Dear Attorney Hesse.

I strongly encourage your support in accepting the proposed settlement in the Microsoft antitrust suit ''Microsoft. has simply provided a product that meets a market demand at a price the consumer is willing to pay. If anything, their competitors have used similar tactics to grow their own business—in a sense. keeping the marketplace fair.

The unfairness lies in Microsoft's competitors using the marts to accomplish what they couldn't do in the marketplace. ??'s Larry Ellison has very publicly decreed their he will unseat Microsoft as the number one player in the software industry, and he will do anything to accomplish that goal I sincerely object to this move to replace the free market system with court manipulation.

With all due respect. I hope you object as welt.

I encourage yore full acceptance and approval of the settlement. I truly believe it addresses all involved and allows Microsoft and the industry to move forward on a positive, note.

Sincerely,

Wayne Stringer

Washington DC, 20530–001

To Whom It May Concern:

I am writing to exercise my right under the Tunney Act to voice my strong disapproval of the current proposed settlement of the Microsoft anti-trust trial. The proposed settlement is both weak and lacking strong enforcement provisions, and is likely to have zero (or worse) effect on competition within the computer industry, with continued and increased harm to consumers in the form of fewer options in the software market and continued increases in the price of the Microsoft software consumers are forced to buy.

Microsoft was convicted of abuse of monopoly power by one Federal judge, and the judgment was largely upheld by another seven Federal justices. In evaluating any proposed settlement, keep repeating one Important Phrase over and over: ''Microsoft is guilty.''

The seven justices of the appeals court ruled that any actions taken against Microsoft (a) must restore competition to the affected market, (b) must deprive Microsoft of the ''fruits of its illegal conduct,'' and (c) must prevent Microsoft from engaging in similar tactics in the future. The proposed settlement fails on every one of these.

(A) Restore Competition

Among the many flaws in the proposed settlement is the complete disregard for the Open Source software movement, which poses the single greatest competitive threat to Microsoft's monopoly.

Most organizations writing Open Source software are not-for-profit groups, many without a formal organization status at all. Section III(J)(2) contains strong language against non-for-profits, to say nothing of the even less-formal groups of people working on projects.

Section III(D) also contains provisions which exclude all but commercially-oriented concerns.

To restore competition the settlement must make allowances for Open Source organizations—whether formal not-for-profit organizations or informal, loosely associated groups of developers—to gain access to the same information and privileges afforded commercial concerns.

(B) Deprivation of Ill-Gotten Gains

Nowhere in the proposed settlement is there any provision to deprive Microsoft of the gains deriving from their illegal conduct. Go back to the Important Phrase: ''Microsoft is guilty.'' In most systems of justice, we punish the guilty. But the current proposal offers nothing in the way of punishment, only changes in future behavior.

Currently Microsoft has cash holdings in excess of US$40 billion, and increases that by more than US$1 billion each month. A monetary fine large enough to have an impact on them would be a minimum of US$5 billion.

Even a fine that large would be a minimal punishment. Microsoft's cash stockpile is used, frequently and repeatedly, to bludgeon competitors, buy or force their way into new markets, or simply purchase customers, with the long-term intent to lock people and organizations into proprietary software on which they can set the price. Taking a ''mere'' US$5 billion from their stockpile will have zero effect on this practice.

For that reason, Microsoft's cash stockpile must be further reduced. In addition to the monetary fine, Microsoft should be forced to pay shareholders a cash dividend in any quarter in which they post a profit and hold cash reserves in excess of US$10 billion. The dividend should be substantial enough to lower Microsoft's cash holdings by US$1 billion, or 10%, whichever is greater.

(C) Prevention of Future Illegal Conduct

The current proposed settlement allows Microsoft to effectively choose two of the three individuals who would provide oversight of Microsoft's conduct and resolve disputes. The proposed settlement also requires the committee to work in secret, and individuals serving on the committee would be barred from making public or testifying about anything they learn.

This structure virtually guarantees that Microsoft will be ''overseen'' by a do-nothing committee with virtually zero desire or ability to either correct Microsoft abuses, or even call attention to them.

Instead of the current proposal, a five-person committee should be selected. Microsoft may appoint one person, but will have no influence over any of the other four. For the four, two should be appointed by the Federal court of jurisdiction, one should be appointed by the U.S. Department of Justice, and one should be appointed by the U.S. Senate. At least two of the appointees should have technical experience and be competent to evaluate technical proposals and arguments by themselves, without the filters which assistants would bring.

These are hardly the only thoughtful and reasonable suggestions you will no doubt receive regarding the proposed settlement of this anti-trust case. And these are hardly the only suggestions which should be adopted if the settlement is to prove effective. But all of them are essential to that aim, and adopt them you must,

Thank you for your time and the opportunity to comment.

Respectfully,
Michael A. Alderete
569 Haight Street

Dear Ms. Hesse:

I am writing in supp ort of the consent decree for the Microsoft settlement. Microsoft has show itself to be an innovator and a company whose products make lives better for he average American. This lawsuit is bad for consumers and ba?? for the economy.

By supper ting the consent degree, you will put an end to a lawsuit theft has become more political than substantive. The Bush administration priorities have been amazingly out of step and out of touch with the American public Hopefully they will at least get this one right and settle the suit. The I maybe we can all move on to a healthy economy and a healthy debate concerning the future of our nation.

Thank you.

Sincerely
Tim Allison Executive Board Member
CA Democratic Party

Dear Ms. Hesse,

The Microsoft Lawsuit Is Bad for Business and Bad for Consumers.

For many, the idea of attacking one of the most successful companies in American history, and its CEO Bill Gates, sounds like fun. But the Department of Justice's pursuit of Microsoft is no laughing matter, having cost American taxpayers well over $35 million in litigation so far and the meter is still running.

The reality is that this lawsuit does nothing to benefit consummers. It does however benefit Microsoft's competitors, who after spending millions of dollars lobbying the Department of Justice to file this suit want a return on their investment. Also, it benefits the lawyers who have made a fortune on both

sides of this issue... and the Attorneys General and bureaucrats who are making political hay, back home by demonizing Microsoft. The real beneficiaries are the powerful anti-Microsoft forces not consumers.

The Cost To Businesses and Consumers in Just Too High.

Rather than protecting consumers, drastic remedies such as breaking up Microsoft would be a disaster for consumers and businesses. The integration and standardization Windows brought us has been a boon for the public as well as for our economic productivity. What Bill Gates understood, much to his competitors'' chagrin, was that consumers- people who use computers, not live computers—want an affordable and reliable system that works with and understands other systems.

Government intervention into the world of high tech programming and design sets a dangerous and potially disastrous precedent. Dictating to Microsoft what technology it can develop will decrease the effectiveness of existing products or meet the expanding needs of users could cripple the technological innovation that has been the hallmark of hour high tech, internet economy.

One could argue in fact that the genesis of the huge decline in the Nasdaq, which so far has resulted in more than $2 trillion of lost wealth, is primarily the result of the government's sustained attack on Microsoft's right to innovate. After all, today Microsoft, tomorrow Intel.

Over the past 10 years, Microsoft has lowered its prices, created a better product, and invested enormous sums of money in research and development. This doesn't sound like monopolistic behavior by any standard.

The government's pursuit of Microsoft has cost the American taxpayer over $35 million so far with devastating results for state and private pension funds, and small investors, all over the country, [illigible] state pension funds have lost $144.2 billion. Here in California, since the March, 2000, break down of mediation on the case, Public Employee Retirement System funds have dropped more than $59 billion while the State Teacher Retirement fund lost $15 billion.

We hope the consent decree is adopted and the federal lawsuit is dropped. If not, it may be time to [illegible] our elected representatives to do the right thing and allow Microsoft to continue its history of investment, innovation and improvement The American economy depends on it.

Sincerely
Joe [illegible]

Dear Ms. Hesse,

As a member of the North Carolina General Assembly, I have always sought to make government a cooperative partner of business and industry. After all, business and industry creates jobs that enhance the lives of countless North Carolinians.

For several years, I have witnessed the federal government's pursuit of a lawsuit against Microsoft, one of the most successful companies in the history of American business. This suit has cost the taxpayers upwards of $30 million over the past years.

I request that Judge Kollar Kotelly approve the settlement that the Department of Justice and Microsoft have both agreed upon. In addition, I am pleased to say that my state, North Carolina, has also signed the agreement and decided to settle.

In spite of the fact that nine state attorneys general plan to prolong their cases against Microsoft, I believe the federal case should be settled.

Sincerely,
Jeffrey L. Barnhart
State Representative

Washington, DC 20530

Dear Ms. Hesse,

As a business executive who travels to Chicago on business from my home in Greensboro nearly every week, I know how important Microsoft's business technology is to American business, In fact, I find Microsoft's products to be bery helpful when I travel abroad on business as well.

I realize that not everyone travels to the extent that I do, but I would imagine that most people who work In business do rely on Microsoft products to a great extent. And shouldn't they? Microsoft's products are universally recognized as the industry leader and they've improved communication for American businesses, schools and government.

Virtually everyone uses Microsoft's products, Executives, attorneys, entrepreneurs, educators and government officials know that Microsoft is the universal leader in technological innovation They all have great confidence In Microsoft's products to get the job done.

I read recently that Microsoft and the federal government agreed to settle the antitrust lawsuit they've been engaged in for a number of years. That's good news for businesses, families, the stock market and the American economy, our economy needs a shot in the arm at this point in time, and I believe that this settlement will provide it, I request that Judge Kollar-Kotelly approve this settlement. Thank you for your consideration of my comments.

Sincerely,
Kumar Lakhavani

Washington, DC 20530

Dear Ms. Hesse:

As a member of the Greenville City Council, I am concerned about the off??er that the Microsoft anti??rust lawsuit is having on both the business and educational institutions in our city. I am a newly elected member of the council, a member who ran in order to create a more efficient government for our ??tizens. I am also concerned that the government operates efficiently.

The American people have a twofold desire in regard to the Microsoft suit, as I see it. First, they want the federal government to work to create a more positive business climate for all Americans. Government needs to use its power to encourage private investment, innovation and job growth, Second, it is the moral responsibility of the federal government to use taxpayers' funds wisely.

The government's work in fostering a strong coonomy is par??licularly timely right now. After all, the unemployment rate is up, the stock market is down, and consumer spending is off. We've got to get back on track. I can think of no more positive action for the federal government to take than for its courts to approve the settlement in the Microsoft case.

Also, Americans today are paying taxes to the federal government at the highest rate per capita in over fifty years. It is the government's responsibility to see to it that these funds are used responsibly for the benefit and general welfare of the American people. The Microsoft lawsuit has cost the American people $30 million to prosecute. It's time to and this litigious spending.

Thank goodness both parties want the suit to end. They have come to art amicable settlement. I urge Judge Kollar-Kotelly to approve the settlement.

Sincerely,
Ray Craft
Council Member

Dear Ms. Hesse:

As a business leader who has served as Chairman of the American Furniture against Microsoft is close to ending. Virtually all of the executives in business and industry that I am in contact with want to see the case settled.

Our society has become more litigious than ever. Litigation costs business money... and can cost employees their jobs That's why l believe that we ought to move beyond this ease. There are so many societal problems for us to contend with no the least of which is

our ourrent economic recession. We need to focus on growth, and we aced the government to be a true partner in that effort.

The company that I own uses Microsoft products every day. t find them to be useful in making my business more efficient. En??epreneurial life is much different from the legal profession. If I am not constantly looking for now niches in which to make a profit, my business will lag. Microsoft products have made my business more productive, and I think it's time to settle this lawsuit so that Microsoft can focus all its resources on creating new products to benefit businesses like mine.

Microsoft and the federal government are in agreement On the settlement, I strongly urge Judge Kollar-Kotelly to quickly approve the settlement Let's set me economy moving again.

Sincerely,
J. Ray Shufelt
CEO

As a member of the Lincoln County Commission, I am pleased that the United States Justice Department is settling with Microsoft. Technology is so important to the future of counties like ours all across America, and this settlement will enhance all facets of the tech industry in the coming years.

Our neighbors in Mecklenburg County have had many advantages over Lincoln County, and other counties in the past. Charlotte is the nation's mega banking centaur. That attracts business, and with it comes a substantial local fax base. I'm not saying that money is everything, but huge counties have had a traditional advantage over smaller ones in the past. As a result, they have had an easier time funding essential county services, such as school improvements. Technology quite simply levels the playing field for average-sized counties across America.

When someone togs on to the internet, it doesn't matter if they're sitting in Raleigh or Hanging Dog, their access to information is the same, and their ability to profit from the proliferation of information is the same, The tech industry needs a shot in the arm so that it can continue aiding America's counties in o significant way. Fore this reason, I'd like to request that Judge Keller Kotelly approves the settlement that Microsoft and the federal government have reached. It will benefit Lincoln County, and counties like ours across America,

Regards,
Beth Saine

Dear Ms. Hesse,

As one of the younger members of the North Carolina Republican Party's Central Committee, I have a strong interest in how government interacts with technology so the economy is strengthened in the future. As Chairman of the North Carolina Federation of College Republicans, I want to formally ask that Judge Kollar Kotelly approve the landmark settlement between the federal government and Microsoft. Here's why:

I do not believe that Microsoft has done any harm to even one single consumer. And without consumer harm, what reason exists to bring an antitrust case? None. Face this fact: the future is in high tech jobs. Also, every industry is going high tech. Imagine the damage done by the federal government suing the technology industry's leading company. It discourages young people from being innovative. It discourages them from becoming entrepreneurs. Our Republic will only survive is maintain a strong free market system. And our market system can only thrive if companies continue to be innovative. I hope the settlement is finalized soon, so that American business can operate at its full capacity again soon.

Thank you for your consideration of my comments.

Sincerely,
Matthew Adams
State Chairman

Wake Forest Town Commission
January 11,2002
Renata Hesse
Trial Attorney
Antitrust Division
Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse:

As a member of the Wake Forest Board of Commissioners, I am all too aware of the high cost of government despite the fad that our citizens and businesses endure terrible economic conditions in our state. Out town needs revenue from increased business activity, not higher property taxes. It seems to me that all our local industries will be enhanced when the settlement of the Microsoft lawsuit is completed.

As you can tell, I am adamantly opposed to higher taxes in whatever form and work hard to ensure that tax money is spent wisely. But, the fact is, in our growing community, we have services that need to be paid for by government. The best way for our town to generate additional revenue is to increase business activity in Wake Forest. That is why I was happy to see that the federal government's case against Microsoft had come to a settlement agreement in the court of Judge Kollar-Kotelly, I know that this case has cost the taxpayers of this nation $30 million, not to mention lesser sums in the t 8 states that also brought the original lawsuits. More significantly, it has hurt business, and local revenues, in our town and towns across America.

I am pleased that North Carolina is one state that decided to agree with the settlement and now no more state tax money will be expended. I hope to see the same thing happen in the federal case as well. That is why t am strongly urging the judge to agree to the settlement in this case.

Sincerely,
Chris Malone
Town Commissioner
401 Owen Avenue—Woke Forest, NC 27587

601 D Street NW, Suite 1200 Washington, DC 20530 Fax: 202–616–9937

Dear Ms. Hesse:

Microsoft's products are the greatest in the technology industry, and that is the major reason that they are regarded as a leader m the American economy. Given that fact, it is no wonder that when the federal court announced that Microsoft would be broken up, the stock market came to a screeching halt, and tumbled down from record highs.

I am very encouraged that Microsoft and the federal government have agreed to a settlement in the antitrust case. I believe that this is good for the economy, the government and other societal institutions, which increasing rely on industry to invent new products to make their operations more effective.

The settlement provides for more oversight into Microsoft's operations, and a more competitive playing field for all companies in the industry. That's welcome news for everyone who demands consumer choice. It will also send the right signal to investors that the government is prepared to work in a cooperative effort to spur economic growth and job creation.

I request that Judge Kollar Kotelly will approve the settlement, so that the Justice Department can conserve resources for more pressing legal matters. Additionally, closure in this matter would send a message that government is prepared to work with the American business in taking constructive steps toward a brighter future for all Americans.

Thank you,
Trustee

601 D Street NW, Suite 1200
Washington, DC 20530
Fax: 202–616–9937

Dear Ms. Hesse:

As a young business executive, I am relieved that the federal government and Microsoft, which have been engaged in a protracted antitrust lawsuit, have arrived at a settlement arrangement that is amicable to both sides. Settling this case as soon as possible is important to the technology industry, as well as many other important segments of the economy.

In the business world, companies look at industry leaders for innovation, and they often try to emulate the corporate giants'' successful business strategies. This partially explains why the tach sector of the economy has been in a tailspin for an extended period of time. When the antitrust suit is finally ended once and for all, a dark cloud will be lifted from the entire industry. The American economy, and to some extent, the world economy has never been more interconnected. Each change within one economical sector creates a ripple throughout the rest of the economy. A major shift in one sector results in a sea change across the board of leading economic indicators.

I work in the mortgage banking industry, a business that is highly sensitive to the state of the national economy. While ending the Microsoft litigation will not alone create record revenues for our industry, I feel certain that it would boost consumer confidence, and encourage investments in many types of business enterprises.

Finally, I am excited about the future of technological innovation in the workplace. Microsoft has led the way in this regard, and finalizing the settlement will help the company refocus on developing new and exciting products. That means a more productive workplace in the future.

I request that Judge Kollar Kotelly approves the settlement.

Sincerely,

Stewart

Fax: 202–616–9937

Dear Ms. Hesse:

As a long-term care specialist, I am concerned that the tumble that the sock market has suffered is draining the finances of our nation's elderly. We've got to get the nation's economy back on track. The government needs to focus on ways to spur economic growth like never before. In less than ten short years, the baby boom generation will begin to reach retirement age. A record number of seniors will inundate our nation's hospitals, nursing homes and assisted living facilities. These people will need savings not for luxury items, but to cover living expenses associated with aging.

Our nation's greatest generation, for the most part, worked at one company for their entire working career. Their pensions are largely vested in stocks. When the stock market is unstable, their financial situation, and living conditions, become unstable as well. The baby boom generation are less likely to have worked in one company, and are less likely to have saved for a retirement. They are, however, more likely to have invested a substantial portion, or all, of their savings in the stock market. IT IS IMPERATIVE THAT WE STRENGTHEN THE ECONOMY IN ORDER TO BOLSTER THESE SAVINGS.

I request that Judge Kollar Kotelly approves the settlementbetween Microsoft and the federal government. This lawsuit has been proven to have caused much of the turmoil within the economy in general, and the stock market in particular. Our nation's retirees need security, and deserve governmental cooperation.

Sincerely,

Douglas McCabe Russell

Fax: 202–616–9937

Dear Ms, Hesse:

I have been involved in business, industry and economic development for over thirty years. Over that period of time, I have come to understand that a quality education system, a solid public infrastructure and a strong flee market system are the keys to economic development in North Carolina and across America.

Virtually every societal institution which is vital to economic development has benefited from the proliferation of technological advances in the past decade. Leading the way in innovative technology is Microsoft. Their products have benefited businesses by saving countless hours of time and making communications between businesses seamless. Microsoft's benefits to the education system are tremendous, Research, class instruction and other benefits have been realized through application of these useful tools. Governmental institutions also rely on Microsoft to maximize their efficiency and serve, the public in a responsive manner.

For these reasons, I am gratified that federal government and the Microsoft have agreed to a settlement in their antitrust case, Microsoft will be able to focus its energies once again on research and development, while the government is granted unprecedented oversight into Microsoft's operations. Under this settlement, economic development wins, and so do the American people.

I hope time Judge Kollar Kotelly will approve the settlement.

Sincerely,

Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Fax: 202–616–9937

Dear Ms. Hesse:

I write to express my desire that the government will act in a cooperative manner with Microsoft and similar business interests in developing a mutually beneficial relationship. I am convinced that now is the time to end the federal government's litigation against Microsoft. Microsoft and the federal government have agreed to settle the suit. The public is yearning for an economic recovery. Congress is debating an economic stimulus package. With these facts in mind, I am quite confident that we should move beyond the Microsoft case and work to get our stagnant economy moving again.

As an attorney, I realize that antitrust law is an important component of maintaining a competitive marketplace. However, company innovation and product improvements are as well, and since both parties have agreed to settle the lawsuit, I believe that it would be advantageous for everyone if Microsoft can get back to doing what it does best: researching and developing useful technological tools for the American workplace and the American home.

The settlement guarantees that other companies will have market access. Every new Microsoft operating system will have to include a mechanism that enables end users to remove or re-enable Microsoft s middleware products. While end users can already remove Microsoft middleware from Windows XP, this settlement would make it even easier for users to change middleware products.

I hope that Judge Kollar Kotelly approves the settlement.

Regards,

Phillip J. Strach

Dear Ms. Hesse:

During my career as a columnist and professor. I have written over 3,000 articles for various publications such as the Dana Daily Record, the Coastal Piedmont leader and other Journals, newspapers and magazines in twenty countries. I feel compelled to write to you on a hot contemporary issue: the pending settlement of the federal government's antitrust case against Microsoft.

I live in a university community. In the past ten years. I have seen a technological explosion on campus that has revolutionized learning processes and intellectual research. I have found the technological advancements of the newspaper to be beneficial in my work as a columnist. The technological advancements to which I refer are in no small measure due to the entrepreneurial success of Bill Gates and Microsoft. After all, Microsoft has developed products that have aided the process of word processing immeassurably,

as well as improved columnists'' ability to transmit data.

I served as the Endowed Chair of the Landry-Fetterman School of Business at Campbell University from 1980 until 1983. During my tenure, I did my utmost to promote the notion that our societal liberty is largely dependent upon the foundation of the free enterpriss system. I fully realize that antitrust laws are needed in order to foster a competitive marketplace, however if a corporation's business practices do not result in harm to the conssumer, the government should not interfere. I have seen no evidence that Microsoft's business practices have harmed consumers in any way. On the contrary, I believe that Microsoft has benefited the American consumers greatly.

I urge Judge Kollar-Kotelly to approve the proposed settlement of the lawsuit. It's time to allow the free market system to determine the corporate winners and losers in our great land.

Sincerely,

Professor Eric Brodin

Dear Ms. Hesse:

The business of America is business, according to President Woodrow Wilson. That statement has held true for the entire duration of our nation's young life Whenever business is good, we say that ''times are good'' in America. When business is off, we say that we're going through a ''tough time''. ! regret to say that I believe that tough times are currently upon us and our economy needs for business to get back on track. In some areas, the government can play an active role in restoring consumer confidence, and strengthening investor resolve.

The stock market is in limbo. Investors are in a period of uncertainty that began when the federal government announced that Microsoft would be dissolved into a series of small companies. The tech sector of the economy, which had been largely separated from government, and looked to Microsoft for leadership, became a very unstable place for investors and employees to be that day. We need to recapture the magic of the 1990s economy by putting the Microsoft lawsuit behind us once and for all.

The federal government and Microsoft are in agreement on the terms of the settlement. All that remains is for Judge Kollar Kotelly to approve the settlement. I hope and pray the settlement will be approved. A renewed spirit of entrepreneurial innovation will be started on that momentous occasion.

I am honored to live in the Unites States of America, a country in which we have a fair and impartial judicial system. The trial has run its course. The verdict is in. Both parties want to settle, in order to save the American people and the American economy irreparable harm. It's time to move forward.

I request that Judge Kollar Kotelly will approve the settlement. Senior Tactical Management Specialist Planner John Deere Corporation

Dent Ms. Hesse:

I believe that the United States of America has the highest standard of living of any country in the world. I am certain that our prosperity is a direct result of the free enterprise system that enables our economy to flourish. I enjoy following current events, end participating in the political process when I believe that my participation is needed.

The federal government's lawsuit against Microsoft is a prime example of an issue that has stirred my passions and evoked my interest in the public good, From the outset of the lawsuit, I have worried about the suit's impact on the American economy as a whole. I noticed that the entire stock market began its slide at the point which the federal government annoyed Microsoft's breakup.

Microsoft's, innovation has been beneficial for industrial and educational institution across America. I strongly believe that the government ought to be as supportive as possible of all companies that are vital to American enterprise and American jobs. It's important to families that their tax dollars be used to strengthen, not weaken, the economy. That's why I believe that the proposed settlement between Microsoft and the federal government is a positive development for America. The settlement provides for like access and monitoring of Microsoft. In essence, everybody wins... business, industry, the government, and most importantly, the American people.

I hope that Judge Kollar Kotelly will approve the settlement.

Thank you,

Scott Lampe

Ms. Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530–0001

Dear Ms. Hesse:

I am encouraging you to accept the Microsoft settlement. It is fair! For three years, I've been reading about the litigation, lobbyists, lawyer's fees and millions of dollars in taxpayers monies spent.

It's time to have less regulation in technology and to have more competition in the market. As a consumer, I want affordable, high quality products that Microsoft creates. This settlement will allow the company to again focus on leading in technology rather than fighting for survival in the face of litigation.

Thank you for considering my input as you deliberate this decision.

Liberty Carty

Renata Hesse Trial Attorney
Antitrust Division
U.S. Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Attorney Hesse:

I am writing to urge the court to accept the settlement proposal of the Microsoft anti-trust case. As a consumer I have witnessed the value of our constantly advancing technology on a daily basis. Like most Americans I am at the same time thrilled and overwhelmed by the new products that are available. These have gone along way toward helping work and live more efficiently. I work in the printing industry and can tell you first hand that technology has had a significant impact on how this industry operates. The quality of our work improved to a great extent while the product turnaround time has been significantly reduced

We are living in a time of financial uncertainty in this country. We must do whatever we can to regain stability in the stock markets and the job market. Ending the government's case against one of our leading companies will help lead our county to continued prosperity.

Please accept the settlement before you.

Sincerely,

Gerald R. Slifka

MTC–00029671

January 16, 2002 Ms.
Renata Hesse, Antitrust Division
U.S. Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse,

I appreciate that my ideas as a livestock business owner can be shared regarding the Microsoft antitrust ease.

It is important that the Federal Courts recognize the benefits of competition in business and technology. The Anti-trust laws were written over 100 years ago to protect consumers. In this day and age, it seems, some of Microsoft's competitors want to use them as a safe-guard from competition. A better use of the government's legal power would be an examination of the vertical integration of agricultural conglomerates.

I personally agree with settlement and hope that you will accept it to bring closure to this litigation that is costing us so much in time and tax dollars.

Sincerely,

Vernon Suhn, Owner

Judge Kolar Kottely
U.S. Department of Justice,
Antitrust Division
601 D Street, N. W., Suite 1200
Washington, DC 20530

Dear judge Kottely:

As an educator, with 37 years of experience, I have followed the Microsoft antitrust suit with much interest and would like to express a major concern regarding the timely disposition of this matter.

I believe the principle parties of this suit have come to a fair settlement for all concerned. However, the nine remaining attorneys general and the District of Columbia need to put aside their individual grievances and settle in the interest of consumers as well as the technology industry which so greatly affects the growth of our economy. It disappoints me that the Attorney General of Kansas is one of the parties who have resisted settlement.

I am encouraged that this settlement has the prospects of more healthy competition in the software industry as well as the increasing the availability of a variety of software to consumers. I sincerely hope you will actively work toward approving the settlement of this case as soon as possible.

Sincerely,

Kent Austin, Speech Pathologist/Audiologist

January 21, 2002
Judge Kolar Kottely
U.S. Department of Justice, Antitrust Division
Attention: Renata Hesse
601 D Street, NW, Suite 1200
Washington, DC 20530

Dear Judge Kottely,

The Federal government has been pursuing its case against Microsoft for 3 years and has spent $30 million of the hard-earned taxpayer's dollars in an effort to protect the consumer against Microsoft's perceived unfair business practices. The result has been confusion and no clear answers.

The Court of Appeals effectively put an end to this case by throwing out a break-up plan instituted by a lower court. This move was clearly in the right direction. We should follow their lead by putting an end to this case. Nothing good will come from dragging it out any longer at an even greater cost to taxpayers and consumers.

Instead, we must see action now in order to spur the American economic recovery we need, especially for our ailing technology industry.

Please support the proposed settlement in this case.

Thank you for considering my opinion on this case.

Sincerely,

Patricia Piester

To Whom It May Concern:

I am writing to express my support for the Department of Justice settlement in your case against Microsoft. I understand that you are close to a settlement and have asked for public input about this issue.

Our tax dollars are spread thin as well our governmental resources. Enough time and money has been spent on this case to come up with the current settlement. The settlement is impartial and the punishment fits the wrong.

My concern at this time is ''who'' will actually benefit from continuing this case against Microsoft, I believe it will be Microsoft's competitors and not consumers. The current settlement creates a stronger technology industry and consumers will be the overall winners. The case against Microsoft stands as an obstruction to progress. We are going through a war and economic recession. Refusing to settle and extending the campaign against Microsoft is technically out-of-date and just another reason for the country slow down. It is time to get back to work.

Thank you for your time and your efforts to settle US v. Microsoft as soon as possible.

Sincerely,

Renata Hesse
Trial Attorney; Antitrust
U.S. Department of Justice
601 ''D'' Street NW
Suite 1200
Washington, DC 20530

Dear Ms. Hesse:

It has come to my attention that the Department of Justice has brokered a settlement with Microsoft that could end the government's anti-trust case against this company. I am very supportive of this.

I live in Kansas where our own Attorney General Carla Stovall has been. a leading advocate for the breaking up of Microsoft and has refused to join. the settlement of this case. I am very disappointed that the Attorney General who was elected to protect my interests continues to pursue this case.

The basis for this suit has always been a mystery to me. Microsoft creates great products that people want to purchase. Because the company is in tune with American consumers and is very innovated they have grown tremendously. This growth has benefited us through lower prices, a growing technology industry and a previously skyrocketing NASDAQ. If Attorney Generals like my own were really interested in protecting the public good they would join this settlement. Besides, it appears to me that those who sought to punish Microsoft are getting much of what they want in this agreement.

I urge you to accept this settlement.

Sincerely,

MTC–00029676

Dear Renata Hesse,

Thank you for this opportunity to comment on the United States v. Microsoft Corporation; Revised Proposed Final Judgement and Competitive Impact Statement. I write as an advanced user. I am not a programmer, but I rely on computers for my work and am very much concerned about preserving diversity, choice, and quality in computer software.

I am concerned about the power of Microsoft to coerce its competition. Microsoft paid money to both Corel and Apple when each company was desperate and Microsoft could control the terms. I am also concerned that Microsoft forces computer manufacturers to bundle Microsoft applications with the result that computer buyers now assume that Microsoft applications are part of Windows and are included at no cost. The settlement proposed by the Department of Justice would not cover either of these situations even thougt1 riley are clear examples of the power of Microsoft to coerce its competitors into less competitive postures.

In Apple Computer's 10K annual report for the fiscal year ended Sepbember 30, 2000 is the statement of an agreement between Apple Computer and Microsoft. ''Microsoft purchased 150,000 shares of Apple...preferred stock...for $150 million [p. 52]. Apple in turn agreed to limit computer production, and thus competed less against Microsoft.

In August 1997, the Company and Microsoft Corporation entered into patent cross licensing and technology agreements. In addition, for a period of five years from August 1997, and subject to certain limitations related to the number of Macintosh computers sold by the Company, Microsoft will make future versions of its Microsoft Office and Internet Explorer products for the Mac OS. Although Microsoft has announced its intention to do so, these agreements do not require Microsoft to produce future versions of its products that are optimized to run on Mac OS X. The Company will bundle the Internet Explorer product with Mac OS system software releases and make that product the default Internet browser for such Mac OS releases. [p. 24, ''SUPPORT FROM THIRDPARTY SOFTWARE DEVELOPERS,'' emphasis added] The same document discusses Apple Computer's continued dependence on CPU chips from Motorola [INVENTORY AND SUPPLY, pp. 22–23]. Apple Computer's new operating system, now known as Mac OS X, derives from Nextstep and Openstep purchased with NEXT, Inc. Both Nextstep and Openstep run well on CPU chips by Intel

or Motorola. I am writing this letter on an Intel PC minting Openstep 4.2. Even the bridging version between Openstep and Mac OS X (a developer-only release known as Rhapsody) ran on both Intel and Motorola CPU chips.

This cross-platform technology would have left Apple Computer far more flexible and competitive as Motorola continues to have manufacturing problems that leave Apple Computer with more marketing problems (the megahertz gap) and a more hazy future. Motorola chips currently cannot achieve the same clock speeds (megahertz) as CPU chips from Intel, AMD, etc. Consumers often choose computers on the basis of clock speeds, so they tend to discount Apple computers even though the Motorola chips accomplish more work than Intel chips for the same clock speed (the megahertz myth). Apple Computer has been aware of this situation for several years.

The statement that Apple Computer agreed to limit its production is not about Apple limiting its production of the Apple computers using Motorola chips. Apple agreed at that time to stop development of Mac OS X for Intel which would have been a far more serious competitor to Microsoft. A consumer could buy an inexpensive PC and replace the Windows operating system with Mac OS X for Intel. Mac OS X is derived from Unix and is known for great stability. Also, Mac OS X has special software development tools that would attract developers because individuals could complete aggressively with far larger software colt)orations. Mac OS X for Intel would have allowed Apple Computer to move from selling hardware (Macintosh Computers) and proceed to selling software only (Mac OS X) in the same way as NEXT, Inc. moved from selling hardware and software to selling software only. The investment by Microsoft in Apple was incidental. Apple Computer's real concern was that Microsoft threatened to cease development of Microsoft Office for Macintosh, leaving Apple Computer without a strong word processor and office suite. In return, Apple Computer agreed to make Microsoft Internet Explorer the default web browser, instead of Netscape. Macintosh computers don't use Windows, but they largely still depend on Microsoft Office, and Microsoft maintains a hold. Microsoft played one rival (Apple Computer) against Netscape, another rival.

In press release dated October 2, 2000, Corel, Inc. announced that Microsoft agrees to buy 24 million shares of Corel preferred stock at US $135 million. Corel now owns and develops WordPerfect, a competitor to Microsoft Word. WordPerfect was once a dominant word processor, but is now far in the minority. The DoJ Microsoft trial included evidence that Microsoft shipped flawed versions of the Windows 95 operating system to WordPerfect developers in order to leave WordPerfect a flawed product that could not easily compete with Microsoft Word. Also, Microsoft cultivates bundling agreements where PC manufacturers include Microsoft Word and other components of Microsoft Office with Windows computers so that consumers do not even think of purchasing WordPerfect. Then, when they upgrade their software, they continue to purchase Microsoft Word and do not consider WordPerfect. This agreement with Corel, has Microsoft offering .NET, a sort of networking server technology, to Corel. It is interesting that Corel now offers all its graphics products in versions optimized for the new Mac OS X, and advertises its cooperation with Apple. At the same time, it has ceased development of WordPerfect for Macintosh. WordPerfect for Linux exists and could be easily ported to the new Unix-based Mac OS X. This agreement between Microsoft and Corel looks like an agreement to dissuade Corel from continuing to compete agressively with Microsoft Word. Isn't perception an important part of this case?

Microsoft bundles many small applications with Windows that leave fewer opportunities for third-party competitors. Windows now includes image editing software that took away opportunties from Kodak. Kodak negotiated some new opportunties. Kodak now offers little support for Macintosh computers. The larger number of Windows computers is not a true measure of the market here. A large proportion of the images on the Internet were created with Macintosh computers. The graphics and desktop publishing industries still rely heavily on Macintosh computers, yet Kodak digital cameras offer far less support for Macintosh computers than for Windows computers.

Microsoft is now offering very inexpensive versions of its software to schools at prices far below even academic prices. Here at the University of Wisconsin-Madison, Microsoft Office is available at $25–30 for a fully functional suite, and Microsoft Windows 2000 at a similar price. In return, Microsoft often pressures schools to replace their server software with Microsoft products. These prices are attractive because they offer a product students want at an attractive price, but they leave server operators subject to pressures unrelated to product quality. Also, end users may find themselves with fewer opportunties because Microsoft server products do not interoperate well with non-Microsoft products. Microsoft has a history of adopting Internet standards and then releasing an ''enhanced'' version that only works with Windows computers. By the way, the DoJ uses an opensource product (OpenBSD) downloaded from Canada (www.openbsd.org) for its most sensitive communications that require the ultimate in security.

The proposed agreement (final judgement) between the US Department of Justice and Microsoft does not provide protections for Apple Computer or for developers of Linux and other opensource software (e.g., FreeBSD) that would compete with Microsoft products. Linux, FreeBSD, and Hewlett-Packard servers would face unfair competition as I describe in the previous paragraph. The DoJ proposal does not address these concerns. Please separate the Microsoft operating system and application (e.g., Word) divisions. Titus, I favor a breakup of Microsoft into at least two parts.

Thank you for your time and consideration.

Sincerely,

Rick Voland

Renata Hesse, Esq.
U.S. Department of Justice
Anti-trust Division
601 ''D'' Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse:

I was truly glad to learn that the court was conducting a comment period during which I might write to express my views regarding the lawsuit currently being waged against Microsoft. I have been opposed to this lawsuit for quite some time for many reasons, including its high cost to American taxpayers, its apparent negative effect on the technological industry and general economy, and its attempts to over-monitor the business activities of an American company. If I could see that Microsoft was, in any way. threatening our free marketplace and driving up consumer costs, I might feel differently about the matter. But I see no indication that Microsoft has hurt the tech industry in any way. It makes me wonder who and what is really driving the campaign against Microsoft and I resent having to pay for a lawsuit that most likely serves the interests of Microsoft's competitors—not the American public.

We, the American people, need to have the court decide this matter in a manner that truly serves our needs -not the needs of a big business. In light of that fact, I ask the court to please accept the settlement proposed by President Bush's team and end this lawsuit as soon as possible.

Sincerely,

Mindi Cook

Seattle, WA 98126
January 26, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

I am writing you today to express my opinion in regards to the US vs. Microsoft settlement. I support Microsoft in this dispute and I believe this litigation is costly and will have adverse effects on consumers. I support the settlement that was reached in November and would like to see a permanent resolution to this dispute.

The settlement that was reached is reasonable and far more than sufficient to deal with the issues of this lawsuit Under this agreement, Microsoft must grant the same rights to all of the twenty major computer makers who want to install Windows on their machines, no matter how the companies configure the platform.

I think this witch hunt to try and make Microsoft the villain is going to have a detrimental effect on the business climate for now and the future. Please pick another battle .... like national security.

We are facing a lagging economy presently. We must do all we can to boost and stimulate our economy, Stifling Microsoft will not

accomplish this. Letting them go back to Washington State to develop more software will. Please support this settlement and allow Microsoft to get back to business.

Washington, DC 20530–0001
Via Fax @ 202–307–1545

The undersigned is opposed to the proposed settlement in the Microsoft antitrust trial because the settlement does not fully redress the actions committed by Microsoft, nor substantially inhibit their ability to commit similar actions in the future, or most importantly, attempt to restore competition to this important market.

Furthermore, there are concerns regarding the fact that none of the provisions within the settlement effectively address Microsoft's abuse of its monopoly position in the operating system market. Even non-educated, non-technical citizens can recognize the absurdity and inequity of the requirement that consumers pay for a Microsoft OS on a new PC—whether it is wanted or not—and yet this most basic issue has never been addressed.

Perhaps most appalling is that the proposed settlement does nothing to address Microsoft's previous misdeeds. Software piracy or violations of the DMCA result in million of dollars in fines and potential incarceration, yet no penalties are stipulated in this settlement? it is equally disheartening that there are no provisions to address future abuses instead the settlement, from a technical perspective, appears to bolster Microsoft's expanding control of the Internet and other related areas, Letting the US government publicly reward criminal behavior simply makes a mockery of the law.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them products and innovation that would otherwise be created because of competition. Consequently it is incomprehensible that obvious cost free measures, such as a requirement for the inclusion of Linux and dual-booting on all OEM PC's, is not even considered.

The finding that Microsoft was (and is) an abusive monopoly must be followed by specific, well-defined measures to address past practices and compensate those harmed by the abuses, In addition, substantial penalties and measurable sanctions are required to prevent future monopolistic abuses. Based on past history, it is even more crucial that strong constraints be placed on Microsoft to mitigate their proven propensity for illegal and unethical activities. The proposed settlement is clearly inadequate to serve its function and calls into question the United State's Judicial System's ability to appropriately perform its purpose. As such, it is respectfully requested that the entire matter be reconsidered in a public courtroom.

Department of Justice
601 ''D'' Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse:

I understand that the Department of Justice is currently conducting a comment period during which members of the American public may express their opinions regarding the Microsoft anti-trust settlement proposed by the Bush administration. I am grateful to have this opportunity to voice my thoughts and would like to thank you in advance for your consideration of my views on this matter.

I firmly believe that the court should approve the settlement which I understand Microsoft has already agreed to accept. At this time in our nation, saving resources for homeland defense and taking steps to strengthen our economy should be at the top of the government's priority list. If the court agrees to the Microsoft settlement, thus ending this expensive and troublesome lawsuit, it will be appropriately addressing both of those pressing needs by: (1) freeing up resources for defense and (2) allowing one of our nation's most productive companies, Microsoft, to continue to generate health activity in the marketplace.

Please consider carefully the realities that face the United States today and approve the Microsoft anti-trust settlement. Thank you again for your consideration.

Best regards,
Elsie Zeurcher

Renata Hesse, Esq.
Trial Attorney, Anti-trust Division
Department of Justice
601 ''D'' Street NW, Ste. 1200
Washington, DC 20530

Dear Ms. Hesse:

I would like to thank the court for inviting the views and opinions of individual United States citizens regarding the Microsoft anti-trust lawsuit and proposed settlement, it seems only right that those of us on the front lines, paying taxes and supporting the economy, should have a voice in this matter.

Free trade is a cornerstone of American capitalism and I believe that the court has been attempting to protect our free trade through its pursuit of Microsoft. However, in spite of all good intentions, the court's efforts appear to have damaged free trade and enterprise instead of protecting it. As a result of the court's actions, Microsoft, one of our nation's most productive business giants, has been forced to pour untold resources into defendin9 itself against an ever-changing, never-ending lawsuit that has yet to establish that the company has harmed the marketplace in any way. In fact, as a result of Microsoft's commitment to improving technology, average American consumers now have access to affordable computer products that were out of reach to them only a decade ago. In the interest of free trade, the court should allow such a company to continue to generate products and business without undue interference.

Additionally, as the court makes its decision regarding the Microsoft settlement. I ask that it consider the amount of taxpayer money it will save by ending this expensive litigation. Too man.,,, hard-earned dollars have already been thrown at this dubious case. Acceptance of the proposed settlement will stop the bleeding and save American citizens further needless cost. I ask the court to make the decision that will truly protect free trade and best benefit the American public. Accept the settlement and end the Microsoft anti-trust case quickly.

Respectfully,
Jim Morrill

601 D Street, N-W Suite 1200
Washington, DC 20530

Dear Attorney Hesse:

As an avid consumer of new technology products I am writing to express to you my support for the settlement of the Microsoft anti-trust lawsuit. There are many arguments why the case against Microsoft was an ill-founded decision. However, I feel the economic reasons are the most compelling.

The whole premise of the government's case has been that Microsoft was responsible for significant consumer harm. It is quite apparent this is not the case. Microsoft is the leading choice among consumers because they find its products to be of superior quality. Yet the government has spent millions of dollars prosecuting a case that the public does not support. The cost to the taxpayer has been staggering

The damage this case has caused to our nation's financial well-being goes beyond the wasting of public funds. This case and the government's threat of break-up have served as a deterrent to investment in the computer and communications industry. There are many contributing factors to the major decline of the NASDAQ, however, the threat of serious government intervention in our nation's fastest growing industry only added to the problem.

In an effort to end this case, DOJ and Microsoft negotiators have found enough common ground to reach a settlement. Based on my knowledge of the agreement this settlement is a solid one. Microsoft will be held responsible for portions of the complaint upheld in court and an independent commission will monitor its compliance with the provisions of the settlement.

The settlement of this case is a good indication that companies like Microsoft will be free to compete and grow in our open market. Both our economy and consumers will benefit.

Sincerely,
Logan Overman

Washington, DC 20530

Dear Ms. Hesse,

Finally, Microsoft and the U.S. DOJ have agreed upon a settlement of the marathon-style anti-trust suit against the company. I think that having nine states sign on to the deal proves its value.

From what I have read and heard about the proposed settlement that is pending your approval, it goes a long way toward what the DOJ wanted to accomplish, but does not completely tie Microsoft's hands in a way that they cannot compete. To me this makes great sense as a worthy compromise.

I am hopeful the judge will approve this settlement and allow all the case's participants to go back to doing business as they should.

Thank you.

Subject: Microsoft Settlement

Dear Department of Justice representative,

Attached is an HTML document with my comments about the settlement proposed. I have included my background and contact information in that document.

Please feel free to contact me at:
rgp@scalio.com
or at home at:
425–889–1043
if you have trouble with the attached documents.

Sincerily,
Ramon G. Pantin

Introduction

My name is Ramon G. Pantin, I have been in involved in commercial Operating System development since 1989. I have worked on the design and implementation of a large variety of Operating Systems and system software (operating system components) including chronologically:

. IBM's AIX 3. I, AIX 3.2, AIX 4.1 and AIX 5.x UNIX operating systems for their RS/6000 product line (recently renamed eServer pSeries) as a consultant.

. Tandem's NonStop UX UNIX operating system for fault tolerant systems (as an employee of Tandem Computers).

. IBM's now defunct WorkPlace OS desktop operating system (successor to their OS/2 product)) (as a consultant and later as an employee).

. Microsoft's Windows NT4.0 and Windows 2000 (employed by Microsoft).

. ICCOS (a now defunct operating system) (employed at TagoSoft, Inc.)

. FreeBSD UNIX operating system (at TagoSoft, Inc and consulting for Shawn Systems, Inc).

. SUN's Network Filesystem V3 for Windows NT (as a consultant)

. SUN's PC/SKIP product for Windows NT (as a consultan0

. Impactdata/Megadrive/Data Direct Networks CDNA shared storage SAN file system (as a consultant and later as an employee)

. At Scalio, Inc developping storage management software for both Windows 2000 and UNIX systems.

. IBM's AIX 5.x UNIX operating systems for their RS/6000 product line (recently renamed eServer pSeries) as a consultant to Veritas Software making changes to AIX as part of an IBM/Veritas relationship.

I have also taught operating systems design classes at Universidad Simon Bolivar (Venezuela) in 1989 and professional system software classes, both for UNIX and Windows NT. I consider myself eminently well versed as a software enginner with 12 years of hands on operating system design and development.

The issues herein are of great importance to me and the industry that I am a participant of. I appreciate the opportunity to comment about the proposed settlement.

Below is a long list of comments. Each comment's name is of the form ''Comment X.Y'' where X is the major section of the proposed settlement within which the commented terms are discussed, and Y is simply a sequential number of the comments that I have written and it is actually independent of the acutal comment numbering within the proposed settlement itself. Each comment includes the appropriate reference to text in question within the proposed settlement document.

I am available for comment and clarification in any and all issues hereing, preferrably thorugh email, please contact me at:

Comment III.1

Section III.A reads:

''A. Microsoft shall not retaliate against an OEM by altering Microsoft's commercial relations with that OEM, or by withholding newly introduced forms of non-monetary Consideration (including but not limited to new versions of existing forms of non-monetary Consideration) from that OEM, because it is known to Microsoft that the OEM is or is contemplating:'' There are 3 problems with this section:

1. It allows Microsoft to withhold existing forms of non-monetary Consideration, because it only prevents witholding newly introduced forms;

2. Monetary considerations are explicitly excluded, they shouldn't be excluded.

3. Microsoft knowledge is irrelevant and hard to establish, that text only contributes to the ambiguity of this section. Section III.A should be not be constrained or qualified in these ways. It should be replaced with this text:

A. Microsoft shall not retaliate against an OEM by altering Microsoft's commercial relations with that OEM, or by withholding any forms of Consideration from that OEM, because the OEM is or is contemplating:''

Comment III.2

Section III.A.I reads:

''1. developing, distributing, promoting, using, selling, or licensing any software that competes with Microsoft Platform Software or any product or service that distributes or promotes any Non-Microsoft Middleware;''

There are 2 problems in this section:

1. Microsoft in the past has retaliated against OEMs that market products that compete against Microsoft products, not just Microsoft Platform Software. For example, Microsoft retaliated against IBM when IBM decided to pro-install its SmartSuite product (a product that competes directly with Microsoft Office) on its PCs, see Findings of Fact, paragraph 122 which reads: ''... Then, on July 20, 1995, just three days after IBM announced its intention to pro. install SmartSuite on its PCs, a Microsoft executive informed his counterpart at the IBM PC Company that Microsoft was terminating further negotiations with IBM for a license to Windows 95. Microsoft also refused to release to the PC Company the Windows 95 ''golden master'' code. The PC Company needed the code for its product planning and development, and IBM executives knew that Microsoft had released it to IBM's OEM competitors on July 17 ....''

2. The words ''any software that competes'' allow for retaliation against the development, distribution, promotion, use, sell, or licensing of any technology that competes against Microsoft technologies. Examples of such technologies, include but are not limited to: technical standards, open or proprietary protocols, services, hardware products, etc. Section III.A1 should be not be constrained or qualified in these ways. The existing Section III.A.1 should be left as part of the text and a new paragraph should be added to the list. Thus Section III.A.4 (a new paragraph) should be:

''4. developing, distributing, promoting, using, selling, or licensing any technology or product that competes with any Microsoft product, technology or service;'' Comment III.3

Section III.A.2 reads:

''2. shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System; or'' Microsoft currently forbids OEMs, or it imposes Market Development Agreement penalities or it withholds Consideration from OEMs when they offer for sell Personal Computers without a Microsoft Operating System. Because of the earlier consent decree imposed on Microsoft, instead of requiring that every Personal Computer include a Microsoft Operatin System, Microsoft requires that for each model of Personal Computer offered by the OEM that each Personal Computer of that model be sold with a Microsoft Operating System. If this isn't done, Market Development Agreement penalties or Considerations are withheld from the OEM. Theoretically, the OEM is free to offer a model of Personal Computers for which it expects to sell such a high fraction of them without a Microsoft Operating System, that offering them in that way doesn't cause harm or competitive disadvantage to the OEM. In reality, node of the models of Personal Computers are expected to sell in any large enough percentage without a Microsoft Operating System, thus the OEM ends up paying for a Microsoft Operating System for each Personal Computer for each model that it offers, thus it is forced to always pay for a Microsoft Operating System.

Microsoft, additionally requires that the end user of the Personal Computer accept a license agreement, and the it indicates that if the license agreement is not accepted, that the Microsoft Operating System product should not be used and that the Personal Computer manufacturer should be contacted for a refund.

Because of Microsoft per unit per model royalty imposition on the OEM, the OEM has no incentive to provide such a refund to the end user and these requests are largely ignored by the OEMs thus resulting in end users that desire to purchase a Personal Computer to pay for a software licesnse for a Microsoft Operating System, even if they never use such a software. Given Microsoft's creativity in constraining OEMs in their business decisions, a broad based term should also be included. For example, Microsoft could technologically constraint the GEM from supporting non-Microsoft Operating Systems, for example by Microsoft imposing on the GEM technological standards that must be used in the Personal Computer design and because of intellectual property reasons the use of these standards prevent non-Microsoft Operating Systems from functioning on the Personal Computer (for example because Microsoft might have patents on the technology).

Section III.A.2 should be augmented with these subclauses to allow consumer to purchase Personal Computers without a Microsoft Operating System:

''2. shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System, or (c) does not include any Operating System of any kind, or (d) includes a Windows Operating System Product and provides for the removal of the Windows Operating System Product during the startup of the Personal Computer, as long as the Windows Operating System has not been used by the consumer, and allows for a refund to be issued to the comsumer for the price of the operating system, or (e) in any way supports or provides non-Microsoft Operating Systems; or''

Comment III.4

Section III.A by virtue of enumerating the activities that the GEM ''is or is contemplating'' allows Microsoft to retaliate for any activities not explicitly enumerated in this list (III.A.1, III.A.2, III.A.3, etc). A broad term should be added that prevents Microsoft from any other cause for retaliation. Section III.A.5 should be added (Section III.A.4 was proposed to be added above in Comment III.2):

5. engaging in any lawful activity by any means by itself or in cooperation with any party.

Comment III.5

Section III.A in the fith paragraph (the paragraph under III.A.3) reads in its last two sentences: ''Microsoft shall not terminate a Covered OEM's license for a Windows Operating System Product without having first given the Covered GEM written notice of the reasons for the proposed termination and not less than thirty days'' opportunity to cure. Notwithstanding the foregoing, Microsoft shall have no obligation to provide such a termination notice and opportunity to cure to any Covered GEM that has received two or more such notices during the term of its Windows Operating System Product license.''

There are three problems with these sentences:

The time period of thirty days for cure is extremely short and would lead to unnecessary hardship on the OEM because of product distribution considerations (channel, distribution, resellers) that might require a constly product recall to be able to cure in thirty days. A period of at least 90 days is more appropriate. It is interesting to notice how terminating a Covered OEMs license and thus putting the OEM immediately out of the Personal Computer business is codified into this consent decree, when any restraint on Microsoft's illegal monopolistic behaviour requires (so far) years of litigation and continued complaints about how ''draconian'' such measures are.

2. The non-obligation to provide a termination notice can be used by Microsoft as a means of retaliation by not enforcing contractual terms on some OEMs while enforcing them on others, thus easily allowing for just two such notices to cure to be used as retaliatory means. The number of notices should be a function of time, for example 2 notices per year.

3. Microsoft should be required to enforce contractual terms in a non-discriminatory way across all OEMs, it should not be allowed to selectively enforce contractual terms because it would provide an easy retaliatory tool against the OEMs. Additionally, Microsoft must show that if it makes efforts to enforce certain terms, then it must enforce all terms across all OEM with equal effort, dilligence and strength.

4. The notion of termination notices, per se, is problematic, because termination notices might not even correspond to actual OEM behaviour but to misunderstanding between the parties or Microsoft's desires for retaliation against the OEM. Any such termination notice should be submitted to the Technical Committee for technical consideration, the Microsoft Internal Compliance Officer, and to all the Plaintiffs; together with detailed documentation of the non-discriminatotry enforcement by Microsoft of these and any other contractual terms across all Covered OEMs. This communication is important because it ensures that the antitrues enforcement parties are involved from the start when any such notice is given. Comment III.6

Section III.A, last paragraph reads:

''Nothing in this provision shall prohibit Microsoft from providing Consideration to any OEM with respect to any Microsoft product or service where that Consideration is commensurate with the absolute level or amount of that OEM's development, distribution, promotion, or licensing of that Microsoft product or service.''

These issues should be addressed:

1. Such Consideration should be offered to all Covered OEMs in a non-discriminatory basis.

2. The Consideration should be objectively measured according to established accounting practices.

3. The Technical Committee, the Microsoft Internal Compliance Officer, and all Plaintiffs should be informed and provided a copy of any and all such agreements and be allowed to requests additional documentation and conduct interviews related to the agreement.

Comment III.7

Section III.B, first paragraph reads:

''B. Microsoft's provision of Windows Operating System Products to Covered OEMs shall be pursuant to uniform license agreements with uniform terms and conditions. Without limiting the foregoing, Microsoft shall charge each Covered OEM the applicable royalty for Windows Operating System Products as set forth on a schedule, to be established by Microsoft and published on a web site accessible to the Plaintiffs and all Covered OEMs, that provides for uniform royalties for Windows Operating System Products, except that:'' Issues:

1. In the first sentence, where it reads ''... with uniform terms and conditions.'' it should read:'' .... with uniform terms and conditions and Considerations.'' Considerations established outside or after the license agreement has been entered should be communicated to the OEMs in a uniform manner. All agreements and Considerations should be provided to the Technical Committe, the Microsoft Internal Compliance Officer, and all Plaintiffs and these parties must be allowed to requests additional documentation and conduct interviews related to the agreements and Considerations.

2. Microsoft in the past has discriminated against OEMs and other Personal Computer manufacturers (for example Apple) by threatening to not make Microsoft products available on those manufacturers computers, for example Microsoft Office cancellation for Apple's Macintosh systems. Additionally, Microsoft has used the OEM prices of these non-Operating System products as a means to discriminate against OEMs. The prices and the offering of any Microsoft product to any Covered OEM for bundling with a Personal Computer should be nondiscriminatory and subject to uniform license agreements.

3. Volume discounts of groups of Microsoft Operating System Products and Microsoft non-Operating System Products should not be allowed, because it might lead to exclusion from the market of products that competed against the Microsoft non-Operating System Products. For example, group discounts for a bundle of Microsoft Windows XP and Microsoft Office; or Microsoft Windows XP and Microsoft Word (or Microsoft Excell, etc); or Microsoft Windows XP and Microsoft Works; must not be allowed.

Comment III.8

Section III.C reads:

''C. Microsoft shall not restrict by agreement any OEM licensee from exercising any of the following options or alternatives:''

This should read:

C. Microsoft shall not restrict by agreement or any other means any OEM licensee from exercising any of the following options or alternatives:

For example, Microsoft could, through verbal or written communication, or through the quality of service that it provides the OEM restrict the OEM, or threaten the OEM from exercising the alternatives. Microsoft has in the past retaliated against OEMs, particularly IBM and Gateway, as is described in detail in the Findings of Fact through means other than agreements. For example by witholding IBM participation in marketting programs, or threatening Gateway with sofware audits.

Comment III.9

Section III.C.1 and others enumerate:

''icons, shortcuts, or menu entries'' this list should be: icons, shortcuts, folders, appliactions, explorer hierarchies or menu entries

Comment III.10

Section III.C.1 ends in ''with respect to non-Microsoft and Microsoft products.'' This should be changed to read: ''with respect to non-Microsoft and Microsoft products or technologies that offer similar types of functionality.'' For example, the technology might be provided by a network service and not by a product installed in the Personal Computer, how the technology is provided should not be a reason for allowing Microsoft to retaliate or discriminate.

Comment III.11

In general, section III.C.1 and throughout the document, it is assumed that the only way to allow applications or software facilities to be used is through ''icons, shortcuts, or menu entries'', when in reality, applications/middleware can also be activated by associating it with particular types of data, and when such types of data are accessed, the application associated with it is activated. For example, when a file with a given extension is accessed, or when a URL is accessed over the interact, the type of the data is determined and the application associated with that type of data is activated. It is vital that such associations be allowed in a non-discriminatory basis between Microsoft and non-Microsoft technologies. For example, when a Internet audio URL is accessed, the media player associated with the data type is invoked to cause the audio to be decoded and played. It is not unsusual for multiple competing technologies, such as Microsoft Media Player, Real Networks and Apple's Quicktime media players to be capable of supporting the same data types, thus the preservation of the setting chosen by the user is important. Discrimination in this area has occurred in the past against both Apple's Quicktime and Real Network's Real Player. The document should be updated throughout to take into account this form of application activation through data type and file name extension associations.

Comment III.12

Section III.C.2 reads:

''2. Distributing or promoting Non-Microsoft Middleware by installing and displaying on the desktop shortcuts of any size or shape so long as such shortcuts do not impair the functionality of the user interface.''

The term shortcuts should be replaced with icons, because many types of items can be shown on the desktop and these are not limited to shortcuts. For example, applications, files, folders, etc.

Comment III.13

Section III.C.3 reads:

''3. Launching automatically, at the conclusion of the initial boot sequence or subsequent boot sequences, or upon connections to or disconnections from the Interact, any Non-Microsoft Middleware if a Microsoft Middleware Product that provides similar functionality would otherwise be launched automatically at that time, provided that any such Non-Microsoft Middleware displays on the desktop no user interface or a user interface of similar size and shape to the user interface displayed by the corresponding Microsoft Middleware Product.'' Issues:

1. The qualification: ''if a Microsoft Middleware Product that provides similar functionality would otherwise be launched automatically at that time'' is simply a form of restraint of trade. Microsoft usually doesn't lead in innovation, it follows, copies and bundles other's innovations into its products. It is unreasonable to require that Microsoft launch some software at a particular time to allow others to launch their software at that time. Usually some third party or OEM will developped these concepts and only later (much later sometimes) Microsoft will copy the concepts and include them in their versions of such functionality. The qualification should be removed.

2. The second qualification is also very unresonable, here Microsoft again thinks that it can dictate or retrain through its actions (or lack thereof the innovations of others. The qualification reads: ''provided that any such Non-Microsoft Middleware displays on the desktop no user interface or a user interface of similar size and shape to the user interface displayed by the corresponding Microsoft Middleware Product.'' Again, it is ludicrous that competing ISVs or OEMs be reatrained to only mimic Microsoft's actions when usually innovation happens the other way around. This qualification should be removed. Why should microsoft care about the size of the user interface? If the OEM creates a user interface that is too small, or narrow, or large, it doesn't cause any harm to Microsoft, only to the OEM in user dissatisfaction and support costs (none of which are Microsoft's concern given that it doesn't bare any of those costs, and given Microsoft's treatment of Hewlett Packard with respect to startup sequnce shells, it has shown that it doesn't care about those OEM costs).

3. The qualification ''if a Microsoft Middleware Product that provides similar functionality'' also allows for Microsoft restraint of other's innovations, the definition of Microsoft Middleware Product is particularly weak and full of escape clauses. The qualification should not be present at all.

4. The time qualification and enumeration of the circumstances and times under which launching can occur ''at the conclusion of the initial boot sequence or subsequent boot sequences, or upon connections to or disconnections from the Internet'' should also be removed. There are many reasons why lounching might be desireable at other times.

5. Launching of should not be restricted to ''Non-Microsoft Middleware'', any software should be allowed to be launched. Section III.C.3 should read:

3. Launching automatically, at the conclusion of the initial boot sequence or subsequent boot sequences, or upon connections to or disconnections from the Interact, or at any other time, any Non-Microsoft software is allowed without this being subject to any restraint from Microsoft. Mechanisms (APIs, Protocols, Facilities, etc) present in a Microsoft Operating System that aids launching of Microsoft software at particular times should be documented and allowed to be accessed by non-Microsoft software without restraint.

It should be noted that the original Section III.C.3 precludes the implementation of IAP sign up sequences, OEM shells, end user tutorials that are desired to be lounched at the initial and subsequent boot sequences. For example the OEM might present an IAP sign up sequence until such a time when the user as made such a selection or when the

user as indicated that it doesn't want to asked again in subsequent sign up sequences. The reason the Section III.C.3 precludes even the implementation in the initial boot sequence is because Microsoft can remove their own facilities from startup or from displaying a user interface, thus forcing the OEM to remove their facilities. Freedom of innovation and choice by the OEMs cannot be at the mercy of Microsoft's actions. For example, Microsoft might move such facilities to the second boot sequence and it might require that the system reboot after an initial boot sequence process, the OEMs would then not have the freedom to provide their facilities in the second boot sequence.

Comment III.14

Section III.C.4 reads:

''4. Offering users the option of launching other Operating Systems from the Basic Input/Output System or a non-Microsoft boot-loader or similar program that launches prior to the start of the Windows Operating System Product.''

This section should be augmented in this way:

4. Offering users the option of (a) launching other Operating Systems from the Basic Input/Output System; or (b) launching other Operating Systems from a non-Microsoft boot-loader or similar program that launches prior to the start of the Windows Operating System Product.; or (c) choosing to make a non-Microsoft boot-loader the default boot loader in the system; or (d) choosing to allow the end user to interactively direct the Basic Input/Output System or a non-Microsoft boot-loader or any other facility to remove a Microsoft Windows Operating System and to provide the Personal Computer owner to receive a refund for the cost of the Microsoft Windows Operating System from the OEM; or (e) to select a default Operating System that is a non-Microsoft Operating System, for example by allowing the default Operating System to start without user intervention after a timeout period; or (I3 any other form of restraint that might cause an OEM to not preload non-Microsoft Operating systems in theft Personal Computers (for example by having the Microsoft Operating System corrupt the disk occupied used by such non-Microsoft Operating Systems, or from denying supprt to OEMs for such product configurations, etc)..

Given the nature of existing restraints by Microsoft in this area, these additional clauses allow for less restraint by Microsoft on the OEMs actions.

Comment III.15

Section III.D reads:

''D. Starting at the earlier of the release of Service Pack 1 for Windows XP or 12 months after the submission of this Final Judgment to the Court, Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of interoperating with a Windows Operating System Product, via the Microsoft Developer Network (''MSDN'') or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product. In the case of a new major version of Microsoft Middleware, the disclosures required by this Section III.D shall occur no later than the last major beta test release of that Microsoft Middleware. In the case of a new version of a Windows Operating System Product, the obligations imposed by this Section III.D shall occur in a Timely Manner.'' Issues:

1. The text ''via the Microsoft Developer Network (''MSDN'') or similar mechanisms'' allows Microsoft not to use the MSDN program which is broadly available and non-discriminatory, and allows instead for Microsoft to extract other agreements and conditions from the interested parties. The intent should by ''via the Microsoft Developer Network (''MSDN'') or successor developer program (if the MSDN program is discontinued or replaced by a new developer program, but such a program should be equally broadly available and equally nondiscriminatory as the MSDN program was on the earliest date the proposed consent decree was filled with the Court by Microsoft and the Plaintiffs).''

2. The text ''APIs and related Documentation'' should be extended to include ''APIs, related Documentation, Protocols, File Formats, Data Formats, Certification/Validation Component Signatures, and any other technological mechanism''.

3. The text ''that are used by Microsoft Middleware to interoperate with a Windows Operating System Product '', given the loose definition and the escape clauses that Microsoft can invoke in that definition, and given that Microsoft also markets a wide variety of non-Middleware software and hardware, the text should be corrected to require full disclosure of the use by these software and hardware products of Microsoft Operating System facilities. The proposed text is shown below.

4. The requirement that disclosure only occur in the case of a new major version of Microsoft Middleware allows Microsoft an easy exit from their documentation requirements. Microsoft has stated in fron of the District Court (Judge Jackson) that a sandwich would be part of the Operating System if they so dictated, clearly Microsoft cannot be trusted to name a release major or non-major, because to Microsoft it would be whatever they desire at such a time. Furthermore the mechanism of Major and first Minor point release numbers is highly ambiguous and maleable, certain Microsoft products don't even have a version number (Windows XP, Microsot .Net). In any case, whether a product release is major or minor should not be an excuse for non-diclosure, a small bug fix release wouldn't have many changes on interface use, so its documentation requirements would be proportional to the effort spent in the release development. If this restriction is not removed, facilities would remain undocumented, simply because Microsoft doesn't use them initially in their so called major release but instead only uses them initially in a minor release; or even more easily by making every release a minor release. Microsoft has shown in the earlier Consent Decree entered with the D.O.J. that it will take advantage in any ambiguity.

The new section should thus read:

D. Starting at the earlier of the release of Service Pack 1 for Windows XP or 12 months after the submission of this Final Judgment to the Court, Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of interoperating with a Windows Operating System Product, via the Microsoft Developer Network (''MSDN'') or successor developer program (if the MSDN program is discontinued or replaced by a new developer program, but such a program should be equally broadly available and equally non-discriminatory as the MSDN program was on the earliest date the proposed consent decree was filled with the Court by Microsoft and the Plaintiffs), the APIs, related Documentation, Protocols, File Formats, Data Formats, Certification/Validation Component Signatures (and Microsoft shall not restraint or deny such signature facilities or enablements, and any other technological mechanism that are used by Microsoft Middleware, Microsoft Application, Microsoft Hardware Products, or by newly introduced Microsoft Operating System features (that are similar to existing facilities available from third parties in the market) to intemperate with a Windows Operating System Product. In the case of a any new version of Microsoft Middleware or Microsoft Operating Systems, or Microsoft Application, the disclosures required by this Section III.D shall occur no later than the last major beta test release of that Microsoft Middleware. In the case of a new version of a Windows Operating System Product, the obligations imposed by this Section III.D shall occur in a Timely Manner.

Comment III.16

Section III.E should be augmented where it reads ''on reasonable and non-discriminatory tcrms'' to read ''on reasonable, non-discriminatory and non-royalty bearing terms.'' The imposition of per unit royalties as a condition to grant access to any Communication Protocol would allow Microsoft to exclude competitors from the market.

Comment III.17

Section III.E reads:

''E. Starting nine months after the submission of this proposed Final Judgment to the Court, Microsoft shall make available for use by third parties, for the sole purpose of interoperating with a Windows Operating System Product, on reasonable and nondiscriminatory terms (consistent with Section III.I), any Communications Protocol that is, on or after the date this Final Judgment is submitted to the Court, (i) implemented in a Windows Operating System Product installed on a client computer, and (ii) used to interoperate natively (i.e., without the addition of software code to the client operating system product) with a Microsoft server operating system product.''

There are many issues with this section:

1. Communication Protocols can be used for communication between two or more personal computers running a Windows Operating System Product installed on client computers. For example a client computer can share a disk drive so that its file are accessed to other client computers, such functionality doesn't require a Microsoft server operating system product. The ability to interoperate natively should not be

restricted to the Communication Protocols used to interoperate natively with a Microsoft server operating system product, for example a competing non-server client operating system might require to implement these protocols to be competitive. For example, both Apple's MacOS X client operating system and client versions of the GNU/Linux operating systems contain incomplete implementations of the file sharing protocols used by Windows Operating System). Section III.E shall apply equally to both client and server operating systems to allow them interoperate natively with Windows Operating System Products installed on client computers.

2. To circumvent the provisions in Section III.E Microsoft could do this in future (major or minor) releases of its Personal Computer Operating System Products: (a) do not include software that implements future revisions of a Communications Protocol with the Windows Operating System Product installed on a client computer; and (b) request from the Microsoft server operating system product the software that the client requies at first boot, each boot, or at under other circumstances. Thus Microsoft would have circumvented the requirements stated in Section III.E because there would be ''addition of software code to the client operating system product'' (which Section III.E.ii requires that it be ''without the addition of software code to the client operating system product''). By Microsoft implementing a new protocol (which it would not have trouble documenting to 3rd parties) that the client computer's Windows Operating System Product would use to request these addional software codes from a Microsoft server operating system product the circumvention would have been achieved. Thus by removing the existing components that implement existing Communications Protocols all kinds of Communications Protocols would thus be allowed to remain undocument in future releases of a Windows Operating System Product by Microsoft, thus denying the purpose of allowing native interoperability between other operating systems and Windows Operating System Products. Microsoft, through privave key signin and public key signature validation, Microsoft would be able to sign these software components to ensure their origins (Microsoft) and that they have not ben tampered, thus allowing every Communications Protocols to remain undocumented, including security protocols, filesystem protocols, transaction management protocols, etc. The intent of Section III.E is good because it is pro-competitive, but the actual terms easily allow Microsoft to circumvent that intent. Software is very maleable, terms used to describe it, such as: ''without the addition of software code'' are easily circumvented, for example by slicing the software and requiting thatthere be ''addition of software code'', this can be done easily and transparently (i.e. without knowledge by end user).

3. The word ''implemented'' is also used to describe the software, and can lead to arguments or circumvention from Microsof with respect to meaning.

4. The description of what is being made available is ambiguous. Instead of ''Microsoft shall make available .... any Communications Protocol'', it should be stated clearly what is being made available. A description of what should be made available is shown in the proposed revision to Section III.E below.

Section III.E should be replaced with:

E. Starting nine months after the submission of this proposed Final Judgment to the Court, Microsoft shall make available for use by third parties, for the sole purpose of interoperating with a Windows Operating System Product, on reasonable (without an up front fee and royalty free) and non-discriminatory terms (consistent with Section III.I), technical implementations for any Communications Protocol that is, on or after the date this Final Judgment is submitted to the Court, utilized by a Windows Operating System Product nstalled on a client computer to interoperate with (i) a Microsoft server operating system product, or (ii) a Windows Operating System Product. The means through which any such Communications Protocol shall be made available shall include:

(a) a non-fee based and non-royalty based patent license to any and all patents required by an implementation of fully featured, high performance, and interoperable client or server operating system product components that implement the Communication Protocols in question. The patent license can be limited to be for the sole purpose of interoperating with Windows Operating System Products installed on a client computers; and

(b) a non-fee based and non-royalty based license to implement the Communications Protocol in client and server operating system product components that are fully featured, high performance, and interoperable with Windows Operating System Products installed on a client computers. The protocol license can be limited to be for the sole purpose of interoperating with Windows Operating System Products installed on a client computers; and

(c) a technical discussion forum (mail list, newsgroup or web site) through which Microsoft will provide in a nondiscriminatory basis non-fee based technical support to ISVs that require support related to the Communications Protocol. Microsoft shall make its best efforts to provide such technical support. Microsoft shall provide subject to the Communication Protocol license the Communications Protocol specifications which shall be:

(d) the precise and complete set of specifications of the Communication Protocols (and their predecessors), such that based on it a competent third party software developper would be capable of implementing fully featured, high performance, and interoperable operating system product components that implement the Communication Protocols in question (without the need to perform any reverse engineering of any kind); or In the abscence of such a precise and complete set of specifications as described in Section III.E.a (above), or at Microsoft's choosing or by direction of the Technicall Committee, Microsoft shall provide instead:

(e) any and all specifications that Microsoft has of the Communication Protocols (and their predecessors); and the complete source code and build procedures of all the relevant client side components and implementations (for each Microsoft Windows Operating System Product) of the Communications Protocol in a form that these components can be compiled (i.e. translated from source code form into binary form) and linked (translated from object form into a binary executable form) by the third party to produce the exact same binaries of the native components in the Windows Operating System Product that implement the Communication Protocols. The license under which these component's source codes and build procedures would be provided to the third party would be only for reference and use only within the third parties premises for the sole purpose of implementing fully featured, high performance, and interoperable operating system product components that implement the Communications Protocol in question. No redistribution rights of any kind (in binary or source form) are required to be given to the third party.

Additionally:

(f) Microsoft shall continuously and proactively provide updates to the third party such that the third party can continue to implement fully featured, high performance, and interoperable operating system product components that implement the Communication Protocols in question as the corresponding Microsoft Windows Operating System Products implement new patents, versions or features of the Communications Protocol. These updates should be provided irrespective of how major or minor is the Microsoft Windows Operating System Product update that makes use of the Communications Protocol changes or patents. Microsoft shall provide these through addendums:

(i) to the licenses described in Sections III.E.a and III.E.b to cover new patents or protocol revisions or versions as appropriate; and

(ii) the specifications and implementations described or provided in Sections III.E.d and III.E.e as appropriate

Comment III.18

Section III.F.1.a reads:

''a. developing, using, distributing, promoting or supporting any software that competes with Microsoft Platform Software or any software that runs on any software that competes with Microsoft Platform Software, or'' Microsoft has shown that it retaliates against OEMs when they support now-Microsoft software in general, not just Microsoft Platform Software, for example the retaliation against IBM because of IBM's intent to bundle SmartSuite with their Personal Computers as can be seen in the Findings of Fact.

Section III.F.1.a should be expanded to read:

a. developing, using, distributing, promoting or supporting any software that competes with Microsoft Platform Software, Microsoft Operating Systems, Microsoft Application Software, Microsoft Hardware or any other Microsoft supported technologies or any software that runs on any software

that competes with Microsoft Platform Software, Microsoft Operatin Systems, Microsoft Application Software, Microsoft Hardware or any other Microsoft supported technologies; or

Comment III.19

Section III.F.2 reads:

''2. Microsoft shall not enter into any agreement relating to a Windows Operating System Product that conditions the grant of any Consideration on an ISV's refraining from developing, using, distributing, or promoting any software that competes with Microsoft Platform Software or any software that runs on any software that competes with Microsoft Platform Software, except that Microsoft may enter into agreements that place limitations on an ISV's development, use, distribution or promotion of any such software if those limitations are reasonably necessary to and of reasonable scope and duration in relation to a bona fide contractual obligation of the ISV to use, distribute or promote any Microsoft software or to develop software for, or in conjunction with, Microsoft.''

Issues:

1. Again, Microsoft retaliates against OEMs (IBM) to product Microsoft products other than its Operating Systems.

2. Allowing Microsoft to enter into agreements that ''place any limitations on ISV's development, use, distribution or promotion of any such software'' is an open ended means under which Microsoft can cause ISV's to act in manners that Microsoft desires. For example, Microsoft might extend the MSDN agreements with limited sublicensing of Microsoft patent pools and extract in exchange agreements from all 1SVs in the market to limit their development, use, distribution or promotion of any other software. The litigation to ensure that those limitations are not ''reasonably necessary to and of reasonable scope'' would probably take another 4 years of litigation. The Plaintiffs must remember that one of Microsoft's options at any time is to relly on the ambiguities of these terms and use them to realize their means, given that it has been shown that Microsoft has monopoly power int he x86 compatible Personal Computer market its retaliatory means must be reduced as much as possible.

Section III.F.2 should read:

2. Microsoft shall not enter into any agreement relating to a Windows Operating System Product, Microsoft Application Software, Microsoft Hardware or any other Microsoft supported technologies, that conditions the grant of any Consideration on an ISV's refraining from developing, using, distributing, or promoting any software that competes with Microsoft Platform Software, Microsoft Operatin Systems, Microsoft Application Software, Microsoft Hardware or any other Microsoft supported technologies or any software that runs on any software that competes with Microsoft Platform Software. Microsoft may not enter into any agreements that place limitations on an ISV's development, use, distribution or promotion of any such software for any reason.

Microsoft has more than enough resources to all the software development that it requires, if it has to felly on outside parties to do software development, it must do so without placing limitations.

Comment III.20

Section III.G.1 reads:

''G. Microsoft shall not enter into any agreement with:

1. any IAP, ICP, ISV, IHV or OEM that grants Consideration on the condition that such entity distributes, promotes, uses, or supports, exclusively or in a fixed percentage, any Microsoft Platform Software, except that Microsoft may enter into agreements in which such an entity agrees to distribute, promote, use or support Microsoft Platform Software in a fixed percentage whenever Microsoft in good faith obtains a representation that it is commercially practicable for the entity to provide equal or greater distribution, promotion, use or support for software that competes with Microsoft Platform Software, or''

These are the issues:

1. The text: ''except that Microsoft may enter into agreements in which such an entity agrees to distribute, promote, use or support Microsoft Platform Software in a fixed percentage whenever Microsoft in good faith obtains a representation that it is commercially practicable for the entity to provide equal or greater distribution, promotion, use or support for software that competes with Microsoft Platform Software'' allows Microsoft to extract agreements from these parties under which at least, by assuring itself of a 50% distribution, promotion or usage share it guarantees that no competitors technology can be bradly available on a large fraction of Personal Computers so that it can become a platform for cross-platform software. For example by ensuring that 50% of new Personal Computers don't include such software, Microsoft can ensure that such software doesn't obtain critical mass as a platform.

2. These kinds of allowances, given Microsoft's behavior, only serve to codify Microsoft's right to extinguish competition. It codifies the right and means through which Microsoft can cut other parties ''air supply''.

3. By restricting these terms to ''Microsoft Platform Software'' it allows Microsoft to enter other kinds of agreements in which the means to kill innovation and drive others off the market is by developping non-Platform Software, for example by developping Applications, giving them for free and forcing these parties to distribute them at 50% usage share. The whole exception should be removed and Section III.G.1 should read: G. Microsoft shall not enter into any agreement with:

1. any IAP, ICP, ISV, IHV or OEM that grants Consideration on the condition that such entity distributes, promotes, uses, or supports, exclusively or in a fixed percentage, any Microsoft Platform Software, Microsoft Operatin Systems, Microsoft Application Software, Microsoft Hardware or any other Microsoft supported technologies, or Furthermore, the agreement that Microsoft might enter might require that the OEM doesn't distribute certain non-Microsoft Sofware without actually requiring the distribution of Microsoft technologies. Thus a new clause should be added, Section III.G.3:

3. any IAP, ICP, ISV, IHV or OEM that grants Consideration on the condition that such entity refrains in any way or percentage from distributing, promoting, using, or supporting, any non-Microsoft software or technologies

Comment III.21

Section III.G.2 reads:

''G. Microsoft shall not enter into any agreement with:

2. any LAP or ICP that grants placement on the desktop or elsewhere in any Windows Operating System Product to that IAP or ICP on the condition that the IAP or ICP refrain from distributing, promoting or using any software that competes with Microsoft Middleware.'' Again the restriction is too narrow with respect to Microsoft's other means of distributing software, it should read:

2. any LAP or ICP that grants placement on the desktop or elsewhere in any Windows Operating System Product to that IAP or ICP on the condition that the IAP or ICP refrain from distributing, promoting or using any software that competes with Microsoft Middleware, Microsoft Platform Software, Microsoft Operatin Systems, Microsoft Application Software, Microsoft Hardware or any other Microsoft supported technologies

Comment III.22

Section III.G contains this, it is the second to last paragraph in the section: ''Nothing in this section shall prohibit Microsoft from entering into (a) any bona fide joint venture or (b) any joint development or joint services arrangement with any ISV, IHV, IAP, ICP, or OEM for a new product, technology or service, or any material value-add to an existing product, technology or service, in which both Microsoft and the ISV, IHV, IAP, ICP, or OEM contribute significant developer or other resources, that prohibits such entity from competing with the object of the joint venture or other arrangement for a reasonable period of time.'' Microsoft should be allowed to enter into these arrangements, but it should be allowed to require it to ''prohibits such entity from competing with the object of the joint venture or other arrangement for a reasonable period of time.''. Again, ''reasonable period of time'' is ambiguous and open ended, and non-compete clauses have no pro-competive role other than exclusionary when included in agreements by a Monopolist such as Microsoft. Joint development or joint services agreements should not be restricted in this manner. If an actual separate entity is formed, a joint venture that includes the incorporation or foundation of a separate independent legal entity, the entity in question could have non-competition restrictions placed on it, but not the shareholder companies themselves (i.e. Microsoft and the other party).

Comment III.23

Section III.G, last paragraph, reads:

This Section does not apply to any agreements in which Microsoft licenses intellectual property in from a third party. This statement, is very ambiguous and unqualified. The meaning of ''Microsoft licenses intellectual property in from a third party'' could easily mean that Microsoft products that include any third party intellectual propery are exempt from the

section. Most Microsoft products contain third party software, certainly its operating systems do (for example the Vcritas/Seagate backup software and the Veritas Volume Manager included in both Windows XP and Windows 2000; the BSD software included in Windows 2000 and Windows XP; the Mosaic sofware included in all version of Internet Explorer; the Java software included in Windows 2000 and Windows XP; the printing drivers and other device drivers from IHVs included in Windows 2000 and Windows XP; the amount of software licensed into these products is very large; etc). Additionally, there can also be other forms of intellectual licenses that apply to these and other products (for example licenses to use patents of third parties). If the clause is intended to mean something different from my interpretation, please explain what it is intended to mean, and what terms in that sentence ensures that only that meaning is allowed.

This sentence should be removed completely from this section. Alternatively, a sentence that says:

Where terms in this section would cause a third party who has licensed software or any other form of intellectual property to Microsoft to have its license agreement violated then the specific terms in this section that would cause such a license breach do not apply. Unless the third party, at its own discrtion, chooses to allow the specific violations under an agreement amendment. Violation of the license agreement means violation to the detriment of the interest of the third party and not violation to the detriment of Microsoft's interests. Additionally, Microsoft should proactively inform the Microsoft Internal Compliance Officer, the Technical Committee, and the Plaintiffs about the circumstances in question and provide, as priviledged communication and without violating the interests of the third party, all information required for their enforcement activities.

Comment III.24

Section III.H.2 (the first such section, there are two such sections in Section III.H) reads:

''2. Allow end users (via a mechanism readily available from the desktop or Start menu), OEMs (via standard OEM preinstallation kits), and Non-Microsoft Middleware Products (via a mechanism which may, at Microsoft's option, require confirmation from the end user) to designate a Non-Microsoft Middleware Product to be invoked in place of that Microsoft Middleware Product (or vice versa) in any case where the Windows Operating System Product would otherwise launch the Microsoft Middleware Product in a separate Top-Level Window and display either (i) all of the user interface elements or (ii) the Trademark of the Microsoft Middleware Product.''

These are the issues:

The text ''require confirmation from the end user'' should include statements that ensure that Microsoft will not act in a discriminatory or derrogatory manner in those confirmations. For example, Microsoft should not be allowed to include as part of that confirmation process: documentation, help, verbal communitation or any other means discriminatory or derrogatory statements. Examples of such statemetns are: ''By choosing this option, Microsoft voids the warranty of the product or disclaims its obligation to provide support. Microsoft has not tested this third party option, use at your own risk. Use of this option might cause data loss, corruption, etc.'' Microsoft has included messages in their products purposedly to cause third parties to not use non-Microsoft technology. The Windows 3.0 betas included messages similar to these when Windows realized that it was running on top of Digital Research's DR-DOS Operating System (instead of running on top of Microsoft's MS-DOS).

2. These statements: ''launch the Microsoft Middleware Product in a separate Top-Level Window and display either (i) all of the user interface elements or (ii) the Trademark of the Microsoft Middleware Product.'' allow for Microsoft to easily subvert the intent by not Trademarking the Microsoft Middleware (while allowing compound Trademarks suchs as ''Windows (R) Stuff'), by only showing all but one (1) of the user interface elements. The restriction to a separate Top-Level Window means that by providing it in a subwindow of an existing window on in a visually separate top level window that is controlled by a Microsoft non-separate or independent process, these escape clauses, again provide Microsoft with a a myriad ways to escape the intent of the clause. Additionally because of the software maleability the restriction to only Microsot1 Middleware Products should not apply.

Section III.H.2 (the first such section, there are two such sections in Section III.H) should read:

2. Allow end users (via a mechanism readily available from the desktop or Start menu), OEMs (via standard OEM preinstallation kits), and Non-Microsoft software and technologies (via a mechanism which may, at Microsoft's option, require confirmation from the end user in a non-discriminatory and non-derrogatory manner) to designate a Non-Microsoft software or technologies to be invoked in place of any Microsoft Middleware, Microsoft Application or any Microsoft Operating System feature that existed in the market as a third party product prior to Microsoft's incorpration of such a feature into its Operating System (or vice versa) in any case where the Windows Operating System Product would otherwise launch the Microsoft Middleware Product, Microsoft Applications or any such Microsoft Operating System.

Comment III.25

Section III.H.3 allows for ''(b) seek such confirmation from the end user for an automatic (as opposed to user-initiated) alteration of the OEM's configuration until 14 days after the initial boot up of a new Personal Computer''. Such confirmation must be sought through non-discriminatory and non-derrogatory means (as outlined in Comment III.23). Additionally such confirmation from the end user must allow the user to reject the continued request for this confirmation by providing an easily visible checkbox that indicates: ''would you like to be asked this question again in the future?'' if the user doesn't want this question to be asked in the future it selects the checkbox and the question is never asked again (and the current settings remain unchanged).

Comment III.26

Section III.H.3.2 (the second such section, there are two such sections in Section III.H) reads:

''2. that designated Non-Microsoft Middleware Product fails to implement a reasonable technical requirement (e.g., a requirement to be able to host a particular ActiveX control) that is necessary for valid technical reasons to supply the end user with functionality consistent with a Windows Operating System Product, provided that the technical reasons are described in a reasonably prompt manner to any ISV that requests them.''

Issues:

1. The ''designated Non-Microsoft Middleware Product'' term should be ''designated Non-Microsoft software or technology''.

2. Requirements to host a paricular ActiveX control must require that Microsoft proactively documents the interfaces of the particular Active) control, and doesn't prevent through signature or any other mechanism such hosting by the Non-Micorosft software or technology.

3. The ''provided that the technical reasons are described in a reasonably prompt manner to any ISV that requests them'' text shold read ''Microsoft must pro-actively and broadly (through the MSDN program and web sites) describe the technical reasons reasonable manner.'' Any such ''valid technical reasons'' must be communicated to the Technical Committee, the Microsoft Internal Compliance Officer and the Plaintiffs.

Section III.H.3.2 (the second such section, there are two such sections in Section III.H) should read:

''2. that designated Non-Microsoft software or technology fails to implement a reasonable technical requirement (e.g., a requirement to be able to host a particular ActiveX control) that is necessary for valid technical reasons to supply the end user with functionality consistent with a Windows Operating System Product, provided that the technical reasons and detailed and complete technical documentation and mechanisms (component signatures) are described in a reasonably prompt manner to all ISVs through the MSDN program or its successor. Addionally the valid technical reasons and any other information relevant to the reasons must be communicated to the Technical Committee, the Microsoft Internal Compliance Officer, the Plaintiffs and the ISVs in question.''

Comment III.27

The last paragraph of Section III.H.3 reads:

''Microsoft's obligations under this Section III.H as to any new Windows Operating System Product shall be determined based on the Microsoft Middleware Products which exist seven months prior to the last beta test version (i.e., the one immediately preceding the first release candidate) of that Windows Operating System Product.'' Issues:

1. Again this is tied to Microsoft Middleware Prodcuts, it should be replaced by the broader term.

2. When a technology ''exists'' can lead to ambiguity given that Microsoft might dictate that technology doesn't exist until it determines (at its sole discretion) that it exists. This ambiguity is not required.

The last paragraph of Section III.H.3 should be removed completely. Microsoft can introduce new Microsoft Middleware, Microsoft Applications, Microsoft Technologies, Microsoft Hardware at any arbitrary point in time after the release of an Operating System product. In so far as those Microsoft technologies alter user's preferences and default system settings, saving and restoring those settings sould be supported through an Operating System mechanism and user interface that allows for these settings to be manipulated.

Comment III.28

The first paragraphs of Section III.I reads:

''I. Microsoft shall offer to license to ISVs, IHVs, IAPs, ICPs, and OEMs any intellectual property rights owned or licensable by Microsoft that are required to exercise any of the options or alternatives expressly provided to them under this Final Judgment, provided that'' The text ''shall offer to license'' requires that licensing be offered, it doesn't require that it actually enter into such license agreements. The text should instead read:

I. Microsoft shall offer to license, and shall make its best effort to actually license, to ISVs, IHVs, IAPs, ICPs, and OEMs any intellectual property rights owned or licensable by Microsoft that are required to exercise any of the options or alternatives expressly provided to them under this Final Judgment, provided that

Comment III.29

Section III.I.1 reads:

''1. all terms, including royalties or other payment of monetary consideration, are reasonable and non-discriminatory;'' Allowing for per unit royalties or prohibitive up front licensing fees might prevent Microsoft competitors from actually being able to participate competitibly in the relevant product markets. This Section III.I.1 should read instead: ''1. all terms, are reasonable and non-discriminatory. Royalties or other payments of monetary consideration are explicitly forbidden from the temps when the intellectual property is to be used only for interoperation with a Microsoft Operating System product.'' For example such a license would not require royalties from a server Operating System to interoperate with a Microsoft Operating System for Personal Computers, but if the server Operating System makes use of the licensed intellectual property to interoperate with non-Microsoft Operating Systems for Personal Computers, then a royalty might be required by Microsoft.

Comment III.30

Section III.I.2 reads:

''2. the scope of any such license (and the intellectual property rights licensed thereunder) need be no broader than is necessary to ensure that an ISV, IHV, IAP, ICP or OEM is able to exercise the options or alternatives expressly provided under this Final Judgment (e.g., an ISV's, IHV's, IAP's, ICP's and OEM's option to promote Non-Microsoft Middleware shall not confer any rights to any Microsoft intellectual property rights infringed by that Non-Microsoft Middleware);'' XXX

Comment III.31

Section III.I.3 reads:

''an ISV's, IHV's, IAP's, ICP's, or OEM's rights may be conditioned on its not assigning, transferring or sublicensing its rights under any license granted under this provision;'' Not allowing the transferring or assignment of these parties rights under certain circumstances, for example under an acquisition, is inherently a form of discrimination. Given that the licenses are to be offered in a non-discriminatory fashion, it is important that such licenses once offered be available in the future and that the licensing not be restricted to a given period of time. If subsequent versions of technology become available, and new licenses are developped for that technology, the older licenses to the earlier technology should continue to be offered for the earlier verisions of the technology.

Comment III.32

The paragraphs immediately after Section III.I.5 reads: ''Beyond the express terms of any license granted by Microsoft pursuant to this section, this Final Judgment does not, directly or by implication, estoppel or otherwise, confer any rights, licenses, covenants or immunities with regard to any Microsoft intellectual property to anyone.''

Comment III.33

Section III.J.2.b reads:

''that the licensee:

(b) has a reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product,''

Microsoft shall not unreasonably dispute the licensee's assertions with respect to III.J.2.b, any individual member of the Technical Committee through direct communication with the prospective licensee can make a positive determination about the III.J.2.b requirement and inform Microsoft about its determination without any further Microsoft argument, dispute or delay about the prospective licensee meeting the III.J.2.b requirement (Court intervention shall not be required).

Section III.J.2.b should read:

(b) has a reasonable business need (as promptly and in a non-discriminating manner determined by Microsoft or any one individual member of the Technical Committee), for the API, Documentation or Communications Protocol for a planned or shipping product

Comment III.33

Section III.J.2.b reads:

''that the licensee:

(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business'' It should instead read: (c) meets reasonable, objective and non-discriminatory standards (proposed by Microsoft and promptly approved by the Technical Committe in consultation with the Plaintiffs) for certifying the authenticity and viability of its business, the actual determination of the actual authenticity and viability of the business can be made by Microsoft or any one member of the Technical Committee after taking into consideration legal consultation from the Technical Committee's legal staff

Comment III.34

Section J.2.d reads:

''that the licensee:

(d) agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification, approved by Microsoft, to test for and ensure verification and compliance with Microsoft specifications for use of the API or interface, which specifications shall be related to proper operation and integrity of the systems and mechanisms identified in this paragraph.''

The issues are:

1. Should be at Microsoft's expense, not the licensee's.

2. Verification should hot be performed by ''third-party verification, approved by Microsoft'' if such verification is required by Microsoft it should be done under staff hired by the Technical Committee and at Microsoft's expense and not through unknown for profit relationships and agreements between a third party and Microsoft. The intent of this section is for ''proper operation and integrity of the systems and mechanisms'', Microsoft should be satisfied with the Technical Committee staff performing these duties unless its goals are other than those expressed herein.

3. The text ''to test for and ensure verification and compliance with Microsoft specifications for use of the API or interface, which specifications shall be related to proper operation and integrity of the systems and mechanisms identified in this paragraph'' refers to to a ''Microsoft specifications for use of the API or interface'', these specifications shall be made available to the licensee

Section J.2.d should read:

(d) agrees to submit, at Microsoft's expense, any computer program using such APIs, Documentation or Communication Protocols to the Technical Committe for verification, to test for and ensure verification and compliance with Microsoft specifications (which Microsoft shall make available to the licensee) for use of the API or interface, which specifications shall be related to proper operation and integrity of the systems and mechanisms identified in this paragraph.

Comment IV.1 Section IV.A.2.a reads:

''a. Access during normal office hours to inspect any and all source code, books, ledgers, accounts, correspondence, memoranda and other documents and records in the possession, custody, or control of Microsoft, which may have counsel present, regarding any matters contained in this Final Judgment.''

This should be expanded to include electronic forms of communication in electronic form, not printed form, because it is extremely hard to sift through information, such as source code, in non-electronic form.

Section IV.A.2.a should read:

a. Access during normal office hours to inspect any and all source code, source code control systems, bug or defect databases, design documents, build procedures, binary codes, books, ledgers, electronic ledgers, electronic databases, accounts, correspondence, memoranda, newsgroups, discussions forums, web sites and other

documents and records in the possession, custody, or control of Microsoft, which may have counsel present, regarding any matters contained in this Final Judgment. Access to electronic forms of information shall be provided in electronic form and not in only in printed form.

Comment IV.2

Section IV.B.2 describes ''The TC members shall be experts in software design and programming.'' section IV.B.2.c reads:

''c. shall perform any other work for Microsoft or any competitor of Microsoft for two years after the expiration of the term of his or her service on the TC.''

Given that Microsoft competes in almost every software market conceivable, it is a strecth to request two years of non-compete agreement from the TC member. Two such years of non-compete could be provided only if Microsoft provides two such years of salary to the TC member with a yearly inflationary bonus adjustment per year.

Comment IV.3

Section IV.B.8.iii reads:

''(iii) obtain reasonable access to any systems or equipment to which Microsoft personnel have access;''

This should reads:

(iii) obtain reasonable access to any systems, services or equipment to which Microsoft personnel have access; services should include but not be limited to: authentication, file sharing, discussion forums, newsgroups, chat channels, source code control systems, bug/defect database systems, design management systems, document repositories, web sites, etc.

Comment IV.4

Section IV.D.4.d reads:

''d. No work product, findings or recommendations by the TC may be admitted in any enforcement proceeding before the Court for any purpose, and no member of the TC shall testify by deposition, in court or before any other tribunal regarding any matter related to this Final Judgment.''

This is one of the most egregious terms of the settlement. Given that the Technical Committee has hardly any actual enforcement duties, other than monitoring, and the Technical Committee actually being an impartial participant in the actual history of Microsoft's interaction with third parties and Microsoft's possible violations of settlement terms, it is astonishing that this term mandates that the actual work product of the Technical Committee not be admissible as evidence of the settlement enforment activities.

Microsoft deifnitely over-reached by requesting this, this shows Microsoft's true intentions (another 5 years without actual enforcement plus maybe another 5 of further litigation), Microsoft should be forced to accept instead the contrary of this term.

It is an interesting legal question if any documents related to presummed antitrust violations are made the work product of the Technical Committee, then by IV.D.4.d and those documents being unadmissible, then what other documents could be used to initiate Court proceedings by the plaintiffs without any such documents being alleged by Microsoft as being derived from the TC's unadmissible work. How could the plaintiffs promptly produce equivalent analysis without it being under this gag order?

Section IV.D.4.d must read:

''d. All work product, findings or recommendations by the TC must be admitted in any enforcement proceeding before the Court for any purpose, and any member of the TC is herein explicitly allowed to testify by deposition, in court or before any other tribunal regarding any matter related to this Final Judgment.''

If the Plaintiffs are not willing to mandate this rewritten IV.D.4.d they are engaging in blatant dereliction of duty of the antitrust enforcement offices and duties that they purport to serve.

Comment IV.5

Section IV.D.4.e reads:

''e. The TC may preserve the anonymity of any third party complainant where it deems it appropriate to do so upon the request of the Plaintiffs or the third party, or in its discretion.'' It should read instead:

''e. The TC must preserve the anonymity of any third party complainant upon the request of the Plaintiffs or the third party. Where the TC deems it appropriate to do so, and it has not ben requested, by the Plaintiffs or the third party, the TC in its own discretion it may preserve the anonymity of any third party complainant.''

Comment V.1

Section V.A reads:

''A. Unless this Court grants an extension, this Final Judgment will expire on the fifth anniversary of the date it is entered by the Court.''

The Final Judgement should last longer than five years. The actual initial antritrust violations by Microsoft occured more than five years ago and we are stiI1 without any form of remedy. The legal system works very slowly. By entering this Final Judgement, and Microsoft continuing its anticompetitive practices, it would probably take more than five years to resolve those further complaints. Given that the orignal D.O.J. vs Microsoft settlement that related to per computer unit licensing was ambiguous enough that it ended up being mostly ignored and full antritrust proceedings were required, it wouldn't surprise me if this agreement which is even more ambiguous and has many more loopholes means at Microsoft's disposal to circumvent its intent would not result in many more years of litigation without any real behaviour change on Microsoft's part.

Mandating an expiration only after Microsoft no longer has monopoly power in the market of Operating Systems for Personal Computers for Intel x86 or x86 compatible systems is more appropriate. Court proceedings or the under the parties agreement and Court supervision would be required for the settlement to expire, Otherwise a period longer than 5 years, at least 12 years should be mandated.

It must be observed how durable has Microsoft's monopoly been and that it was initially cemented through antitrust violations for which a Final Judgement with no teeth got the industry into its current state: 1.

Since the mid 80s it faced no competition. Through illegal competitive behaviour, it foreclose the market to then Digital Research's DR–DOS product (an atlernative to Microsoft's MSDOS). Microsoft has recently settled a separate antitrus suit by the current owner of the DRDOS assets (Caldera). These original violations animated the first consent decreed between D.O.J. and Microsoft 1995. That consent decree was determined to be ambiguous by the appellate Court in its allowance of integration, and a full antitrust lititgation ensued.

2. Even though Microsoft's technology significantly lagged behind the technical abilities of the systems (for example it took Microsoft 10 years to produce a quasi 32 bit operating system after x86 Intel 32 bit capable operating systems became available in the market) no other competitors could enter the market because Microsoft moved from per-unit licenses to persystem licenses for each model of system that the OEM manufactured (and this continued to exclude other vendors from the market). 3. The one significant threat that Microsoft has faced to its personal computer operating system monopoly has been the advent of the Internet with open standards and as a means for delivering applications from server computers (either through Java or directly as web applications) or through middleware based applications that could perform on Microsoft Operating System based personal computers or personal computers running other operating systems. This one threat has been completely erradicated from the market. Microsoft will continue to exclude Java as a viable Interact based application delivery mechanisms, because this Final Judgement doesn't mandata the allowance of interoperability of Sun's Java with Microsoft's Internet Explorer (the Top Level Window definition is purposedly design to make this impossible). Dereliction of duty now from the Plaintiffs would mean that even under the most blatant violations of antritrust laws and astonishing findings of fact, that Microsoft would escape with a Final Judgement that is too short and very weak from many perspectives. 12 years of enforcement seem the minimal time for market conditions to actually have another opportunity to arise and for actual market change to actually occur.

Comment V.2

Section V.B reads:

''B. In any enforcement proceeding in which the Court has found that Microsoft has engaged in a pattern of willful and systematic violations, the Plaintiffs may apply to the Court for a one-time extension of this Final Judgment of up to two years, together with such other relief as the Court may deem appropriate.''

The Plaintiffs in any enforcement proceeding shall not be limited to only one extension of two years. If the Plaintiffs cannot request as a remedy to future Microsoft's violations of this settlement, then it is not clear if the Court can actually mandate a remedy that is not being requested. Additionally, limiting the length of the actual extension at this time and as part of this settlement seems beyond belief given that any enforcement will require the Court participation because there is no actual real enforcement (other than monitoring by the Technical Committee with its work

product later bein unadmissible as court evidence and without the TC members being allowed as witnesses).

Section V.B should read:

B. In any enforcement proceeding in which the Court has found that Microsoft has engaged in a pattern of willful and systematic violations, the Plaintiffs may apply to the Court for an extension of this Final Judgment for up to ten years, together with such other relief as the Court may deem appropriate, which is hereby agreed by the parties that it is acceptable for it to be of any length as the Court deems appropriate.

Comment VI.1

Definition VI.A reads;

''A. ''Application Programming Interfaces (APIs)'' means the interfaces, including any associated callback interfaces, that Microsoft Middleware running on a Windows Operating System Product uses to call upon that Windows Operating System Product in order to obtain any services from that Windows Operating System Product.''

Issues are:

API refers to the interfaces that are used not only by Microsoft Middleware uses, but any other software uses. APIs are mostly used by regular applications, narrowing the definition of APIs to what Microsoft Middleware uses is a contorted way to allow even more freedoms of circumvention to Microsoft. For example for Microsoft to perform anti-competitive practices through undocumented interfaces that its applications use, but that Microsoft's Middleware doesn't use, thus excluding those APIs (by definition!) from being covered by this settlement. Amazingly, this definition proposed to define API to mean something other than Application Programmin Interface, do you see the word application? It is not Middleware Programming Interface! Simply amazing!

Definition VI.A should be replaced by the definition in the Final Judgement entered by Judge Jackson (definition 7.b):

A. ''Application Programming Interfaces (APIs)'' means the interfaces, service provider interfaces, and protocols that enable a hardware device or an application, Middleware, or server Operating System to obtain services from (or provide services in response to requests from) Platform Software in a Personal Computer and to use, benefit from, and rely on the resources, facilities, and capabilities of such Platform Software.

If another definition is adopted, it should be explained why it is different from the one proposed.

Comment VI.2

Definition VI.B reads:

''B. ''Communications Protocol'' means the set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product and a server operating system product connected via a network, including, but not limited to, a local area network, a wide area network or the Internet. These rules govern the format, semantics, timing, sequencing, and error control of messages exchanged over a network.''

Issues:

1. Given that Communication Protocols relevant to this settlement (given the proposed changes in other sections) also exist between two personal computers, the definition should reflect that.

2. The set of tasks between the parties in a protocol doesn't have to be predefined, there are protocols under which the parties actually sent pieces of arbitrary code to each other to perform actions that are arbitrary.

Definition VI.B should read:

''B. ''Communications Protocol'' means the set of rules for information exchange to accomplish tasks between a Windows Operating System Product and another operating system connected via a network, including, but not limited to, a local area network, a wide area network or the Internet. These rules govern the format, semantics, timing, sequencing, and error control of messages exchanged over a network.''

Comment VI.3

Definition VI.J reads:

''J. ''Microsoft Middleware'' means software code that

1. Microsoft distributes separately from a Windows Operating System Product to update that Windows Operating System Product; 2.

is Trademarked;

3. provides the same or substantially similar functionality as a Microsoft Middleware Product; and

4. includes at least the software code that controls most or all of the user interface elements of that Microsoft Middleware.

Software code described as part of, and distributed separately to update, a Microsoft Middleware Product shall not be deemed Microsoft Middleware unless identified as a new major version of that Microsoft Middleware Product. A major version shall be identified by a whole number or by a number with just a single digit to the right of the decimal point.''

This is a very astonishing definition of Middleware, nowhere does it talk about software that provides APIs to other software components, which is core to any definition of Middleware. The definition of Non-Microsoft Middleware (VI.M) does seem appropriate to what Middleware is. Definition 7.q in Judge Jackson's Final Judgement should be seen for a reasonable defintion of Middleware:

'''Middleware'' means software that operates, directly or through other software, between an Operating System and another type of software (such as an application, a server Operating System, or a database management system) by offering services via APIs or Communications Interfaces to such other software, and could, if ported to or interoperable with multiple Operating Systems, enable software products written for that Middleware to be run on multiple Operating System Products. Examples of Middleware within the meaning of this Final Judgment include Internet browsers, e-mail client software, multimedia viewing software, Office, and the Java Virtual Machine. Examples of software that are not Middleware within the meaning of this Final Judgment are disk compression and memory management.''

These notions in the VI.J ''Microsoft Middleware'' definition are astonishing:

''2. is Trademarked;'' other than to provide Microsoft another escape clause, this term adds absolutely no value. With this term as part of the definition, Microsoft can rename some component, not use an earlier trademark name for it, and voila! it is no longer Microsoft Middleware.

The notion of what Microsoft Middleware is certainly cannot be tied to the version number given to it! Something is what it is whatever the name used to refer to it. Something as arbitrary as a version number and as easily maleable as a version number certainly cannot be criteria to be used to determine what it is. Contract writting 101 should certainly tech any lawyers about this. It is interesting to pose these questions to the Plaintiffs:

What is the major version number of Office XP? What is the version number of Internet Explorer. NET? What is the version number of Outlook Express. NET? What is the version number of Windows XP, Windows CE, Windows ME, Winodows 95 OSR2? Widonws 95? Microsoft certainly can change interfaces, protocols, APIs, etc in a major, minor, service pack, hot fix, or any other packaging of its software. The names or version numbers of such software should not be used to determine what is contained by them.

Both of these (VI.J.2 and VI.J last paragrpah) should be removed from the definition. The term VI.J.4 seems to be there only for the purpose of allowing Microsoft to slice and recombine its software in such a way as to ensure that the user interface component be the one called the ''Microsoft Middleware'' and not the components that acutally perfrom the traditional Middleware functionality (see Jacksons definition above) of providing APIs to other software. It is very intereseting that Middleware is mostly not about user interfaces but about providing interfaces to other applications, applications that felly on the Middleware as a platform. Most Midleware doesn't have a user interface, if it has one it is incidental.

The term VI.J.4 should be removed.

After these adjustments, Defintion VI.J should just be:

J. ''Microsoft Middleware'' means software code that

1. Microsoft distributes separately from a Windows Operating System Product to update that Windows Operating System Product; and

2. provides the same or substantially similar functionality as a Microsoft Middleware Product; and

Comment VI.4

Definition VI.K reads:

''K. ''Microsoft Middleware Product'' means

1. the functionality provided by Interact Explorer, Microsoft's Java Virtual Machine, Windows Media Player, Windows Messenger, Outlook Express andtheir successors in a Windows Operating System Product, and

2. for any functionality that is first licensed, distributed or sold by Microsoft after the entry of this Final Judgment and that is part of any Windows Operating System Product

a. Internet browsers, email client software, networked audio/video client software, instant messaging software or

b. functionality provided by Microsoft software that

i. is, or in the year preceding the commercial release of any new Windows Operating System Product was, distributed separately by Microsoft (or by an entity acquired by Microsoft) from a Windows Operating System Product;

ii. is similar to the functionality provided by a Non-Microsoft Middleware Product: and iii. is Trademarked.

Functionality that Microsoft describes or markets as being part of a Microsoft Middleware Product (such as a service pack, upgrade, or bug fix for Internet Explorer), or that is a version of a Microsoft Middleware Product (such as Internet Explorer 5.5), shall be considered to be part of that Microsoft Middleware Product.''

The first issue with this definition is, what is the connection between VL.K.2 and the presumably subordinate VI.K.2.a and VI.K.2.b? The sentence under VI.K.2 seems incomplete, it should end in something like:

''* * * and that is part of any Windows Operating System Product, and is either:'' Other issues are:

1. Throughout the trial Microsoft and depositions (but not before litigation was brought into action) would not budge on its pretense incomprehension of what an Internet Browser is. They would only talk about browsing technologies but would react stupified to the notion of Integer Browsers, particularly their own, when they were referred to as ''the browser product.'' It is amusing and without any sign of legal thouroughness that the Plaintiffs have come to agree with Microsoft to a definition that uses the term ''Internet browser'' without actually providing a definition for such a term anywhere in the proposed Final Judgement. Not even what a Internet Browser is being agreed amongst the parties in the dereliction of duty that this document embodies.

2. Given that this section includes other disputed terms such as Internet Explorer, it sould seem to be important to include precise definitions about what these actual terms mean. Maybe when the Plaintiffs try to do this together with Microsoft they will realize that only contorted definitions such as the ones for API, Microsoft Middleware, Microsoft Middleware Product, etc. are arrived at.

3. Again software can be or stop from being a Microsoft Middleware Product depending on whether it is trademarked or not (which to no ones surprise is another contorted and unnatural definition by itself).

4. VI.K.2.b.i refers to ''distributed separately by Microsoft from a Windows Operating System Product'', that term should be precisely defined to mean what it seems to mean, because Microsoft having argued in court that a sandwich is part of Windows if they soley dictate so, then they surely would say that any code ''is distributed as part of a Windows Operating System'' even if the code is sent to the end user m a CD–ROM inside a sandwich not included in the Windows box, or more complexily and seriously, if it is sent to the user's system through a the Windows update process.

5. VI.K.2 seems to require that the functionality be ''part of any Windows Operating System Product'' but immediately and sub-ordinated to that clause it also says VI.K.2.b.i ''distributed separately by Microsoft from a Windows Operating System Product'' which seems to contradict the pre-requisite governing condition (it has to be both part of and not part of?.), that would be by necessity the empty set, because something cannot be both part of something and not part of something; thus redering the whole contorted VI.K definition sense-less.

06. The final paragraph on VI.K states that:

''Functionality that Microsoft describes or markets as being part of a Microsoft Middleware Product (such as a service pack, upgrade, or bug fix for Internet Explorer), or that is a version of a Microsoft Middleware Product (such as Internet Explorer 5.5), shall be considered to be part of that Microsoft Middleware Product.''

as some form of saving grace for the grotesquely constructed prior definition. Obviously, since the litigation started, Microsoft has described everything as part of Windows, so one should not wait standing for Microsoft to ever again market anything in their anticompetitive campaigns as not being part of Windows.

Definition VI.K should be replaced by:

''K. ''Microsoft Middleware Product'' means

1. the functionality provided by Internet Explorer, Microsoft's Java Virtual Machine, Windows Media Player, Windows Messenger, Outlook Express and their successors in a Windows Operating System Product, and

2. any functionality that is first licensed, distributed or sold by Microsoft before, on, or after the entry of this Final Judgment and that is later made part of any Windows Operating System Product, this shold include but not be limited to: Internet browsers, email client software, networked audio/video client software, instant messaging software; or

3. functionality provided by Microsoft software that

i. is, or at any time preceding the commercial release of any new Windows Operating System Product was, distributed separately by Microsoft (or by an entity acquired by Microsoft) from a Windows Operating System Product; or

ii. is similar to the functionality provided by a Non-Microsoft Middleware Product Functionality that Microsoft describes or markets as being part of a Microsoft Middleware Product (such as a service pack. upgrade, or bug fix for Interact Explorer), or that is a version of a Microsoft Middleware Product (such as Internet Explorer 5.5), shall be considered to be part of that Microsoft Middleware Product.''

Additionally, reasonable definitions of what these mean should be included as separate definitions: ''Internet Explorer, Microsoft's Java Virtual Machine, Windows Media Player, Windows Messenger, Outlook Express and their successors in a Windows Operating System Product''

Comment VI.5

The word product should be replaced by technology in definition VI.M because not all middleware is made available in a product form, some of it might be made freely available or under conditions or packaging that don't relate directly to it being a product:

''M. ''Non-Microsoft Middleware'' means a non-Microsoft software product running on a Windows Operating System Product that exposes a range of functionality to ISVs through published APIs, and that could, if ported to or made interoperable with, a non-Microsoft Operating System, thereby make it easier for applications that rely in whole or in part on the functionality supplied by that software product to be ported to or run on that non-Microsoft Operating System.''

It shold read:

''M. ''Non-Microsoft Middleware'' means a non-Microsoft software technology running on a Windows Operating System Product that exposes a range of functionality to ISVs through published APIs, and that could, if ported to or made interoperable with, a non-Microsoft Operating System, thereby make it easier for applications that rely in whole or in part on the functionality supplied by that software product to be ported to or run on that non-Microsoft Operating System.''

Comment VI.6

The requirement under VI.N.ii that:

''and (ii) of which at least one million copies were distributed in the United States within the previous year.''

Seems excessive, a more reasonable number of one hundred thousand copies is more appropriate because the benefits of the settlement can benefit nascent technologies and not just more established ones.

Comment VI.7

The definition under VI.O of OEM is self centered, to be an OEM, the OEM has to be a licensee of a Windows Operating System Product. How do new OEMs come to be if Microsoft refused to license its products directly or uses intermediaries not under its ownership control but under agreement control to do actual sublicensing? The definition of an OEM should be independent of whether they at any given point in time they have a direct license from Microsoft (instead of purchasing the product in the channel like smaller OEMs do). The definition of Covered OEM already takes care of them being licensees.

''O. ''OEM'' means an original equipment manufacturer of Personal Computers that is a licensee of a Windows Operating System Product.''

Should be:

O. ''OEM'' means an original equipment manufacturer of Personal Computers.

Comment VI.8

Definition VI.Q reads:

''Q. ''Personal Computer'' means any computer configured so that its primary purpose is for use by one person at a time, that uses a video display and keyboard (whether or not that video display and keyboard is included) and that contains an Intel x86 compatible (or successor) microprocessor. Servers, television set top boxes, handheld computers, game consoles, telephones, pagers, and personal digital assistants are examples of products that are not Personal Computers within the meaning of this definition.''

The only concern here is if:

television set top boxes, handheld computers, game consoles, telephones, pagers, and personal digital assistants are constructed from Intel x86 or x86 compatible

processors and Microsoft offers a version Windows for them that allows any software designed for Personal Computers to work on those systems, then what those products would be are:

x86 Personal Computer based handheld personal computers; or

x86 Personal Computer based personal digital assistants; or

x86 Personal Computer based personal game consoles; etc

For example today Microsoft offers a fully functional Personal Computer as its game console, the Microsoft Xbox. If Microsoft were to offer Windows XP for that system, it would not only be a game console but also a fully function Personal Computer. Under those circumstances it should not be excluded from the definition.

Comment VI.9

Defintion VI.R reads:

''R. ''Timely Manner'' means at the time Microsoft first releases a beta test version of a Windows Operating System Product that is distributed to 150,000 or more beta testers.'' Without actual evidence about the actual size of the MSDN subscription base, it seems safer to rewrite this. Addtionally because of naming issues, the term ''beta test version'' should be expandded into its meaning:

''R. ''Timely Manner'' means at the time Microsoft first releases a release version of a Windows Operating System Product through its MSDN developper program solely for the purpose of developper testing and not intended for end user use for reasons other than for testing. If Microsoft plans multiple such test releases, then Timely Manner shall means the release time of a test release that is at least one year away from the product's final availabilty to OEMs for pre-installation or for consumer retail purchase, whichever is earlier.''

Comment VI.10

Defintion VI.S reads:

''S. ''Top-Level Window'' means a window displayed by a Windows Operating System Product that (a) has its own window controls, such as move, resize, close, minimize, and maximize, (b) can contain sub-windows, and (c) contains user interface elements under the control of at least one independent process.''

This definition is purposedly constructed to prevent:

1. An alternative Jave Virtual Machine (for example from Sun Microsystems) from being invoked when Java Applets are invoked through a web page because the window controls are the window controls of the Internet Browser and the Java Applet executes within the same window. By Microsoft using this defitintion to condition where it allows non-Microsoft Middleware to be invoked it controls the most important way for Java application execution (i.e. under a more complex web based application). Thus Microsoft having killed Netscape Navigator's viability proceeds to deny Java the remaining vehicle that it could have enjoyed under this settlement, i.e. under Interact Explorer. Of course the Plaintiffs do nothing other than acquesce under this settlement either because of dereliction of duty or blatant technical misunderstanding of the issues involved.

2. For example, the ''live chart'' stock quotes provided (through Java applets) by www.quote.com or the Chess application provided (Java applet) by www.chessclub at

http://www.chessclub.com/interface/java.html

http://queen.chessclub.com/sji/index.html

Would simply continue to run under Microsoft Java Virtual Machine and not under Sun's Java Virtual Machine when installed on the same system and with all the provisions of the settlement fully implement (and without any Microsoft violation of the terms whatsoever).

Thus Microsoft gets to reap the fruits of its anti-competitive camapaign without having actually conceeded anything of substance for non-Microsoft Middleware as it relates to Microsoft's Internet Explorer. The same will occur with network video and audio formats because Microsoft will make its players not start on a Top Level Window thus taking control of audio and video formats of Real Networks players even when the end user has choosen otherwise under the provisions of this agreement.

The notion of Top Level Window must be extricated from the settlement and Microsoft should allow invocation of ActiveX based components of the non-Microsoft Middleware under all circumstances, in a manner similar under which today third party software is invoked under a non Top Level Window and displayed within the Internet Explorer window without a problem (for example see how Adobe's Acrobat Reader is displayed under a non-Top Level Window). Microsoft has done already all the technical work in this area, an it is now only putting contractual road blocks to all these natural forms of invocation of non-Microsoft Middleware.

Comment VI.10

Definition VI.T reads:

''T. ''Trademarked'' means distributed in commerce and identified as distributed by a name other than Microsoft?? or Windows?? that Microsoft has claimed as a trademark or service mark by (i) marking the name with trademark notices, such as ?? or ??, in connection with a product distributed in the United States; (ii) filing an application for trademark protection for the name in the United States Patent and Trademark Office; or (iii) asserting the name as a trademark in the United States in a demand letter or lawsuit. Any product distributed under descriptive or generic terms or a name comprised of the Microsoft?? or Windows?? trademarks together with descriptive or generic terms shall not be Trademarked as that term is used in this Final Judgment. Microsoft hereby disclaims any trademark rights in such descriptive or generic terms apart from the Microsoft?? or Windows?? trademarks, and hereby abandons any such rights that it may acquire in the future.''

The main issue throughout this proposed settlement with respect ot Trademarks is that software is what it is irrespective of what it is called. The definitions of Microsoft Middleware and Microsoft Middleware Product where conditioned with them being trademarked (under this definition) as a means to provide Microsoft and escape clause to make the no longer Microsoft Middleware (and Microsoft Middleware Products). That concept should completely go away. If it doesn't then the defintion of Trademarked shold be exactly the legal defintion understood under the law and not this one.

Comment VI.11

Defitions VI.U reads:

''U. ''Windows Operating System Product'' means the software code (as opposed to source cede) distributed commercially by Microsoft for use with Personal Computers as Windows 2000 Professional, Windows XP Home, Windows XP Professional, and successors to the foregoing, including the Personal Computer versions of the products currently code named ''Longhorn'' and ''Blackcomb'' and their successors, including upgrades, bug fixes, service packs, etc. The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion.''

The list must also include Windows 95, Windows 98, Windows SE, Windows ME (collectively known as Windows 9x) and Windows NT 4,0 and all their service releases. The current installed base is mostly made out of these products. By purposedly excluding them Microsoft and the Plaintiffs allow Microsoft to continue to prevent non-Microsoft Middleware from fairly competing in the broad installed base and forces competition to only occur under Microsoft's controlled evolution of the market. It does so by not allowing competition from the broad installed base by not affording the benefits of the settlement to that gigantic installed base (i.e. all the versions of Windows 9x).

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to Microsoft. I fully support the settlement that was reached in November. In my opinion, the litigation that has continued for the last three yearn is a waste of precious resources that should be focused on more important issues. I am chagrinned that many state Attorneys General have continued suing Microsoft. I sincerely hope there, will be no further action against Microsoft at the federal level.

This settlement is fair and reasonable. Microsoft has agreed to carry out all provisions of this agreement, Under this agreement, Microsoft remains together as a company, while following procedures; that will make it easier for companies to compete. Microsoft has agreed to disclose information about certain internal interlaces in Windows;. Furthermore, Microsoft agreed to, disclose any protocols implemented in Windows'' operating system products.

This settlement will benefit the economy and the technology industry as a whole. Please support this settlement so this dispute, can finally be resolved. Thank you for hearing my opinion.

Sincerely,

MTC–00029687

Deal Ms. Hesse

Though I am a current member of the Kansas ago Board of Education, I am writing this letter personally and not as a representative of the Kansas State Board of Education. Before you is a fair proposal for settlement of Microsoft case. In a sincere a??empt to close the door on a highly publicized legal embattlement, Microsoft offers to reveal technical information to comp??titors, enabling other companios to write software that actually works with Microsoft's operating products. Microsoft even offers, at its own expense, a failsafe in the form of an impartial review board which will have clearance to every facel of Microsoft's business dealings. This means software customers will have the ability to smoothly access competing software products on the same desktop, just like they are part of Microsoft Office.

Though Microsoft may surely have hoped for a solid win in this case, Bill Gates himsel recently recognized that accepting the strict rules and regulations imposed by the settlement is ''the right thing to do'', benefiting the consumer, the tech sector and the economy. We may hate to admit it, but Gates is right again. Settlement is the right thing to do. Thank you for your consideration of my opinions.

Sincerely,
Dr. Steve Abrams

Dear Mr. Ashcroft,

I would like to express my appreciation to the Justice Department for allowing we as Americans to comment on the Microsoft antitrust case. I am a part of the tech industry and am in favor of the settlement in its current form.

I would like to express how happy I am with Microsoft products. Microsoft ha3 changed the way Americans do business. I think most Americans believe that the terms and conditions of the settlement are decent and just, and they are right. The settlement covers all sorts of parts of Microsoft's operation, from business practices to design changes.

Please use your power to end this case in an expeditious manner. It will benefit the country and the IT industry if you do so.

Sincerely,
Dean Martin

Washington, DC 20530

Dear Mr. Ashcroft:

I am amongst those who believe that the Microsoft antitrust case should have never gone to trial. Nevertheless 1 would like you to support the settlement that was achieved in this case. Continuation of this case would be harm fid to Microsoft, and needlessly cost the Justice Department money in a time of a dwindling government surplus.

Justice Department officials have approved and agreed to the settlement in this case. The settlement will make it easier for non-Microsoft software to be installed on Microsoft platforms, giving competitors a better opportunity to offer their products to the public. However for some opponents of the settlement this is not adequate. It must be kept in mind that special interests will pressure officials to have this case re-opened.

I appreciate you taking the time to review my views on this issue. Once again I would like to stress to you my belief that this cage has undoubtedly become protracted and should be terminated. Please back the settlement.

Sincerely,
Jim Atkins

January 26. 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I feel that the settlement made between Microsoft and the Department of Justice is reasonable and that the litigation against Microsoft needs to be brought to an end. The money and time that has been spent on this suit doesn't seem to be worth what will be gained if this continues. The terms of the settlement, if finalized, will open up competition to other companies, which will in turn benefit the consumer, Not only will there be more choice but also hopefully there will also be more reasonable prices. Because of the terms of the settlement, Microsoft is going to have to make Windows internal code available to other companies so they can design their software to be compatible. Microsoft will be reimbursed for this, which is fair for all sides involved.

Overall I feel that the settlement should stand the way it is and that any further litigation against Microsoft would prove to be wasteful. Thank you for allowing me the opportunity to express my opinions.

Sincerely,
Michael DiBello

January 23, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft.

The Department of Justice was absolutely wrong in wanting to slice Microsoft into separate parts. Three years have produced public resentment and gravely hurt the computing Industry, all for the benefit of those who won't ever be able to compete with Microsoft. The settlement Microsoft agreed to with the federal government must go forward. It is more than generous, and is obviously better than forcing Microsoft back into court, where the only winners are the attorneys representing both sides of this case.

Microsoft concedes to give up more than enough to promote far more competition among the computer makers and software developers who want a more level playing field. Agreeing to open Windows for further application development, Windows and non-Windows alike, will produce far more innovations than ever before, and will show the consumer that they are not at the whim of this industry giant, creating more individually-based options and configurations.

I urge the Department of Justice to see to it that Microsoft is given unprejudiced consideration by allowing them to return to business NOW. Do not continue to waste the incredible innovation and efforts of Microsoft, by choking them in more court proceedings. They have been the most industrious and prolific business since that of Ford Motors. The ramifications are far reaching, for the better good, by supporting the position of this settlement with Microsoft.

Dear Ms. Hesse:

I would like to share a few thoughts of mine about the Microsoft case that you are currently reviewing as pan of the public comment period for the suit. Microsoft and Bill Gates have paid their penance. Throughout this case, Microsoft has been portrayed as an evil corporate citizen, but in my opinion this accusation does not stand up to reality.

In addition to Microsoft's corporate giving, Bill Gates has established the largest charitable foundation in the world. This foundation is making significant progress by donating hundreds of millions of dollars every year to assist in feeding the hungry in third world countries, preventing diseases, and educating youth in America. Lets put an end to this lawsuit and allow the success of Bill Gates and other high-tech entrepreneurs continue to, not only boost the economy of our country, but to aid to the underprivileged worldwide through charitable giving.

Sincerely,
Todd Kangas

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW

Washington, DC 20530
Dear Mr. Ashcroft:

I want to take a moment to give my feelings on the settlement reached last year between Microsoft and the Department of Justice. I believe the settlement is fair to both sides and should continue t6 be supported by the federal government.

The settement is exlensive aggressive, and covers all the issues that were m dispute. Microsoft has agreed to many concessions for the ??ake of wrapping up this suit and moving forward One example is Microsoft agreeing to document and disclose for use by its competitors various interfaces that are internal to Windows'' operating system products. This is a first for an antitrust settlement and reveals the strength of the agreement on the government's part.

I believe settling this case and ending the litigation can only help the economy during this difficult period. It will bring some certainty to the computer industry and lessen the uncertainty about where the litigation may he heading I commend your office for the efforts so far and hope your support for the settlement remains strong.

Sincerely,

Dear Mr. Ashcroft:

This is to give my approval to the ending of the antitrust case brought against Microsoft. In my opinion, it has gone on far too long and we need to get back to business. We talk about the economic downturn but keep the one company that could probably pull us out of it, tied up in litigation.

From what I understand of the agreement, Microsoft has been more than fair in trying to settle this case. Microsoft has agreed to terms that go far beyond the products and procedures that were actually at issue in the original case; Microsoft has agreed to grant computer makers broad new rights to configure Windows so as to promote non-Microsoft software programs. Microsoft has further agreed to design future versions of Windows with a mechanism to make it easier to promote non-Microsoft software.

It is in the best interests of America, and the world, if we put this case behind us and get back to business. Please give your support to this agreement.

Sincerely,
Glenn R. Hasman

Dear Attorney General Ashcroft:

I would like to take this opportunity to express my personal opinion about the government's role in Microsoft's freedom to innovate The United States Department of Justice and Microsoft reached an agreement at the beginning of this past November and that is where the litigation should end. The settlement was fair; allowing Microsoft to continue doing business while allowing competitors to sue Microsoft if they do not think the company is complying with the agreement.

I believe no more litigation should be enacted at the federal level. With a reasonable settlement already reached, further action by our government would only waste more time and money. !n this time of economic recession, these resources could be used in a much more productive manner In these trying times, we need to support our homeland companies and allow them to continue providing high quality products to the marketplace both nationally and internationally. This settlement allows our companies to actually return to the success that the IT industry enjoyed four years ago. Microsoft will now be making future versions of Windows that will include a way to greatly simplify the process of adding arid removing non-Microsoft programs from the Windows operating system.

In a battle that already has been fought and won, I believe it would be in our best interest not to continue suing Microsoft at the federal level Let us get our economy back on track and start supporting products and companies that me made in the USA. Thank you for you time.

Sincerely,
J.T. Buchar

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft:

I was quite pleased to learn that the federal government and Microsoft reached a settlement in their three-year anti-trust lawsuit. I am hopeful that this settlement will become final in the near future so the negative effects that is has had will cease, and the technology industry can see a resurgence.

This will be made possible by the various concessions that Microsoft made in order to settle this dispute. A three person technical committee will oversee Microsoft's business operations from this point forward, and any company that has a complaint of anti-competitive behavior against Microsoft will be able to be heard immediately. Competition will increase, and consumers will have more choices in the marketplace. I see no reason to pursue this matter beyond this point. I want to thank you for your decision to stop this litigation. I am certain it will have positive effects on the industry as well as the whole economy, and I look forward the settlement becoming final in the weeks ahead.

Sincerely,
Rudy Key

January 22, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001
Dear Mr. Ashcroft:

Three years ago when Microsoft was first brought to trial, my fear was that the company wouldbe split up and the American technology industry would begin to suffer. Now, a settlement hasbeen proposed that would allow Microsoft to remain whole, and I believe that would be in thebest interest of the consumer for the Justice Department to approve the settlement and move on.I do support limits on Microsoft's conduct to safeguard our antitrust laws, but I think theserestrictions are a bit harsh. Microsoft agreed to terms and conditions in the settlement that extendto procedures and technologies that were not found to be unlawful by the Court of Appeals.Microsoft has agreed, among other things, to disclose source code and interfaces from theWindows operating system to its competitors for their use in developing Windows-compatiblesoftware. Microsoft has also agreed to license the Windows operating system to twenty of thelargest computer makers at the same price. In the interest of wrapping up the case, Microsoftagreed to these and more terms, and I believe that, regardless of the harshness of certainobligations, it is better to settle now and let things get back to normal than to continue litigationand risk further economic damage.

This has gone on long enough, and it is time to move on. Microsoft has made the necessarychanges to prevent further antitrust violations, and I do not believe further litigation is eithernecessary or constructive. I ask you to endorse the settlement.

Sincerely,
Jeannie Fitzsimmons

Dear Ms-Hesse;

As the parents of two children in a small, rural Kansas school, I was excited to hear about theprospects of Microsoft donating millions of dollars worth of computer systems and learningprograms to schools like the ones my children attend.I have seen first hand the value of computers in advancing the education, of my children and Ifirmly believe that, if accepted, this settlement could prove to be very beneficial to the educationof America's children.

The government has wasted enough taxpayer dollars pursuing a problem that never existed. It ismy hope that this fair settlement, which has levied steep and taxing financial burdens onMicrosoft, will end soon.

Sincerely,
Rhonda Green

Washington, DC 20530
Dear Ms. Hesse:

I am writing to you to express my feelings regarding the lawsuit filed against Microsoft by JanetReno. I understand that the Bush administration has proposed a settlement that has been agreedto by Microsoft and several of the states involved in the lawsuit.

I want to add my voice to those who believe it is time m put this lawsuit to bed. It is drainingvaluable resources from government coffers and unnecessarily burdening one of America'sleading technology companies. I urge you to approve the settlement proposed by the Bushadministration.

Sincerely,
Mrs. Floyd Powers

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft:

I am writing this letter in support of Microsoft. As a businessman, I believe there is no place forGovernment in free enterprise. I have a lot of respect for Microsoft and saw the economy flourishas Microsoft grew. It's no coincidence that the technology, sector, technical stocks andemployment numbers are down while this antitrust case is going on. While it may not be thecause, it sure is the contributor.

Microsoft agreed that if a third party's exercise of any options provided by the settlement wouldinfringe on the rights of any Microsoft intellectual property, they will provide the third party witha license to the necessary, intellectual property on reasonable terms. That seems more than fair tome. Microsoft agreed to provide computers in the school, but all the states rejected it since itwould infringe on Apple's ability to continue providing computers in the school. Here in NassauCounty, we are in desperate need of IBM compatible computer's, especially since we use oldtechnology, like a microfiche. It's a shame we can't access any.

It's obvious to me that the competition and the states are only pursuing litigation because theywant ''a piece of the action.'' If the consumer likes the products of a company ''a'', and thecompany ''a'' gains a large market share, it's not fair for other companies to sue company ''a'' justbecause consumers like their product. Your help in resolving this mailer is greatly appreciated.

Sincerely,
Stuart Muchnick

January 25, 2001

I am writing to have my thoughts on the proposed settlement between Microsoft and the UnitedStates Department of Justice entered Into the record in accordance with the Tunny Actsrequirement of public comment on such settlements.

I think the settlement plan is a good one, and one that reaches the necessary balance betweenantitrust enforcement and the need for as competitive a software market as the U.S. economy canhave. Consumers benefit from a competitive market in ways that; the kind of regulationspreviously argued in this case would nullify. Whereas a free and competitive market will drivedown Dries and hasten the pace of innovation, a heavily regulated market, or a software marketIncluding a cawed-up Microsoft would slow the pace of Innovation and allow companies to siton their hands and let prices gradually rise.

Consumers deserve the best high tech market available to them, and the best high tech market isthe one that innovates. The Innovates of the last decade were primarily responsible for thecreation of Jobs, Investment, and wealth at rates never before witnessed In any economyanywhere. The success of the ''New'' Economy In the 1990s was not a boomlet, in my view, but aharbinger of flings to come In the future, if the government will allow consumers andentrepreneurs to successfully guide the market toward higher levels of competition andInnovation.

I hope my thoughts can be entered into the record and also hope the court fit to approve thesettlement proposal. It is the best way for the economy to start to put this recession behind it andbegin to build for the future.

Sincerely,
Leo T. Goodrich

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft:

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. This issue has been dragging on for entirely to long now and I feel that the current settlement before the DOJ is fair and just. I would like to see the government accept it. Many people think that Microsoft has gotten off easy, in fact they have not. In order to put the issue behind them Microsoft has agreed to many concessions. Microsoft has agreed to give computer makers the flexibility to install and promote any software that they see fit.

Microsoft has also agreed not to enter into any agreement that would obligate any computer maker to use a fixed percentage of Microsoft software. Also, Microsoft has agreed to license its products at a uniform price to computer makers no matter how much that computer maker uses Microsoft products.

What we need to remember is that Microsoft products are very affordable and offer many advantages over other products, if one desired, they could purchase another operating system ie; Linux etc., but the fact is most people choose Microsoft Windows over others. With the economy stalling, we need to move forward not backward, many people have spent large amounts of time and money to be trained on Microsoft products, lets not forget them.

Sincerely,
Dameon Rustin

Dear Mr. Ashcroft:

I am violently opposed to the antitrust lawsuit against the Microsoft Corporation, I personally feel that the suit should be dropped, and Microsoft left alone. This case defies the very ideal of free enterprise upon which this nation has been built, and this case does nothing but damage the entrepreneurial spirit that has heretofore been celebrated in this nation.

I understand that Microsoft has agreed to the settlement that has been reached in this case because it would simply like to see this litigation end. While I do not agree that Microsoft should have to settle I understand their desire to see the end of this lawsuit. The terms of the settlement, while a little harsh, are not overly objectionable. Microsoft has agreed to design all future versions of its Windows operating system to be compatible with the products of its competitors, along these same lines Microsoft will disclose certain segments of source code to its competitors enabling them to design products that work within Windows, it is this term that I find most objectionable. I believe that the parties trying to perpetuate this litigation are seeing only their own political ends rather than a fair solution to this dispute.

Please ensure the passage of this settlement. American business needs 3,our support. Thank you.

Sincerely,
Brad Houghtaling

Dear Mr. Ashcroft:

I am of the opinion that the settlement that has recently been reached between Microsoft and the Department of Justice is fair and reasonable, and I would like to see it implemented as soon as possible.

The only reason why I do support this settlement is because it brings an end to the ludicrous litigation against Microsoft. The governments, both stale and federal, are legally pursuing Microsoft for one reason and one reason only, for the cash. It is ironic that they have wasted millions of dollars taking Microsoft to court, and do not have much to show in return. The economy is bad enough; we do not need our tax dollars going towards the prosecution of a company that has been so beneficial to the American economy. I hope that the ongoing technical oversight committee, which is a result of the settlement and will monitor Microsoft's compliance with that settlement, will satisfy the government and all other anti-Microsoft entities. A settlement has been reached, we must now put this issue behind us and move on to more pressing issues. Thank you.

Sincerely,
Carl Beck

Dear Ms. Hesse:

All too often in our country it seems our government has taken aim at a successful company under the auspices of protecting the American people. Unfortunately, it is the government's actions that are truly hurting Americans. When the Department of Justice first began its pursuit of Microsoft it claimed it was doing so to protect consumers from some harm created by Microsoft. The reality could not be further from the truth.

The facts are simple really. Microsoft leads its industry because it has developed ways to meet consumers needs better then its competition. This is the American way! Most successful companies strive to be the very best in their field and compete hard with

others in their industry. Certainly Microsoft is no exception. Punishing them for being the best is not appropriate. The United States government and the Microsoft's competitors have yet to provide proof of how consumers have been harmed by Microsoft. However, as a taxpayer T can see where I have been harmed Countless tax dollars have been spent in the pursuit of this case at o time when our economy is constricting. I view this a real example of harm.

Please accept the settlement offer.

Sincerely,

Vonda Wiedmer

January 27, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The intention of this letter is so that I may go on record as being a staunch supporter of the proposed agreement that was reached between Microsoft and the Department of Justice. The litigation between these two has gone on for long enough, more than three years actually. It is time to put this issue to rest and move on.

The settlement actually goes further than Microsoft would have liked, but they decided to settle because it was in the best interests of the IT industry and the American economy. The settlement mandates that Microsoft make future versions of the Window, operating system to include a feature that makes it much easier for computer makers and consumers to remove Microsoft software programs from Windows and then replace it with non-Microsoft software. This completely opens the industry up to much more competition, and the companies producing the competing software will need to deliver a ''Grade A'' product to the market, or people will simply not buy it.

Everything is now in place for a stronger IT industry and a healthier economy. I support this settlement because it looks out for everyone's best interests. Thank you.

Sincerely,

Matthew Alfieri

Washington, DC 20530
Dear Ms. Hesse:

I appreciate the opportunity to voice my opinion on the proposed settlement before you in the Microsoft antitrust lawsuit.

As a Kirkwood community college computer instructor, I have the opportunity to teach the Microsoft Office suite to my students. I have seen first-hand the advances Microsoft has made in the software industry. Everyday, my students learn more about how to harness technology and use it to their advantage to work more efficiently.

Microsoft changed the way America, and the world for that matter, does business. As I understand it, most of the world's computer users work on Microsoft's Windows software. That is truly an amazing accomplishment. Success on that scale only comes when a company continues to produce an outstanding product year in and year out.

I urge you to accept the settlement before you on behalf of all taxpayers. Too much time and too many resources have been spent trying to tear down a company that has enriched our national economy and aided businesses worldwide. Enough is enough.

Sincerely,

Marie Schulte

RE: Settlement of U.S. v. Microsoft

Nearly 30 million dollars in taxpayer funds have been spent on this case. The time and expense of this case combined with the uncertainty it has led to in the technology sector leads me to believe that now is time that we settle this case.

I do appreciate the government's efforts in protecting consumers. The settlement is appropriate in scope because it addresses only those items upheld by the courts and it provides for close monitoring of future Microsoft operations.

Let's get the technology companies back to competing, which will help consumers and our economy. Thanks for considering my views on this matter.

Sincerely,

Leonard Beard

RE: Settlement of U.S. v. Microsoft

I am of the opinion that it is in the best interest of consumers and all involved that this case be settled once and for all.

It is my understanding that the settlement addresses the findings of the court and provides for future operations by Microsoft that will avoid any monopolistic practices. That is good news for all parties.

The bottom line is that enough tax dollars have been spent in this effort and now is the time for our technology companies to return to the marketplace battlefield. That would be the best news for consumers and our economy.

I appreciate your consideration of my views on this matter.

Sincerely,

Dear Ms. Hesse:

As a co-owner of medium size construction company in central Missouri, I have observed the Microsoft lawsuit from the beginning. It appears to me from the press that this case has come full circle and now is the time settle. Based upon my review of the summary of the lawsuit it would appear that the Department of Justice has garnered a fair compromise with Microsoft. While I cannot specifically defend the software glant's business practices, I remain skeptical that this case should have been dismissed some time ago.

Now is the time to settle the case against Microsoft. Thank for allowing me to offer my opinion.

Sincerely,
Chris Hentges

Washington, DC 20530

Dear Judge Hesse:

I am writing to take advantage of the opportunity for the public to express its opinion regarding the anti-trust lawsuit filed against Microsoft. Thank you for making this opportunity available. I believe that the entire basis for suing Microsoft in the first place was flawed. The argument posed by Janet Reno was that Microsoft was engaging in monopolistic practices which were detrimental to the buying public. And yet, Correct me if I'm wrong, but haven't the prices of computers and software been falling? Isn't the definition of a monopoly a company that shuts out its competitors so it can raise prices? That just doesn't make sense.

I hope you'll agree with President Bush that winding up this lawsuit is the right thing to do. It's been going on too long already.

Thanks for letting me comment.

Very truly yours,
Mr. Kenneth Cordon

Dear Mr. Ashcroft:

I am in support of the Microsoft antitrust settlement agreement. The lawsuit has ensued for three years now. Continuing the litigation will only amount to an incredible waste of resources. Settling is in everyone's best interest.

If antitrust laws have been violated, steps should be taken to ensure no further violations occur. The settlement agreement should provide the appropriate safeguards. The agreement provides for the creation of a technical review committee that will monitor Microsoft's business practices. The review committee will also field complaints from parties who believe the settlement agreement is not complied with.

Microsoft has agreed to disclose portions of its code to its competitors. I do not agree that Microsoft should be forced to give away what it has worked hard at developing. However, if Microsoft is agreeable to this concession,. I would support that decision in the interest of resolving this case and moving on to other endeavors.

Your efforts toward resolving this lawsuit are appreciated. Thank you for your time m reviewing my thoughts on this matter.

Sincerely,
Mark Goldstein

Washington, DC 20530

Dear Mr. Ashcroft:

I was happy to hear of the recent settlement regarding the Microsoft antitrust suit. During these times of recession, it is important to allow our industry to continue to develop. Holding the IT sector back, by dragging out the negotiation process, can only hold back our technology industry. Let us allow the IT sector to get back to business.

Not only do the terms of this agreement promote the competitive process, but they also open up avenues of development on both sides of the fence. Although Microsoft has made an overwhelming number of concessions, they are still able to prosper somewhat. The other software manufacturers have been given many new options with regard to licensing, marketing and new avenues in running non-Microsoft software. All parties involved are ready to move forward and get back to business. By thwarting this process, we only hold up the advancement of the 1T sector and our economy in general.

Let us help our economy move forward by supporting our 1T sector. The competitive market is a global one, and we need to work together to keep our piece of the pie. Help us to move this settlement along, by making sure that no more action is taken against it.
I thank you for your help

Sincerely,
Maria Brito

January 25, 2002

Dear Mr. Ashcroft:

I am writing to voice my opinion on the antitrust case settlement between the US department of Justice and Microsoft. I am glad to see that there will soon be an end to this lawsuit. It has been a waste of our government's resources and our tax dollars. Does the government want to be responsible for an Enron-type business failure? They need to end this case immediately so that we can all move on with our lives.

I am a Research Scientist and use Microsoft products all the time for my work. Their company has been responsible for the advent of our computer industry, as we know it. They have also created tremendous growth in our economy and have put our nation ahead in the technology race. The proposed settlement is a very fair compromise and should be enacted at once. Microsoft is going to share an unprecedented amount of technology information with their competitors and they will give consumers more choices by allowing OEM's to install non-Microsoft products on Windows.

Please use your influence to implement the settlement as soon as possible. Thank you for your time.

Sincerely,
Chung Chang

Dear Mr. Ashcroft:

I was pleased to learn that the Justice Department has reached a proposed settlement agreement in the Microsoft litigation.

You now have the opportunity to clean up the mess created by your predecessor. Microsoft was the target of this litigation because of its size and because of its great degree of success. Your implementation of this settlement will bring an end to the political witch-hunt. Microsoft has placed a number of concrete proposals on the table to resolve the case. They have agreed to changes in almost every aspect of their business operations, from pricing, to distribution, to system design. These changes, if implemented, should provide additional competitive opportunities for Microsoft's competitors and more choice for computer users. Please go forward with the settlement and let Microsoft get back to business.

Sincerely,
Ben Kormanik

Dear Mr. Ashcroft:

I am writing to you to express my belief that the antitrust lawsuit against Microsoft should be concluded. The settlement reached in November 2001, should be accepted by the Justice Department.

Microsoft has offered very generous terms includes full access to the Windows system for rival software developers. Never before has a company had to offer its competitors the right to use its own information against itself. This is a legal first and will allow rival developers the chance to drastically improve their own software. The economy and the country need a strong American company, like Microsoft, to help us through these trying times A lawsuit against Microsoft does nothing but damage our economy, and our country. Please take this opportunity to put an end to this suit. Thank you.

Sincerely,
Ed Lezza

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am in favor of the Microsoft settlement for the following reasons:

Microsoft has agreed to a number of changes in its business that result in greater competition and growing consumer choice:

. Adoption of a Uniform Price List under which Microsoft will market Windows on identical terms and conditions to computer makers.

. Revising agreements which would allow third parties to distribute products other than those manufactured by Microsoft.

. Granting rights to computer makers to reconfigure Windows systems so as to allow the placement of non-Microsoft programs within Windows.

I would rather see this case concluded now with a predictable result than see you roll the dice in Court. The Bill Clinton Department of Justice instigated this unnecessary case. Government at its worst caused the subsequent decline in the technology side of the economy. Please do not jeopardize the fragile business rebirth that the U.S. is going through by extending this case.

Thank you for reviewing my comments.

Sincerely,
Dennis Lange

Washington, DC 20530

Dear Judge Kollar Kottely:

Those lobbying for stricter regulations against Microsoft had better be careful what they wish for. I seriously doubt that they wish to operate under the same level of scrutiny themselves. Contrary to the claims of the antitrust suit, Microsoft has done nothing but benefit the consumer in terms of providing better, more innovative products at affordable prices.

I ask you to accept the current settlement offer, concluding this questionable lawsuit. Settlement of the suit will definitely crimp Microsoft to some extent, but the fact remains that the consumer will still choose the products they prefer. The only fair way that AOL, Oracle, and other Microsoft competitors can knock off Microsoft's top spot is to truly offer a better product, Hopefully this lawsuit will spur an investigation of the underlying issue, current antitrust law, and how this law does or does not apply to modem day business.

Sincerely,
Jerry Wallace

Washington, DC 20530

Dear Mr. Ashcroft:

I am disgusted that the government has so little to do with its time that it can waste nearly four years pro-suing the Microsoft antitrust case. I hoped that the economy, which has been suffering ever since this case began, would have the chance to recover. Microsoft's opponents have kept after Microsoft for so long. It is truly becoming tedious.

The settlement provides Microsoft's competitors with the opportunity to use Microsoft's technological advances to their own advantage, in order to restore an atmosphere of fair competition to the technology market. For example, Microsoft will reformat future versions of Windows so that its competitors will have the opportunity to introduce their own software directly into the Windows operating system. Microsoft will also allow computer makers the ability to replace Microsoft programs in Windows with non-Microsoft alternatives.

The settlement is fine; in fact, I think it would be harm tiff to the consumer to extend litigation any longer. The suit is no longer about progress; it is about inhibition. America desperately needs to be able to progress. I urge you and your office to take the necessary action to see this settlement finalized.

Sincerely,
Edwin Barksdale

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

There has been enough posturing on both sides of this Microsoft lawsuit to make a flock of peacocks jealous, and more confusion than a chicken running around with its head cut off. It is clear that any further litigation would only make matters worse.

I am writing to lend my individual support for this settlement. I believe that its terms are reasonably fair for both sides. They make sure that Microsoft avoids its allegedly unfair retaliation practices to software makers, such as attaching software to Windows. It will also be required to change future versions of Windows to accommodate other brands of software more effectively.

I am hoping that no further federal action will be necessary, and that this sort of rancor can be minimized in the future.

Sincerely,
Christopher Britt

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Now that a settlement has been reached in the Microsoft case, I would like to confirm

my support behind the terms negotiated and allowing this action to be completed. As a technology consultant, I am fully aware that Microsoft has overstepped its bounds in some respects in the past, yet this lawsuit has gone beyond what any reasonable person would consider worth the price in government time and money. A deal is a deal and it's time to put this issue to rest. There is ample competition to Microsoft and many ''disruptive technologies'' emerging that will change the balance of market dominance.

Microsoft is a great success story that is being punished, rather than lauded, for its achievements in the software industry. To suggest a break up would be an injustice to entrepreneurs everywhere who want to create the best products and services possible for their customers. This compromise offers significant concessions to how Microsoft can freely do business and should be considered a credible good faith gesture to allowing more competition.

Considering the greater freedoms for computer makers to configure Windows without question and developers to utilize Windows technology for their own interests, this deal should pass the approval process at once. This is the fairest solution possible among these parties, and also the most practical one, considering the need for stability, in this dicey economic climate. Please halt any further action.

Sincerely,

Phil Mattson

Washington, DC 20530–0001

Dear Judge Kollar-Kotally:

The recent proposed settlement between the Department of Justice and Microsoft fails to put an end to Microsoft's predatory practices. The final settlement in U.S. v. Microsoft does not adequately protect competition and innovation in this vital sector of our economy, does not sufficiently address consumer choice, and falls to meet the standards for a remedy set in the unanimous ruling against Microsoft by the Court of Appeals for the District of Columbia. Its enforcement provisions are vague and unenforceable. The five-year time frame of the proposed settlement is far too short to deal with the antitrust abuses of a company that has maintained and expanded its monopoly power through years of fear and intimidation.

Microsoft's liability under the antitrust laws is no longer open for debate. The company has been found liable before the District Court, lost its appeal to the United States Court of Appeals for the District of Columbia in a 7–0 decision, saw its petition for rehearing in the appellate court denied, and had its appeal to the Supreme Court turned down. The courts have decided that Microsoft possesses monopoly power and has used that power unlawfully to protect its monopoly. The next step is to find a remedy that meets the appellate court's standard to ''terminate the monopoly, deny to Microsoft the fruits of its past statutory violations, and prevent any future anticompetitive activity.'' This proposed settlement fails to do so. In fact, the weak settlement between Microsoft and the Department of Justice ignores key aspects of the Court of Appeals ruling against Microsoft. The decision gives Microsoft ''sole discretion'' to unilaterally determine that other products or services which don't have anything to do with operating a computer are nevertheless part of a Windows Operating System product. The deal fails to terminate the Microsoft monopoly, and, instead, guarantees its survival.

The flawed settlement empowers Microsoft to retaliate against would-be competitors, take the intellectual property of competitors doing business with it and permits Microsoft to define many key terms, which is unprecedented in any law enforcement proceeding.

In addition, the proposed settlement contains far too many strong-sounding provisions that are fiddled with loopholes. The agreement requires Microsoft to share certain technical information with other companies. However, Microsoft is under no obligation to share information if that disclosure would harm the company's security or software licensing. Who gets to decide whether such harm might occur? Microsoft. The settlement says that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop or distribute software that would compete with Microsoft's products. However, another provision permits those payments and deals when they are ''reasonably necessary.'' The ultimate arbiter of when these deals would be ''reasonably necessary?'' Microsoft.

Furthermore, the weak enforcement provisions of this proposed deal leave Microsoft free to do practically whatever it wants. The company appoints half the members of its overseeing committee and has the ability to violate regulations, knowing that whatever the committee finds inappropriate is not admissible in court. Finally, Microsoft must only comply with the lenient restrictions in the agreement for only five years. This is clearly not long enough for a company found guilty of violating antitrust laws.

Sadly, the proposed final judgment has the potential to make the competitive landscape of the software industry worse, it contains so many ambiguities and loopholes that it may be unenforceable and will likely lead to years of additional litigation. Various industry experts from such institutions such as Morgan Stanley, the Harvard Business School, Schwab Capital Markets, and Prudential Financial have been quoted as saying that this settlement is beneficial to Microsoft's current monopolistic intentions.

Antitrust law has protected free markets and enhanced consumer welfare in this country for more than a century. The Microsoft case does not represent a novel application of the law, but is the kind of standard antitrust enforcement action that could ensure vigorous competition in all sectors of today's economy. These same standards have been applied to monopolies in the past, such as Standard Oil and AT&T. Court decisions to break up these monopolies led to prices declining as much as 70% and an increase in competition-driven innovation.

The end result is that Microsoft is now able to preserve and reinforce its monopoly, and is also free to use anticompetitive tactics to spread its dominance into other markets. After more than 11 years of litigation and investigation against Microsoft, surely we can do better.

Thank you for your time.

Regards,

Rose Wayne

Dear Judge Kollar-Kotally:

The recent proposed settlement between the Department of Justice and Microsoft does not put an end to Microsoft's questionable practices.

Does the final settlement in U.S. v. Microsoft adequately protect competition and innovation in this vital sector of our economy? Does it sufficiently address consumer choice and meet the standards for a remedy set in the unanimous ruling against Microsoft by the Court of Appeals for the District of Columbia? These questions remain unanswered. The five-year time frame of the proposed settlement seems far too short to deal with the multiple antitrust actions of a company that has maintained and expanded its monopoly power through years of unmatched success. Microsoft's liability under the antitrust laws is no longer open for debate. The company has been found liable before the District Court, lost its appeal to the United States Court of Appeals for the District of Columbia in a 7–0 decision, saw its petition for rehearing in the appellate court denied, and had its appeal to the Supreme Court turned down. The courts have decided that Microsoft possesses monopoly power and has used that power unlawfully to protect its monopoly.

The next step is to find a remedy that meets the appellate court's standard to ''terminate the monopoly deny to Microsoft the fruits of its past statutory violations, and prevent any future anticompetitive activity.'' This proposed settlement may not be strong enough.. In fact, the settlement between Microsoft and the Department of Justice seems to ignore key aspects of the Court of Appeals ruling against Microsoft. The decision as it stands gives Microsoft ''sole discretion'' to unilaterally determine that other products or services which don't have anything to do with operating a computer are nevertheless part of a Windows Operating System product, thus failing to terminate Microsoft's standing position in the market.

The settlement allows Microsoft to retaliate against would-be competitors, take the intellectual property of competitors doing business with it and permits Microsoft to define many key terms, which is unprecedented in any law enforcement proceeding.

In addition, the proposed settlement contains far too many strong-sounding provisions that are riddled with loopholes. The agreement requires Microsoft to share certain technical information with other companies. However, Microsoft is under no obligation to share information if that disclosure would ham the company's security or software licensing. The question is, who gets to decide whether such harm might occur? The settlement says that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop or distribute software that would compete with Microsoft's products. However, another provision permits those payments and deals when they are ''reasonably necessary.'' The ultimate arbiter of when these deals would be ''reasonably necessary?'' Microsoft.

Furthermore, the provisions in this proposed deal may create a scenario in which Microsoft has too much freedom. The company appoints half the members of its overseeing committee and has the ability to violate regulations, knowing that whatever the committee finds inappropriate is not admissible in court. Finally, Microsoft must only comply with the lenient restrictions in the agreement for only five years. This is clearly not long enough for a company found guilty of violating antitrust law.

Various industry experts from such institutions as Morgan Stanley, the Harvard Business School, Schwab Capital Markets and Prudential Financial have been quoted as saying that this settlement is beneficial to Microsoft's current monopolistic intentions.

Dear Judge Kollar-Kotally:

The recent proposed settlement between the Department of Justice and Microsoft fails to put an end to Microsoft's predatory practices.

The final settlement in U.S. v. Microsoft does not adequately protect competition and innovation in this vital sector of our economy, does not sufficiently address consumer choice and fads to meet the standards for a remedy set in the unanimous ruling against Microsoft by the Court of Appeals for the District of Columbia. Its enforcement provisions are vague and unenforceable. The five-year time frame of the proposed settlement is far too short to deal with the antitrust abuses of a company that has maintained and expanded its monopoly power through years of fear and intimidation.

Microsoft's liability under the antitrust laws is no longer open for debate. The company has been found liable before the District Court, lost its appeal to the United States Court of Appeals for the District of Columbia in a 7–0 decision, saw its petition for rehearing in the appellate court denied, and had its appeal to the Supreme Court turned down. The courts have decided that Microsoft possesses monopoly power and has used that power unlawfully to protect its monopoly. The next step is to find a remedy that meets the appellate court's standard to ''terminate the monopoly, deny to Microsoft the fruits of its past statutory violations, and prevent any future anticompetitive activity.'' This proposed settlement fails to do so. In fact, the weak settlement between Microsoft and the Department of Justice ignores key aspects of the Court of Appeals ruling against Microsoft. The decision gives Microsoft ''sole discretion'' to unilaterally determine that other products or services which don't have anything to do with operating a computer are nevertheless part of a Windows Operating System product. The deal fails to terminate the Microsoft monopoly and, instead, guarantees its survival.

The flawed settlement empowers Microsoft to retaliate against would-be competitors, take the intellectual property of competitors doing business with it and permits Microsoft to define many key terms, which is unprecedented in any law enforcement proceeding. In addition, the proposed settlement contains far too many strong-sounding provisions that are riddled with loopholes. The agreement requires Microsoft to share certain technical information with other companies. However, Microsoft is under no obligation to share information if that disclosure would harm the company's security or software licensing. Who gets to decide whether such harm might occur? Microsoft. The settlement says that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop or distribute software that would compete with Microsoft's products. However, another provision permits those payments and deals when they are ''reasonably necessary.'' The

ultimate arbiter of when these deals would be ''reasonably necessary?'' Microsoft.

Furthermore, the weak enforcement provisions in this proposed deal leave Microsoft free to do practically whatever it wants. The company appoints half the members of its overseeing committee and has the ability to violate regulations, knowing that whatever the committee finds inappropriate is not admissible in court. Finally, Microsoft must only comply with the lenient restrictions in the agreement for only five years. This is clearly not long enough for a company found guilty of violating antitrust law.

Sadly, the proposed final judgment has the potential to make the competitive landscape of the software industry worse, it contains so many ambiguities and loopholes that it may be unenforceable and will likely lead to years of additional litigation. Various industry experts from such institutions as Morgan Stanley, the Harvard Business School, Schwab Capital Markets and Prudential Financial have been quoted as saying that this settlement is beneficial to Microsoft's current monopolistic intentions.

Antitrust law has protected free markets and enhanced consumer welfare in this country for more than a century. The Microsoft case does not represent a novel application of the law, but is the kind of standard antitrust enforcement action that could ensure vigorous competition in all sectors of today's economy. These same standards have been applied to monopolies in the past, such as Standard Oil and AT&T. Court decisions to break up these monopolies led to prices declining as much as 70% and an increase in competition-driven innovation.

The end result is that Microsoft is now able to preserve and reinforce its monopoly, and is also free to use anticompetitive tactics to spread its dominance into other markets. After more than 11 years of litigation and investigation against Microsoft, surely we can do better.

Thank you for your time.

Suite 1200

Washington, DC 20530–0001

Dear Judge Kollar-Kotally:

The recent proposed settlement between the Department of Justice and Microsoft does not put an end to Microsoft's questionable practices. Does the final settlement in U.S. v. Microsoft adequately protect competition and innovation in this vital sector of our economy? Does it sufficiently address consumer choice and meet the standards for a remedy set in the unanimous ruling against Microsoft by the Court of Appeals for the District of Columbia? These questions remain unanswered. The five-year time frame of the proposed settlement seems far too short to deal with the multiple antitrust actions of a company that has maintained and expanded its monopoly power through years of unmatched success. Microsoft's liability under the antitrust laws is no longer open for debate. The company has been found liable before the District Court, lost its appeal to the United States Court of Appeals for the District of Columbia in a 7–0 decision, saw its petition for rehearing in the appellate court denied, and had its appeal to the Supreme Court turned down. The courts have decided that Microsoft possesses monopoly power and has used that power unlawfully to protect its monopoly. The next step is to find a remedy that meets the appellate court's standard to ''terminate the monopoly, deny to Microsoft the fruits of its past statutory violations, and prevent any future anticompetitive activity'' This proposed settlement may not be strong enough.. In fact, the settlement between Microsoft and the Department of Justice seems to ignore key aspects of the Court of Appeals ruling against Microsoft. The decision as it stands gives Microsoft ''sole discretion'' to unilaterally determine that other products or services which don't have anything to do with operating a computer are nevertheless part of a Windows Operating System product, thus failing to terminate Microsoft's standing position in the market.

The settlement allows Microsoft to retaliate against would-be competitors, take the intellectual property of competitors doing business with it and permits Microsoft to define many key terms, which is unprecedented in any law enforcement proceeding. In addition, the proposed settlement contains far too many strong-sounding provisions that are fiddled with loopholes. The agreement requires Microsoft to share certain technical information with other companies. However, Microsoft is under no obligation to share information if that disclosure would harm the company's security or software licensing. The question is, who gets to decide whether such harm might occur?

The settlement says that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop or distribute software that would compete with Microsoft's products. However, another provision permits those payments and deals when they are ''reasonably necessary.'' The ultimate arbiter of'' when these deals would be ''reasonably necessary?'' Microsoft.

Furthermore, the provisions in this proposed deal may create a scenario in which Microsoft has too much freedom. The company appoints half the members of its overseeing committee and has the ability to violate regulations, knowing that whatever the committee finds inappropriate is not admissible in court. Finally, Microsoft must only comply with the lenient restrictions in the agreement for only five years. This is clearly not long enough for a company found guilty of violating antitrust law.

Various industry experts from such institutions as Morgan Stanley, the Harvard Business School, Schwab Capital Markets and Prudential Financial have been quoted as saying that this settlement is beneficial to Microsoft's current monopolistic intentions. Antitrust law has protected free markets and enhanced consumer welfare in this country for more than a century. The Microsoft case does not represent a novel application of the law, but is the kind of standard antitrust enforcement action that could ensure vigorous competition in all sectors of today's economy. These same standards have been applied to monopolies in the past, such as Standard Oil and AT&T. Court decisions to break up these monopolies led to prices declining as much as 70% and an increase in competition-driven innovation.

The end result is that Microsoft may still be able to preserve and reinforce its predominance. After more than 11 years of litigation and investigation against Microsoft, I eagerly await what is to be the final outcome.

Thank you for your time.

Microsoft does not adequately protect competition and innovation in this vital sector of our economy, does not sufficiently address consumer choice and fails to meet the standards for a remedy set in the unanimous ruling against Microsoft by the Court of Appeals for the District of Columbia. Its enforcement provisions are vague and unenforceable. The five-year time frame of the proposed settlement is far too short to deal with the antitrust abuses of a company that has maintained and expanded its monopoly power through years of fear and intimidation.

Microsoft's liability under the antitrust laws is no longer open for debate. The company has been found liable before the District Court, lost its appeal to the United States Court of Appeals for the District of Columbia in a 7–0 decision, saw its petition for reheating in the appellate court denied, and had its appeal to the Supreme Court turned down. The courts have decided that Microsoft possesses monopoly power and has used that power unlawfully to protect its monopoly. The next step is to find a remedy that meets the appellate court's standard to ''terminate the monopoly, deny to Microsoft the fruits of its past statutory violations, and prevent any future anticompetitive activity.'' This proposed settlement fails to do so. In fact, the weak settlement between Microsoft and the Department of Justice ignores key aspects of the Court of Appeals ruling against Microsoft. The decision gives Microsoft ''sole discretion'' to unilaterally determine that other products or services which don't have anything to do with operating a computer are nevertheless part of a Windows Operating System product. The deal fails to terminate the Microsoft monopoly and, instead, guarantees its survival.

The flawed settlement empowers Microsoft to retaliate against would-be competitors, take the intellectual property of competitors doing business with it and permits Microsoft to define many key terms, which is unprecedented in any law enforcement proceeding. In addition, the proposed settlement contains far too many strong-sounding provisions that are fiddled with loopholes. The agreement requires Microsoft to share certain technical information with other companies. However, Microsoft is under no obligation to share information if that disclosure would harm the company's security or software licensing. Who gets to decide whether such harm might occur? Microsoft. The settlement says that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop or distribute software that would compete with Microsoft's products. However, another provision permits those payments and deals when they are ''reasonably necessary.'' The ultimate arbiter of when these deals would be ''reasonably necessary?'' Microsoft.

Furthermore, the weak enforcement provisions in this proposed deal leave Microsoft free to do practically whatever it wants. The company appoints half the members of its overseeing committee and has the ability to violate regulations, knowing that whatever the committee finds inappropriate is not admissible in court. Finally, Microsoft must only comply with the lenient restrictions in the agreement for only five years. This is clearly not long enough for a company found guilty of violating antitrust law.

Sadly, the proposed final judgment has the potential to make the competitive landscape of the software industry worse, it contains so many ambiguities and loopholes that it may be unenforceable and will likely lead to years of additional litigation. Various industry experts from such institutions as Morgan Stanley, the Harvard Business School, Schwab Capital Markets and Prudential Financial have been quoted as saying that this settlement is beneficial to Microsoft's current monopolistic intentions.

Antitrust law has protected free markets and enhanced consumer welfare in this country for more than a century. The Microsoft case does not represent a novel application of the law, but is the kind of standard antitrust enforcement action that could ensure vigorous competition in all sectors of today's economy. These same standards have been applied to monopolies in the past, such as Standard Oil and AT&T. Court decisions to break up these monopolies led to prices declining as much as 70% and an increase in competition-driven innovation. The end result is that Microsoft is now able to preserve and reinforce its monopoly, and is also free to use anticompetitive tactics to spread its dominance into other markets. After more than 11 years of litigation and investigation against Microsoft, surely we can do better.

Thank you for your time.

Dear Judge Kollar-Kotally:

The recent proposed settlement between the Department of Justice and Microsoft does not put an end to Microsoft's questionable practices.

Does the final settlement in U.S. v. Microsoft adequately protect competition and

innovation in this vital sector of our economy? Does it sufficiently address consumer choice and meet the standards for a remedy set in the unanimous ruling against Microsoft by the Court of Appeals for the District of Columbia? These questions remain unanswered. The five-year time frame of the proposed settlement seems far too short to deal with the multiple antitrust actions of a company that has maintained and expanded its monopoly power through years of unmatched success. Microsoft's liability under the antitrust laws is no longer open for debate. The company has been found liable before the District Court, lost its appeal to the United States Court of Appeals for the District of Columbia in a 7–0 decision, saw its petition for reheating in the appellate court denied, and had its appeal to the Supreme Court turned down. The courts have decided that Microsoft possesses monopoly power and has used that power unlawfully to protect its monopoly. The next step is to find a remedy that meets the appellate court's standard to ''terminate the monopoly, deny to Microsoft the fruits of its past statutory violations, and prevent any future anticompetitive activity.'' This proposed settlement may not be strong enough.. In fact, the settlement between Microsoft and the Department of Justice seems to ignore key aspects of the Court of Appeals ruling against Microsoft. The decision as it stands gives Microsoft ''sole discretion'' to unilaterally determine that other products or services which don't have anything to do with operating a computer are nevertheless part of a Windows Operating System product, thus falling to terminate Microsoft's standing position in the market.

The settlement allows Microsoft to retaliate against would-be competitors, take the intellectual property of competitors doing business with it and permits Microsoft to define many key terms, which is unprecedented in any law enforcement proceeding.

In addition, the proposed settlement contains far too many strong-sounding provisions that are fiddled with loopholes. The agreement requires Microsoft to share certain technical information with other companies. However, Microsoft is under no obligation to share information if that disclosure would harm the company's security or software licensing. The question is, who gets to decide whether such harm might occur? The settlement says that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop or distribute software that would compete with Microsoft's products. However, another provision permits those payments and deals when they are ''reasonably necessary.'' The ultimate arbiter of when these deals would be ''reasonably necessary?'' Microsoft.

Furthermore, the provisions in this proposed deal may create a scenario in which Microsoft has too much freedom. The company appoints half the members of its overseeing committee and has the ability to violate regulations, knowing that whatever the committee finds inappropriate is not admissible in court. Finally, Microsoft must only comply with the lenient restrictions in the agreement for only five years. This is clearly not long enough for a company found guilty of violating antitrust law.

Various industry experts from such institutions as Morgan Stanley, the Harvard Business School, Schwab Capital Markets and Prudential Financial have been quoted as saying that this settlement is beneficial to Microsoft's current monopolistic intentions. Antitrust law has protected free markets and enhanced consumer welfare in this country for more than a century. The Microsoft case does not represent a novel application of the law, but is the kind of standard antitrust enforcement action that could ensure vigorous competition in all sectors of today's economy. These same standards have been applied to monopolies in the past, such as Standard Oil and AT&T. Court decisions to break up these monopolies led to prices declining as much as 70% and an increase in competition-driven innovation. The end result is that Microsoft may still be able to preserve and reinforce its predominance. After more than 11 years of litigation and investigation against Microsoft, I eagerly await what is to be the final outcome.

Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am writing you this brief letter to ask you to utilize your office and influence to expedite the finalization of the settlement proposal in the Microsoft anti-trust case. This case is three years old, It has been the subject of endless controversy and continuous litigation, negotiation and mediation, and is now ready and ripe for settlement. Your Justice Department and Microsoft have reached an agreement. It is fair, timely and overdue. Please support it.

The agreement will allow Microsoft to retain its present corporate structure. In return Microsoft will substantially change its marketing practices and marketplace philosophy. Microsoft will hereafter promote the use of non-Microsoft software by reconfiguring its Windows platform systems to readily accept competitors'' products. Microsoft will now even share certain Windows technology with the rest of the industry in order to facilitate innovation and choice for consumers. Within the industry Microsoft will now license its Windows products to major computer manufacturers at similar terms and prices. This settlement contains all of this and more in an effort to prod Microsoft's competitors to greater market share. Such concessions merit a settlement.

Let's let Microsoft get back to the work of leading the IT industry into this new century.

Sincerely,

Charlie Tucker

Dear Ms. Hesse:

The United States Department of Justice has wisely approved the proposed consont docr??e that would end the federal government's three-year antitrust case against Microsoft. The North Carolina Department of Justice has done the same. I believe it is now time for the federal courts to accept the settlement and put an end to this unwise and unnecessary litigation.

Yes, Microsoft has been a tough competitor. But the purpose of antitrust law is to protect the consumer, not to protect the market share of competitors. I have never seen proof set forth that Microsoft's business practices hurt consumers, Software has become more available, easier to use and less expensive. Millions of people have been able to use computers for the first time. Where is the consumer harm?

Yes, in the interests of settling this case and ending the litigation, Microsoft has now agreed to accept unprecedented curbs on how it does business. It must provide more information to competitors and computer manufacturers. It must change the way it develops, licenses and market its software. It must accept the oversight of a technical committee.

These are remarkable concessions. They were developed in tough negotiation led by a court-appointed mediator. They offer something for both sides. More important, they offer Microsoft, this industry and the technology-dependent economy the opportunity to end the costly and time-consuming litigation.

I sincerely hope the federal court will approve this settlement. It is time to put an end to this ill-advised case.

Sincerely,

Sam Ellis

Dear Ms. Hesse:

From the beginning, the federal government's pursuit of Microsoft has been politically inspired and economically unwise. The case was conceived and even subsidized in the beginning by Microsoft's competitors. They sought to win in the courts what they could not win in the market. The government should never have initiated this proceeding. Now the courts have an opportunity to end this madness. Three years and $30 million of the taxpayers money is enough. At a time when terrorists threaten America and we are facing an economic slowdown, our nation. the information technology industry and Microsoft should not be forced to waste more time and money on this case. It is time to move ahead. Please put and end to this travesty.

Sincerely.

Ballard Evere??t

Bay Village, Ohio 44140
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvanta Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

Microsoft and the Department of Justice recently reached an agreement ending a three-year-long antitrust suit. I am in the computer industry and thus feel more confident to comment on the case. It should not have happened. The case was brought simply to give an advantage to Microsoft's competitors. I am as happen as I can be with the settlement, and hope this issue is finally over. What is totally ignored, and what I don't understand, is the lack of recognition of the way things were before Microsoft. Before Microsoft, there was no compatibility between software packages. You could have ten different software packages, none of which ''talked'' to cash other and you were left to have to deal with ten different companies. Nothing worked. Bill Gates saw an opportunity and seized it. Isn't that what you're supposed to do? Would it have been any better if it had been Sun Microsystems? Or IBM? Would the Justice Department be hounding these companies? Is success in this country only acceptable if kept within limits strictly define by the federal government? I have problems with the federal government and its intrusion into our everyday life. Can I bring suit against the federal government for being to large? Another example is AT&T. We had the best phone system in the world. Now, I do not understand my phone bill, I have to talk to any number of people, none of which take responsibility for my problem. I pay just as much for a fraction of the service. But, hey, the goal was accomplished; break up AT&T. It was too big, too good.

The result of Microsoft's ''business practices'' is widely available, higher quality software at a very reasonable price. The only harm to the consumer comes from lawsuits like these. Companies should spend their money on research and development not legal fees. If my government wants to fix something that's broke, they should take a look at the medical industry.

I appreciate your time in this matter, and would like to reiterate that fact that I am happy with the settlement. The economy can now move on.

Sincerely,

Rick Wolf

Orlando, FL 32837
January 24, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to register my opinion in support of the Microsoft settlement, To begin with, I agree with the 32 states that decided to not join the case in the first place. I don't think there was any justification for the lawsuit, and there wasn't any real evidence that consumers had been overcharged or

deprived in any way. There has always been flee choice in the computer marketplace, and people simply chose Microsoft's Windows over other systems, and a stronger market of partnering companies has built up around Windows.

I work with Microsoft Windows NT to administer a local area network (LAN) in my division of our healthcare company, and we use a non-Microsoft billing software package customized for our industry. This collaboration is part of the strength of the Microsoft Windows system. The settlement will encourage still greater cooperation. For instance, Microsoft will release its software codes and allow computer makers to be more flexible in how, or if, they load Windows or other Microsoft software. The programs included in Windows installation, such as Internet Explorer browser and Windows Media Player, will be made easier to remove and substitute with non-Microsoft products, like Netscape Navigator, Software experts on a government-sponsored technical committee will monitor Microsoft for compliance with the agreement, and investigate complaints. These provisions should enable the industry to make creative use of Microsoft's Windows innovations, and assure the industry that Microsoft will live up to the agreement. I appreciate the leadership you have provided in seeing that the settlement is approved by the Federal Court's new judge on this case. Once this case is resolved, the American will be better off. Thank you for considering my public comment.

Sincerely,
Evelyne Byll-Paul

Washington DC, 20530–001

To Whom It May Concern:

I am writing to exercise my right under the Tunney Act to voice my strong disapproval of the current proposed settlement of the Microsoft anti-trust trial. The proposed settlement is both weak and lacking strong enforcement provisions, and is likely to have zero (or worse) effect on competition within the computer industry, with continued and increased harm to consumers in the form of fewer options in the software market and continued increases in the price of the Microsoft software consumers are forced to buy.

Microsoft was convicted of abuse of monopoly power by one Federal judge, and the judgment was largely upheld by another seven Federal justices. In evaluating any proposed settlement, keep repeating one Important Phrase over and over: ''Microsoft is guilty.'' The seven justices of the appeals court ruled that any actions taken against Microsoft (a) must restore competition to the affected market, (b) must deprive Microsoft of the ''fruits of its illegal conduct,'' and (c) must prevent Microsoft from engaging in similar tactics in the future. The proposed settlement fails on every one of these.

A) Restore Competition

Among the many flaws in the proposed settlement is the complete disregard for the Open Source software movement, which poses the single greatest competitive threat to Microsoft's monopoly. Most organizations writing Open Source software are not-for-profit groups, many without a formal organization status at all. Section III(1)(2) contains strong language against non-for-profits, to say nothing of the even less-formal groups of people working on projects. Section III(D) also contains provisions which exclude all but commercially-oriented concerns. To restore competition the settlement must make allowances for Open Source organizations—whether formal not-for-profit organizations or informal, loosely associated groups of developers—to gain access to the same information and privileges afforded commercial concerns.

B) Deprivation of Ill-Gotten Gains

Nowhere in the proposed settlement is there any provision to deprive Microsoft of the gains deriving from their illegal conduct. Go back to the Important Phrase: ''Microsoft is guilty.'' In most systems of justice, we punish the guilty. But the current proposal offers nothing in the way of punishment, only changes in future behavior. Currently Microsoft has cash holdings in excess of US$40 billion, and increases that by more than US$1 billion each month. A monetary fine large enough to have an impact on them would be a minimum of US$5 billion.

Even a fine that large would be a minimal punishment. Microsoft's cash stockpile is used, frequently and repeatedly, to bludgeon competitors, buy or force their way into new markets, or simply purchase customers, with the long-term intent to lock people and organizations into proprietary software on which they can set the price. Taking a ''mere'' US$5 billion from their stockpile will have zero effect on this practice.

For that reason, Microsoft's cash stockpile must be further reduced. In addition to the monetary fine, Microsoft should be forced to pay shareholders a cash dividend in any quarter in which they post a profit and hold cash reserves in excess of USS10 billion. The dividend should be substantial enough to lower Microsoft's cash holdings by US$1 billion, or 10%, whichever is greater.

C) Prevention of Future Illegal Conduct

The current proposed settlement allows Microsoft to effectively choose two of the three individuals who would provide oversight of Microsoft's conduct and resolve disputes. The proposed settlement also requires the committee to work in secret, and individuals serving on the committee would be barred from making public or testifying about anything they learn. This structure virtually guarantees that Microsoft will be ''overseen'' by a do-nothing committee with virtually zero desire or ability to either correct Microsoft abuses, or even call attention to them.

Instead of the current proposal, a five-person committee should be selected. Microsoft may appoint one person, but will have no influence over any of the other four. For the four, two should be appointed by the Federal court of jurisdiction, one should be appointed by the U.S. Department of Justice, and one should be appointed by the U.S. Senate. At least two of the appointees should have technical experience and be competent to evaluate technical proposals and arguments by themselves, without the filters which assistants would bring.

These are hardly the only thoughtful and reasonable suggestions you will no doubt receive regarding the proposed settlement of this anti-trust case. And these are hardly the only suggestions which should be adopted if the settlement is to prove effective. Rut all of them are essential to that aim, and adopt them you must.

Thank you for your time and the opportunity to comment.

Respectfully,
Michael A. Alderete

January 23, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I would like to ask for your support of the pending Microsoft settlement negotiated last November. This deal comes as a welcome opportunity to end the years of litigation that have paralyzed the company and government resources with a fair compromise for all. Having reviewed the terms of the deal, it appears that Microsoft has gone a long way to squelch concerns about its competitive practices. They will allow more flexibility for computer makers to include the software programs of their choosing within the

Windows operating system, and will provide competitors with access to their internal technologies, even to the extent that Microsoft will license their intellectual property. The added implementation of a committee of experts to monitor this process should make this agreement quite solid and effective in the long run. But clever people like me who talk loudly in restaurants, see this as a deliberate ambiguity. A plea for justice in a mechanized society.

I look forward to your approval of the proposed settlement. Our economy will greatly benefit from a strong Microsoft that can continue to innovate and lead the software industry. Thank you very much.

Sincerely,

Dear Mr. Ashcroft:

I am disgusted that the government has so little to do with its time that it can waste nearly four years pursuing the Microsoft antitrust case. I hoped that the economy, which has been suffering ever since this case began, would have the chance to recover. Microsoft's opponents have kept after Microsoft for so long. It is truly becoming tedious.

The settlement provides Microsoft's competitors with the opportunity to use Microsoft's technological advances to their own advantage, in order to restore an atmosphere of fair competition to the technology market. For example, Microsoft will reformat future versions of Windows so that its competitors will have the opportunity to introduce their own software directly into the Windows operating system. Microsoft will also allow computer makers the ability to replace Microsoft programs in Windows with non. Microsoft alternatives.

The settlement is fine; in fact, I think it would be harmful to the consumer to extend litigation any longer. The suit is no longer about program; it is about inhibition. America desperately needs to be able to progress. I urge you and your office to take the necessary action to see this settlement finalized.

Sincerely,
Edwin Barksdale

Dear Mr. Ashcroft:

As a computer professional in the technology industry, I am writing in favor of Microsoft. Microsoft is innovative, great for the technical sector and great for the economy. Look at what's happened to the technical sector and the NASDAQ since Microsoft went to litigation. Perhaps if we wrap this case up, we will see a rebound in those sectors.

Microsoft is going out of their way to wrap up this case, beyond what would be expected in any antitrust case. They settled after extensive negotiations with a mediator and agreed to the establishment of a technical committee that will monitor their compliance with the settlement and assist with resolving any disputes.

Microsoft has been through a lot these last few years. Let's move on. There are far greater issues that warrant our attention. Thanks.

Sincerely,
Ernie Dufek

Ms. Hesse:

I am writing to encourage your support for the Microsoft antitrust settlement. What seems to have been lost in this case is that there was not one shred of firm evidence offered linking Microsoft to a single case of actual harm to consumers anywhere in the country. Yet, consumer harm was the premise for the launching of this suit against the company.

I believe that Microsoft's offer to pay the legal expenses of the remaining states is a sign that the company is tired of being distracted by this case—especially given the recession we find ourselves in. I believe that the American people are also growing tired of officials like Kansas's own General Stovall continuing to drag it out.

Many have lost jobs, had their savings and investments evaporate, and are watching the technology sector nose-dive. Much of which is the cause of this lawsuit.

The last thing we need in the middle of a recession is a crippled technology industry and an out-of-control litigious government. This case should have been settled long ago. The Bush Administration says so and nine other states have said so—I hope you see it that way too.

Sincerely,
Bob Hodgdon

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to the Microsoft settlement issue. I support the settlement that was reached in November and believe this agreement will serve iv, the best public interest. I am a Microsoft supporter and feel that this company should not be punished for being successful.

Microsoft has agreed to all terms and conditions of this settlement. Under this agreement, Microsoft must grant computer makers broad new rights to configure Windows so as to promote non- Microsoft software programs that compete with programs included within Windows.

Microsoft has also agreed to document and disclose for use by its competitors various interfaces that are internal to Windows' operating system products.

We are facing difficult times and a lagging economy. We do not have time to waste on expensive litigation that will not benefit the public. Please support this settlement and allow Microsoft to get back to business. Thank you for your time.

Dear Mr. Ashcroft:

As a citizen of this great nation, ! am writing to give my support to the settlement reached between the Justice Department and Microsoft. I support Microsoft, because they have a right to free enterprise. The government needs to stop their prosecution of Microsoft once and for all. As a real estate broker, I use Microsoft's products at my work, and feel their products are the most user friendly on the market.

This settlement was reached after many hours of negotiations with a court-appointed mediator. Microsoft has agreed to document, and disclose for use by its competitors various interfaces that are internal to Windows operating system products.

Furthermore, Microsoft also has agreed to the establishment of a three person technical committee. This committee will monitor Microsoft's compliance with the settlement, and aid in dispute resolution. Further pursuit of Microsoft would be a waste of time and money.

Sincerely
J.C. Jordan

January, 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

This letter is to urge you to give your approval to the Microsoft settlement, This would end three years of court battles between Microsoft and the Department of Justice. The two parties have agreed to this agreement and I do not think it is the place of others to second-guess the decision. The fact that a federal judge accepted it is also evidence of a settlement. It has gone on far too long. It is time to quit wasting taxpayers' money and put some of that money towards things that are needed more, like highways, schools, the environment.

Microsoft has agreed to a great many of the terms demanded by Justice. There is internal interlace disclose, computer-maker flexibility, granting computer makers new rights to configure Windows to promote non-Microsoft programs; there is an oversight committee. What more is there? Why should anyone work to make a company work, or invent something, if only to have to give it away? This whole lawsuit sets a very bad precedent.

I urge you to let this decision stand and let us go forwards, not backwards.

Sincerely,
Shirley Hui

Dear Mr. Ashcroft:

I am writing to give my support to the agreement reached between Microsoft and the Department of Justice. I did not support the original lawsuit against Microsoft I do not think the case was warranted. The lawsuit was more political than any outrage over unethical business dealings. Bill Gates has carried the technological revolution on his shoulders. He has enabled the average person to become part of the technological age. Does anyone remember what it was like before Microsoft? Bill Gates standardized computer software to enable its compatibility with other software. And people bought the product, because it was the best.

Bill Gates has agreed to any number of terms demanded from the Department of Justice. Microsoft has agreed to share its source codes and books pertaining to Windows. that Windows uses to communicate with other programs: Microsoft has agreed to a three person technical committee to monitor future compliance; Microsoft has agreed to contractual restrictions and intellectual property rights. This is more than fair.

Give your approval to this agreement Allow us to get back to work.

Sincerely,
Marc Hui

Washington, DC 20530

Ms. Hesse:

Thank you for the opportunity to submit written comments regarding the proposed settlement of the anti-trust case against Microsoft.

I strongly support settlement of this case. In my opinion, the sooner it is put to rest the better. I was not in support of the case being brought in the first place, but am glad that at least most of the suit's participants have found a solution that is acceptable to them.

I understand the role of government in protecting consumers from entrenched monopolies, however I do not believe the laws on the books with regard to this apply to today's high tech industry. In the last few years of the anti-trust lawsuit against Microsoft the high tech industry has already changed significantly, proving that the marketplace is a far better regulator of corporate behavior than the courtroom.

I urge the court to approve the proposed settlement of the Microsoft case. It is the best course of action for our federal government to take.

Sincerely,
Mrs. John walker

Dear Mr. Ashcroft:

The tentative Microsoft settlement should be enacted at the end of January. The onslaught of this attack against Microsoft has stifled productivity in the technology markets, The enactment of this settlement, conversely, will increase confidence in the tech sector. With the recent recession causing layoffs in every industry, now is the time to finalize this settlement.

Further the settlement has many points that will benefit members of the tech industry. Under the terms of the agreement Microsoft will now provide for the disclosure of protocols that are internal to the Windows system. This will enable developers to create software that is more compatible with the Windows system.

I encourage the Justice Department to enact this settlement.

Sincerely,
Earl Lairson

Dear Mr. Ashcroft:

As a retiree who has been following this Microsoft antitrust case, I think it's time to leave Microsoft alone. Now that a settlement has been reached, let's move on.

Microsoft did not get off as easy as its opponents would have people think. They agreed to terms that were well beyond what would be expected in any antitrust case. Microsoft also agreed to give computer companies the right to configure Windows in order to promote their software programs that compete with programs within Windows. Is there any other software company out there that does this?

Enough is enough. There is no further need for litigation. I urge you to accept the settlement. Microsoft has cooperated, and now we need to do our part to get the economy going.

Sincerely,
Ed Raphael

Dear Ms. Hesse,

The basis of the Microsoft lawsuit has been weak Cram the start, a failed attempt to shake Microsoft through negative media attention trod distraction. Microsoft has been hog tied by fresh legal complaints answering each advance they have made since the original suit, I fail to see how Microsoft is more corrupt than any other of the litigating parties, as opposition has blatantly used the courts to stall Microsoft in hopes of their own gain.

The lawsuit against Microsoft may have originated with legitimate concerns regarding modern day antitrust issues, but has digressed to a manipulation of the courts by misguided ambition. Enough resources have been wasted on this debacle. The proposed settlement should be an acceptable solution for all, After all, Microsoft's competition has already won more than three years worth of media battles and scrutiny throughout the trial.

Sincerely,

SUBJECT: Microsoft Settlement

Dear Ms. Hesse:

I am writing you today on behalf of the Independent Women's Forum to strongly advocate acceptance of the proposed Final Judgment offered by the U.S. Department of Justice (and endorsed by nine state attorneys general) to resolve the antitrust case against Microsoft Corporation. The Independent Women's Forum (IWF) is a non-partisan organization that focuses on issues that matter to women. We were formed in 1992 and have counted among our members some of the most credentialed legal scholars, economists and policy experts in our nation's capitol and across the country.

As president of IWF, I am convinced that technological innovation is essential to enabling women to meet the competing pressures of our lives. When we speak with working mothers across the country it is clear that the most difficult challenge they face is balancing the demands of work and family. As a mother of five who works full time, I can tell you that I would have voted in a 34 hour day a long time ago if that were possible. Without the aide of technology, I do not believe it would have been possible for me to succeed at work and at home. For this reason—and for those detailed below—I was shocked at the government's initial attack on a company that has brought consumers so much innovation and quality of life enhancing products.

As a professional economist, this proposed settlement quite frankly seems more than generous on the part of Microsoft. Any prolonging of the matter seems unjustified on economic or legal criteria. Candidly, it seems more motivated by competitors who would rather use government as a tool to hobble their commercial adversary than by any supportable antitrust theory. Even the Court of Appeals concluded that only inferential evidence exists that there is any causal link between Microsoft's conduct and its continuing position in the market. P.O. Box 3058, Arlington, Virginia 22203–0058 Phone: 703–558–4991 Fax: 703–558–4994 Website: www.iwf.org

On the other hand, there seems very well-documented evidence that the original case against this company was launched as competitors spent vast amounts of money hiring former government officials whose sole job was to find an acceptable ''hook'' for the Antitrust Division at the Department of Justice. Additionally, the judge's very public comments to the media evoked an image of the old Salem witch-trials. As you are aware, the Court or' Appeals criticized him sharply. Unfortunately, by then, most of the public damage to Microsoft's reputation had been done, We are concerned that this entire exercise will dissuade others from taking the entrepreneurial risks inherent in creating new products for consumers.

The IWF calls on the Department of Justice to accept the settlement that the federal government and the attorneys general of nine states have already approved. As female consumers who desperately want and need top quality technology products at reasonable prices in order to balance, the twin pressures of work and family, we ask you to end this legal wrangling that benefits no one and costs millions of taxpayer dollars.

Respectfully submitted,
Nancy M. Pfotenhauer
President, The Independent Women's Forum

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I would like to take some time and go on record as being an advocate of the settlement that was reached between the Justice Department and the Microsoft Corporation. It was about time that a settlement has been proposed, and I only hope that it is approved as soon as possible. Microsoft did not get off the hook easy, not by any means. But, the settlement will help in fostering competition in the technology industry and will also give the American economy the shot in the arm that it needs. I think that forcing Microsoft to give up its intellectual property is a bit much, but whatever it takes to improve our economy is fine by me. Microsoft will make available to its competitors, on reasonable and non-discriminatory terms, any coding that Windows uses to communicate with another program running on it. Clearly, this settlement is more than just a slap on Microsoft's corporate wrists.

This is going a bit far, but it is in the best interest of the nation to bring an end to this lawsuit. I am in support of this settlement because it does so. Thank you.

Sincerely,
Sherry Zorzi

Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my belief that you should accept the settlement reached between your department and Microsoft. This case has been going on for three years. If you choose to return to court and litigate an outcome, it may be three more years before a judgment is reached, and then additional time will be required for appeals.

The agreement your department reached with Microsoft provides a concrete, immediate resolution to the case. The agreement may nor contain exactly everything you want, but it is a certain resolution in a time when our economy could use the certainty the agreement provides. The agreement's provisions relating to uniformity in pricing practices, an end to exclusivity requirements in distributorship contracts, and the opening of Windows to competition offer an improvement over the present situation. They also offer a degree of certainty that will not be afforded if the case continues. Please end the case by going forward with the settlement agreement your department reached last year. We will all benefit from it.

Sincerely,
Carol Albertsen

January 28, 2002
Attorney General 3ohn Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am happy to hear about the settlement that has been worked out with Microsoft. It has taken three long year, to finally reach an agreement like this that is fair for both sides. I hope that the Federal government will let this be it and finally put the matter to rest.

The settlement is fair. First of all, Microsoft will adhere to a uniform pricing list when licensing Windows out to the larger computer vendors in the United States. Also, Microsoft has agreed not to retaliate against companies that promote or use non-Microsoft products. Most importantly, Microsoft has agreed to share sensitive information with its competitors; information that will allow them to more easily place their own programs on the Windows operating system.

I know that many people who daily depend on Microsoft products will write to you about this matter. I hope that you take their and my opinions into account. I support the settlement and look forward to seeing the suit come to an end. As a consumer and a user of Microsoft products, I do not feel that I am being ''clobbered'' by Microsoft. Many of their competitors would like you to think this is the case. Since many other companies can't effectively compete with their own inferior products, they want the taxpayers to help them get rid of Microsoft by way of a government breakup. Enough is enough, settle the lawsuit and allow Microsoft to get on with creating more innovative products!!

Sincerely,
Marc T Nettles

Washington, DC 20530

Ms. Hesse:

Attorney General John Ashcroft and Microsoft's legal team are to be commended for their efforts to bring the Microsoft case to

an end. I am writing to express my strong support for this settlement and to encourage the court to accept this agreement.

The economic benefits of ending this case should be taken into consideration. I am certain that the court is aware of the dramatic influence the DOJ's actions have had the technology sector. A look back in history clearly demonstrates a link between the beginnings of our bearish stock market to the order by a federal judge to bust up Microsoft.

I believe that an honest effort was made by all parties involved in the creation of the settlement to be fair. This settlement establishes a committee that will oversee Microsoft's business practices in the future. Additionally, the company will not be allowed to cut special packaging deals with computer makers and will be forced to shared technical information with its competitors. This settlement is fair and it represents a step toward the technology sector getting back to work.

Sincerely,

Washington, DC 20530

Dear Mr. Ashcroft,

I strongly support the settlement recently agreed to by the federal government and Microsoft with regard to their antitrust lawsuit. The cost of this ordeal in monetary terms, as well as the setbacks it caused to innovation are staggering. It is time to move forward and repair the damage. The settlement is a good start in this endeavor.

The settlement is a comprehensive approach to remedying Microsoft's alleged wrongdoings. Its adversaries should be very pleased with it, instead of attempting to derail it, as they are. Contrary to popular belief, the settlement foists some very. stringent terms onto Microsoft. Microsoft must share interfaces with its competitors. It also is charged with avoiding any form of agreement with another company to distribute Windows at a fixed rate.

There are even more terms like this that work to fence Microsoft in after its allegedly overaggressive business model became hugely successful. The settlement achieves what it set out to do—increase the competition in the market—and so the judge should effect the settlement. Microsoft's adversaries should be quite pleased with the tenets of the settlement and should stop trying to derail its finalization by the court. The only reason its competitors are against this settlement is to put their own financial interests ahead of fair competition and the public interest.

Thank you.

Sincerely,

Karen Christian

Washington, DC 20530

Dear Ms. Hesse,

I have been employed in the pharmaceutical industry for over five years. My industry and personal livelihood depends upon my employer's research and development capabilities and its dedication to constant innovation in the treatment of a variety of human ills.

The computer and technology industry is no different. In fact, one could argue that no other industry is the world is as co-dependent and entwined with other industries as is the computer and technology field. Countless other industries rely on technological innovations to improve their own products and processes.

For this reason, I have closely watched the progress of the Microsoft lawsuit. While I'm not completely familiar with all the intricate details of the suit, I understand the major issues involved. And yes, I agree it is important for there to be continued competition in the computer industry in order to foster even more innovation. I am not convinced, however, that a strong case was made against Microsoft in the first place.

That being said, if news reports are to be believed, there seems to me to be a fair settlement before you for consideration. I urge you to accept the settlement and send a message that innovation is too important to be stifled in America.

Sincerely,

Marc Banks
Territory Business Manager

Dear Mr. Ashcroft,

I am writing you today to express my support in regards to the Microsoft settlement issue. This settlement is comprehensive, fair and enforceable, and I am relieved that this issue has been settled and resolved. Please work to send it through the appropriate channels to ensure that it is finalizes as soon as the comment period is over.

Under this agreement, Microsoft has agreed to disclose more information, such as certain Windows internal interfaces, and software books and codes to a technical oversight committee. This committee was created in response to the government's fear that the settlement would be considered unenforceable. As such, any company that feels that Microsoft is not complying with this agreement is free to sue; the technical committee will work as a go-between for disputants and Microsoft.

Enough time and effort have gone into litigation against Microsoft. Thank you for settling with Microsoft and ending this case.

Sincerely,

Ken La Bad

RE: The Microsoft Antitrust Lawsuit

Dear Mr. lames:

Attached for your or your office's general reading pleasure is my somewhat detailed but hopefully very readable and understandable analysis of the recently proposed settlement between the DOJ and Microsoft, as well as what I consider to be somewhat more appropriate possible remedies.

The document ''Some Remedy Guidelines For Correcting Key Microsoft Monopolistic Strategies and Business Practices'' is pretty self-explanatory both in title and in content. I am personally extremely unhappy with what appears to be nothing less that total capitulation by the Department of Justice in regards to Microsoft case and I can only hope that the states will go successfully forward with their own actions, and that the Tunney Act will serve a sufficient protection against final adoption of the settlement. I should mention that this document it submitted for your consideration as a singular effort on my part, with no input or connection to any other party to the antitrust proceedings against Microsoft. I just happen to be someone well-versed in the technical issues involved and their meaning and impact related to computer and Internet matters. Copies of the attached document are being sent to my state's Attorney General, Thomas Reilly, to the the states'' lead attorney, Brendan Sullivan, and to Judge Kollar-Kotelly.

Sincerely,

Bernie Conneely

Some Remedy Guidelines For Correcting Key Microsoft

Monopolistic Strategies And Business Practices

(bconneely@yahoo.com)
Introduction

I've been a self-employed general computer/network consultant and systems engineer since 1984 under the DBA name of Tobercon. I have seen and have dealt with a lot of issue relating to Microsoft's rise from mostly being the supplier of DOS to its current monopolistic pre-eminence in the computer industry. I've also been following the various lawsuits against Microsoft with some interest: you would be hard-pressed to find any hard-core tech people not aware of at least some of the ''tricks'' Microsoft has used over the years to leverage its products onto computers, from simple ''bundling'' to heavy-handed licensing agreements to the overt sabotage of competing products Mast, if not all of, these practices have come up at different points in the lawsuits, most especially the. DOJ amitrust suit. Judge Thomas Penfield Jackson's remarks may have been intemperate in a legal setting, but they were unarguably accurate in their depiction of Microsoft's behavior over the years. Actually, I felt the evidence against Microsoft to be so hefty and compelling that even a Republican administration generally favorable towards big business would be obliged to follow through in punishing and reigning in Microsoft's still-continuing misbehavior.

Summary and Critique of the Proposed DOJ Settlement

Judging by my perusal and analysis of the recent agreement reached between the DOJ and Microsoft (Civil Action No. 98–1232), it would appear I was mistaken. The salient points of the agreement, listed by the pertinent sections, are that:

III C. 1–2: Microsoft cannot prevent computer vendors from installing icons that run or install so-named ''Middleware'' products from Microsoft's competitors. Note that the key terms here are ''icons'' and ''Middleware'' which is defined in the agreement glossary as products similar to Microsoft's Internet Explorer, Java Virtual Machine, Media Player, Messenger, and Outlook Express It's unclear if the competing products themselves can be installed or merely the icons for their installation, or if this applies to Middleware products that have no Microsoft equivalent like Adobe Acrobat Reader, and whether too if this has any bearing on the installation of a non-Middleware product like a word processor or database manager.

III C. 3–5: Microsoft can't prevent a computer vendor from installing the option to boot into an alternative operating system (typically Linux) or from having a non-Microsoft Middleware product launch on start-up.

III F-G: Microsoft cannot prevent PC manufacturers, whether by licensing agreement or by threat of retaliation, from offering or installing competing products to Microsoft's operating system, Windows (the current version being ''XP'') or Microsoft's Middleware products This sounds reasonable enough, but the paragraph at III F3 has this section: ''Microsoft may enter into agreements that place limitations on an ISV's [''Independent Software Vendor,'' meaning a Bernie Conneely—Microsoft Remedies Page 1 Contact bconneely@yahoo.com for further info software developer other than Microsoft] development, use, distribution or promotion of any such software if those limitations are reasonably necessary to and of reasonable scope and duration in relation to a bona fide contractual obligation of the ISV to use, distribute or promote any Microsoft software or to develop software for, or in conjunction with Microsoft'' Got that?

III H.1: Basically states that a consumer will be given easy means to remove the icons for any Microsoft or non-Microsoft Middleware program Note that removing the icon for any Windows program, whether from the Windows desktop, the Start Menu, or the bottom bar does nothing to actually uninstall the program—it merely hides it: the program files and registry, entries will still be there and program itself still active, especially if it's a Microsoft product.

III H.2–3: Supposedly allows users to use the Middleware products from Microsoft's competitors in place of Microsoft's, and disallows Microsoft from using Windows to alter icon and menu settings of competitors'' products installed by an OEM (''Original Equipment Manufacturer,'' usually a computer manufacturer who installs Licensed versions of Microsoft Windows.) However. towards the end of III H.3 are two addendum sections that allow for Microsoft Middleware products to be automatically invoked when: No 1. when accessing a ''server maintained by Microsoft''—presumably any Microsoft-owned web site like MSN or Microsoft.com and possibly sites co-owned by Microsoft like MSNBC), and No.2, when a some Microsoft-specific function like ''ActiveX'' is requested What this means is that a consumer will be permitted to use a non-Microsoft e-mail client or Web browser, but any Microsoft-related site can automatically invoke Internet Explorer. and Microsoft's e-mail clients Outlook or Outlook Express may be required to access e-mail from a Microsoft-related site, overriding the consumer's choices. Requiring Outlook or Outlook Express as part of an MEN account is well within Microsoft's rights and has precedent (most notably AOL) just so long as it's made clear to consumers that MEN is a closed, proprietary, online-service that limits the means of access, unlike a general Internet access acount. ActiveX controls, however, have been a means for recent worms like NIMDA to infect PC's via Internet Explorer, a prudent computer user may not want ActiveX active at all or have Internet Explorer popping, up unwontedly.

III J.J: Allows Microsoft to keep secret all its proprietary codes and encryption algorithms. This in effect will let Microsoft continue its poli??s of making it difficult if not impossible for competing products to interact or replace its own ''Secure Password Authentication'' for example is an encryption technique that prevents competing e-mail clients from accessing MEN. Likewise if a typical consumer who was not even using MEN warned to change from Outlook Express to a competing e-client he/she would find transferring over existing saved e-mails to be all but impossible, due again to encoding techniques unique to Microsoft and very probably designed to impede or prevent such changeovers to competing products.

The entire proposed settlement is seemingly a major victory, for Microsoft. All ''bundling'' issues were dropped; competing products may be installed, but removal and total replacement on Microsoft's equivalent products can be blocked, there is apparently no penalty to Microsoft for violating prior agreements; and all that is demanded of Microsoft is that it doesn't overtly punish Bernie Conneely—Microsoft Remedies Page 2 Contact bconneely@yahoo.com for further info computer manufacturers for installing any products from Microsoft's competitors and that it doesn't overtly sabotage the installation of said products Is this not the corporate equivalent of being put on probation, with not even the equivalent of having to do community service?

Alternative Remedy Strategies

Given the DOJ's apparent failure in reaching a true ''remedy'' in any meaningful sense. I've been moved to add my own expert 2-cents to the effort by going over what I consider to be some genuine and far more appropriate remedies, explained in understandable terms (1 hope) with pertinent examples, that are really needed to treat Microsoft monopolistic behavior. The DOJ capitulation is very unfortunate, but hopefully the states can show the backbone necessary to set things right.

Before I go into the details, I should mention that regardless of the legalities involved, letting Microsoft continue to do what it has been doing will absolutely NOT benefit consumers in any way, snape, or form. Because of Microsoft's current monopolistic position:

I. Consumers and businesses are at a higher risk to virus attacks because of inherent security and coding flaws in all of Microsoft products. The argument that Microsoft products are simply targeted more because they are the most popular is false: for example Apache web servers far outnumber Microsoft ??S web servers, but Apache was not affected by the Code Red and NIMDA worms. Microsoft has an ill-considered philosophy of sticking in programming ''hooks'' into all of its products, which in turn have been very exploitable by virus writers Very few other companies do this because of the inherent security risk in doing so.

II. Removing Internet Explorer from Windows 98 or ME will speed up the computer and make it more stable. The most commonly used ''Tool'' to remove IE is ''98Lite'' a product downloadable from www.98lire.net Removing IE this way is a common technique for audio professionals doing high-end production work on a PC to maximize throughput and enable the most system resources for the audio software The average consumer, though, has no clue about being able to do this, and Microsoft's insistence that IE and Windows are inextricably tied together has confused the issue The relationship of IE to Windows is very much analogous to a TV having a built-in VCR. Yes, the VCR and TV components are sort of ''inextricably tied together'' in a disingenuous manner of speaking, but nevertheless the VCR can be removed from

the TV if one had the technical wherewithal, and without any undo damage to the functionality of the TV component And obviously and most importantly, the VCR component can be ''unbundled'' quite easily by the manufacturer, regardless. Just as Microsoft could do easily with IE

III. If a consumer wanted to use a more stable operating system than Windows, like Linux, or a more advanced one, like BeOS, it would be extremely difficult, if not impossible for that consumer to be able to exchange certain types of files with other users, or even access everything available on the Internet. thanks to the monopolistic position of key Microsoft application products like Powerpoint, as well as certain web sites only allowing access via IE in clear violation of W3C guidelines (''W3C'' is the World Wide Web Consortium, which is suppose to be the final authority regarding web standards). Other, much smaller companies have been good at offering versions of their products to run on alternative Bernie Conneely—Microsoft Remedies Page 3 Contact ??@yahoo.com for further info operating systems, but Microsoft has not—they only support Windows and Macintosh (somewhat). Consequently even a very, very good product like BeOS can fail and is failing because certain key Microsoft products don't run on it and there are no suitable, compatible alternatives Even Linux, while making good headway in server applications and despite the enormous amount of development surrounding ?? has hit a brick wall as far as appearing on desktop computers primarily because of incompatibilities with a Microsoft-dominated environment in home and in general business.

IV. Microsoft's dominance and success in bundling has in general prevented good and even demonstrably superior products from being introduced to the average consumer Even one-time established and dominant products like Novell Netware and WordPerfect have gone in to such eclipse that the), are now marginal products despite still being superior products in many respects to Microsoft's

V. Each newer version of Windows is harder to repair than the previous version. Microsoft. always claims each new version to be more stable and have more features than the version it replaces, and to some extent this is true: Windows 3.11 use to crash quite a bit. and Windows 2000 does crash far less than Windows 95 or 98; however, while Windows 3.11 would crash fairly frequently, it very rarely went ''bad'' to the point it needed expert troubleshooting—generally a simple reboot fixed things Crashes on subsequent versions were usually more serious and required much more time to fix. Damage caused by viruses are often extremely difficult to recover from in the later versions of Windows, as removal instructions for the NIMDA worm on any antivirus web site will attest to. The same also applies to Microsoft Office: since the average consumer can't completely uninstall Office (you need a special software ''tool'' from Microsoft) certain types of damage from viruses can't be fixed because the standard repair technique of reinstallation won't work Microsoft is and never was an ''innovator'' no matter how much you may want to stretch the meaning of the term Virtually all of Microsoft's products were ''borrowed,'' licensed, bought or copied from other companies DOS came from Seattle Computer. Windows ''came'' from Apple, Internet Explorer from Mosaic/Netscape, Windows XP/NT/2000 from IBM OS/2, and so on. Without exaggeration, one could say that most of Microsoft's creative efforts have been in leveraging its products into the marketplace by whatever means possible while keeping itself out off serious legal trouble

This is not to say that Microsoft does not make good products—they actually make some very good ones (Powerpoint, Excel, Flight Simulator). as well as mediocre ones (Word, IE, Outlook) and some pretty terrible stuff(Access. ??S. Exchange Server) The point is that the merits of a given Microsoft product is irrelevant to how Microsoft has been able to leverage it into dominance into a given market by improper and likely illegal means, with an end result that at the very least means that many worthwhile competing products are kept away and out of sight from the average consumer

So without further ado, here is one informed guy's recipe for remedying in a meaningful way the Microsoft problem:

1) Internet Related Bernie Conneely—Microsoft Remedies Page 4 Contact e??oo.com for further info A) Allow Installation of Alternative System/Web Browser in Place of Internet Explorer (''IE'') Despite Microsoft's claims to the contrary, this is straightforward programming issue. The Interact Explorer ''uninstall'' function introduced in Windows XP merely removes the IE icon from the desktop—it is not a true uninstall in any meaningful sense. A true uninstall will separate out web-access components and return basic file/disk, network access 8: browsing to a standalone Windows application similar if not identical to the original ''Windows Explorer'' program in Windows 95 and its counterpart ''NT Explorer'' in Windows NT. The user should be able to install and use any web browser of her or her choice, whether in its standard Function for web access or in place of IE for ''active desktop'' access or any other internal Windows process that IE would be used above and beyond that supplied by separate ''Windows Explorer'' type program..

The burden will be on Microsoft to create a software program that will accomplish all this with minimal technical intervention by the user The program must be provided free of charge If Microsoft is unwilling to comply with creating such a software program, a 3rd party programmer or programming group of sufficient expertise should then be designated by the court or the DOJ (depending on whose ultimate responsibility it turns out to be) to carry out the programming objectives. This should be done at Microsoft's expense and with their full cooperation in providing whatever code and system information deemed necessary by the 3rd party programmers.

I would have to say that allowing consumers from to truly remove IE from a computer and install a competing product in its place is probably the most important antitrust remedy that can be achieved, especially for the long term. It has become obvious that Microsoft is intent on using the near universal placement of IE to mitigate further inroads by competing operating systems like Linux and to leverage itself much further into general Internet commerce and services, especially through its. ''.Net'' initiative—which is basically a form of bundling that will ultimately make it nearly impossible for a consumer to do any sort of Internet commerce without the use of Microsoft products.

B) Disallow/Discourage IE As A Requirement for Accessing Any Commercial Web Site

There is a sizable number of web sites that currently only allow access via IE. If this was done via a licensing agreement with Microsoft and not because of any valid technical reason, all such agreements should be voided The governing body for all web standards is the World Wide Web Consortium (''W3C'') and it is they who should define web standards, not Microsoft Microsoft itself requires the use of IE for many functions on its own web site. most especially ones related to updates to Microsoft's other products This requirement should be voided, especially since there really aren't any valid technical reasons for doing this (Antivirus programs are quite adept at checking for updates without even a browser requirement)

As a matter of good web commerce, companies should be encouraged to keep their web sites W3C compliant, which will eliminate dependency on any particular web browser If it turns out Bernie Conneely—Microsoft Remedies Page 5 Contact bconnee??@yahoo.com for further info that it would be a burdensome cost for many companies to immediately make their web sites nonIE dependent, it may be necessary to have Microsoft come up with a ''application'' version of IE, meaning that it installs and behaves like a normal non-Microsoft application that doesn't embed itself into the Windows operating system IE for Apple's Macintosh works this way, so Microsoft has surf cleat familiarity with how to achieve this A user can install this application version of IE specifically to access those IE-dependent sites without it ''taking over'' all web/file access functions as the normal version of IE does Still. this should be only an interim solution to allow for web sites to be made non-IE dependent without undue time pressure or burden

C) Disallow IE as a Requirement for Microsoft's Other Products & Services

There are no good valid reasons why Microsoft Word. Powerpoint, or whatever other Office component needs IE to be installed, likewise with even Microsoft's online services like MSN.

Microsoft would argue otherwise, but all their technical arguments to date for unbundling IE have been disingenuous, misleading or simple outright lies Just recently, on October 25. 2001. MSN locked out non-IE web browsers.

Microsoft's explanation for this was. to put it very mildly, not very credible. The following was taken from a ZDNet news item

about the matter. Microsoft on Thursday contended that the upgraded MSN she uses World Wide Web Consortium (W3C) standards and that browsers that don't conform to the standards are being blocked out.

''We supported the latest W3C standards when developing the co??ent and services delivered from MSN.'' Bob Visse, the director of MSN marketing said in an e-mail Friday. He added that Microsoft wants users to visit the Web site ''regardless of the browser they choose.

But Visse recommended that for the best experience with MSN, customers should use a browser that lightly adheres to the W3C standard.

''If customers choose to use a browser that does not ??gh??s support W3C standards, then they may enco??er a less then op??m??l experience on MSN.'' he said,

On Thursday, he had said that the com?? expected to have MSN.com f??lly accessible to the browsers later in the day.

The problem was actually not fixed until that following Saturday, which gave me a chance to run an experiment: on 10/26/2001 at approximately 7:00 PM EST. I went to the W3C web site and downloaded ''Amaya,'' an experimental browser developed m conjunction with W3C standards. After installing Amaya on my computer, I went to ?? to access www.msn.com and got this message, which was the same message all other non-IE browser users were getting: Attention: Web Browser Upgrade Required to View MSN.com

If you are seeing this page, we have detected that the browser that you are using will not render MSN.com correctly Additionally. you'll see the most advanced functionality of MSN.com only with the latest version of Microsoft Internet Explorer or MSN Explorer If you wish to visit Bernie Conneely—Microsoft Remedies Page 6 Contact ??com For further info MSN.com, please select the appropriate download link below Internet Explorer for Windows Internet Explorer for Macintosh MSN Explorer for Windows [end]

Basically, in using ''W3C Standards'' as an excuse for requiring IE to access MSN. Microsoft outright lied. For the record, IE is the LEAST W3C compliant of all the current major web browsers, including Netscape 6.1, Mozilla, and Opera Checking in with the W3C organization will confirm this

The same applies to Microsoft's main site www.microsoft.com which frequently needs to be accessed if you want to keep up with the latest security patched or updates. Ironically, it is NOT W3C compliant and makes non-IE browsers act funny Again, a little trick that has no technical or consumer benefit.

Often, a consumer will be told he/she MUST install IE in order to use some online product or service, which is usually through some Microsoft licensing arrangement. ''Quick Books Pro 2001'' for example is an accounting program, but it will install IE 5 5 automatically for no genuinely good reason. And if you go to the McAfee antivirus site www.incafee.com using any 4.xx version of Netscape, you will be greeted with a pop-up window requesting that you download IE for the benefit of doing just a trial test of its online scanner: however. Trend Micro's online scanner at www.housecall.antivirus.com has no such requirement

As a side note, Microsoft also modified its Hotmail online service so that when a Hotmail user signs out. he/she is immediately redirected to Microsoft's MSN web site. While the newer non-IE web browsers don't get that annoying ''Upgrade'' message, older Netscape browsers do. Many public libraries in the Boston area at least have been standardized on Netscape 4.08 for a few years now, and now their many Hotmail users are getting that ''Upgrade'' warning once they are done, even though it has nothing at all to do with accessing Hotmail itself.

Yet more Microsoft heavy-handed ''tricks'' even in the midst of all the current lawsuit and antitrust, activity

2) Application Product Related

A) Allow for Complete Removal of Any Installed Microsoft Product and Without the Need for the Installation CD

Another common Microsoft ''trick'' is to make complete removal of its application products very difficult. Typically, a consumer will buy a new PC and find that it came pre-loaded with a Microsoft product like Works 2000, a very large and seldom used software suite. If the consumer is savvy enough to go to the ''Control Panel'' in Windows and try to uninstall Works via ''Add/Remove'' programs, he/she will be asked to insert a ''Works'' CD and no matter which of Bernie Conneely—Microsoft Remedies Page 7 Contact bconnee??@ yahoo.com for further info the several Works CDs get inserted, it will seem to be the wrong one. The only way to remove is to either have a very technical friend delete The all the Works registry, entries and then The Works folders, or else go to the Microsoft web site and do a search on how to remove Works. and if he/she is lucky, this page will be found http//:support.microsoft.com/support/kb??70.ASP or perhaps this page: http://supprort.microsoft.com/support/kb/articles??74.ASP Removing Office 2000 is more straightforward but still requires the installation CD But if you need to completely remove it and reinstall it because of corruption or virus damage, then you must again go searching on the Microsoft site and if you are again very ''lucky'' you will find this: http://support.microsoft.com/support/kb.articlesQ23??.ASP Or if you're not so lucky, you might find this instead: http://support.microsoft.com.support/kb/articies??5/60.ASP

There is not a single good reason for Microsoft not to include a genuine uninstall option to its software products, either for people who want to clear them off their systems or for users who just want to fix a problem by reinstalling

B) No Automatic Replacement/Disabling of Another Company's Product or Feature

This is seemingly covered in the DOJ settlement, but it should be made more explicit and that it covers all of Microsoft products. This sort of anti-competitor behavior is not a uniquely Microsoft trait (RealAudio is quite good at this in regards to MP3 music files) but it can be much more problematic given that it can interfere with functions critical to important business software For instance ''LDAP'' is a directory service usually built into mail server programs—a standards-based means of looking up e-mail addresses However. if you install a Windows 2000 server and add ''Active Directory Services'' it takes away LDAP from any non-Microsoft e-mail server you might want to install, forcing the installer [o either disable LDAP for the mail server users or else fiddle with the LDAP registry settings for mail server software, or else just give up and install Microsoft's own e-mail server program. Exchange Server Of course Microsoft allows no such changes with its Windows LDAP settings.

C) A ''Bare Windows'' Option With Clean Registry

After buying a typical retail PC, a consumer is usually faced with a daunting number of unwanted programs and add-ons that come with the system above and beyond what he/she expected. Some are bundled anti-trust baiting products from Microsoft. others are ''value-added'' products and quasi-free trails from other vendors, This is not a good thing because those programs slow down the computer, eat up resources, and generally make the completer less stable than it should be. Removing all of these programs is usually tricky, confusing and beyond the capabilities of the average user Microsoft. should include a global ''Rem??'' function to put the system to a basic state without any wasteful programs or registry e?? The consumer could then systematically add back any programs he/she actually needs or want, Bernie Conneely—Microsoft Remedies Page 8 Contact bconnee??@yahoo.com for further info Closing Thoughts

It's been shown that Microsoft blatantly violated previous agreements, that it frequently misled and outright fled about its actions, capabilities and motives, that it was totally willing to doctor evidence in its behalf, that it still tries to undermine its competition through monopolistic leverage, and that these actions have been both harmful to the consumer and hurtful for the economy by excluding better, more secure products from the marketplace The recent incident involving MSN access to non-IE browsers clearly demonstrates that Microsoft has not mitigated its monopolistic operational behavior at all, even in the face of ongoing litigation If Microsoft again fails to comply with what final agreement is reached with the federal and state governments, a suitably severe penalty should be applied. My suggestion is the original break-up order by Judge Jackson with the addition of the release of all Windows 95/98/ME source code This Windows ''lineage'' has ended with the release of Windows XP, which follows from Windows NT/2000, a completely different code set from 95/98/ME. This will protect Microsoft's current technological investment, but would give possible competitor:, an opening for creating a Windows—compatible operating system. That would, be a fair penalty I think.

I can only hope that at least some of what ! wrote will be of some positive benefit

Re:
United States of America v. Microsoft Corporation, Civil Action No. 93–1232 (CKK) (D.DC);
State of New York ex. tel. Attorney General Eliot Spitzer, et al. v. Microsoft Corporation, Civil
Action No, 98–1233 (CKK) (D.DC)

Dear Ms. Hesse:

Pursuant to 15 U.S.C. § 16(o) and the Notice of Revised Proposed Final Judgment, 66 Fed. Reg. 59452 (Nov. 28, 2001), The New York Times, through its undersigned counsel, hereby submits the following comments relating to the revised proposed Final Judgment pending in the above-referenced matters.

Under the Antitrust Procedures and Penalties Act (the ''Tunney Act''), Microsoft Corporation (''Microsoft'') was required to file, within ten days of the filing of the revised proposed Final Judgment, ''a description of any and all written or oral communications by or on behalf of [Microsoft], including any and all written or oral communications on behalf of [Microsoft], or other person, with any officer or employee of the United States concerning or relevant to such proposal.'' 15 U.S.C. § 16(g). The only communications excepted from this requirement are those made by Microsoft's ''counsel of record alone with the attorney general or the employees of the Department of Justice alone.'' Id.

The revised proposed Final Judgment in the above-referenced actions was filed November 6, 2001. On December 10, 2001, Microsoft filed a ''Description of Written or Oral Communications Concerning the Revised Proposed Final Judgment and Certification of Compliance Under 15 U.S.C. § 16(g)'' (the ''disclosures''), a copy of which is enclosed for your convenience, that purports to satisfy the, Tunney Act's disclosure requirement.

Microsoft's disclosures are insufficient for several reasons. First, with respect to the referenced October 5, 2001 meeting regarding ''technical questions,'' Microsoft indicates that its counsel met with ''representatives of the United States and the plaintiff States'' but does not identify those ''representatives'' or the departments or agencies for which they work Moreover, although Microsoft indicates that Linda Averett, Michael Wallent, Robert Short and Chad Knowlton attended this meeting, it does not indicate what positions these persons hold at Microsoft or the purpose of their attendance at the meeting. Nor does Microsoft describe the substance of the October 5 communications or indicate specifically where they took place.

Similarly, with respect to the referenced meetings that occurred between September 27 and November 6, 2001, Microsoft has not disclosed the names of those counsel for Microsoft, the United States, and the plaintiff States who attended; 1 the specific dates and locations of those meetings; which of those meetings were attended by Professor Eric Green and Jonathan Marks; and which of those meetings were attended by Will Poole. Nor has Microsoft described in even the most cursory fashion the substance of any of these communications.

1 This shortcoming is significant. As Senator Tunney explained, the ''limited exception for attorneys representing the defendant who are of record in the judicial proceeding ... is designed to avoid interference with legitimate settlement negotiations between attorneys representing a defendant and Justice Department attorneys handling the litigation.... [T]he provision is not intended as a loophole for extensive lobbying activities by a horde of 'counsel of record.'" 119 Cong. Rec. 3451 (1973). The report on the Tunney Act issued by the House Committee on the Judiciary further clarifies that the limited exception to disclosure ''distinguishes 'lawyering'' contacts of defendants from their 'lobbying contacts.'" H.R. Rep. No. 93–1463, at 9 (1974), reprinted m 1974 U.S.C.C.A.N. 6535, 6540, 1974 WL 11645.

In addition, it appears that Microsoft may not have made all of the disclosures required. The only exception to the disclosure requirement is for communications between counsel for Microsoft alone and the attorney general or employees of the Department of Justice alone; any other communications between the government and Microsoft or others on Microsoft's behalf concerning or relevant to the disposition of these actions—even those in which no counsel participated—must be disclosed. See 15 U.S.C. § 16(g). The communications disclosed by Microsoft appear to each involve its counsel of record. This fact, coupled with the absence of any meaningful description of the communications and the lack of any express disclaimer of the existence of communications with the government not involving counsel of record, renders it impossible to determine whether Microsoft has complied with Section 16(g).

According to the House Report, the Tunney Act was intended "'to encourage additional comment and response'" by the public to proposed consent decrees "'by providing more adequate notice to the public.'" 1974 U.S.C.C.A.N. at 6538 (quoting S. Rep. No. 93–298, at 5 (1973), reprinted in 9 Earl W. Kintner, The Legislative History of the Federal Antitrust Laws and Related Statutes 6598 (1984) (''Kintner'')). ''[E]ffective and meaningful public comment is also a goal.'' Id. (emphasis added). In addressing Section 16(g) specifically, the House Report emphasized that Congress ''intend[ed] to provide affirmative legislative action supporting the fundamental principle restated by the Supreme Court ... [that it] 'is not only important that the Government and its employees in fact avoid practicing political justice, but it is-also critical that they appear to the public to be avoiding it if confidence in the system of representative Government is not to be eroded to a disastrous extent.'" Id. (quoting United States Civil Serv. Comm'n v Nat'l Ass ''n of Letter Carriers, AFL-CIO, 413 U.S. 548, 565 (1973)); see also Kintner, at 6600 (''antitrust violators wield great influence and economic power,'' and ''additional comment and response'' from the public would alleviate much of the ''significant pressure'' violators could often ''bring ... to bear on government, and even on the courts, in connection with handling of consent decrees''). Indeed, when Senator Tunney first introduced his bill, he focused on the significance of the disclosure provision. ''Sunlight is the best of disinfectants,'' he explained (quoting Justice Brandeis), and thus ''sunlight ... is required in the case of lobbying activities attempting to influence the enforcement of the antitrust laws.'' 119 Cong. Rec. 3453. The disclosure provision was only slightly altered before passage, and the amendments were designed ''to insure that no loopholes exist in the obligation to disclose all lobbying contacts made by defendants in antitrust cases culminating in a proposal for a consent decree .... ''1974 U.S.C.C.A.N. at 6543.

The New York Times respectfully submits that Microsoft's disclosures are inadequate to serve these statutory purposes, i.e., to assure

the Court and the public that the parties agreed upon the revised proposed Final Judgment at arms length and without the exertion of any improper or undue influence. The public has a statutorily recognized right to information sufficient to make this determination. For this reason, The New York Times respectfully suggests that Microsoft should be required to supplement its disclosures to: (1) identify the location, date and, where possible, time of each communication; (2) identify the names and titles of all persons present for each communication; (3) state the purpose of the participation in each communication by those other than counsel of record; (4) describe the substance of each communication; (5) disclose any other required communications, if necessary; an (6) certify that there exist no further communications required to be disclosed.
Sincerely,
LEVINE SULLVAN & KOCH, L.L.P.

Plaintiff,
Civil Action No. 98–1232 (CKK)
v.
MICROSOFT CORPORATION,
Defendant.
STATE OF NEW YORK ex. rel.
Attorney General ELIOT SPITZER, et al.,
Plaintiffs,
Civil Action No. 98–1233 (CKK)
v.
Next Court Deadline: March 4, 2002 Status Conference
MICROSOFT CORPORATION,
Defendant.
DEFENDANT MICROSOFT CORPORATION'S DESCRIPTION OF WRITTEN OR ORAL COMMUNICATIONS CONCERNING THE REVISED PROPOSED FINAL JUDGMENT AND CERTIFICATION OF COMPLIANCE UNDER 15 U.S.C. § 16(g)

In conformance with. Section 2(g) of the Antitrust Procedures and Penalties Act (''APPA''), 15 U.S.C. § 16(g), defendant Microsoft Corporation (''Microsoft'') respectfully submits the following description of ''any and all written or oral communications by or on behalf of'' Microsoft ''with any officer or employee of the United States concerning or relevant to'' the Revised Proposed Final Judgment filed in these actions on November only ''communications made by counsel of record alone with the Attorney General or the employees of the Department of Justice alone.''

(1) Following the Court's Order dated September 27, 2001, and continuing through November 6, 2001, counsel for Microsoft met on a virtually daily basis with counsel for the United States and the plaintiff States in Washington, DC After the Court appointed Professor Eric Green of Boston University School of Law as mediator on October 12, 2001, Professor Green and his colleague Jonathan Marks participated in many of those meetings. From October 29, 2001 through November 2, 2001, Will Poole, a Microsoft vice president, also participated in some of the meetings.

(2) On October 5, 2001, counsel for Microsoft met with representatives of the United States and the plaintiff States in Washington, DC to answer a variety of technical questions. Linda Averett, Michael Wallent, Robert Short and Chad Knowlton of Microsoft attended this meeting, as did Professor Edward Felten of Princeton University, one of plaintiffs'' technical experts. Microsoft certifies that, with this submission, it has complied with the requirements of 15 U.S.C. § 16(g) and that this submission is a true and complete description of such communications known to Microsoft.

Dated: Washington, D.C, December 10, 2001

Dear Mr. Ash croft:

I would like to start by saying that I am neither pro nor anti-Microsoft. I do however believe in right and wrong. What the government has done to Microsoft over the past three years is definitely wrong. This letter is to show my support for the settlement that was reached with Microsoft. I do not support the settlement because I agree with it; I support it because it brings an end to one of the most absurd lawsuits I have ever seen.

There was not a single reason why the government should have brought Microsoft to court at all. I do not agree with all of their practices, but they have never broken the law. I guess that does not matter when the competition of Microsoft spends more money lobbying to get them in trouble than it does on their own research and development. I suppose the competition can now rest easy in the fact that their money was well spent. Microsoft has agreed, just to get this madness over with, to not retaliate against the competition if they produce software that competes with Microsoft's. Let's examine the word ''competition'' American Heritage Dictionary as defines it: ''the act of competing, as for profit or a prize rivalry''. Microsoft took part in just that; they were competing for a profit. They made this profit, and did great things with it. Millions of dollars in profits were donated to charities other profits were used to establish scholarship funds for college students. Clearly Microsoft isn't some sort of evil corporation.

We need to end this senselessness now. The lawsuit should never have been necessary in the first place.

Sincerely,
James Hall

RE: MICROSOFT SETTLEMENT

Dear Ms. Hesse:

The proposed settlement is, I believe, fair and equitable for all concerned.

. Microsoft will continue to provide new software that will integrate new products;

. Competitors will have more Windows access to incorporate in their products, making them more compatible;

. Software manufacturers will resume the creation of new products;

. Consumers will have wider choices among software products; and

. Investors will enjoy stability in the marketplace.

Sincerely,
William F. Summerfield

January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to give my approval to the agreement between Microsoft and the Department of Justice. This is a reasonable settlement for all and it is time to put this matter behind us and move on. I am somewhat irritated with the entire lawsuit, as the competitors of Microsoft are coming across as a bunch of whiners who, because they are not producing a quality product, cry and run to the government to ball them out instead of doing a better job at their own production and marketing.

Be that as it may, Microsoft and the Justice Department worked out a fair agreement. Microsoft agreed to open the company up to more third parties making available more of its copyrighted code to aid in development of third party programs; Microsoft has agreed to disclosure various interfaces that are internal to Windows' operating system, and have agreed to a three person technical committee to oversee future compliance. This is more than enough.

I urge you to give your support to this agreement and allow this country to get back to business.

We desperately need to.

Sincerely,

James P. Duggan

Dear Mr. Ashcroft:

I am writing to express my full support of the recent settlement between the US Department of Justice and Microsoft in the antitrust case. The case has taken too long to settle and needs to be finalized to serve the best interests of the public.

The terms of the settlement reflect the intense lobbying efforts on the part of Microsoft's competitors. Microsoft is agreeing to disclose interfaces that are internal to Windows operating system products—a first in an antitrust case. They have also agreed to grant computer makers broad new rights to configure Windows so that non-Microsoft products can be promoted more easily.

It is time for your office to use its influence to press for an end to this matter. There are nine states out there looking to continue litigation, and it is my belief that your office should be active in suppressing this silly notion. Our nation cannot afford further litigation, and we need Microsoft back at full strength.

Sincerely,

Anthony Perrella

Washington, DC 20530

Dear Mr. Ashcroft

I am writing to you today to voice my support for the Microsoft settlement. Three years have now passed since the beginning of this case During this time, much money has been wasted. Federal dollars have been squandered on court mediators and countless extensions. The settlement of this case then is a welcome end to the protracted ??gation.

The settlement that was reached is equitable Microsoft agrees to share with its competitors some of the workings of its operating system. This gives developers the freedom to design software that will be mereasingly compatible with the Windows system. While this is a large concession on behalf of Microsoft. I agree with Microsoft's support of the settlement. The settlement allows Microsoft to finally resolve this issue. Getting back to business is important to Microsoft.

I agree with Microsoft's decision to settle this case. I believe that the terms of this agreement are fair. I hope that the Justice Department will enact this settlement as soon as possible.

Sincerely,

Richard Bayer

Washington, DC 20530–0001

Dear Mr. Ashcroft:

The Justice Department's anti-trust lawsuit against Microsoft has gone on for much too long, and I would like to express my support for the settlement that the two sides reached in November of last year. It is a fair compromise that will benefit all parties involved, and I would like to see it finalized in the near future.

The government should not interfere with Microsoft simply because it is a successful company. Yet Microsoft has agreed to allow other independent companies new rights that will allow them to promote their own products (rather than Microsoft's) within the Windows operating system. Microsoft will not ?? against computer makers that choose to do this, and the result will be stronger competition in the industry. Once competition increases, consumers will have more to choose from, and the technology industry will receive a real boost.

I believe the Justice Department made the right decision in settling this lawsuit. Microsoft can no go back to developing the types of ideas that have made it the successful company it is today, and the government can begin to focus its time and money on more important issues.

Dear Mr. Ashcroft:

I am writing this letter to express my opinion about the settlement that has been reached between Microsoft and the Department of Justice.

First off, I am NOT 100% in Microsoft's camp. I have tried MANY of their competitors'' products: very few are truly better when you take all of the real world factors into consideration. The pattern has been simple all along: Microsoft sees a product in the marketplace, imitates it until it is as good as the competing product, and then (now this is the KEY) they surpass their competitor's product. This is really the driving force behind the technicalities of the lawsuits. You cannot even imagine how much it disgusts me that companies are allowed to sue because another company bettered their product.

If I were Bill Gates, I would be so outraged that] would move Microsoft to Canada. I have consulted for EMC Corporation in Ireland so I know firsthand that the U.S. is losing ground as THE place to be for technology. If our court system continues to allow cases as outrageous as this, no business will want to set up shop here.

Who's going to file a lawsuit next? Palm, Inc.? Well, I'm a registered Palm developer and if they file a lawsuit, guess who will be switching to Windows CE devices?

I obviously think this case should have been thrown out of court on the first day, but since it was not, please just get it over with and APPROVE the settlement. Thanks.

Sincerely,

David M. McNamara

Washington, DC 20530

Dear Mr. Ashcroft:

This letter is to urge you to give your approval to the Microsoft settlement. This would end three years of court battles between Microsoft and the Department of Justice. The two parties have agreed to this agreement and I do not think it is the place of others to second-guess the decision

The fact that a federal judge accepted it is also evidence of a settlement. It has gone on far too long. It is time to quit wasting taxpayers'' money and put some of that money towards things that are needed more, like highways, schools, the environment.

Microsoft has agreed to a great many of the terms demanded by Justice. There is internal interface disclose, computer-maker flexibility, granting computer makers new rights to configure Windows to promote non-Microsoft programs; there is an oversight committee. What more is there? Why should anyone work to make a company work, or invent something, if only to have to give it away? This whole lawsuit sets a very bad precedent.

I urge you to let this decision stand and let us go forwards, not backwards.

Sincerely,

Shirley Hui

Dear Mr. Ashcroft:

This lawsuit against Microsoft has gone on long enough. There are other Issues of greater Importance facing our county and there is now a settlement In place that will, hopefully, end the hostilities between our government and Microsoft.

Often overlooked throughout the course of this contentious litigation is the fact that there are many other IT companies, that have built their businesses off of Microsoft's leadership and innovative products. While few, of these companies are dependent upon Microsoft, they are dependent upon a reasonable stability In the marketplace. This litigation has disturbed this stability.

The strength of this settlement is that it focuses on remedies for the original issues and leaves Microsoft Intact. I am therefore writing in favor of this settlement, and hope that similar actions will not be brought in the future.

Sincerely,

The opportunity to make commennts on the Microsoft annual lawsuit is much appreciated with the importance it carries for the economy. We would like to other our opinion for your consideration as you deliberate the proposed settlement of this case.

As the owners of a wholesale plumbing supply company, we understand that government has a role in protecting consumers and businesses from monopolistic behavior. Although we were never supportive or the case against Microsoft, we acknowledge the Court of Appeals findings.

To this end we believe that settlement is the best option for the economy and the high-tech industry.

The key point in our minds in that settlement not only ends the suit, but it does accomoplish what the government set out to do; put a more watchful eye on Microsoft's business practices to ensure consumers are protected.

What we have read about the details of the suit and the settlement talks us that the settlement that is on the table is a good compromise that gives the government what it is seeking. Microsoft some of what it wants, and the economy what it desperately needs. We hope your deliberations bring you to the same conclusion.

Sincerely,
John and Beverly Trimmell, Owners
B & J Wholesale Plumbing Supply

To whom it may concern:

I am responding to the proposed Microsoft settlement in accordance with the Tunney Act I was someone who has been an IT professional for the past seven years it disturbs me to learn that the proposed settlement will have no real affect on Microsoft and will not restore competition. It is imperative that a settlement to restrain Microsoft include:

1. The equired publishing of API's, file formats, and other protocols to all developers. This is the only way to truly give independent soft-ware companies the ability to compete with Microsoft.

2. Protection to OEM's that wish to load competitive software on their systems. This will allow OEM's to install the software that customers want.

3. Full ??ricing disclosure from Microsoft on how much it charges OEM's for its products. This will allow consumers to make informed choices as to which products are the most cost effective solution.

Thank you for you time.

Mark King

January 16, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001
Dear Mr. Ashcroft:

As a Microsoft supporter, I would like to see this case concluded. I believe Microsoft has become powerful not by malicious intent, but because it makes a quality product that is reasonably priced.

I do not agree with every decision that Microsoft has made in the past, but I understand the idea of aggressively marketing your own product. Either way, I do not agree with the allocation of scarce state and federal resources on problems that have already been solved.

Under the settlement agreement, Microsoft has promised to change the way it develops, licenses, and markets its software. It has granted computer makers broad new rights to configure Windows to better promote non-Microsoft software on the Windows platform. Also, Microsoft has agreed not to retaliate against software or hardware developers who develop or promote software that competes with Windows. Microsoft has opened its inventions to the competition that would see that invention become obsolete. This goes against the very fundamentals of capitalism, but if it ends the case, then Microsoft is willing to concede.

Although the settlement reaches further than Microsoft may have wished, Microsoft realizes that settling sooner is better than settling later. The longer that the case proceeds and innovation suffers, the greater the risk that American products may lose their competitive advantages in the world market. I am convinced that the only reason states would continue litigation would be an effort to appease Microsoft's competitors, rather than to protect consumers. Let's make sure that we don't lose our place as the world leader in the IT industry; let's end this debacle once and for all.

Sincerely,
Randall Baxley

28 January 2002
The Attorney General, John Ashcroft
US Department of Justice
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. The issue, which should never have begun, has been dragged out long enough and it is time to put the issue to rest. A settlement is available and the government should accept it.

Under the settlement, Microsoft gave in to many concessions in order to return to software design. They have agreed to give computer makers the flexibility to install and promote any software that they see fit, With no fear of retaliation, Microsoft has also agreed to license Microsoft software at a uniform price to computer makers no ma?? software the company decides to install or promote. Also Microsoft has agreed not to enter into any agreement that would obligate a computer maker to exclusively install or promote Microsoft software.

Microsoft has given far too much in order to settle this issue. Microsoft and the technology industry need to move forward, arid the only way to move ahead is to put this issue behind us. In these days, we hear shouts of outrage that the government has not done more to bolster the airlines, Enron, K-Mart, and many other companies in financial trouble. It is truly outrageous that the government should do much to destroy one of the this country's most successful businesses.

As unfair as it is to Microsoft, ask you to please accept the Microsoft antitrust settlement.

Dear Mr. Ashcroft:

We wanted to write to you today to express our dismay over the Microsoft antitrust dispute. As Americans, we feel that this quit is contrary to the very ideals of Free trade and capitalism theft we treasure in this nation. It is our opinion that punishing a company or an individual for demonstrating the very cleverness and ingenuity upon which we have built this nation is un-American.

Americans are unlike any other people in the world. It is our goal to became a success; to became something marc than our Fathers and grandfathers were: to start with nothing more than a good idea and a diligent work ethic and end up a success. This is the American dream, and it is this dream that is under attack in this suit.

This litigation is not a question of whether or not Microsoft violated antitrust laws. It is a question of whet her or not we, as Americans, have the right to become successful without the interference of the government. We are pleased that this heinous suit has finally reached a conclusion that is satisfactory to all of the parties involved. However, it is our fondest wish that none of this unpleasant litigation had begun in the first place, Please keep the government out of the private sector. Thank you.

Sincerely,
Don Crohan

US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

As a concerned citizen who would like to see this process ended,

I would like to ask for your approval of the proposed agreement in the Microsoft anti-trust lawsuit. This legal action appeared to have been punishment for not having given enough campaign contributions to the previous administration, which then led down the ridiculous path of Judge Jackson trying to break up Microsoft.

It is time to come back down to earth and accept this more reasonable compromise without further legal action.

The fact is that Microsoft has done more than any other company to move the PC industry forward over the last 20 years. With such advantageous terms, the Justice Department should finalize this deal and let this company continue to work toward further innovations. Considering Microsoft's flexibility of allowing non-Microsoft software programs to be placed on Windows, and offering to license intellectual property and access to its internal code, the competition should be quite pleased with this decision.

It is time to end the arduous legal proceedings and get back to priorities. Please keep Microsoft intact and the software industry stabilized by moving forward with this plan. Thank you very much for your support.

Sincerely,
Robert Agness

601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse,

I am writing to you regarding you the Microsoft lawsuit. This lawsuit was brought against Microsoft by the federal government. During the course of this three-year lawsuit, the federal government has spent $30 million pursuing their case. The funding for the federal government's case comes from the taxpayers of this country.

This case has had its day in court. And the Court of Appeals has ruled to do away with the lower courts' plan to break up the company. Let's put an end to the lawsuit. At this point, spending any additional taxpayer money would just be sending good money after bad. The proposed settlement agreement is the only logical solution.

If this case is carried out any longer, it will only result in unnecessary increased expenses to consumers. I believe any additional public funds spent on this lawsuit are not being used for an appropriate cause. That is why I am asking that you move ahead with the settlement agreement without delay. The agreement will close the book on this overdone court case and allow us to move forward into the next century of technological advancements.

Thank you for giving consideration to my opinion.

Sincerely,
Kim Waltman

Dear Mr. Ashcroft,

We are writing to show our support for the Microsoft antitrust settlement. It is of vital concern to this country that a climate of stability and support by established for American businesses to flourish, With the grave challenges facing America now, both in the domestic economy and around the world, self-destructive legal abuse is uncalled for.

Microsoft has shown that it is willing to bend over backwards to reach a settlement that will help its partners and competitors perhaps more than itself. The settlement, whatever the effect it has on Microsoft, will greatly help the broader American technology industry. Software companies will be better able to have their products work with Microsoft's Windows operating system when Microsoft makes the code for the internal interfaces and server interoperability protocols that tie program together available. Computer manufacturers will have more flexibility to contract with other companies, like AOL Time Warner, RealNetworks, and Symantec to substitute their products for the program Microsoft includes in the standard Windows installation, such as internet Explorer. The American computer industry should benefit from the settlement I welcome your support and leadership for the settlement, Mr. Attorney General, The Federal Judge who will be deciding on the settlement should approve it in the best interests of the American public.

Sincerely,
Axel Heimer

OnQuest Technologies, Inc
January 17, 2002
Attorney General John Ashcroft
U.S, Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

Whatever might be said of this lawsuit against Microsoft, it is, in my opinion, good that the entire case has settled. Without necessarily taking sides on any of the issues explored during the court proceedings, at the very least it can be observed that the tone was contentious and unnecessarily inflammatory.

All of this has apparently created a perceptible nervousness among consumers that has, in turn, adversely affected both sales of computer products, as well as the economy in general.

I am therefore writing to convey my support of the settlement, as well as my hope that there will be no further federal action against Microsoft, or any other IT company. The settlement assures that Microsoft will commit to better business practices, and change its software to reflect that.

Starting with the next release of Windows XP, Microsoft will make their software easier to use for non-Microsoft software developers, and Microsoft will even make it easier for developers, since Microsoft will release its interfaces and protocols to them so they can be more competitive.

This really is more than a slap on the wrist; it's a whole new way of doing business.

Sincerely,
Luis Navarro
President

Washington, DC 20530–0001

Dear Mr. Ashcroft,

I have always believed that it was a bit overzealous for our government to have actually reacted with a federal lawsuit against Microsoft simply because a few of Microsoft's competitors had suggested it. I agree that Microsoft may well have employed aggressive marketing and sales tactics, but these tactics had never risen to the level of needing federal court intervention. I worry more about any business that doesn't aggressively pursue sales.

The IT business, by its very nature, is a very fluid business. Where one particular company may be dominant today, another will be tomorrow. It is incumbent upon all who hope to survive in the IT world to change with the current times and technologies. Any company that does not—even a company with the apparent invulnerability of Microsoft—will soon find itself relegated to yesterday's outmoded ideas. By the very nature of the IT business, therefore, Microsoft would have had to change to remain competitive. The limitations on Microsoft brought on by the settlement, such as disclosure about internal interfaces of Windows, will only make trade secrets public, and prepare IT engineers for the ''next big thing.''

The irony here is that this lawsuit, and the subsequent settlement, only delayed what would have had to happen on its own anyway. I am hopeful that this marks the end of any federal action against Microsoft, or any other IT business.

VIA FACSIMILE

Ms. Hesse:

Iowa Attorney General Tom Miller's leadership in the Microsoft antitrust case has caused many Iowans to track the situation with a watchful eye.

According to the Wall Street Journal, Miller ''was the one who originally cooked up the idea of a multi-state assault on Microsoft.'' (November 9. 2001) Regarding the case, Miller told the Journal, ''Everyone knew it was high profile. This one was a no-''??rainer.'' (The same article on November 9, 2001.)

I serve as Chair of the Iowa House Appropriations Committee and I am trying to solve the sizable budget deficit the State of Iowa is facing. I have publicly urged AG Miller to sign on to this settlement and bring this case to an end.

The state is scraping for every dollar in a time of budget cuts, yet our state attorneys are spending staff time and money pursuing this case—that has not and likely will not bring anything back to our state. Thus far, Miller has claimed over $1.1 million in spending on the case. Of the 19 states involved when that claim was filed, only three states topped Iowa's spending, including much larger states like California and New York. According to the Wall Street Journal, Miller is a main reason several states are balking at a settlement, ''...some state pols will stoop lower than others to latch onto a celebrated case in hopes of boosting their name recognition for future electoral ambitions. These antics might have been tolerated when the economy was stronger. but such frivolity looks conspicuously out of place after September 11. In light of the discovery that we have real enemies in the world, suffice it to say the Microsoft prosecution looks more myopic and perverse than ever.''—Wall Street Journal.

''Finally, A Settlement'' Nov. 2.

The hard-earned money of taxpayers can be better spent, and consumers will be no better off if this case are prolonged. At a time of belt-tightening all over the country, the attorneys general who remain on the case are acting like they have unlimited resources for an indefinite pursuit of an American business that anchors a sector of an already limping economy.

Americans deserve fiscal responsibility from their government. Please We strong consideration to approving the settlement in this case.

Sincerely,
David Millage

Dear Ms. Hesse,

With utter consternation, I have watched my state attorney general continue to battle Microsoft on the issues raised in the current lawsuit pending with the U.S. Department of Justice. I'm not clear on his motives, given that 1owa is facing a severe budget crisis and the expenses of his continued crusade against Microsoft would be much better used to aid Iowans with their education and security budgets than it is to relentlessly pursue one of the most successful companies in the country.

I'm always amazed when politicians like Tom Miller conveniently use lawsuits as a means to advance their own personal agenda at the expense of the taxpaying public they claim to represent. Anyone with any common sense realizes how ludicrous it is to continue this lawsuit when a settlement has been proposed that addresses the concerns raised in the original complaint.

In my opinion, from its onset, this lawsuit was brought by jealous colleagues who are in awe of Bill Gates and his phenomenal capacity to invent and market his products. Isn't that what America is all about? In a few short years, Gates built one of the most successful and profitable companies in the world, which, by the way, made billions of dollars for investors across the globe. To portray this man as an evil to be ''dealt with'' is unfair and unwarranted. The Bill Gates and Microsoft legacy will be one that stands the test of time.

Settle this nuisance lawsuit as quickly as possible so we can all get back to business.

Sincerely,
Lon Anderson

To,
The Department of Justice,

United States of America.

Dear Sir or Madam:

Sub: Opinion on Microsoft settlement

Since it has been proven in US court of justice that Microsoft Corporation has been unlawfully maintaining its monopoly, violating US competition laws. Being a software engineer for about 3 years now I have been in situations when I was a victim of the unlawful monopoly and hence, I would like to make a few suggestions and give possible solutions so that the fights and freedom of people like me is protected in the free market.

Firstly, the judgment has overlooked an important aspect. All OEM's licensing Microsoft software should be made to provide an option without the Microsoft product. For e.g., An OEM selling desktop computers preinstalled with Microsoft Windows Operating System should give an option of a desktop without the Microsoft software. The rationale being ''Why should a consumer who just wishes to buy a desktop computer be forced to have Microsoft software we-installed on it.'' Currently there is not a single portable computer (notebook) in the market which offers a option other than Microsoft Windows.

Though its good to see nearly all clauses of the ''Prohibited Conduct'' talk about the Microsoft licensing policy in the section of the judgment. But, a very important aspect has been missed out: Currently Windows OS overwrites the Master Boot Record so that no other preinstalled operating system would be recognized. Microsoft should be asked to make changes to their OS so that it stops it intrusive behavior and thus making other OS to co-exist on the same machine.

Sincerely hoping that my comments would be helpful to the justice effort.

To the United States Department of Justice:

Sub: Opinion on Microsoft settlement

I am writing in response to the proposed settlement which is currently under the 60 day public comment period. I consider myself to be a person whom the outcome of this case will have a very significant effect. Since it has been proven in US court of justice that Microsoft Corporation has been unlawfully maintaining its monopoly, violating US competition laws. Being a software engineer for about 3 years now I have been in situations when I was a victim of the unlawful monopoly and hence, I would like to make a few suggestions and give possible solutions so that the rights and freedom of people like me are protected in the free market.

Firstly, the judgment has overlooked an important aspect. All OEM's licensing Microsoft software should be made to provide an option without the Microsoft product. For e.g., An OEM selling desktop computers preinstalled with Microsoft Windows Operating System should give an option of a desktop without the Microsoft software. The rationale being ''Why should a consumer who just wishes to buy a desktop computer be forced to have Microsoft software pre-installed on it.'' Currently there is not a single portable computer (notebook) in the market which offers a option other than Microsoft Windows.

Microsoft has been using open standards in its products and then making some proprietary extensions and claiming all rights over it including closing the source of the so-far open protocol How can Microsoft claim trade secrecy for a protocol that is distributed over the Internet? For example the 'Kereberos'' case.

Microsoft makes it unable for prospective purchasers of its operating system to make informed judgments regarding interoperability with other operating systems in connection with their purchasing decisions. Also it overwrites MASTER BOOT RE CORD of all other previous OS's thus ensuring that user does not have access to his/her OS, other than WINDOWS. The fact is that now, Microsoft has a monopoly on not only operating systems, but also to a lesser degree, office software and web browsers. They have blatantly and obviously abused this monopoly in many cases over the years and it has to stop. The DOJ has made that very clear. However the penalties sought to be imposed nor the agreement between the DOJ and MICROSOFT do not properly address and punish MS for its judged illegal Monopoly. All communication standards and protocols and API, file system formats must be made open source so that all developers can effectively compete and produce more efficient software for the users who are currently forced into buying MS software by various illegal means.

Sincerely hoping that my comments would be helpful to the justice effort.

Ms. Renata B. Hesse

Antitrust Division

U.S. Department of Justice

601 D Street NW

Suite 1200

Washington, DC 20530–0001

Dear Ms. Hesse:

I applaud the leadership displayed by the Department of Justice and the nine Attorneys General for developing the proposed Microsoft settlement agreement that balances the protection of consumer interests and the competitive process.

I believe that this settlement will preserve Microsoft's ability to innovate and engage in normal procompetitive activities, critical during our nation's current economic recession. At the same time, the settlement is a win for consumers, with its broad scope of prohibitions and obligations imposed on Microsoft. It will certainly require substantial changes in the way that Microsoft does business. It imposes significant costs on the company and entails an unprecedented degree of oversight. Furthermore, the agreement strikes an appropriate balance within the technology industry, providing opportunities and protections for firms seeking to compete while allowing Microsoft to continue to innovate and bring new technologies to market.

This reasonable settlement will help consumers, the industry, and the economy to move forward.

Very truly your,

Tim Pawlenty

Majority Leader

January 28, 2002

Attorney General John Ashcroft

US Department of Justice

950 Pennsylvania Avenue, NW

Washington, DC 20530

Dear Mr. Ashcroft:

After three long years of court battles Microsoft and the Department of Justice have reached a settlement regarding the anti-trust stilt. I believe that the settlement will be beneficial to both the IT industry and the consumers alike. It is necessary that all those who are involved in this suit put aside their differences and work to put this issue behind them. I would like to go on record as being a staunch supporter of the settlement.

This settlement went further than what Microsoft would have liked, but they believe that settling the case now is the right thing to do to help the industry and the economy move forward. The agreement is fair and reasonable, and was arrived at after extensive negotiations. The industry will be more competitive since Microsoft has agreed not to retaliate against competitors who produce, promote and ship software that competes with Microsoft's.

I am satisfied with this settlement since it is fair and reasonable to all parties involved.

Sincerely,

Raymond Beal

RE: Microsoft Settlement

We urge the Department of Justice to withdraw its consent to the revised proposed Final Judgment. The agreement, as it now stands, will allow Microsoft to extend its monopoly to most if not all aspects of

computing. The new settlement allows firms better access to APIs necessary to work with Windows, which only reinforces the Windows monopoly.

We ask that you (1) restrict Microsoft's practice of forcing Internet Explorer in contractual tying, (2) restrict their practice of giving favorable Windows pricing deals to OEMs, (3) require Microsoft to allow users to remove icons from Windows desktops, (4) restrict Microsoft's bundling of middleware to force its monopoly, (5) re-insert the source code licensing provision of the 2000 DOJ settlement, and (6) allow OEMs to modify Windows to add features.

As you are aware, it is small business that its the fire of the US economy. By allowing Microsoft to extend its monopoly as your proposed agreement will do, you are in essence a□lowing them to continue chasing small companies out of business. Microsoft tolerates NO competition—no matter how small, Please, please take this shark out of the waters of our economy.

Sincerely,
Diane Walter

January 27, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The nine plaintiff states in the Microsoft antitrust case who are seeking to overturn the settlement reached last November are claiming to act in the best interest of the public. They are mistaken. I do not understand the intricacies of the Microsoft antitrust case. but I do know that extended litigation would be anything but beneficial to the consumer. I do not believe it is necessary to continue litigation at this point. Extended suit can only result in wasted time and money.

The settlement is reasonable. Microsoft will be allowed to remain intact, and it will also retain control over its software, but it will be required to give its competitors access to various parts of Microsoft technology and to refrain from monopolistic actions. For example, Microsoft will not be permitted to enter into any contracts that would require a third party to distribute Microsoft software either exclusively or at a fixed percentage.

It is wrong for States to attack Microsoft under the guise of protecting the consumer. Consumers benefited from Microsoft's developments & marketing. Allowing these nine states to cause the existing ruling to be overturned will only result in expensive litigation, which is contrary to the best interest of consumers.

Thank for your consideration.

Washington, DC 20530

Dear Mr. Ashcroft:

I completely disagree with the last three years of litigation against Microsoft. The government has no right to keep messing around with private enterprise and it stands to reason why the economy took a turn for the worst when America's number one company is a victim of lawsuits brought on by the Attorney General and Microsoft's competitors.

The terms of the settlement are not fair as they force Microsoft to disclose interfaces that are internal to Windows'' operating system products. They also force Microsoft to grant computer makers broad new rights to configure Windows so that competitors can more easily promote their own products.

Although the terms of settlement are not fully justified, I urge your office to implement it as soon as possible, because our economy cannot afford further litigation against it. Thank you.

Sincerely,
Glen Bell

Dear Ms. Hesse:

It is no secret that one of the reasons that Microsoft has succeeded is that the federal government has had very little control over the technology industry. Over-regulating this industry will slow progress.

Technology has fueled the current economic expansion and we should be looking to preserve its status rather than take it down. As a regular consumer of high technology products, I enjoy the benefits of a free and competitive market prices are affordable, the products are of high quality, and the rate of development is the fastest of any market in the world.

There is now an agreement between the opposing parties in this case that designates a fair system of checks and balances. Additionally, it sets out a plan to monitor future activities and a technology committee to enforce them.

Resolving this case once and for all is not only beneficial to the courts and all participants, but also to the marketplace, t hope you will accept this fair agreement.

Washington, DC 20530

Dear Mr. Ashcroft,

I am writing in full support of the recent settlement between Microsoft and the US department of Justice. Although I think the lawsuits have dragged on too long to date, I am happy to see a settlement has been reached. I am confident that the settlement will serve the public's best interests and protect the consumer.

The terms of the settlement are more than fair. Microsoft will be forced to document its Windows interface codes for competitors. It will also be monitored by a special ''Technical Committee'' that will make sure that it stays within the bounds of the settlement.

Our nation cannot afford to continue litigation on fids issue. For the sake of our IT sector and economy, please finalize the settlement. Microsoft needs to focus on business, not politics.

Sincerely,
Carolyn Sergel

Dear Mr. Ashcroft:

I am writing to ask the Department of Justice to accept the Microsoft antitrust settlement The suit by AOL that Microsoft has violated antitrust laws is outrageously beyond my reasonable imagination. Microsoft has done nothing wrong and both companies should work together as well as on a competitive bases to improve the benefit of end customers. It is absolutely bad idea for both companies and the government to spend their resources for nothing. A settlement is in place and the terms are fair, I would like to see the government accept it.

I believe the settlements by Microsoft are more than I could think of as a private company could endure. At the same time, the Justice Department should use its resources from tax dollars in more productive ways for the consumers than harassing Microsoft as a company.

Sincerely,
Seha Son

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

We are writing you today in regards to the Microsoft settlement issue, We support the settlement that was reached in November and feel that this costly dispute has gone on too long. Further pursuit of Microsoft will cement the impression held by stockholders that our government is simply conducting a harassment program, Shame on those responsible!

The current settlement is thorough and complete. Microsoft has agreed to share more information with other companies and give consumers more choices. Microsoft has agreed to disclose for use by its competitors various interfaces that are internal to Windows' operating system products.

Microsoft has also agreed to grant computer makers broad new rights to configure Windows in order to promote non-Microsoft software programs that compete with programs included within Windows. Computer makers will now be free to remove the means by which consumers access various features of Windows, such as Microsoft's Internet Explorer web browser, Windows Media Player, and Windows Messenger.

Unfortunately for stockholders, this settlement will benefit companies attempting to compete with Microsoft. We accept that consequence, as this settlement will benefit consumers and will be good for stimulating our lagging economy. Please support this .settlement so our precious resources can be funneled into more pressing issues. Thank you for your support.

Sincerely,
James and Christianna Downs

Dear Mr. Ashcroft,

The government's case against Microsoft quickly degenerated into such a war of rhetoric that it became impossible to decipher the real issues. It is my opinion that the government has badly misunderstood the free market concept of employing aggressive marketing techniques over and against its contention that Microsoft was in any way attempting to create an atmosphere of unfair competition.

However, now that the case has entered into the settlement phase, these questions will remain unresolved. I am writing to suggest that the settlement itself is a decidedly better option than the continuation of the litigation. However, I may have some misgivings over some of the more salient terms of the settlement, particularly the provisos for information and divulging of intellectual property.

Sincerely,
Christopher Seale President

RE: Microsoft Settlement
January, 28, 2002
Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

While my business has not been adversely affected by this lawsuit against Microsoft, had it continued to its anticipated bitter end, I cannot help but think that all IT businesses would somehow have been hurt.

There is a perception that Microsoft had grown a little too big and successful for its own good. Adding to that perception is the allegation that they had treated much of their customer base (the OEMs) with a certain amount of undue, over-protective suspicion. However, this has more than adequately addressed in the settlement, and the settlement has ample protections figured into it.

It is good on several levels that there has been a settlement. While in a few areas, the settlement goes beyond the lawsuit, it does address the initial concerns leveled at Microsoft by their competitors. I am writing to express my support for this settlement, and hope that with it the IT community, can resume business in a more normal fashion.

Sincerely,
Walter A. Householder
President

Washington, DC 20530–0001

Dear Mr. Ashcroft:

This correspondence is to show my support for the proposed settlement that has been reached between the Justice Department and Microsoft. The litigation has lasted for over three years, and the time has come to worry more about our slumping economy than a company who has been vital to the economy.

It is nice to see that the government and Microsoft both realized that the best way to stop a recession is to attack the problem at its source. As soon as the antitrust suit against Microsoft was announced, the market started to dive. The longer the litigation lasted, the lower our economy sunk. The settlement will allow the IT industry to be more competitive, and Microsoft will have to work closer with their competitors. They will actually share information and source code to their products just so their competitors can make products that are compatible with Microsoft's.

All in all, this settlement is the best thing that could have happened, and I support it all the way.

cc: Senator Rick Santorum

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

In the interest of ending this costly litigation, I would like to ask for your support

of the pending settlement with Microsoft Corporation. This case has been motivated by states that want to protect their weakened software businesses, which would seem antithetical to America's purported belief in the free market system. The case should be wrapped up at the earliest opportunity.

This agreement is a very good one for the competition, as Microsoft has made several gestures to encourage more competition in the industry, even surpassing some of the government's initial complaints. They will allow computer makers to receive universal terms and conditions on licensing the Windows operating system, while working without any contractual quotas to distribute or promote their technologies. Additionally, the broader rights of these companies to offer non-Microsoft software will enable software developers plenty of opportunities to gain a bigger share of the PC market.

In light of the ongoing struggles of the U.S. technology sector, it is time to accept this deal and get these companies back to business. Any further action would only postpone a solution and cost taxpayers more government time and money. I thank you for your support.

I wonder if all the lawsuits that American businesses have to put up with will ruin our economy.

Sincerely,
Charles Schaaf

Dear Mr. Ashcroft:

I avidly support the Microsoft Corporation and have so for many years. Thus, the federal case against Microsoft over antitrust laws met me with trepidation. I do not believe that the federal government was justified in enacting the outdated antitrust laws against Microsoft. Despite this, however, the settlement that was reached in November is suitable in that it ends the negotiation process.

Microsoft has made many concessions in an attempt to end this process. Microsoft has agreed to disclose much of the internal information regarding the design of Windows. Microsoft has agreed to disclose both the protocols and the design interfaces of the Windows system to its competitors on reasonable grounds. Now Microsoft competitors can access this information when designing software. The software designed from information sharing should result in products that are compatible.

Microsoft has done enough. They have complied with all the terms of the federal government. I believe it is time to put this issue to rest once and for all.

Sincerely,
Wynn Courtney

Dear Mr. Ashcroft:

I am writing to support the implementation of the recent settlement between the U.S. Department of Justice and Microsoft. There is no sense in continuing litigation a against a company that is the only bright in our sorry economy. I do not think the lawsuit should have begun in the first place. Microsoft has made a good offer and the rune states opposing the settlement should accept it. Microsoft is giving away technological secrets, granting broad new rights to computer makers to configure. Windows so as to make it easier for non-Microsoft products to be promoted, and a three-person team will monitor compliance with settlement.

I urge your office to finalize the settlement and to make sure that further unnecessary lawsuits against Microsoft do not occur. Thank you. My losses in the stock market during the past year have been in excess of $2,000,000 and Microsoft is the only bright spot I have left in my technology portfolio, I urge you to get this lawsuit settled and allow Microsoft to work on behalf or the stockholders and America.

Sincerely,
George Platt

RE: U.S. v Microsoft

Dear Judge Kollar-Kotelly,

The proposed settlement between Microsoft and the Department of Justice seems inadequate in resolving Microsoft's monopoly of the market. The settlement may serve to promote further monopolies for Microsoft in web services and other related products. This settlement does not sufficiently protect competitors against predatory pricing and does not protect consumer choice. The unanimous ruling by the Court of Appeals for the District of Columbia against Microsoft should warrant a strong remedy and this settlement does not meet those standards. Microsoft's violation of federal antitrust is no longer an issue it is time that they are held accountable for their questionable practice& It is time that we find a remedy that meets the appellate court's standard to ''terminate the monopoly, deny Microsoft the fruits of its past statutory violations, and prevent any future anticompetitive activity.'' This proposed settlement fails to do so.

The settlement says that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop or distribute software that would compete with Microsoft's products. However another provision permits those payments and deals when they are ''reasonably necessary.'' The ultimate arbiter of when these deals would be ''reasonably necessary?'' Microsoft. The settlement does not go far enough to provide greater consumer choice, and leaves Microsoft in a position that it can continue to charge whatever it wants for its products. Consumers should be protected from these types of practices Enforcing federal antitrust laws is vital to maintaining the integrity of free markets. It is Important that we continue to enforce them to protect tile welfare of consumers and the fundamentals that contribute to what makes our country's industries great.

I appreciate you taking your time to examine this important matter.

Sincerely,
Both Masterman

Dear Judge Kollar-Kotelly,

The Antitrust Procedures and Penalties Act, also called the Tunney Act, was passed to insure that competition and consumer choice continue in the marketplace. With regard to Microsoft, neither competition nor consumer choice seems to be a concern.

Manufacturers of computers are hamstrung as are those who use computers because they cannot install the software they prefer on their computers. Instead Microsoft, which has become a monopoly in this arena dictates what may be used. Software developers need to have complete information about Microsoft's operating system so that they can compete creating a competitive market.

Included among the concerns I have in looking at the remedy are:

–Microsoft will be permitted to expand its control by bolting applications to Windows using a ''commingling code''. This violates antitrust law.

–Some of the future applications which will undoubtedly be included are: financial, cable services as well as an expanded use of the internet.

–Microsoft is required to share technical information concerning Windows. The catch is that Microsoft itself will determine if there is any possible situation where its security or software licensing may be compromised. The likelihood that Microsoft will use this option is very high.

–The manufacturers' concern is that Microsoft will have access to its intellectual properties by virtue of doing business with the software giant.

–Microsoft will make decisions concerned with which companies it will share technical information as called for m the settlement. There is a clause indicating that sharing information must be reasonably necessary.

–A three person technical committee will be set up to hear violations.

–It is highly unlikely that a company will take on the giant when it could lose the challenge and risk retaliation in the future.

–One of the three people on the committee is appointed by Microsoft; one by the Department of Justice and the third must be an individual who will be agreed to by both Microsoft and the Department of Justice. This arrangement gives an interesting advantage to Microsoft.

–The findings may not be admitted into court in enforcement proceedings. Additionally the compliance is for only five years.

For the most part after all the years of investigating and litigating there will be little or no change in the way Microsoft does business. I appreciate your interest in tiffs matter. If there is any way with which I may be of assistance, please contact me.

Sincerely,

Paul J. O'Sullivan

RE: U.S. v Microsoft

Dear Judge Kollar-Kotelly,

I would like to express my dissatisfaction with the settlement between Microsoft and the Department of Justice. I feel that the settlement, made virtually no impact on protecting consumers from companies like Microsoft who have monopolies in the marketplace.

The settlement has many loopholes and its level of enforcement is questionable, this does not provide consumers the level of protection they need for greater consumer choice. In addition the settlement leaves Microsoft in a position to continually raise prices for their products. It is my understanding that many consumer groups have opposed the settlement.

The agreement states that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop or distribute software that would compete with their products, but it is Microsoft that will be the final decision maker on that provision. The agreement also states that Microsoft must share certain technical information, but only if it would not harm the company's security or software licensing. Again, Microsoft will be the final decision maker regarding this matter. The settlement does nothing to deal with the effects on consumers and businesses of technologies such as Microsoft's Passport.

The enforcement of the settlement is questionable at best. The three person technical committee that will be assigned to monitor any violations made by Microsoft of the agreement is comprised half of people selected by Microsoft, and if any violations are found, the work of the committee cannot be admitted into court.

I find these inadequacies to be too broad to accept this settlement. I hope that Microsoft will not be able to continue to preserve its monopoly while consumers and competitors are subject to the practices that are supposed to be protected by antitrust laws.

Thank you for your time.

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

This is to give my support to the recent settlement between Microsoft and the Department of Justice. This litigation has gone on long enough, and it is time to settle this matter. The basis of the suit is that Microsoft excluded other companies from competition. However, whenever I have gone into a store, I have had any number of choices. I chose Microsoft because it worked. The competition could not produce the same quality product; hence, the public chose the product that worked for them. This is the basis for all free market philosophy, which is really what the antitrust suit was against.

Furthermore, Microsoft has more than acceded to the demands of the Department of Justice. Microsoft has agreed to allow computer makers to ship non-Microsoft products to its customers; Microsoft has agreed to help companies achieve a greater degree of compatibility with regard to their networking software; axed Microsoft has agreed to gram computer makers broad new license to make Windows promote non-Microsoft software programs. Ultimately, the company agreed to terms that extend well beyond the products that were at issue in the original suit.

Further litigation will only hinder our progress in this direction. Let Microsoft, and the country, get back to work.

Sincerely,

Salvatore Valvo

Attorney General Jon Ashcroft
US Department of Justice
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settelment. The issue was brought about the former administration that simply did not understand the technology industry. They ignored one of the things that makes this country the best in the world, our free enterprise system, Then to top it all off, they extended their socialistic philosophy to apply antiquated antitrust laws to a brand new industry.

In the free market, Microsoft rose to the top because they had the best products. Their products are user friendly and Microsoft has made them very easy to Integrate and at lower cost than the alternitives. It is no wonder that where people had a choice most choose Microsoft software. Under the terms of the settelment Microsoft has agreed to allow computer makers the flexability to install and promote any software they see fit. Microsoft has also agreed not to enter into any agreement that would require a computer maker to use a fixed percentage of Microsoft software. I beleive that computer makers will

continue to predominatly preinstall Microsoft software becuase it is the best and most computer buyers will choose a Microsoft Windows based computer when making a new purchase. This is not a monopoly problem, Microsoft simply is, supplying a better product and most people know it.

My experiance as supervisor of an electric power generation plant for over 15 years, offered me the oppertunity to try many brand, of computer software products and computer equipment. What I found over time was that even when cost was not a consideration, products that were not Microsoft based, did not perform satisfactorly. Microsoft products and windows based computers were simply the best. On top of that we experienced signifig??nt savings over other options. Sure Microsoft has made a lot of money, but can you imagine the cost to the people of our nation if Microsoft and all they have provided for us vanished or had never existed? This is my plea for justice in our mechanized and technolgical society.

Microsoft has gotten to where they are by developing better products, not by crushing their competitors. This suit and the fact It has gone on for over three years Is simply mind-booling. It is time to end It. DO NOT PUNISH MICROSOFT FOR BEING BETTER. Please accept the Microsoft antitrust settelment.

Sincerely,
Dennis C. Daggett

Dear Attorney Hesse,

I am certain that you are receiving many letters of comment regarding the Microsoft settlement with the Justice Department. Your time is greatly appreciated.

It was 1998 when the government first brought its anti-trust suit against Microsoft. In the years since then we have witnessed truly astounding developments in our industry. Laptops are thinner and more reliable, email is a communications device many Americans depend on, and many of us are speeding across the Internet at speeds not thought possible four years ago. These innovations are truly amazing and beneficial to our daily lives. These new products and ideas came about because of the competitive free market system we live in, not because the government was directing it behind the scenes.

The circumstances of our current economy and the government's anti-trust case have truly stifled new growth in this industry. As our country's economy is struggling to find its way toward positive growth again, settling the anti-trust suit can only be viewed as a benefit. Please work to make sure this settlement is agreed to.

Sincerely, ??

I am writing to express my support of the Microsoft antitrust settlement agreement. I am in favor of this case settling. As a fellow entrepreneur, I sympathize with the position of Bill Gates. I believe Microsoft should be free to conduct its business with limited government intervention. Notwithstanding my opposition to the lawsuit, the terms of the settlement agreement are reasonable. Microsoft has made many concessions in the interest of settling this case. Microsoft has agreed not to take retaliatory action against those who promote software that competes with Windows. They also agreed not to enter into agreement obligating third parties to exclusively distribute Windows. These types of concessions should put to rest the complaints of anticompetitive behavior on Microsoft's part.

I am happy of see that the current Department of Justice has made the wise decision to settle this case. I appreciate your review of my comments.

Sincerely,
Albert Roesel

Dear AG Ashcroft,

I believe that your decision to settle this Microsoft suit was a wise one. Anytime that our government takes upon itself the rather extreme position of suing a private business is serious indeed. It is important for our government to encourage innovation and creativity through incentives, rather than discouraging them through convoluted, politically expedient lawsuits. It seems as if this case may have had less actual legal merit than it first appeared. In these days, we should remain especially vigilant at concentrating on far more important issues like national security and budgetary problems. It is good for us to settle this case and move on to these more important matters. The settlement does an excellent job of answering for all the problems that competitors brought against Microsoft. By allowing manufacturers their own say in how to configure Windows and competitors more access to source code that will improve their programs' ability to operate in Windows, Microsoft is going well beyond what has been asked of them.

Thank you for your foresight and wisdom in this matter and thank you for taking the time to review my opinion in this matter. It is about time for the Justice Department ask the people who will be most affected by this decision how it will impact them.

Sincerely,
Clark Spencer

Dear Ms. Hesse,

I understand that the federal courts are now reviewing the proposed settlement in the Microsoft antitrust case. I further understand that the government is collecting public comment on that issue.

My comment is simple: Accept the settlement and help get this country back to work. A lengthy, expensive lawsuit contributes nothing to our nation's economic prosperity. Unwise government interference in the marketplace contributes nothing to economic growth—in fact) it hurts growth. And the Microsoft lawsuit has hurt our nation's economy, make no mistake about it.

The marketplace, not the courtroom, is where these issues should have been decided. Those who are concerned by Microsoft's dominance of its market should remember other industry leaders that no longer lead: Apple and Tandy in computer manufacturing; Kodak and 3M in copiers, and CompuServe m online services.

A market leader that fails Is satisfy its customers will remain a leader no longer. Microsoft will remain a leader if and only if it continues to provide new services and lower costs. That is where its competitors should seek to replace Microsoft, not through the courtroom.

The government should not file antitrust lawsuits simply because a company is dominant in its market or because competitors cry foul. Yes, Microsoft plays hardball. But nothing in this long and costly lawsuit has established that the consumer—the most important person in this proceeding—has been damaged by anything Microsoft has done. In fact, the consumer has been the big winner. If this settlement is approved, the consumer will again be the big winner—as will the entire American economy.

Sincerely,

James A. Ciao

Dear Ms. Hesse:

As the government accounts representative for Comark, a leading regional tech firm, I am thrilled that the long awaited settlement between Microsoft and thee federal government is finally at hand. All we need now is for the Judge to approve the settlement. The Judge, in my opinion, has more than ample reason to do just that.

First of all, let me say how well I believe that government and business can work together for mutual prosperity. It can and does happen—EVERY DAY! I see it when I call on governmental agencies, officials and departments.

I enjoy using technology to build a bridge between government and business. It makes perfect sense. After all, the emerging technologies of today make every segment of society more productive—it makes no difference if the end user works for the public good or a private interest. Let's forge ahead and revitalize the American economy. Let's renew our commitment to research and development, so that we continue to lead the world in productivity and quality. Let's create a new spirit of cooperation between the government and private enterprise. Let's show the rest of the world that American don't take recessions lying down—that we will act to strengthen our country and assist our countrymen.

Now is the time for bold action. I request that Judge Kollar Kotelly approves the settlement.

Sincerely,

Jason Deans

Dear Mr. Ashcroft:

I'm writing to encourage you to accept the terms of the antitrust settlement recently reached between Microsoft and the United States Justice Department. Microsoft has agreed to terms that will result in a much more competitive software environment and that will allow Microsoft to move forward with its business of developing innovative software.

To put this lawsuit behind it, Microsoft has agreed to allow computer makers and software developers to set-up Windows within their computer systems they will sell on the market so that Microsoft products can be disabled and competitive non-Microsoft products can be enabled in their place. And to make this easier, Microsoft will show competitors the various interfaces that are internal to Windows. This will allow smaller, developing software companies to get their foot in the door and grow while fostering a competitive environment that will drive all parties to create better, more innovative software.

Further, Microsoft will not take any retaliatory action against any computer makers of software developers who choose to modify Windows, nor will Microsoft retaliate against any computer makers who ship operating systems that directly compete with Microsoft Windows. Based on these facts, I encourage you to support the terms of the settlement so everyone can move forward with the business of developing good software for the American people. Thank you for all your hard work!

Sincerely,

Brittisha Boston

Dear Ns. Hesse:

Given that my husband is a local television news personality, I follow the news even more keenly than I ordinarily would. I began working at a new job just a few short weeks ago, as the membership and marketing director for Heritage Golf Club in Wake Forest, North Carolina. Unfortunately, the news and my common sense tells me that many other folks won't be fortunate enough to find new jobs because of the poor economic conditions our country is in. Were got to change that.

Our government must demonstrate that it is serious about stimulating the economy. A great first step in that process would be to finish the job of settling its antitrust lawsuit against Microsoft. I think I speak for most American when I say, ''Enough already!'' Both sides have agreed to settle—it's time to move on to something else,

I believe that I also speak for executives who work in membership and marketing when I say that I'm much more efficient in my job because of Microsoft's quality products. Database management, communications, and publications are all professionally done with just a click of a mouse.

The American people choose Microsoft products because they make life better. Life will also be better for many Americans once this suit is settled. I request that Judge Kollar Kotelly approves the settlement.

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft

I am writing to you today to encourage you to bring the litigation against Microsoft to an immediate and decisive closure. I must state that I have been unequivocally and strongly against this case from its very inception. It appears evident to me that it is very unfair to punish a company for excelling in their industry. I am a volunteer instructor with a non-profit organization teaching senior citizens how to enrich their lives by becoming computer literate. This is no easy task but at the close of every session I thank God that Microsoft has been so innovative and far sighted as to integrate their basic Operating System with applications to provide the User with a basis of commonality that makes the learning process infinitely easier. This applies not only to senior citizens but also to those individuals learning the use of new software to increase their knowledge and consequently leading to industrial efficiency. Prior to my retirement I vividly remember the days when it was a nightmare when attempting to home-brew our own integrated system, I have experienced the fact that Microsoft has expended every effort to provide us with the features that we sorely needed.

As I dwell upon the past three years ! conclude that it must have been very taxing on the IT industry, the economy, Microsoft and its employees. I understand that Microsoft has spent millions of dollars in their defense-money that could have been put into the development of new products resulting in further advancement of technology and industrial efficiency. The employees of Microsoft have had to endure an air of uncertainty during this entire situation. As a citizen I am extremely concerned with the possible flight of talent that is the backbone of Microsoft's awesome capability.

It is difficult for me to understand the problems related to the proposed, but rejected, settlement. Judging from what the media has reported, Microsoft has agreed to the terms included in the settlement as well as to the terms brought forth on issues that were not considered to be unlawful, To name two concessions, Microsoft has agreed to avoid agreements that would obligate any third party to exclusively distribute Windows technology. Additionally, Microsoft will not obligate software developers to refrain from developing competing software. Frankly, I personally cannot understand why Microsoft should have to divulge the code that makes up their Operating System. t would certainly include that in the realm of being proprietary and intellectual property. To put it more strongly, to me it smacks of being a case of sour grapes by certain other organizations that have not been as successful. Chairman Greenspan commented, with words to the effect, that the Guide-On that is going to lead the economy of our nation out of tile doldrums is technology. It is our future. There is absolutely no doubt in my mind that Microsoft has been a major contributor to technology. As a result, and to reiterate, I personally would like to see this matter dosed as soon as possible and I am sure that I am among many who share this same point of view. Thank you for your time and giving me this opportunity to voice my opinion.

Sincerely,

Joe 13. Ike

28-January-2002

Dear Ms. Hesse:

I have worked in the computer industry for over 2S years. During that time I have worked as a developer, a marketing / business strategist, and as a consultant to large and small companies. I have a degree from Rice University in software and hardware design and an MBA from the Amos Tuck School of Business Administration at Dartmouth College.

My work experience includes Hewlett-Packard as well as six years as a marketing and business strategist at Microsoft working on database and developer products.

I have seen Microsoft from both the inside and now, for the last ten years, from the outside. As I am not an attorney, I cannot speak to the legal specifics of the Proposed Final settlement, however, I am qualified to speak to the practical implications of the terms in the computer industry as well as other industries and markets into which Microsoft may enter.

COMMENTS IN GENERAL

As the computer industry moves towards a future, fully-distributed, computing environment, it is vital to have an environment which fosters and rewards innovation. While it may seem a mature industry, we are still only at the early stages. To date, there have been several waves of general innovation and consolidation. Each wave brings cost reductions, creative ideas, whole new companies and new technologies. After a wave, there has been consolidation around standards and then the next wave appears. These waves could be named the ''mainframe era'', the ''minicomputer era'', and the ''personal computer era''. We are now leaving the ''personal computer era'' and entering a new one centered on distributed computing and information, the ''distributed computing era''. As each era transitioned to the next, the companies and products of each successive wave accommodated the past, while providing new innovations.

IBM anchored the mainframe era, Digital and Hewlett-Packard emerged during the minicomputer era, and Microsoft, Dell, Gateway, and others emerged during the personal computer era.

What is different about the current transition, is that a single company, Microsoft, is attempting to leverage their monopolistic power created in the personal computer era and their position in the industry to define and control the next era.

COMMENTS ON CULTURE

I worked at Microsoft before Windows was a monopoly. What I observed was a culture fixated on domination at all costs. While Microsoft was growing, these actions and activities were not illegal. After becoming a monopoly, they clearly are (and were found to be so by the courts). What is important to note is that these illegal behaviors stem from the culture of the company. Because of this strong culture, I do not believe that any external monitoring of internal operations would ever be successful (e.g. the ''TC'' as proposed). Microsoft managers are simply too smart, experienced, and aggressive to ever agree to submitting to external pressures. This comes from the top, Bill Gates himself. In my experience, I have never encountered a discussion in which anyone at Microsoft ever thought that they were in the wrong. This would never occur to anyone. This is a cultural factor, an arrogance of doing no wrong. With this culture, it seems extremely unlikely that Microsoft would be able to self-monitor or even work with an external auditing agency.

REMEDIES

My first choice for a remedy is to break Microsoft up into smaller competing entities. The reason for this is to attempt to reshuffle the organization so that there could be cultural and behavioral change.

I petition the court to explore this remedy as the best way to combat future violations by Microsoft.

If the court does not pursue a break-up of Microsoft, then I strongly agree with many others, that there must be changes to and additional provisions added to the Proposal Final Settlement.

For example, I fully support, and have sign Dan Kegel's open letter (http://www.kegel.com/remedy/letter.html).

OPENNESS AND TRANSPARENCY

My second choice for a remedy is to force openness and transparency in Microsoft's technology. Distributed computing systems are very complex and can be very subtle. To help the court, many other petitioners have listed specific technology disclosures that will help create openness. I will add that, in a general way, if Microsoft's technologies can be viewed by the industry and the market as *components* rather than as a *whole*, then a good balance may be struck between Microsoft's ability to innovate, and the industry's ability to compete and develop both complementary technology as well as competing technology.

The tricky question is this: ''Where are the boundaries between the components7''

A simple answer can be found by focusing on and leveraging the upcoming pressures that will be felt as the distributed computing era arrives. The answer I propose is simple, easily monitored and enforced:

* Force Microsoft to fully disclose all wire-level (binary) protocols used between independent computing devices. (This include .Net protocols, SMB/NBT protocols for file sharing, and others) Force Microsoft to disclose the APIs which they expect other components to use as they access the wire-level protocols.

* Force Microsoft to fully disclose all file formats used to store persistent information. The reason these are good remedies relies on the following:

* The future direction of computing is toward small, distributed computing devices. The economic and technological pressures will force the definition of boundaries between distributed components. This will be a constant pressure to *increase* disclosure over time.

* It is easier to monitor and audit compliance at these boundaries compared to other more abstract and more easily re-defined boundaries. (Microsoft is a master at redefining boundaries for their own benefit).

* These disclosures provide significant value to competitors and innovators. However, I must also point out that this is only a first step, This describes the technological boundaries and requirements. The Settlement must also address the legal issues such as Microsoft's attempt to prevent open-source software from running on Windows, and other licensing and cross-tie issues. I will leave these issues to the legal experts.

Violation of the Settlement must bring with it a powerful and costly punishment. I propose that if Microsoft violates the provisions of the Settlement that they be forced to place any software or system found to be in violation or associated with a violation into the general domain through, an open-source license. This, more than any financial penalty, would be a real deterrent.

Dear Mr. Ashcroft:

I am writing this letter to express my full support for the settlement with Microsoft. Enough is enough. Milllons of dollars are being wasted on unnecessary litigation and we must take advantage of this opportunity to end needless spending now.

Microsoft has made many concessions just so that the company may move forward with developing new products. For example, Microsoft, has agreed to disclose for its competitors various interfaces that are internal to Windows' operating system products—a first in an antitrust settlement, Also, the Company has agreed in design its future products to provide easy access to computer makers and consumers to promote non-Microsoft software within Windows. In addition, Microsoft has agreed to license its Windows operating system products to the 20 largest computer makers on identical terms, including price. Clearly, these changes will benefit both consumers and the economy.

Not only is this settlement fair and reasonable, but it will prevent any future antic0mpetitive behavior as well. The recession has had a huge affect on both government and individual pocketbooks, and it. is important that the IT industry be allowed to concentrate on business as soon as possible.

Dear Mr. Ashcroft:

I am writing to express my support of the recent settlement between the Department of Justice and Microsoft. Even though the terms of the settlement are certainly not favorable to Microsoft, the settlement has the advantage of ending the litigation.

It is better that Microsoft will now be encouraged to handle its pricing policies to its OEMs in a fairer and more equitable fashion, but the requirement that Microsoft release more of its source codes to developers and competitors can be problematic. I am hopeful that that proposed technical committee would be a fair arbiter when dealing with all of these issues.

With so many other more important issues facing our country today, I am glad that this lawsuit is finally over. I am hoping that no further federal action in this matter will be necessary.

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am urging you to settle the lengthy antitrust lawsuit pending against Microsoft. I think it is ridiculous that the case even made it as far as it has. I think it is a shame that the government has gone after Microsoft. Bill Gates is simply a guy who made good and has been punished for his success. The Justice Department seems to have unfairly singled out Microsoft instead of treating all companies in similar positions in an evenhanded manner.

Though I believe that the justice system has wasted significant time and money in continuing to pursue legal action against Microsoft, I believe that the terms of the current settlement are reasonable, and I would like to see Microsoft back on track. I am a stockholder in the company, so I am affected by its inability to conduct business as usual.

The government's stated aim is to increase competition. The new provisions Microsoft has agreed to will do just that. Users and computer makers can more often and more easily install and configure Windows in ways that promote and use competing products.

Please settle the case as quickly as possible.

Sincerely,
Constance Roberts

Dear Mr. Ashcroft:

I would like to take this time to give you my opinion on die Microsoft Anti Trust case. This case has been a fiasco since its beginnings and I can't understand how it has been allowed to go on for so long.

I run my own company and use Microsoft products every day. I have never been forced to use their software. This is supposed to be a free enterprise system and anyone can go out and buy whatever products they want. There is a reason Microsoft's products have become so widespread and widely used that consumers prefer them to their competitors. Consumer preference does not constitute a monopoly.

Even though I feel this settlement goes farther than Microsoft may want, it is necessary to get out country on its feet again. Microsoft has agreed to give away a lot of thee intellectual property and will be changing their business practices to make it easier for consumers to access non-Microsoft products on their computers.

For the sake of our technology industry and our entire economy, please do your pall m putting a final end to this case.

Dear Mr. Ashcroft:

Microsoft is not the evil money grubbing corporation that it has been made out to be. Rather, it is in my opinion that the other information technology companies are the ones with dollar signs in their eyes. The antitrust lawsuit filed against Microsoft was nothing more than profit driven facade.

The settlement that was reached in November is reasonable and in the best interest of all parties involved. Microsoft has agreed not to seek any sort of retaliatory measures against computer manufacturers that promote software other than Windows. The settlement further stipulates that

Microsoft must provide documentation on how to interface competitors' software with its own operating system. Microsoft has already given a lot of ground with this settlement, and I feel that they should be asked to give no more. The settlement as decided upon in November should be left as is with no changes. The money driven attack on this company needs to stop, so please finalize the current settlement and stop litigation now.

Sincerely,
Ben Martin, Ph.D.

Washington, DC 20530

Dear Mr. Ashcroft,

I am writing you today to express my concern in regards to the Microsoft settlement issue. I feel this settlement is fair and reasonable, and I believe that this three-year-long dispute should be resolved permanently. Because of the federal action many states have jumped on board. I don't understand their cause. If you drop the case and accept the initial agreement, then, I'm sure man), of the states will also.

Microsoft is a company that is successful m its business. I do not believe they should be penalized for this. Microsoft has pledged to share more information with other companies and create more opportunities for them, therefore, the entire technology industry will benefit from this settlement.

Again, it will be more productive to allow Microsoft to continue doing what they do best. This will benefit the economy and consumers. I sincerely hope that this settlement will be finalized because it is in the best interest of the industry and the American consumers.

Sincerely,
James Woodward

Washington, DC 20530

Dear Ms. Hesse:

I am not a lawyer, an officer of the court, a technology professional, or a politician. So granted, there may be nuances that I am overlooking in the Microsoft antitrust case. I am having a difficult time understanding why some of Microsoft's competitors driving the antitrust case, along with half of the states suing the company, are unhappy with the settlement that all others involved in this case have agreed upon.

Reviewing the compromise from my vantage point, it would appear that Microsoft gave the most and the plaintiffs got the most. Computer makers using Windows receive flexibility allowing them to replace and remove specific parts of Windows. Even customers receive more flexibility with the product and information technology providers will have access to technical specifications. Plus, they would set up a panel to make sure all parts of the settlement are complied with.

As children, and sadly sometimes as adults, when it comes to decision-making there are always a couple of people that won't budge. In order to seek a compromise, two sides must at least come part way to meet somewhere in the middle. It seems those not signing off on the settlement simply refuse to take any steps toward the middle. Where I come from, that's bullheaded and stubborn and it gets you nowhere fast.

It is my hope that as the officer of the court making a final judgment on this decision, that you will be able to compartmentalize the intricate parts of this case. Set aside those who haven't signed on to the settlement, set aside those technology companies seeking a break up of Microsoft refusing to accept any punishment less, set aside those politicians who may be seeking continued spotlight by moving on with the case. Focus on the facts. A settlement has been reached by most of the parties partaking in the case. It seems to me to be a just compromise.

Sincerely,
Joe Meyers

Renata Hesse
Trial Attorney
Antitrust Division
Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse:

During my tenure as Assistant Director of Admissions at North Carolina State University, I have witnessed many technological innovations and trends. Most Of these have involved the use of a computer, and many involved Microsoft products.

While I cannot say with exact certainty why the federal government pursued an antitrust lawsuit against Microsoft, I can tell you that it has had a devastating impact on technological innovation while it has transpired. Before the lawsuit, tech companies were lauded for focusing on research and development at the exclusion of politics. In fact, few of the leading tech firms employed anyone to conduct government relations programs.

Microsoft learned quickly that its exclusive focus on making life more efficient for everyone had made its competitors struggle

for market share. The competitors retaliated by getting into the political game. The lawsuit followed. Even today, Microsoft's competitors are lobbying to contignue the lawsuit endlessly.

We should support the federal government and Microsoft in their decision to settle the case. I urge Judge KollarKotelly to approve the proposed settlement of the lawsuit. Let's allow research and development to march ahead.

Sincerely,
Jill Green

Attorney Hesse:

In my eyes, the government's treatment of Microsoft has not been unlike the actions of Medieval European Lord's who would cut off the head of a nemesis and display it on a stake in the village square for all to heed the warning. Unfortunately, the real harm goes to taxpayers, consumers, and tech investors in this case.

The government and Microsoft finally came to a settlement after going in and out of courtrooms as fast as they would enter and cease mediation talks since this case began a few years ago. Although this settlement is fair, we are beyond even that factor in this proceeding. Whether or not the agreement serves one side more than the other—which from the looks of it serves the government over the corporation—what is important is that a settlement has been reached with most of the contributors to the case have signed off on.

Please end this portion of the case with your approval of the settlement so that all of us—Microsoft, consumers, taxpayers, government court officials, and investors—can get back to business as usual.

Many Thanks,
Richard J. McLaren

Dear Mr. Ashcroft:

I would like to see the government stop interfering with the business practices of Microsoft, and I am happy to see this case has been settled at the federal level. The two sides reached a fair compromise in November of last year, and it is time to finalize that settlement and end this matter once and for all.

The government agreed to settle this matter because Microsoft agreed to change its operating system to allow independent companies a better chance to compete in the marketplace. Windows will be designed so that these other companies can promote their own products rather than Microsoft's, and Microsoft will not retaliate against its competitors in any way for promoting non-Microsoft products. Them will be no more risk of anti-competitive behavior by Microsoft because a three person technical committee will oversee Microsoft's business operations from this point forward, ensuring that the company fully complies with all terms of the proposed settlement. I see no need to continue this litigation.

Once this case is settled, the IT industry will really benefit, and consumers will have more choices and better choices as a result. Competition will be strong, the industry will flourish, and the nation's economy will get a jump-start that it desperately needs. Thank you for settling this lawsuit, as it is the right thing to do for the industry and for the American economy.

Sincerely,
Linda Diamond

Renata Hesse
Trial Attorney
Antitrust Division
Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms, Hesse:

As a member of the Wake Forest Board of Commissioners, I am concerned that the Microsoft antitrust lawsuit has dragged on too long and we need to settle it now. I am elected to represent all the people in Wake Forest, and I am concerned that everyone's jobs are being threatened by the recession. Microsoft products are the backbone of business and industry—and they help offices run efficiently throughout our community. I am opposed to prolonging the lawsuit in any way. The suit needs to be resolved... and resolved now! Many of our commuting citizens work in the Research Triangle Park. High tech solutions for health care, business and communications firms are developed here in the Triangle. However, the ability of these companies to be innovative in creating solutions, and productive in the creation of jobs, hinges upon moving beyond excessive litigation.

Let's face the fact that both parties want the suit to end, Microsoft and the federal

government are in agreement on all points of the settlement. I want to strongly urge Judge Kollar-Kotelly to promptly approve the settlement. This lawsuit has cost businesses and local governments untold millions in lost revenues, Let's stop the bleeding,

Let's move beyond this case and move the economy forward.

Sincerely,

Kim Marshall

Re: Microsoft Anti-Trust
cc:
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft

I'm happy to see the Federal Government has come to at least some decision to end the unjustifiably offensive and expensive anti-trust case against Microsoft Corporation. Three years of untold waste has been directed at Microsoft and we the tax payers incurred the entire cost. Quite frankly, had Justice spent the amount of money it wasted in this suit in anti-terrorist security several thousand people would be alive and working at the World Trade Center building. The agreement arrived at after extensive negotiations with a court-appointed mediator is very unfair and only serves the self interests of the individuals and companies which brought the action as well as those political interests of the Justice Department attorneys and US politicians. Simply; Microsoft has gone well beyond any legitimate or fair agreements to remedies. It's time the government accepted the terms levied against the company and moved on to other things, Let Microsoft continue doing great things for the computer industry which helps us all instead of hindering the company and as we all know harming the little guys—the employees and the consumers.

Enough is enough. No more federal legal action should be taken against Microsoft.

Sincerely,

David Morgan

Washington, DC 20530

Dear Ms. Hesse,

The proposed settlement of the Microsoft antitrust case is a good deal for the taxpayer, investors and the computer industry. I strongly encourage the court to accept the settlement. The good news for supporters of the free-market system is that Microsoft is not going to be busted up by the federal government. Instead tiffs settlement specifically provides remedy for portions of the complaint that have been made it through lower courts.

Under this agreement competitors of Microsoft will find it much easier to promote their products into the Windows operating system, it requires Microsoft to provide intellectual property with other companies when necessary, and Microsoft will be banned from cutting special deals with specific computer manufacturers.

Clearly the Department of Justice and the company are interested in seeing this case ended. I the American public can count on the court to support this agreement.

MTC–00029865

Sub. Microsoft Settlement
Date: January 26, 2002

Dear Sir.

I feel the Justice Department should settle with Microsoft. The agreement you and the nine states agree to was a victory for neither side.

Now we need a victory for the consumer. Allow us to use the windows system without diluting it with more regulations on Microsoft.

The public has been supporting the Justice Department and state attorneys with our tax Dollars to continue these lawsuits. Settle and allow the private industry to make a profit. If an inventor has his property taken away by the government, other inventors will take notice. Consider what little incentive Microsoft or other potential targets of lawsuits would have to make a better product I would not be able to type and send you this letter without windows operating system. I'm sure there are others systems but I don't have time to search them out. Settle and somehow don't allow the other nine states to continue battling the litigation can be endless and no benefit to the public.

Settle and close the book.

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I would like to urge you and the administration to do every thing in your power to bring to a close the years old Microsoft case. This anti-trust suit is settled but m name and further politicking in Washington or posturing in the media are wasteful and counter productive exercises. The proposed settlement agreement was born of years of litigation, negotiation and mediation, it is a hard fought and won compromise between the several parties and varied interests. It deserves to be adopted for the sake of Microsoft, a great American company, the faltering IT industry, and our national wellbeing.

The settlement will leave Microsoft as it stood at the outset, the sole leader of America's most innovative industry. It will require the company, however, to change its ways and embrace a more Open and pro-competitive business philosophy. Microsoft will have to abandon its software exclusivity demands when selling its platforms to computer manufacturers. It will have to open itself up to regular government review. It must eschew further predatory or anti-competitive marketing practices. It will have to, not just accept, but also promote a more competitive IT world. In doing so it will hopefully become a catalyst for the whole industry.

Please support this settlement.

Sincerely,

Anne Gould Anderson

Fred Dorst
11715 Canyon Vista Lane
Tomball, TX 77375–7677
January 26, 2002

Dear Mr. Ashcroft:

I am happy to hear that the Justice Department has decided to end its antitrust lawsuit against Microsoft. The Department's three-year case has gone on for way too long.

The agreement they came up with came after extensive negotiations with a court-appointed mediator. The company agreed to terms that extend well beyond the products and procedures that were actually at issue in the suit—trust for the sake of wrapping up the suit. The company even agreed to document and disclose, for use by its

compertitors, various interfaces that are internal to windows' operating system products—a first in an antitrust settlement.

Microsoft has been distracted long enough. I don't think the federal government should ever have to drag the company in to the courts ever again, it would be soon by most as nothing more than pure harassment.

Sincerely,
Fred Dorst

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC, 20530–0001

Dear Mr. Ashcroft:

At first glance, many companies in the IT community were elated when the Department of Justice filed their suit against Microsoft. As time went on, however, it became evident that the punitive nature of the suit would probably end up more damaging than helpful to the entire IT community.

Now there is this settlement. I believe this settlement to he amply fair. It is my hope that it will prevail through this period of public comment, and that no further federal action will be contemplated. The settlement's call for interoperability protocol disclosure and Windows reconfiguration will ensure that more varied and effective computer software is brought to the market.

The IT business community has already been hit with slowdown and its share of business failures, both of which cut into the ability to quickly rebound. As the IT business has faltered, so has our entire national economy. It is time to put all of this unpleasantness behind us and allow the IT community to regain its position of strength. It is here that our economic recovery as a nation will be greatly enhanced.

Sincerely,
Robert Burger

January 26, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I favor an immediate resolution to the Microsoft anti-trust case. A settlement proposal exists. It has the support of the major parties and the majority of party states. It is fair and it is workable and it deserves to be ratified by the government and enacted.

The settlement agreement addresses the concerns and the complaints of all parties. It leaves Microsoft whole while requiring the company to adopt practices that benefit its competitors. Microsoft must abandon predatory market practices. It must open its systems and technology to the exploitation of its competitors. It must now license its Windows platforms to computer manufacturers without exclusivity requirements for its software. These and other settlement terms, which Microsoft has accepted, make it clear that the company is willing to actively contribute to a new more competitive marketplace and justify an end to this case.

Please support this settlement and use your influence to convince the congress that it is, as it is in fact, the best thing for everyone.

Sincerely,
Kevin H. Smith

Dear Mr. Ashcroft:

I am of the opinion that the settlement that was reached between the Justice Department and the Microsoft Corporation is fair and reasonable, and I am in full support of it. It is nice to see that the lawsuit that has leveled the stock market and pushed our economy into recession is over, and I hope that the other states still involved in litigation will follow the lead of the federal government.

The settlement does not go easy on Microsoft, but will be beneficial to the entire information technology industry and the economy. Microsoft has agreed to design future versions of Windows, which will include a mechanism that will make it easier for computer makers and consumers to install and use non-Microsoft software within the Windows operating system. It will also make it easier to add or remove access features that are built into Windows. This will push the competition to develop better software that will rival Microsoft's, and gives the consumer more choices. This gives the consumer the best of all worlds. Competition in the information technology industry will benefit as will consumer choice, This settlement is good for everyone involved, and i stand behind it.

Sincerely,
Bill Hughes

Dear Ms. Hesse,

I work in the financial services industry (commercial insurance) and have closely watched the impact of the Microsoft lawsuit, particularly its effect on the economy as a whole. I don't believe it is a coincidence that just when the lawsuit was getting underway, our economy began a significant downturn which some say we are just beginning to come out of in recent weeks. Continuing this lawsuit is only detrimental to the companies involved and the American economy as a whole. It would be far more advantageous to

all parties to settle the matter with appropriate safeguards in place to prevent a similar suit in the future. In my opinion this suit did nothing to protect me or other American consumers. In fact it harmed our buying power and the overall strength of the economy.

As I understand the settlement from media reports, Microsoft has agreed to share intellectual property (which I don't think is right or fair) and create software that would allow for more flexibility for competing products to be used within Microsoft's operating system. In addition, a special committee will be formed to ensure compliance with all aspects of the settlement. It seems to be a fair and just compromise. Continuing to cripple Microsoft to allow others to ''catch up'' is not what our market economy is based upon. The fair opportunity taken advantage of by Microsoft 20 some years ago was open to all, do not further punish them for exercising their opportunity.

Please accept the settlement before you and put this case to rest. Thank you.

Sincerely,
Scott M. Scheidel

Washington, DC 20530

Dear Mr. Ashcroft,

During the course of the past several years, there has been a lot of saber-rattling going on between Microsoft and the department of Justice over this lawsuit. I personally do not think that the ultimate goal of the government to break up Microsoft would have survived a Supreme Court review, but the very threat seems to have tamed Microsoft into this settlement.

In the unlikely event that Microsoft would have ever been broken up, it could have been beneficial for my company. However, it must be quickly said that the Microsoft product line is deservedly superior to anything on the market today. The long-term effects of having Microsoft splintered through this lawsuit would have been devastating for most consumers as well as many IT companies.

This settlement is therefore good. Even though its terms encompass more than the lawsuit did, it has been accepted by both sides and, with its acceptance, the struggle between our government and Microsoft is over. i am hoping that this in itself will be enough to allow all of us to put this behind us and move forward.

Sincerely,
John Woods

Subject: Support for Microsoft Settlement

Dear Ms. Hesse:

I started in business as a very young man, working with my father at the garbage company he owned. Since then I have worked with a variety of companies in the waste industry. I have seers dramatic changes not only in this industry but also in the national economy, Technology is a driving force in the waste industry and the economy, providing the foundation for increased productivity, consumer and business knowledge and millions of new jobs in almost every industry.

Microsoft has been the leader in technology, not only in the United States, but internationally through its establishment of technology standards and integration of software. The efforts to restrict Microsoft's ability to compete could have serious implications for our economy. I urge a speedy resolution to the antitrust lawsuit. The proposed consent decree offers new flexibility and access to the tachnical aspects of Microsoft software so that computer makers and software developers can integrate non-Microsoft products into computer operating systems. Microsoft itself, its competitors, computer manufacturers, information technology providers and, most important of all, the consumer and end-users will benefit from the protections provided in the settlement agreement. It is time to accept this agreement and allow Microsoft and other technology companies to return to building a competitive technology industry.

Sincerely,
Jimmie Jones

Subject: Support for Microsoft Settlement

Dear Ms. Hesse:

For more than 20 years, I have worked in different aspects of the waste management industry During that time, I have seen dramatic changes in my industry as well as the overall economy. Certainly the use of technology has dramatically changed the way business is done, The waste industry is much more efficient and more capable of keeping track of equipment, waste sites and a variety of other aspects of our work because of technology.

I have watched the antitrust litigation against Microsoft with interest not only because of the impact on technology but also the impact it could have on innovation and product development. While not a panacea for the concerns voiced by computer makers and software developers, the proposed settlement agreement will give them new rights to configure Windows so that non-Microsoft products can be used. Microsoft has also agreed to the establishment of a technical committee to monitor progress of the settlement and to provide a venue for concerns of computer makers, software developers and consumers.

Microsoft will have the freedom to continue efforts to develop new and innovative products, Innovation is key in this country's ability to thrive in a global marketplace where foreign competitors try to replicate our products and sell them st cheaper prices to undercut our economic growth, The proposed settlement, agreement provide protections to all involved in this industry Microsoft itself, its competitors, computer manufacturers, information technology providers and, most important of all, the consumer. From my own experience, I know how difficult it is to come up with a compromise I encourage a quick resolution to the litigation so the technology industry can focus on regaining its competitive edge in the world economy.

Dear Ms. Hesso.

I am writing in support of the proposed settlement a??eement in the United States v. Microsoft case The Antitrust laws were meant to protect consumers, not to stop market competition. As a small business owner, I believe this proposal will not penalizeó other competing operating systems. This proposed settlement encourages more competition and groater innovation. All new Microsoft operating systems, including Windows XP. would have to include a mechanism that readily allows and users to remove or to-enable Microsoft's middleware products, such as the Internet web browser We need to be encouraging the technology sector, which is critical to out economic recovery.

This Agreement is good for the technology industry, the economy and consumers

Sincerely,

Dear Mr. Ashcroft:

I am writing in full support of the recent settlement between Microsoft and the US

Department of Justice. It is time that this foolishness comes to a prompt end. More than enough time has been used to cover all of the bases and I feel that it is just a political standoff at this point.

The terms of the settlement make apparent to me the intense lobbying efforts of Microsoft's competition as they will be granted new rights to configure Windows so that non-Microsoft products can be promoted more easily and also be given interfaces that are internal to Windows' operating system produces.

Even though these concessions do not actually protect consumers and just help Microsoft's competitors that were unable to be innovative on their own, I urge your office to finalize the settlement. It is in the best interests of our economy, IT sector, and public for the case to end and our country to move on. Thank you.

Sincerely,
John O'Donnell

Attorney Hesse:

Please accept the settlement before involving the Department of Justice's antitrust suit against Microsoft. Based on what I have seen on the news and read in the papers lower courts have ruled that Microsoft should not be broken up and have thrown out much of the original case. It is my understanding that this occurred because the case revolved around proving consumer harm and such harm has never been proven.

While this case has gone on for the last several years, we have all felt its negative impact on our wallets. Whether you consider the astronomical costs that taxpayers must bear or the millions lost in the stock-market, the effects of this case have been negative to average Americans. In an effort to resolve this case the Justice Department and Microsoft have wisely found a way to reach an agreement. It seems to me this agreement more then addresses any concerns some may hold about Microsoft's business practices.

Please support the settlement before the court.

Sincerely,
Beverly Duncan

Dear Mr. Ashcroft:

Re: Microsoft Settlement Support

As an elected member of the Antelope Valley Health Care District representing 450,000 people, I am writing this letter as in support of the settlement in the case against Microsoft. I believe that this whole suit was a waste of time and money. Only in America do we focus on tearing down success, and destroying a product line the works. There are choices out there, but none of them work as well as the Microsoft products.

There are more pressing issues that are of concern to me in this country such as the energy crisis here in California. The state has lost $22 billion dollars resulting in consumers getting gauged. In addition, the price of gas has risen 20 cents per gallon, just in the last week. The Department of Justice should have taken a strong NO to the rash of oil company mergers this past decade; we can live without a home computer, but must have gasoline (real public transit has not arrived yet) Microsoft did not get off as easy, as its opponents would have people think. They agreed to terms beyond what was required in the suit. They also agreed to design future versions of Windows, starting with an interim release of XP, to provide a mechanism to make k easy for computer companies, consumers and software developers to promote non-Microsoft software within Windows.

Microsoft seemed to be generous when settling the case. Let's end litigation now so that Microsoft can go back to work. We, the American people, need a company like Microsoft to stay strong, so they can continue to create innovative products, well paying jobs, and help strengthen the tech sector of the economy.

Sincerely
Gary G. Hill

Dear Ms. Hesse:

After years of hearing and reading about the Microsoft antitrust case, it is a great opportunity for the those of us in the general public to voice our opinion as part of the official record. Thank you for the opportunity to do so.

Bill Gates started his company in his garage. Today, it's one of the largest software companies in the world. There is no better example in our time of fulfilling the American Dream. This man and his company are what entrepreneurial spirit is all about. When raising our children, never was it instilled in them to work hard, work smart, build something, BUT be careful not to get too big because if you do, the government might try to take it away. That is not how our country became the economic super power it is today. We got there with freedom and free enterprise. Clearly, I disagree with the premise of this entire case. However, we are past that point. Now we are at a place, after three long years of courtrooms and lawyers, where you have a decision to make On a proposed settlement. The agreement presented delivers what the federal and state governments involved felt they needed—oversight of Microsoft's business operations. I hope you will see fit to endorse the agreement so we can all move on.

Thanks Again,
Tammy Fox

State Senator Stan Clark
205 US Highway 83
Oakley, KS 67748
January 25.2002
Judge Kolar-Kottely
Attn: Renata Hesse, Antitrust Division, U.S. Department of Justice
601 D Street, NW, Suite 1200
Washington. DC 20530

Dear Judge Kolar-Kottely,

This is a difficult time for our nation as we face economic hardship we have not seen in a decade. As a state senator, I know the difficulties that come with this economic downturn. My own state of Kansas is facing budget shortfalls and the threat of increased taxes as a result.

I understand that the economic situation is the result of a number of elements that together have culminated in a recession. Some of these elements, like the attacks on America on September 11(th), were beyond our immediate control. Others elements, like the monetary'' policy of the Federal Reserve are controlled directly by the government. The US Department of Justice's antitrust suit against Microsoft is another event that contributed to our economic downturn at the hands of our own government.

There is quite a pool of evidence that demonstrates that specific events during the government's case against Microsoft had a direct correlation to the state of the stock market, Upon Judge Jackson's ''findings of fact'' against Microsoft, the NASDAQ fell. Upon his recommendation for splitting up the company, there was another NASDAQ freefall.

The lawsuit against Microsoft may seem to be a small part of the whole economic picture, but it is difficult to deny that the case has had a negative economic impact—and on one of the driving sectors of our economy: the high-tech industry''.

When the high-tech industry is ailing, the rest office economy suffers as well. Technology is so integrated into our daily lives that we sometimes forget just how dependent up on it we are. Thus the ripple effect through the economy. When high-tech hurts, everybody hurts.

From what I understand of the settlement accord the Department of Justice, state attorneys general and Microsoft Corp have agreed to, the major concerns of the government have been addressed; yet Microsoft is kept from breakup and allowed to continue to be an innovator in our high-tech industry.

I hope you take a valuable step forward for our national economy by lending your approval to this settlement. It is a timely and appropriate way to end this suit and allow our country's economy to begin to repair itself.

Sincerely,
Sen. Stan Clark

Dear Ms. Hesse:

I was pleased to hear that the Department of Justice had settled its ridiculous suit against Microsoft. Clearly, this lawsuit was politically driven and using our government and our laws in this fashion was unfortunate from the beginning. I am relieved to see this dispute resolved, although believe it should never have been brought in the first place.

Although Microsoft has agreed to the restrictions in this settlement, I believe it is unfortunate that our government has chosen to do anything less than completely dropping the case. Microsoft has done more to improve our efficient and effective communications than has any other company in history. They should be left alone to continue their fine work without further interference from our government.

Sincerely,

Dear Mr. Ashcroft:

I am writing you today to express my opinion m regards to the Microsoft antitrust dispute. I fully support Microsoft in this dispute and feel that this company is being punished for being successful. Microsoft has contributed such a great deal to our society that stifling this company would only have adverse consequences for consumers. I support the settlement that was reached in November and believe that this settlement will serve in the best public interest.

Microsoft has agreed to all provisions of this agreement. Microsoft is willing to grant computer makers broad new rights to configure Windows so as to promote non-Microsoft software programs that compete with programs included within Windows. Microsoft has also agreed to design future versions of Windows to provide a mechanism to make it easy for computer makers, consumers, and software developers to promote non-Microsoft software within Windows.

This settlement is thorough. Continuing litigation against Microsoft will only serve to negatively impact our economy and consumers. Please support this settlement so that this company can devote their resources and time to innovation, rather than litigation. Thank you for your time.

Sincerely,
Mark Snipe

To the U.S. Department of Justice:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet. Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Dear Ms. Hesse:

As the new Commissioner of the Babe Ruth Softball League, I am confident in the future of our programs. I only wish that I had reason to be as optimistic about the future of the American economy. It seems as though everywhere I look I see doubt, confusion and a lack of stability in the American economy. We've got to improve this situation

I think that President Bush has the right ideas: strengthening our military, improving education and cutting taxes will make our nation stronger, smarter and more ready for business. However, consumer confidence in the short term must be fixed in order to spur growth. The American people want to see their government working to help create jobs. In that spirit, I believe that the pending settlement in the federal government's antitrust suit against Microsoft needs to be finalized. Think about it: the stock market took a nosedive when the federal courts announced that they planned to dissolve Microsoft. The economy has never recovered. We need to reverse this trendl

When I think of every American out of work, it makes me realize how needless and futile that any further pursuit of this lawsuit would be. We need our industry leaders, particularly our industry giants, like Microsoft, to be as strong as possible. Our government should work cooperatively to bolster, not weaken, them.

I request that Judge Kollar Kotelty approves the settlement.

Sincerely,

Famie Horn

Washington, DC 20530

Dear Ms, Hesse:

The antitrust case against Microsoft brought the booming success of the high-tech industry to a screeching halt.

Microsoft has been a leader in the surge in both the high-tech sector and our overall economy. The case caused numerous slides on Wall Street costing investors everywhere. Future success for not only tech companies, but businesses of all types, seems in jeopardy of government intervention.

The marketplace is constantly changing and guarantees success to no one, but opportunity for success to all. Government involvement in business obstructs the workings of America's free-market system. Customers determine what they want, what they like and buy it. There's no sure thing. The federal government should not be placed in a position of authority over the market—choosing champions and runners up. There is a place for a limited government—to protect.

Those who argue this is in fact the role the state and national Justice Departments undertook in this case, should be asking

themselves—Why does this settlement come three years too late? Three years after it began we have a wounded economy, a limping technology industry, puzzled consumers and furious taxpayers. Please accept the settlement before you.

Sincere

Washington, DC 20530

Dear Mr. Ashcroft:

I want to express my gratitude liar the work you have done since being named Attorney General last year. I am especially pleased with your decision to settle the government's anti-trust lawsuit against Microsoft, and I fully support this settlement. Private businesses should have the right to develop ideas and become successful from them without being punished by the federal government.

This lawsuit has had very negative effects on the technology industry, and this has carried over and hurt the U.S. economy. Microsoft has agreed to change its business practices so that competition can increase, the industry can be revitalized, and the economy can be stimulated. The settlement calls for a three person technical committee that will watch over Microsoft, and make sure that no more anti-competitive behavior exists in the future. Consumers will benefit from more choices in the marketplace, and this was the desired outcome when the lawsuit began over three years ago.

Settling now is the right thing to do for our country at this time, and I thank you for your decision to end the litigation against Microsoft. I am hopeful that this is truly the end of this case at the federal level, and that there will no further action taken against Microsoft.

Sincerely,
Dan Schwartz

Dear Ms Hesse:

This letter is to articulate my support for the proposed settlement in the Microsoft case. The fact that over $30 million in taxpayer dollars has been spent in this case during these trying economic times is proof enough that this case has gone on far too long. Hopefully, the settlement will signal a return to innovation without the threat of government intervention.

The Department of Justice has done a commendable job in putting together an agreement that is fair but won't put Microsoft out of business. It is a reasonable conclusion to this case and I support it wholeheartedly.

Sincerely,
Joseph Tartaglia

Washington, DC 20530

Dear Mr. Ashcroft:

I am writing in support of Microsoft and believe this whole antitrust case has become political. I don't see how this benefits consumers and businesses—especially at the expense of the economy. The tech stocks are down. The technology sector is down. The employment numbers are down. Let Microsoft get back to work and the government get on with worthwhile business. The only people I see benefiting from this case are the lawyers.

I am a small businessman who employs 25 people. I have greatly benefited since 1982 from the products Microsoft produces and feel they have been more than fair to me. If their competitors can't put out a better product with competitive pricing and service that's their problem. I don't see why I should suffer as a small businessman.

After years of extensive negotiations and mediation, Microsoft has gone out of their way to settle this case. They went well beyond what would be required in any antitrust case. They agreed to design future versions of Windows, starting with an interim release of XP, to provide a mechanism to make it easier for computer companies, consumers and software developers to promote their software within Windows.

Let's end this litigation so that we can focus on what's really important. Thanks,

Sincerely,
Mike Sampson

January 26, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I would like to take some time to express to you my feelings about the proposed settlement that was reached between Microsoft and the Department of Justice. It is about time that the antitrust suit ended, and I feel that the terms in the settlement, although harsh on Microsoft, will be for the betterment of the computer industry and the economy.

I am pleased with the prospect of the case being resolved, but I think it was initiated for all of the wrong reasons. Microsoft's competitors had a major role in initiating the litigation, because they could not bring to the market a product that matched Microsoft's own. The competition should be happy though. The terms of the settlement require Microsoft to turn over to their competitors source code and design data that are crucial to the internal makeup of Windows. Enough is enough. This settlement needs m he approved so the industry can get back on its feet, and with competitors working more closely with one another, the industry will benefit.

I feel the proposed settlement will benefit all parties involved, including Microsoft's competitors.

Sincerely,
Jesse Clay

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

The antitrust lawsuits against Microsoft have gone on for too long. They are also not very well justified. Microsoft has not only created jobs and wealth for our country, but also has made technological breakthroughs that have revolutionized the IT sector. I do wish that when they come out with new versions of software they would always make it compatible with previous versions, which they didn't do, for instance, with PowerPoint.

Still, it's clear that the settlement seems to only help competitors gain an edge they were not able to gain beforehand. It forced Microsoft to disclose interfaces that are internal to Windows operating system products, and also grant computer makers broad new rights to configure Windows so that non-Microsoft software can be promoted more easily. It is in the best interests of the

American public to finalize the settlement. Our nation cannot afford further litigation so I urge your office to use its influence to try to rein in the nine states that want to drag this case out for even longer. Thank you for your time.

Sincerely,

Carol Morse Sibley

Dear Ms. Hesse:

I am addressing in this letter the settlement agreement in U.S.v. Microsoft, and its benefits for our state and America's economy.

Frankly, this case has run its course after four years and the tremendous financial investment by federal and state governments, and the Microsoft Corporation, I am aware that nine of the 18 states in the antitrust case have chosen not to agree to settle, but I think it speaks more loudly and convincingly when nine states and the U.S. Department of Justice agree that this case has reached a satisfactory conclusion.

As someone who has served on county and city boards which were created a better quality of life, I am very pleased that a positive result of this case wilt be the distribution of computers, software and support for low income schools in the nation. Our state will certainly benefit, particularly among the Indian populations where some of America's poorest counties are found. I am also pleased that this agreement indicates that this court action will finally end, and Microsoft will be able to refocus its energies to providing the leadership in information technologies. Because Microsoft has blazed the path, America's technology industry has been a cornerstone to our nation's economic position in the world. Please do what you can to allow this agreement to be implemented so that we can all move forward. Thank you very much.

Sincerely,

Nancy Waxdahl

Washington, DC 20530

Dear Trial Attorney Hesse:

Thank you for the opportunity to provide my Input on the settlement reached recently in U.S.v. Microsoft. I am very pleased that this antitrust case has settled after the years and millions invested in pursuing every relevant issue involved, I realize that it has been a complicated case which has caused the courts to enter unfamiliar terrltory in determining the appropriateness of Microsoft Corporation's practices as they affect its equally ambitious competitors, However, I have been concerned that this case would also act to stifle the dynamic ability of Microsoft—or any other software firm—to create and successfully market the best software which meets the needs of consumers Placing our government in charge of micromanaging innovation would certainly limit the ability of American software companies to keep our nation ahead in technology development, For my dental practice and home use, I have relied on Microsoft to provide a competent and versatile system to conduct bustness and communicate with friends and family. I hope this settlement will allow Microsoft to dived its resources into continuing to make Its clients satisfied with its new products.

Sincerely,

Dr. Jeff Olson

Renata Hesse, Trial Attorney
Antitrust Division
U.S. Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Renata Hesse:

My letter is for the public commentary portion of the settlement phase in U.S. vs. Microsoft. As an educator in a Sioux Falls college, one reason I support the settlement is it offers a chance to improve education in South Dakota's and the nation's poorest school districts by bringing IT equipment, software, and support to them. This will create a ladder to those who've been trapped in the IT access gap, and give these children the tools they will need to continue their education in our state's colleges.

I also support the proposed settlement largely because it puts an end to an antitrust suit which has not shown consumers have been harmed by Microsoft, and because it has found answers to the issues which were found to be important by the federal court system. Additionally, when a case of this size and important has boon running for four years with all of the resources brought into it, I think you can safely assume that all valid issues have been brought to light and all questions have been answered satisfactorily, Apparently the U.S. Department of Justice thinks so, as do half of the state attorneys general who brought the case.

Our own state did not join this antitrust action. Our Attorney General felt it lacked enough ?? to warrant using our state's limited financial resources to pursue it, I think he was right. Considering them arc much more important and pressing matters before the Department of Justice, I think it's time to call this matter resolved and settled.

Thank you for your attention to my letter.

Sincerely,

Kip Scott

Washington, DC 20530

Dear MS. Hesse:

With the court's approval, our nation will be best served by the settlement agreement reached between the Department of Justice and Microsoft Corporation. The settlement resolves the issues which were found to be legitimate. It resolves an issue which has absorbed four years and many millions in taxes from the Justice Department.

While our nation has endured a recession, one Of the strong points in our recovery has been the Microsoft Corporation which has Shown great resiliency, even though its resources and attention have been split with the threats posed by the antitrust case. Microsoft has ?? In one of the most hostile Industries because the entire company's energetic focus is on remaining the leader in software development. Their competitors are also very wealthy and they are equally as determined to replace Microsoft as the leader. Therefore, I am not surprised that half of the states in the original suit are still in the hunt to bring down Microsoft.

I am impressed with one Of the gifts available In this settlement, Which will target computers and Information technologies resources for our nation's most poverty-stricken school districts. My home state will probably be rewarded With these computers since some of the nation's poorest counties are located in South Dakota. I nave been an activist on social development Issues, Including my service as Executive Director of the S.D. Alzheimer's Association. I support this settlement not only because It ends an action which has served its usefulness, but also because it benefits children who need the help. I appreciate your consideration of my letter.

U.S. Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Trial Attorney Hesse:

Thank you for the opportunity to provide my comments on the settlement of U.S.v. Microsoft and the benefits this settlement will have for the nation and our state. South. Dakota has been pro-active in making information technologies ubiquitous for

children and adults throughout our state. Governor Bill Janklow's Wiring the Schools Program is making high-speed, wide ban interact service available in all schools and public buildings in every town. Additionally, with the help of a $670,000 matching grant from the Bill and Melinda. Gates Foundation, the state is bringing faculty and administrators up to speed on using these systems so that more children will benefit. The settlement from the Microsoft antitrust case will result in financially disadvantaged school districts receiving free software, hardware and technical support. For disadvantaged kids, this is a case of what happens when preparedness meets opportunity, In South Dakota, where the nation's three poorest counties are found, this settlement will have great meaning for young people seeking their way in tills world.

Aside from the educational benefit, I am glad that this ease is nearly settled. It has absorbed an incredible amount of taxes and four years of productive time to resolve the issues brought to the court. Those issues are addressed in this settlement, and I believe they should he satisfied. There are those who would like to continue this case, I can't imagine that after all of the time and money invested to date that anything useful or productive would be the result. Please let this case become settled, Microsoft is part of the foundation of our nation's economy, and continuing this case will work only to weaken a corporation which has been a responsible citizen to our nation. Thank you for considering my letter.

Renata Hesse, Trial Attorney
Antitrust Division
U.S, Department of Justice
601 D Street NW, Suite t200''
Washington, DC 20530

Dear Ms. Hesse:

My comments here are'' in favor of the settlement in U.S. vs. Microsoft, because the settlement's provisions will be a benefit for children in regions'' where poverty has prevented them from accessing the intenet. The state government of South ''Dakota has put an emphasis of wiring our public schools and public'' buildings for the. internet, but obtaining good software and hardware, and the support needed to make the system work smoothly, have been lacking. The settlement will be of great benefit to this program and to the state's children.

I also feel the settlement is the. right thing for our nation's economy, I have used Windows products for work and pleasure, and I am satisfied with the products. They empower people to gain the full benefit of the information superhighway, and they enable business people and nonprofits to correspond on the same technical level, I think it is noteworthy that the antitrust case never established a finding that consumers were shortchanged by Microsoft.

Your attention to my letter .is appreciated.

Sincerely,
Deb Aden

Washington, DC 20530

Dear Ms. Hesse:

On the issue of the settlement agreement in US v. Microsoft, please allow this agreement to move forward so that this anti-trust case is allowed to come to a fair and final conclusion very soon.

The time and money which has gone into this case, in both the government and private sectors, has been more than sufficient to render sensible decisions, it is my understanding that the settlement agreement addresses each of the issues which needed to be addressed by the courts. It is interesting that none of Microsoft's practices and policies were determined to be harmful to consumers. AS someone who has worked in family and children advocacy projects in Western South Dakota, I am pleased that an important aspect of this settlement will help to bridge the IT gap among poorer Children in the nation.

The distribution of computers and supplies by Microsoft is in keeping with the reputation of the Bill ?? Melinda Gates Foundation. The Foundation made a sizeable gift to our state to enhance the development of IT services within South Dakota's public school systems. And the Foundation has a tremendous record of philanthropic contributions [o eliminate diseases worldwide through vaccination programs. Despite the criticism by some, the remedy of forcing Microsoft to install and maintain computer systems in public schools to help the neediest children is profoundly wise and beneficial to society.

Sincerely,
Mark Proctor

RE: Public commentary In U.S. v. Microsoft settlement

Dear Ms. Hesse:

Public service, for me, means investing my time and energy to help improve the quality of life for the people in my legislative district. That is why I have served as a member of the Rossbud Sioux Tribal ??, and as a State Senator for 10 years, and now as a State House member for my second year.

My legislative District 27 is home to the pine Ridge Reservation and the Ro??obud Reservation, where you will find two of the poorest counties in the entire United States, according to the U.S. Census Bureau. My district is filled with kids who want to do well in school no that they can make a good life for themselves as adults, Everybody is encouraged by our Governor's program Wiring the Schools because it brings wide band, high speed Internal capabilities to our schools. But it is discouraging when you visit the schools and see Kids waiting their turn to use systems which are slow, dilapidated and not up to the standards of systems used by kids in other parts of the United States.

That is one important reason why I support the settlement agreement, because it will bring updated systems, software and support to the schools in my district. Another strong point is the fact that this antitrust case has been fully scrutinized and debated for four years in the federal court system, and the settlement agreement speaks to all of the significant issues which have survived the court process. I have enough faith in the U.S. Justice Department to know that this settlement is a good one, or it would not have aigned off on the agreement.

Thank you for the opportunity to submit my opinion on this important settlement.

Sincerely,
State Representative

RE: Public commentary on U.S.v. Microsoft Settlement

Dear Ms. Hesse:

In my service as General Counsel to the Sisseton-Wahpeton Sioux Tribe at Lake Traverse Reservation, I am concerned with the development of tribal schools and the education of Indian children. My work also involves services to other tribes in more remote areas of western South Dakota, North Dakota, and Kansas where education programs are also viewed as essential to the economic survival of Indian people and tribal governments.

Tribal schools throughout this region are becoming increasingly interested in new technologies and making sure Indian children are not left behind the curve with non-Indian students. That is why I believe the Microsoft settlement is going to have untold benefits for generations by supplying

these schools and schools of other low-income students with computers, software and technical support they need to operate competent systems.

As an attorney, I have been watching the antitrust case, and I have taken an interest in its outcome. While consumers clearly have not been hurt by anything Microsoft has done, I think it is debatable whether Microsoft was inappropriate in its practices against its competitors. I am glad to see that the U.S. Justice Department and nine of the 18 states in the case come to terms with Microsoft, because I think this case has had enough time and resource paid to it to render a just settlement of issues.

I appreciate your interest in my thoughts on this settlement, and I ask for a quick resolution to approve the settlement.

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Since the Courts reached a settlement on the Microsoft antitrust case in November, I was hopeful we could move forward. Now with the additional states and competitors coming forward to pursue further litigation, I am starting to wonder if this benefits the consumer at all or just the business of the competitor's.

Microsoft has been more than cooperative. They agreed to license their Windows operating system products to the 20 largest computer makers on identical terms and conditions, including price. They also agreed to grant computer makers broad new rights to configure Windows, in order to promote non-Microsoft software programs that compete with programs included within Windows.

I urge you to put an end of this litigation fiasco. There are more pressing issues upon which the government should be focused.

Sincerely,

Byron Wright

Re: Microsoft Settlement

Dear Mr. Ashcroft:

I support the settlement between Microsoft and the U.S. Department of Justice. Please stop this foolishness.

I feel that, as an attorney and president of a technology firm, I have some reasonable understanding of the issues in this case. It is my strong feeling that the Government's actions have been overly aggressive and caused problems damaging to the whole software industry. I have no sympathy for Microsoft's competitors who have sought to promote this case. I believe that they have done so in order to gain advantage for their otherwise inferior software. I have no economic relationship with Microsoft, beyond being in the same industry and using their products—for which I pay retail. I support Microsoft and this settlement and I hope you will lend your support as well. Thank you.

Yours truly,

Randy Hanshaw

Dear Mr. Ashcroft:

I am writing to express my support of Microsoft and by extension, the settlement recently proposed by the DOJ. I support this settlement because Microsoft deems the terms fair and will comply in the hope of regaining a measure of normalcy in the IT industry as soon as possible. I am sure that this has been public's desire from the very beginning.

However, I don't believe in the prosecution of Microsoft, in the first place, in my mind, this all started due to an overzealous prosecutor and competitor's which used the available court system as a venue to retain competitive advantage, damn fairness and free trade. Microsoft has brought new innovative products to market and because they were superior, they've become widespread. Why on earth should they be prosecuted for being successful?

To me the only good thing that has come out of this lawsuit is that the public has been able to see the kind of company that Microsoft is, one that provides products that the market wants, low cost and effective computing solutions. That they bundled their software, made it easier for me and I support them for it. It didn't kill Netscape (I still use it) or any other competitor. They just failed to be as successful as Microsoft, and now they're complaining.

Microsoft's willingness to comply with the terms of this agreement and those not even at issue in the lawsuit is a classic example of their high caliber. Microsoft has agreed to allow their competitors aspects of Windows that will facilitate competitiveness such as Microsoft's internal interfaces, protocols and intellectual property. To ensure their compliance, Microsoft has agreed to be monitored by a Technical Committee.

In the interest of seeing a restored IT industry and a more stabilized economy, please make the necessary decision to

formalize the proposed settlement, though I personally think it goes to far.

Sincerely,
Richard Paeschke

COMMITTEES
State Government, Chair
Appropriations
Business & Labor Relations
Commerce
Judiciary Oversight & Communications
Appropriations Subcommittee
Vice Chair
Renata Hesse
Department of Justice, Antitrust Department
601 D St NW
Suite 1200
Washington, DC 20530

Dear Ms. Hesse,

I am a State Senator from Iowa and I also the owner of construction contracting business. In my capacity as a State Senator I am chairman of the state government committee and also serve on the commerce committee. I chose to serve on these committees because as a business owner I am acutely aware of'' negative impact: over regulation can have on business It is from this unique perspective that I am writing you today to encourage you to settle the Microsoft anti-trust case

The suit against Microsoft was brought under anti-trust laws that were developed in at a time in our history when our nation was growing into the industrial and economic leader it is today. These laws were meant to protect American consumers from harm inflicted by monopoly companies. These laws have served their purpose in the past. However, in this case, I do not think they apply the government and Microsoft's critics have yet to prove consumer harm as a result of Microsoft actions or practices.

As a businessman and strong supporter of our free-market system, it is apparent to me that Microsoft's only crime is giving the American public a superior product, and therefore has been able to build a loyal following of committed users. Assumedly, Microsoft worked very hard to develop its products and market. They should not be punished for this or for having the business savvy to take action to protect their market.

A closer look at this suit and the lobbying efforts that have fueled it will expose disturbing realities. Microsoft's competitors do not appreciate that technology consumers are overwhelmingly loyal to Microsoft products. However, instead of committing to production of new products that may allow them to more successfully compete in our free-market, they have banded together and found a way to use outdated anti-trust laws for their own purposes.

The settlement before you is truly a compromise for Microsoft. Certainly, Microsoft will be held to the severe provision of this settlement, not the least of which is the sharing of intellectual property. However, negotiating settlement is the best solution for the technology industry and our'' economy in general. When this settlement is approved it will send a signal to the technology industry that the threat of government interference has been lifted.

Sincerely,
Senator Steve King

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

After three long years of court baffles, Microsoft and the government have settled an antitrust suit that has profound implications for all software publishers, the rest of the Information Technology industry, and American consumers. By ending this case, the government is actually giving a boost to our sagging economy.

The settlement has teeth. Under the agreement, computer manufacturers were granted new rights to configure systems with access to various Windows features. Microsoft must also design future versions of Windows to make it easier to install non-Microsoft software and to disclose information about certain internal interfaces in Windows.

The government even went so far as to create an ongoing technical oversight committee to review Microsoft software codes and books and to test Microsoft compliance to ensure that Microsoft abides by the agreement. This will help to promote fairness. In conclusion, I don't think it will ever be necessary for the federal government to ever bring any more litigation against Microsoft beyond this agreement. This agreement is more than fair and reasonable and was arrived at after extensive negotiations with a court appointed mediator.

Sincerely,
C. Cowdery

Dear Ms. Hesse:

As a concerned citizen with an eye for government waste, I strongly believe that the antitrust case against Microsoft has been a squandering of public resources. I also believe this was brought on by those who have a liberal bias and are against corporate America. Therefore, I support the agreement between Microsoft and the nine plaintiff states.

As you know, our antitrust laws are supposed to protect consumers, not competitors, What's going on here is that our government is penalizing Microsoft for its success, The consequences are far ranging. If the United States government can attack one of the most successful companies in America, who's next?

As a believer in open markets and opponent of government intrusion, I support ''the Microsoft settlement.

Thank you for your time.

Washington, DC 20530

Dear Mr. Ashcroft:

I am happy to hear about the settlement that has been worked out with Microsoft. It has taken three long years to finally reach an agreement like this that is fair for both sides. I hope that the Federal government will let this be it and finally put the matter to rest.

The settlement is fair. First of all, Microsoft will adhere to a uniform pricing list when licensing Windows out to the larger computer vendors in the United States. Also, Microsoft has agreed not to retaliate against companies that promote or use non-Microsoft products. Most importantly, Microsoft has agreed to share sensitive information with its competitors; information that will allow them to more easily place their own programs on the Windows operating system.

I know that many people who daily depend on Microsoft products will write to you about this matter. I hope that you take their and my opinions into account. I support the settlement, and look forward to seeing the suit come to an end. As a consumer and a

user of Microsoft products, I do not feel that I am being ''clobbered'' by Microsoft. Many of their competitors would like you to think this is the case. Since many other companies can't effectively compete with their own inferior products, they want the taxpayers to help them get rid of Microsoft by way of a government breakup. Enough is enough, settle the lawsuit and allow Microsoft to get on with creating more innovative products!!

Sincerely,
Marc T Nettles

RE: U.S. v Microsoft

Dear Judge Kollar-Kotelly,

At a time when innovation in the computer technology industry should be booming the decision with regard to U.S. v Microsoft certainly makes it very difficult for companies to find the investment dollars to develop software. Limiting the ability of companies competing, the settlement provides loopholes which will probably keep this issue in litigation for years. Microsoft's monopoly has grown stronger. Its Windows operating system and Office Suite have higher than 90% usage. It is clear that operating systems which may have posed a threat and others that might have competed are no longer a concern.

If competition is precluded it is very unlikely venture capital will be available. Investors historically will avoid the risk involved when potential future development is impeded by a monopoly, Consumers are affected as well be, cause they will not find affordable products in the marketplace, The already sluggish job market and economy certainly does not reflect the potential in the industry if a monopoly did not exit.

It is clear that Microsoft hopes to expand to web services, financial, cable and the like, perhaps even the interact. Without venture capital companies will be unable to creatively address emerging markets, At a time when government on all levels faces serious challenges involving security and privacy issues they will be limited in the software they can use if it is not compatible with Windows.

There is nothing the settlement which will hinder Microsoft. It will be business as usual. The settlement requires Microsoft to share technological information unless Microsoft determines that sharing the information might harm its security or software. In addition Microsoft, due to its monopoly and dominant market share, dictates the technologies, which will be compatible with Windows.

?? 617 357 6911
gerl@denterleinworldwide.com

One of the three person technical committee will be selected by Microsoft. The Department of Justice will choose a second member and they must agree on the third member. There is no question that companies will be less inclined to take on a monopoly when their future business, if the challenge fails, may well depend on that company. Microsoft will continue to be able to charge whatever it wants for its products, prices will skyrocket.

The technical committee must identify violations of the agreement. No findings may be admitted into court in enforcement proceedings and compliance is only for five years. This seems a short time for such a flagrant violation of antitrust law.

After all the years examining this important issue it would seem a better solution could be found. I appreciate your interest. If there is any additional information with which I may be of assistance, please contact me,

RE: U.S. v Microsoft

Dear Judge Kollar,Kotelly,

I am writing in regards to the proposed settlement between Microsoft and the Department of Justice. In the decision on U.S.v. Microsoft it appears that the settlement does not fully resolve Microsoft's monopoly of the market and will continue to lead to predatory, practices.

Microsoft's ''bolting'' of applications to their software which was not terminated in the settlement has maintained an unfair advantage for Microsoft in the distribution of these applications. These types of practices don't create an environment of fair competition, which creates a problem not only for their competitors but also eventually for consumers.

It is clear that Microsoft hopes to expand its monopoly to web services, financial, cable and the like, perhaps even the Internet. If we let Microsoft continue this expansion ultimately consumers will have to pay inflated prices for these products that we will only become more dependant on. Antitrust laws were created to avoid business being conducted in such a manner.

This deal also threatens to curtail innovation in an industry that is a vital part of our new economy. At a time when serious challenges face government and corporations they will be seriously handicapped in choosing the high value systems they need for privacy and security because compatibility with Windows does not exist.

The enforcement mechanisms in the settlement leave Microsoft free to do whatever it wants. The three person technical committee will only serve as a kangaroo court, which further threatens the integrity of enforceability. Analysts from many sectors of the technology industry have indicated the lack of impact the settlement will have and will result in minuet changes in Microsoft's practices.

RE: U.S. v Microsoft

Dear Judge Kollar-Kotelly:

After many years of investigating Microsoft with regard to monopoly issues, a settlement has been struck which appears to continue that monopoly. Limiting the ability of other companies to compete, the settlement provides loopholes, which wilt probably keep this issue in litigation for years.

The longer it takes for competition to be permitted the less likely it is for those interested in investing venture capital to risk taking a chance on potential future development by companies hoping to compete. The result is that not only are consumers affected in that they will be unable to buy an affordable product, but the already sluggish job market will fail to reflect the potential of the industry.

It is clear that Microsoft hopes to expand its monopoly to web services, financial, cable and the like, perhaps even the internet. Without venture capital companies will be unable to creatively address emerging markets.

Although the agreement precludes Microsoft from paying a vendor to keep it from developing or distributing software that would compete, Microsoft is the determining body when an exception is identified. Likewise Microsoft: must share technological information unless Microsoft determines the

information may harm its security or software. In addition Microsoft, due to its monopoly and dominant market share, dictates the technologies, which will be compatible with Windows.

The Honorable Coleen Kollar-Kotelly
January 25, 2002

At a time when serious challenges face government and corporations they will be seriously handicapped in choosing the high value systems they need for privacy and security because compatibility with Windows does not exist.

Although the technical committee will oversee the process, Microsoft will choose one of its three members. The Department of Justice will choose a second and they must agree on the third member. There is no question that companies will be less inclined to take on a monopoly when their future business may well depend on the company. Given that Microsoft will continue to be able to charge whatever it wants for its products, prices will skyrocket. The technical committee of three must identify violations of the agreement. No findings may be admitted into court in enforcement proceedings and compliance is only for five years. This seems a short time for such a flagrant violation of antitrust law.

Washington, DC 20530–0001

Dear Judge Kollar-Kotelly,

I am writing with regard to the settlement between the Department of Justice and Microsoft in U.S. v Microsoft. It appears to violate antitrust law. Microsoft has a monopoly now and will be permitted to expand it with regard to emerging markets.

The fact that Microsoft Is free to bolt financial services, cable services or even the internet to Its Microsoft Windows is a great concern. As companies develop software they will be unable to address the issue of affordability due to the dependency on Windows technology to function.

Microsoft may not pay a vendor to keep them from developing or distributing software that would compete, however Microsoft is the determining body when an exception is identified. Likewise Microsoft must share technological information unless Microsoft determines the Information may harm Microsoft security or software. In addition Microsoft, due to its monopoly and dominant market share, dictates the technologies, which will be compatible with Windows. Governments and corporations will be unable to choose high value systems they need for privacy and security if that compatibility does not exist.

Half of the technical committee will be appointed by Microsoft. The Department of Justice and Microsoft each appoint one member while they must agree on the third member. There is no question that companies will be less inclined to take on a monopoly when their future business may well depend on that company. Given that Microsoft will continue to be able to charge whatever it wants for its products, prices will skyrocket.

The technical committee of three must identify violations of the agreement. No findings may be admitted into court in enforcement proceedings and compliance is only for five years. This seems a short time for such a flagrant violation of antitrust law. After many years of examining this important issue I would think a better solution could be found. I appreciate your Interest. RE: US v Microsoft

Dear Judge Kollar-Kotelly,

The settlement agreed to by the Department of Justice and Microsoft appears to fly in the face of antitrust laws. Although the examination of this problem took a number of years, the results seem inadequate and the penalties less than one would expect for such serious violations of the law. Among the areas which are of concern:

* Microsoft will determine if any company's technology violates Microsoft security or software. This would preclude a vendor from distributing or developing software as proscribed by the settlement.

* Microsoft may bolt financial, cable services or even the internet to Windows, creating a dependency on Windows technology for all software developers.

* The technical committee which will oversee implementation will be stacked in favor of Microsoft, as there will be one member appointed by Microsoft, another appointed by the Department of Justice and a third on whom both entities must agree.

* The process to'' file a complaint would be unlikely to attract many businesses challenging Microsoft, as the most probable result would be the company then still having to deal with Microsoft.

* Consumers will bear the brunt of this decision, as they will find the expense of software reflected in the monopoly Microsoft will hold in its development.

* At a time when governments and corporations are looking to develop software to insure privacy and security it will be impossible if compatibility with Microsoft Windows does not exist.

I am pleased that Attorney General Tom Reilly has agreed to reject the settlement and is pursuing all avenues to assist individuals and businesses in the Commonwealth of Massachusetts. I appreciate your attention. Please contact me if I may be of assistance.

Sincerely,
Virginia M. Allan

Washington, DC 20530–0001

Dear Judge Kollar-Kotelly,

With regard to the settlement of the Department of Justice and Microsoft in U—S—v Microsoft I would like to raise a few issues. It appears Microsoft will continue to have a monopoly in the marketplace. Expansion will only increase the corporation's ability to intimidate smaller companies as they make an effort to produce software at more affordable prices.

At a time when development of financial services, updated cable services and the internet are offering challenges to many small and midsized companies to be creative in new uses, the inability of a company to progress without compatibility with Microsoft is a major stumbling block. Microsoft in theory may not keep a vendor from developing or distributing software, even if it might be competition, but Microsoft itself will determine if a company's information technology might adversely affect Microsoft's security or its software.

Compatibility with Microsoft Windows is essential and Microsoft makes the determination as to which technologies will be compatible thus limiting the ability for companies whose technologies are not included to procede.

The oversight of the settlement offers additional problems in that Microsoft will be responsible for the appointment of one individual on the technical committee. In addition the Department of Justice appoints one other and the two must agree on the third. The committee must identify violations of the settlement. In addition it must hear

complaints from the companies whose products are not compatible. It is highly unlikely that a challenge will be made against a company which essentially controls the monopoly which at some point may well control the smaller companies ability to develop future software,

Although Microsoft will comply with these lenient restrictions it will only be required for five years. This seems a short time for a penalty for violating antitrust law, Please contact me if you have any questions.

Sincerely,
Mark T. Collins

RE: US v Microsoft

Dear Judge Kollar-Kotelly,

I realize there has been discussion over many years concerning this issue. It does seem a more equitable solution could have been reached in light of antitrust laws. As it stands now, Microsoft can still bolt financial services, cable or even the internet to Windows hindering competition. The fact that Microsoft will determine what technologies will be compatible with Windows makes it very difficult for companies to develop software or for that matter find capital investors to even be interested in their companies.

As it stands now both Microsoft Windows and Office Suites enjoy a 90% user status. Expansion into other markets will expand that usage even more. At a time when computer technology should be expanding to address security and privacy issues in government and corporations, the inability to compete is certainly not making it the environment good for growth. The settlement provides many loopholes which will probably keep the issue in litigation for years.

Without competition it is very likely venture capital will be unavailable. The affect on consumers will be reflected in the high cost of software. The already sluggish job market and economy certainly does not reflect the potential in the computer software market. It is clear that Microsoft plans to expand to financial, cable and the internet, expanding its monopoly. There is nothing in the settlement which will hinder Microsoft.

One of the three people on the technical committee will be selected by Microsoft. The Department of Justice will choose a second member and they must agree on the third member. It is apparent that companies will be reluctant to take on a monopoly when their future business may well depend on that company. Microsoft will continue to be able to charge whatever it wants for its products, prices will skyrocket.

This issue has been discussed for many years. It seems a more equitable solution could be determined, if I may be of any assistance, please contact me,

RE: U.S. v Microsoft

Dear Judge Kollar-Kotelly,

I am writing in regards to the anticipated settlement with the Microsoft Corporation, This proposed settlement allows Microsoft to preserve and reinforce its monopoly, while also freeing Microsoft to use anticompetitive tactics to spread its dominance into other markets. After more than 11 years of litigation and investigation against Microsoft, it seems a more equitable solution can be reached.

The deal fails to meet the appellate court's remedy standards, which are clearly laid out by the appellate court. The following are some examples of how the deal fails to meet the standards:

1. The settlement does not address key Microsoft practices found to be illegal by the appellate court, such as the finding that Microsoft's practice of bolting applications to Windows through the practice of ''commingling code'' was a violation of antitrust law. This was considered by many to be among the most significant violations of the law, but the settlement does not mention it.

2. The proposed settlement permits Microsoft to define many key terms, which is unprecedented in any law enforcement proceeding.

3. The flawed settlement empowers Microsoft to retaliate against would-be competitors and to take the intellectual property of competitors doing business with Microsoft.

4. The deal fails to terminate the Microsoft monopoly, and instead guarantees Microsoft's monopoly will survive and be allowed to expand into new markets. The settlement is also fiddled with loopholes making the enforceability of the settlement questionable.

The agreement requires Microsoft to share technical information with competitors so that non-Microsoft software will work on Windows operating systems. However, Microsoft is not required to do so if it may harm the security or software licensing. The determiner of this harm? Microsoft. The settlement also says that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop software that would compete with its products. However, another provision permits those payments and deals when they are ''reasonably necessary.'' Again who determines this ''reasonably necessary?'' Microsoft.

The enforcement provisions in the settlement are weak and leave Microsoft virtually unaccountable.

Microsoft is only subject to comply with the terms of the agreement for a mere five years. Hardly an adequate amount of time for a corporation found guilty of violating antitrust laws. The three-person committee that is being assembled to identify violations of the agreement will have nearly no effect since the work of the committee cannot be admitted into court in any enforcement proceeding.

The proposed settlement between the Department of Justice and Microsoft in U.S.v. Microsoft falls short of what would be prudent and necessary in rectifying Microsoft's monopoly and changing their current practices.

Thank you for your time.

Regards,
Jennifer E. Lawrence, Esq.

January 27, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Attorney General Ashcroft:

I would tike to express some of my opinions regarding the settlement agreement between your Department and Microsoft. I feel that it is fair, reasonable, and extensive. I do not see the need for further federal action, especially when nine states have approved the agreement. Microsoft is currently negotiating with the opposing states to reach a conclusion. Not only does this agreement address the issues that brought about the lawsuits, but it provides direction in dealing with future problems as weft.

Although the settlement calls for concessions that make antitrust precedent, Microsoft has agreed in an effort to end this case sooner rather than later. The company will stop retaliating against those that design or p ore non-Microsoft programs, end will allow computer makers to configure Windows so as to promote those programs. Most importantly, a technical oversight committee will ensure Microsoft's compliance with these concessions, and competitors will be allowed to sue Microsoft directly if they feel they've been treated unfairly.

I appreciate you taking time to consider my views on this issue. We must bring certainty and stability back to the IT sector. This agreement will allow the market, the industry, and the economy to move forward.

Sincerely,
Erwin Oetken

January 18, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

As a citizen of California I am very disappointed that the settlement reached between Microsoft and the Department of Justice has not been accepted by my state. I believe that this suit has gone much farther than was ever appropriate. It is my opinion that the alleged crimes committed by this company are much less severe than a number of people have made them out to be. Microsoft does not deserve the callous treatment that they have been given, and the continuation of this already protracted suit will not benefit either the United States as a whole or the state of California.

The proposed settlement is well thought out and is a fair conclusion to this unfortunate litigation. Microsoft will not commit any further anti-trust infringements, the company will be monitored by a three-man oversight committee which will ensure that all business tactics engaged by the company in future are fair and do not lean towards monopolistic practices. The settlement ensures that Microsoft will not strike back against any company that develops products that compete against its own. And finally, Microsoft will develop all future versions of Windows to work more completely with the products of competing companies. This settlement will remedy any problems that any of Microsoft's competitors may have experienced when dealing with this company. All of the states should jump at the chance to accept the terms and finalize this costly litigation.

I understand the need to protect businesses and to ensure that there is a fair playing field for everyone. However, free enterprise must be protected. Without it, we lose the very fabric upon which we have built this nation. I believe that we need to move forward as a nation and to do so we need this settlement. Thank you for the work that you have done to bring this agreement about and for ensuring that we do not ring in another year with this costly litigation hanging around our necks.

Sincerely,
Henry Kath

January 22, 2002

Dear Mr. Ashcroft,

I personally believe that this lawsuit against Microsoft is better settled. Even though many of the points enumerated in the suit were valid, the litigation was quickly getting out of control and could have resulted in a lot of unnecessary complications for both Microsoft and for the IT businesses in general.

The points of the suit have been adequately addressed in the settlement. The settlement, for example, requires more responsible and flexible attitudes by Microsoft towards its OEM licensees as well as to third party software developers, who will now be able to take advantage of disclosure of Microsoft software code. Microsoft's competition should be elated at this.

I am therefore writing in support of the settlement and hope that this kind of lawsuit be prevented in the future.

Sincerely,
Charles Johnson

Dear Ms. Hesse.

The Microsoft ?? case reminds me of the novel ?? Shrugged, written by Ayn Rand In the novel, industral competitors turn to the govenment and empower it to choose ?? and losers in the marketplace.

Without question, Microsoft's primary competitors have joined into an unholy zilance with the judicial ?? of government, in an effort to target the success of Microsoft are its popular software You might also want to reference ?? Bastiat's The Law, to gain his insights on how government attempts to choose winners and losers in the marketplace.

I have been intimately involved with personal computers and the software that drives them since the very ??. As a computer consultant and a database software developer for nearly twenty years, I would be amused by government lawyers with limited computer skills—and an even more limited grasp of the actual inner working of software—trying to dictate policy to a marketplace that literally changes every day. If the slakes weren't: so high.

As an active an informed citizen, I have a thorough understanding of the roles the branches of government are to play in our society, and the businese, of choosing winners and losers in the marketplace is not a function of government, in belongs to the American consumer. Sign off on the proposed settlement before you in this case and lot us do our work Sincerely,

Loras Schulte

Ms. Hesse:

I have been informed that under the Tunney Act you are accepting public comment on the United State's agreement with the Microsoft Corporation. I am writing to offer my views on this matter. I work for a company called Nash-Finch that is based in Minneapolis and operates a large chain of grocery stores in the upper Midwest and wholesale operations in more than thirty states. As Regional Pricing Manager I have seen first hand the benefits of computer innovations. It seems that we are constantly being presented with new tools that allow us to maintain better control of our inventory and maintain/improve gross margins:

The future holds many exciting things for consumers and lousiness when it comes to technology. The last few years have taught us theft almost anything is possible when technicians are allowed to freely ?? and create. Future innovations will allow businesses to operate more efficiently and help our economy as we work out of our current recession.

This case has cruised questions throughout the entire industry as it watches to see if the government will successfully gain new power to regulate this industry. It is clear in the reports that I have read that the settlement currently on the table is fair. It appears that any allegations against Microsoft that have been shown to have merit in court are fairly remedied in the settlement.

This settlement provides a good resolution and it allows the technology industry as a whole to get on the move again.

Your consideration is appreciated.

Ms. Renata Hesse
Department of Justice, Antitrust Division
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse.

Like so many Americans, I am an investor in the stock market and have been financially hurt by the downturn this past year. As an individual investor, I have made every effort to do my part to prevent an even greater drop in the markets by maintaining my holdings without over-reacting. While we enjoyed a relatively minor upswing recently, the markets once again dropped following the national media attention of the Enron bankruptcy. In the face of so much negative news, it is getting more and more difficult for investors to optinistically believe the markets have hit the bottom and are in a recovery.

From an economic standpoint, you have the ability to send a message which can only be construed as good by the media and the American public. I am referring to the Microsoft lawsuit. A proposed settlement in this case is before you. Most of the parties involved in this case are in agreement to settle this case based on the proposal presented. Please take this opportunity to do your part and sign on to the proposed settlement. By putting and and to this lawsuit, you allow the tech industry the chance to move forward. You will also create

much needed oprimism for a ?? point in our times of economic struggles.

Thank you.

Sincerely,

Keith ??

ERIG J. KFOURY. EGQ.
January 24, 2002
Honorable Colleen Kollar-Kotelly
U.S, District Court, District of Columbia
C/o Renata B. Hesse
Antitrust Division
U.S. Department of Justice
Suite 1200
Washington, DC 20530–0001

Dear Judge Kollar-Kotelly:

Please accept this letter of concern with regard to the terms of the settlement being proposed by the United States Department of Justice and Microsoft Corporation. Acceptance of this settlement will not dissuade Microsoft from continuing to pursue its established objective of market dominance, and, more importantly, will encourage other businesses to follow the lead in new and different markets without fear of any reprisals or Interference from the government, in all, it is a seemingly toothless me measure of exactitude that undermines the historical good achieved by the antitrust regulations of which Microsoft was duly found to be in violation.

The settlement purports to force Microsoft to share key information with competitors as a way of braking the stranglehold the company enjoys with its Windows product. Howover, it need only do so if Microsoft, itself, determines such divulgence would not hurt its security or product licensing. Further, the continued market dependency c Windows created by the fact Microsoft can bolt it to financial and cable services, as wall as, the internet will adversely affect the affordability of new software being developed by other companies. As such, any potential competition will be priced out of the market and Microsoft will stand alone—the essence of a true monopoly.

Though there are other areas of the settlement that are problematic, the final concern sterns from the notion that there can be a limit to the amount of time (e.g., five years) an antitrust violator should be subject to enforcement. If the government agrees to terms with a corporation to correct conditions set by monopolistic practices, there should be no expiration data with regard to the commitment to those terms.

An antitrust violation has been established. Irrespective of penalizing the violator, an equitable resolution must be found that opens up the market and ensures it remains a place where other businesses and entrepreneurs have a chance to succeed. This proposed settlement does not amount to such a resolution.

Very truly yours,

Eric J. Kfoury, Esq.

Dear Judge Kollar-Kotelly,

I am writing with regard to the settlement between the Department of Justice and Microsoft in U.S. v Microsoft. It appears to violate antitrust law. Microsoft has a monopoly now and will be permitted to expand it with regard to emerging markets.

The fact that Microsoft is free to bolt financial services, cable services or even the internet to its Microsoft Windows is appalling. As companies develop software they will be unable to address the issue of affordability in working to help consumers find a lower priced product due to the dependency on Windows technology to function.

Microsoft may not pay a vendor to keep them from developing or distributing software, which would compete, however Microsoft is the determining body when an exception is identified, Likewise, Microsoft must stare technological information unless Microsoft determines the information may harm Microsoft security or software, In addition, Microsoft, due to its monopoly and dominant market share, dictates the technologies, which will be compatible with Windows. Governments and corporations will be unable to choose high value systems they need for privacy and security if that compatibility does not ??.

The three person technical committee, which will be appointed is inordinately weighted in favor of Microsoft as the department of Justice and Microsoft each appoint one member while they must agree on the third member. There is no question that companies will be less inclined to take on a monopoly when their future business may well depend on that company. Given that Microsoft will continue to be able to charge whatever it wants for its products, prices will skyrocket.

The technical committee of three must identify violation, of the agreement. No lindings may be admitted into court in enforcement proceedings and compliance is only for five years. This seems a short time for such a flagrant violation of antitrust law.

After many years of examining this important issue, I would think a better solution could be found, I appreciate your interest. If there is any additional information with which I may be of assistance, please contact me.

Sincerely,

Karen I, Macdonald

Suite 1200
Washington, DC 20530–000t

Dear Judge Kollar-Ketelly,

I am writing with regard to the settlement between the Department of Justice and Microsoft in U.S. v Microsoft. It appears that this settlement will enable Microsoft to continue to expand its monopoly with regard to emerging markets and may violate antitrust laws.

Microsoft's ability to bolt financial services, cable services and the Internet to its Microsoft Windows program is of great concern. As companies develop software, they will be unable to address the issue of affordability due to the dependency on Windows technology. Microsoft is required to share technological information unless they determine the information may harm their security or software. Additionally, Microsoft dictates the technologies, which will be compatible with Windows. As such entities will be unable to choose high value systems they need for privacy and security if that compatibility doesn't exist.

As I feel that this agreement raises significant questions affecting the equity and fairness of the settlement, I ask for your consideration of a more appropriate solution to this matter. Thank you for your time mad attention to this matter.

Sincerely,

Dear Ms. Hesse:

As a member of the Wake Forest Board of Commissioners, I am concerned that the Microsoft antitrust lawsuit has dragged on too long and we need to settle it now. I am elected to represent all the people in Wake Forest, and I am concerned that everyone's jobs are being threatened by the recession. Microsoft products are the backbone of business and industry—and they help offices run efficiently throughout our community.

I am opposed to prolonging the lawsuit in any way. The suit needs to be resolved... and resolved now] Many of our commuting citizens work in the Research Triangle Park. High tech solutions for health care, business and communications firms are developed here in the Triangle. However, the ability of these companies to be innovative in creating solutions, and productive in the creation of jobs, hinges upon moving beyond excessive litigation.

Let's face the fact that both parties want the suit to end. Microsoft and the federal government are in agreement on all points of the settlement. I want to strongly urge Judge Kollar Kotelly to promptly approve the settlement. This lawsuit has cost businesses and local governments untold millions in lost revenues. Let's stop the bleeding.

Let's move beyond this case and move the economy forward.

Sincerely,
Kim Marshall

Attention: Renata Hesse
601 D Street, NW, Suite 1200
Washington, DC 20530

Dear Judge,

It is time for the Anti-trust lawsuit'' against Microsoft to end.

Our antitrust laws were designed and enacted in order to protect the citizens and consumers of the United States.

The Microsoft Antitrust lawsuit was originally pushed by its competitors and their claims they were working in the interest of consumers. I do not believe that the consumers were clamoring for this lawsuit. I wonder how prolonging these proceedings will benefit consumers?

The Federal Government has spent millions of dollars on this antitrust case. Microsoft has probably spent several times as much defending itself against this claim filed by the government.

These costs will no doubt be passed on to the consumer, the same consumer the antitrust laws are supposed to benefit.

I believe this case has cost enough and should be settled once and for all.

Thanks for your consideration and your acceptance of my comments as part of the public comment period for the case.

Sincerely,

January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I understand that Microsoft and the Justice Department have reached a proposed settlement of their antitrust case, and I want you to know that I support the settlement.

I wish my letter were sent for the purpose of thanking you for dismissing the case. Microsoft has incurred substantial expenditures of time and money for no reason other than to defend the fact that they are big and they are successful. It is a shame that Microsoft's ability to defend itself in Court was thwarted by a judge with an axe to grind. The case should have been thrown out before evidence was ever presented.

The settlement proposed clearly addresses the allegations of anticompetitive behavior by promoting greater consumer choice and opening areas to greater degrees of competition from non-Microsoft software programs. After implementation of the settlement agreement, Microsoft Windows operating systems will be subject to competition in areas such as messaging and the Internet from non-Microsoft programs.

In addition to responding to the allegations of antitrust violations, Microsoft has placed a settlement on the table that makes concessions regarding products and practices that were never even at issue in the suit. I fail to see the need to punish Microsoft by continuing the Case.

Thank you for the opportunity to speak on this matter.

Sincerely,

MTC–00029936

January 28, 2002
Attorney General John Ashcroft, DOJ
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear AG Ashcroft,

While I agree that this settlement appears better than a perpetuation of this ill-advised lawsuit, I believe that the settlement goes too far. In spite of the fact that Microsoft has agreed to its terms, I do not see the necessity of forcing them to release any more of their source code to developers than they had previous to the suit. This code is proprietary and Microsoft is entitled to keep it so. This consideration aside, I am at least pleased that the lawsuit and all that it entailed will soon be over. On the whole, however, I am hopeful that our government will not be as quick to interject itself into the private marketplace in the future as it has here. If Microsoft supports this suit, than I will.

I am appreciative of the opportunity afforded me to voice my opinion of this settlement, and I must stress here that this opinion is my own. However, the issue of forcing a company to relinquish even a small piece of its proprietary intellectual property, simply because its competitors cannot develop better products on their own, is of some concern.

Sincerely,
Charlie Butler

January 28, 2002
Attorney General John. Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The Microsoft Corporation and the Department of Justice agreed to terms on a proposed settlement that will bring an end to the three-year antitrust lawsuit filed against Microsoft. I support this settlement because it ends the litigation against Microsoft, and allows them to focus even more on producing innovative products.

The settlement goes further than k should have, in particular as regards intellectual property, which Microsoft will have to disclose to its competitors. In order to end this messy litigation process, Microsoft has actually agreed to give to its competitors source code and other design information that is critical to the internal structure of Windows. While that does not fit the mold of a free market economy, it enables Microsoft's competitors to do more, and to produce software that is compatible with Microsoft's. This will foster competition in the IT industry, and the economy will benefit as a result.

I support this settlement. Now the economy can regain its former level of success, and we can put this costly litigation behind us.

Sincerely,
Sunil Chatterjee

January 24, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am highly opposed to excessive government intervention in the business world. It is no surprise, then, that I am opposed to the antitrust lawsuit that was brought against Microsoft three years ago. Now that a settlement has been reached in this case, I hope you will support it, as well, and allow Microsoft to put this episode behind them.

Microsoft has offered many compromises as part of this settlement. The company has agreed not to have any contractual restrictions with companies it deals with regarding the sale of non-Microsoft products. Microsoft has also agreed to build all future operating systems in such a manner that non-

Microsoft products can easily be promoted on them.

Despite the fairness of the settlement and the compromises made by Microsoft, some opponents want this case brought back to court. I believe it is your duty to make sure they do not succeed.

Sincerely,
Ken Graham

Dear Mr. Ashcroft:

I am glad that the litigation in this matter with Microsoft has ended with a settlement. Settling in this case is better for all. There has been a noticeable uncertainty in the IT industry over the threat to break Microsoft up, and this settlement at least will end this talk and help us all get back to business.

Progress in the IT industry, and the strength of this country's IT infrastructure, depend upon both innovation and some semblance of standardization. The prevalence of Microsoft software has greatly aided the exchange of information both within and between organizations. This prolonged legal action is hurting this country by slowing progress to a crawl.

I can appreciate that Microsoft's competitors are unhappy with this prevalence, but that's the way it has worked out. To them I say, there are plenty of other problems to be solved and they should put their resources into solving them instead of counter-productive efforts directed against Microsoft.

For their part, the evidence indicates that Microsoft has engaged in unfair business practices and abused their monopoly position. I see that penalties and restrictions on their future behavior are part of the settlement. I hope that the settlement terms were negotiated in good faith by both parties to effectively address the issues.

I am writing in support of the settlement of the Microsoft case, and the sooner the better. I am hopeful that with it, some uncertainty in the IT industry will be resolved, and we can all put this behind us.

Sincerely,
David Weston
Vice President

Dear Mr. Ashcroft:

This is to give our support to the antitrust settlement between Microsoft and the Department of Justice. This antitrust suit has gone on for far too long, crippling our economy and holding our country back from further innovation in the technology industry. Furthermore, I do not believe the government should have been brought into what is competition between technology companies. Microsoft became the dominant force in computer software, creating the first compatible software programs. Before Bill Gates nothing worked, nothing was compatible. Through hard work and creativity, Bill Gates met the needs of consumers. The company became successful because of tiffs, and unfortunately, created a lot of jealousy with other rims, who were unable to compete. This was the real cause behind the antitrust suit against Microsoft.

The case has been settled. Even the federal judge wanted to see an end to it, ordering round-the-clock dialogue. Microsoft has agreed to a uniform price list, and to design future versions of Windows with a way to make it easier for computer makers to promote non-Microsoft software such as different startup screens; Microsoft has also agreed to help companies reach a greater degree of reliability with regard to then competing networking software. The company has gone the extra mile to end this case and satisfy the demands of the Department of Justice. We think we should honor that decision.

We urge you to give your support to this agreement and not give in to the pettiness of those whose only concern seems to be the destruction of Microsoft.

Sincerely,
Rodger Carpenter and Carol Carpenter

Dear Ms. Hesse:

I am writing with regards to the pending settlement between the Department of Justice and the Microsoft Corporation.

In my opinion, the finding of fact in the case of the federal government versus Microsoft, overlooked the most important point: whether or not there has been harm to consumers. We hear conflicting reports—(a) that the company's dominance in the market has resulted in higher prices and (b) that their dominance has produced a trend of prices dropping lower than cost for consumers.

How do consumers feel? In even the most recent public opinion polls, most consumers express their approval of Microsoft and the company's products. The reality of it is that the high-tech industry develops and changes so rapidly that since the trial began the face of the industry has changed, Linux has made great strides in the market with their operating system and several software companies have closed the gap between themselves and Microsoft.

I am sure that most consumers would be in favor of ending the lawsuit against Microsoft. The proposed settlement would end the suit and that is exactly what consumers are looking for. I urge the Judge to approve the settlement.

Sincerely,
Scott B. Glynn

Dear Mr. Ashcroft,

I have been a firm supporter of Microsoft for many years and my philosophy as far as this settlement goes is that I will support anything that is in Microsoft's best interest. As far as the settlement reached in the antitrust case, I am willing to express support for it in the interest of closure. I feel this entire lawsuit was unwarranted and a complete contradiction to the spirit of free enterprise. Bringing closure to this as soon as possible will be in the best interest of consumers, the economy, and the IT industry on a whole.

It is very hard for me to imagine why there are still States that wish to pursue this matter when one considers the severity of our economic situation. What exactly is the issue? Microsoft has made several concessions in this settlement that will doubtless have adverse effects on their own competitiveness. For example, Microsoft has agreed not to obligate third parties to distribute or promote Windows technology exclusively or at a fixed percentage. Also, Microsoft will make no attempt to obligate software developer to only create Windows-compatible software. I am very pleased with the Microsoft's obvious compliance and hope that you will aggressively pursue means that will pacify the concerns of the dissatisfied states and bring this matter to close immediately.

Sincerely,
Cynthia Kulle

Dear Ms. Hesse,

Our country is experiencing a recession like we have not seen in decades. Many factors have contributed to our shaken economy, but the onset of the Microsoft antitrust case really bit into the NASDAO, shaking confidence of investors and consumers. It is important to remember that for the first time in history, more than half of American citizens are invested in the stock markets. I am pleased to see the significant steps President George W. Bush has taken to offset the panic of the American consumer in the form of tax rebates and tax cuts. We are fortunate to have such a proactive in office.

Information regarding the lawsuit is readily available through every imaginable media source, and I couldn't help but notice that tech stocks parked up a little with news of the ?? settlement. I appeal to your sense of good ?? and ask you to endorse the settlement. I fear that further litigation and regulation will further damage our economy and morale. Rest assured that an end to this lawsuit would result in a collective sigh of relief from the entire nation.

Sincerely,
Tim Golba

Dear Ms. Hesse,

I live and work in a Midwestern state that is constantly battling to keep our citizens here to work and raise their families. One of the most important incentives we have to offer is a growing technology industry, which we affectionately refer to as ''Silicorn Valley.''

I've watched with much interest the progress of the Justice Department's suit against Microsoft. I understand the issues involved, but more importantly, I've felt the impact of the lawsuit on my own pocketbook. As a young investor, I have a portion of my retirement savings invested in the technology sector and have watched my returns deflate along with the sinking economy and can't help but assume that this lawsuit has some bearing on my poor returns.

Common sense tells me tells me that the quicker we can ?? this issue ?? the better off all Americans will be, particularly those Americans whose livelihood is directly dependent on the technology industry and those whose retirement savings could use a shot in the arm.

Please give your utmost consideration to the settlement before you. An approval of the settlement will go far in jump-starting the economy and actting America back on the road to prosperity.

Thank you for your consideration.
Sincerely,
Susan Severino

Dear Mr. Ashcroft:

I am writing you to express my opinion in regards to the Microsoft settlement. The settlement that was reached in November is fair and reasonable, and I am extremely anxious to see this settlement finalized. This three-year-long litigation against Microsoft has been expensive and a waste of resources.

Microsoft has agreed to all terms and conditions of this agreement. Microsoft has agreed to document and disclose for use by its competitors various interfaces that are internal to Windows'' operating system products. Microsoft has also agreed not to enter into any agreements obligating any third party to distribute or promote any Windows technology exclusively or in a fixed percentage, subject to certain narrow exceptions where no competitive concern is present. This settlement will create more opportunities for other companies and make ''it easier for these companies to compete against Microsoft. Please support this settlement so this company can remain together and continue benefiting our society, with inventive software that makes our lives easier. Thank you for your support.

Sincerely,
Stefanos Evangelinos

Dear Mr. Ashcroft,

The pending settlement between Microsoft and the federal government presents an opportunity to bring this case to a close. This suit has distracted Microsoft and the nation from more pressing priorities for too long, and this settlement will allow us to get back to business.

The settlement will, in effect, force Microsoft to treat its competitors in a more sympathetic way. For example, Microsoft has agreed to avoid retaliation against any computer makers who ship software that competes with anything in Windows. This alone will increase competition among software developers. Additionally, Microsoft has agreed to share its code for the Windows operating system that will enable its competitors to configure software that is fully compatible with Windows. Most vexing, however, is the provision that places Microsoft under the oversight of a government mandated technical review committee. As the president of a business, I can say that I would not relish the idea of my company being watched by the government at all times.

This lawsuit has drained resources on both sides for more than three years. The settlement can stop the resource drain, and at the same time make the IT sector more competitive. I support it wholeheartedly, and believe that it is in the best interest of the nation. Thank you for your time and efforts in Washington.

Sincerely,
Carol Conway
President

Washington, DC 20530

Dear Ms. Hesse,

I am writing as a Kansas State Representative and Vice Chairman of the House Business, Commerce, and Labor Committee. As settlement in the Microsoft suit hangs in the balance, I write with genuine concern for the future of our industry.

The Microsoft Antitrust suit was brought to fruition due to antiquated rules and regulations written during the development of the railroads, Microsoft's harm to the consumer has yet to be proven; point in fact, there is a discrepancy in claims that Microsoft: has undercut the competition by under pricing, yet there are contradicting claims that Microsoft has overcharged the consumer.

Microsoft is primarily guilty of supplying a terrific product for a huge niche market. A market they actually helped to grow due to high demand for the technology they pioneered. The prosecution of Microsoft for giving the consumer what they ask for is absurd. Like an>, business, Microsoft has tried to protect the details of their products from competitors and tried to maintain their market share.

The real meat of this lawsuit lies in the antitrust laws themselves. Microsoft's competitors have merged and aligned in a full attack in hopes of gaining Microsoft's market share through court orders rather than through the free market system. It's as if these laws are allowing the competition to monopolize Microsoft with protection of the courts.

In the time since the lawsuit was introduced, the software and tech industries have ?? into a living, breathing organism, changing daily with each new advance. Paid far by leggy long for State Representative, Rayburn, Treasure. PO Box 546—Madison, KS 66860–0546 (620) 437–283—peglong@ink.org

There are no linear changes here. Each new advance seems to drive the consumer toward a different direction. This reality holds no marker share security for Microsoft. In your consideration of the settlement of this suit, please be thoughtful as to the root of the problem, outdated antitrust law. Prompt settlement will appease the competition, but more importantly let industry move on without such slowing scrutiny.

Cordially,
Representative Peggy Long

Washington, DC 20530

Your Honor,

The new economy has been the source of an economic and technological renaissance in America and Microsoft has been a part of that from the beginning. At the dawn of the Information Age, there is no denying the importance of the technology industry to America's prosperity in the 21st century.

As an elected official, I need to ensure an environment that allows the technology industry's entrepreneurial freedom to innovate and reinvigorate our economy. We need a return of the self-regulating competition that has built this industry into the most vibrant and successful in the world. The U.S. economy stands to grow by leaps and bounds in coming years, all due to the innovation, competition, and customer-focused attitude of our high tech community.

This case opened a Pandora's box of litigation and regulation that is already stifling competition, cramping innovation, and haring consumers and investors. Microsoft's presence in the market increased competition and innovation driving down costs for consumers, Microsoft helped set a high standard in the market and raised the bar for competitors many of whom have stepped up to the plate and become viable competitors to Microsoft.

Considering a snapshot of the high-tech industry when this case started compared to one from today, it is a much different picture Aside from the fact that the industry has outgrown this case, the proposed Final Judgment would decidedly help our economy and hopefully close the lid on the Pandora's box it opened. I urge you to approve the settlement.

Sincerely,
Larry Mekibben

Page 1 of 1

Dear Mr. Ashcroft:

This letter is to give my support to the Microsoft and Department of Justice settlement. Microsoft is one of our greatest companies and I resent the government interference in what is basically competition between technology companies. I doubt whether Microsoft has done anything that the other firms have not. More likely, the other firms could not compete and have gone crying to the government. They just want a bigger piece of the pie.

You don't have to look any further than AT&T to see the havoc that can result from breaking up certain so-called monopolies. AT&T was deemed a monopoly while we had the best service in the world. Now, no one can understand the half-dozen phone bills received each month from strange sounding phone companies. Phone companies come and go with alarming frequency, and those that stay in business seem to be merging all back together. I often wonder if I would have been better off if AT&T had been left alone.

The same may be true for Microsoft. In any event, Microsoft and the Justice Department have reached an agreement. Microsoft has agreed to open the company up to third party, innovation; has agreed to disclose internal source codes for Windows; and agreed to an oversight committee. This is more than fair.

I urge you to give your approval to this agreement.

Thank you for your consideration of my views.

Sincerely,
Bonnie Wood

Dear Ms. Hesse,

The settlement before the court in the Microsoft antitrust case is not ideal. The premise for this case was unwarranted to begin with. The antitrust laws being applied are subjective and left to regulators to interpret—in this case not even for the benefit of consumers. All things considered, I still write you today to encourage Judge Kolar Kottely to support the proposal.

The settlement gives the government most of what they wanted, stopping short of breaking up the company. Among other measures, the company is required to disclose significant proprietary information to its competitors. This is a significant and meaningful punishment. To enforce the terms of the settlement, Microsoft engineers will have to put up with a team of three on-site, full-time monitors. The monitors will have access to all of the company's records and personnel, and Microsoft will even have to pick up the tab for their offices and up-keep. Again, this is a significant and meaningful punishment that provides ample ground for the state to make the case to the public that justice has been served.

The end of the conflict between Microsoft and the federal government will restore a much-needed measure of ''certainty in the marketplace,'' as the Justice Department itself has claimed. Consumers and business partners will no longer have to fear the dismemberment of a major player in the software industry. I, as a Microsoft customer, won't have to worry about dealing with more vendors to get the same goods and services. People will be able to make plans for the future with a somewhat reinforced sense of confidence.

But real certainty in today's marketplace requires a knowledge of what's legal and what's illegal. While the Microsoft settlement seems to put a high-profile conflict to rest, it doesn't deal with the larger problems that sparked that battle. As long as legislation that means whatever bureaucrats say remains on the books, conflict will continue between frustrated businesses and arbitrary regulators.

So, I urge you to take this needed step toward bringing this chapter to an end. And I encourage the Department of Justice to work with the legislative branch to carefully re-examine and restructure, or, preferably, repeal the Sherman Antitrust Law.

Thank You,
Louis James
President

January 28, 2002
Attorney, General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am the controller of a diamond wholesale company writing to give my support to the recent Department of Justice and Microsoft antitrust case. This settlement was reached after three months of intense, round-the-clock negotiations endorsed by a federal judge. Ongoing persecution of one of the strongest companies m our country is unfair, and stands in stark relief to how much positive difference Bill Gates has made in the computer industry.

When I first started using computers, interoperability was virtually nonexistent, and computers were not user-friendly at all. Now, with Windows, I can install everything myself. I am not a computer expert by any means, but bemuse of Microsoft's simple programs, I have been able to customize my computer to my specifications.

The envious competitors who foisted this lawsuit on America now claim that the settlement is not strict enough. Any objective view of the settlement, however, shows that Microsoft is more than fairly reprimanded. Microsoft has agreed to change Windows so that it will be even easier to install programs, and Microsoft has agreed to share any interfaces that Windows uses to communicate with other programs. This alone is more than enough, and should placate even the shrillest of the competition.

I urge you to continue your support to this agreement.

Sincerely,
Irene Chin

Washington, DC 20530

Dear Mr. Ashcroft;

I am writing on this last day of the comment period to express my full support of the recent settlement in the antitrust case between Microsoft and the US Department of Justice. The lawsuit dragged on too long and now it is definitely in the best interests of the American public to end litigation against Microsoft.

I am a Microsoft supporter. I do not think my rights as a consumer have been infringed upon. In fact, 1 think that Microsoft has standardized the industry and made it mush easier for users. The terms of the settlement are fair. Microsoft has agreed to increase its relations with computer makers and software developers, design future Windows'' versions so that competitors can more easily promote their own products and form a three person team to monitor compliance with the settlement.

I hope your office implements the settlement as soon as possible. Our nation needs Microsoft as the cornerstone of the tech sector. Please suppress the opposition from the nine states and make this thing a reality.

Sincerely
Max Birnbach

Ms, Renata Hesse
U.S. Department of Justice, Anti-trust
601 ''D'' Street NW, Suite 200
Washington, DC 20530

Ms. Hesse:

I appreciate the chance to comment under the Tunney Act on the settlement that has been proposed to end the Department of Justice's anti-trust suit against Microsoft.

I am in favor of settlement of the suit. I believe the suit should be brought to an end. as soon as possible. In my opinion, the case should not have been brought in die fiat place. The fact that nine states and the Department of Justice trove found common ground with Microsoft to settle the case is a very positive development for the entire nation,

It seems to me that the laws governing anti-trust suits are not designed to -keep up with a constantly changing industry like high technology. That said, the proposed settlement does reach a solid middle ground that cakes measures to ensure competition without over-reaching the role of government regulators.

The settlement is a fair and reasonable way to end this suit. I urge the judge to approve it.

Sincerely,
Victoria Jenson

January 17, 2002
Atty. Gen. John Ashcroft
950 Penn. Ave., NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am writing in regards to the antitrust settlement reached between Microsoft and the Department of Justice. I am in favor of bringing the litigation process to an end immediately, and I support the current settlement. The antitrust suit with Microsoft has been going for three years now, and with a settlement proposed is the time to put this issue to bed once and for all.

Under the terms set forth in the current settlement, Microsoft has agreed to make several major changes in the way it operates and interacts with other companies, consumers, and in particular with its competitors. Microsoft has agreed to license its Windows products out to the 20 largest computer manufacturers on identical terms and conditions, Additionally Microsoft will no longer enter into any agreements with third parties to exclusively distribute or promote Windows family products, unless there are no competitive concerns present in the particular situation.

While I feel that many of the aspects of the settlement are too restrictive on Microsoft I am still in favor of the settlement as a whole. Now more then ever we need companies such as Microsoft, leaders in the industry, who are financially able to weather our current economic storm. At a time when the economy is dwindling and layoffs are prominent we should not be penalizing successful companies. For these reasons I urge you to support the antitrust settlement and take no further action against Microsoft.

Sincerely,
Jorge Godoy

RE: Settlement of U.S.v. Microsoft

I share the government's concern about consumer harm in the fast growing technology industry. However, I am aware that the settlement agreement provides resources, access, and authority to respond to complaints about Microsoft's compliance.

I am aware that the negotiators have worked out a settlement that may not satisfy, anyone, but includes something for everyone. Usually that is the sign of a fair settlement.

Therefore I believe that it is time to settle this case. As our economy begins to try to rebound, finality in this case would be a great boost. I appreciate your consideration of this important matter.

Sincerely,

Dear Mr. Ashcroft:

I am concerned about the states and now AOL currently seeking litigation and more litigation against Microsoft They all seem to be operating only on a basis of greed and without a firm foundation for claims. Or else, they are suffering from sour grapes because they have not been able to bring to the market a product that was as good or as easily usable by people like me. I have used Microsoft products since Word Version One came out. In fact I bought my first computer because research indicated that it would be the best and easiest product to use. Time tins proved me correct.

Microsoft has helped me in so many ways to improve my business: I can exchange information without telephone calls and long retyping of material. Everything is less expensive to operate and buy—from computers to all the software.

I tried Netscape -what a pain it was to use. And AOL is the only E-mail service that I have not been able to exchange images with Microsoft walked away with the business because they had better products and were good about customer service. They have always been able to get me operating—and I am a complete novice to the technical end of this business. I cannot say this for many other software products.

As an example of their products: I took my old DOS with the Multiplan spreadsheet to Europe. Used the old DOS computer because the battery had 6 hours, and I was working in an ancient library. Recorded my data. Brought the data home into Excel and then into Access. It all worked like a charm.

Sincerely,
Anne Pullin

Fax 202–616–9937

Dear Renata:

While I am pleased that the Tunney Act allows me to make an input on behalf of True Blue'8 membership across America In regard to the proposed Microsoft settlement, I want to be candid. The federal government's pursuit of Microsoft damaged consumers and the economy, as follows:

. Consumers paid more than $30 million in taxes to sue a company that has consistently created and marketed better products at a lower cost.

. Investors lost millions more as the tech sector of the stock market sagged under the Impact of the threat to break up Microsoft, adding Impetus to a recession.

. Taxpayers, whose Interests are the key priority of lawmakers, paid lawmakers and attorneys'' salaries to work on behalf of the competitors of Microsoft. (Personally, I'm not sure I'll ever want to buy products from companies that whine to the Papa Fools to secure taxpayer funding of their marketplace fights.)

Asking Microsoft to hire a staff and provide offices for a bureaucracy to enforce the settlement is simply using a socialist mechanism to control an Industry. At best, such an office should exist no longer than 12–18 months, and then be completely terminated, If Congress determines a need for such an agency, we can place the idea before Congress, debate the law, and vote. The Court must not become a bureaucracy-creating and bureaucracy-enforcing entity.

Every State Attorney General who continues in this suit clearly morphs his/her office into collection arm grabbing for taxpayer dollars. It is disturbing that the Attorneys General, who are funded by taxpayers at the state level, are grasping for families'' earnings at the federal level, too We urge you to end this matter and allow Microsoft to return to what it does best: Innovating to serve consumers. Consumers will see that Microsoft offers flexibility and demonstrates its resolve to become an ever better industry leader.

Yours truly,
Patricla R. Cooksey, President

Washington, DC 20530

Dear Ms. Hesse.

I often encourage my students to speak up when they have, an opinion on a current event. I decided recently to heed my own advice and speak up on the proposed proposed Microsoft settlement during this open comment period.

As a teacher in a small rural school. I am encouraged by the possibility that Microsoft has offered to donate millions of dollars of computer equipment to schools like the one where I teach. Many times, rural schools have a hard timer keeping up with technological advances and opportunities available at larger, more urban schools. I believe the settlement proposed by the Bush administration would go a long wary toward leveling the playing field for students who attend rural schools by allowing them access to cutting edge computer technology. Thank you for your work on this important case. I urge you to approve the settlement

Sincerely
Connie Morris

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to say that I fully support the Microsoft settlement. I feel that if Microsoft is going to comply with all the terms and conditions of the settlement agreement, then the Justice department should conclude their investigations in this matter. The country needs to go on with it business of production and development in regards to the tech industry.

One way in which Microsoft has agreed to comply in regards to the settlement, is the three expert technical committee, which was formed to make sure that Microsoft will not step out of the bounds of the agreement. If another group finds Microsoft acting inappropriately, that group can take up a formal grievance with a number of individuals appointed by the government and who are associated with this case.

I know that you will make the right decision for all Americans. End this case now, and let the country keep moving.

Sincerely,
Jim Waldo

Dear Mr. Ashcroft:

For a long time I have followed the antitrust, suit being brought on Microsoft by the Justice Department. After more than three years of litigation, a settlement has finally been reached. The purpose of this letter is to show my support for this settlement. This case has simply gone on far too long.

Unfortunately, some powerful opponents of Microsoft would like to see this settlement, revoked, and are pressuring the Justice Department to withdraw this offer. They believe that the settlement does not go far enough. This is where I distinctly disagree. Under the terms of the settlement, Microsoft will allow easy access to its operating systems for competing software firms. Also under the terms of the settlement. Microsoft will be monitored full-time by the government, and can still face lawsuits from competing companies.

The government at the State and Federal levels must fully support, the settlement for it t come to fruition. After three years and millions of dollars, isolated opponents should not be allowed to spoil the work of the DOJ to settle this case. I stand behind the settlement 100%, and appreciate this outlet to have my opinion count.

Sincerely

Calvin A. Jordan

Dear Ms, Hesse,

I am writing to take advantage of the opportunity to weigh in on the Microsoft antitrust settlement decision by the U.S. District Court. Thank you for this opportunity. Microsoft has been a leader in the technology industry with its software, operating system, and Internet browser. They are accused of being a monopoly, yet the companies fueling the case are identified as Microsoft's ''competitors''—seems like a contradiction.

Linux operating system (OS) is growing at an astounding pace taking a larger share of the market every day. It's able to capture more of the market because consumers are choosing the Linux OS over Windows. The customer is deciding which product best suits their needs—not the government.

Bill Gates took Microsoft to unforeseen levels with unmatched speed. His vision and business savvy made the company ''king of the hill''... for now. However, the high-tech industry grows at such rapid rates that no company will be ''king of the hill''... for long.

In the meantime, Microsoft's position in the market has not caused harm to the consumer. On a professional and personal level I appreciate the ease with which Windows works and my children would agree...it is simply the most user friendly software on the market today. Whether or not Microsoft is the best system for me is, and should remain, my own decision.

The settlement that the parties in this suit have come to is reasonable and delivers the government much of what it sought including a way to enforce the requirements set forth in the agreement. I respectfully request that you support the settlement in this ease.

Thank You,

Robert Haus

Attorney Hesse,

I find it interesting that Apple is objecting to Microsoft's settlement offer, perhaps due to Microsoft's offer of cash, software, and computer equipment to schools in need, I think Apple pioneered the idea of discounting computers to schools and teachers in the 1980's, possibly in a smart strategy of gaining youth loyalty and influencing future sales, No matter, fair is fair. When Bill Gates and company were working out era garage, they had no more opportunity than any other person or company. Microsoft was literally built from nothing to an empire due to hard work, innovation, and by recognizing an untapped market.

Microsoft's biggest edge is that they pioneered the industry, and to date, they do it better than anyone else. Their business model is studied internationally. Of course Microsoft is a fierce competitor, there are no laws against that.

The bottom line is that freedom to innovate is there for everyone. This lawsuit borders on hindering that freedom. I strongly encourage you to approve the current settlement offer in a move to protect free commerce.

Sincerely,

Kellene Walker, RN

Dear Mr. Ashcroft:

Please accept the proposed settlement of the Microsoft anti-trust case. As a long-time user of Microsoft products, I see this agreement as the most practical solution for competitors to thrive, short of a break up that would risk consumers losing a quality, stable presence in the software industry.

Seemingly inspired by a lack of monetary support from the last administration, this government intervention into the business world has been off base from the start. With this deal, Microsoft's market position is clearly weakened, so any further litigation would be an even more misguided attempt to manipulate the marketplace on behalf of the ''consumer.'' Microsoft will allow computer manufacturers broad freedoms to configure Windows with the software of their choice without preference in future licensing deals and will provide competitors with extensive access to its internal code, among other agreed measures to expand competition. Considering the constant verification by a committee of experts to monitor the deal, I ask for you to support for this overly fair settlement. The IT industry and the economy will greatly benefit from the return of stability to the software marketplace. Thank you very much for your support.

Sincerely,

Forrest Muire

Dear Ms. Hesse:

I am writing to express my support for Microsoft case's settlement with the federal government. Considering the poor state of the economy, the last thing consumers need prolonged litigation resulting in additional oppression of the high tech industry.

Consumers, on the whole, were harmed by the case far more than they were ever harmed by the conduct described by it. It's been a long time since the high tech industry was truly free to compete and innovate without fear of repercussions from the government, but now that that time has come again. I believe we will see great results in short order that could turn this economy around.

Sincerely,

Sean Galvin

RE: Settlement of U.S.v. Microsoft

As the owner of a private business I know how fierce competition can be out in the open market. And I do appreciate the government's role in protecting consumers against monopolistic activities. However, this case has gone on long enough and I am hopeful that the proposed settlement will be approved.

It is important to my business that our economy begin to turn around and I think the technology sector is important to the rebound. A final settlement in this case will provide that boost and protect consumers at the same time. I am hopeful that the settlement is approved soon.

Thank you for your consideration of my views.

Sincerely,

MTC–00029967

Regarding the lawsuit Against Microsoft

I think it is time to settle this and get it behind us so we can proceed with more important things such as economy and terrorists. I feel this Company is being punished for being successful and that most libly have not done anything more out of their time than those that are bringing

charges against them. Lets get on with it and say it is done!

Sincerely,

Mark Hanson

TO THE ATTENTION OF: Renata B. Hesse Antitrust Division
RE: Letter to Attorney General John Ashcroft
January 28, 2002
Attorney General John Ashcroft
United States Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

As a Microsoft supporter, I would like to point out some reasons why the antitrust case should be closed at the federal level. The settlement is fair and reasonable, and has been extensive enough for nine states to approve. I fear that the states pursuing further litigation will never be satisified. Under the terms of the agreement, Microsoft will make significant changes in the way it develops and licenses its software. The corporation has agreed to more or less open its inventions to the competition, allowing them to use the success of Windows to launch their own competing products. For instance, Microsoft has granted broad new rights to software engineers and computer makers to configure Windows so that competing programs can be promoted on Windows itself.

Although these concessions make antitrust precedent, Microsoft has been willing to change in an effort to bring this case to a close. As long as the industry leader is giving away market share, there will always be those that want more. I hope you will pay attention to the merits of this case.

If so, you will see fit to end this matter.

Very truly yours,

James R. Graves Attorney-at-Law

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to ask that you give your support to the settlement reached between Microsoft and the Department of Justice I am a retired electrical engineer. I know computers, and I know Microsoft. I believe Microsoft was all right; in no way did it monopolize the market. Bill Gates'' main strength was that he was simply quicker and smarter than the other fellows. Bill Gates recognized the need for standardized software programs and filled it. Then he marketed it brilliantly. There are any number of firms out there in other industries whose product is not necessarily better, it's just that they are smarter in promoting it and changing to fulfill public need. MBAs are taught this very lesson Bill Gates was hauled into court out of jealousy, not any unfair business practices.

I also understand from the settlement, Microsoft will be opening up its source codes for the Windows operating system. This is a lot more than other firms would do Microsoft has also agreed to a technical committee that will oversee Microsoft's compliance. Microsoft has more than paid for any sins it may have committed. I urge you, for the good of the county, for business, for the general public, to give your support to this settlement. Thank you.

Sincerely,

Bernard Gerber

Judge Renata Hesse
U.S. Department of Justice Anti-Trust Division
601 ''D'' Street Northwest, #1200
Washington, DC 20880

Dear Ms. Hesse:

The purpose of this letter is to add my comments to the record regarding the anti-trust lawsuit filed against Microsoft.

As a veterinarian and businessman, I believe in as little interference as possible in the operations of a private company. Though I see the value of having anti-trust statutes in place to protect the public from, anti-competitive practices. I also believe that in this case, those statutes have not been properly applied.

While it is true that Microsoft is a large company and has earned a great share of the computer and software marker, I believe that has happened because Microsoft offers great products at reasonable prices. I do not believe it has been demonstrated that Microsoft has been engaging in anti-competitive practices that would warrant an anti-trust lawsuit of this type. I further believe that to continue pursuing this lawsuit will only sap state and federal resources that are already in short supply and cause unnecessary damage to a company that has contributed a great deal to the American economy and way of life.

I urge you to affirm the settlement proposed by the Bush Administration and agreed to by many state Attorneys General.

Sincerely,

Dr. Charles Fox

Dear Mr. Ashcroft:

After a long, difficult three years, the Department of Justice has settled its antitrust suit against Microsoft. Microsoft did not get off easy. The firm went far beyond what was originally mentioned in the antitrust case. Microsoft has substantially opened up the company to competitors of Microsoft. Something I do not think any other firm would have done. But it is time to move on. It should be over. We cannot keep dragging the case on. Congress is arguing about a stimulus package, but keeps one of our major companies tied down with litigation. I support the settlement, and look forward to the boost ending this case will give our economy. Thank you for your time and consideration,

Sincerely.

Washington, DC 20530

Dear Mr. Ashcroft:

The antitrust law was designed to Protect consumers from abuse by a company. Not to monitor competition between businesses, which is what happened with the antitrust case brought against Microsoft by the Department of Justice. A settlement has been reached and I am writing to ask that you give your rapport to this agreement. The original antitrust suit against Microsoft was badly misinterpreted. Microsoft has not harmed consumers; on the contrary, Bill Gates has helped consumers enormously in understanding the technological revolution that has descended upon us. He has made software easier to understand, easier to imegrate, and much more affordable. What he has not done is pay court to the powers that be in Washington, or appeased his competitors by not being too successful. Hence, we have our antitrust lawsuit against Microsoft. However, the case is over, and it is time to move on.

Microsoft has met the demands by the Department of Justice by agreeing to configure its Windows program to allow competing software to be inserted; Microsoft his agreed to help companies achieve a greater degree of reliability with their networking software, and Microsoft has agreed to terms that extend well beyond the products and procedures ?? in the original lawsuit. Whatever ''sins'' Microsoft may have committed, they have more than paid for. I urge you to give your support to this agreement. It is time to get back on track. We have been through some rough times and now need to concentrate on getting our ??my going again.

Microsoft can help us to this, if we allow it. Thank you.

Sincerely,

James Rocca

Washington, DC
FAX 1–202–307–1454 or 1–202–616–9937

Please settle the Microsoft case with the current findings.

We feel the prosecution of Microsoft has been and is detrimental to the entire economy. The public has been penalized by actions of the federal government in this unreasonable prosecution by the government,

Microsoft competitors, various states where the competitors reside and a prejudice judge. We feel Microsoft has a better product and should not be prosecuted for making the best successful economy in history and its prosecution led to the recession. It appears the other giants, i.e. Exxon and Mobile, merging banks, merging lumber companies, etc., manage to merge and be monopolistic to the detriment of the regular citizen causing increased prices and the federal government does not interfere.

While Microsoft gets punished for going it alone (without political aid) and the other giants lobby Congress, we (everyday citizens) have to pay the higher prices. Please settle this matter with the current decisions and do not carry it out any longer. Forcing Microsoft to help their competitors is unAmerican.

Washington, DC 20530–000

Dear Mr. Ashcroft:

I have taken this opportunity to write and express my opinion of the settlement that has been reached in the Microsoft antitrust case. I believe that we need to concentrate on issues of greater importance. I am pleased that a settlement has finally been reached in this case and that Microsoft will be able to continue doing business as a whole entity.

It is apparent to me that the people pursuing this litigation on are not looking for a good judgment in this case but rather the perpetuation of their own personal agendas. When government becomes involved in business, socialism becomes the rule of the day. I feel that this case has been fueled by jealousy and that until we reach a conclusion to this litigation free enterprise is stymied. The terms of the settlement are fair: Microsoft has agreed to design all future versions of Windows to be compatible with the products of its competitors, and they will also cease any behavior that may be considered retaliatory.

Please support this settlement. I trust that you will do all that is within your power to protect American businesses.

Sincerely,
Vanessa I. Castagliola, Leonard D. Castagliola Jr.

January 24, 2002
Attorney General John Ashcroft
US Justice Department
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am tired of the Justice Department using my tax dollars to fund litigation against Microsoft. No other company has provided the amazing tools that have helped businesses around the globe to produce their work faster and better.

The litigation was shaped and formed in the Clinton administration under the guidance of Microsoft's competitors. Had they put as much passion and energy into developing products that were worth using, they would not be in this fight.

Please, let's put the American machine to work protecting our people from terrorists inside and outside of America. Let the free market economy decide who has the better product. At the end of the day, it really doesn't matter what is loaded onto a computer. I can strip it down and build it back with whatever programs I so desire. To date, the competitive products have not been worth the effort.

I am a business owner who has a product that is so great; my clients won't go elsewhere ever again. Does that make me a monopoly too? By the way, I intend to make a profit this year. Is it cause for litigation by the Justice Department?

Dear Mr. Ashcroft:

I am writing to you today in support of the settlement that was reached in the Microsoft antitrust dispute. I believe that this case needs to come to a close, and indeed, never should have been brought in the first place.

The settlement is reasonable, under its terms Microsoft will disclose information about the internal interface of its Windows operating system, this will enable its competitors to create new products that will work within the system. Microsoft will also design all future versions of Windows to be compatible with the products of other companies. Finally Microsoft will not engage in predatory business tactics, or exact revenge against any of its competitors. The company will be monitored the by a government appointed technical committee which will ensure that Microsoft complies with the terms of this settlement.

Microsoft is one of this nations greatest corporate assets. Attacking this company will not benefit the U.S. economy, the IT industry, or the American consumer. Thank you for doing all that is within your power to see this settlement pass. Thank you for your consideration of my position.

Sincerely,
J.C. Boatright

Dear Ms. Hesse,

The settlement of the Microsoft antitrust case can help our nation's struggling economy begin to improve.

Employers are challenged by the downswing in the economy. Many workers are seeking employment after being laid off. NASDAQ and technology stocks have been directly affected by the Microsoft lawsuit since the spring of 2000. It is imperative to draw closure to this litigation. I see that this is important to improve our economy and to encourage consumers. I urge you to agree with the settlement of the proposed Final Judgment antitrust case against Microsoft Corporation.

January 21, 2002
Attorney General John Ashcroft
U.S, Department of Justice
950 Pennsylvania Avenue
Washington, DC 20530–0001

Dear Mr. Ashcroft,

Your decision to settle the Justice Department's lawsuit against Microsoft offers every party involved in the matter the best of both worlds; Microsoft will cease its alleged unfair business practices to the immense benefit of its competitors while at the same be allowed to stay in tact as a company.

Microsoft certainly was penalized with more than a rap on the corporate knuckles. The settlement was arrived at after extensive negotiations with a court-appointed mediator. Important to note is Microsoft's agreeing to terms that extend well beyond the products and procedures that were actually part of the suit; it demonstrates how much Microsoft is committed to settle this lawsuit. Even though they may not realize k right now, Microsoft's biggest adversaries will benefit from the terms of the settlement. First of all, Microsoft has agreed to share its patented code for its Windows operating system with competitors. Second, Microsoft has agreed not to retaliate against computer makers who ship software that competes with anything in its Windows operating system. These two measures will significantly increase competition.

I hope the settlement process is quickly concluded and that the settlement is implemented as soon as possible.

Sincerely,
Gid Yousefi

20530–0001

Dear Mr. Ashcroft:

Three years ago, Microsoft was brought to trial in the federal courts. Up until six months ago, absolutely no progress was made it was just a waste of time and money. Now, a settlement has been proposed and is currently awaiting approval. Microsoft's opponents believe that the settlement lets Microsoft off too lightly and that Microsoft holds a dangerous monopoly over the consumer. They are wrong. Microsoft did not get off lightly in the settlement, they do not hold a dangerous monopoly, and the only thing that is harming the consumer is the litigation itself. The economy has been crippled over the past several years, arid this is due in large part to the antitrust case, the amount of money that has been spent in litigation, and the panic of stockholders pulling out of their Microsoft shares. I do not believe it is in the best interest of the consumer to continue litigation against Microsoft. It can only do more damage to the economy and the technology industry.

The settlement needs no further deliberation or modification. Microsoft has been more than generous to its competitors, agreeing to terms that cover aspects of Microsoft technology and procedures that were not found to be in violation of antitrust laws. The settlement requires Microsoft to refrain from retaliation should software be introduced into the market that directly competes with Microsoft technology. Microsoft has also agreed to license the Windows operating system to twenty of the largest computer makers on identical terms and conditions, including price.

I can find no reason for litigation to be continued against Microsoft. As I see it, only more harm can come to the public if this drags on for much longer. I ask you to support the settlement as it now stands.

Sincerely,

Richard Miller

Dear Ms. Hesse,

I am writing in regards to the proposed settlement negationed with Microsoft. As the former owner and CEO of a Maine Company that employed over 250 people and relied on negotiations with state and local governments for much of my business, I can appreciate first hard the complexity of dealing with issues that effect the public good. In fact that was a significant factor in why I chose to run for both local and state offices in my home town. I also have been involved in litigation and know the enormous drain it is on a business, and even its employees, many of whom are also stockholders, both financially and emotionally. That is why I feel it is in the best internet of the public and the government to accept the proposed settlement negotiated with Microsoft and move on. Having need a considerable amount surrounding the proposal, I feel it to be a beneficial arrangement for the general public in several ways.

It provides for the introduction of technology resources into the education system that will be functional and integrated. It offers the potential for widespread benefit because it includes money for teacher training and support as well as sorely needed hardware and software. These have proven to be more critical to the successful integration of technology than the latest version of computers and associated programs.

I also like the matching greats aspect of the proposed foundation. I have always felt in dealing with various nonprofit groups and charities with which I have been involved, that some contribution on the part of the recipient provided for appreciation of the items or services received. It just makes sense to me.

Ms. Renata Hesse, Esq.
January 17, 2002
Page Two

To return for a moment to the matter of litigation, I am of the opinion that a civil case of prominence benefits our society in that it causes both parties to become more sensitive and responsive to issues that resulted in the suit to begin with. However, there comes a time where the need to resolve the case becomes crucial as it starts to drain productive resources from both parties. Our government's case has reached such a stage. Timing is always of the essence for all parties.

The legal actions to date have forced Microsoft, and many other large corporations, to rethink and modify their business practices if they have half a brain, which can only benefit the general public. Microsoft's willingness to reach a settlement of this magnitude demonstrates a responsive attitude and finally it brings to a productive conclusion a very expensive and burdensome lawsuit which has had adverse effects on the company's value and productivity during the period of the lawsuit and this too has an adverse effect on many citizens as well. As we have seen in the Enron debacle, stockholders are real people too.

At a time when the economy and our nation are in recovery, I feel settlement of this case to be in the general public's best Interest and urge the Attorney General to convey this message to all parties involved.

Thank you for consideration of my comments.

Enthusiastically,

Antitrust Division
U.S. Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530–0001
SUBJECT: Microsoft Settlement

Dear Ms. Hesse:

I am writing to urge acceptance of the proposed Final Judgment offered by the U.S. Department of Justice and endorsed by nine state attorneys general to resolve the antitrust case against Microsoft Corporation.

I am president of the Coalition on Urban Renewal & Education (CURE), a 5-year-old independent nonprofit organization based in Los Angeles. CURE produces research and commentary on a wide range of public policy issues impacting America's inner cities and the poor. CURE promotes faith-based and free-market solutions on issues of race and poverty. CURE works with policy leaders, inner city pastors, entrepreneurs, college students and ex-welfare recipients to create an environment for self-government and free-enterprise.

This lengthy litigation has cost my fellow taxpayers and me more than $35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DO]) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance—the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a

Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors'' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability, this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Star Parker
President

Dear Ms. Hesse:

I am writing to encourage your swift approval of the settlement of the U.S. v. Microsoft case. As you are aware, Microsoft has been a worldwide leader in groundbreaking technology. This has been a tremendous benefit to consumers. Prompt settlement of this case is in the best interest of the state of Wisconsin, and my constituents in the 21st Assembly District. Microsoft's leading technology is of great advantage to our school children and the future of America. By file Department of Justice settling this case, Microsoft could again assist less fortunate school districts with much needed help in technology. To date, over $30 million dollars in taxpayer dollars has been needlessly spent on this case. It is time for the Department of Justice to move forward and approve the settlement of the U.S. v. Microsoft case.

Sincerely,
Jeff Plale
State Representative
21st Assembly District

Dear Ms Hesse:

This letter is to articulate my support for the proposed settlement in the Microsoft case. The fact that over $30 million in taxpayer dollars has been spent in this case during these trying economic times is proof enough that this case has gone on far too long. Hopefully, the settlement will signal a return to innovation without the threat of government intervention. The Department of Justice has done a commendable job in putting together an agreement that is fair but won't put Microsoft out of business. It is a reasonable conclusion to this case and I support it wholeheartedly.

Sincerely,
Joseph Tartaglia

Washington, DC 20530
Dear Mr. Ashcroft:

I am writing in support of Microsoft and believe this whole antitrust case has become political. I don't see how this benefits consumers and businesses—especially at the expense of the economy. The tech stocks are down. The technology sector is down. The employment numbers are down. Let Microsoft get back to work and the government get on with worthwhile business. The only people I see benefiting from this case are the lawyers.

I am a small businessman who employs 25 people. I have greatly benefited since 1982 from the products Microsoft produces and feel they have been more than fair to me. If their competitors can't put out a better product with competitive pricing and service that's their problem. I don't see why I should suffer as a small businessman. After years of extensive negotiations and mediation, Microsoft has gone out of their way to settle this case. They went well beyond what would be required in any antitrust case. They agreed to design future versions of Windows, starting with an interim release of XP, to provide a mechanism to make it easier for computer companies, consumers and software developers to promote their software within Windows.

Let's end this litigation so that we can focus on what's really important. Thanks,

Sincerely,
Mike Sampson

January 15, 2002
Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, N-W
Washington, DC 20530–0001
Dear Mr. Ashcroft:

As a citizen of a state party to the pending Microsoft settlement, I would like to offer my support to the Justice Department approving the current deal and ending further legal action in this case. The seemingly envious reaction of the government to Microsoft's growing power and dominance in the technology industry, led to a lawsuit, then a misguided judgment, that far over-reached the right of government to manipulate the marketplace. This agreement seems like a reasonable compromise and should be approved, or risk alienating the public and hurting the economy. Based on the terms of the settlement, it would seem that Microsoft has made great strides to offer competitors more opportunities to succeed. They have agreed to not retaliate against computer makers who ship competitive software, offering broader fights to promote non-Microsoft programs within Windows and providing the top 20 manufacturers a uniform price structure to back up that promise. Starting with Microsoft XP, they will begin to provide a mechanism to make it easy to add access to competitive software, such as those from AOL or Real Networks, or even remove features within Windows. These steps seem like a major opportunity for competitors to show they can thrive in the Windows environment.

I ask for your approval of this very fair settlement, as both sides have proven able to compromise through negotiation with a court-appointed mediator and that work should be upheld. I appreciate your time and look forward to an intelligent decision.

Sincerely,
Vernon Kempfert

RE: Comments on the Microsoft Proposed Settlement Agreement
Dear Ms. Hesse:

The Prince William Regional Chamber of Commerce is writing this letter to express its support for the settlement reached by the U.S. Department of Justice, nine state attorneys general and Microsoft in the long-running antitrust lawsuit initiated by the federal government. The Region's Chamber is critically aware of how important it is to our national economy that all businesses be able to ''get back to business.'' There were many knowledgeable people guided by an internationally recognized mediator to reach the Microsoft settlement. We believe that additional litigation, following on the heels of many years of costly legal proceedings and on the subsequent work of those in mediation would serve only to prolong the negative impact on our economy of the Microsoft litigation.

Therefore, the Prince William Regional Chamber of Commerce, an organization of more than 800 businesses in the Prince William area, respectfully encourages the U.S. Department of Justice to urge the Courts to adopt the agreement with all due speed so that business and our national—and even international—economy can move forward again with certainty.

Sincerely,
Carol A. Kalbfleisch Laurie C. Wieder
Chairman of the Board President

Re: Comments on Microsoft Antitrust Settlement
Dear Mr. Ashcroft:

It has been well over three years that I have watched the litigation debacle among the Department of Justice, states and other lawsuits against Microsoft. I have been dismayed that Judge Thomas Penfield Jackson's decision was allowed to stand in the first place, when it was obvious that he was biased before the trial ended and his ruling ought to have been tossed out in its entirety. That the litigation continues to date without settlement is egregious.

I am indignant that millions of our tax dollars have been wasted in pursuit of Microsoft, a tax-paying corporation that employs over 40,000 workers worldwide. In the past twenty-five years, it has been known for its software advances and innovation. It has established industry standards where there were none, advanced computer science, and single handedly has been the catalyst of the technological boom. They are only guilty of ''being very successful'' in what they do.

The DOJ's lawsuit has and continues to financially injure retirees, mutual funds, PERS state retirement funds, individual investors, and anyone who has invested in Microsoft. ''How in good conscious can the department justify this?'' So far, the DOJ has done more to disrupt business, injure the public, damage the economy and technology sector, and financial markets combined than what you claim Microsoft has done to the consumer.

Finally, it appeared there would be a settlement with Microsoft offering to undergo close scrutiny and willing to spend a billion dollars on computer science, hardware and software, teacher training and on-going assistance in the most needy schools. It is an innovative idea and adequate settlement offer, all of which is geared to help our youth become computer literate, as the business world will demand and expect of them for entry-level positions.

However, Judge Motz denied the offer, since he believes it gives Microsoft an unfair advantage and allows them to expand their market share into the school system. The judge fails to recognize that he alone is denying impoverished school districts, and the children therein, access to a computer education they will need in order to compete for jobs in the real world. He would rather have children computer-illiterate, because Microsoft might just benefit in some way. What's wrong with this picture?

His ruling is notably without justification, denying Microsoft's good faith offer to settle. Even in a perfect world, the judge's decision would still be wrong, very wrong. This litigation is a perfect example of an imperfect legal system. The ease has gone on far beyond anyone's imagination, and has become a virtual nightmare. The DOJ has seemingly painted itself into a corner, looking very inept. From my viewpoint, it seems the entire justice system needs a complete overhaul, because of its anti-business bias, and predilection against what constitutes normal and free competition in the business world. Judges need to be knowledgeable in the law, of course, but they also need to understand business, economics, capitalism, and who succeeds in business and why. Innovation is not a dirty word. Until now, our country has led the world in creativity and innovation thanks to Microsoft. Take a good look at all the companies that have stood on the shoulders of Microsoft and have ably competed in the marketplace for the last twenty-five years. The list is huge.

That Microsoft is willing to follow the provisions set forth, it should satisfy every one. It is past time to end this debacle. The states that are holding out simply want to pan for gold in Microsoft's deep pockets. There isn't one rational reason not to grant Microsoft's substantial offer of settlement, because, it IS in the public's interest.

The litigation has already cost millions of tax dollars for nothing. Moreover, the DOJ is directly responsible for the untold millions that it has cost Microsoft for its legal defense and representation—not to mention the financial fallout affecting millions of investors.

Enough of this: Settle the case.
Sincerely,
Marlane R. Taylor

January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft:

I am writing to support the implementation of the recent settlement between the U.S.

Department of Justice and Microsoft. There is no sense in continuing litigation against a company that is the only bright in our sorry economy. I do not think the lawsuit should have begun in the first place. Microsoft has made a good offer and the nine states opposing the settlement should accept it. Microsoft is giving away technological secrets, granting broad new rights to computer makers to configure Windows so as to make it easier for non-Microsoft products to be promoted, and a three-person team will monitor compliance with settlement.

I urge your office to finalize the settlement and to make sure that further unnecessary lawsuits against Microsoft do not occur. Thank you. My losses in the stock market during the past year have been in excess or $2,000.000 and Microsoft is the only bright spot I have left in my technology portfolio. I urge you to get this lawsuit settled and allow Microsoft to work on behalf of the stockholders and America.

Sincerely,
George Platt

Washington, DC 20530

Dear Ms. Hesse,

I wanted to write to Judge Kollar-Kotelly to encourage her to approve of the settlement that has been reached between Microsoft, nine of the attorneys general and the Department of Justice in Washington. If you have a consensus like this with so many interested parties, it is hard to see what is standing in the way of approval of this settlement.

As a member of the school board in Forsyth County and a former employee of one of the largest law firms in the Southeastern United States, I am more than aware of what happens when the government gets involved in lawsuits. The effects of a lawsuit on any company, school or just an individual is chilling enough. But in this case, the effect of forward movement in the Microsoft lawsuit was devastating to millions of investors throughout America who were heavily invested into Microsoft stock. During this period and while many high-tech firms were losing ground, Microsoft continued to be strong and show good earnings. Yet, by facing a court trial and possible break up, Microsoft stock suffered a great deal as did investors as, at that time, Microsoft was the No. 1 held stock in pension and mutual funds. The reason that I would like to see a quick settlement in this case is to get the matter out of the courts so that Microsoft and the other parties can get back to business.

Thanks for your consideration of my views

Sincerely,
Rick Bagley

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. The entire case was uncalled for from the beginning. Now that there is a settlement that is fair I would like to see the government accept it and move on.

Many people think that Microsoft is getting off easy, this is simply not true. Microsoft has given up much to reach the settlement. Microsoft has agreed to allow computer makers the flexibility to install and promote any software that they see fit. Microsoft has also agreed to not enter into any agreement with any computer maker that would require them to use Microsoft software in any set percentage. Microsoft has also agreed to license Microsoft software at a set price no matter what kind of software the computer maker installs or promotes.

Microsoft has agreed to much in order to put the issue behind them. The government needs to accept the settlement and allow Microsoft to move forward. The only way to move forward is to put the issue in the past. Please accept the Microsoft antitrust settlement.

Sincerely,
Kenneth Jerome

Dear Me. Hesse,

Pursuant to the Tunney Act in anti-trust cases, we are writing to strongly urge you to support the settlement reached by the Department of Justice and Microsoft. It is time to put this issue to rest, Nearly four years and 35 million dollars is enough!

Microsoft is a true American business success story and doesn't deserve to be penalized for it. Fair business guidelines are sometimes necessary, and have been already incorporated into the settlement agreement. Let Microsoft get back to the business of creating new and useful computer software. Every part of the economy feels the affects of this issue. As we are in the middle of a hard-hitting recession, it is time to do what is necessary to get the nation back on its financial feet.

Again we strongly urge you to support the settlement reached by the Department of Justice and Microsoft.

Sincerely,
Antonio Gastelum

Re: Comments on the Microsoft Proposed
Settlement Agreement

Dear Ms. Hesse:

The United State government negotiated a meaningful settlement with Microsoft that is in our nation's best interest. The settlement places sanctions on Microsoft without destroying the company. These sanctions will foster greater competition in the software industry and give consumers greater choice when they purchase and enhance their computers. This settlement will also help define the direction of government's role in the high-tech industry. This is a just, not punitive, resolution that will help the economy and promote new investment in

technology. I am encouraged by the actions of the Department of Justice and support you in your efforts to settle this case.

Sincerely,
Joseph D. Morelle

MTC–00029995

Tom A. Schatz, President
Citizens Against Government Waste
13Ol Connecticut Avenue, NW, Suite 400
Washington, DC 20036
I am in gavor oh this mio TM. Herrick
Ms. T. M. Herrick
1500 Terrace Ave, Apt. 112
Liberal, KS 67901–5702

Dear Ms. Herrick,

Your response to this letter today will not only put a stop to $35 million in government waste, it may also be the single best way you can help stimulate America's economy and protect this nation's and your own financial future. I need to ask you today to send an urgent message to the U.S. Department of Justice (DOJ) that you support the proposed settlement of the Microsoft lawsuit,

Under a federal antitrust law called the Tunney Act, there is a 60-day period for public comment before the U.S. District Court decides whether to accept the settlement. This period will expire on January 28th.

By sending your message to DOJ, you can help put an end to the government's long-running legal assault on Microsoft, which has cost taxpayers more than $35 million and undermined one of the primary engines of America's economic growth. Let me tell you what's going on and why it's urgent that you send DOJ a message right away that you support the Microsoft settlement.

On Noyember 6, 2001, Microsoft reached, a proposed settlement with DOJ and nine states in the antitrust lawsuit against the company. The terms of the settlement, briefly, are as follows: Computer manufacturers would be free to include non-Microsoft software in their products. Microsoft would alter its products, including the new Windows XP, to make it easier for consumers to substitute non-Microsoft programs in the Windows operating system. Microsoft would be required to share its programming code with competitors so their software for video streaming, digital photography and other features would be compatible with Windows. In addition, a three-member Technical Committee would be established, at Microsoft's expense, to monitor the company's behavior and enforce the settlement for the next five years. Should the company be found in violation of the terms of the settlement, it can be extended for another two years.

The proposed settlement is a win-win for all concerned. It's fair to:

- Microsoft, which will continue to be able to provide new software that integrates new products;
- competitors, who will have more access to the Windows platform to incorporate their products or make them compatible;
- software manufacturers, who will get back to the business of creating innovative products;
- Consumers, who will have more choices among software products; and,
- investors, who will have stability in the marketplace.

Opponents of the settlement—primarily Microsoft's well-heeled competitors who lobbied DOJ and the states to bring this lawsuit on the backs of taxpayers in the first place—have launched a massive campaign to prevent the court from accepting the agreement. They want nothing less than the dismantling of Microsoft, and they want taxpayers to continue to pay to secure a competitive advantage they couldn't win in the marketplace. That's why I urgently need you to send a strong message to DO! today that you support the Microsoft settlement.

By visiting CAGW's website at www.cagw.org, you can e-mail a letter to DOJ, telling the government that you support the settlement. DOJ has specifically stated that they would prefer to receive comments electronically, so that's why I'm talcing the extraordinary step of asking you to visit our website today and send an e-mail to DOJ. All you need to do is go to CAGW's homepage at www.cagw.org, click onto the ''Approve the Microsoft Settlement'' link on the top fight-hand side of the page, and follow the instructions to e-mail your letter. It will just take a few minutes of your time.

If, however, you prefer to fax your comments in support of the settlement to DOJ, you may fax them to the attention of Ms, Renata B. Hesse at (202) 307–1454 or (202) 616–9937. The most important point is that you tell DOJ you support the Microsoft settlement and that you do it right away before the comment filing period ends on January 28th. To date, the Microsoft lawsuit has cost taxpayers more than $35 million. As the District Court Judge presiding over the case has said, ''In light of the recent tragic events affecting our nafion...the benefit which will be'' derived from a quick resolution of these cases [is] increasingly significant.'' Please tell DOJ to approve the settlement today. Thank you.

Sincerely,
Thomas A. Schatz
President, CAGW

P.S. Help put an end to $35 million in government waste. Tell DOJ that as a taxpayer and consumer you support the Microsoft settlement, and please get your message off to them today.

Time is nmning out.

MTC–00029996

Jesse L Clay
1205 Ridgecrest Drive SE
Albuquerque, NM 87108
January 26, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I would like to take some time to express to you my feelings about the proposed settlement that was reached between Microsoft and the Department of Justice. It is about time that the antitrust suit ended, and I feel that the terms in the settlement, although harsh on Microsoft, will be for the betterment of the computer industry and the economy.

I am pleased with the prospect of the case being resolved, but I think it was initiated for all of the wrong reasons. Microsoft's competitors had a major role in initiating the litigation, because they could not bring to the market a product that matched Microsoft's own. The competition should be happy though. The terms of the settlement require Microsoft to turn over to their competitors source code and design data that are crucial to the internal makeup of Windows. Enough is enough. This settlement needs m he approved so the industry can get back on its feet, and with competitors working more closely with one another, the industry will benefit. I feel the proposed settlement will benefit all parties involved, including Microsoft's competitors.

Sincerely,
Jesse Clay

Carol Morse Sibley
92 Overlook Terrace
Bloomfield, NJ 07003–29t7
January 24, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

The antitrust lawsuits against Microsoft have gone on for too long. They are also not very well justified. Microsoft has not only created jobs and wealth for our country, but also has made technological breakthroughs that have revolutionized the IT sector. I do wish that when they come out with new versions of software they would always make it compatible with previous versions, which they didn't do, for instance, with PowerPoint.

Still, it's clear that the settlement seems to only help competitors gain an edge they were not able to gain beforehand. It forced Microsoft to disclose interfaces that are internal to Windows operating system products, and also grant computer makers broad new rights to configure Windows so that non-Microsoft software can be promoted more easily.

It is in the best interests of the American public to finalize the settlement. Our nation cannot afford further litigation so I urge your office to use its influence to try to rein in the nine states that want to drag this case out for even longer. Thank you for your time.

Sincerely,
Carol Morse Sibley

Lilburn. GA 30047
January 24,2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The lawsuit that has reached a tentative agreement between Microsoft and the US Department of Justice was flawed from the start. The initial aim of settlement was to break up a perceived monopoly and stop Microsoft from infringing in consumer rights. First off, Microsoft does not fall under the terms of he definition for monopoly because it does not sell poor quality goods at inflated rates. Microsoft in fact has consistently delivered user-friendly products that far outdo their competitors. They have also not infringed on our rights, because all consumers made a conscious decision to purchase Microsoft. The terms of the settlement violate Microsoft's intellectual property rights as they force them to disclose for use by competitors interfaces that are internal to Windows'' operating system products. I urge your office to take a firm stance against the nine states that want to continue litigation. Put an end to this dispute so that the cornerstone of the IT sector can continue to innovate as it has in the past. It is in the public's best interests to settle.

Sincerely,

Ralph Knight

Washington, DC 20530

Dear General Ashcroft:

If the public spends time listening to Microsoft's opponents, we all would be under the impression that this industry icon was the bad guy in this entire case. These same opponents would like us to think that Microsoft got off easy in this settlement. The truth, however, is the very opposite. Since the company's inception, Microsoft has set the standard for innovation and quality. Their products are accessible, easy to use, arid affordable. They have been seen as the ''bad guy'' because they are being blamed for their competitor's inability to innovate and keep up with Microsoft's rapid changes. How fair is that?

As far as Microsoft getting off easy in the case, this is simply not true, Microsoft has basically opened their operation doors to their competitors by allowing them access to Windows interfaces, protocols, and intellectual property. They have even agreed to create future versions of Windows within which non-Microsoft products may function. In addition to all these damaging concessions, Microsoft has also agreed to terms that were not even found unlawful. I hope that you will make every possible attempt to bring this matter to an early close.

Sincerely,

Frank W. Brown, Jr.

Washington, DC 20530–0001

Dear Attorney General Ashcroft:

I would like to express my support for settling the antitrust suit against Microsoft. I do not feel that the case should ever have been taken as far as it was. It is time to move on to more pressing concerns.

While I recognize Microsoft's market dominance, I also feel that they are operating legally, and as such no further action should be taken. With the economic downturn of the past year, ending the case and letting Microsoft generate further technologies is important. Competitors of Microsoft will gain a lot from the settlement, including disclosure by Microsoft of the internal interfaces of the Windows operating system Microsoft development with its own personnel and capital.

The longer the government keeps Microsoft's hands tied, the more the economy will suffer. Please finalize the settlement agreement as soon as possible. Thank you.

Sincerely,

Jenny Wallace

MTC–00030002

Janurn7 28, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The Microsoft antitrust settlement agreement should be finalized. I am opposed to this lawsuit.

We operate h≃ a free enterprise system where competition is the driving force behind a prosperous economy. Lawsuits of this nature punish a company for being competitive. Despite my opposition to the lawsuit, I believe the terms of the settlement are reasonable. Microsoft has agreed to begin designing Windows with mechanisms to make it easier for consumers to add or remove features of Windows, and instead replace them with non-Microsoft software. They also agreed to not to enter into contracts that would obligate third parties to exclusively promote or distribute Windows products. With these types of concessions, consumers will have greater choices, and any so-called anticompetitive behavior wilt be curtailed.

I am hopeful the Department of Justice will continue in its efforts to settle this case. Thank you.

Sincerely,

MTC–00030003

CarrierChoice
January 28, 2002
Attorney General John Ashcroft
US Department of Jusnce,
950 Pennsylvania, Avenue, NW
Washington. DC 20530

Dear Mr. Ashcroft:

I am writing you this brief note to encourage you to help end the Microsoft antitrust case. This nearly four-year-old case has dramed Microsoft and the government of millions of dollars. It has been the subject of controversy and litigation to no one's discernable benefit. It has had a debilitating affect on Microsoft, the entire ?? industry and the national economy at a nine when we can least afford it. It is tune to resolve this matter.

At present, the major parties and the majority of compl??ant states have reached a tentative settlement agreement. The agreement allows Microsoft to retain its present corporate structure in return for committing itself to a radical change in its marker philosophy and practices. Microsoft will now actively encourage ''competition'' by reconfiguring its Windows platforms to readily accept and even promote non Microsoft software. The company will now no longer requite exclusive Windows software be in agreements of computer manufacturers to whom they license their basic platforms. These and other concessions prove the sincerity of Microsoft's commitment to ameliorating its in intimidating marker dominance.

Microsoft is a great, inventive and productive player in our economy and its own industry. We need Microsoft up and running full time. Please support this settlement

Sincerely,

Chick ??earberstone

THE CENTER FOR THE
MORAL DEFENSE
OF CAPITALISM
VIA FAX
January 28,2002
From: Nicholas Provenzo
Chairman
Center for the Moral Defense of Capitalism
To: Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530–0001

Re: Microsoft Settlement

Pursuant to the Antitrust Procedures and Penalties Act, 15 U.S.C. § 16, the Center for the Moral Defense of Capitalism respectfully submits its evaluation of the proposed Final Judgment resolving U.S. v. Microsoft Corporation (Civil Action No. 98–1232) and State of New York ex. ref Attorney General Eliot Spitzer, et al., v. Microsoft Corporation (Civil Action No. 98–1233). The mission of the Center for the Moral Defense of Capitalism is to promote the social welfare of the nation by presenting to the public a moral foundation for individualism and economic freedom based on a philosophical analysis of humanity and human nature. Specifically, we seek to apply Ayn Rand's philosophy of Objectivism to the understanding of human action and human relationships.

As the cornerstone of a free, capitalist system, we argue that human life requires thought and effort and that the free market springs from the trade of one's thoughts and efforts with others. We make the argument that human minds and bodies must be left free of coercion, that all human interaction must be voluntary and that the initiation of

physical force must be banished from human relationships. We see a proper government as the agent of its citizens, charged with one mission: the use of retaliatory physical force in defense against the initiation of physical force. Our organization has followed the Microsoft antitrust case from its initial filing—we have opposed the case from the outset, seeing it as an abridgement of the freedom of production and trade and an interference with the right to acquire and possess property. We disagree with the essential factual component of this case-that Microsoft's integration of its Internet Explorer Web browser with its Windows operating system was a coercive act against Microsoft's competitors and customers. Instead, we see a company that accordin9 it its evaluation of the marketplace saw the commercial value of product integration and acted accordingly. In exercise of Microsoft's right to control its property, the firm set terms for the sate of that property that it believed was in its own self-interest. Microsoft's subsequent commercial success after this integration affirms the wisdom of Microsoft's actions—Microsoft's customers themselves chose to reward the firm with increased sales and increased market share. Rather than serve an impediment to the free market, Microsoft's actions personified them.

Yet, obviously, Microsoft's success has made it into the target of the government's wrath via the current antitrust case. Our organization closely followed the District Court case, writing several published evaluations of the case and its subsequent rulings (see Appendix t & 2). Our organization also participated in the US Court of Appeals for the District of Columbia Circuit appeals proceedings as an amicus curie. Our amicus brief relied on two major arguments in opposing the government's case: 1.) that the antitrust laws are unconstitutional laws that fail to provide with clear and concise guidance necessary to avoid sanctions under the law; and 2.) that the antitrust laws are unconstitutional laws because they require the government to initiate force against innocent citizens.

Today, our view of the Microsoft antitrust case and its proposed settlement is as follows: While we respect the desire of the parties to seek a resolution to this case, particularly that of Microsoft, which has had to endure a 3½ year crusade against its property rights and its right to conduct its business in a profitable manner, we are wary of any settlement that legitimizes any aspect of this unjust assault against a successful, innovative business

We consider the case against Microsoft to have been defective at every level, from the fundamental claim that the entrepreneurial actions of a successful business are a threat against others, to the claim that a monopoly can exist where there is no legal barrier to entering a market, to the claim that the citizens of the United States are too ignorant or incompetent to exercise their individual power of choice when in the marketplace and therefore require the government to make their personal choices for them. We consider it a failure that the court saw no distinction between the earned success of a business in the free market and the coercive power of a government favorite and we consider it a failure that the court did not ultimately throw out the case against Microsoft.

Considering that this case was initial brought not at the insistence of individual consumers or with Microsoft's business partners, but at the insistence of Microsoft's unsuccessful competitors, this entire case reeks of business failures asking the government to step in and give them the commercial success they could not achieve in the marketplace. Failed businesses must not be allowed to set the rules for the markets in which they failed.

In evaluating the proposed settlement, we find that it specifically threatens the right to private property. A key component of the proposed remedy is a requirement that Microsoft make its source codes available to a government-sanctioned oversight committee, which in turn is supposed to ensure these same source codes are made available to non-Microsoft ''middleware'' producers, so that these companies can create products to compete with Microsoft. Since under the proposed judgment, the United States would retain the right to determine and enforce the scope to which these source codes are to be made available, the final judgment constitutes a de facto seizure of private property—the source codes—and its subsequent conversion to a public good. Such a taking is wholly incompatible with the Constitution of the United States.

Accordingly, we reject the notion that this settlement serves the public interest, or that any punishment of Microsoft for its business practices will be of benefit to any consumer. Eroding Microsoft's property rights serves no one. We hold that no antitrust case, including the Microsoft case can withstand rational scrutiny, and we ask that no sanction be placed on Microsoft as a result of its antitrust conviction.

Appendix 1:

Judge Jackson's Findings of Fiction

By Dr. Edwin A. Locke, Ph.D.

Senior Policy Analyst

The Center for the Moral Defense of Capitalism Judge Thomas Penfield Jackson has released his ''findings of fact'' in the Microsoft antitrust case. While his report did contain some correct information—such as the truism that a successful company tries to defeat its rivals—the central claims of his report are blatant falsehoods Let us examine five of these fictions

Fiction #1: Microsoft is a ''monopoly. ''There is no such thing as a private monopoly. Only the government can forcibly prevent competitors from entering a market. Microsoft has attained dominance in the software industry, but dominance is not monopoly. Market dominance has to be earned through a long struggle, by providing better products and better prices than anyone else Dominant companies who falter (as did Xerox, IBM, General Motors and Kodak) will find their market share eroded, sometimes very quickly. There is no threat from these dominant players so long as their competitors are legally permitted to enter the field, invent new products, and combine with each other to gain the needed market power.

In a free market, a dominant position can only be sustained by continually providing new products and services that are better than other firms'' products. Paradoxically, Judge Jackson recognizes this fact but condemns it. Microsoft's innovation, its continual product upgrades, its millions spent on research and development, are cited by Jackson, not as evidence that Microsoft has earned its position, but only as evidence of a conspiracy to ''stifle'' its competitors.

Fiction #2: Microsoft's ''monopoly power'' allows it to ''coerce'' its customers. A private company has no power to force consumers to do anything. Did Judge Jackson find that Microsoft threatened to beat people up or throw their bodies into the East River if they bought the wrong Web browser? Of course not. The only ''leverage'' Microsoft has is the leverage it has earned by producing a product that people want to buy.

This economic power, the power of voluntary trade, is fundamentally different from political power, the power of the gun. Yet Judge Jackson is eager to erase this distinction. Thus, such actions as upgrading a product to match the features offered by a competitor, distributing a product for free, or negotiating favorable terms with business partners—all of them normal and beneficial business practices—are presented by Judge Jackson as if they are a nefarious, mafia-like conspiracy to oppress the public.

Fiction #3. Microsoft harmed consumers. This is certainly news to the millions of people worldwide who value Microsoft products enough to make the company and its founders rich. Most bizarre is Judge Jackson's claim that Microsoft harmed consumers by giving away its Web browser, making it unprofitable for other firms to sell their browsers Any sane consumer would be delighted to get a product for free rather than paying money for it. To speak of receiving free software as a ''harm'' is Orwellian doublespeak.

Fiction #4: Microsoft is a threat to consumers because it ''could'' raise its prices. Under this criterion, anyone could be prosecuted for anything. Do you own a kitchen knife? Then you might stab somebody—so should the government put you in jail?

Microsoft has the right to sell its product for any price it chooses—but anyone familiar with the history of business and with Economics 101 knows that market leaders have a selfish interest in keeping their prices low. Why? Because they make a lot more money by creating a mass market than by creating a product only the rich can buy. Henry Ford understood this. So did Bill Gates.

Clearly, Judge Jackson does not. The only basis for his conclusion is the caricature of the successful corporation as a vicious ''Robber Baron'' which, even if it is not ''exploiting'' consumer now, is merely waiting for the opportunity to do so

Fiction #5: Blocking Microsoft's ability to compete will foster greater industry innovation. A private company, with no power over consumers but the power conferred by offering a useful product, is branded by Judge Jackson as dangerous. But far-reaching government intervention in the software industry, including the massive use of force to shatter Microsoft and control its

business practices, is presented as an attempt to spur innovation. Only those who believe Al Gore invented the Internet could take this argument seriously.

What Judge Jackson really objects to is the fact that Microsoft defeated its competitors, i.e., that it was successful. The real meaning of his ''findings of fact'' is that the best brains must be crippled, so that lesser brains will not have such a hard time succeeding. He and the government prosecutors whose arguments he is echoing do not want to foster innovation; they want to sacrifice the best and the brightest in the name of egalitarianism. They want the playing field leveled by coercion so that no one can rise to the top.

What consumers need is an antidote to the fictions peddled by Judge Jackson: the recognition that businessmen have a right to succeed by trading their products in a free market Dr. Edwin A. Locke is Dean's Professor of Motivation and Leadership at the Robert H. Smith School of Business at the University of Maryland and is affiliated with UMD's Department of Psychology. An internationally renowned behavioral scientist, Locke's work is included in leading textbooks and acknowledged in books on the history of management.

Appendix 2:

Altruism in Action: An Analysis of Judge Jackson's Finding of Fact and the Antitrust Assault on Microsoft by Adam Mossoff

Policy Analyst

The Center for the Moral Defense of Capitalism United States District Court Judge Thomas P Jackson is crystal clear in his recent ''findings of fact'': Microsoft is marked for destruction. But why does Judge Jackson want to punish one of the most successful corporations in American history? Because Bill Gates proclaimed that he wanted ''to prove that a successful company can renew itself and stay in the forefront'' [i] and he proceeded to do just that.

By the early 90s, Microsoft had gained a dominant position in the software industry by creating Windows, the first commercially viable graphical operating system that could be used on PCs. But in the mid-90s, Gates realized that the Internet represented the next step in the ongoing computer revolution; thus, he created a business plan to ''stay in the forefront'' of this revolution. In so doing, he set into motion the same technological and commercial innovation that had led to Microsoft's leading market position in the first place.

Microsoft began by investing a staggering $100 million each year in Internet research and development, and in four years the company expanded its Internet division from only six people to more than one thousand. These investments, in the words of Judge Jackson, paid ''technological dividends.[ii] (Paragraph 135) Microsoft developed a Web browser called Internet Explorer, and ''after the arrival of Internet Explorer 4.0 in late 1997, the number of reviewers who regarded it as the superior product was roughly equal to those who preferred [Netscape's] Navigator.'' (Paragraph 135)

But Gates took Microsoft even farther. He integrated Internet Explorer into Microsoft's Windows operating system so that it would be easier to incorporate the fast-growing Internet into all aspects of personal computing. In fact, Judge Jackson partly acknowledges the groundbreaking work performed by Microsoft in this regard:

The inclusion of Internet Explorer with Windows at no separate charge increased general familiarity with the Internet and reduced the cost to the public of gaining access to it, at least in part because it compelled Netscape to stop charging for Navigator. These actions thus contributed to improving the quality of Web browsing software, lowering its cost, and increasing its availability, thereby benefiting consumers. (Paragraph 408)

Concurrent with its technological innovation, Microsoft put into practice novel business services and licensing arrangements. Just one of many examples addressed by Judge Jackson is the Internet Explorer Access Kit (IEAK), a service that permits an Internet access provider (IAP), such as America Online or Earthlink, to accept a license agreement on the Web and then download and customize Microsoft's Internet software. When Microsoft began offering this service in September, 1996, it was the first time an Internet access provider could create a distinctive identity for its service in as little as a few hours by customizing the title bar, icon, start and search pages, and ''favorites'' in Internet Explorer. The IEAK also made the installation process easy for IAPs. With the IEAK, IAPs could avoid piecemeal installation of various programs and instead create an automated, comprehensive installation package in which all settings and options were pre-configured (Paragraph 249)

More than 2,500 access providers—representing more than 95% of the Internet subscriber market in the US—used Microsoft's IEAK service. (Paragraph 251) Notably, Netscape did not create a similar service until nine months after Microsoft introduced IEAK, and Netscape charged almost $2,000 for something Microsoft offered for free. (Paragraph 250)

Microsoft blended technological innovation with business acumen and thus offered its business partners an integrated package of new technology and new business opportunities. In exploiting these opportunities: Microsoft often offered ''valuable consideration''—such as special discounts-to companies like Compaq, IBM, and Intel as an incentive to adopt its Internet Explorer and other Microsoft technology In fact, Judge Jackson uses the term ''valuable consideration'' eight times to describe Microsoft's business agreements with other companies—leaving the honest reader to conclude that Microsoft's dealings were not some form of coercion but rather value-for-value trades.

For instance, Microsoft beat Netscape in developing a special type of browser that America Online (AOL) required for its Internet service As a result, the two companies entered into several agreements in 1996. In exchange for AOL's commitment to use Microsoft's Internet software, Microsoft promised to provide AOL with unprecedented access to Internet Explorer source code, extensive technical assistance, ''free world-wide distribution rights to Internet Explorer,'' an assurance ''that future versions of its Web browsing software would possess the latest available Internet-related technology features, capabilities, and standards,'' and the placement of an AOL icon in a special folder on the Windows desktop. (Paragraph 288)

This relationship has been advantageous to both parties. Overall usage of Internet Explorer has risen dramatically, and as a result of this agreement AOL registered almost one million new users in a single year—11% of its total membership—through its icon on the Windows desktop. This fact alone prompted AOL to state in 1998 that its business arrangement with Microsoft was an ''important, valued source of new customers for us.'' (Paragraph 302)

Microsoft's achievements should be held up as a model of how to create and maintain a highly productive, innovative company. Yet Judge Jackson is unable to view any of these facts in a positive light. While Judge Jackson recognizes many of the concrete facts that demonstrate Microsoft's productive achievement, he is incapable of praising the innovation and business acumen that led to Microsoft's success.

Instead, his descriptions are clouded by slanted, inflammatory terms that attribute vicious motives to Gates and his company. When Microsoft created new technology to compete with its rivals, Judge Jackson describes the company's motivation as ''fear'' and ''alarm.'' When Microsoft offered incentives to its business partners, Judge Jackson decries this as the ''quashing'' and ''stifling'' of rivals. When Microsoft licensed its products only under conditions favorable to its long-term success, Judge Jackson describes these actions as ''threats'' and ''force.'' (Judge Jackson uses variations of ''threat'' no fewer than twenty times and of ''force'' no fewer than sixteen times to describe Microsoft's actions.) When Microsoft refused to support its competition, Judge Jackson calls this ''punishment.'' When Microsoft ingeniously melded technological and business strategies to convince consumers that its products were the best, Judge Jackson sees the company as ''seizing control'' and trying to ''capture'' the market.

Even worse than his slanted terminology are his substantive arguments, in which he sets up impossible standards according to which no successful business could escape prosecution For example, Judge Jackson writes early in his ruling that:

It is not possible with the available data to determine with any level of confidence whether the price that a profit-maximizing firm with monopoly power would charge for Windows 98 comports with the price that Microsoft actually charges. Even if it could be determined that Microsoft charges less than the profit-maximizing monopoly price, though that would not be probative of a lack of monopoly power, for Microsoft could be charging what seems like a low short-term

[i] Bill Gates, The Road Ahead 64 (1995).

[ii] US v Microsoft, No. 98–1233 (TPJ) D.D.C. Nov 5, 1999) (findings of fact). All references to the findings of fact hereafter will refer only to the paragraph number.

price in order to maximize its profits in the future for reasons unrelated to underselling any incipient competitors (Paragraph 65) (Emphasis added.)

Judge Jackson admits that it is not possible to tell whether Microsoft is in fact charging a monopoly price. Yet he dismisses this lack of evidence as irrelevant because Microsoft could simply be using low prices today in order to ''capture'' the market and charge exorbitant prices at some future date. In other words: Microsoft is a monopolist if it charges prices that are deemed ''too high''—but it is also a monopolist if it charges prices that are too low. By virtue of its dominant position in the industry—that is, by virtue of its success—Microsoft is damned if it does and damned if it doesn't.

Judge Jackson's visceral antagonism to business is also revealed by his condemnation of Microsoft for winning the browser battle against Netscape when ''superior quality was not responsible for the dramatic rise [in] Internet Explorer's usage share'' (Paragraph 375) Note the implicit premise in this condemnation: If Microsoft hasn't produced a product that is technologically superior, then only commerce can explain its success. Jackson is repulsed by the notion that successful computer companies require both technological savvy and business skills; in his ideal world, Silicon Valley would be populated solely by computer scientists with nary an ''alarming'' venture capitalist or ''threatening'' businessman in sight.

Judge Jackson's praise for innovation, however, might seem to contradict his overall attack on successful businesses. Technological innovation is a source of business success, is it not? Although Judge Jackson recognizes that technological innovation causes businesses to succeed, he believes that this innovation has another, more legitimate, function. He writes: In many cases, one of the early entrants into a new software category quickly captures a lion's share of the sales What eventually displaces the leader is often not competition from another product within the same software category, but rather a technological advance that renders the boundaries defining the category obsolete. These events, in which categories are redefined and leaders are superseded in the process, are spoken of as ''inflection points.'' (Paragraph 59) (Emphasis added.)

Innovation appeals to Judge Jackson not because it leads to the creation of wealth, but rather because it tends to tear down the market leader. He argues that the emergence of the Internet in the mid-90s was one such ''inflection point.'' (Paragraph 60) Thus. the nature of his support for innovation explains his disgust with Microsoft's defeat of Netscape: By introducing its browser product sooner, Netscape should have replaced Microsoft—if only Microsoft had not engaged in the ''vicious'' commercial competition that ensured its continued leadership in the computer industry.

These beliefs ultimately lead Judge Jackson to conclude that Microsoft's ''monopoly power'' has ''harmed consumers in ways that are immediate and easily discernible?'' (Paragraph 409) What are these alleged harms? Judge Jackson claims (wrongly) that the integration of Windows 98 and Internet Explorer does not allow employers to block employees from surfing the Web He asserts that vast ''confusion'' reigns among consumers—but beyond one or two offhand references throughout the rulin9, he never explains this vague allegation Moreover, he claims, the integration of Windows and Internet Explorer has created slower computers with more bugs—as if computers are slower and less dependable than they were two years ago! One might regard such mythical ''harms'' as the laughable allegations of a Luddite—if they did not come from a judge who wields the coercive power of the federal government

Regardless of how trivial these alleged harms may be, Judge Jackson seems sincerely to believe that Microsoft is acting as a vicious monopolist Why? He answers this question in the last few sentences of his ruling: ''Microsoft's past success in hurting such companies and stifling innovation ... occur for the sole reason that [other companies and their innovations] do not coincide with Microsoft's self-interest.'' (Paragraph 412) (Emphasis added.) It takes Judge Jackson more than 200 pages, but in the end he names the essence of his disgust for Microsoft—and the essence of the antitrust laws In so doing, Judge Jackson exposes the fundamental moral premise dictating his factual distortions, his fallacy-ridden arguments, and his illogical conclusions: a hatred for any form of self-interest The morality of altruism or self-sacrifice is often presented as a form of benevolence, as if it simply means being nice to other people. But the actual meaning of this philosophy is a hatred of success. Under this morality, anyone who achieves some extraordinary wealth or distinction owes it to his fellow men to sacrifice what he has earned—including giving away his whole fortune, as and when it is demanded by others. (This is essentially what has been demanded of Bill Gates) But what about those who have not achieved anything? They are entitled to welfare programs, private charities, protective legislation, and a host of other unearned benefits to be paid for by those who have succeeded. In this system, anyone who earns success through his own effort is to be punished, while anyone who hasn't exerted any effort and hasn't attained any success is to be rewarded.

Far from standing for benevolence or good will, such a moral outlook stands for destruction. This code of sacrifice demands an assault on a Microsoft or a Bill Gates. By amassing so much money and achieving so much success, they must be shirking their duty to sacrifice to others. But it does not demand the destruction of the Netscapes of the world because, by virtue of having faltered, they are the ''have-nots'' who are entitled to benefit from the sacrifice of their more-successful competitors.

Note that the ultimate standard of this moral outlook is not the well-being of the poor, the weak, the downtrodden; has the welfare state ever achieved these aims? Instead, the goal is the sacrifice of the rich, the strong, and the powerful—not to achieve any positive aim, but simply to punish them because they are rich, strong, and powerful.

The altruist connection to antitrust is evident in the mere fact that Judge Jackson could have applied the antitrust laws against Microsoft without finding any harm at all. Although the ostensible purpose of antitrust is to ''protect consumers'' from alleged ''monopolists,'' court decisions consistently belie this fiction. In one of the first cases defining the doctrine of antitrust, a large railroad trust defended itself against prosecution by arguing that its price-fixing plan resulted in lower prices for consumers. Since the stated purpose of the 1890 Sherman Antitrust Act was to protect consumers, and since consumers actually benefited in this case, the defendant logically concluded that the antitrust laws should not apply to its practices. The Supreme Court rejected this argument and ruled that the railroad trust was guilty. In an illuminating statement, Justice Peckham declared: ''in this light it is not material that the price of an article may be lowered. It is in the power of the [monopolist] to raise it.'' [iii]

(Interestingly, Justice Peckham was an ardent conservative who was one of the principal advocates of ''freedom of contract'' in the 19th century—just as Judge Jackson was a Reagan appointee. This proves once again that conservatives are not reliable friends of freedom.) Continuing to apply the underlying anti-success principle of antitrust, the Supreme Court ruled in 1968 that a newspaper company violated the Sherman Antitrust Act when it fired a distributor for charging rates above an allowable maximum price. The Court found that the newspaper ''would not tolerate over-charging'' of its customers, and that it even agreed to rehire the distributor if he ''discontinued his pricing practice''—that is, if he charged lower prices. Nonetheless, the Court held that the benefit to consumers was irrelevant in finding that the newspaper company acted in ''conspiracy'' with its other distributors to set prices—thus its actions were ''an illegal restraint of trade under Section 1 of the Sherman Act.'' [iv]

Harm to consumers has nothing to do with the purpose of antitrust. The antitrust laws are intended only to punish ''power''—but since economic power is earned on the free market, this means that the purpose of antitrust is to punish successful business practices. Antitrust case law is replete with examples of companies being punished, not for any alleged harm, but simply for having the acumen to remain successful in their industries. A ski resort in Aspen, Colorado, was not only found guilty in 1985 of violating the antitrust laws because it successfully competed against its only rival; it was also held to a ''duty under antitrust law to help a competitor.'' [v] In the famous case against ALCOA in 1945, Judge Hand declared that ''the successful competitor,

[iii] United States v. Trans-Missouri Freight Association, 166 US 290, 324 (1897), emphasis added.

[iv] Albrecht v. Herald Co., 390 US 145, 153 (1968).

[v] ''Olympia Equipment Leasing Go. v. Western Untion Telegraph Co.. 797 F.2d 370, 377 (7th Cir. 1986), citing Aspen Skiing Co. v. Aspen Highlands Skiing Corp., 472 US 585 (1985) (holding that monopolist has a duty to help a competitor).

having been urged to compete, must not be turned upon when he wins.''

But he contradicted himself in the very next paragraph, concluding that ALCOA insists that it never excluded competitors: but we can think of no more effective exclusion than progressively to embrace each new opportunity as it opened, and to face every newcomer with new capacity already geared into a great organization, having the advantage of experience, trade connections, and the elite of personnel.[vi] ALCOA's ability and success, by Hand's reasoning, was the deciding factor for finding it guilty of violating the antitrust laws.

Given this legal context, Microsoft was doomed before it even set foot in the courtroom. The media, in an anti-Microsoft feeding frenzy, often highlighted mistakes made by Microsoft's counsel during the lengthy (and ongoing) trial. Yet Microsoft's attorneys could have performed flawlessly, and Judge Jackson would still have produced the same ruling. The reason is that Microsoft is an extremely successful company; Gates is a unique combination of technological genius and businessman, reminiscent of earlier American giants like Thomas Edison Thus, it was irrelevant how hard Microsoft's attorneys worked or how much intellectual vigor they brought to their legal briefs and courtroom arguments. These things were irrelevant because no army of lawyers could hide a single, essential fact—the only fact necessary for applying the antitrust laws: Microsoft succeeds at what it does.

The punishment doled out for success is paralysis. Judge Jackson makes it clear that Microsoft must not be permitted to capitalize upon its well-earned success. Because it has created values, it must now relinquish them. Does it matter that Microsoft has earned its success by producing a better product, by offering better incentives to its business partners, and by providing better service to software developers and Internet access providers? No.

Such facts do not matter to a man who believes that a successful company has a moral duty to sacrifice to its lesser rivals—especially when that man has the legal power to coerce the company to obey its alleged duty. With every slanted term and with every absurd conclusion, Judge Jackson practically screams his unstated moral premise: Since Microsoft is a leader in the computer industry, it must sacrifice the values it has created because it has created them In his ruling, Judge Jackson claims to set out the objective facts underlying his impending application of the antitrust laws to Microsoft. But the only thing he manages to establish is his own animosity towards commercial success. What drives this animosity is the underlying moral justification for antitrust: altruism's hatred of success.

The basis for Judge Jackson's ruling is not any ''monopoly'' allegedly controlled by Microsoft; it is the monopoly commanded by the morality of altruism over our culture. That monopoly can be seen, unfortunately, in Bill Gates's sanction of his own destruction in a comment immediately after the ruling, in which he declares that ''because of our success, we understand that Microsoft is held to a higher standard, and we accept that responsibility.'' [vii] vii As long as this moral monopoly remains unchallenged, legal doctrines such as antitrust will continue to punish successful businesses.

Washington, DC 20530

Dear Mr. Ashcroft:

As a yahoo Internet user I would like to voice my opinion concerning the Microsoft lawsuit. I urge you to support the settlement and encourage the various companies to get back to the business of technology research. It is my belief that millions of dollars are being spent to stifle competition when these companies should be focused on new markets and technology. Please do what is in the best interest of consumers through out the United States and settle this costly suit.

Sincerely,
Henry R. Ochel, Jr.

Washington, DC 20530–0001

Dear Mr. Ashcroft:

The intention of this letter is so that I may go on record, per the Tunney Act, as supporting the settlement that was reached between the Department of Justice and the Microsoft Corporation. The court battles between these two entities went on for over three years, and cost millions of dollars. This is time and money that could have been put to much better use.

Microsoft did not get off easy by any stretch of the imagination, and has had severe restrictions placed upon it. For example, Microsoft will now have to turn over data and source code that makes up internal interfaces in Windows' products. This is a first in an antitrust settlement, and is not fair in that it makes them forfeit their intellectual property. I think this goes too far. Plus they will have to deal with a technical oversight committee watching over Microsoft's every move and testing their compliance with the terms of the settlement.

Enough is enough, this has gone on too long, cost too much money, and is too harsh on Microsoft. End this now. I support any settlement, even though it is not 100.*,'o fair, which ends the litigation against Microsoft.

Sincerely,
Vincil C. Bishop, Jr

Washington, DC 20530

Dear Mr. Ashcroft:

I have been following the Microsoft antitrust case for quite some time now, and quite honestly this is getting a little out of hand. I am pleased that a settlement has been reached in the matter, and I believe it is in the best interest of the public to have the settlement finalized rather than dragged out any longer. The economy has suffered as a result of this seemingly endless suit, as has; the technology industry. Naturally, consumers have begun to suffer as well. Time is getting to be of the essence in this case, and I see no reason to reject this settlement.

After extensive negotiations, Microsoft and the Department of Justice reached an agreement on various terms that would prevent antitrust violations on Microsoft's part in the future and allow Microsoft's competitors more of an edge in the market. Microsoft has, for instance, agreed to reformat future versions of Windows so that non-Microsoft software will be able to be introduced and supported within the Windows operating system. Microsoft has also agreed to refrain from retaliation should sofa, are be introduced into the market that directly competes with Microsoft programs. I believe that these terms are fair; in fact, Microsoft has agreed to conditions that extend to products or policies that the Court of Appeals did not, in fact, find to be unlawful.

This settlement is, I believe in the best public interest. No further action needs to be taken at the federal level. I urge you to support the settlement and allow the Justice Department to move on.

Sincerely,
Hao Chen

Attorile3, General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I would like to see the antitrust lawsuit against Microsoft settled. I feel that the case has been active long enough, and that ending it according to the settlement reached in

[vi] US v. Aluminum Co. of America, 148 F.2d 416, 431 (2d Cir. 1945).

[vii] ''Statement by Bill Gates on the Findings of Fact,'' www.microsoft.com/presspass/ofnote/11

November is fair. An important reason I would like to see the case settled is because of the concessions Microsoft is agreeing to. I have not felt positively about the company bundling Windows-related programs onto computers, and the new removal features will give users and computer manufacturers a wider range of choices. Microsoft's competitors will now be able to more easily place their own programs on the Windows platform. Because of that and the other provisions in the settlement, I believe settling the suit is in the best interests of the public.

Microsoft is approaching the settlement reasonably, and I urge you to do the same. Please end the case without additional delay.

Sincerely,

James Putt

January 28, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 205301

Dear Mr. Ashcroft:

I have long been a Microsoft supporter and was angry to see a case being brought against them in the first place. Microsoft is a company that is being punished for simply being too successful and the government simply needs to keep their hands off of business. The settlement, that has taken three long years to work out, I think adequately covers many off the issues that people had with Microsoft. Because of the terms of the settlement, Windows will have greater compatibility with a wider array of products and relations with other software developers won't be tarnished because of this case. I feel that this case will improve things overall in the software industry, if that is it is ever over and done with.

I know that there will he many letters coming in concerning this issue, but I also know that a good deal of them will support Microsoft. Please pay attention to how much the average person care about Microsoft and end any further Federal litigation.

Sincerely,

Beverly Goyen

LTC Bernard R Buchta (US Army, Ret)
5100 Cameron Drive
Troy, Michigan 48098
.. E-mail: MrBuchta@home.com
January 28, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

As a six-year teacher of PCs and the Windows operating system, I would like to voice my strong support for settling the pending Microsoft case.

My experience as a PC instructor and my 26-year's as a military logistics officer has taught me the great value of standardization. Standardization buys everyone a lot. And, after standardization is achieved, ''the payback is forever.'' Witness: When we go to war, we want our bullets to fit into our allies' guns and rifles, and want theirs to fit into ours. We want to be able to share, substitute and interchange their artillery rounds, fuel, and rations, etc., with ours. It's called being ''Interoperable.'' It's a great force-multiplier and keeps costs down.

Standardization, by definition, creates efficiency. It also makes for convenience and ease of use. Now, today, we need standardization and efficiency more than ever. Therefore, the proposed solution seems like a fair compromise that will provide the most effective long-term results for consumers.

As seen with the International Standards Organization, the uniformity of Windows* and its supporting products is an asset to all computer users. This includes business and industry, schools, home users, . .. just everyone!

Technology is complicated enough for the average person, so the advantages Microsoft provides with the scope of their software presence is immeasurable in the form of America's almost seamless transition into the information age with young and old alike. Though I did not respect the government's case, the restrictions imposed with this deal are far more favorable than the possibility, of a corporate break up and chaos within the computer world. Based on the new, more even-handed approach of Microsoft toward competitors, and those who do business with competitors, plus the implementation of an objective technical committee of experts to ensure compliance, it seem to me it would be in the best interest of all parties involved to proceed with this agreement. This will save the consumer a great deal of heartache. It will also permit continued interoperability in future systems and software programs.

Thank you very much for your consideration.

Sincerely,

LTC, OrdC
US Army (Ret)

P.S.

You're doing a great job in the War on Terror.

Don't let them grind you down!

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my opinion in the recent settlement between Microsoft and the US Department of Justice. While I am glad to see Microsoft is not being broken up, I do believe some of the concessions Microsoft are making axe not in the best interest of the public. Microsoft must integrate their software with different software makers' products to allow for more effective development of windows interfaces and technology. But other concessions such as contractual restrictions and windows design obligations seem to go against intellectual property fights and patent laws.

I think that the IT sector is hurt badly enough without any further litigation brought against Microsoft by the nine states who oppose the settlement. I look forward m seeing Microsoft focusing on business and watching one of the premier companies in the world keep on thriving.

Sincerely,

Hudson Zhu

Dear Mr. Ashcroft:

We are writing to urge you to accept the pending deal in the Microsoft case. This agreement offers the competition plenty to work with to gain ground in the software market and should mean an end to this costly government action.

Microsoft is one of the great success stories in the history of U.S. business and should not be disbanded because their competitors can't gain consumer support and market share. With the pending settlement, the company has made extensive moves to give their rivals more opportunities to succeed, from licensing its technologies to disclosing its internal code for the Windows operating system. The added verification of a three-person group of experts to monitor the deal should provide added assurance of the plan's long-term effectiveness.

Please make sure to confirm this court-mediated compromise at the soonest time possible, as these steps provide plenty of options for computer makers and give software developers more than enough chance to compete. Any further action is unnecessary. Please make the right decision.

Sincerely,

Daniel Riemer
Rebecca Weymouth

Re: Comments regarding the Proposed Final Judgement
United States v. Microsoft
Civil Action No. 98–1232

As a United States citizen and experienced computer professional who has at times been compelled to work with Microsoft products, I would like to express my opposition to the settlement that has been proposed for the USDOJ's antitrust lawsuit against Microsoft. I feel that the terms of the settlement as currently specified are weighted far too heavily in favor of Microsoft, and that they will do nothing to prevent Microsoft from continuing to abuse its monopoly position to stifle competition and lock customers into its

products. The terms also significantly underestimate the lengths to which Microsoft has shown it is willing to go to root out loopholes in any agreements it enters into and exploit them in such a way that any intended restrictions on its behavior are effectively neutralized, T also feel that the terms will do literally nothing to ease the market barrier to entry for new products, particularly open-source products such as the Linux operating system, which may happen to directly compete with Microsoft's offerings.

There are a number of problems with the settlement which others have outlined and on which I will not 9o into further details. However, I am dismayed by the extent to which the proposed settlement focuses almost completely on attempting to restrict Microsoft's behavior on the Windows desktop and middleware platforms, to the virtual exclusion of server platforms and other operating system products that are offered or soon to be offered by Microsoft. In particular, the name ''Windows'' is mentioned 56 times in the document, yet no mention is made of the embedded operating system market or of Microsoft's explicitly stated intention to replace the Windows desktop and server platform with the .NET initiative. Furthermore, the definitions of ''operating system,'' ''personal computer,'' ''Microsoft Platform Software,'' and ''Windows Operating System Product'' in the document refer entirely to desktop operating systems intended for use by a single user at a time. This loophole would have the effect of rendering Section III.A moot in its entirety should Microsoft attempt to retaliate against an OEM that is attempting to market a competing SERVER platform on its products. Additionally, the proposed settlement does nothing to preclude Microsoft from dropping the Windows brand name altogether and continuing their customer lock-in, competition-stifling and monopoly-extending behavior on a similar but differently named platform.

Dan Kegel has done an excellent analysis which may be found online at (http://www.kegel.com/remedy/remedy2.html). Mr. Kegel's site also contains links to several other very compelling analyses. Due to the flaws which I and others have pointed out, the settlement as it is currently written does not serve the public interest and should not be accepted without considerable revisions to ensure that the market is not tilted unfairly in Microsoft's favor. Thank you for your time and for considering my point of view.

Sincerely,
Brian Showalter

Dear Mr. Ashcroft:

It has been three long years of litigation between Microsoft and the Department of justice and quite frankly it is tirr a to put this issue to rest. I am an avid supporter of Microsoft and am very pleased that the settlement is acceptable at the federal level hut am puzzled as to the persistence of the nine remaining states, Is it not obvious to them the negative effects that this continued litigation has on the economy and on the Technology industry? I trust that; my views and those of others will contribute to the expeditious settlement of this matter.

Microsoft's innovations have done much to enhance productivity both on and off the job and is doubtless an Industry icon. This company has made significant contributions to the economy and the overall growth of our country and the sooner this matter is settled the sooner Microsoft is able to rededicate their full attention to doing what it does best—innovate Looking closely at the details of the settlement, we will see that Microsoft has already done very much to honor the terms. They have agreed to make their protocols and intellectual property license available to competitors and have made it easier for competitors to promote non-Micro, soft software within windows. The list of measures taken by Microsoft goes on and on and is a direct indication of their willingness to comply.

Sincerely,
Paul Newell

January 24,2002

Dear Mr. Ashcroft:

Winter greetings from Fairbanks!

I am sending you this e-mail to register my support on behalf of the settlement in the Microsoft antitrust case. This is the best resolution available to America now due to a bad situation. The settlement required Microsoft, the attorney generals from the states involved, and the Department of Justice, to state their differences, make concessions, and reach compromises in front of the Federal judge appointed in an effort to avoid countless days of court battles and appeals. In the settlement, Microsoft basically kept itself intact in exchange for giving up its legal rights. Microsoft will release from copyright the software codes of the various internal interfaces and protocols allowing servers to interoperate for its Windows operating system programs. Microsoft must license its other software copyrights and patents to any company that wants to use them on reasonable terms. The ability of a business to enter into exclusive marketing agreements is often very important to its success. Microsoft will no longer be able to contract with computer builders to use its Windows operating system exclusively. Monitoring of the settlement terms by software engineering experts will make sure that the agreement is followed.

The settlement is in the best interest of America. Please use your best efforts to see that the Federal judge approves it. Thank you for your consideration and support.

Sincerely,
Bill Moberly

Dear Mr. Ashcroft:

Microsoft revolutionized the computer age with the advent of its Windows operating system. The standardization and user-friendly operability offered by Windows has a wide appeal and is what pushed Microsoft to the front of the pack. Microsoft's success is due to great innovation and clever products, not surreptitious antitrust activity.

I am content with the pending settlement reached by Microsoft and the government because it is fair. The settlement provisions, such as Microsoft agreeing to share its Windows source code with competitors, represent a very positive development. It is important because they are also interconnected and comprehensive. Microsoft not only will avoid retaliating against software developers who promote software that competes with Windows, but also the computer makers who ship the aforementioned software are also covered. Together, these measures will lead to an increase in competition and therefore remedy the government's primary ''beef'' with Microsoft.

Everyone wins! Thanks.
Sincerely,
Larry Williams

Department of Justice
601 D Street, NW, Ste. 1200
Washington, DC 20530

Dear Ms. Hesse,

This letter is to express my strong support for the proposed settlement between the Department of Justice and Microsoft, It is a fair settlement to the antitrust lawsuit. Fair means that it is a compromise which all sides can live with.

This issue has been going on for more than three years. It has gown into multiple lawsuits and the millions of dollars. The proposed settlement gives the opportunity to close part of the issue. If both the DOJ and Microsoft have reached an agreement, let's move forward for the good of the economy and in the bigger picture, the good of the country.

Sincerely,
Katteena Salgado

MTC–00030019

January 28, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

During these times of economic strain, it is important for us to watch our spending, and to focus on production. After hearing that the recent Microsoft settlement may be even further delayed, I felt the need to write you. After years of well thought out negotiations, it is time to let the terms of the settlement speak for themselves. I support the settlement as it stands

The terms of this settlement have teeth. Not only does Microsoft make various concessions to help promote non-Microsoft software, but they have also agreed to be monitored throughout the entire process. The settlement will require Microsoft to share information detailing the internal interfaces in Windows with its competitors, allowing them to more easily install their own software on machines that use Windows It is obvious Microsoft is willing to work with the many companies in the IT sector so that everyone can get back to business.

I urge you to help get the economy back on track. The delay of this settlement can only slow down our growth in the technology industry. The finalization of this settlement would be a step in the right direction.

Sincerely,
Paul W. Budd

January 22, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I would like to go on record as supporting the settlement that has been reached between the Department of Just?? a and Microsoft. The settlement finally brings an end to the three-year-old antitrust law suit that has been partly responsible for the sharp decline in America's economy. I can remember three years ago when the antitrust skill against Microsoft was first announced.

The stock market and economy immediately started to go down, and now we are in the middle of a recession I have no idea how economists working for the government did not notice the correlation between these two events. In any case, the settlement is fair. The increased information shoring and non-retaliation provisions should be enough to satisfy even Microsoft's harshest crities.

The settlement is the best thing that has come out of the ??titrust su?? between fi?? Department of Justice and Microsoft, and I fully su?? pert it.

Sincerely,
W??mda Bel??

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Attorney General Ashcroft:

As an active computer user, I would urge you to settle the case against Microsoft. I have heard repeatedly of the unfair advantages that Microsoft has over its competitors and believe this to be a ploy on the part of Microsoft's competitors in the industry.

I have owned a Palm Pilot for over five years while using Microsoft Outlook on my desktop computer. I have never had any synchronization problems with the two software programs. The charge that Microsoft is trying to squash its competition by making software that does not work with other programs is unwarranted. Please work to settle this case as quickly as possible so that all companies involved can focus their time and efforts on software not law suits.

Sincerely,
Barney Chapman

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

My comments are made with regard to the proposed settlement in the Microsoft v. DOJ case. I believe it would be improper to allow Microsoft to enter a settlement agreement that does not guarantee that future antitrust violations will be prevented. Microsoft has been adjudged to have violated antitrust laws. Its conduct was so pervasive that the original trial court judge determined that break-up was the only remedy. That decision, but not the decision that Microsoft violated antitrust laws, was reversed on appeal to the Court of Appeals. The case is now back before a new trial court judge following the U.S. Supreme Court's decision not to review the case. The purpose of the remand is to determine the proper sanctions to penalize Microsoft for past conduct and to prevent future violations.

This determination should be made by the court and not by the parties. I am informed that the proposed agreement contains critical provisions that do not go far enough or that place too much discretion into Microsoft's hands. Failure to impose proper and adequate sanctions will set an unfortunate precedent for future antitrust cases and will do little to resolve the issues in the Microsoft litigation.

The court should resist the urge to adopt a settlement and hold hearings to make a proper determination.

Respectfully,
Paul T. Moxley

Renata Hesse
Trial Attorney
Antitrust Division
Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse,

The Justice Department and State Attorney General offices' case against Microsoft was arguably unwarranted from its commencement.

As a concerned and active voting citizen, I am focused on how to keep taxes at a minimum in our state as well as serving as somewhat of a watchdog for the use of taxpayer money at the state level.

There has been no proof of consumer harm from the monopoly behavior of which this technology company is being accused. Yet, this suit continued seemingly gaining steam with every new wave of national media attention that came with it. At present,

consumers are no better or worse off than when it all started. Unless you consider their position as taxpayers, in which case they are much worse for the wear.

More than $I million has been spent by Iowa's state attorney office alone. Millions of tax dollars have also been spent cumulatively by the other states involved in the case and tens of millions more by the federal Justice Department.

Now after cycling through mediators and various bumps in the road toward bringing this case to an end, there is now a settlement proposed. The proposal is one that gives enough to satisfy both sides and addresses the consumer concerns. I urge you to accept it for the sake of the American taxpayer.

Sincerely,
Casey Jones

Anti-Trust Division
US Department of Justice
601 D Street, NW
Washington, DC 20530

Dear Ms. Hesse:

As an individual who owns her own business, I am very interested in seeing the Microsoft case brought to Its end. I congratulate the US Department of Justice for working hard to find a sound way to close this chapter In American legal history. One of the most amazing things about the technology industry Is that we are only just beginning. The innovations and great strides yet to come should be exciting to all of us. However, the costs and risks of Innovation are extremely high. Investors and creators must have the confidence and the will to move forward,

When the move was made against Microsoft, It was felt throughout the entire industry, This action coincided with falling technology stocks and loss of investment capital for start-up companies. The entire Industry felt the blow and its suffering is detrimental to our nation, When our economy was booming there was much talk about the New Economy and the leading role technology stocks had this economy. But this all ended about the time the government threatened Microsoft. This action raised a cloud of uncertainty around the technology industry and many Investors decided it was best to wait it out. It is interesting that when technology stocks began to slide, it hurt the entire market, If tech stocks rebound it can only be a positive sign for our economy, Investors may regain their confidence if the government ends Its case against Microsoft,

Additionally, when the technology industry slows down if no longer has the free??? case brought to an end. It is In all of our best Interests.

Sincerely,
Angie Weible-Jones

January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I think the three-year lawsuit against Microsoft is flawed and unjustified. Microsoft has not done anything that can be called monopolistic. Instead, Microsoft has done wonderful things for our nation, including creating jobs and wealth, as well as making technological breakthroughs. I think it is ridiculous that Microsoft is being forced to disclose interfaces that are internal to Windows operating system products. Microsoft has spent vast amounts of time and money to develop and innovate. They should not be penalized for being the most successful company in the IT industry.

I urge your office to finalize the settlement, although it is flawed, because the alternative of further litigation would be detrimental to our nation's IT sector and economy. I believe it is time to discard the liberal Democrat notion that every competition has to end up in a tie. Thank you.

Sincerely,
Ronald Skaggs

Dear Ms. Hesse:

I write in support of the proposed comet decree between Microsoft and the Department of Justice, After four years and $35 million spent pursuing the lawsuit, it is tune that the country move On to more pressing business.

Microsoft is being adequately reprimanded by the proposed agreement, as the settlement would address many of the major charges against Microsoft. The company would be required to provide technical details to help rivals make products compatible with the Windows operating system. It also bans exclusive* contracts with computer makers that put rival software vendors at s disadvantage.

Prolonging the settlement would deliver a severe blow to California's already shaky financial situation, as our state is expected to pay the lion's share of the remaining trial costs. This is a fair deal—but more importantly, it is time to put tiffs lawsuit behind us for the good of taxpayers. I urge you to move forward with the agreement.

Sincerely,
Robert Branzuela

Dear Ms. Hesse,

I am writing to express my support for the settlement Judge Kollar Kottely is considering to end the US Department of Justice's antitrust suit against Microsoft.

As Vice President of Iowans for Tax Relief, I have monitored the suit against Microsoft from its inception. I stand in stark opposition to my Attorney General Tom Miller's dogged pursuit of it. I believe this case has been a waste of taxpayer dollars at the state and federal level. It has also been an albatross around the neck of the technology industry, making it unattractive to investors and uncertain for companies making long-term decisions.

It is important to the high tech industry, taxpayers and investors to end this case as soon as possible. The settlement that the DOJ, nine states and Microsoft have agreed to is a very good deal for the government and achieves what is most important: ending the lawsuit.

Taxpayers have been bearing the negative impacts of this case from the beginning. They have been funding the suit at the state and federal level—without their consent. They have seen their retirement funds suffer through the downturn the stock market has taken since the ruling for a breakup of Microsoft was made back in the Spring of 2000.

I urge Judge Kollar Kottely to approve the proposed settlement in this lawsuit in order to stop the needless damage done to American taxpayers throughout this process. Thank you for accepting my comments as part of the court record.

Sincerely,
Edward D. Failor, Jr.

Dear Ms. Hesse:

I support approval of the proposed settlement Judge Kollar Kottely is reviewing that would bring closure to the federal government's antitrust case against Microsoft Corporation.

As a grassroots taxpayer advocate, I know firsthand that ending this suit is a priority for taxpayers across Iowa. It is an issue that comes up at many meetings and in telephone conversations with activists on a regular basis.

Taxpayers want to see the suit ended, not just to end the waste of their money, but also to send the message that the marketplace is where decisions about the success and failure of businesses should be made and not courtrooms.

I am hopeful that the judge will approve the settlement and bring an end to waste of federal taxpayer dollars that have been spent on this suit. I appreciate the opportunity to register my opinions on this important issue.

Sincerely,
Jamie Hopkins

Dear Ms. Hesse:

I am writing to submit my position on the Microsoft antitrust case. There was no outcry from taxpayers for action in this, case. Rather, competitors implored the * federal government to make sweeping regulatory decisions picking winners over losers in the market.

Iowa attorney general alone spent more than 3,000 hours working on this landmark antitrust case filing a federal court document asking for $1.1 million to reimburse ''the. state* for the time. Altogether, 19 states tendered a $13 million tab from lawsuit expenses and it has been estimated that the federal government spent, some $30 million.

Nine of the states, the Department of Justice, and Microsoft saw fit to settle. There are many more important issues facing. America and taxpayers deserve to have their funds utilized in a responsible manner, which best serves them With a fiercely competitive technology industry Microsoft, like* any business or individual, should be afforded economic freedom.

I urge you to deliver closure for taxpayers in this case and support the proposed settlement.

Cordially,
Jeff. Boeyink
Executive Vice President
Iowans for Tax Relief

Attention: Renata Hesse
Judge Kollar Kottely
U.S. Department of Justice, Antitrust Division
601 D Street, NW, Suite 1200
Washington, DC 20530

Dear Judge Kollar Kottely:

I am baffled by the fact that the Microsoft antitrust suit has gone this far. Unfortunately, the lawsuit has had serious repercussions not only on Microsoft, but also on the economy and the tech sector in particular. It is time to bring closure to this case so the economy can begin to rebuild.

Even through the economic turmoil this case has created, the public has seen a variety of new products introduced by many different companies. There is real competition in the software industry. So many of us are now plugged into the web, a service that actually bombards us with free software and offers from hundreds of software companies. Many of us have unexpectedly become dependent upon high tech in our work and personal lives and are using products from a wide variety of companies.

Just think how much more innovation and creativity there will be in software and hardware when this lawsuit is ended and the threat of government intervention in the tech marketplace is shelved. I hope you will see to it to approve the settlement in this case. I believe it to be in the best public interest.

Sincerely,
Richard R. Phillips

Ms. Renata Hesse
Trial Attorney Antitrust Division
Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse:

Free enterprise is what made our country a leader in so many sectors of the global marketplace. Today, the nation's has economy weakened and we are facing serious economic concerns. During this difficult time, many of us are tightening our belts and curtailing our own personal family budgets. I hope you will agree that now is the time, to do the same within our government.

In the antitrust case against Microsoft the total to the federal government as of July 2000 was an estimated $30 million dollars in taxpayer funds. The suing states spent millions of state tax dollars on top of that.

The majority of participants reached a long awaited resolution in this case. We applaud those state attorneys general who signed on to this proposed settlement—unfortunately our state attorney general is notably absent .from that list. Nevertheless, settling this case now is the right thing to do for American taxpayers.

Those who came together on this settlement have found a conclusion that will have positive effects for the industry and consumers—those for whom the case was originally brought about. I urge you to approve, the settlement before you.

Thank you for your time and careful consideration.

Cordially,
Edward D. Failor

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Attorney General Ashcroft:

This letter is to ask you to give your support to the proposed agreement between the Department of Justice and Microsoft. I understand there is a 60-day period in which public comment is allowed, and I feel it is my duty to encourage your support of this agreement. There is no need for any further Federal action.

Microsoft has provided so much to this country through creating jobs and opening the way for technological innovation in the software industry. I don't feel it should be punished for its success at the expense of weak competition. The agreed terms provide a major opening for other players to build market share and should be quite satisfactory to Microsoft's opponents. Software developers will benefit from access to Windows internal interfaces and server protocols and will even be able to license Microsoft technology while marketing themselves without obstacles due to computer maker's business limitations,

Please move forward with this plan and allow the competition to prove their worth in the software market without the industry disruption of a corporate break up. Our economy will respond, and so will the general public, to this very fair decision being implemented without further delay, I appreciate your support.

Sincerely,
Mark Coutermarsh

Microsoft''
January 26, 2002
Attorney General Ashcroft, USDOJ
950 Penna. Avenue, NW
Washington, DC 20530–0001

Dear AG Ashcroft,

I believe that your decision to settle this Microsoft suit was a wise one. Anytime that our government takes upon itself the rather extreme position of suing a private business is serious indeed. It is important for our government to encourage innovation and creativity through incentives, rather than discouraging them through convoluted, politically expedient lawsuits. It seems as if this case may have had less actual legal merit than it first appeared. In these days, we should remain especially vigilant at concentrating on far more important issues like national security and budgetary problems. It is good for us to settle this case and move on to these more important matters. The settlement does an excellent job of answering for all the problems that competitors brought against Microsoft. By

allowing manufacturers their own say in how to configure Windows and competitors more access to source code that will improve their programs'' ability to operate in Windows, Microsoft is going well beyond what has been asked of them.

Thank you for your foresight and wisdom in this matter and thank you for taking the time to review my opinion in this matter. It is about time for the Justice Department ask the people who will be most affected by this decision how it will impact them,

Sincerely,

Clark Spencer

R?? Hesse, Trial Attorney
A?? Division
U.S. Department of Justice
601 D Street NW, Suite 1.200
Washington, DC 20530

Dear Ms. Hesse:

My interest in the antitrust case, U.S. v. Microsoft, comes from my concerns as a former state legislative leader and as a satisfied customer of Microsoft products. It is no secret that Microsoft is in an incredibly competitive and combative business climate. Microsoft has maintained its position as the number 1 creator and distributor of office systems software by making sure its customers get the most innovative systems at the best prices. Perhaps this is the reason why this four-year-old case did not show that consumers wars getting the poorly served by Microsoft's business decisions.

I am very concerned about the precedents which could be set if this settlement agreement is not approved, and the ball is again tossed in the air to see where it may land next. Would Microsoft be forced to give away its intellectual property, thus removing its technological edge over its competitors? Is the government going to begin micromanaging the affairs of information technology research and development, thus making it virtually impossible for any IT firm in the United States from maintaining a world leadership status? After four years in the courts, this case should have examined every possible aspect of Microsoft's business pr??tices. I trust that the U.S. Department of Justice and nine of the 18 states in this case used good judgment in reaching their settlement.

I hope that it is allowed to end this case and allow the benefits of the settlement to help kids in disadvantaged schools. Thank you for considering any letter in this public commentary on the settlement.

Sincerely,

Craig Schaunaman

U.S. Department of Justice
601 D Street NW, Su?? 1200
Washington, DC 20530

Dear Trial Attorney Hesse:

I am submitting my comments to support the settlement in U.S. vs. Microsoft Corporation, because the settlement has answered all of the significant issues which have survived the court process so far. While there are those who oppose this settlement, it would be senseless to turn it away. I understand it has taken the Justice Department four years and about $40 million to reach this point. It is time for this case to be allowed to come to a conclusion.

No doubt, Microsoft's competitors will continue seeking any means to gain an advantage over Microsoft inside the marketplace and outside the marketplace. Bringing issues to court is an appropriate action when there are significant issues to be answered.

I think this case has answered these issues, and now it is time for the case to be ended. A decision to not accept the settlement, I believe, would be perceived as an invitation to a fishing expedition which will not serve justice for Microsoft or any other company which is involved in the creation and marketing of new software technologies.

I appreciate your attention to my remarks.

Very truly yours,

John L. Wilds

Renata Hesse
Trial Attorney
Antitrust Division
U.8. Department of Justice
6Ol D Street NW—Suite 1200
Washington, DC 20530

Dear Ms. Hesse:

The best interests of the future of Information technologies are found in the settlement agreement between the Microsoft Corporation and the U.S. Department of Justice. The antitrust case, to a large extent, plowed new ground in the development of regulating a company like Microsoft, which has moved very quickly in the development of its software systems. I have been told the settlement answers the issues that prevailed in the court process.

As a state legislator, I am particularly interested In the benefit to schools with high percentages of low-income children and families. South Dakota has a number of school districts that would be eligible for the supply of hardware, software and support in this offering. I think it is a fair method of resolving a case like this, and it will matter quite a lot to the future of the children included in these school districts.

I appreciate your attention to my statements.

Sincerely

Jim Hundstad

Washington, DC 20530
January 28, 2002

Dear Ms. Hesse:

The settlement agreement in U.S. v. Microsoft can result in a major benefit to education in South Dakota because of the children who would be identified to receive computer systems. I understand the settlement terms seek to send the systems to school districts whore there are disproportionate numbers of children who qualify for the fedela1 school lunch aid program. In South Dakota, there are quite a few school districts which would qualify under that criteria.

State government in South Dakota has focused on making internet use ubiquitous via the Wiring the Schools Program. Our state seeks to use long distance learning technologies to make sure our rural school districts are on even ground with, the wealthier urban school districts. The availability of computer systems via the settlement will make this technique a reality for more and more children,

My letter is sent to support the settlement for the benefits it would bring children, arid to express my hopes that this four-year-old lawsuit can be allowed to be put to rest. The settlement fairly and adequately addresses the pertinent issues in the lawsuit, and the settlement will allow good things to happen to children who need the help, Thank you.

Sincerely,

John McIntyre

US Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse:

My legislative district is home to or borders on the Yankton Sioux Tribe, the Crow Creek Reservation and the Lower Brule Reservation, as well as non-Indian school districts where you will find tow-income families and stressed financial resources for schools. The people in my district are quite diverse, not only in race, but also in terms of ethnic heritage, faith and occupation.

One cause we all agree on is the fact that a quality education will do more to equalize opportunity for children than anything else. For this reason, I am looking forward to the settlement in U.S. v. Microsoft. The installation of up-to-date computers and systems in low income school districts will allow disadvantaged children equal access to

the wonderful learning tools found in the interest.

I also support the settlement became the antitrust case has fully lived its usefulness to addressing the legal questions involved. It is doubtful that extending this case beyond it's 4-year-old lifespan is going to be productive, I hope this settlement wig. be enacted so that everyone concerned may benefit. Thank you for your attention to my letter

Sincerely,
Sam Nachtigal
State Representative
Legislative District 25

January 25, 2002

Dear Ms. Hesse:

My comments are offered here to show my support for the Settlement recently obtained between the Justice Department and the Microsoft Corporation, support this settlement because it will bring an end to a case which has remained in the courts long enough to resolve the relevant Issues Involved.

Beyond the Issues, however, I strongly encourage this settlement because it will surely bring a better quality education to children who need the most help in South Dakota and elsewhere. I have served as a State Representative in central South Dakota where them are school districts in farming and ranching communities which are considered remote and low income. Pr??sentiy, the state is expanding its efforts to Improve the quality and availability of tong distance learning. I know there are plenty of rural school districts wh??ch need competent computer systems to take advantage of the Internet and the state's educational efforts. As an ?? who supports the Ar??sts in Schools P?? am excited by the possibilities of helping more ch??dren enhance their lifestyles through the arts via the Internet.

Thank you so much for allowing my comments to be considered. I think the settlement is a healthy step forward for children and for justice.

Yours very truly,
Joanne Lockner

Dear Ms. Hesse: My letter is intended to articulate my support for the settlement reached in U.S. v. Microsoft and to help complete a four-year-old antitrust case which has addressed the issues which have been deemed valid through the court process. It is plainly clear that this case has had sufficient time and enough resources to fully and fairly consider all of the pertinent issues and develop a remedy that is appropriate to the findings involved.

Any further time and financial resources expended to search for additional issues would, in all likelihood, be a wasteful effort, and not worthy of the resources of the United States government. As an educator, I am very interested in realizing the befits to education and disadvantaged children that would result from the settlement. This penalty seems to be a wise and useful result of this lawsuit. Thank you very much for considering my input on this settlement.

Sincerely,
Nona L. Wilson

Washington, DC 20530

Dear Trial Attorney Hesse: On the issue of the settlement in U.S. vs. Microsoft, let my comments show that I support it because the settlement will have great value to Indian children throughout western South Dakota. The settlement calls for Microsoft to supply computers, equipment, software and the technical support they require to the nation's neediest school districts, as defined by the criteria for federal school lunch aid to students. The U.S. Census Bureau has shown South Dakota has three of the nation's poorest counties, all of which are located on reservations. South Dakota also has plenty of low income counties and school districts in rural counties where farm incomes have floundered.

The settlement should be the last word in the Microsoft controversy. This case has had more than enough time and money to find remedies to the issues brought before the U.S. Department of Justice Antitrust Division. I think it says a tot that nine of the eighteen states in the case (South Dakota decided to stay out of the case) and the Justice Department have declared they have a settlement with the Microsoft Corporation. It's not my intention to retry the issues in this tatter because I have faith that everything which could be done to reasonably remedy the controversy has been done. Thank you for your attention to my comments.

Sincerely,
Henry Maicki

RE: Settlement agreement in U.S. v. Microsoft

Dear Ms Hesse:

Please include my sentiments in the public commentary as a supporter of the settlement agreement. The sooner this case ends, the sooner all parties involved can move on to other matters.

From what I have been able to learn, the settlement ought to be in the final chapter in this case; it has taken four years to reach this point. I understand that the issues which ,,,ere deemed important by the court have been satisfied in this settlement. I believe, the Department of Justice made a wise decision to close the book on this issue after an exhausting effort to examine all pertinent issues.

Thank you including my remarks on this commentary.

Sincerely,
KAREN L. CREW

RE: U.S. v Microsoft

Dear Judge Kollar-Kotelly,

I would like to express my dissatisfaction with the settlement between Microsoft and the Department of Justice.

The settlement made virtually no impact on protecting consumes from companies like Microsoft who have monopolies in the marketplace, It has many loopholes and its level of enforcement is questionable, In addition the settlement leaves Microsoft in a position to continually raise prices for their products. This does not provide consumers the level of protection they need for greater consumer choice. It is my understanding that many consumer groups have opposed the settlement.

The agreement states that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop or distribute software that would compete with their products, but it is Microsoft that will he the final decision maker on that provision, The agreement also ??tates that Microsoft must share certain technical information, but only if it would not the their security or software licensing. Again, Microsoft will be the final decision maker regarding this matter. The settlement does nothing to deal with the effects on consumers and businesses of technologies such as Microsoft's Passport.

I find rhea, inadequacies to be too broad to accept this settlement. I hope that Microsoft will not be able to continue to preserve its monopoly while consumers and competitors are subject to the practices that are supposed to be protected by antitrust laws.

Thank you for your time,

Regards,

William A Carito, President

Dear Ms. Hesse:

Thank you for your service as U.S. District Court Justice.

The agreed upon remedies in the Microsoft case allow computer operating equipment manufacturers limited access to Microsoft Windows to manipulate it in a way that fits their specific needs and product. Permits some adjustments to the Windows operating system to be made by the average user. It affords other technology providers—including Microsoft's direct competitors—the benefit of access to technical specifications. It sets in motion a machine to enforce these remedies.

It does the equivalent of disclosing the recipe for the McDonald's Big Mac special sauce to all competing fast food restaurants. The fact that this only applies to Microsoft and none of the other software or operating system manufacturers provides all its competitors with an unfair advantage.

Yet, Microsoft agreed to settle with these remedies in an effort to end this relentless infinitely long litigation. Hopefully you will add your consent to this agreement.

Thank You,

Jill Stutts

Dear Ms. Hesse:

As the government accounts representative for Comark, a leading regional tech firm, I am thrilled that the long awaited settlement between Microsoft and thee federal government is finally at hand. All we need now is for the Judge to approve the settlement. The Judge, in my opinion, has more than ample reason to do just that.

First of all, let me say how well I believe that government and business can work together for mutual prosperity. It can and does happen—EVERY DAY! I see it when I call on governmental agencies, officials and departments.

I enjoy using technology to build a bridge between government and business. It makes perfect sense. After all, the emerging technologies of today make every segment of society more productive—it makes no difference if the end user works for the public good or a private interest. Let's forge ahead and revitalize the American economy. Let's renew our commitment to research and development, so that we continue to lend the world in productivity and quality. Let's create a new spirit of cooperation between the government and private enterprise. Let's show the rest of the world that American don't take recessions lying down—that we will act to strengthen our country and assist our countrymen.

Now is the time for bold action. I request that Judge Kollar Kotelly approves the settlement.

Sincerely,

Jason Deans

Dear Ms. Hesse:

During my tenure as Assistant Director of Admissions at North Carolina State University, I have witnessed many technological innovations and trends. Most of these have involved the use of a computer, and many involved Microsoft products.

While I cannot say with exact certainty why the federal government pursued an antitrust lawsuit against Microsoft, I can tell you that it has had a devastating impact on technological innovation while it has transpired. Before the lawsuit, tech companies were lauded for focusing on research and development at the exclusion of politics. In fact, few of the leading tech firms employed anyone to conduct government relations programs.

Microsoft learned quickly that its exclusive focus on making life more efficient for everyone had made its competitors struggle for market share. The competitors retaliated by getting into the political game. The lawsuit followed. Even today, Microsoft's competitors are lobbying to conti9nue the lawsuit endlessly.

We should support the federal government and Microsoft in their decision to settle the case. I urge Judge Kollar-Kotelly to approve the proposed settlement of the lawsuit. Let's allow research and development to march ahead.

Sincerely,

Jill Green

Dear Ms. Hesse: Given that my husband is a local television news personality, I follow the news even more keenly than I ordinarily would. I began working at a new job just a few short weeks ago, as the membership and marketing director for Heritage Golf Club in Wake Forest, North Carolina. Unfortunately, the news and my common sense tells me that many other folks won't be fortunate enough to find new jobs because of the poor economic conditions our country is in. We've got to change that.

Our government must demonstrate that it is serious about stimulating the economy. A great first step in that process would be to finish the job of settling its antitrust lawsuit against Microsoft. I think I speak for most American when I say, ''Enough already!'' Both sides have agreed to settle—it's time to move on to something else.

I believe that I also speak for executives who work in membership and marketing when I say that I'm much more efficient in my job because of Microsoft's quality products. Database management, communications, and publications are all professionally done with just a click of a mouse.

The American people choose Microsoft products because they make life better. Life will also be better for many Americans once this suit is settled. I request that 3udge Kollar Kotelly approves the settlement.

Sincerely,

Tresa Jalot

Dear Ms. Hesse:

I have always believed that a limited government is the best government. Our federal government should give businesses and families a hand up when they need it. Our federal government should never stand in the way of American progress.

I believe that the Microsoft antitrust suit has gone far enough. Microsoft is an industry leader. They deserve to be supported. I use Microsoft's technology to run my construction business. Start to finish, I use the many tools they offer to estimate, bid, and execute a job.

In short, their products help me meet a payroll. I want the feds to support Microsoft the way Microsoft supports me.

I request that Judge Kollar Kotelly approves the proposed settlement.

Sincerely,

Dan Mansell

CEO

Subject: Microsoft Settlement

The following are my comments regarding the proposed settlement of the United States vs. Microsoft antitrust case.

Personal Background

I am Information Technology specialist who works primarily in Systems architecture, design, and development, Over the past ten years I have specialized in Information Security. I have been a user of Microsoft products (for both consumers and developers) since the early 1980s. United States w Microsoft Background The District Court and the Court of Appeals concluded that Microsoft had ''unlawfully maintained its monopoly power by suppressing emerging technologies that threatened to undermine its monopoly control of the personal computer operating system market.''

The Court of Appeals held ''a remedies decree in an antitrust case must seek to 'unfetter a market from anticompetitive conduct,'' to 'terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future.'''

Comments

Scope of Protection Is Too Limited

Microsoft's competition in the Operating system area varies greatly in type and size. This competion includes:

. direct competitors, organizations creating different Operating systems (e.g. Linux)

. organizations that build applications and middleware that run ''on top'' of an operating system (e.g. Java and Netscape Communicator)

. organizations that customize operating systems for their clients (hardware OEMs)

. organizations that provide software equivalence of the services of one operating system on a different system or environment.

The proposed restrictions on Microsoft business conduct will provide protection to a subset of these Microsoft competitors. The majority of the Proposed Settlement focuses on providing relief for 1) organizations that provide middleware that run exclusively on Microsoft Windows products, and 2) hardware OEM vendors. There are only minimal changes in the Microsoft conduct to protect vendors of competing operating systems.

Only Large Competitors Are Protected

The size of organizations that develop software varies greatly. Even Microsoft started as a small number of people. Unlike many other businesses, there is not a requirement for a large capital investment to start developing software.

The restrictions on Microsoft conduct apply only to large organizations (both OEM and software developers). Not only does this not work to terminate the monopoly it creates new exclusionary and discriminatory practices which did not previously exist,

Scope of Interfaces to be Disclosed Is too Narrow

The Proposed Settlement requires that Microsoft disclose the APIs for its middleware. However, in the Proposed Settlement the definition of Middleware is so limited that it excludes many of the interfaces required by competitors, The Interfaces to be disclosed need to include not just Application Programming Interfaces (APIs) but all other data structures and protocols externalized by Microsoft software components. The Department of Justice chose not to pursue issues related to the comigling of software and yet the Proposed Settlement assumes to have sufficient knowledge of the separate pieces (middleware vs. operating system) to provide a working definition in the Proposed Settlement. As long as the definition of the Windows Operating Systems is outside the scope of the Proposed Settlement Microsoft will maintain the control over which interfaces must be disclosed. It would be more appropriate to require Microsoft to disclose ALL interfaces between all components of their products.

Not All Middleware Components are Identified.

Given that some of the Microsoft Middleware components that are subject to this settlement are mentioned in the Proposed Settlement, the ''.net'' interfaces, as the Microsoft followon to Java should be included, Given the complexity of the definition of Middleware provided in the Proposed Settlement, it would be desireable to include the complete list of all Microsoft Middleware. This list should be publicly available for the time period that the Settlement is enforced.

Not All Current Versions of Windows are Covered In the Settlement

All current versions of Windows that are based on Win-32 should be covered by the Settlement. This should at least include Windows CE and Windows XP Tablet Edition.

Too Many Restrictions on Disclosure of Security Interfaces

The Proposed Settlement places restrictions on the disclosure of Microsoft security interfaces in the name of National Security. I would suggest that the reverse is true. In the current environment it is important to nurture the development of security functionality. All Microsoft security programmable interfaces, protocols, and date structures should be fully disclosed. The only restriction should be that the content of some specific data elements may not be disclosed (private keys, etc.)

Limits on Which Organizations can Seek Disclosure of Interfaces

The proposed Settlement places restrictions on which competitors Microsoft must disclose their APIs. The competitors must be of sufficient size and have a valid business case. This allows Microsoft to chose which organizations they wish to compete. Even Microsoft in its earliest years would have failed these requirements. Given that in the current environment one of Microsoft's strongest competitors is primarily a volunteer organization (Lunix) it seems likely that Microsoft would not disclose any APIs to ''Free'' Software development organizations.

Poor Enforcement Mechanisms

A good settlement should include enforcement that is easily understood, quantifiable, and verifiable. There should be metrics that can be used over a period of time to evaluate the success of the Settlement. A good enforcement needs to provide quick resolution of issues related the Settlement for the business needs of both any plaintiff as well as Microsoft. Finally, them needs to be a sufficient motivation to insure Microsoft will not violate the Settlement.

The Proposed Settlement provides almost none of the above There is technical review by a three person team but all of their work will be confidential and not subject to review. There is no public or judicial review of the progress of the Settlement. The only option for handling misconduct, outside of the technical team, is to go back to court—one of the slowest ways to resolve any violations. Finally, given that them is no financial incentive required in this Settlement and that Microsoft earns billions of dollars using their current business conduct it is hard to see why Microsoft will be motivated to make any changes in their conduct.

Conclusion

The Proposed Settlement does not provide adequate changes in business conduct of Microsoft to provide a remedy that meet the requirements of the Court of Appeals mandate. In some cases the Proposed Settlement adds new herders to the competition to Microsoft Operating Systems and Middleware. Thus, the Proposed Settlement does not serve in the public interest. I recommend that the Proposed Settlement be rejected.

Sincerely,
Jerry L. Hadsell

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am writing to express my opinion about the recent antitrust settlement between Microsoft and the US Department of Justice. In light of the recent terrorist attack and the ongoing war on terrorism, I think it is absurd that nine states continue to bring lawsuits against Microsoft in a case that seemed unjust from the start.

The settlement is too harsh to begin with since entering into third party exclusive distribution agreements have never been a problem in the past. Also, disclosing internal interfaces that Microsoft spent a lot of time and money to develop is a violation of their intellectual property rights.

I urge your office to free up Microsoft to allow them to focus on business. This will serve the public's best interests because only our strong industry leaders can rejuvenate economy.

Sincerely,
John Stern

Washington, DC 20530

Dear Judge Kottely.

After years of litigation, the Department of Justice, nine state attorneys general, and Microsoft Corporation—the majority of the parties involved in the case—have agreed upon a settlement. It is now before you to make your judgment.

As history has revealed, there is often a six-month to one-year delay before the real estate market feels the effects of a significant economic change in either direction. An economic downturn had begun prior to the horrific events of September 11th. However, it was accelerated after that day. Those of us in the real estate industry are just beginning to feet the market soften.

In addition to the much appreciated efforts of President Bush and Congress to put forth an economic stimulus package to help generate a spark in the economy, settling this case is another small, but important step in that direction.

I urge you to accept the settlement that the majority of the parties involved in this case have agreed upon.

Sincerely,
Kory Nanke

950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

Now that Microsoft and the Government have reached an agreement, it appears that the states are doing to Microsoft what they did in the tobacco suit. They wish to pursue further litigation in order to fund their state governments, and I think it's ridiculous.

Microsoft did not get off easy. Not only did they agree to disclose various Windows internal interfaces to the competition, they also agreed to not enter into any agreements obligating any third party to distribute or promote any Windows technology exclusively.

Let's move on. Our government should focus on more pressing issues, and leave decisions about software company size and success up to consumers.

Sincerely,
Jim Grabowski

Why the Microsoft Case Should Be Settled
Alexis de Tocqueville Institution
Washington, DC
January 22, 2002

The Hard Truth About Invention in the U.S. Marketplace Two courts have reaffirmed that Netscape nor its browser were shut out of the marketplace. The browser wars produced a winner and a loser; and Netscape was the loser. However, within thousands of briefs and legal arguments criticizing the U.S. vs. Microsoft settlement is the repeated concern about the future of new Netscape's in the technology sector. Almost every other issue is tangential, and we must differentiate the arguments properly.

We see an interchanging of terms being used, specifically, ''....the settlement should make the marketplace safe for firms to compete with Microsoft...'' vs. ''...the settlement should be safe for firms to introduce new products...ie. like Netscape

Navigator...'' The Department of Justice has proposed a settlement that properly speaks to its duty—to introduce a remedy which allows firms to safely introduce new products. Microsoft has agreed to the rules; which include a mandate that Microsoft disclose any information necessary for rival firms to produce fully interoperable products with Windows for competing software and servers.

The reason why critics want a settlement which goes further is because they want Microsoft completely out of the way. The case is merely obfuscation. With billions of dollars in resources, Microsoft's competitors want every advantage because 1) the marketplace for new technology is overwhelming and having a chief competitor eliminated makes things a little easier and 2) the competitors lobbying for a far-reaching settlement are among the most aggressive and fierce technologists in the world.

The reality is that the marketplace, particularly the marketplace for new technology has never been safe from a competitor. What Microsoft's competitors want is an oxymoron because no technology product is ever ''competition-free'' or guaranteed success in the marketplace. This benefits consumers, the country and ironically inventors themselves, which makes it relevant to observe the reality of the marketplace (beyond the courtroom) for a moment. Great Inventors Must Be Fierce Strategists

Every inventor and innovator small and large must face the formidable odds to succeed in the marketplace for new technology. Since the day the first idea was registered in the U.S. patent office, countless inventions and innovations have become cinders in the furnace of competition. Relentless markets in America only sustain the fiercest competitors, without exception. Technologists rewarded with fabulous wealth and fame did so at the expense of employing hard-hitting, merciless strategies. Regardless of ingenuity, technologists without the ability to navigate in the marketplace were failures; and lucky to even receive credit as creators of their own inventions.

The marketplace for food, furniture and other goods each have their challenges. But, the technology marketplace is unique because it demands both inventive genius and keen business savvy. The combination of the two is rare in individuals and corporations, and particularly scarce among pure inventors such as physicists, mathematicians or engineers. From the light bulb to the PC operating system, every innovator that history has been kind to, had the indomitable capability to merge intellectual power with commercial insight. In the end, technologists with these qualities became far more successful than their counterparts with better inventions or greater talent.

Competitive Inventors Preserve U.S. Leadership

However, America's owes its technological leadership in the world to its competitive battleground. Although education, vigorous intellectual property rights and democracy are also credit to American invention, its ability to surface inventors with commercial savvy, make it a source of the most competitive innovations in the world. In the end, the U.S. is a loader in world-changing innovations, at the expense of sustaining a ''bare-knuckled'' marketplace.

After an excruciating and lengthy examination by the court system, the federal government and 9 states (actually 41 when you consider the states that never filed suit) agree on the U.S. vs. Microsoft settlement. Regardless of the differences among the parties, we can't expect any ruling to settle the differences between Microsoft and its competitors. However, this dissatisfaction is in the best interest of our country and will only spawn better ideas and products that will propel the U.S. to new heights. U.S. technological leadership depends on the undying will of its innovators to be no. 1.

The ''Electric'' War Between Edison and Tesla

The debate over Windows is similar to many stories about wars between rival innovators throughout history, particularly aspects of the Thomas Edison story. Although the Edison-Tesla rivalry did not involve anti-trust law, the contest details the reality of the ''invention business'' in the most competitive capitalist society in the world.

Contrary to popular belief, the idea of electric lighting was not Edison's. A number of individuals had developed forms of electric lighting, but none had developed a system that was practical for home use. Using lower current, a small carbonized filament, and an improved vacuum inside the bulb, Edison was able to produce a reliable, long-lasting source of light. Thomas Edison didn't ''invent'' the light bulb, but became a legend for making a 50year-old idea a fantastic commercial success.

Edison's fiercest rival, was an ex-employee named Nikola Tesla from Smijlan, Croatia. Tesla was a genius who invented the fluorescent bulb in his lab forty years before industry ''invented'' them. At World's Fairs and similar exhibitions, he demonstrated the world's first neon signs. Perhaps Tesla's greatest invention was the AC (alternating current) system we use in our homes today. DC (direct current), an inferior system, ironically, was designed by Thomas Edison. After years of fierce wars and debate between the Tesla and Edison teams, AC became the accepted system of transporting electricity. In fact, Edison later admitted that AC was the better system. While both men were geniuses ahead of their time, the biggest difference between Edison and Tesla was their perspective and approach to invention. Edison had a keen understanding of capital markets and the strategies necessary to finance, promote and commercialize his inventions. Tesla was a great theoretician who worked perpetually to finance experiments.

Edison held a world record 1,093 patents and died a wealthy, famous man. Tesla received over 800 patents, died penniless and was literally erased from the history books. In fact, Tesla was poor the last thirty years of his life and arguably would have eclipsed Edison's patent record if he had the capital. Remembered for many things, Edison was known for saying, ''I have more respect for the fellow with a single idea who gets there than for the fellow with a thousand ideas who does nothing.'' Edison's vision reflects the view of anti-trust law, that the greater value is in a stable marketplace, not the resurrection of competing ideas.

The Other Truth about Netscape

The Appeals Court ruling reflects another hard truth—Netscape fell, because it did. The DC Circuit rejected the course-of-conduct theory, under which Microsoft's specific practices could be viewed as part of a ''broad monopolistic scheme.'' This obviously has made anyone that viewed Microsoft as an evil-doer exponentially dissatisfied with DOJ's settlement. But again, is the responsibility of the DOJ to make the world safe from Microsoft? Netscape maintained its Internet dominance until 1997, when Internet Explorer's fourth version was able to lap Netscape. Netscape Navigator never regained its prominence. In addition, by that time, the Netscape product was slow, outdated, and unstable, falling to a swifter surging Internet Explorer.

But perhaps the most unmentioned reality regarding Netscape's fall was their announcement to all (Microsoft included) that their strategy was to be the middleware that would be the ''new'' Windows, removing Microsoft's flagship product from dominance. Hindsight is 20/20 but when you consider how far ahead Netscape was in front of Microsoft, there are infinite what if's'' to consider if it had been mum about its strategy to take on Redmond. Microsoft had all but ignored the Internet and it is very questionable if they would have been able to play catch-up to a well-funded and branded Netscape team. The outcome of this possibility almost completely counters any damage claims in their civil suit recently announced. After all, Netscape's grand plan was never realized, thus the future is incalculable especially when taking into consideration the hubris of Netscape.

Innovators are the Lifeblood of U.S.

Today, new technology firms use every means available to compete including spending billions of dollars on research and development. Sun Microsystems, IBM and AOL and Microsoft combine to spend over $100 billion annually just on research and development. Firms spend exorbitant amounts of money to create and protect to new products. But again, this competition is to the benefit of inventors and the U.S. marketplace.[1] Recently, the United States Patent Office released its annual list of the top ten private sector patent recipients, it reported that for the ninth consecutive year, IBM received more patents than any other organization in the world. ''I am proud that American corporations are leaders among U.S. patent holders,'' said James E. Rogan, Undersecretary of Commerce for Intellectual Property. ''Patents promote technological progress and are a potent source for competitive free enterprise.''

USPTO's comments echo the importance of preserving the status quo of the U.S. marketplace. In the end, it is in the interest of innovation that we close the chapter on

[1] U.S. Patent and Trademark Offfice. January 10. 2002.

U.S. vs. Microsoft. The judicial process has sorted through the facts and come to judgment. Those dissatisfied with the settlement should be reminded by W. M. Deming's famous quip, ''Learning is not essential, survival is not mandatory.'' Deming's point speaks not only to the Microsoft case; but the hard truth about invention and success in the technology business. The court system has done its job, and enough precious time has been dedicated to legal jurisprudence, It is now the time for Microsoft and its opponents to tuck in their chin, learn from their mistakes and return to the marketplace.

U.S. PATENT AND TRADEMARK OFFICE (USPTO) LIST OF TOP 10 PATENT RECIPIENTS

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I write to inform you of my support for the position taken by Utah's Attorney General concerning the proposed Microsoft settlement.

It would have been easy for Utah's Attorney General, as a Republican, to join with certain other states in accepting the proposed Microsoft/Justice Department settlement. He has been criticized by some for being anti-free market. However, this case can not be reduced to such simplistic sound bytes. His support for a free market is not at issue. Microsoft was found in violation of law by a court of law. The real question is what action should be taken to prevent similar violations from occurring in the future and what penalty should be imposed upon Microsoft: for past violations. The proposed settlement does not appear to reflect the extent of the findings of violation made by the trial court and sustained by the appellate court.

I applaud Attorney General Shurtleff for holding fast to the rule of law, notwithstanding the pressure brought to bear through campaign contributions and by certain public officials who would have him take a position that may not be in the best interest of the citizens of the State of Utah.

If the settlement does not properly terminate present antitrust violations, penalize for past violations, and prevent future antitrust violations, then it should not be adopted. I would prefer this court hold evidentiary and legal hearings and impose a remedy warranted by the facts and law. In addition, the government should zealously enforce the remedy to avoid future abuses.

Respectfully,
E. Blaine Rawson

Dear Mr. Ashcroft:

The Microsoft case was ridiculous. In my view, it showed how the U.S. Government can step in and attack a company because it has a huge market share. The competitors complained and said Microsoft was unethical even though the stone attackers'' business practices are largely the stone. The settlement on Microsoft's behalf shows how cooperative the company can be in a reluctant situation. It includes compromises that far exceed the original scope of the lawsuit, and gives their competitors several unfair advantages.

Please approve the settlement and let Microsoft put the lawsuit behind them once and for all.

Sincerely,
Jerol Love

Dear Mr. Ashcroft:

I am writing this letter to inform you that I am fully in support of the settlement reached between Microsoft and the Department of Justice. The legal battle that preceded this settlement drained tax funds, and challenged state budgets. This suit was initially brought about to help give the consumer more choices in the IT market; instead, it has succeeded in draining money from our pockets.

This settlement is fair and pragmatic. Microsoft has gone far and above what it should have needed to do to get this issue resolved. The settlement addresses concerns that were not even part of the original suit, and Microsoft even compromised some of its intellectual property to make the settlement adequately thorough.

Please prevent any further abuse of our tax resources. The right thing to do would be to finalize the settlement and resolve this issue promptly. We muse give Microsoft way, so it can return to innovation—

Sincerely,
Curt Fluegel
General Partner

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Since the Department of Justice is accepting and publishing public comments for the first time since the antitrust suit was brought against Microsoft over three years ago, here are my comments.

Microsoft agreed to the right of third party's to exercise any of the options provided by the settlement that would infringe on any Microsoft intellectual property right. Microsoft will provide the third party with a license to the necessary intellectual property on reasonable and non-discriminatory terms.

Microsoft also agreed to the establishment of a technical committee that will monitor Microsoft's compliance with the settlement and assist with dispute resolution. The technical committee will consist of three experts in software engineering. Any third party who believes that Microsoft is not complying with any provision of the settlement will be free to lodge a complaint with an internal Compliance Officer at Microsoft, as established by the settlement, the Department of Justice, or any of the State plaintiffs that are party to the settlement. Now that Microsoft has agreed to those terms, shouldn't Government agree to end litigation?

Sincerely,
Syed Kamal

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

This letter will inform you of my opposition to the proposed Microsoft settlement. I understand that Microsoft was found to be in violation of the antitrust laws of the United States by virtue of uncompetitive conduct, particularly in its marketing practices. It is important that the market have viable competitors, including those who would make compatible products. Microsoft's practices have destroyed any semblance of an open market place. The proposed settlement appears to be little more than business as usual. Microsoft has once again won, and the consumer has lost. The proposed settlement does not resolve the problems identified by the trial judge, it has merely postponed their resolution because the agreement fails to prevent future violations and does little to correct past behavior.

I am not advocating that Microsoft should be broken up. I am a shareholder and believe that Microsoft is still a strong company that holds value for investors. However, I believe that Microsoft will succeed in a competitive market place. Breaking up Microsoft would not be in the best interests of investors. By the same token, adoption of the proposed settlement agreement would not be in the best interests of the consumers.

Since the parties have not achieved a reasonable settlement, it is time for the courts to do so. Please reject the proposed settlement and conduct such hearings as may be necessary to determine what appropriate remedies should be employed.

Respectfully,
Suzanne F. Thorup

Washington, DC 20530–0001
January 24, 2002

Dear Mr. Ashcroft:

In a few days, the Justice Department will make its final decision on the Microsoft settlement. It is my fervent hope that the government accept this settlement from Microsoft. I feel that Microsoft is giving away too much to the competition, but I completely support Microsoft's efforts to end this three-year legal war over antitrust behavior.

The federal government's actions toward Microsoft have been abominable. I am completely against government involvement in private business affairs. The freedom to innovate must be preserved if our country is to continue to be a world leader This country's strength has been built from our free enterprise system. Further government involvement will continue to hurt our already weak economy.

As a real estate agent, I have exclusively used Microsoft Windows and Microsoft Office for years and it has indeed contributed to the success of my small business. I also use Internet Explorer, my web browser of choice. Nothing on the market compares to Microsoft's software products. The competition can put their software on Windows and remove Microsoft's, but I will always use Microsoft's products.

I have confidence that Microsoft is doing what is in their best interest, to get out from under the hand of government involvement. I see nothing but positives for the economy and for the computer industry, once Microsoft is allowed to work entirely free from further government entanglements. Please do what I feel is best for the economy and the people of this great nation, confirm the Microsoft settlement.

Sincerely,
Maria Ferrer

Re: Microsoft Settlement

Dear Ms. Hesse:

We believe the Revised Proposed Final Judgment (''RPFJ'') that the federal government and some of the plaintiff states have reached with Microsoft should be adopted, and that the proposals of the nine states that continue to pursue this litigation (the ''Litigating States'') should be rejected. That is so, in our view, for four main reasons. First, the RPFJ will serve the central goal of antitrust law—benefiting consumers—far better than any of the states'' proposed remedies. Most importantly, it allows Microsoft to continue selling a single, uniform operating system under the Windows name. This will directly benefit all the consumers who have relied on Windows' continued availability when deciding which computer and software to purchase.

At the same time, the RPFJ will increase the range of choices available to consumers by requiring Microsoft to enable both computer manufacturers and end-users to turn off Microsoft's middleware products such as its Internet browser, instant messaging tools, media player, and email utilities. Consumers will therefore be free to sample and choose among a variety of middleware utilities from various companies. The RPFJ thus strikes a sensible balance between the goal of giving rival middleware producers access to Microsoft's customers, and the equally important goal of avoiding anything that would destabilize the Windows platform on which consumers—and indeed most of the software industry—depend.

The Litigating States' proposals strike no such balance. For example, the Litigating States would require Microsoft to sell stripped-down versions of Windows at court-mandated prices, without regard for the technical advantages of integrating middleware and operating system functions, or for the importance of a stable, uniform operating system. Computer manufacturers would then be able to patch competitors' middleware into the Windows system and sell the hybrid product to consumers without giving them any guidance as to how to restore their computers to the original Windows settings. This would effectively destroy the Windows standard. That will not benefit consumers; it will harm them. And it is anti-competitive, not pro-competitive.

Second, the RPFJ is narrowly tailored to the findings of illegality affirmed by the Court of Appeals. The RPFJ thus enjoins the types of conduct held illegal by that court—primarily certain exclusive dealing arrangements and threats of retaliation—in language broad enough to preclude similar behavior, without losing sight of the limited Court of Appeals holding.

In contrast, many of the Litigating States' proposals have nothing to do with any of the issues in this case, much less the Court of Appeals' decision. For example, the Litigating States would require Microsoft to inform them sixty days in advance of any acquisition of technology or other intellectual property. Yet this ''remedy'' cannot be tied to any element of this case, let alone to any finding of liability that was affirmed on appeal. Other proposals are simply overbroad or unworkable, such as the proposal that Microsoft notify any software developer sixty days in advance of any action it intends to take that might have an impact on the interaction between the developer's middleware and Windows,

Third, the remedy in this case must be one that the federal courts can administer, not one that will turn the District Court into a regulatory agency. Again, the RPFJ strikes the needed balance. The Technical Committee and the Compliance Officer that it would install are unquestionably intrusive, but at least the Committee would properly make its reports to the plaintiffs, who then would decide what course to pursue,

By contrast, installing a Special Master with his own staff and the power both to investigate and to judge, as the Litigating States propose, would drag the federal courts into a prosecutorial and regulatory role that they are ill-suited to perform. The Litigating States' substantive proposals take a similar, regulatory approach. They would mandate product design and pricing, force Microsoft to distribute its competitors'' products, and give Microsoft's rivals a mechanism to try to block any decision by Microsoft that they dislike.

Finally, we believe that entry of the RPFJ will respect and promote the primacy of the U.S. Department of Justice in enforcing federal antitrust law. To be sure, the States may have some role to play in this area. But it would be bad policy to allow a small group of state attorneys general to trump, in effect, the Department's decision to settle on reasonable terms an antitrust case that has such enormous implications for the national economy.

For all these reasons, we urge the District Court to enter the RPFJ as its final judgment in this case. We believe it would benefit consumers, effectively address the Court of Appeals' findings, and provide a workable resolution to this long-running litigation.

Sincerely.
Griffin B. Bill

Dear Ms. Hesse:

My pursuit in public service has been to make sure that taxpayers and justice are well served in all matters. In the settlement proposal affecting U.S. v. Microsoft, I am concerned that enough resources in time, money, attention and personnel have been used to pursue the issues raised in this anti-trust case.

At no time in the proceedings has it been established that consumers have been wronged by Microsoft's actions. In fact, I think consumers who've used Microsoft have been well pleased with the quality and cost of the company's products and services. The issue seems to focus on Microsoft and its ambitious competitors, and I think this case has expended enough resources to determine what is fair. I strongly support putting the settlement into effect.

I appreciate your attention to my statements.

Sincerely
Representative Bill Napoli
Legislative District 35
Assistant Majority Leader

601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse:

This letter is to be entered in the public input phase of the settlement in U.S. v. Microsoft. I support the settlement for the following reasons:

. The settlement answers the issues which were found to be valid at the end of this 4-year-old case.

. The settlement will conclude a case which has used sufficient time, personnel and money to seek out every possible issue and fully explore each one.

. At no time during the past four years has it been established that consumers have been wronged by Microsoft's actions.

. A significant benefit from this case to school districts which hold a disproportionate share of economically stressed children is the dedication of hardware, software and tech support to bridge the IT gap for these children.

Frankly, the continuation of this case will not benefit justice or the information technologies industry. After more than four years, an antitrust case of this magnitude should have yielded all of the benefits that are reasonable.

I appreciate the opportunity to submit this letter.

Sincerely,
Brock L. Greenfield
State Senator
Legislative District 6

Renata Hesse, Trial Attorney
Antitrust Division
United States Department of Justice
601 D Street NW—Suite 1200
Washington, DC 20530

Dear Renata Hesse:

I am a strong supporter of the use of information technologies as a major resource of developing the economy of South Dakota. Efforts achieved in the state's Wiring the Schools Program and long distance learning systems will reap huge dividends as the so-called digital divide is erased between urban America and rural states. The allocation of computers and backup support which is expected from the settlement proposal in the

antitrust case, U.S. v. Microsoft, offers another leap forward because those systems are targeted for use by low income school districts. South Dakota has many of those districts which should qualify for the computer systems. That is one reason I support the settlement.

The other speaks to how the justice system is used to pursue justice. This antitrust case was established to explore Microsoft Corporation's practices as they relate to its competition. It has not established any harm to consumers, which should be a strong consideration in the value of this settlement. From what I have been able to read and understand, the settlement adequately addresses the issues which have remained viable throughout the court process. I think this case has reached the point when it is time to say enough is enough; it's no longer necessary to keep this court action going.

I think justice has been pursued, and the pursuit has not wandered outside the lines of what is a proper action by the courts. My hope is that this process is not allowed to wander outside the lines by rejecting the settlement. Thank you.

With best regards,

Phil Hanson

U.S. Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Renata Hesse:

My letter is being sent for the settlement phase in U.S. vs. Microsoft. I have followed the case in the news and I have wondered why so much money and attention has been consumed to pursue Microsoft on issues which could have been decided in much less time. Frankly, the case has the public appearance of Microsoft being punished for leading the competition with software which is more competent and less expensive for average users than Microsoft's competitors.

Skepticism aside, I hope the settlement is enacted because this issue has had its day in court and because the issues which were believed to be important have been answered. I am very pleased that the U.S. Department of Justice reached an accord with Microsoft. The fact that such an accord was reached by the federal government and nine of the states involved in the action should weigh heavily in favor of allowing thin settlement to move toward enactment.

Thank you for your attention to my letter.

Sincerely,

Ron Sauby

Attorney General John Ashcroft
Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I was relieved last November when a settlement was finally proposed in the Microsoft antitrust case. I do not think Microsoft has done anything worthy of such harsh litigation, and I think that a settlement would, at this point, be the best thing that could happen in the case. To my dismay, however, Microsoft's competitors, who have been relentlessly pursuing the destruction of Microsoft from the beginning, are currently engaged in undermining the settlement and seeking further litigation against Microsoft. Ever since this case was brought to the federal courts, the economy has declined and the technology industry has suffered. The measures Microsoft's opponents want to pursue will ultimately de more harm than good, and I do not believe that the public should have to suffer simply because Microsoft's competitors want to make some money.

Microsoft has been very generous in this suit. I think Bill Gates and his lawyers have shown a great deal of pragmatism in making so many unnecessary concessions. They have gone beyond what was required of them in the lawsuit, and have agreed to terms that restrict parts of their company that have not violated antitrust law,, The settlement appears to be very fair, and I can honestly see no good reason for additional litigation. Microsoft has agreed not to cater into any contract that would require a third party to sell Microsoft software at any fixed percentage. Microsoft has also agreed to change its Windows operating system so that it will support non-Microsoft software, and Microsoft's competitors will be able to introduce their own software directly into Windows.

I believe it is time to let Microsoft gel back to business, and the only way to do that is to settle the case. The proposed settlement is sufficient to prevent future antitrust violations, and there is no need to continue federal action. I urge you to accept the settlement.

Sincerely,

Ronald Chikalla

RE: Settlement of U.S. v. Microsoft

Dear Ms. Heese:

I am writing in support of this proposed settlement. I deeply appreciate the efforts of our government in pursuing antitrust activities and believe that this settlement is a positive development in this pursuit. As the former director of a state agency I know that the government and Microsoft lawyers have fought diligently in this important case. I would like to see the case resolved so that private industry can return to competing in the marketplace. The technology sector of our economy is looking for a signal to get moving again. The settlement of this case can provide the right signal that competition is alive and well through innovation and hard work and not continued litigation.

Please know that t appreciate your consideration of my views on this important matter.

Sincerely,

Washington, DC 20530–0001

Dear Mr. Ashcroft:

Microsoft has been dealing with a hostile government for over three years now; it is time to put on end to the lawsuit. I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. The critics are wrong when they claim that Microsoft is getting away with lenient terms. The settlement was arrived at after extensive negotiations under a court-appointed mediator. Microsoft has agreed to terms that extend well beyond the products and procedures that were actually at issue in the suit, simply for the chance to put the issue behind it. Microsoft has given up the right to charge different computer makers different prices, thus losing leverage useful in getting its software promoted. It has also agreed to allow computer makers and users to remove access to Windows technologies,

features, and bundled applications, in favor of competing software. Microsoft has even committed competing software ?? works better with Windows.

It is time that the government stops harassing Microsoft and allows free enterprise to re-emerge. The terms of the settlement are fair and the government needs to accept it. Please exercise your influence and authority to help make that happen.

Sincerely,
James Ferraro

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

This letter will inform you of my opposition to the proposed settlement of the Microsoft lawsuit. Although we are from different political parties, I agree with the Utah Attorney General's reasons for opposing file proposed settlement—the State of Utah must defend laws that protect our consumers, protect free enterprise, and promote competition. It was determined by the trial court that Microsoft violated the antitrust laws of the United States. That decision has been reviewed and affirmed by the Court of Appeals, and the United States Supreme Court has determined not to hear a further appeal by Microsoft. Microsoft has had ample opportunity to defend itself against charges that its actions thwarted competition in the market. These actions have had an adverse impact on Utah consumers, including some who are my constituents.

Any settlement approved, or any remedy imposed, by the court must assure that Utah's consumers, including its businesses, are protected from Microsoft's anti-competitive behavior. I am informed that the proposed settlement allows Microsoft too much discretion in determining whether or not certain of the settlement provisions apply. Such provisions do not protect free enterprise or promote competition.

Rather than adopting settlement provisions that might lead to future litigation, I recommend that hearings be conducted by the court to determine an appropriate remedy that will ensure fair competition into the future.

Sincerely,
Representative Judy Ann Buffmire

January 28, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

To protect the idea of free enterprise in this country, please make sure to confirm the proposed agreement with Microsoft Corporation. Microsoft has developed a great product, which tile public is satisfied with, so any further attempt to infringe on that could only damage our many years of progress in the PC industry.

Under the review of a committee of software experts, these terms enable computer makers to re-configure Windows with their own preferred software offerings, and the ability to manipulate their supporting features, without reprisal from Microsoft. The top 20 manufacturers will be able to operate without preference on terms and conditions to license the Windows operating system and any requirements to distribute or promote Microsoft technologies. Not only is the offer generous, but also some of the proposed measures even exceed the Justice Department demands in order to encourage swift approval of the deal.

It's time to put the legal activities aside and complete this agreement at the earliest opportunity. There is no reason for further action against Microsoft, as the company should continue freely to develop the high-quality software that consumers want and businesses need. I look forward to your approval.

Sincerely,
Miguel Cordero

MTC–00030081

January 28, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am in favor of the decision to settle the Microsoft antitrust lawsuit. Little will be gained by continued litigation, especially in light of the vast concessions Microsoft has made. Contrary to assertions made by their competitors, Microsoft will not be getting off easy. The settlement agreement will impose numerous restrictions on the way Microsoft conducts its business. For instance, Microsoft will not enter into agreements obligating third parties to exclusively distribute Windows products. They have also agreed not enforce many of their intellectual property rights. Instead of calling for more litigation, Microsoft's competitors should be overjoyed by the changes that will be taking place in Microsoft's business practices. I tort hopeful the court will approve the settlement. The time has come for fine parties to move on, and to focus on other matters.

Sincerely
Michael Baldasare

January 26, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Attorney General:

With as many people and small businesses that depend on Microsoft and their products on a daily basis, and considering how large an impact the company has on the U.S. economy and balance of trade, I cannot see how the Justice department thought it a good idea to attack Microsoft. It is like shooting ourselves in the foot to attack one of, if not the, top businesses in the world. That is why I was so pleased to hear that you had reached a settlement, This settlement will mean an end to this issue once and for all. It is harsh enough to satisfy Microsoft's competitors and yet will leave the company in one piece to continue innovating. I only hope that they will respect how much Microsoft is giving up by allowing full access to key components of its software. This will allow anyone to use it to enhance their products to better compete with Microsoft's, without retaliation from Microsoft.

That, without all the other pans of the settlement, should be enough to satisfy Microsoft's critics. Microsoft has simply gone beyond what was expected of them in order to end this case. Let's let them move on and get back to business as usual. In my opinion, this will make a major part of ending our recession.

Sincerely,
Lee & June Johns

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I write this letter to express my concerns about the proposed Microsoft settlement. I am a 17-year old high school student working on a merit badge for my scouting activities. My parents own some stock in Microsoft, and I have discussed the issue with them to help me better understand the issues before making up my mind concerning what type of letter to mite. I am told that the Microsoft proposal is the result of court action in which Microsoft was found to be in violation of antitrust laws. I commend Microsoft for its ingenuity and creativity in bringing products to market, however, I believe Microsoft may have abused its market power to the

detriment of its market competitors and consumers.

The courts have determined that Microsoft has violated antitrust laws. The only thing to determine is what should be done. My parents suggested to me that breaking-up Microsoft may not be in the best interest of its shareholders, however, from I have learned, the proposed settlement has many problems and may not prevent future violations. This would not be in the best interest of the shareholders either.

Please hold hearings to decide what remedies should be imposed, and do not adopt the proposed settlement agreement.

Thank you for your consideration.

Sincerely,

Paul C. Thorup

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I am a concerned consumer who believes that the federal government is not looking out for my best interests in supporting the proposed settlement of the government commenced lawsuit against Microsoft.

I have been concerned for a long time that Microsoft's actions were not in the best interest of consumers and that its practices were uncompetitive, designed more to monopolize than provide reliable products to the market. My concerns were realized when the Department of Justice was able to prove its antitrust case against Microsoft. Although the Court of Appeals determined that breaking Microsoft up would be too punitive, the Court did uphold the district court's findings that Microsoft violated antitrust laws.

If breaking up Microsoft is too harsh of a remedy, then the proposed settlement is too lenient of a remedy. Some of the proposed settlement provisions do not go far enough and others are either not easily enforceable or are subject to conditions that would allow Microsoft to determine whether and how to comply. For instance, one of the driving issues of the lawsuit dealt with Microsoft's failure to share information with others to allow for the reasonable development of compatible software. The proposed settlement agreement would allow Microsoft to determine whether disclosure should be allowed, based upon Microsoft's determination that disclosure would harm Microsoft's security of software licensing.

Settlement should be allowed only if past violations are cured and future violations are prevented. The current proposal, in my estimation, does neither and should be rejected.

Your truely,

Michael Sonntag

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I am a supporter of the free enterprise system and believe that government should generally allow businesses to operate and compete without government intervention. Nonetheless, I am informed that a settlement has been proposed in the Microsoft case that may not be in the best interest of average consumers like me.

I understand that the original trial court held that Microsoft violated U.S. antitrust laws and that the Court of Appeals did not overturn that portion of the trial court's decision. If Microsoft has violated antitrust laws, they have hurt rather than promoted competition which is one of the most important aspects of a free enterprise system. This call not be good for the average consumer. If the proposed settlement does not resolve the antitrust violations, then Microsoft's conduct could continue into the future, therefore, I ask that you not accept the proposed settlement and take whatever action may be appropriate to properly protect the interests of consumers.

Sincerely,

Mike Browning

Dear Mr. Ashcroft:

I am writing to express my opinion of the recent settlement between Microsoft and the US Department of Justice. The lawsuits have been too long to date and need to be ended. I feel that Microsoft has been a victim of personal vendettas and greed and has gotten a raw deal even in temps of the recent settlement.

The settlement is harsh and requires Microsoft to give up interfaces that are internal to their Windows products and design future Windows version so that computer makers, software developers, and consumers can more easily promote their own products. These concessions should be enough to appease all parties that are part of dispute so it amazes me that 9 states want to continue litigation. Please ignore this opposition for the sake of our IT sector and economy. Our nation needs your office to take a strong stance and uphold principles of free enterprise.

Sincerely,

Ann Poh

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

This is to address the recent settlement between the Department of Justice and Microsoft. I want to give my support to this agreement. It has gone on far too long. I opposed the initial lawsuit. It was not warranted. Microsoft, through Bill Gates, has done nothing but benefit the consumer with his technology. I use Microsoft software programs, operating systems, everything, because they work better than the other programs on the market. If another firm were to put out a better product, I would use that one. The antitrust suit was nothing more than a bunch of crybabies getting together and trying to cripple the one firm they could not compete with, and the Department of Justice fell right into line. I know there is a great desire to break up Microsoft, but I cannot think of any thing worse for the industry or the country. AT&T was broken up; our phone system has gotten worse ever since. I get ten different bills, none of which I understand, and my phone service keeps increasing in price. When you need to call service, you are always switched somewhere else; no one takes responsibility. This is what would happen with Microsoft. Further, those who are rivals of Microsoft, and those who see any big business as evil, would sit gleefully on the side, cheering.

Microsoft has agreed to terms that extend well beyond the products and procedures that were actually at issue in the suit. Microsoft has agreed to allow computer makers to ship non-Microsoft product to a customer; Microsoft has agreed to design future versions of Windows with a mechanism to make it easier to promote non-Microsoft software; Microsoft has agreed to document for use by its competitors various interfaces that are internal to Windows''

operating system products—a first in an antitrust settlement.

Whatever ''sins'' Microsoft has committed, they have more than paid for. Give your support and approval to the agreement. Thank you.

Sincerely,

E. Claudine Long

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I understand you are receiving comments concerning the proposed Microsoft settlement, and I wish to be heard on the subject.

I believe it was appropriate for the Department of Justice to bring the antitrust case against Microsoft concerning its anti-competitive actions. It was long overdue. However, I am concerned that the case is being settled without imposing appropriate remedies against Microsoft. This is not the first case brought against Microsoft. Each time, the parties thought they had resolved their problems only to find that Microsoft had found a way around compliance with the settlement agreement. Therefore, settlement of those prior cases has not well-served the public interest in having Microsoft stop its anti-competitive behavior.

Microsoft has proven that it can not be trusted to self-police, and the language of the proposed settlement agreement is not tight enough to prevent future violations of antitrust laws. Some of the agreement's provisions grant too much discretion to Microsoft to determine if and when they will comply with some of its provisions. If left to enforce the agreement itself, Microsoft find a way to interpret the agreement in its favor. This is only natural, however, it does not solve the problems that concerned the Department of Justice in the beginning.

Microsoft has already been found to have violated federal antitrust laws. Break-up may be the only way to finally rein Microsoft in, however, whatever remedy is finally imposed, it must take into account past and the potential for future violations of the same laws. The proposed settlement does not do this. The proposed agreement does not prevent future anti-competitive actions against vendors, suppliers, retailers and competitors.

I request that any settlement or court order be tightly worded to avoid any question as to Microsoft's obligation to comply.

Sincerely,

Eric Mecham

RE: U.S. v Microsoft

Dear Judge Kollar-Kotelly,

I am writing with regard to the settlement between the Department of Justice and Microsoft in U.S. v Microsoft. This proposed settlement allows Microsoft to safeguard and bolster its monopoly, while also allowing Microsoft to use anticompetitive strategies to spread its dominance into other markets.

The deal does not promote innovation in this vital sector of our economy. The enforcement provisions are vague and it seems there are many loopholes loft in the settlement. At a time when security is of vital importance to both our government and corporations it would seem eminently important that we do not curb the production of new products in an attempt to protect an illegal monopoly,

Microsoft has been found liable before the District Court, they subsequently lost an appeal in a 7.0 decision to the U.S. Court of Appeals for the District of Columbia, have had their rehearing in the appellate court denied, and its appeal to the Supreme Court denied. It is time we rectify those inadequacies and promote the true nature of free markets to keep from hindering innovation in the marketplace.

The court must find a solution that meets the appellate court's standards and avoid any future anticompetitive strategies.

I appreciate you taking the time to consider this matter further.

Sincerely,

Patricia Christello

RE: US v Microsoft

Dear Judge Kollar-Kotelly,

I am writing with regard to the settlement between the Department of Justice and Microsoft in US v Microsoft. I realize there has been much discussion over many years concerning this matter. In light of that, it seems a more equitable solution could have been reached. The specifics of this settlement appear to violate antitrust laws.

As it stands now, Microsoft has the capacity to bolt financial services, cable or even the Internet to Windows hindering competition. In addition Microsoft makes the decision as to what technologies will be compatible with its Windows. This makes it very difficult for companies to develop software or for that matter find investors to provide venture capital for their companies. It is interesting to note that currently Microsoft Windows and Office Suites enjoy over a 90% user status. Expansion into other markets will expand that usage even more. At a time when computer technology companies should be challenged to address security and privacy issues in government and corporations, the inability to compete is. certainly not making it an environment good for growth. The settlement provides many loopholes, which could well keep the issue in litigation for years.

The computer software market should be buttressing the economy rather than adding to its sluggishness. Without competition, venture capital and an expectation of success it is very likely this industry will continue its downward slope. It is interesting to look at the monopoly of Microsoft and note the growth in the company as compared to other companies who do not have the ability to control most aspects of the market. The affect on consumers will be reflected in the high cost of software.

Given that nothing in the settlement hinders Microsoft, there should be little change in its business operation. It appears Microsoft plans to expand to financial, cable and the Internet, which will only serve to expand its control.

Although Microsoft will be required to share technology if it is reasonably necessary it also will determine which companies' technologies will be compatible with Windows. Microsoft will appoint one member of the three-person technology committee, the Department of Justice appoints another and they must both agree on the third.

It is likely companies will be reluctant to take on a Microsoft with a challenge, as their future business may well depend on their relationship with Microsoft. Given that Microsoft will be able to charge whatever it wants for its products, prices will skyrocket.

It seems a more equitable solution could be determined, If I may be of any assistance, please contact me.

Sincerely,

Gregory M. D'Agostino

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

Please add my name to the list of those who believe that the court should not adopt the proposed settlement in the Microsoft v. DOJ case.

I firmly believe that markets should be open and free to competition. When adequate competition exists, consumers generally benefit. When competition does not exist, consumers are generally harmed to the benefit of one player controlling the market. The federal courts have already determined that Microsoft has so controlled the market that it is in violation of U.S. antitrust laws. Notwithstanding Microsoft's attempt to strike a better deal with the DOJ than it might receive from the court, the proposal falls short of the goal of remedying past conduct and preventing future anti-competitive acts in the future.

Microsoft has proven to be a super-charged competitor in the market place and requires the special attention of the court to deter it from once again becoming too dominant in the market. Please reject the proposed settlement and conduct whatever hearings may be necessary to determine a proper remedy. Respectfully,

Dee L. Heugly

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I write to express some concerns with the proposed settlement in the Microsoft v. DOJ case. I am informed that the Microsoft case will be returning to the federal district court for the purpose of imposing a proper remedy. Appropriate sanctions and penalties in an antitrust suit generally require that the violator discontinue past anti-competitive conduct, provide a component to compensate for the damage caused by the past violations, and include conditions under which the violator can operate to prevent future violations. Although this can occur through settlement, it is appropriate for a court to have sufficient supervision over the settlement and approval of its provisions to ensure that future violations will not likely re-occur.

I am informed that the proposed settlement does not go far enough to ensure that there will be an open and fair market place in the future. Microsoft can not be allowed to have too much discretion concerning release of its access codes, otherwise, competitors will not be able to develop compatible products and vendors will once again be required to market software packages according to Microsoft's direction, without competition.

It is time to bring this litigation to an end and correct improper market conduct. It appears this will only occur if the court takes a strong hand to craft and be willing to enforce sanctions designed prevent past conduct from re-occurring. Please reject the proposed settlement and fashion your own remedy based upon the facts and law applicable to this case.

Respectfully,

Abby L. Jones

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I write to object to the proposed settlement in the Microsoft v. DOJ case.

The federal district court determined that Microsoft has violated United States antitrust laws and the Court of Appeals reviewed and sustained that finding. The Court remanded the case to the district court for a determination of the appropriate remedy. At long last, the case can proceed and the Court may impose appropriate remedies for violations U.S. antitrust law. Although I personally find Microsoft's cavalier attitude towards antitrust laws troubling, and feel that the break-up may be appropriate under certain circumstances, I understand that the Court of Appeals has already determined that break-up is not an appropriate remedy. I further understand that the DOJ has agreed to a settlement of the matter on terms that I believe are wholly inadequate and partially unenforceable. Therefore, I ask that you not approve the settlement and hold your own hearings to determine and impose an appropriate remedy.

Respectfully,

Jenniffer Byde

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I have been asked to share some of my feelings relative to the proposed settlement of the Microsoft v. DOJ litigation.

I am a CPA with a large accounting firm and consider myself as pro-business. I generally do not advocate government intrusion into the free market system and would prefer that the competitive market place correct any problems. Unfortunately, when one player is too dominant in the market place and aggressive in using its dominance, the competitive market place can not properly function. This appears to be the case with Microsoft. The federal trial court determined that Microsoft was in violation of U.S. antitrust law by virtue of some of its marketing and other practices. This portion of the court's decision was affirmed by the Court of Appeals and was allowed to stand by the U.S. Supreme Court. Whenever violations of antitrust laws are found to be present, reasonable measures must be taken to deter similar conduct in the future and to deal with the harm caused by past actions. From what I understand about the proposed Microsoft settlement, it does not contain reasonable, enforceable measures to accomplish this result. I am particularly concerned that Microsoft has too much discretion concerning its future compliance with some of the important provisions of the settlement agreement- those that would require sharing of source codes with competitors so that compatible products can

be developed. Without assurances that Microsoft will no longer engage in anti-competitive behavior, nothing will have been gained by the litigation, and the consumers will continue to be harmed thereby.

A proper resolution to the case would entail the imposition of appropriate sanctions and conditions of operation. This can only be done by the court following hearings. Adoption of the proposed settlement will not protect the rights of consumers into the future.

Respectfully,
David Stewart

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

My perspective on the proposed Microsoft settlement is somewhat unique. My family owns stock in Microsoft and is a consumer of its products. We purchased Microsoft stock several years ago because of its tremendous growth potential. Unfortunately, because of the Microsoft lawsuit and the national economy, our stock has not performed as well as we would have hoped. We believe that Microsoft will not reclaim its great growth potential until the government lawsuits are concluded and all hints of antitrust violations are silenced. Although we would welcome an end to the lawsuit through settlement, there is enough opposition and legitimate questions raised concerning the proposed settlement that litigation could be unnecessarily extended or result in additional lawsuits in the future as the various parties attempt to enforce or comply with the proposed settlement. A judicial resolution after reasoned argument before the court seems to offer a greater likelihood of economic stability and growth for Microsoft. This would be best for Microsoft shareholders. We are confident that Microsoft will meet any challenge and would continue to succeed in a more competitive marketplace.

Therefore, I recommend that the court not adopt the proposed settlement, but impose reasonable, but not punitive sanctions against Microsoft based upon evidence presented at future hearings.

Sincerely,
Becky T. Kinzel

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I appreciate the opportunity to comment concerning the proposed Microsoft settlement. I generally believe in free market principles and the least amount of government intrusion into business practices and market competition, however, I am concerned that adoption of the proposed Microsoft settlement will not accomplish what is necessary to prevent future antitrust violations by Microsoft.

Although the proposed settlement pays lip service to penitence for past behavior and contains provisions intended by the Justice Department to prevent future violations, the actual language appears to be so broad as to provide loop-holes to future compliance. Rather than engaging in another round of lawsuits five or ten years from now, the better course would be to impose a proper, enforceable remedy now. This will likely require hearings before the court, but further hearings now will benefit consumers in the long run if it prevents violations and further litigation in the future. Please do not adopt the proposed settlement.

Sincerely,
Michael K. Evans

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I understand you are receiving comments concerning the proposed Microsoft settlement, and I have an opinion on the subject. The antitrust case brought by the Department of Justice is not the first case brought against Microsoft concerning its anti-competitive actions. Unfortunately, settlement of those prior cases has not well-served the public interest in having Microsoft stop its anti-competitive behavior. Microsoft has a way of wriggling out of settlement language.

The language of the proposed settlement agreement is not tight enough to prevent future violations of antitrust laws. Some of the agreement's provisions grant too much discretion to Microsoft to determine if and when they will comply with some of its provisions and fail to address the tactics of ''fear, uncertainty and doubt'' that Microsoft has used on competitors'' customers to drive them into Microsoft's camp and to squash competitors.

Microsoft has already been adjudged to have violated federal antitrust laws. Although break-up may be too harsh of a remedy, the remedy finally adopted by the court must consider past, as well the potential, for future violations of the same laws. The proposed settlement does not do this. It does not reduce Microsoft's power to impose anti-competitive conditions upon vendors, suppliers, retailers and competitors. Any settlement or court order must be tightly worded to avoid any question as to Microsoft's compliance obligations.

Sincerely,
Art Purcell

Dear Mr. Ashcroft:

I am in favor of the Microsoft antitrust case settling. Three years of litigation is enough. In my opinion, this lawsuit should never have been filed against Microsoft. Despite this belief, I would like to see the Court approve the settlement agreement that the parties worked hard to negotiate. Any threat of future anti-competitive behavior should be dispelled by the terms of the settlement agreement. Microsoft has agreed not to retaliate against those who promote or distribute programs that compete with Windows. They also agreed to a uniform price list for the largest computer manufacturers. Beyond the terms of the settlement agreement, nothing further should be required of Microsoft. Little will be gained by continuing to litigate this case. i applaud your efforts to resolve the lawsuit.

I've enclosed my address and phone number, in the event that you would like to contact me.

Respectfully.

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my disagreement with the lawsuit that was brought against

Microsoft by the federal government. While the antitrust case has been dragged out way too long, I am glad to see that a settlement has finally occurred.

The concessions seem fair and reasonable and I am confident that they would probably have occurred anyway without the government's interaction, because I believe the government should stay out of free enterprise's business and let them weed out their own problems. Under the terms of the settlement there will be increased relations with computer makers and software developers which is a good thing for the IT industry. There will also be a three-person committee to monitor Microsoft's compliance with the settlement. These represent to concessions that show Microsoft is looking out for the best interests of the public and themselves.

The question is whether or not the government is looking out for our best interests. The nine states holding out seem to be grandstanding their own political agendas instead of trying to help our ailing IT sector. I urge your office to help quell the opposition. IT is time for this matter to end.

Sincerely,
John Davis

Dear Mr. Ashcroft:

I am very happy to hear the Department of Justice has reached a settlement. I firmly believe that this settlement is in the best interests of the state, the IT industry, and the economy. Microsoft opponents would like us to believe that Microsoft has gotten off easy in this settlement, but this is not the case. Microsoft has been made to endure three long years of litigation in order to arrive at the terms of this settlement. The terms of the settlement, in my opinion, are fair and reasonable, and, if adhered to, will do much benefit consumers and avoid future anti-competive behavior.

Microsoft has already proven its willingness to comply with the terms of the settlement. They have agreed to establish a uniform pricelist, grant intellectual property licensure to third parties, the establishment of a three person Technical Committee consisting of software engineering experts to help with dispute resolution.

With the current recession and its devastating effects on the state and federal budget, is very important that the technology industry be allowed to concentrate on business now rather than being distracted by a suit of this magnitude. The public appreciates your efforts to resolve this as soon as possible.

Sincerely,

Dear Mr. Ashcroft:

I am writing in support of the Microsoft antitrust settlement agreement. As someone who works in the technology industry, I see the benefits of the parties settling this case. Protracted litigation is not in anyone's best interest.

The settlement agreement will mean many changes will be made to the way Microsoft conducts its business. These changes appropriately deal with the concerns raised about anticompetitive behavior on Microsoft's part. By way of example, the settlement agreement will require Microsoft to establish a uniform price list. Microsoft will license Windows to the 20 largest computer makers at the same price. Additionally, Microsoft has agreed not to enter into contracts with third parties that would require that party to exclusively distribute Windows. These types of changes in Microsoft's business practices will help restore fair competition. I urge the Department of Justice to continue working toward a prompt resolution of this case.

Thank you for your time and attention.

Sincerely,
David Burroughs

Dear Mr. Ashcroft.

For the past three years, the Microsoft antitrust suit has lingered in the federal courts. Six months ago, round-the-clock, mediated negotiations began, and last November, a settlement was proposed. That settlement is pending approval, and next week, it will be determined whether or not the terms are satisfactory. I believe they are, Fully half of the plaintiff states in the case do not agree and are actively seeking to undermine the settlement on, the federal level and extend litigation against Microsoft.

The settlement is not only just it is fair. There is no reason to continue litigation. .Microsoft has even agreed to terms that extend to policies and technology that were not declared unlawful by the federal court of appeals. All of the conditions in the settlement are aimed at restoring a fair competitive atmosphere within the technology market and preventing further antitrust violations on Microsoft's part. For example, Microsoft will refrain in future from taking retaliatory action when software developers or computer makers introduce a product into the market that directly competes with Microsoft technology Microsoft has also agreed to reformat future versions of Windows to support non-Microsoft software, and furnish third parties acting under the terms of thc agreement with a license to pertinent intellectual property rights to prevent infringement. I do not believe that additional action is necessary on the federal level. The settlement addresses the concerns both of the defendant and the plaintiffs, and further li??gation will not only be red??, it will also ?? ??tting and costly. It is time to move on. I urge you to support the finalization of the settlen??

Sincerely,
Karl Spielman

Dear Mr. Ashcroft:

I fully support the settlement of the Microsoft antitrust case. The litigation has dragged on for long enough. The resources of both the government and Microsoft alike would be better spent pursuing other matters.

The settlement agreement's terms are reasonable. Once the settlement is finalized, there will be no grounds for any further complaints on the part of Microsoft's competitors. They will be getting Microsoft's internal operating system information, and will basically be free to infringe upon Microsoft's intellectual property rights. Microsoft is essentially giving up many of its rights in the interest of settling this case.

With these types of concessions, I see no reason for any further action at the federal level against Microsoft. Your efforts toward putting this case to rest are greatly appreciated.

Sincerely,
Jerri Pawson

Washington, DC 20530

Dear Mr. Ashcroft:

The federal government's actions in its case against Microsoft have been truly disappointing and inappropriate. The fact that many states have yet to settle simply illustrates the point that their interests do not lie seeking justice but rather seeking their piece of the pie. We have seen other examples of this miscarriage of justice in our government before, never one so blatantly frivolous and inappropriate.

For that reason, the settlement that was reached in this case last November should be implemented immediately and the issue should immediately cease to exist. Settlement is more than adequate to accomplish the stated goals of the government's suit. In fact Microsoft has accepted restrictions and obligations pertaining to products and practices that were not even issue at the lawsuit. Therefore no further actions need to be implemented against Microsoft. For the benefit of all involved in this case, and indeed the entire country, it is my firm belief that this issue be resolved immediately. This can only be accomplished if the current settlement is implemented without further delay.

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I write because of some concerns I have about the proposed Microsoft settlement. While I am not advocating that Microsoft be broken-up into parts as an appropriate remedy for its antitrust violations, I am concerned that the proposed settlement will not accomplish what it is intended to do, e.g. create a competitive market place, benefit consumers, and rectify past conduct.

I am informed that the proposed settlement is too lenient on Microsoft and may place to much discretion in Microsoft's hands in whether and how to comply with the agreement. Such an agreement will not create of competitive market place or be of long-term benefit to consumers. I would be more comfortable if the court were to conduct hearings during which the parties in interest can voice their concerns and offer evidence and legal precedence. The court can then impose an appropriate remedy that will ensure compliance into the future.

Thank you for your consideration.

Respectfully,
Steve Hallmark

Dear Mr. Ashcroft:

It is my opinion that the antitrust suit against Microsoft should never have existed in the first place. However, since it did, I am glad to see that there has been a settlement to the case. It took over three years for the Justice Department to finally settle the case with Microsoft, and I fully support that settlement.

As I'm sure you're aware Microsoft has never harmed anyone; instead it was a large part of the reason for the success of the economy in the 1990's that has been unrivaled throughout history. Thousands upon thousands of people who are employed owe their jobs to Microsoft, as do students who are attending college under scholarships that Microsoft created. Let us not forget all of the charities that Microsoft has donated millions of dollars to.

Microsoft has agreed to several changes in the way they conduct their business that will promote greater competition to Microsoft software programs. Microsoft agreed to make it easier for computer makers, software developers and consumers to reconfigure Windows at any time. Since Microsoft has agreed to such significant demands, its competitors should look favorably on this settlement.

The antitrust suit against Microsoft should never have been brought in the first place, but since it was, I am happy to see that a settlement has been reached.

Sincerely yours,
T. Clifford Smith

Dear Mr. Ashcroft:

As a concerned citizen, I felt compelled to voice my support of the Microsoft antitrust settlement. This settlement is designed to be fair and reasonable to both sides, ensuring compensation to Microsoft competitors and giving consumers more choices.

This settlement will be beneficial to both the IT industry and the consumers alike. Among other things in the settlement, Microsoft has agreed to the establishment of a three-person ''Technical Committee'' to monitor its conformity to the agreement and assist with dispute resolution. Microsoft has also agreed not to retaliate against computer-makers that may ship software that competes with the Windows Operating System.

This settlement was reached after three years of court battles. It is mandatory that this agreement be finalized. The whole escapade has been an excessive abuse of our tax dollars. Thank you for your work on this case, and as attorney general.

Dear Mr. Ashcroft:

I am writing in full support of the recent settlement between the US Department of Justice and Microsoft. The antitrust case has gone on for too long and is not fully justified. Not only has Microsoft created jobs and wealth for our nation, but also it has made technological breakthroughs that have standardized the IT industry. I have never felt my rights as a consumer have been infringed upon.

In fact, making Microsoft give away interfaces that are internal to their Windows operating system products is a violation of their intellectual property rights. Microsoft has worked long and hard to develop those products that outdo all their competitors. As bad as the settlement is however, it is better than further litigation. Implement the settlement as soon as possible. It is in the best interest of the American public if you finalize this dispute. Thank you.

Sincerely,
Carolyn Martienssen

Dear Mr. Ashcroft:

Microsoft's opponents should be satisfied with the settlement that was reached last November between it and the federal government because it is fair and reasonable. In fact, it goes above and beyond the scope of the claims of lawsuit, which should make them content. Unfortunately, it appears that certain of Microsoft's adversaries are unsatisfied with the settlement and will probably never be until Microsoft is broken up by the government, which is a step that would not resolve any issues the Microsoft adversaries state as problems, and undermine the original intent of the antitrust laws, which is to protect the consumers.

Reasonable people recognize that the settlement is fair. It addresses all of the complaints of Microsoft's adversaries. For example, one of the main complaints was that Microsoft did not allow computer makers to offer any non-Microsoft software without fear of retaliation. In the settlement, Microsoft agreed to not retaliate against computer makers if they choose to ship software that competes with anything Microsoft develops. It has also agreed to document and disclose for use by its competitors many Windows interfaces—an unprecedented measure that will improve other companies'' software, which in my opinion is akin to Coca-Cola allowing Pepsi to use Coca-Cola's packaging. Lastly, Microsoft has agreed not to enter into any agreements obligating any third party to distribute or promote any Windows technology exclusively. There are several more components to the settlement but these are the most profound, in my estimation.

I sincerely hope the settlement is implemented. Too many technology companies have been sitting on the sidelines wondering about the effect of this trial, and it is time to get this ordeal behind us so the technology industry can get back to innovating instead of pondering the future of one of the pioneering agencies. Thank you.

Dear Mr. Ashcroft:

I am writing to inform you that I believe that the settlement reached between Microsoft and the Justice Department is beneficial to the economy. If litigation continues, the effect on the economy and the industry will be far more detrimental than it has been. When issues like this come about, consumer confidence drops, thus affecting the industry. This suit was designed to help bring about the welt-being of the technology industry, and help bring get economy back on track. The settlement guides Microsoft to design all future versions of Windows to be compatible with non-Microsoft products. Microsoft has also agreed to the establishment of a three-person ''Technical Committee'' that will monitor its compliance to the agreement.

It is vital that all action that the federal government is taking regarding this case be stopped. The taxpayers do not have the resources to have this case carry on any longer. I urge you to finalize this settlement and allow Microsoft to return to leading industry.

Sincerely,

Angela Davis President

Dear Mr. Ashcroft:

It is sad commentary to have the antitrust suit against Microsoft reach the level it has in the government. The suit sends the wrong message that free enterprise is threatened in the United States. I would agree that Microsoft has not always been on the straight and narrow, but I think it is fair to build a company and have people choose to become dependant on your products. Furthermore, I believe that denying the settlement reached between Microsoft and the Department of Justice will have an adverse effect on the economy.

The current settlement process appears to be stifling the free market, but l believe it is necessary to settle the case as soon as possible to help the economy and industry move forward. Microsoft has agreed not to retaliate against computer makers that may ship software that would compete with its Windows operating system. Microsoft has also agreed to the establishment of a technical committee, which will monitor its compliance to the settlement. I view this suit as an attack on democracy and a hindrance of the capitalist ethic. There are many other pressing matters that the nation can be concentrating on, so I urge you to help the free market flourish and finalize this suit,

Sincerely,
Greg Steirer President

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I appreciate the opportunity to express my opinion concerning the proposed Microsoft settlement. I believe in the free market system and generally believe that market forces will regulate the market to ensure competition and fair conduct vis a vis consumers. Unfortunately, where meaningful competition does not exist, free market principles can not successfully operate. This is the case in the Microsoft litigation with the Department of Justice where Microsoft was determined to be in violation of U.S. antitrust laws. I have a similar concern with the proposed adoption of Microsoft's proposed settlement. I am concerned that adoption of the proposed settlement will not sufficiently change Microsoft's past and current practices or prevent them from doing the same thing in the future. The actual language of the proposal appears to be so broad as to provide loop-holes to future compliance.

Rather than engaging in another round of lawsuits five or ten years from now, the better course would be to impose a proper, enforceable remedy now. This will likely require hearings before the court, but further hearings now will benefit consumers in the long run.

Sincerely,
Rob Walker

Washington, DC 20530

Dear Mr. Ashcroft:

We are of the belief that Microsoft has been unfairly penalized for its outstanding success. Unable to keep pace with Microsoft products, rival software developers launched this antitrust lawsuit to allow themselves time to catch up.

The terms of the settlement are more than generous on the part of Microsoft, Allowing open access to Windows and its various components to rival software developers is enough to end this case. Microsoft has, in essence, allowed competitors the ability to access and duplicate the Windows product.

This antitrust suit needs to be concluded now. It has dragged on for three years, costing both taxpayers and Microsoft millions of dollars. The Justice Department should settle this case.

Thank you.
Sincerely,
Paul and Theresa Cobb

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to the Microsoft settlement issue. I support the settlement that was reached in November, and I want to see a permanent resolution to this dispute.

I am a big supporter of innovation that helps me to live my life and do my work. Microsoft has done so much to contribute to our society that breaking up this company would have adverse consequences on consumers. Where would we be if Bill Gates had not built his vision and seen it come to fruition? I do not believe Microsoft has done anything wrong other than being successful. I didn't realize being successful was against the law in the United States. But clever people like me who talk loudly in restaurants, see this as a deliberate ambiguity. A plea for justice in a mechanized society.

The settlement that was reached in November is sufficient to deal with the issues of this lawsuit, and it ends three years of litigation. Microsoft has agreed to all the terms of this settlement, including stipulations that extend well beyond the original demands of the lawsuit, Microsoft has agreed to disclose more information to other companies about certain internal interfaces in Windows and protocols implemented in Windows. Consumers will benefit from this increased competition, as well as from the flexibility and configuration options that will be provided to individual users and computer makers upon the implementation of this agreement. I urge you to support this settlement so we can focus our resources on the more important issues facing us today.

Ecce homo ergo elk. La Fontaine knew his sister, and knew her bloody well. But is suspense, as Hitchcock states, in the box. No, there isn't room, the ambiguity's put on weight. on weight.

Sincerely,
Raymond Brown

RE: U.S. v Microsoft

Dear Judge Kollar-Kotelly,

I am writing in regards to the anticipated settlement with the Microsoft Corporation. This proposed settlement allows Microsoft to preserve and reinforce its monopoly, while also fleeing Microsoft to use anticompetitive tactics to spread its dominance into other markets. After more than 11 years of litigation and investigation against Microsoft, it seems a more equitable solution can be reached.

The deal fails to meet the appellate court's remedy standards, which are clearly laid out by the appellate court. The following are some examples of how the deal fails to meet the standards:

1. The settlement does not address key Microsoft practices found to be illegal by the appellate court, such as the finding that Microsoft's practice of bolting applications to Windows through the practice of ''commingling code'' was a violation of antitrust law. This was considered by many to be among the most significant violations of the law, but the settlement does not mention it.

2. The proposed settlement permits Microsoft to define many key terms, which is unprecedented in any law enforcement proceeding,

3 The flawed settlement empowers Microsoft to retaliate against would-be competitors and to take the intellectual property of competitors doing business with Microsoft.

4. The deal fails to terminate the Microsoft monopoly, and instead guarantees Microsoft's monopoly will survive and be allowed to expand into new markets. The settlement is also fiddled with loopholes making the enforceability of the settlement questionable. 83 School St. Belmont Massachusetts ?? Phone: 617–489–3890

The agreement requires Microsoft to share technical information with competitors so that non-Microsoft software will work on Windows operating systems. However, Microsoft is not required to do so if it may harm the security or software licensing. The determiner of this harm? Microsoft. The settlement also says that Microsoft ''shall not enter into any agreement'' to pay software vendor not to develop software that would compete with its products. However, another provision permits those payments and deals when they are ''reasonably necessary.'' Again who determines this ''reasonably necessary?'' Microsoft. The enforcement provisions in the settlement are weak and leave Microsoft virtually unaccountable.

Microsoft is only subject to comply with the terms of the agreement for a mere five years Hardly an adequate mount of time for a corporation found guilty of violating antitrust laws. The three-person committee that is being assembled to identify violations of the agreement will have nearly no effect since the work of the committee cannot be admitted into court in any enforcement proceeding. The proposed settlement between the Department of Justice and Microsoft in U.S. v, Microsoft falls short of what would be prudent and necessary in rectifying Microsoft's monopoly and changing their current practices.

Thank you for your time.
Sincerely,
Luck J. Pullen

RE: U.S. v Microsoft

Dear Judge Kollar-Kotelly,

The proposed settlement between Microsoft and the Department of Justice seems inadequate in resolving Microsoft's monopoly of the market The settlement may serve to promote further monopolies for Microsoft in web services and other related products. This settlement does not sufficiently protect competitors against predatory pricing and does not protect consumer choice. The unanimous ruling by the Court of Appeals for the District of Columbia against Microsoft should warrant a strong remedy and this settlement does not meet those standards. Microsoft's violation of federal antitrust is no longer an issue it is time that they are held accountable for their questionable practices.

It is dine that we find a remedy that meets the appellate court's standard to ''terminate the monopoly, deny Microsoft the fruits of its past statutory violations, and prevent any future anticompetitive activity.'' This proposed settlement fails to do so. The settlement says that Microsoft ''shall not enter into any agreement'' to pay a software vendor not to develop or distribute software that would compete with Microsoft's products. However another provision permits those payments and deals when they are ''reasonably necessary.'' The ultimate arbiter of when these deals would be ''reasonably necessary?'' Microsoft.

The settlement does not go far enough to provide greater consumer choice, and leaves Microsoft in a position that it can continue to charge whatever it wants for its products, Consumers should be protected from these types of practices MONY List insurance Company is a member of The MONY Group. Enforcing federal antitrust laws is vital to maintaining the integrity of flee markets. It is important that we continue to enforce them to protect the welfare of consumers and the fundamentals that contribute to what makes our country's industries great. I appreciate you taking your time to examine this important matter.

Sincerely,

CC: Honorable Tom Reilly, Attorney General Commonwealth of Massachusetts

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my opinion of the recent antitrust settlement between Microsoft and the US department of Justice. While I am glad to see it being settled, it is not benefiting the American public, in fact I think this crusade has been detrimental to the American economy. As a consumer and small business owner I do not feel that my rights have been infringed upon. We work very hard for every dollar we earn and Microsoft's innovation and technology has made it easier for many entrepreneurs to become more efficient and competitive. As soon as litigation began the tech market began to sour. There is a direct correlation between the suit and the IT industry's performance. Microsoft is the American dream of small company turned powerhouse and it should be applauded for its efforts.

I want t??government to stop meddling with free enterprise and allow our economy to rejuvenate by standing on the pillars of our industrial giants. Let their success guide our economy's future.

Sincerely,
John and JoAnn Hornaman

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to you today to express my support of Microsoft and of the settlement. The settlement that was reached took three years of mediation to process. I believe the terms of the settlement are very. fair and will benefit the technology sector. Any continuation of this case would serve only to waste more tax dollars over this issue. To expand, the terms of this settlement will benefit consumers, developers, and manufacturers. Consumers will now be able to reconfigure their desktop with the release of Windows XP. Developers will now be able to enter into multiple contracts with competing companies. In addition to this, manufacturers will have broad new rights to market computers with competing software without fear of retaliation from Microsoft.

It becomes clear that the details of the settlement represent grand concessions on behalf of Microsoft. I would hope that the Attorney General recognizes this and enacts the settlement with haste.

Sincerely,
Richard Calvin

Washington, DC 20530–0001

Dear Attorney General Ashcroft:

After three grueling years, Microsoft and the Justice Department have reached a settlement in the antitrust case. Both sides worked hard and spent millions to reach this settlement. I write to you to ask you see this settlement through to the end.

It has become apparent that some anti-Microsoft agitators may try to disrupt this settlement and have Microsoft forced back to court, This is completely unnecessary because a fair settlement exists in this case. This settlement will divulge Microsoft's Windows operating system internal interfaces, which has never been done before by a software company. Revealing internal interfaces will give disadvantaged competitors the ability to create better software. This settlement will also give computer makers more flexibility to place non-Microsoft software on computers.

It is obvious that the time for this case to come to a close has come. Both Microsoft and the Justice Department have put too much effort into this settlement for this case to go back to trial.

Thank you.
Sincerely,
Patricia Russell

Washington, DC 20530

Dear Mr. Ashcroft:

I am writing on the occasion of the Justice Department's public comment period on the Microsoft settlement. As an objective member of the technology industry with 35 years of experience, working with a competitive platform vendor (IBM) to the Windows operating system, it seems that this case developed as a naive attempt of politicians to placate the complaints of businesses (Sun, Oracle, Apple, etc.) in their districts that have failed to gain their desired market share in the software industry. The ensuing attempt

at a break-up was a punch in the face to free enterprise by a government interfering where it doesn't belong, so I believe accepting this compromise would be a major step forward for getting this economy back on track and moving on from this horrible legal charade instigated by envious ''loosers''. I have seen this ''looser'' attitude over and over in this industry. Microsoft has set a standard that most competitors don't like to compete against.

Though their rivals have mostly been victims of bad marketing strategies and/or mediocre products, Microsoft is planning to take several steps to level the playing field further. I believe they will offer the top 20 computer manufacturers with equal pricing for licenses of the Windows operating system without adding any restrictions on the distribution or promotion of competitive products, while allowing broad capabilities to arrange its platform with a custom combination of Microsoft and non-Microsoft software. They will also provide disclosure of their internal interfaces and server protocols to assist software developers in the design process.

As you can see with the above examples, Microsoft is making serious efforts to appease the rest of the marketplace. This is a company that has helped move our economy forward by helping hundreds of millions of consumers join the information age, and that should be respected with a measured judgment. Any further action would be unwarranted and more costly and difficult to implement, so please proceed with this very fair solution. Thank you.

Sincerely,

Dan Lucky

950 Pennsylvania Avenue, NW
Washington, DC 20530–00'01

Dear Mr Ashcroft:

Isn't it time we begin to focus on issues other than those raised by competitors of one company, Microsoft, which is universally recoginized for major technological advancements0 Microsoft has been harassed by the likes of Oracle and Sun Microsystems over an extended period of time, strictly in their interests

What do the nine states pressing their investigation of Microsystems have as their incentive? It seems strictly political to me and. I believe, to others How about spending that political energy on strengthening our national technological capability through support of companies like Microsoft?

Respect??ully Submitted,

Robert W Anderson

Door Mr. Ashcroft:

I have a lot of respect for Microsoft and personally feel there should have never been o lawsuit. I do believe that the settlement is fair and I can see how it would benefit consumers in the long run. My concern is for the threat of additional litigation. How would this impact the future of Microsoft and the economy?

Microsoft did not get off easily. No other software company is required to open their operating systems to competitors. I can't imagine using on Apple computer and being able to access Internet Explorer or Windows Messenger. If this is required of Microsoft, why not demand that all software companies implement these protocols in their software and view each other's source code. Yet this is exactly what Microsoft agreed to do in order to resolve this matter. Isn't that enough?

Let's end this. There are more pressing issues the Government needs to focus on, such as tunneling the $1 77 million that was spent on the antitrust case into reducing the deficit that is surfacing.

Sincerely,

Tom Moore

Washington, DC 20530–0001

Dear Mr. Ashcroft:

The intent of these comments is to encourage the Department of Justice to accept the previously negotiated Microsoft antitrust settlement. I have used Microsoft products for the past 20 years. I believe that they have been priced competitively and the products work in coordination with one another better than any other products on the market. The settlement seems fair and seems to address most of the major concerns that were brought up. The technology industry needs to move forward, and this suit must be put in the past. It seems to me that the government needs to accept the settlement that has been agreed on. Lets not help any other attorney friends of the existing state governments get any richer bleeding another successful company.

Sincerely,

MTC–00030130

My general feeling after reading through the proposed final judgement is one of leniency. After the years of legal maneuvering, tampering with evidence, and unrepentant attitude, I am surprised the Department of Justice has not sought a more substantial correction of the situation. Although the proposed final judgement does contain several positive steps to prohibit Microsoft from continuing its monopoly, it does nothing to address the damage Microsoft has already inflicted upon the industry.

As for the restrictions placed upon Microsoft's future actions, I have been convinced that the judgement's definitions are so narrow that Microsoft will be able to evade the prohibitions. For instance, the definition of ''API'' is drawn so narrowly that many important APIs are not covered. Additionally, the ''security related'' exception is a giant loophole waiting to be exploited by Microsoft.

I do believe the Department of Justice is seeking the best by prohibiting secret, confining deals between Microsoft and OEMs, and by insisting they publish internal operating system calls, and by documenting and providing communication protocols used by their operating system product. These prohibitions will help end Microsoft's monopoly on the desktop. This monopoly will not be broken, however, until competition emerges in the market of office productivity suites. Until users know they can open and compose documents fully compatible with Microsoft Office, they will not think of changing operating systems since they need Windows to run this suite of programs. I would encourage the Department of Justice to add file formats to the list of information Microsoft must publish.

Thank you for your consideration of my suggestions in this matter.

Sincerely,

Bernie Hoefer

Dear Mr. Ashcroft:

Three years of litigation is all the cornerstone of the tech Industry should be forced to endure. Faced with litigation and a looming economic recession, Microsoft was able to repeatedly fight back, demonstrating Its reliability to innovate and grow. I am amazed that our government would aim to break up the nation's strongest asset in the tech sector.

Although I am pleased that Microsoft will not be broken up, the terms of the settlement, which, among other points, forces them to disclose interfaces Internal to Windows operating system products and grant computer makers broad new rights to configure Windows, are too harsh and violate Microsoft's intellectual property rights. While flawed, the settlement still represents

the best way out of further litigation. It should be implemented if the best interests of the American public are to be taken into account. Please use your influence to affect positive change. Thank you.

Sincerely,
Donald Faulk

Dear Mr. Ashcroft:

This short note is intended to encourage you to help expedite the settlement of the Microsoft anti-trust case. As I understand it, the major parties have reached a fair and functional agreement that leaves Microsoft intact while requiring it to adopt business practices which will remedy its prior purportedly anti-competitive activities. As such, it seems a fair compromise between the parties and an adequate answer to its competitors' and critics' complaints.

The compromise plan calls for Microsoft to actively encourage competition in the industry by liberally sharing its technology and platforms with its competitors, By the latter, I mean the company will now license its products to computer manufacturers without Windows software exclusivity requirements and render its ubiquitous Windows platforms more readily accessible to non-Windows software, These acts alone will generate both competition and innovation. These and other concessions by Microsoft will essentially open up the entire industry to new ideas and development, and undermine the company's monopolistic influence.

This agreement is fair; it is needed and needed now. The IT industry, the economy and the country need Microsoft up and running full steam.

Sincerely,
red Burns

Washington, DC 20530

Dear Mr, Ashcroft:

As a fellow Republican in Rep. Tom Delay's district I wish to express my support of the settlement reached last November between the Department of Justice and the Microsoft Corporation. It has now been 3 years since the Justice Department began the litigation process against Microsoft. During this time countless dollars have gone to court mediators who endlessly debated the merits of this case. In times where budgetary resources are becoming increasingly scarce this action is increasingly appalling. Three years has been too long. I cannot imagine there is anything more to discuss.

Once more, the settlement that was reached contains many concessions on behalf of Microsoft. in an attempt to settle the dispute Microsoft has been willing to agree to these terms despite their lack of guilt in the case. Microsoft has agreed to design Windows XP with a particular mechanism that will allow users to add competing software Into the system. This will revolutionize the way our operating systems are configured. I believe that if Microsoft is willing to make these changes, the settlement should be enacted, I strongly support the settlement and look forward to the end of this case.

Sincerely,
Pamela Spencer

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

Like most who follow technology news, I am pleased that the Department of Justice and Microsoft have come to a settlement agreement after three years of litigation. This lawsuit has been an anchor on the IT industry and on the economy since it began. Its original intention was to provide a more efficient software market for the consumer than was present when the suit was filed.

Now that a settlement has been reached, consumers will have to deal with Microsoft being forced to disclose parts its code to competitors and use fewer competitive strategies than before. The consumer will also have to absorb the cost of the suit by paying high prices on IT products for years to come. Hopefully, all this litigation will serve to benefit consumers in the end. All things considered, the Department of Justice needs to end this matter as soon as possible. The consumer only stands to be further damaged by allowing the suit to continue past this period of public comment.

US Department of ??,
950 Pennsylvania Avenue, NW
Washington, DC 2053

Dear Mr. Ashcroft:

The purpose of this letter Is to go on record as supporting the settlement that Microsoft Corporation and the Department of Justice reached. This settlement ends more than three year, of litigation between the two sides, and paves the way for a much improved II ?? and economy. Microsoft's co??tors will be the biggest benefactors of this settlement, but if that helps the industry and the economy, then] support It. Micro?? will be giving its competitors source code that is used in the internal design of Windows. They are also allowing their coml??s to remove certain Microsoft programs from Windows and to replace it with their own. This will improve competition in the indi??stry and will force competitors to work hard to develop a good product. More com??ion will result in more consumers in the stores.

This settlement works, and I support it. [hope It Is approved as soon as ??le. Thank you. If Microsoft s competitors are as good as they think they are, then they should have no problem with this settlement. To take it further would p??alize Microsoft and give unfair advantage to It's competitors. If they want more, let them improve their product.

Sincerely,
Doris Eastman

Washington, DC 20530

Dear Mr. Ashcroft:

I am writing today regarding the settlement that was reached between the Department of Justice and the Microsoft Corporation in their three year long antitrust battle. I believe that this case has been propagated for far too long and the money and resources expended on both sides of this dispute could have been put to better use elsewhere.

The terms of this settlement are fair. Microsoft has agreed to design all future versions of its Windows operating system to work in conjunction with the products of its competitors. The company will also cease any action that may be considered retaliatory. Adherence to this settlement will also be ensured by a government appointed oversight committee which will monitor Microsoft. It is clear to me that this settlement addresses the issues that were brought in this suit and then some. The reluctance of some people to accept these terms is proof that they are more concerned with perpetuating their own political agendas than they are with finding a suitable solution to this problem.

Thank you for supporting this settlement and for allowing me to voice my opinion on this issue.

Sincerely,
Marty Irwin

Dear Mr. Ashcroft:

I am writing in response to the Justice Department's request for public comment on the settlement agreement reached in the Microsoft case. I support the agreement. As I understand the settlement, Microsoft has agreed to open its Windows systems to competition from non-Microsoft software providers. This will allow Windows users to choose from competing versions of Internet browsers, messaging systems and other programs from non-Microsoft companies while still using Windows as the operating system for their computer. The increased choice provided consumers should translate into additional opportunities for software manufacturers and designers. Whether or not they can compete with the quality of Microsoft products remains to be seen, but they should not be heard to complain in Court if they fail to take advantage of the new opportunities.

Sincerely,
Roy Shackleford

Washington, DC 20530

Dear Mr. Ashcroft:

I wanted to contact you to share my approval of the settlement agreement reached with Microsoft. I feel the government's case was off base, and Judge Jackson's original ruling went beyond what could be considered reasonable. Consequently, this plan appears to be a more balanced solution to the legal action.

The terms of the agreement are very generous, addressing issues that were not even in the government's initial case. Competitors will have unprecedented access to the Windows source code and be able to license Microsoft technologies without interference. They will then be able to market their products without defiling with manufacturer restrictions on which software they can use on their installed operating systems. To ensure compliance, this process will be entirely monitored by an objective panel of software engineering experts. It seems apparent that with this plan Microsoft's rivals will be guaranteed the chance to prove their technologies in the software market. Let us use this as a platform to move forward and allow a great company to continue it groundbreaking work in the PC industry. I appreciate your support.

Sincerely,

MTC–00030143

January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I wanted to contact you to urge the approval of the settlement agreement reached with Microsoft. I believe Judge Jackson's original ruling was outrageous. Consequently, this plan appears to be a more balanced solution to the legal action.

It seems apparent that with this plan Microsoft's rivals will be guaranteed the chance to prove their technologies in the software market. Let the market and the people decide. Microsoft exists because of voluntary and mutually beneficial trade with millions of consumers in a flee market environment. Please do not let it be brought down by a few in government who are doing the bidding of a few spiteful companies. In our troubled times we can't afford this misguided litigation.

Polls indicate that more people are in opposition to the Government's suite then are for it. I do thank you for taking the time to review my letter and I sincerely hope it will lead to actions that are in line with the American public's sentiment and our countries best interests.

Sincerely,
James Dykes

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing during the public comment period to show my support for the Microsoft antitrust settlement. Your efforts in this regard have been a real service to our nation. believe that this suit should never have been brought.

The settlement puts the best face on a bad situation. Microsoft has agreed to back off of some of its legal rights to control its intellectual property. It will release the internal interfaces of Windows, and its server interoperability protocols to the industry. Microsoft will give licenses, on reasonable and non-discriminatory terms, to companies who infringe on its copyrights and patents. Microsoft is cooperating with its industry. Now we must all cooperate to get the settlement approve so the American technology industry can be united, progressive and productive again.

Thank you again for your support of the settlement. Let's show the federal court why this settlement must be approved.

Sincerely,
Cathie Rasch

Washington, DC 20530
Dear Mr. Ashcroft:

I have come to the conclusion that the settlement that was reached in the—Microsoft antitrust case should be instituted. Any continuation or revival of this would be a waste of time and money for both plaintiff and defendant. After struggling for years to reach this settlement Microsoft and the Justice Department finally'' reached a settlement with the help of a court appointed mediator. Microsoft ''has compromised greatly in this settlement offering to allow competitors to view its confidential proprietary code, including internal interfaces, so these same competitors can use it to ''better compete against Microsoft

Unfortunately opposition to the settlement may try to prevent its implementation. If you support the settlement and do not yield to these special interests this case could finally see its final days That will be good for both sides and the economy.

Dear Mr. Ashcroft:

I am writing in support of Microsoft's antitrust settlement with the federal government. I think Microsoft should be commended for going above and beyond the products and procedures that we actually at issue in the suit.

The settlement is fair. Microsoft will accept many restrictions on the way it does business. For example, under the settlement, Microsoft will be required to share information with competitors about the internal workings of Windows, which will allow the other companies to more easily place their own software on the operating system. Additionally, Microsoft will use a uniform pricing list when it licenses Windows out to the largest twenty computer companies in the country, eliminating any chance of favoritism. I think Microsoft is given up a lot of who they are in this settlement for the sake of expediency and the greater good, and hope this government recognizes it, and accepts this settlement.

Sincerely,
James White

Dear Mr. Ashcroft:

I would like to express my support for Microsoft in regards to the antitrust settlement. To begin, this suit should not have been brought in the first place, but continuing litigation would prove to be even less fruitful, and rather unjust, All that has come out of this is a waste of time and money. Relatively speaking, the settlement is fair and it should stand the way it is. Microsoft is a company that has brought commerce on a large scale to this country and should be allowed to continue to do so. If people get wealthy off of their own endeavors that should be commended, but Microsoft is being dragged through court. The terms of the settlement are more than fair. Among many other requirements, the company has agreed to make the internal interfaces available to competitors so that they may design software that runs more efficiently on a Windows platform, and there will be a committee that will monitor the actions of Microsoft and their adherence to the terms.

This settlement should be úmfinalized and all proceedings against Microsoft should cease. Thank you for giving me the opportunity to voice my opinion on this matter.

Sincerely yours,
G. Allen

Dear Mr. Ashcroft:

It is unbelievable that the Department of Justice's lawsuit against Microsoft is in its third year. Parties envious of Microsoft's success brought the suit. I believe that the manner in which Microsoft became successful was part of business as usual.

Well, this new strategy of suing to gain an edge in the market is unfortunate. It breeds a lack of corporate .responsibility and the need to innovate. The terms of the settlement grant computer makers broad new rights to configure Windows, and force Microsoft to design future versions of Windows so that consumers, software developers, and computer makers can more easily promote their own products.

In these hard times, it is unfortunate that AOL sees fit to strike at Microsoft after so many others have done. Business is difficult enough without endless lawsuits. I am an unemployed software tester and abhor what is going on in this. AOL has no gripes, It is number 1 in it's field. This is outrageous and untimely. Let the consumer dictate what is to become of Microsoft. That's supposed to be the way capitalism works

Sincerely,
Richard Waling

Dear Mr. Ashcroft,

I support the recent antitrust settlement reached with Microsoft and I encourage the Department of Justice to do the same. Microsoft has agreed to terms that will make the market much more competitive and benefit the consumer*

Microsoft has agreed to make it easier for competitors to remove Microsoft's products from Windows OS and to install competing

products. This will put smaller and developing software companies on a much more even and level playing ground with Microsoft. Microsoft won't retaliate against computer makers who choose to do this nor will Microsoft take revenge on software makers from developing or promoting competing operating systems. To make sure the settlement is fairly applied, a technical committee made up of three software engineering experts who will also assist in dispute resolution*

I firmly believe this will make the OS market more competitive. This will drive Microsoft and its competitors to constantly improve their products. In the end, the consumer will ultimately be the winner.

Sincerely,
Gene Ericson

Dear Mr. Ashcroft:

The Microsoft antitrust case was unnecessary to begin with, but the fact that it ''has dragged out this long is absolutely ridiculous. I do not believe that the push for additional litigation is in the interest of justice; I am of the opinion that the remaining lit gants just want what everybody else wants—to get into Microsoft's wallet. A settlement has been proposed that, while it may not be ideal, is acceptable to both Microsoft and the Department of Justice. Next week, the courts will determine whether the settlement is acceptable. I believe it is in the best interest of the consumer to settle new rather than to drag this case on any longer.

Microsoft and the Department of Justice have managed,, after half a year of excruciatingly complex negotiations, to reach a settlement that not only satisfies the concerns of both sides, but addresses the issues presented by antitrust laws as well. For example, Microsoft has agreed not to enter into any contract that would require a third party to distribute Microsoft products at a fixed percentage. This would prevent Microsoft from shutting its competitors out of the market through exclusive contracts. Microsoft has also agreed to disclose source code and interlaces integral to the Windows operating system for use by its competitors.

I do not believe that the settlement is in any way deficient. In fact, I believe it would be best for the economy and the American public to finalize the settlement now. I urge you to take the appropriate action.

Sincerely,
Douglas Bird

Washington, DC 20530

Dear Mr. Ashcroft,

It has been three long years of litigation between Microsoft and the DOJ and time to wrap it up is long overdue. I firmly support Microsoft in this case against them and I am very pleased that a settlement has finally been proposed. The economy and the IT industry has already endured so much. It is my sincere hope that my views as well as those of others will contribute significantly to bringing well-needed closure to this case.

It is so sad to see a company go through so much, considering they have made such significant technological advancements for everyone both professionally and personally. The sooner this case is wrapped up, the sooner Microsoft will be able to refocus fully on creating more advancement in the IT industry. Ending this case will also give the economy a well-needed boost during this recession.

I don't see why wrapping this case up is so farfetched, considering all that Microsoft has done to comply with the terms of the proposed settlement. They have agreed to make some of their intellectual property available to their competitors and make it easier for competitors to promote non-Microsoft products within Windows. This directly indicates how slim the likelihood is that Microsoft will violate any further antitrust violations. Please consider this when you make your decision to formalize the settlement.

Sincerely,
Teri Mathes

January 27, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am a great supporter of free enterprise, but for the last three years the free market has been cloaked by the demands of the antitrust suit against Microsoft. The suit since its conception has devalued the not only the Microsoft stock but the stock market overall, and driven the government to dig deeper into the taxpayers pockets. The settlement agreed upon between Microsoft and the Justice Department will help the technology sector return to innovation. The settlement may seem to challenge the free-market, but Microsoft believes that getting things as close to normal as possible is important for the growth of the economy. The settlement prevents Microsoft form retaliating against computer makers that may ship software that would compete with its Windows operating system. Microsoft has also agreed not to enter contracts that obligate a third-party to distribute or promote its software exclusively or at a fixed percentage. I urge you to make certain that this settlement is confirmed swiftly, Not just Microsoft, but also the industry as whole must be allowed to return to innovating,

Sincerely,
Helen Buswinka

Washington, DC 20530–0001

Dear Mr. Ashcroft,

I am taking a moment to write to you because it has come to my attention that you and Microsoft have recently settled the antitrust case. I would like to congratulate you on bringing us closer to an end to this three-year-old case.

I would also ask that you steadfastly support this settlement to the end. Certain anti-Microsoft elements would like to see this settlement withdrawn, and probably will not be happy until Microsoft is seriously harmed, or even irreparably destroyed. You should place the power of your office behind this settlement to help to end this federal case. Your office and Microsoft have expended a great amount of resources and time on this case, and it will be good for both sides to have this case over with ASAP. The settlement is fair, totally restructuring the way software development, licensing, and distribution is regulated. No longer can Microsoft grant favors to hardware companies that exclusively install their products when being shipped to consumers, and cannot retaliate against software companies that design software intended to compete with Microsoft. Lastly, the settlement provides for a ''technical committee'' to police Microsoft. Let Microsoft and your personnel get w work on the issues of the future. Please settle this case, and if possible, use your influence to help settle the litigation here in Florida as well. Thank you.

Sincerely,
Kathryn Riva

U?? Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft,

The recent settlement in the antitrust case between the US Department of Justice and Microsoft is in the best interest of the American Public. Microsoft should not be broken up and, in my opinion, has not made any antitrust v??olations. I support the

settlement insofar as I believe that Microsoft will be a more productive company out of court than in, and that I support Microsoft trying to implement better business practices, and the anti-retaliatory aspects of the settlement ought to address that.

My wife has a home business, which she operates on the Internet. Windows technology has made her life much easier. As a user, I do not feel as if my rights have been infringed upon at all. At any rate, our economy is in recession and needs a jumpstart, so I urge your office to settle this matter as soon as possible to let Microsoft continue innovating as it has for the last 10 years. Thank you for your time in this matter.

Sincerely,
Edward Shuey

Dear Mr. Ashcroft:

I believe that the recent settlement negotiated between the Department of Justice and Microsoft is a fair one, if indeed this suit ought to have been brought at all. I am writing this to express my appreciation for your having taken the logical step to settle it. I hope at the end of January this settlement will be enacted.

There are so many other more important things about which we should be concerned. Any further efforts to cripple one of our country's most successful companies ought not be on that list. I am hopeful that this settlement signals the end of hostilities between our government and American business. Microsoft has shown some leeway in this issue. They have agreed to license their Windows at the same price. They have also agreed to disclose some of the interfaces to its competitors. Let's concentrate on those things that are necessary rather than those grudge matches that seem to indicate a lack of national resolve.

MICROSOFT HAS SOON A DRIVING WH?? ?? ??UR BURGE??NING ECONOMY. GIVT ?? SANT SC??CK.

Dear Mr. Ashcroft,

I am pleased that we all have seen the final conclusion to the Microsoft lawsuit. This whole dispute seems frivolous now that the case has been settled on the federal level. We need to approve the settlement quickly, and move on with more important national business. It can be argued that has Microsoft actually enhanced the world of computers rather than hindered it. Its integrated software and operating system have certainly educated a segment of computer consumers around the country. Without Microsoft, computers across the globe would be operating on multiple, totally different systems, and many would be unable to communicate with each other.

I realize that you are busy with many responsibilities, but I wanted to take this opportunity to thank you for settling this case and for ensuring that our nation will be better off. We've put this case behind us and it is time to move on. Thank you.

Sincerely,
Tom Johnston

Dear Mr. Ashcroft:

I encourage you to accept the recent anti-trust settlement reached with Microsoft. Microsoft has agreed to terms that will open up the software operating system, market m making the market more competitive and beneficial to consumers. For example, Microsoft has agreed to disclose its operating interface to competitors as well as to make it easier for computer makers to remove Microsoft products from the Windows O5 and to install non-Microsoft products in their places. Microsoft has also agreed to let a three person Technical Committee oversee settlement compliance and assist in dispute resolution. I firmly believe all of this will serve to open the OS market and to make it more competitive. This competitive market will ultimately drive Microsoft and its competitors to create better software. And it will be the consumer who wins.

Sincerely,
Robert Saunders

Washington. DC 20530

Dear Mr. Ashcroft:

Three years ago, the Department of Justice announced it had filed an antitrust suit against the Microsoft Corporation, and that was the beginning of our economic woes. The stock market dropped sharply that day and kept going. Now we are stuck in a recession, and the settlement that was reached last November between the DOJ and Microsoft has a good chance of helping America regain its economic prosperity.

I support the settlement. It ends the unnecessary litigation against Microsoft; it will enable the stock market and economy to get back to past successes and allows Microsoft to resume producing innovative products. Microsoft has agreed to produce future versions of Windows to make it easier for competitors to remove Microsoft software and replace it with their own. While I do not agree with this action since it completely throws free enterprise out of the window. I am relieved to see the litigation stop.

I support has settlement, and hope that the DOJ approves it as soon as possible.

Thank you.
Sincerely
Lloyd Sime

Dear Mr. Ashcroft:

I want to express my concern over the Microsoft antitrust dispute. The settlement that has finally been reached in this case is fair and in the best interest of all parties. The continued dispute over this litigation will not aid anyone in any way nor will any of us be benefited by the breakup Microsoft.

The terms of this settlement are fair Microsoft will design all future versions of its Windows operating system to be compatible with the products of its competitors. The company will also cease any behavior that may be construed as predatory or retributive. This settlement will ensure that Microsoft cannot engage in any further antitrust violations, alleged or confirmed. Those who are not satisfied by the terms of the settlement are, in my opinion, not looking for a good solution to this problem, but rather the propagation of their own political ends.

Please ensure that this settlement is approved, I appreciate the time that you have taken to deliberate this issue, and make the right decision.

Sincerely,
Charles Field

Washington. DC 20530

Dear Mr. Ashcroft:

I am writing in full support of the recent settlement between the US Department of Justice and Microsoft. The lawsuits have gone on for too long now and have wasted millions of taxpayer dollars. Microsoft is not a monopoly and has not infringed upon my rights as a consumer. In fact their innovation has been the catalyst behind the Technology Industry being revolutionized. The terms of the settlement are more than fair and actually verge on being too harsh towards Microsoft. Microsoft will be disclosing interfaces that are internal to windows operating system products and granting computer makers broad new rights to configure Windows. This is a first in an antitrust case.

Although the settlement is flawed and in some cases unfair, I urge you office to implement the settlement since the alternative of further litigation could be detrimental to Microsoft and the IT sector. Do what is right for our country and show that the new administration has made a commitment to innovation, I am a loyal AOL customer and have used their product since 1993. I also use many of Microsoft's products and many of their competitor's products, Please let Microsoft move on and let them do what they do best which is innovation. They raise the bar of excellence for all.

Sincerely,
Catherine Hamlin Walker

Dear Mr. Ashcroft,

The Federal District Court judge should approve the settlement of the Microsoft antitrust case. That would be the best thing for the American computer industry and the American economy. Until six years ago, I worked in the computer industry, starting with college internships. I worked with IBM's OS/2 software, which was great for connectivity to IBM's mainframe and mid-level computers, but was able to run only the older, 16-bit Windows programs, not the newer 32-bit ones (Windows 95 and later). The salespeople refused to use OS/2 on their laptops, insisting on Windows. At the time, I purchased a home computer with Windows on it, and later decided to purchase the Microsoft Office Suite, because I thought it worked better than the Lotus Smart Suite and other similar products.

There have been complaints made about Microsoft that are reflected in the antitrust litigation. For example, people have said that Microsoft's knowledge of the internal software code interfaces of its Windows operating system allowed its application programming division to have an inside track to building better programs, like Microsoft Office. Under the settlement, Microsoft will have to document and disclose the Windows internal interfaces. IBM never disclosed the internal interfaces of its operating systems in eighteen years of antitrust litigation. Top software engineering experts will monitor the agreement for five years to ensure that it is complied with, and investigate complaints. The other terms also require Microsoft to cooperate with its competitor, open up its software code, and introduce more flexibility into its business practices. The settlement resolves concerns and is good for the American computer industry.

Thank you for your support of the settlement.

Sincerely,

MTC–00030169

Microsoft Antitrust Case
T. Blanford—01/28/02

How many businesses have been forced out of business by the unlawful, ruthless tactics of Microsoft?

How many individuals have suffered countless loss hours ,and dollars as the result of Microsoft.

How many Billions of dollars in losses has Microsoft cost business's and organizations of all types including the government and individuals by their buggy and often hacked software. By all metals, show me where the security in their software resides. I can't find it.

Show me where the competition is. Microsoft couldn't sell their crap software if there were real competition.

I personally have lost ten of thousands if not hundreds of thousands of dollars and ten of thousands of man-hours as the result of anti-competitive actions by Microsoft.

Show me where the standards are. Show me where Microsoft has promoted and implemented universal cross platform and cross application compatibility.

Who, outside of government, has the power to control rite abuses and raider-handed actions of Microsoft?

Where is tile level playing field for all businesses and individuals?

What is the purpose of government if not to protect the people from unlawfull and unethical acts committed by those without civil sensibilities.

Where is this crap going to end?

Tom Blanford—

Dear Mr. Ashcroft:

The federal case against the Microsoft Corporation is without merit. The Justice Department's litigation against Microsoft has served only to attack the principles of free enterprise that spur productivity. I believe that settling this issue is in the best interests of this nation and I would urge the Dept. of Justice to enact the settlement swiftly.

The details of the settlement agreement contain many changes brought forth by Microsoft in an attempt to resolve the issue. Microsoft will now disclose the protocols and design interfaces of the Windows system. The result of this change will be that developers will more readily be able to design soft-ware that is compatible with the Windows system. I believe that consumers and developers will both benefit from these changes.

The Justice Department should realize the benefits of enacting this settlement.

Sincerely,
Willard E. Salter

Dear Mr. Ashcroft:

I am writing this letter to show my support for the recent proposed settlement that was reached between Microsoft and the Department of Justice. It is my opinion that the settlement will provide the necessary push that the IT industry needs to help bolster the economy. The economic troubles

that America is facing all started when the antitrust suit against Microsoft was announced. Our stock market and economy went from being the best in history to being mired in a nasty recession. Microsoft is the one company that has the ability to save our economy, and since the settlement makes them work ever closer with their competitors, competition in the IT industry will benefit, and the economy will show gains. The settlement that was reached is more than fair, and I support it.

Sincerely,

Washington, DC 20530

Dear Mr. Ashcroft:

I want to take advantage of this opportunity to give my opinion on the settlement concluded last year between Microsoft and the Department of Justice. I believe the agreement represents a good deal and should continue to be supported by the federal government. The agreement is fair and the government received many strong provisions. Microsoft has agreed to design future versions of Windows to provide a meehanism to make it easy for computer makers, consumers and software developers to promote non-Microsoft software within Windows. This mechanism will make it easy to add or remove access to features built in to Windows or to non-Microsoft software. This change will give consumers the freedom to change their computer's configuration whenever they so desire. This agreement is also good for consumers because it allows Microsoft to focus their attention on new products that consumers have come to expect. This will make everyone more efficient, whether they use the products at home or their job.

Sincerely,
Maya Balle

Dear Attorney General Ashcroft:

I am writing to express my support in the recent antitrust settlement between Microsoft and the federal government. I sincerely hope that no further action is being taken an the federal, level. Considering the terms of the agreement, Microsoft did not get off with just a slap on the wrist. In fact, Microsoft is left to make several significant changes to the ways that they handle their business. For example, Microsoft has agreed to make available to its competitors, any protocols implemented in Windows' operating system products that are used to interoperate natively with any Microsoft server operating system. With the many terms of the agreement, there should be no reason to pursue father litigation against Microsoft on any level.

Thank you.
Sincerely yours,
Donald B Wain

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The purpose of this letter is to support Microsoft and the antitrust settlement, The suit brought against Microsoft was frivolous and misplaced. Clearly, Microsoft has been the leader in the technology industry and has driven the incredibly positive returns in the stock market for the entire decade of the 1990s. Government meddling in business has almost never produced positive results—but in this case, the interference has been even more egregious than ever before. I disagree with any Government involvement.

The terms of the settlement will allow other companies the ability to compete and will also be more beneficial/advantageous to consumers. In addition, Microsoft has agreed not to retaliate against software and hardware developers and competitors. They have also agreed to make it easier for non-Windows software to operate within Windows, starting with Windows XP. Surely, you must agree that Microsoft has shown much more than good faith in this entire, ridiculous lawsuit!

Best regards,
Carolyn A. Strand, Ph.D., CPA

Dear Attorney General:

I was happy to hear the Department of Justice made the wise decision to settle the Microsoft antitrust case. As a software developer, I am cognizant of the benefits settlement agreement provides to both Microsoft and to its competitors.

I am supportive of Microsoft's efforts to dispel concerns about anticompetitive behavior. Microsoft has agreed to disclose portions of its code to its competitors, as well as to make it easier for consumers to run other software systems with Windows. Future versions of Windows will be designed with mechanisms that will allow consumers to remove features of Windows and replace them with non-Microsoft programs. By these and other concessions, Microsoft has really gone above and beyond what should be required it.

It is time for the litigation to conclude so Microsoft will be free to focus its resources on developing new products. I hope you continue your efforts to resolve this case. Thank you for your consideration.

Sincerely,
Liam Newman

950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft,

I am appalled that the Microsoft antitrust case has gone on for this long. Three years have been spent already in the federal courts, and the possibility that even more time and money could be wasted in an extended court battle is outrageous. The push for continued litigation represents a pathetic attempt on the part of state legislatures to line their own pockets at Microsoft's expense, It is not in the best interest of the consumer for another round of proceedings to be brought against the Microsoft Corporation; indeed, the economy and the technology industry have been stagnating since the case began. The proposed settlement would not only prevent future antitrust violations, it would also allow Microsoft and the Department of Justice to get back to business. This is what the economy, the consumer, and the IT industry all need.

Microsoft and the Department of Justice were able last November, with the aid of a courtappointed mediator, to reach a settlement that was realistic as well as just. In the interest of wrapping up the case, Microsoft has agreed to conditions that extend to products and procedures not found to be unlawful by the Court of Appeals. Microsoft has, in fact, already made the necessary changes and is no longer in violation of antitrust laws. For example, Microsoft has agreed to refrain from taking retaliatory action should software developers or computer makers introduce software onto the market that directly competes with Microsoft products, Microsoft has also agreed to disclose various interfaces integral to the Windows operating system for use by its competitors. I cannot imagine that the Department of Justice will be able to find the agreement to be anything but fair.

The settlement needs no revision. Continued litigation is not in the best interest of the consumer, I do not believe that further action needs to be taken on the federal level. I urge you and your office to support the settlement.

Sincerely,
Michael Curtin

January 18, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Attorney General Ashcroft:

As a member of the technology industry, my only concern when working with computers and software is whether or not I can rely on it consistently over time, Microsoft has delivered the best services and products In the industry over the last decade and has benefited consumers, software developers, and computer makers alike, While I think that Microsoft, like any large corporation, has probably been aggressive in its use of marketing, I think that the lawsuits have been brought on not because there are antitrust violations of any great nature, but, because the Clinton administration had political vendettas against Microsoft for their lack of financial support for the party.

The government should stay out of big business and the technology industry especially at this time of growth where our country is competing with other nations for the lead in the IT sector. Even though I think the settlement should have never occurred in the first place, I want to see it come to fruition because it is In the best interests of everyone involved to end litigation. Let Microsoft focus on innovation and growth.

Under the terms of settlement Microsoft is giving away numerous technological secrets, which seem s to me to be in violation of their Intellectual property rights, They are also agreeing to license its Windows'' operating system products to the 20 largest computer makers on identical terms and conditions, including price. This stipulation seems to me to be creating an opportunity for monopolistic behavior since there will be collaboration on pricing.

In spite of these flaws, the settlement should be finalized, The nine states holding out should be reprimanded and all of this has to come about due to the direction off your office. I ask you to please take these thoughts into consideration. Thank you for your time.

S. Gorman

950 Pennsylvania Avenue, NW
Washington, DC 20530–0001
January 26, 2002

Dear Mr. Ashcroft:

It's good to see that the Justice Department has ended its very long and costly antitrust lawsuit against Microsoft. By freeing the innovative giant to fully focus on business, the Government will be aiding the creation of many jobs.

The agreement calls for Microsoft to agree to terms that extend well beyond the products and procedures that were actually at issue in the suit—for the sake of wrapping up the suit. One provision calls for Microsoft to disclose and document, for use by its rivals, various interfaces that are internal to Windows'' operating system products—a first in an antitrust lawsuit. Good work deserves its rewards. Microsoft has produced amazing software products for the world. It is time now for the government to allow the provisions of the agreement to fall in to place. No more action should be taken at the federal level against Microsoft.

Washington, DC 20530

Dear Mr. Ashcroft:

As a fellow Republican in Rep. Tom Delay's district I wish to express my support of the settlement reached last November between the Department of Justice and the Microsoft Corporation. It has now been 3 years since the Justice Department began the litigation process against Microsoft. During this time countless dollars have gone to court mediators who endlessly debated the merits of this case. In times where budgetary resources are becoming increasingly scarce this action is increasingly appalling. Three years has been too long. I cannot imagine there is anything more to discuss.

Once more, the settlement that was reached contains many concessions on behalf of Microsoft, in an attempt to settle the dispute Microsoft has been willing to agree to these terms despite their lack of guilt in the case. Microsoft has agreed to design Windows XP with a particular mechanism that will allow users to add competing software into the system. This will revolutionize the way our operating systems are configured. I believe that if Microsoft is willing to make these changes, the settlement should be enacted. I strongly support the settlement and look forward to the end of this case.

Sincerely,
Pamela Spencer

Dear Mr. Ashcroft,

It is in the best interest of the American public to finalize the antitrust settlement with Microsoft as soon as possible. Although we are happy to see Microsoft will not be broken up, we maintain our belief that Microsoft is still receiving unwarranted treatment. Under the terms of the concession, Microsoft has agreed to disclose internal interfaces, and increase its relations with software developers. All of these concessions have their positives and negatives. But, it seems to us when a company starts from nothing and is innovative to the point that it becomes the unprecedented leader of an industry, that company should be applauded, not criticized.

We urge your office to free up the IT sector and allow it to grow again at the rapid rate it did before litigation. Only by allowing Microsoft to focus on business—not politics will the tech sector make a quick recovery. Thank you for your time. We appreciate your consideration of our thoughts for the continuing growth of Microsoft for everyone's benefit.

Sincerely,
Joseph and Maxine Stephens

Washington, DC 20530

Dear Mr. Ashcroft:

The Department of Justice has finally ended its pursuit of the Microsoft Corporation. A proposed settlement was reached between the two last November, and I am in full support of it. Now my government will be able to focus its attention o 1 more pressing matters than Microsoft. The settlement that has been reached is more than fair to all parties involved, and I urge you to, approve it as soon as possible. Microsoft will now be communicating more with their competitors than ever before, which will provide the IT industry with the necessary boost it needs. They have agreed to share design information with their competitors concerning the internal make-up of the Windows operating system, an I will make future versions of Windows that will make it easier for companies to manipulate the operating system and install their own software into it.

All in all, his settlement benefits the industry and economy and should be implemented as soon as possible.

Sincerely,

Reginald L. Armfield

Dear Mr. Ashcroft:

It's good to see that the Justice Department has ended its very long and costly antitrust lawsuit against Microsoft. By freeing the innovative giant to fully focus on business, the Government will be aiding the creation of many jobs.

The agreement calls for Microsoft to agree to terms that extend well beyond the products and procedures that were actually at issue in the suit—for the sake of wrapping up the suit. One provision calls for Microsoft to disclose and document, for use by its rivals, various interfaces that are internal to Windows'' operating system products—a first in an antitrust lawsuit. Good work deserves its rewards. Microsoft has produced amazing software products for the world. It is time now for the government to allow the provisions of the agreement to fall in to place. No more action should be taken at the federal level against Microsoft.

Yours truly,

Peggy Broyles

Washington, DC 20530

Dear Mr. Ashcroft:

I am writing in full support of the recent antitrust settlement between the US Department of Justice and Microsoft, Although I am happy to see that Microsoft will not be broken up, I believe the current penalties are still too harsh. I am an avid believer in free market enterprise. Microsoft continually outdid its competitors by developing better products and services faster. This is called free market competition and Microsoft's efforts only served to increase the rate of growth in the industry. They should be applauded for their efforts not criticized.

I sincerely hope that the remaining nine states opposing Microsoft's actions drop litigation immediately and allow the IT sector to focus on business which is in the best interest of the American public, especially in this time of recession.

Sincerely,

Francis Baird

Dear Mr. Ashcroft:

Please see that the new Federal District Court judge approves the settlement in the Microsoft case. The settlement is good for the country, because the information technology industries is a leader in fostering American prosperity through increased efficiency as a result of useful innovations, and because Microsoft is a vital part of the IT industry, which has for too long been stymied by this litigation.

The settlement is fair and will be adhered to. A committee of software engineering experts will be able to look throughout Microsoft's facilities and into its software code to see that the agreement is followed. Other companies will be able to make any complaints they may have to the committee and the committee will investigate. This sounds like an approach that should work well.

Please keep up your efforts to resolve this case now that we are so close.

Thank you.

Sincerely,

Sonia Tarrish

Dear Mr. Ashcroft:

I would like to inform you of my support of the proposed settlement in the antitrust lawsuit against Microsoft. This litigation has extended much further, and cost more money, than the public wants. It should be completed without further delay.

Microsoft has made a significant attempt with this agreement to encourage weaker competitors to gain market share. They will make it easier to configure Windows with the software of competitors and will offer top computer makers equivalent terms and conditions to encourage fair play. Software developers will benefit from measures that are sensitive in scope, gaining the ability to license Microsoft's intellectual property and access their Windows source code. Now that we have the opportunity to move on, let us enact this fair, court mediator-assisted plan and get back to business. Any further action would just do harm to our fragile economy and truly over-step the public's feelings on the issue. I hope we have your approval.

Sincerely,

Dan Lester

Dear Attorney General Ashcroft:

I understand there is a 60-day public comment period, as required by the Tunney Act, with regard to the settlement between Microsoft and the Justice Department. Please know that I am fully supportive of this court mediator-assisted compromise and am urging you to cease any further legal action against Microsoft. Microsoft's success is extremely important to the U.S. economy, technological innovation, and millions of consumers. Microsoft's offer—access to their internal code for future design and permitted licensing of their intellectual property—should more than suffice to their competition. Creative, forward-thinking individuals and companies should not be penalized because their competitors are not able to be as successful due to their own lack of ability. This deal offers capitulation with sensible restraint, so I urge you to finalize it and move on to more important matters. Thank you very much.

Yours truly,

Shirley Claudon

RE: Microsoft Settlement

Dear Mr. Ashcroft:

We understand that the public comment period on the proposed settlement agreement between the Department of Justice and Microsoft closes today, January 28, 2002. We are writing to cast our votes in favor of settlement.

Given the record of accomplishment so far in this case, it makes no sense to continue litigation when you have the chance to conclude the case in a manner beneficial to the economy. The primary complaint against Microsoft was that consumers who chose to

use Windows operating systems for their computers were precluded from utilizing non-Microsoft software Programs for such services as Internet browsers and messaging services within Windows. Microsoft has agreed to end this practice, and open its Windows systems to such competition. With the major complaint answered, there is no need to further litigate.

Please end this case, and put Microsoft back to work. The country needs to heal. Thank you for your kind consideration in this matter.

Sincerely,
Lester A. Taylor

Dear Mr. Ashcroft:

There has been a recent settlement between the Department of Justice and Microsoft. I want to give my support to this agreement and ask that you do also. The whole case, in my opinion, was a boondoggle. The lawsuit was entirely political, more a result of the collaboration of Microsoft's r??vals tan any unethical business practices. I find it interesting that we comp ??out competition from abroad, urge innovation, yet in other countries, the government helps companies. In our country, companies, if they become ??o successful, are hauled into court, completely at the mercy of their competitors and the government's definition of success. This is a shame out the two parties have reached an agreement and I urge you to give your approval since they, obviously, want this to end.

Moreover, Microsoft has acquiesced to a great number of demand from the Department of Justice. Microsoft has agreed to grant compute takers broad new license to cast Windows as to promote non-Microsoft software programs; Microsoft has agreed to new relations with software developers; Microsoft has agreed to internal interface disclosure. Enough is enough.

Sincerely,
William Hatley

Subject: Microsoft Settlement

Dear Mr. Ashcroft,

I am faxing you concerning the Microsoft settlement.

I believe in free enterprise and have for many years worked with other small companies. I have used computers since the mid 1980's in my businesses. I greatly appreciate all that Microsoft has done to enable US companies but especially small companies do their business productively. We faced major costs with unknown results trying to use custom software before the success of Microsoft who offer us competitive suitable software for our various needs.

I, like many other people in small business, feel that major companies which try to compete with Microsoft: are trying to use the US government and courts to fight Microsoft success because these big companies have not met the market needs that Microsoft so successfully addresses. While I was totally opposed to the court actions, I was pleased that a settlement was reached at least between the US government as well as many states and Microsoft. The settlement was a compromise but I thought would enable Microsoft to focus again on their customers' needs in a world of global competition. Weakening Microsoft could enable not only US competitors but overseas competitors an unfair advantage. Microsoft is a major US exporter which we need and has helped many other companies and technologies grow to the benefit of the USA. I hope this settlement will be enacted this month.

I believe that less government and more individual initiative is what makes the USA strong in this world. Let us finally let Microsoft focus on their business which has definitely help our company and many thousands of companies our size compete daily in our business areas. Thank you for your time. I wish you continued success in your fight against world terrorism.

Comments on the Revised Proposed Final Judgment
http://www.meer.net/iq/doj—comments.html
John Giannandrea, Independent Software Developer, formerly ('94–'99) Chief Technologist in the Internet Browser group at Netscape/AOL

Summary

After reviewing the Revised Proposed Final Judgment, the Competitive Impact Statement, the May 18th 1998 Antitrust complaint together with the findings of the District Court and the Court of Appeals I submit that the Proposed Final Judgment fails to describe effective remedies for Microsoft's illegal activities.

An effective Final Judgment would prevent recurrence of the illegal behavior and provide relief and protection for independent software developers to develop innovative new middle-ware products and compete with Microsoft in the market for Windows software. The terms of this Final Judgment will not achieve this result because it is seriously flawed. These comments briefly describe the following problems with the Proposed Final Judgment:

1. Problems with the scope of the remedy
2. Shortcomings in the OEM configuration provisions
3. Loopholes and technical shortcomings with the wording of the judgment
4. Restrictive language related to Intellectual Property.
5. Problems with the term and proposed implementation
6. Flaws in several of the definitions

Taken together I believe these flaws in Proposed Final Judgment make it an inappropriate remedy for the illegal behaviors found by the Court of Appeals. While changing some of the specific wording of the Final Judgment and removing some of the loopholes will make it stronger, on balance it is a wholly inappropriate remedy for the ongoing harm done by Microsoft in protecting and extending its Windows monopoly.

ig@meer.net
January 27th, 2002.

1. Problems with the scope of the remedy

There are several problems with the scope of the proposed remedies which are likely to make it ineffective in practice. The Final Judgment does not correct the harm done to the marketplace today by Microsoft's existing software products, nor address the issue of backwards compatibility and harm done to the market by ongoing changes (''upgrades''). Nor does the Final Judgment address the crucial issue of APIs in Microsoft middle-ware products themselves, as opposed to APIs in the Windows Operating System Product.

1.1 What products fall under the proposed remedy?

Sections III.D, III.E and III.H limit the practical effects of the Final Judgment to some future versions of Microsoft's latest operating system product (WindowsXP, SP1) or 12 months from submission of the Final Judgment. This will not provide effective remedy for the actual installed base of Windows users, of which WindowsXP remains a small minority. Microsoft's monopoly position is, and will be for the length of the initial proposed term, made up of Windows2000, WindowsME, Windows98 and Windows95 products and their associated middle-ware product lines. It is in these products that harm is and was being caused by the illegal activities. For the Final Judgment to be effective in providing relief, the communications protocol and Windows API disclosures need to apply to the actual installed base of Windows. It is no more technically difficult for Microsoft to document current APIs than it is to do so in future products.

The final paragraph of III.H limits the proposed remedies to middle-ware as defined by a timeline relative to the release of new Windows operating system products. The reality is that the illegal conduct relates to all existing and past Microsoft middle-ware products, and the release of future versions of Windows will not significantly affect the harm being done in the marketplace. There is no technical reason why existing Microsoft and non-Microsoft middle-ware will not be compatible with future versions of Windows. In fact Microsoft makes considerable effort to ensure that Windows is ''backwards compatible'' with its own applications. Remedies need to apply to all future versions of Windows, and all middle-ware now and in the future, and the obligations of the monopoly holder should not change unilaterally with a product release cycle under their express control. Much of the harm found by the Court is related not just to the disclosure of interfaces and APIs, but to the fact that Microsoft can stop supporting a documented feature or API without consulting the affected parties.

One possible way to improve the Final Judgment would be to add a new condition to III. C. that allows OEMs the option of shipping any prior Microsoft middle-ware with any subsequent version of Windows.

1.2 Middle-ware APIs are as important as Windows APIs Section III.D. proposes that Microsoft shall disclose APIs used by its middle-ware to interoperate with a Windows operating system. Since middle-ware such as Internet Explorer or Windows Media Player has added, subtracted or altered significant APIs with each subsequent version, including minor, so called ''maintenance'' versions, and since these APIs are depended on by the the majority of ISVs. III.D. should be extended to require disclosure of all APIs used by, or provided by any Microsoft middle-ware product, including APIs in other middle-ware software.

1.3 Changes to current and past middle-ware needs to be covered The definition in VI.] excludes software in minor version changes from the definition of Microsoft middle-ware. Yet it was exactly such a minor change that disabled Java for millions of Internet Explorer users, or forced thousands of ISVs to abandon the Web Plug-in API and redevelop or abandon their middle-ware. (See http://www.meer.net/jg/broken-plugins.html) At a minimum all software middle-ware released by Microsoft and in use by a majority of Windows users should be covered by the Final Judgment for it to be effective.

2. Shortcomings in the OEM configuration provisions It is clear from the findings of the Court that needs to exist remedies that enable OEMs and End Users to be able to add, remove and replace middle-ware without limitation by Microsoft through its Windows product. It has been shown to the Court that its technically easy to allow middle-ware either from Microsoft or its competitors to be added removed from the Windows operating system. The current language in the Final Judgment does not protect distribution of new and innovative forms of middle-ware and therefore fails to remedy the current situation where investment and competition in Windows middle-ware is ''chilled'' by Microsoft's prior and current practices.

III.H.3 allows Microsoft to undo an OEM configuration in any subsequent version of a Windows product and to change the way an OEM's configuration interacts with Windows in each subsequent version. This lack of ''backwards compatibiliy'' is in Microsoft's interest at the expense of the OEM's investment.

III.H.3. Allows Windows OS to undo an OEM's configuration automatically after 14 days. But it does not give the same capability to an ISV, or the OEM themselves. If a third party provides competitive differentiation by adding features and services on top of Windows they should be able to do so with no hindrance from Microsoft at all. If it is determined that Windows should have a ''revert'' feature that disables or undoes an OEM's enhancements, then that feature should have an ''undo'' capability so that the enhanced product purchased from the third party is not irreparably harmed by the behavior of the Windows software at some later time. III.H attempts to give end users and OEMs the right to add and replace non Microsoft middle-ware with competitive middle-ware, an essential component of the proposed remedies. Rather than just stating this as a simple requirement, additional restrictions are imposed in III.H.2:

that competing middle-ware be replacing a Microsoft middle-ware

that the middle-ware be a specific subset of possible middle-ware that has a particular and limited type of user interface

that Microsoft can require (and itself present?) a confirmation dialog for the end user if the change is made by software that the user presumably installed themselves

III.H.3 imposes conditions on Microsoft operating system products altering OEM configurations, but Microsoft middle-ware also has a documented history of making such alterations. The Final Judgment does not protect OEM investments or end user choices unless it enjoins all Microsoft software products from altering, without express permission, the end user experience. It is exactly Microsoft's ability to make unilateral changes that expresses its monopoly power and distorts the market for improvements to Windows.

The mechanism proposed in III.H.1 allows Microsoft to provide a interface choice to enable ''all Microsoft Middle-ware Products as a group''. This should be specifically disallowed since it reinforces the distinction between Microsoft and non Microsoft software, and suggests that an end user would be given the default choice of ''taking everything'' (i.e. all available Microsoft middle-ware, turning off competitors middle-ware) in order to allow ease of use and configuration.

III.C.3 The requirement that a non-Microsoft middle-ware product should display a user interface ''of similar size and shape'' to a Microsoft middle-ware product is technically onerous. The additional inferred requirement that a middle-ware product can only launch automatically if a Microsoft middle-ware product were otherwise to do so, is also technically unreasonable. If the purpose of this remedy is to allow competition in such middle-ware; to allow, for example, an OEM to configure a PC so that it connected automatically to an IAP or ICP on boot up, then these restrictions would preclude this.

3. Loopholes and technical shortcomings with the wording of the judgment There are significant exceptions and conditions attached to the definitions used by the Final Judgment. These exceptions appear to make the remedies themselves weaker and in several cases are technically inaccurate or groundless.

3.1 Excluding existing middle-ware

Section III.H after III.H.3 describes two exceptions where Microsoft middle-ware would be allowed to execute in preference to competing Middle-ware. These exceptions effectively negate the value of III.H and are seriously flawed.

3.1.1 The first exception is for middle-ware ''invoked solely for use in inter-operating with a server maintained by Microsoft''. Given the current and past scope of MSN and the services provided by various servers in the ''microsoft.com'' domain, this exception is unreasonable. For example, a component of Windows that contacted a server to upgrade or maintain the device driver software on a Personal Computer would be exempt from III.H. This would presumably preclude an OEM from providing their own value-add service using the same component APIs of Windows. As the value and prevalence of network services grows, Microsoft would be able to continue to exclude competing middle-ware as long as they could define the service as being hosted at Microsoft. This would also include most .NET services, which Microsoft has publicly stated will be at the core of most end user functions in all future versions of Windows. The proposed remedy for past behavior is ineffective.

3.1.2 The second exception is if ''non-Microsoft middle-ware fails to implement reasonable technical requirements .–.–.''. This is an unreasonable and overly broad restriction on the proposed remedy. The specific example given, failure of support ActiveX, is a most egregious example. ActiveX is not a feature of Windows, it is an API created for Internet Explorer middle-ware expressly to tie that middle-ware to the Windows platform. In a healthy competitive environment it should be end users that conclude if middle-ware is providing ''functionality consistent with the Windows product'', not Microsoft. The idea that Microsoft themselves are qualified to say what is and what is not a valid non-Microsoft middle-ware product puts the fox in charge of the henhouse. In fact by the definitions of this section of the Final Judgment, most existing successful non-Microsoft middle-ware (.lava, Netscape Navigator, Web Plug-ins) would be exempt from the remedy. It was precisely the success of these products, demanded by end users, that precipitated the threat to Microsoft and led to the illegal behavior.

3.2 Limitations on disclosure of communications protocols

Section III.E. Requires disclosure of any communications protocol implemented in a Windows OS installed on a ''client''

computer. This would appear to exclude protocols implemented as Microsoft middle-ware, such as Web Browsers, or communications middle-ware such as e-mail programs (Outlook Express) or streaming media players (Windows Media Player). It would also appear to exclude protocols implemented in the same copy of Windows, running as a ''server''. Given the advent of ''peer-to-peer'' computing this distinction excludes more significant protocols than it includes. To meet the intent described in the impact statement, the requirement should be the disclosure of any communications protocol implemented by the Windows Operating System Product and any Microsoft middle-ware product.

3.3 Preventing disclosure on ''security'' grounds.

Section III.J.1.a attempts to limit the APIs and protocol descriptions to be published as part of the proposed remedy. The exceptions include those that would ''compromise the security .–.–.'' of the Microsoft products. It is well known and supported by the majority of reputable computer security experts, including many who work for Microsoft Corporation, that disclosure of the mechanisms of software makes it more secure, not less secure. In fact requiring Microsoft to document and disclose APIs will make the products more secure as flaws are discovered by peer review and then repaired. Computer security should not be considered valid technical grounds to limit disclosure.

3.4 Limitations on who can access the disclosures

Section III 3.2 places all kinds of limitations on the disclosure of the information central to the proposed remedy. In III.D the Final Judgment requires Microsoft to disclose APIs to all listed parties via ''MSDN or similar'' i.e. publicly and for a small fee. This conflicts with III.J.2 which allows Microsoft to withhold such information unless Microsoft itself determines ''a reasonable business need'', or that the requester meets ''standards established by Microsoft for .–.–. viability''. These restrictions are unnecessary and are not vital to the remedy. The required information should be disclosed simply, via MSDN or Microsoft.com, to anyone who has a valid Windows license.

Section III.J.2 additionally requires that non-Microsoft middle-ware innovators be in ''compliance with Microsoft specifications'' and, at their own expense, pass a Microsoft defined third party verification test. These new tests and requirements are onerous, and do not exist in the market today except as optional marketing programs. In particular the non-Microsoft middle-ware at issue in the anti-trust action would not have met these standards. These additional requirements and limitations will serve to place further hurdles in front of middle-ware ISVs. They only serve the interests of the monopolist in limiting access to the required APIs as has happened in the past as documented in the Findings of Fact.

4. Restrictive language related to Intellectual Property.

The licensing terms implied by the Final Judgment are both more onerous than the prevailing market today, and unfairly biased in favor of Microsoft. The terms of III.G are not in force if Microsoft licenses intellectual property from the third party. This would appear to allow, for example, Microsoft to enter into an exclusive distribution arrangement with an ICP if the ICP had a reciprocal license to Microsoft for some middle-ware enhancement related to their Internet content. This kind of transaction is common in the industry today and would seem to weaken the intent of III.G.

Section III.I.5 grants Microsoft the right to require a competitor to license to it IP rights to ''relating to the exercise of their options or alternatives provided by this Final Judgment''. This is an onerous and unreasonable requirement because Microsoft does not need such non reciprocal IP rights to comply with the Final Judgment. (Could such rights be licensed father by Microsoft to other ISVs?)

III.I requires Microsoft to reasonable and non discriminatory licensing of any intellectual property required for the market to take advantage of the provisions of the Final Judgment. However there is a restriction (H.III.3) on sub-licensing. This would in practice curtail most ISV business models if a technology innovator was unable to resell its technology to an ''end user'' OEM or ISV without that entity then being required to obtain a license from Microsoft. The last paragraph of III.I explicitly states that the terms of the Final Judgment will not confer any rights with regard to Microsoft IP on anyone. But as the Final Judgment requires disclosure by Microsoft of APIs, protocols and detailed documentation of mechanisms inherent in middle-ware interfaces, then certain legal rights are in fact surrendered in most jurisdictions.

III.I does not address the significant and influential market in royalty free software (such as Linux) and the open standard nature of the Web protocols and standards. Industry standards groups which Microsoft itself is an active member of such as W3C (The World Wide Web Consortium) customarily require all APIs and protocols to be royalty free. Yet III.I potentially places further restrictions or costs on ISVs developing products and innovations under that model if they wish to integrate them with Windows.

5. Problems with the term and proposed implementation

5.1 Term is not long enough

The Final Judgment has a term of five years (V.A), or seven years with additional violations. Given the pattern of illegal behavior by Microsoft since 1995 and the fact that Windows Operating system product cycles are frequently many years apart, the scope of this agreement appears unusually short. A 10 or 15 year agreement would be more appropriate.

5.2 Issues with creating a competent technical body

The Final Judgment requires a three person technical committee. While this committee is intended to be knowledgeable about software design and programming, it also needs to be knowledgeable about Internet standards and protocols, online transactions and web e-commerce architectures and business models. It is unlikely that a committee as small as three people will have the requisite skill set to oversee the broad range of initiatives and innovations that center on the Windows platform and are the subject of the monopoly concern. The committee would be more in keeping with industry standards and accepted practice if it were larger and comprised of experts in several fields.

5.3 Public disclosure of information relating to enforcement

Section IV.B.10 and other language in :IV (e.g IV.D.4.d) suggests that the Final Judgment requires the work of compliance and technical overview to be conducted in secret. For example if an ISV submitted a complaint to the TC or the Microsoft Compliance Officer it is not required that the complaint and its response be published (IV.D.3) It would be more in keeping with industry standards and accepted practice for technical discussion around the enforcement of a Final Judgment be open to wider technical review. This would improve the quality and accuracy of such review as well as reassuring the community of OEMs, ISVs etc. that the enforcement process was actually working. At a minimum there should be a requirement that the TC host an independent web-site to communicate with the industry about the status of enforcement issues.

6. Flaws in several of the definitions

There are many problems with the definitions of key terms that affect the meaning and substance of the Final Judgment.

VI.A. A suitable definition for Application Programming Interface needs to include interfaces provided by middle-ware itself, since middle-ware can include tiers of software, not just a simple arrangement where middle-ware calls the Windows software layers. A more accurate and common definition of APIs would be independent of both the terms Windows and middle-ware. VI.B. The scope of Communications Protocol should not be limited to communications with a ''server operating system''. This excludes the concept of one Windows XP PC talking to another PC, which is a common occurrence and should be within the scope of the remedy. ''Peer-to-peer'' is an example of a middle-ware category that is not covered by this definition. VI.J.2 and VI.K.b.iii both require that the covered software be ''Trademarked'' to be under the terms of this agreement. This requirement seems to exclude certain middle-ware. For example ''My Photos'' and ''Remote Desktop'' are new middle-ware in WindowsXP and are apparently not trademarked. VI.T defines Trademarked to exclude certain named products regardless of their impact in the market.

VI.J.4 excludes software that has no user interface, such as a streaming video codec or a web commerce protocol handler.

VI.K.1 lists certain products explicitly as middle-ware. Given that the Final Judgment as written only covers Windows XP and subsequent versions (it should be modified to cover prior versions), the list of covered products and categories should also include MSN Explorer, Microsoft Outlook and other Microsoft Office components, Windows Movie Maker and others. VI.N limits the definition of a ''non-Microsoft middle-ware

product'' to one that has shipped 1,000,000 copies in a previous year. Under this definition, Netscape Communicator would not be covered by this Final Judgment, nor would Sun's Java JVM, both examples cited by the Court of middle-ware that require relief. The idea that a competing product has to already be successful to receive the protection of the Final Judgment is flawed. This condition should be removed. VI.N defines non-Microsoft middle-ware in terms of code exposing APIs, which are defined in VI.A as being uses by Microsoft middle-ware (this is a circular definition), More importantly, non Microsoft middie-ware should not be defined more narrowly than Microsoft middie-ware. Not all middie-ware ''exposes a range of functionality to ISVs though punished APIs'' although some (like lava) does. The original Netscape 1.0 web browser would have failed the definition in VI.N.

VI.Q defines Personal Computer as using an Intel x86 processor. Microsoft has in the past and will most likely in the future ship Windows Operating systems for processors other than x86. The Court found that Microsoft's illegal practices in respect of distribution of Internet Explorer also extended to the Macintosh Power-PC platform so this definition is overly narrow. VI.R. 150,000 beta testers is an unusually large number, even for Windows and suggests that ''timely manner'' would be defined as the last test release of a Microsoft product rather than the first public test release. The interests of the enforcement are better served if Timely Manner was defined as the first public test release of a Windows OS product.

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my opinion about the recent antitrust settlement between Microsoft and the US Department of Justice. I think that the government should stay out of big business and not interfere with the operations of our free market. Microsoft has done a world of good for education, job growth, and technological advances. They should be applauded, not reprimanded. I am glad to see that the terms of the settlement do not break up Microsoft. They are harsh though. For instance, Microsoft will have to disclose technological information such as interfaces and protocols to their competitors. They have also agreed not to retaliate against competitors who distribute or promote non-Microsoft products.

I think the settlement is flawed n many ways, but it should be finalized because the alternative, which is further litigation, could be a lot worse. Please take a firm stance against the nine states that want to continue opposition.

To tell you the truth, with all my respects to you, I think our government should learn from Microsoft, our government started long time ago and am able to see the flaw on it.—Microsoft had been evolving for better in a competitive enviroment and it is growing, even though, It stared a few years ago.

Sincerely,

MTC–00030195

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. The issue has been dragged out for over three years now and needs to be put to rest. A settlement has been reached, the terms are fair and the government needs to accept it. In order to reach a settlement Microsoft has agreed to many concessions. They have agreed to allow computer makers the flexibility to install and promote any software that they see fit. They have also agreed not to make any agreement that would obligate any computer maker to use a set percentage of Microsoft software. Also, Microsoft has agreed to license its software at a set price no matter what software the computer maker uses or promotes and no matter at what percentage they use Microsoft: software. These terms are set to allow complete competition in the realm of pre-installed software.

Microsoft and the technology industry need to move forward, the only way to move forward is to put this issue in the past. A settlement is available and the terms are fair, I would like to see it accepted. Please accept the Microsoft antitrust settlement.

Sincerely,
Barem Christian

Dear Mr. Ashcroft:

I am writing today to encourage you and the Department of Justice to accept the Microsoft antitrust settlement. This issue has dragged on for over three yearn now and it is time to put an end to it. Contrary to critics'' claims, Microsoft has not gotten away with easy terms. Microsoft has agreed to allow computer makers to install and. promote software that competes with Microsoft's. Microsoft has also agreed to release part of the Windows base code to its rivals, making it easier for them to write competing software.

The settlement is fair and should be accepted. Microsoft and the industry need to move forward. It is time to end this government harassment. Please accept the Microsoft antitrust settlement.

Sincerely,
Dorothy Christian

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to the settlement that was reached with Microsoft in November. I believe this settlement is fair and vital to improving our economy. Under this agreement, Microsoft must share more information with other companies, create more opportunities for other companies, and give consumers more choices. Microsoft has agreed to create future versions of Windows that will make it easier to install non-Microsoft software. Microsoft must also share software books and codes, and a technical oversight committee has been created to oversee Microsoft compliance to this agreement. These stipulations make it clear that this settlement is fair, and not simply a cakewalk for Microsoft.

Thank you for making the right decision and considering public comment on this issue.

Sincerely,
Margarita Caicedo

Attorney General John Ashcroft
U.S. Dept. of Justice
Pennsylvania Ave. NW
Washington, DC 20530

Dear Mr. Ashcroft:

Last Nov, a settlement to the antitrust suit between Microsoft and the Dept. of Justice was proposed and we would like to lend our support to it. The public comment period is coming to an end and it is our hope that the proposed settlement is approved shortly thereafter. Millions of dollars have been spent by both sides in this matter and that is a complete waste of money. Microsoft could be investing that cash into research

and development, and the Federal Govt. could have used taxpayer dollars in a much more productive manner. We hope that once the settlement is approved there will be no further litigation against Microsoft at the Federal level. The settlement calls for a 3-member oversight committee that is extremely well versed in software engineering. This committee will make sure tht Microsoft follows the terms of the settlement and will also handle any 3rd party disputes that might arise. Let us move on.

We support this settlement and hope it is enacted quickly. Thank-you.

Sincerely,

Eve Nowack

Reg: US V Microsoft, Anti Trust Act Tunney Act Comments

Ladies and Gentlemen,

I am opposed to the settlement as written. I believe it not to be in the public interest. Many times I've heard or seen comments to the effect that ''We can't do that .–.–., look at the effect on our economy that would have .–.–.'' Statements such as these are wrong and must be rejected. I believe Franklin Roosevelt said it best:

The liberty of a democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic State it self. That, in its essence is Facism—ownership of a government by an individual, by a group, or any controlling private power.—Franklin D. Roosevelt

That is also a great benefit of the Tunney Act, under which I write this objection. There are two themes that I see missing: (1) they should be broken up, and (2) their interfaces between the companies and products lines must be publicly available. Each of the baby-Microsofts must make use of, and work only from the same publicly available documentation that every one else has access to.

Specifically:

1) The Divisions

I believe that the public interest would be better served Microsoft should be split into at least 4 operating units, not the two that Judge Jackson ruled.

Those divisions should be:

Games & Entertainment Group. Focus: The home user Duane Ellis, 206 Pine Blvd Medford NJ 08055

Tunny Act Comments reg: Microsoft Includes XBOX, Cable TV. WebTV, MSN, Hotmail, all ''Internet Related'' activities, Microsoft Reader [eBooks] and Internet Explorer, Business Applications

Focus: The business user

This would include Microsoft Word, Excel, PowerPoint, Access, Visio Servers And Operating Systems

Focus: Core Operating systems, and servers. This would include Microsoft Windows CE/95/98/XP/2000/whatever .–.–. and all of its successors what ever they may be. Exchange Mail Server, SQL Server, Terminal Server, Developer Tools

Focus: The software developer community, the people who write the applications. This would include Visual Studio, the computer language compilers for things like ''C, C++, C#, Java, linkers, assembler, Visual Basic, FoxPro'' and so forth.

2) Publicly Document the Interfaces, common to all. This is the fundimental means by which Microsoft has extended and held their monopoly and will continue to hold it:

The proprietary communications formats the Microsoft applications use. These 'communications formats'' include: (a) 'over the wire'' communications such as when one computer communicates with another [Such as a computer network, or the internet], and (b) documentation of the file formats that their products use [such as those used by Microsoft Office].

Today, through out the world many companies claim to have an ''ISO–9000'' (or 9001, or 9002) certification. The fundamental requirement those certifications have is simple: Document what you do. Do what you document. Nothing more, nothing less.

If you look back at the IBM Anti Trust case, and the Telephone industry, a central theme in the solutions are or where: Document the interfaces between the systems, and abide by them. The openness of protocols and file formats is so fundamental that there must be a lethal ''Sword Of Damocles'' making Microsoft document and publish what they do so that competitors have a chance to offer a competing product.

Duane Ellis, 206 Pine Blvd Medford NJ 08055 Tunny Act Comments reg: Microsoft The most striking example of this I can find of this is the documentation for the ubiquitous Microsoft Word DOC file format, or the lack there of. If one was to write a competing word processor, one needs to be able to read and write DOC files. To do so, one needs documentation. To date, all DOC file format programs have been reverse engineered [Those in the industry are aware of the phrase ''Undocumented Function Call'', a hall mark of a Microsoft Style] For example: I wish to write a word processing program. To compete in the market place, my product must be able to read and write the Microsoft Word DOC file format directly.

Nowhere at Microsoft. COM can one find an accurate description of the DOC. The response I have seen about this is: You should supply a plug-in converter for Word so that users could download it. That might be one business solution. I think this will work just as well as Netscape being able to supply their browser to customers using this method .–.–.

My example word processor, to be a viable product must be able to read and write a DOC file directly'—without messing up. (How many times have you, or a co-worker imported a file, only to find it screw up, this is a constant problem users face.) To Microsoft's credit, on their web site one can find Microsoft's ''Knowledge Base'' article id: Q111716 titled: ''How to Obtain the WinWord Converter SDK (GC1039)'' Which has not been updated since 1997. Obviously over the last 5 years we've seen Word98, then Word-2000, and now Word-XP yet there is no updated documentation that I can find. The simple test is this: Please supply me with a Part Number and Price so that I may order full, complete, and not 'reverse-engineered by a 3rd party' documentation for the various file formats used by the last 4 versions of Microsoft Office (Office 98, ME, 2000 and XP). And no, it's not in the MSDN developer package—I've looked. If I've over looked it—please tell me exactly what file or 'page' to find this information.

By the way, the ''GC1039'' documentation refers you to yet another document about RTF files that is of some help, but is so hopelessly out of date (Again 1997)—and has this caveat: Note: The sample RTF reader is not a for-sale product, and Microsoft does not provide technical or any other type of support for the sample RTF reader code or the RTF specification. Site: http://msdn.microsoft.com/library/default.asp?url=/library/enus/dnrtfspec/html/rtfspec.asp, click on ''Appendix A: Sample RTF Reader'' [Visited & Verified January 28, 2002] Duane Ellis, 206 Pine Blvd Medford NJ 08055 Tunny Act Comments reg: Microsoft Microsoft and all the baby-Microsofts must be required to document completely, fully and un-ambiguously their external interfaces for all of the products or groups of products for which they hold a monopoly.

Given Microsoft's prior record there must be a ''Sword Of Damocles'' to enforce this. My choice would cost Microsoft nothing if they behave, and lots if they misbehave. It works like this:

This requirement is in effect for a product, or families of products where Microsoft represents more then 49.9% of the installed user base, and does not expire for at least 20 years. The requirement to supply documentation for a specific product interface expires 1 year after the product is no longer available for purchase (or licensing). Microsoft must in a timely manner, make widely and freely available under a 'free license'' (no patent royalties or non-disclosures required), at a cost of no more then the cost of duplication the documentation for all interfaces to their products.

The first of such disclosures must be made at the same time each ''beta or test'' version is made available. Specifically: The interface documentation must be of the same quality and accuracy that the 'beta or test'' application is. Where applicable, part of the documentation Microsoft should include reference program [or application], with full source code under the same free terms as the documentation that serves to validate the documentation.

As each 'service pack'' or 'patch'' is made available to improve an application, so must the interface documentation be improved. If any one [not just baby Microsofts] asks another for further clarification or information, that information must be posted in a public way so that others may benefit from the information. If a reasonable man

would conclude that the above conditions where not met, Microsoft: would be required to refund 100% of the license fees they have collected for the effected products, including a 5% interest as if the license fees were deposited in a bank account. If a reasonable man would conclude that the disclosures where purposely vague, or show a pattern of problems that are not remedied the penalties increase 10 fold. Duane Ellis, 206 Pine Blvd Medford NJ 08055 Tunny Act Comments reg: Microsoft

The test of this solution is simple:

If Microsoft says they will document—they will have no fear of the Damocles'' sword, as it will never fall. This sword makes them understand in simple terms: Do not forget to document what you do, and do what you document. And you will do nothing else.

Thank you for your time.

Duane Ellis.

January 23, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am urging you to settle the lengthy antitrust lawsuit pending against Microsoft. I think it is ridiculous that the case even made it as far as it has.

I think it is a shame that the government has gone after Microsoft, Bill Gates is simply a guy who made good and has been punished for his success. The Justice Department seems to have unfairly singled out Microsoft instead of treating all companies in similar positions in an evenhanded manner.

Though I believe that the justice system has wasted significant time and money in continuing to pursue legal action against Microsoft, I believe that the terms of the current settlement are reasonable, and I would like to see Microsoft back on track. I am a stockholder in the company, so I am affected by its inability to conduct business as usual.

The government's stated aim is to increase competition. The new provisions Microsoft has agreed to will do just that. Users and computer makers can more often and more easily install and configure Windows in ways that promote and use competing products.

Please settle the case as quickly as possible.

Sincerely,

Constance Roberts

Dear Mr. Ashcroft:

I am writing to express my full support of the recent antitrust settlement between Microsoft and the US Department of Justice. I am glad to see that Microsoft will not be broken up, but the rest of the concessions seem fair. In order to increase competition in the tech market, Microsoft will agree to share information about how Windows works with its competitors. This information will allow them to place their own programs on Microsoft's operating system, and to better compete with Microsoft.

I am a firm believer in free enterprise and a fan of what Microsoft has accomplished in the last 10 years. There are many large companies that also could be targeted, which leads me to believe their suits are serving political interests than public ones. I support the settlement and look forward to seeing it implemented soon. This settlement will enable the country to move forward again.

Sincerely,

Clifford Bagwell

Everett, WA 98208
January 26, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The antitrust lawsuit brought against Microsoft was unjustified and flawed. The dispute in my opinion arose due to competitors'' envy for their own lack of innovation and creativity. Microsoft has been the leading innovator of technology, for over a decade. In the 80's when we lagged behind Japan in many industries, Microsoft developed a product that streamlined and made more effective many of our businesses. The company I worked for is a perfect example as it was able to use Microsoft software for its businesses.

The terms of the settlement are harsh and seem to reflect the intense lobbying of Microsoft's competitors. Forcing Microsoft to give up internal interfaces and protocols, making them agree not to retaliate against other vendors, stipulating that they must grant computer makers broad new rights to configure Windows so as to make it easier for non-Microsoft products to be prompted, the settlement also reflects lawmakers and politicians lack of concern for the public.

This settlement only aims at giving competition an edge they did not have and could not attain on their own.

Even though I think the settlement is unfair, I must support it because the alternative of further litigation would be too much for our weak economy. I urge your office to take a firm stance against the opposition and stop any further disputes. Thank you.

Sincerely,

Brian P. Seguin

January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The settlement with Microsoft in the antitrust case should be approved in the best public interest of America. The settlement was reached only after three months of negotiations with a court-appointed mediator. What is more, the terms of the settlement represent reasonable compromises of the positions of the parties, and will be beneficial to the American computer technology industry as a whole.

The settlement will make it easier for computer software and hardware companies to work with and modify Microsoft's Windows operating system. With disclosure by Microsoft of the internal interfaces and server protocols by which Windows works with programs and other computers, computer companies will be able to find better ways to work with Windows. This can only encourage growth in this industry.

I would appreciate your support of the Microsoft settlement. The Federal Court should approve the settlement. Thank you.

Sincerely,

George Arthur

January 28, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Enough is enough! Please implement the fair and equitable settlement reached by the Dept. of Justice and Microsoft.

Washington state has been hit hard by the economic recession. The Bush Administration is now in a position to stop the economic troubles which now effect not only Washington state but the entire nation. Microsoft mirrors the Market. When the tech sector was healthy, the Market was healthy. It is my opinion that the settlement will provide the necessary push that the IT industry needs to help bolster the economy back to its previous strength.

Microsoft is the one company that has the ability to save our economy, and since the settlement makes them work ever closer with their competitors, competition in the IT industry will benefit, and the economy will show gains.

The Bush Administration did not start the recession, but it is in a position to STOP the recession. The settlement that was reached is fair, and I support it.

Sincerely,
Maureen M. DeShazo

Washington, DC 20530

Dear Mr. Ashcroft:

I support the terms of the settlement agreement the Department of Justice and Microsoft were able to negotiate. I am in favor of bringing this case to a conclusion.

Microsoft has appropriately addressed the concerns raised by the plaintiffs in the case. They have agreed to take steps to safeguard against future antitrust violations. Microsoft has agreed not to enter into contracts that would require third parties to exclusively promote or distribute Windows. They also agreed not to take retaliatory actions against software developers who design software that competes with Windows. Another important concession is Microsoft's agreement to implement a uniform price list. Beyond the concessions set forth in the settlement agreement, nothing further should be required of Microsoft.

Your efforts to settle this case are appreciated.

Sincerely,
Gerald Robinson

January 17, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

American ingenuity should not be punished. The government's suit against Microsoft is nothing more than an attack on the very creativity and hard work that have made this nation great. I feel that Microsoft has had the wherewithal to become a successful company and they should not be punished for pursuing the American dream.

While I am glad that this suit has reached an end with the settlement that was negotiated in early November, [would rather see the entire thing dropped. I understand that Microsoft has agreed to a number of rather harsh terms because they understand that a quick end to this case is vital to future American leadership in the worldwide technology market. For example, Microsoft will agree not to retaliate against computer companies that use, sell, or promote non-Microsoft software,

Thank you for your efforts thus far in bringing forth a quick end to this litigation. I hope that we can put this unsavory business behind us and that Microsoft can get back to the business that it is best at: innovation. Thank you.

Sincerely,
Lawton Ocain

sage software
January 28, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

The greatest advantage to this settlement between Microsoft and the Department of Justice is that it ends the court action. Aside from that, the settlement is rather lopsided.

While I support the settlement, I also feel that some of the terms set a dangerous precedent. Not only will this settlement force Microsoft to release some of its protocols to its competitors, but the settlement also forces Microsoft to allow software other than its own to essentially become part of its operating system.

All of this can have two undesirable side effects: The first is that the reliability and high quality standards that we have all grown accustomed to when operating a computer with the Windows platform may now be rendered unstable because of the addition of someone else's software. Secondly, there will now be a possibility for cloned versions of Windows to flood the market. The idea of Rolex watches springs to mind. Microsoft will no doubt be blamed for this too. Again, I reiterate my support for the settlement in principle, but the specifics of some of these terms can prove problematic down the road.

Sincerely,
Chad Ruff

Dear Ms. Hesse,

I am writing today in response to the **Federal Register** item concerning the Microsoft settlement with the United States and nine of our states'' attorneys general. I note that North Carolina, my home state, is among the states that have signed off on the proposed settlement.

I have reviewed the proposed settlement of this long running case and endorse the proposed settlement between these parties. I would urge Judge Kollar-Kotelly to do the same. The proposed settlement has positive points for all sides; and appears to make many of Microsoft's anticompetitive practices impossible to continue, while not destroying a firm which has done much to revolutionize the way people all over the world live.

Certainly, Microsoft's agreement to an independent monitor is quite a concession for a corporation in the high-tech areas. The agreement also calls for Microsoft to guarantee ''equity'' in a number of areas with third parties which will mean less profit for the company m the future. I understand that Microsoft is willing to agree to these provisions just to get this case over with. Since this proposed settlement has the support of the Department of Justice, and of nine states, I hope that Judge Kollar-Kotelly will be willing to approve.

Very truly yours,
Thomas M. Roth III

Dear Sir/Madam,

I refer to the antitrust case against Microsoft Corporation in the United States District Court for the District of Columbia, reference Civil Action No. 98–1232 (CKK). In accordance with provisions of the Antitrust Procedures and Penalties Act, there is attached to this letter a written submission concerning the proposed Final Judgment which has been agreed to between the United States Government and Microsoft Corporation. Our standing to make a submission is explained in the submission.

Cordially,

Geoff Bird National President

SUBMISSION IN RESPONSE TO THE PROPOSED SETTLEMENT OF THE ANTITRUST CASE AGAINST MICROSOFT CORPORATION

AUSTRALIAN UNION OF STUDENTS

NOVEMBER 2001

EXECUTIVE SUMMARY

1. The proposed settlement will not end litigation against Microsoft, as it neglects to punish Microsoft for unlawful conduct and compensate those affected.

2. If the proposed settlement goes ahead, it will deprive the United States Government of influence over the settlement that Microsoft will ultimately reach with the European Union.

3. Accordingly, our association, on behalf of our members who are American citizens, wishes to propose an alternative settlement.

4. Microsoft should be required to publish the source code for its operating systems.

5. Microsoft should be required, by way of a punishment, to set up a venture capital corporation, and to transfer a proportion of its assets to this corporation.

6. The assets which Microsoft should be required to transfer should be equal to the stockholders'' equity in Microsoft, less the stockholders'' equity that Microsoft would have if it had complied with the law.

7. The venture capital company should be required to invest in business start-ups in a country in proportion to the amount that residents of the country have spent on Microsoft products.

8. Stockholders in Microsoft should be issued with stock in the venture capital company in proportion to their holding in Microsoft.

9. The United States Government should be required to use its best efforts to persuade foreign governments to enact legislation excusing Microsoft for any illegal action committed prior to 2002.

10. If a government of a foreign country does not enact the legislation, the venture capital corporation should not be required to invest in the country.

SUBMISSION

The United States Government has brought an anti-trust action against Microsoft Corporation. Following the election of President Bush with the assistance of donations from Microsoft, the Justice Department has reached a settlement with Microsoft. According to the Antitrust Procedures and Penalties Act, the details of the settlement have to be published in the ''Federal Register''. Members of the public have sixty days to make written submissions on the proposed settlement. This submission is being made in accordance with the statute.

Our association, the Australian Union of Students, has standing to make a submission on the following basis. We have a number of United States citizens as members. Under the constitution of our association, we have the power to make representations to governments on behalf of our members, without necessarily consulting the members beforehand. Accordingly, this submission should be treated as though it was made by American citizens. We could, if necessary, provide to the United States Government, in confidence, the names and addresses of the members concerned.

We are against the proposed settlement. It is not that we are unsympathetic to Microsoft. The management of Microsoft are very much respected in Australia, and are held out by our association as examples who young people in Australia should copy. Nevertheless, the proposed settlement will be of limited usefulness to Microsoft, and will not settle existing litigation by American states, and proposed litigation by European Union countries. This litigation will go ahead, and there will in time be settlements or judgments, which may not be beneficial to Microsoft or the United States.

From the point of view of the United States Government, Microsoft has been held to have broken the law, and to have gained substantial financial benefits as a result. The Justice Department is of the view that it would be undesirable to break up Microsoft into smaller corporations, or to require that Microsoft pay fines. We agree with this. At the same time, Microsoft should have to make up for its illegal actions in some way, so as to discourage other corporations from breaking the law.

The advantage of an out-of-court settlement is that Microsoft can be made to do things that it otherwise cannot be made to do. A court is limited in what it can order. But an out-of-court settlement can contain anything within reason. As an example, an out-of-court settlement could contain a requirement that Microsoft executives must wash their hair each day. An out-of-court settlement should be a ''wish list'' of things that Microsoft should do. The Justice Department has not been imaginative enough in formulating its ''wish list''.

The Justice Department's ''wish list'' must meet two requirements. First, it must end the illegal conduct by Microsoft. Secondly, it must compensate the people adversely affected by Microsoft's actions. The Justice Department should be asking the question, ''What can Microsoft do that would be most beneficial to users of its operating systems?'' This should not necessarily be limited to things that Microsoft can do in its capacity as a supplier of operating systems, but should include anything that Microsoft can do.

For example, an out-of-court settlement could include Microsoft making donations to charities. No distinction should be made between a donation made by Microsoft and a donation made by its stockholders. Past charitable donations certainly go some way to making up for Microsoft's actions, and should be taken into account in deciding whether to accept an out-of-court settlement. To end the illegal conduct by Microsoft, we propose that Microsoft should publish the source code written by its programmers, that is used to compile its operating systems, from DOS up to and including Windows XP. This should include comments by programmers put in to explain what the code does. But it should not include code for functions that are for national security purposes.

The publication of the source code would not make piracy of Microsoft operating systems any easier. The software can already be copied illegally. Anyone compiling the operating system from the source code, and using the software without paying a royalty could still be prosecuted. The advantage of publishing the source code would be that software developers could produce operating systems that are functionally equivalent to Microsoft operating systems. If Microsoft refused to allow its distributors to bundle software with its Windows operating systems, Microsoft would run the risk that a distributor would use an equivalent operating system from some other software developer.

Microsoft operating systems have a similar status to human DNA. The information is essential for everyday life. It is surely unsatisfactory that information that is essential for everyday live should be controlled by Microsoft. Certainly Microsoft developed the information, at great expense, so is entitled to a royalty. But they should not be able to prevent further development and improvement of the information.

In formulating its out-of-court settlement, the Justice Department appears to have thought that Microsoft can best compensate consumers for its illegal actions by continuing to develop operating systems. We disagree. We think Microsoft's talent can be used to greater effect in the field of Venture Capital. Of course, if Microsoft was complying with the law, it would be up to them how they use their resources. But since they have broken the law, it is up to the government. The terms of an out-of-court settlement are up to the government.

We propose that Microsoft should be required by a settlement to set up a venture capital corporation. This corporation would invest in and provide advice to business start-ups. Microsoft would be required to transfer a large part of its assets to this corporation. Its stockholders would be issued with stock in the new corporation, in proportion to their holding in Microsoft. The corporation would be required by its charter to invest an amount in each country that is

proportional to the amount that has been spent in that country on Microsoft products. This would be advantageous to the European Union, and so they would be likely to agree to such a settlement.

To make sure they do, the United States Government should lobby the European Union and other countries on Microsoft's behalf for legislation to excuse Microsoft from any illegal action committed prior to 2002. It should be included in the out-of-court settlement that the government must use its best efforts to secure such legislation. Such legislation should be a pre-requisite for the venture capital corporation being required to spend any money in a country.

The amount that Microsoft should have to invest in the venture capital corporation would be set so as to compel Microsoft to downsize to the size they would have reached if they had complied with the anti-trust statute. In other words, their stockholders'' equity should be reduced to a level that it would be if they had complied with the statute. Microsoft will as a result have to scale down the extent of its activities and lay off staff. These people will be able to set up businesses in areas of Information Technology that Microsoft was previously involved in. Hence there will be greater competition.

We are suggesting that the Justice Department try to compel Microsoft to transfer its capital into the Venture Capital Industry. This is based on a number of considerations. Microsoft has expertise in taking an industry which is disorganised, and organising it. The Information Technology Industry was disorganised in 1975, but after Microsoft released its Windows 98 operating system, it became organised on a comparable basis with other industries. In our view, it is a waste of resources for Microsoft to continue being exclusively involved in this area. Cars made in 2001 are not much better than cars made in 1971, and Windows XP is not much better than Windows 98.

There are a number of industries which are disorganised compared to other industries. The Venture Capital Industry is disorganised in most countries, and is organised only on the West Coast of the United States. Other industries that are particularly disorganised are the Entertainment Industry, the Property Development Industry, and the Genetic Engineering Industry. By getting involved in Venture Capital, Microsoft can bring its organisational ability to bear on helping set up businesses in Information Technology, Entertainment, Property Development, and Genetic Engineering. This will be of incalculable benefit to consumers. Microsoft already acts as a venture capital corporation, so it has staff who can be transferred to the proposed corporation.

The Justice Department's proposed solution certainly prevents future breaches of the antitrust statute by Microsoft. But it is not as imaginative and beneficial as our proposed solution. Of course, the staff of the Department of Justice work under great pressure, in circumstances that are not conducive to imagination. That is why the United States Congress made provision for the Department of Justice to consider public submissions, in order to arrive at a more imaginative solution. We hope our submission is of some assistance.

Dear Ms. Hesse: As an attorney, I have long been concerned by the antitrust litigation pursued against Microsoft by the federal government and several states at the instigation of Microsoft's competitors. I was heartened by the decision of North Carolina Attorney General Roy Cooper to agree to the settlement that has been negotiated, and I write in support of the settlement agreement that is before the judge now.

Microsoft's release of its XP program recently again demonstrates why the company has been successful: it offers a superior product at an affordable price that enables even the most computer-challenged among us to take advantage of the information technology revolution. Microsoft should be praised, not punished, for this aggressive innovation and marketing. I strongly believe it is time to bring an end to this lawsuit and get on with the business of meeting the economic and safety challenges that face America today.

Thank you for the opportunity to comment.

Dear Ms. Hesse:

I am by no means an expert on federal antitrust law. But I am a small business owner, and I am qualified to recognize when a business is spending too much time on the wrong issues. Right now, Microsoft, its competitors and the entire information technology industry are spending far too much time fighting over the law and not nearly enough time doing what they should do: serve their customers.

If, as I understand it, there is a reasonable settlement to this matter before the court, it should be approved and put into effect immediately. As I further understand it, the settlement was reached through negotiations supervised by a court-appointed mediator and accepted by the U.S. Attorney General and a number of state attorney generals.

That is good enough for me. Let's end the lawsuits and get back to the business of rebuilding our nation's economy.

Thank you for allowing me to express my opinion.

Sincerely,

Julie Edge

Subject: Microsoft Settlement

Dear Attorney ??:

Thank you for your public service and your work on behalf of the ?? government. I am writing you today to offer my support of the current settlement proposed in the Microsoft case. I understand you are now accepting public comment and wish to submit my support. As our nation's economy continues in a downturn, many are out of work and ?? are doing more with less. Here in New Hampshire, I am working with my colleagues in the state ?? to find new and ?? ways to wisely spend the money we have and avoid needless spending in areas that do not have an impact on the public good.

I am concerned that if we continue to pursue the government's case against

Microsoft, we are further impeding in the area of technology and making it less and less attractive for investment in this industry both by ?? and in the financial ??. We cannot afford to have the happen. We need to encourage investment in order to spur an upturn in the economy.

By approving the settlement in this case, you will be benefiting just about everyone except the small group of Microsoft's competitors who have been pushing this case from the beginning. But, it is not the government's role to do their ??, the need to compete in the marketplace by offering comparable products.

I hope you will accept the settlement and and the government's involvement in the operations of one of our nation's most exciting companies. Thank you for your consideration.

Sincerely,

John T. ??

Dear Ms. Hesse:

As the Delegate representing the 35th House District in Northern Virginia, I am writing to encourage you to approve the settlement agreement in U.S. vs. Microsoft.

The United States has become a global technology leader because we have always encouraged our citizens to develop their skills, both intellectually and creatively, in order to invent and develop new ideas. Due to their courage, persistence, and work ethic many choose, through entrepreneurship, to further those ideas by establishing businesses. Every once in a while, one of these entrepreneurs will work hard enough to meet with extraordinary success, at which time, it seems, those that are less successful will attempt to ''shoot them down.''

The message this antitrust litigation sends to the entrepreneur is that if he works hard to create a successful business, he will be penalized. This works against the very spirit that has made our nation great!

Thank you for taking the time to read this letter. Once again, I respectfully request that the Department accept the settlement agreement in the U.S. v. Microsoft case,

Sincerely,

Jeannemarie Devolites

Dear Mr. Ashcroft:

I wanted to write to you giving our family's opinion about the suit brought by the Dept of Justice and Micro- soft. I fully support the settlement that was reached—not because it was warranted or that Microsoft deserved to be punished but because it harms our economy and stifles further creativity by business who want to compete and innovate.

Government interference was not the right thing to do and probably was brought about as a result of lobbying on the part of Microsofts competitors. Just as in the case of the airlines the government ought to be providing other services to its citizens instead of pressure and regulations on the private sector of legitimate business dealings. I am happy a settlement has been reached and hope that the future direction of the Justice Department will not be to hamper and oppress Microsoft and other capitalistic endeavors.

Sincerely,

Evelyn Parent

Dear Ms. Hesse:

As an attorney, I can appreciate the complexity that the court faces as it reviews the proposed settlement of the Microsoft federal antitrust lawsuit. But I am impressed by the fact that the consent decree under consideration was developed in negotiations overseen by a court-appointed mediator, that it is supported by the U.S. Attorney General and that it has been agreed to by North Carolina's Attorney General.

Further, it is telling that the under the proposal Microsoft would agree to accept significant changes in its business practices, as well as the continuing supervision of a technical committee empowered to review the company's compliance with the agreement.

This certainly seems to me to be adequate protection for Microsoft's competitors, without at the same time crippling the company's ability to continue providing excellent products for use in schools, businesses and homes.

I hope the agreement will be approved.

Sincerely,

Sarah Capel

Dear Ms. Hesse:

I am writing in support of the settlement of the Microsoft antitrust case. In a nation where we pride ourselves on free trade and development of services and ideas, Microsoft has proven itself. The agreement contains significant rules and regulations on how Microsoft develops and licenses its software, but it also allows Microsoft to keep innovating on behalf of consumers. I hope you will resist the efforts of Microsoft's competitors, who try to continue their efforts to dissolve this company.

We have many computer and Internet companies throughout Virginia, with a large concentration in Northern Virginia, the area I represent. The economy depends upon technology and Internet success—including Microsoft. It is extremely important to allow this facet of trade to grow and produce without restriction. It is equally as important to allow it to grow free from fear of developing a product that is accepted universally by computer users.

I urge you to accept the settlement as just and fair. If you have any questions, please do not hesitate to contact me.

Sincerely,

Dear Ms. Hesse:

Now that the new year has begun, it is my hope that the other states involved in the suit against Microsoft will agree That it's time to move forward and progress with the proposed settlement. American consumers need some sort of hope that the economy will improve in the months ahead and the high

technology sector could provide just the kick to get the economy moving in the upward direction.

It's time for healthy competition and re-investment into our economy made by consumers. The end needs to arrive as it concerns this case and we all need to do what we can for our country—work to improve the quality of our lives and give us back some sort of stability.

Thank you,

Dear Ms. Hesse:

As jobless rates and economic indicators continue to tell consumers that times are getting worse, I think Microsoft's settlement with the federal government could provide a beginning bright light. By settling the case, we could once again see the competitive prosperity of the 90's foster the necessary kick the economy needs to move in a positive direction.

The high tech industry has been a driving force for our nation in recent years and if Microsoft's settlement revitalizes competition, than we should welcome this opportunity. This long drawn out case should be resolved once and for all, and the focus should be on lowering the jobless rate, increasing consumer confidence and strengthening our economy.

Sincerely,

Dear Ms. Hesse:

Now that the federal government has finally settled its long antitrust case against Microsoft, I hope the states still involved with the suit will do the same. It is time for consumers to come together and move the economy and our country in a positive direction—a forward and economically strong direction.

The settlement's provisions protect Microsoft's ability to continue to be innovative and, this hopefully, will revitalize competition and the technology industry for the betterment of us all. Consumers and investors will reap the benefits of this settlement and this should help to get the engines running toward a healthy and prosperous economic stance. Thank you for your consideration.

Dear Ms. Hesse:

I am writing to you in: support of the recent Department of Justice settlement with the Microsoft Corporation.

The country is at war, the economy is sour and the business community is struggling. Yet, the U.S. Department of Justice is spending millions of dollars in time and resources on the Microsoft settlement.

I believe it has been a waste of taxpayers dollars, my understanding is that it has cost us over $30 million. This has been a competitor driven lawsuit and it has hampered high tech innovation. If Microsoft's competitors would spend time and money on their own research and development, instead of this lawsuit, all consumers would benefit.

Enough is enough, let's settle this lawsuit and move forward. Thank you for your attention to this matter.

Sincerely,

Dear Ms. Hesse,

In respect to the U.S. vs. Microsoft anti-trust action and why I support the courts decision. I believe our country, government, judicial system and constitution to be second to no other in the world.

Henceforth if the most advanced and just court system in the world has made a settlement of this case. Being a believer and supporter of our system I would have to agree with this decision. As for I do not believe that the general public has more knowledge of the facts,laws and complexity of this case than the decision rendered by the courts.

I do believe most of the nonsupport of this settlement to be no more than sensational rhetoric influenced by microsoft's competitors.

I trust the judge will do what's best for the consumers and not the profiteering of the competitors.

Thankyou.
Sincerely

To whom it may concern:

I feel it necessary to voice my opinion in regards to the U.S. v, Microsoft case in hopes that this case will finally settle. As a concerned citizen, and as a business woman in Buffalo, NY, I strongly believe that the continuation of this lawsuit will only serve to put continued undue pressure on our economy and damage further economic advancement possibilities. Buffalo is a perfect example of a city that has been first into any national economic slump and last out, I can only see this lawsuit negatively impacting the economy further. Further funding of a lawsuit that is going after an incredibly successful company—which has been built on the principle of free enterprise that we as Americans so value—will only serve to help Microsoft's competition and do nothing for medium to small businesses. Thank you for your attention to my opinion—

Dear Ms. Hesse:

As a member of the New York State Assembly and small business owner, I strongly support the settlement of litigation associated with the case United States v. Microsoft.

The Country and especially New York State have suffered immeasurable financial losses due to a lagging economy and the destruction of the World Trade Center on September 11, 2001. It is apparent, now more than ever that we need to generate growth in all sectors of the economy. We need to encourage businesses, both small and large, to continue to strengthen the economic environment of the United States.

It is time to move forward and allow one of the world leaders in software technology to do what they do best, and continue to lead the United States economy toward the

recovery we all expect and desperately need at this time. Settlement would be in the best interest of all parties involved including the taxpayers of this great country.

I appreciate your consideration of this matter, and hope for a speedy resolution to this most pressing matter.

Re: Microsoft Propose, d Settlement Agreement

Dear Ms. Hesse:

On behalf of our business community and thousands of individual computer users, I am writing to lend support to the proposed final settlement between the Department of Justice and Microsoft Corporation.

The growth of the high tech industry has been phenomenal due to the innovative spirit of companies such as Microsoft. The economy of our community and that of the State of Oklahoma have benefited from this impressive industry. The settlement effectively puts an end to what has been a dark cloud over the technology sector, It is better to settle the dispute in a reasonable manner than to continue to hamper the industry with pro-longed litigation.

Please add our voice to those of other civic and business groups that believe the provisions of the settlement should be expeditiously approved.

Sincerely,
Cindy Davis
Office Administrator

Dear Mr. Ascroft:

Although not a technology expert, as someone familiar with the Microsoft anti-trust case and its products, I am contacting you to express my agreement with their pending settlement with the Justice Department. From my perspective, Microsoft is hardly a big evil trust squashing the competition and hurting the consumer, so the government's case appears to have gone much further than necessary and should finally be completed. For instance, if the consumer has been hurt, why are prices continually falling for software and related products?

From my review of the pending agreement, I would say Microsoft has made some substantial efforts to encourage competitors to succeed in the software marketplace. They will offer the same pricing to the top 20 computer makers, while opening up their opportunities to re-arrange Windows with the software offerings and features of their preference, free of contract obligations. They will even allow other software developers to utilize their internal codes and license their technologies.

In addition, the situation has certainly changed since this suit was begun; there is much more competition in all the technology fields than once existed, and, if one can credit the business news, AOL is aggressively pursuing Microsoft and may bid fair to best her. This does not appear to be the position of a monopoly, who can shrug off competition and maintain dominance in an industry with no large expenditure of effort.

So much of the attack on Microsoft has appeared to me to be lot of whining by companies that could have done better, and are blaming someone else for their incompetence. Such measures as Microsoft is offering should be quite satisfactory to those who have encouraged this lawsuit. To proceed with a break-up of the company at this point would be overkill to say the least and would only destroy tile opportunity for a peaceful compromise. I look forward to your support.

Sincerely,
Marilyn Braiger

Dear Ms. Hesse:

I write in support of the proposed settlement in the anti-trust action involving the U.S. Department of Justice and Microsoft Corporation.

I believe strongly that the time has come for an end to the litigation of this matter, which has cost U.S. taxpayers upwards of $30 million to date. A negotiated settlement appears to be in everyone's interest. The settlement agreed to by the Justice Department and Microsoft, as well as numerous state attorneys general, presents an opportunity to remove this debate from our nation's courtrooms and place it squarely back in the hands of consumers via the marketplace, the most appropriate vehicle, in my opinion, for resolution of the issues involved.

The technology marketplace is a highly competitive one, to be sure. I am among those who have always believed that competition is a positive and lasting characteristic of our nation's economic framework. Those industry competitors who are aggressively opposing settlement of this case are asking the U.S. government to move beyond its role as enforcers of federal anti-trust laws, in my opinion, setting a new standard of government intervention in what should be market-driven forces.

The time has come for a settlement of these issues, and I urge the Department of Justice to move expeditiously toward that end.

RE: Microsoft Proposed Settlement

Agreement
Dear Ms. Hesse
The Microsoft settlement is a nimble resolution that preserves competition, allows Microsoft and its rivals to freely continue to meet consumer demands, and helps define the direction of government's role in the high-tech industry. More than anything, certainty and resolution will help the economy and promote new investment in technology.
In my estimation, it will be very hard to justify rejecting a settlement that is good for consumers, the technology industry and the economy as a whole. Accordingly, I urge you to accept the proposed settlement agreement.
I thank you for your time.
Sincerely,

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft:
I'd like to express my opinion on the Microsoft antitrust ??ase. Microsoft agreed to make available to its competitors, on reasonable and nondiscriminatory terms, any protocols implemented in the Windows' operating system that are used to operate with any Microsoft server operating system. They also agreed to design future versions of Windows, to provide a mechanism to make it easy for computer makers, consumers and software developers to promote non-Microsoft software within Windows.
Now that Microsoft has agreed to the above and a host o?? other terms of the agreement, there may be more pending litigation. How can that be? Is there anything that can be done to stop the pending litigation? Our economy is already below what it was this time last year We cannot afford another drain on our economy.

Dear Mr. Ashcroft:
I am of the opinion that the settlement that ended the antitrust case between Microsoft and the Department of Justice is more than fair, and should be implemented as soon as possible. The time has come to put this issue behind us and to move forward. Our economy needs all the help it can get.
This proposed settlement brings an end to the more than three years of litigation than has cost the government and Microsoft millions of dollars. The agreement does not let Microsoft easy by any means, but it does finish the tireless lawsuit. Microsoft will now have to share with its competitors, the source code and data that make-up the design of Windows. This will be done in order to make competing software compatible with Windows, and will encourage competition in the IT industry.
The settlement is past due, and I hope that it is approved as soon as possible.
Sincerely,
John Biondolillo

Dear Mr. Ashcroft:
I am concerned that the possibility of continued litigation against the Microsoft Corporation even exists. I cannot fathom how nine states still believe that Microsoft has not been properly dealt with in the antitrust suit. The whole thing is a waste of time for everybody including the government.
Microsoft and the Justice Department have come to an equitable settlement in this case. An agreement has been reached that is fair both to Microsoft and its competitors. Microsoft has agreed to reformat future versions of Windows so that the operating system will support non-Microsoft software. They have also agreed not To retaliate against software producers who introduce programs onto the market that directly compete with Microsoft's technology. I believe that these terms satisfy antitrust laws. I find it unnecessary to bring further suit against Microsoft. No further action should be taken on the federal level. I urge you to allow this settlement to carry through. THIS LAWSUITE IS A JOKE, AND AN INJUSTICE TO ALL THE AMERICAN PEOPLE AND THE USA.
Sincerely,
Sebastian Bartorillo

Attorney General John Ashcroft,
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft,
I would like to give you my thoughts about the Microsoft Antitrust Case. This issue has been in and out of the news for almost three years. Doesn't our government have anything better to do with their time? It is a waste of taxpayers'' hard-earned money and is not something that truly represents the public interest. Microsoft's company is not harming consumers. Their company has actually contributed a great deal to our economy, providing thousands of well-paying jobs to the technology industry directly, and countless more indirectly.
I am retired and use computers at home now. For years, I used Microsoft products m my office and liked their east of use and compatibility. No other system provides that as Microsoft does; that is why they have been so successful.
This settlement is very reasonable, calling for Microsoft to change their counteractive marketing practices and to give away some of their technology. This will make things more than fair for their competitors, especially since they are getting to take advantage of Microsoft's intelligence and money spent to come up with the technology. Please uphold this settlement for the good of everyone. Our economy needs a boost right now and improving our computer industry is a good way to do it.
Sincerely,
Claudia Morin

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft:
I support the Microsoft antitrust settlement agreement. I believe that continued litigation at this point would be a waste of time.

Endless amounts of time could certainly be spent nit-picking the terms of the agreement. But, as a whole, I believe its terms are fair. The agreement provides for mechanisms to ensure Microsoft does not have a monopoly. Microsoft will be prevented from engaging in predatory business practices. A technical review committee will be created which will monitor Microsoft's business practices. Microsoft also agreed to uniform price lists for the largest computer makers.

Microsoft may have ended up with a monopoly in the software world, and steps are being taken through the settlement to restore competition in that arena. The settlement goes as far as covering products and procedures that were not the subject of the initial lawsuit.

I would like to see this case brought to a conclusion. Thank you for your efforts in this regard.

Sincerely,

Salvatore A. De Luca

January 24, 2002
Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

Please support the proposed settlement between Microsoft and the Department of Justice. There needs to be a resolution of this case. I think that the terms agreed to are reasonable, since they offer increased competition, without calling for the break-up of Microsoft.

The settlement calls for improved design features, more competition among computer makers and software developers, and a technology committee to review complaints. The settlement would benefit the state, the IT industry, and the economy.

Since many of the obligations extend to products that were not part of the original lawsuit, I believe this is more than a reasonable compromise by Microsoft. Again, I ask you to please support this settlement.

Sincerely,

Edward Lurey

Dear Mr. Ashcroft:

The purpose of this letter is to express my support of the Microsoft settlement. The settlement, which was reached last November after three years of litigation, is extensive, and equitable. I strongly urge the Justice Department to enact the settlement.

Enacting the settlement is in the best interest of the technology sector, consumers, and the economy. It will increase confidence in the technology sector and provide for heightened productivity. What's more, Microsoft has agreed to redesign Windows to allow users to reconfigure their operating system at their discretion. Further, the surge in the technology sector that the enacting of this settlement will catalyze will strengthen the economy as well.

Finally, I would hope that the Justice Department recognizes the benefits of this settlement and suppresses any opposition to it.

Sincerely,

Carolyn Skinner

Dear Mr. Ashcroft:

The intent of this letter is to urge the Justice Department to enact the federal antitrust settlement reached with Microsoft. As a Microsoft supporter, I have followed the case against Microsoft with great interest. have been increasingly annoyed by the amount of time and money that has been squandered over this issue. Microsoft has been generous in this mediation process. Any continuation of this case would serve only to waste federal resources.

Further, the settlement agreement that was reached is extremely equitable. Microsoft has agreed to license the rights to Windows to competing computer manufacturers at the same rate. Also, Microsoft will disclose some of the interfaces of the Windows system. The disclosure of interfaces will help developers to create software and hardware that is more compatible with the Windows system.

These changes will greatly benefit technology, consumers. Once more, the settlement is fair and should be enacted.

Sincerely,

Rodger Skinner

Dear Mr. Ashcroft:

I understand the Department Of Justice is accepting and publishing public comments for the first time since the antitrust suit was brought against Microsoft more than three years ago.

Microsoft did not get off easy. The settlement was reached after extensive negotiations with a court-appointed mediator. The Company agreed to terms that extend well beyond the products and procedures that were at issue in the suit, for the sake of wrapping up the suit. Now several states anti competitors want to pursue further litigation.

I personally fell the agreement reached m November was fair. I urge you to please end all litigation against Microsoft. Let's focus on other far Important issues such as getting us out of the Recession and other pertinent issues.

Sincerely,

Jeffrey J. Rhodes

Ref, Proposed Microsoft Antitrust Settlement, Public Comment Opportunity

I wish to weigh in on this matter from the perspective of someone (n small business owner) who has suffered substantial harm as a result of Microsoft's dominance in the past is being harmed at this moment, and will continue to be adversely affected unless major changes occur in the future. First, I would ask you to consider some history. We began a major involvement with computers some fifteen years ago. The operating system in use for IBM compatible computers was DOS. It is important to remember that while Microsoft acquired the rights to this system and IBM used it, there were a number of operating system software producers.

Each system was guaranteed to operate any DOS program and each one offered particular features which might recommend them to the user. Then there were producers of software that dealt with functions viz word processing, spreadsheets; and utilities viz: backup, file management, hard drive maintenance. There was constant competition between these software producers to gain a competitive edge and thereby gain new users far their offerings. It is important to remember that at this time while Microsoft produced certain offerings they were not dominant, or even a major player, in any category.

We had perhaps ten or twelve 8oftware vendors in those days. Of that number the vast majority are out of business as a direct result of Microsoft's practices. Those that are still in business survived by a capitulation to Microsoft and a willingness to stay within the parameters in which they were permitted to operate.

While reason forces one to admit the unknowableness of ''what might have been'', I can feel confident in saying that the damage to the advancement of computer applications as a result of Microsoft having crushed their competition is beyond measure.

We have applications that perform tasks in a manner superior to any offering from Microsoft but they are essentially obsolete as they will not run in a Windows environment. Their developers long since were rolled over by the microsoft behemoth. I could go on for pages about why this monstrous monopoly developed and the interests that supported and abstained it. I will forebear this as it is, at this point, not relevant. What is relevant is.

Different Drummer Lenox
TEL:1–413–637–2910
Jan January 24th., 2002
page two whether or not the situation is going to change or just get worse, No one seems to realize the potential being lost to our economy as a result of computer applications that will be never be developed due to the Microsoft monopoly.

In order to break the Microsoft monopoly two things must be required. First The Windows operating system must be made available for license under terms that will truly allow one or more competitors. Second, Microsoft must be prohibited from being a developer of any applications or utilities software by setting these operations under the control of an unrelated company.

Any remedies short of this will not solve the problem. A problem that is far more onerous and detrimental to our economy than can be imagined save by those who live with the results every business day. I implore you to stop now that which should have been stopped earlier and thereby reintroduce competition to the computer software industry. Thus you will allow the American computer industry to fully achieve its potential.

Respectfully submitted,

Dear Mr. Ashcroft:

I am disturbed by the fact that the Microsoft settlement is in jeopardy. It concerns me that, regardless of the comprehensive and impartial settlement reached in November of 2001, nine out of eighteen plaintiff states continue to seek federal action against Microsoft. What grounds can these nine states possibly find for additional litigation? The terms of the settlement do not allow Microsoft to further violate antitrust laws; how then can the antitrust suit be pursued?

Microsoft did not get off easy. Once the settlement is final, Microsoft will be required to disclose any Windows operating system protocols that allow native interoperation with any Microsoft server. Microsoft has agreed to reformat future versions of Windows so that competing software producers can introduce their products and programs into the Windows operating system without complication. Property rights violations are not an issue here, because Microsoft has also agreed to provide third parties acting within the terms with a license to applicable intellectual property rights. There is nothing in the agreement that does not benefit competitive software makers and prevent antitrust law violations.

I urge you and your office to support this settlement. The only thing that can come of additional litigation is a stagnation of growth in the IT industry and further economic decline for all Americans. I support this settlement, and I believe you should do the same. cc: Senator Rick Santorum

Dear Mr. Ashcroft:

As a Microsoft supporter I felt it was necessary to write and disclose my opinion of the settlement that was finally reached in the antitrust lawsuit against this company. I believe that this settlement must be passed and that the continued litigation involved in this case has done nothing but bog down the American economy as well as the 1T sector in general.

It is my personal belief that the terms of the settlement are reasonable. Microsoft will

no longer commit antitrust violations and in return they will be allowed to continue trading as a whole entity. The settlement will include the implementation of a technical oversight committee that will monitor Microsoft's compliance to the terms. I feel that the acceptance of this settlement is vital to a positive future of American business. Please ensure that this settlement is accepted. Thank you.

Dear AG Ashcroft:

Microsoft had been responsible for some business practices that could be construed by others as anti-competitive. Whether this had actually been over the point of legality or not is, in my opinion, an open question. There are many examples of other IT companies that have—and and do—exert this kind of anticompetitive behavior who have not been as visible as has Microsoft.. or for whatever reason have remained closer to the political mainstream. Nevertheless, it is far better that this litigation has ended with a settlement. The terms of the settlement address the main points of the original lawsuit, such as the problems of retaliatory action and allegedly u/flair licensing, Settling the lawsuit has the advantage of causing less disruption in the IT industry than would have resulted in Microsoft had been broken up. For this reason, I support the settlement, though I remain skeptical that the original suit should ever have been brought originally.

Sincerely,
David Phillips

Dear Mr. Ashcroft:

Last November there was finally a settlement hammered-out between Microsoft and the Department of Justice, which ended the three-year ant/trust lawsuit. This settlement was a long time coming, and I hope that it will be approved as soon as possible.

Microsoft had to concede more than they would have liked in the settlement, but after everything is all said and done, the biggest winner will be the economy. Microsoft has agreed not to retaliate against software or hardware developers who develop or promote software that competes with Windows or that runs on software that competes with Windows. This will allow the competition to bring their product to the marketplace without having to worry about being punished by Microsoft. This will give a much-needed shot in the arm to the economy.

I am in favor of the settlement between Microsoft and the Department of Justice, and would like to go on record as being so.

Sincerely,
Veronica S. Deluca

Dear Mr. Ashcroft:

I understand the Courts will make a final decision at the end of January on whether the proposed Microsoft settlement is in the best interest of the public. I don't believe this case should have gone to litigation at all. Since it did, and an agreement has been reached, why not end this case? Microsoft did not get off easy, as its opponents would have people think. They have agreed to not enter into any agreements obligating any third party to distribute or promote any Windows technology exclusively or in a fixed percentage. Microsoft has also agreed to not retaliate against software or hardware developers who develop or promote software that competes with Windows or that runs on software that competes with Windows.

I urge you to put an end to this litigation. No more action should be taken at the Federal level.

Sincerely,
Randall Seller

Washington, DC 20530–0001

Dear Attorney General Ashcroft:

I am writing to express my support for Microsoft and the government for reaching a settlement on the antitrust issue. The government did what they thought was in the best interest of the consumer. Microsoft showed in this settlement that they have always done that and will continue to.

Microsoft took the initiative and offered a very reasonable settlement. They have agreed not to retaliate against software or hardware developers who develop or promote software that competes with Windows or that runs on software that competes with Windows, not to enter into any agreements obligating any third party to distribute or promote any Windows technology exclusively or in a fixed percentage, subject to certain narrow exceptions where no competitive concern is present, and agreed that if a third party's exercise of any options provided for by the settlement would infringe any Microsoft intellectual property right, Microsoft will provide the third party with a license to the necessary intellectual property on reasonable and nondiscriminatory terms.

Microsoft has lived up to its corporate responsibility, and I, the consumer, never doubted that they would. I support this settlement, and hope it stands.

Sincerely,
Michael Nelson

Thinskate@yahoo.com

I am 71 years old and not influenced by keeping up with the Jones or AOL. I have been teaching the use of computers since 1988 and was thrilled when Netscape help drive the Interact, but I do not buy Edsels.

Internet Explorer works so much better now then Netscape, you wonder what AOL programmers are doing. AOL should be in court because of their blatant rejection of material from other services. You can not use their buddy system, even from the greatest Home Page ''Yahoo.'' If you send video or photos outside of AOL you are very fortunate if they arrive. I constantly send Video and photos to my one Son who has the bad judgment to use AOL, those efforts rarely get delivered. My other three children seem to have no problem viewing my efforts. My opinion on a company that is out of control (I assume because they think they are GOD) has to be AOL. I am pragmatic, I had AOL for five years, I now use AT&T. If Netscape and AOL were better they would be on my computer.

When you go on-line with AOL & CS, you are not on the Internet, you are on AOL & CS. AT&T, Earthlink, Juno you are on the Internet. SO? It means AOL is not faster, it also means they control the content on your home page. You pick the content on other servers, not the choices AOL gives you. INTERNET EXPLORER WORKS BETTER AND THE UPGRADES ARE FREE

This is supposed to be about the public, not AOL, Correct?

Re: Comments in Support of the Microsoft Proposed Settlement Agreement

Dear Ms, Hesse:

I am adding my support as Majority Leader of the Iowa Senate for the efforts by the Department of Justice and a number of Attorneys General to settle the Microsoft case. I am not an economist or a lawyer, but I know the marketplace. The markets have responded very positively to the prospect of this settlement agreement being accepted by the Court. That would be good news here in Iowa as we struggle to regain the momentum our economy had in the 1990s, much of it because many smaller businesses were able to partner with Microsoft and others in the high-tech industry. The markets have said it's time to clear away the cloud cover and bring some sunshine again.

I know the government has some role in overseeing the market place. The settlement helps define that role. It is also important that we not destroy this company. Thank you for the efforts of all involved in crafting this proposed agreement. Keep urging the Court to accept your work product.

Sincerely,
Stewart Iverson, Jr.
Iowa Senate Majority Leader

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to address the settlement reached in the Microsoft antitrust case. I am in favor of ending these proceedings against Microsoft as soon as possible. To that end I am in favor of the current antitrust settlement, although I am opposed to the antitrust suit as a whole. I do not believe that Microsoft should have been involved in antitrust proceedings at all. As I understand it, Microsoft agreed to terms that exceed well beyond the original products and procedures that were at issue under the antitrust suit. Under the terms of the settlement, Microsoft has agreed to license their Windows products out to the 20 largest computer makers on identical terms and conditions, including cost. In addition Microsoft must document and disclose information to its competitors regarding the internal interfaces of the Windows product line for the purposes of further software development on there part.

While I feel that many of the terms of the settlement are overly restrictive to Microsoft, I am in support of the settlement for the sake of getting back on track economically. Bringing an immediate end to the litigation process will benefit the slumping economy. There for I strongly urge you to bring an end to the antitrust proceedings, as we have many more pressing issues currently at hand.

Sincerely,
Millard Wolfgang
cc: Senator Rick Santorum

MTC–00030256

To Whom It May Concern:

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. The current proposed settlement will not put any constraints on Microsoft that Microsoft can not maneuver out of easily. It is imperative to restore competition to the marketplace for the benefit of consumers and businesses alike. Microsoft has maintained its monopoly in the marketplace by controlling who has access to the API's, file formats and protocols used in it s products. These API's file formats and protocols should be available to other vendors and the general public, so adequate competitive products can be developed and to ensure that users have access to their data and computers if Microsoft raises prices. I have always believed in fair competition and letting the best product win. However. Microsoft used its dominance in one area to take over another area. They were able to do this by controlling API's, file formats and protocols available to other vendors. If Microsoft claims its products are superior then it should not have a problem competing on a level playing field where each competitor has the same API's, file formats and protocols available. So I ask the court to consider requiring Microsoft to publish all API's, file formats and protocols on all products prior to their release. This should be monitored by an independent monitoring board appointed by the court with stiff penalties for non-compliance. I also ask the court to require Microsoft to publish the amount it charges for each copy of its products shipped with a new computer to allow consumers to determine the actual value of the software they receive. I also ask the court to provide protection to 0EM manufacturers from Microsoft if the 0EM manufacturers determine that another configuration other than the default windows configuration is best for its customers. Thank you for your time.

George King

U.S. Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530–0001
FAX (202)307–1454/(202)616–9937

Dear Ms Hesse:

By way of introduction, my name is John A. Mulhall. I am a practicing pharmacist with Eckerd Drug in Syracuse, New York. As a taxpayer and consumer, I strongly support the proposed settlement with Microsoft in the government's long-standing Clinton-era antitrust lawsuit. So far, it has been estimated that the lawsuit has cost the American taxpayers more than $35 million. What a waste of taxpayer dollars in this witch hunt! I urge you to put a stop to this travesty of justice NOW.

The way I see it, this lawsuit has been nothing more than a form of welfare for Netscape and other competitors of Microsoft, as well as a way for states to get ''free'' money. It has done absolutely nothing for those supposedly harmed by Microsoft, the computer users of this nation, and has greatly discouraged technological innovation. This is not ''the American Way''. At least not the America in my mind's eye.

The waste of taxpayer dollars aside, I, for one, hold the United States government, and specifically he Department of Justice, responsible for crippling this premier high-tech cog in the nation's economy. Is this really an opportune time when we can afford to continue to harm the backbone of this country? Has not the DOJ suffered enough ''black eyes''? Microsoft has already agreed to hide its Internet Explorer icon from the desktop. The proposed settlement is in the best interest of all involved:

—Microsoft: can continue to provide innovative software that integrates new products
—Competitors: can return to the creation &new products which can be incorporated or made compatible with Windows
—Consumers: can have more software choice
—Investors: can have marketplace stability

If the lawsuit is allowed to continue, the expenditures involved will be even more outrageous to the American taxpayer than they already are. The nine states and the District of Columbia still involved in the case have retained many high-priced lawyers intent on dragging this out for a very long time. They have issued twice as many requests for information including frivolous subpoenas of non-involved third parties, during the remedy phase of the trial than the previous 19 states did in the entire liability phase.

It is high time to put an end to this abuse &hard-working American taxpayers. The economy is in dire need of a remedy to this situation. The proposed settlement is a fair one, I thank you in advance for your time and consideration in this very important matter. It is my hope that you and your staff can keep me up-to-date regarding the status of the settlement.

Sincerely Yours,
John A. Mulhall, RPh

From: Jim W Myers
40835 244th Ave S E
Enumclaw, WA 98022

Dear Mr. Ashcroft:

I strongly recommend that the Court approve the Microsoft antitrust settlement agreement. The uncertainty of this situation

continues to damage the economic condition of our country far more than any actions taken by Microsoft. As a business person, I am all too familiar with the dog eat dog climate in the business world. All Microsoft did was play the game too well and the other teams got mad and jealous.

The restrictions that will be placed on Microsoft pursuant to the settlement agreement will allow the competition an extra edge, but they will still have to learn to play the business game as well as Microsoft. Microsoft has agreed not to retaliate against computer makers who promote non-Windows software. They have also agreed to make it easier for consumers to replace features of Windows with non-Microsoft software. Additionally, a technical review committee will monitor Microsoft's business practices to ensure no further antitrust violations occur. No settlement can make Microsoft competitors stronger competition; they have to do it themselves. This settlement is good for the country but still unfair to Microsoft. Microsoft has approved it and so should the country! This case has dragged on for long enough. I am anxious to see the settlement agreement finalized and the case brought to an end.

Thank you,
Sincerely,
Jim W Myers

Dear Ms. Hesse:

As a public school teacher now on sabbatical, I know the importance of computer literacy to students in today's world. The products and services that Microsoft provides to schools, businesses and residences have played an important part in providing many people with opportunities to learn, work and improve their lives. So I hope the proposed settlement of the federal litigation against Microsoft will he resolved soon

I understand that the settlement now before the court strikes a balance between restricting Microsoft's potentially anticompetitive business practices and allowing the company to get back to what it does best. Clearly, that is a difficult balance to achieve. But the fact that this settlement has been negotiated under court supervision, accepted by the U.S. Attorney General and accepted by a number of state attorney generals, including North Carolina's, makes a compelling case for its value.

I sincerely hope the court will approve the settlement and resolve this matter soon.

Regards,
Anne Otersen

Deer Attorney. Hesse:

It is my understanding that your office is now accepting letters of comment in the settlement proposed in the U.S. v Microsoft case. Please accept my letter of supper[for this agreement. Granite State Taxpayers is a coalition of taxpayers and taxpayers associations throughout New Hampshire that work together to stop attempts to increase taxes and : help make sure taxpayer dollars are spent efficiently.

That is why I find this cage so appalling. It has already cost the taxpayers of this nation over $30 million $30 million to prosecute one of the most exciting companies our nation has seen This case never should have been brought forward in the first place. Microsoft has been an innovator in the area of technology, and because of that, their competitors have not been able to keep up with their technology. As a result, they successfully lobbied the government to fight for them In the courtrooms and now we have this kind of money being wasted on our hands. After many, many months, a settlement has been reached that has something for everyone. This is an opportune time to end these proceedings and remove the federal government's involvement in the operations of this area marketplace.

I urge you to stop the needless wasting of taxpayer delivers and approve this case quickly. Thank you for your attention.

Sincerely,
Roy Stewart
Immeditate Past Chairman

Dear Ms. Hesse:

The settlement in U.S. v. Microsoft has my support because I believe this case has reached a reasonable conclusion for all parties concerned, including the American economy. I believe It Is Important to point out that the case did not show that consumers were adversely affected by Microsoft's actions, and that the essence of the matter is centered around Microsoft and its highly competitive marketplace adversaries.

In my professional life, personal life and endeavors as a family farm activist, I have depended upon Windows systems, and I have been very satisfied with the product. For farm families in South Dakota, Windows systems have the right price, the most important functions and accessibility needed to remain competitive in agriculture. Windows empowers people, and in the rural areas of our nation Windows becomes a ''great equalizer'' by giving farm people equal access to market information and financial transactions.

A feature I particularly like in the settlement is the requirement that Microsoft will send software, computer systems and technical support to schools in low income areas, and I am sure South Dakota will ultimately become a significant beneficiary in that distribution. Thank you for the opportunity to provide input On this settlement.

Sincerely,
Anita Gullickson

Dear Ms. Hesse:

The settlement in United States vs. Microsoft has my strong support because four years is plenty of time to examine all of the issues and reach logical conclusions in this highly visible antitrust suit. From everything I've seen on this issue, this case has exhausted every possibility of wrongdoing, and I think it is remarkable that none of the findings have indicated consumers were being harmed by Microsoft Corporation. For your information, I have worked with many businesses in Sioux Falls in a consulting capacity, and I can tell you that the vast majority of them use Windows systems, and they are very pleased with the products they use. From what I've learned, the remedies sought in this settlement are not only fair, but also would be beneficial to improving the education and career preparedness of disadvantaged kids. This would be a commendable result from a case which has threatened to tie the hands of research and development in information technologies.

I hope this case can be allowed to end fairly and quickly, and that Microsoft can continue to produce the great innovations which have helped to strengthen America's economy, and to keep our nation in the leadership position in technological breakthroughs.

Sincerely,
Shari Rowland

Dear Ms. Hesse:

My comments are to be directed for public commentary In U.S. vs. Microsoft's settlement phase. I support the settlement because it is time, after four years, to end this dispute in the American courts system. The important issues have been addressed in this settlement, and continuing this dispute for another year or two would not serve justice nor the American economy, which benefits from a strong presence by Microsoft Corporation.

Microsoft has been the world's leader in the development of innovative software because of its strong competitive nature and the brilliant people who work hard to stay in front of the competition. This antitrust case acts to keep some of the issues involved in the rapid growth of Information technologies in check, That much of it is healthy to the process of growth. But there comes a point when detaining a vibrant company like Microsoft in the courts system beyond e reasonable time becomes burdensome to its viability in a harsh, competitive climate. I hope this settlement obtains permission to be enacted and that this antitrust action is put to rest, It would ultimately serve the best interests of all involved, including Microsoft's competitors.

Thank you.
Sincerely,
Patrick Starr

Dear Ms. Here:

Protecting the best interests of business and consumers, as I understand the law, is the purpose of antitrust law and court actions. As U.S. v. Microsoft Corporation has moved along in its winding four-year path through the federal courts system, I think it is interesting that the court has not established that consumers were harmed by Microsoft's policies and decisions. What has mattered in court process has been Microsoft's relationship with its marketplace competitors, and I question whether Microsoft's actions were inappropriate when considering the predatory and pressurized nature of competition between companies striving to get ahead in information technologies. It's a tough business.

It is my hope that this case ends soon, so that one of our nation's most important corporations is allowed to continue serving the quickly shifting needs of consumers with the most versatile and reliable line of software for business and home use. It is remarkable that, despite being sidetracked in the courts for the past four years or more, Microsoft Corporation remains a vibrant force in our national economy. Considering that our economy needs all the help it can within the private sector, we need Microsoft back in the ring putting its full energies into its research and development to keep American information technologies development ahead in the world.

Thank you for your attention to my letter.
Sincerely,
Randy Stratton

Dear Ms. Hesse:

From a South Dakota perspective, I believe the agreement to settle the U.S. vs. Microsoft antitrust case is not only fair, it is appropriate because it creates a public benefit which will be helpful for our nation's poorest children. By targeting school districts with the highest percentages of students who qualify for government assisted lunches, this settlement will put disadvantaged students on a fast track to learning through the internet. Certainly, many of the targeted school districts in this settlement will be here in South Dakota. They will be set on a more level playing field to compete for opportunities with students in wealthier school districts.

My career is as a trainer of children and adults to enable them to realize and fully develop their potential in business and in life. As a State Senator in South Dakota, I worked with many local and state educational leaders to develop positive alternatives for growth, especially for disadvantaged children, I cannot think of a better result for this antitrust suit than to enable these economically challenged children with the tools they need to open their worlds to the internet and Its infinite educational resources.

Additionally, I want you to know that I believe that It would be in the best Interests of our nation's economy and of Justice to accept this settlement and put this case to rest. The case has examined virtually all relevant issues Involved in Microsoft's business practices, and the settlement appears to have addressed these Issues as well as anyone could reasonably expect.

Thank you for considering my opinions on this settlement.

With best regards,
Rebecca .J. Dunn

Dear Ms. Hesse:

It is my understanding that a settlement agreement has been reached between the Microsoft Corporation and the United States Attorney's office, and that the proposed settlement is based on the competitive principles of the free market system. It is my hope that Microsoft and its competitors will be encouraged to operate and provide the most technically advanced products at the most reasonable cost to consumers.

The growth of the technology industry has been of enormous benefit to the Commonwealth of Virginia providing jobs for our citizens and tax revenues to state coffers. Thus, an expeditious settlement of this dispute should be in the best interest of all concerned.

Thank you for your consideration of my concern.

To Whom It May Concern,

As both a member of the public who has been watching this case very carefully, a contributing member of the open source community, and as someone who has been programming for over six years, I feel it is my civic duty to inform you to several problems with the proposed antitrust settlement in the Microsoft case. The proposed settlement addresses does not address any of Microsoft's past anticompetitive behavior, does not force Microsoft to atone for it's past transgressions, and appears to be, as Red Hat CEO Matthew Szulik says, ''an agreement reached for the purpose of expediency, not for ensuring an adequate remedy.''

Not only does the settlement fail to address any of Microsoft's behavior outside of coercing cooperation from original equipment manufactures (OEM), but it also specifically gives Microsoft a government enforced monopoly, with the loophole-ridden Section III.J. Using emotionally and politically loaded phrases like ''anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems'' gives all the ammunition Microsoft needs to maintain it's monopoly, as these systems are vital components that allow Microsoft to leverage it's monopoly, while at the same time, causing problems for Microsoft's largest competitor: Open Source Software.

Open Source Software1 (OSS) is a new form of software development, relying around a model based on community involvement and the principle that the underlying source code2 should be freely available for all to see, modify, and distribute. This is significant as this allows anyone to contribute to an Open Source project. It also must be noted that the open nature of source code means that the full details on the inner workings of a program or protocol are available to any programmer who wants them, as will become significant latter. Because of the uniqueness of the Open Source Model, special attention must be taken in the settlement to make sure that the does not harm Microsoft's largest competitor as a side-effect.

But let us look at certain problems with the settlement that are problematic: First, I must examine the term ''authentication systems'' in Section III.J.1.a, and show why this term is problematic by looking at some recent actions by Microsoft. When Microsoft released Windows 2000, Microsoft included support for an authentication protocol developed at Mir called Kerberos. The problem was that Microsoft deviated from the protocol specifications ever so slightly as to only introduce incompatibilities with other implementations of Kerberos. This means that Windows 2000 only grants access if the Kerberos ''ticket'' (the method of authentication in a Kerberos security model) was issued by a Windows 2000 server. It would reject what would be valid tickets from other vendor's versions of Kerberos for the sole effect of customer lock-in.

1 For a detailed description of the Open Source model, please read Eric S. Raymond's The Cathedral and the Bazaar, available in print format from O'Reilly Press, or http://tuxcdo.org/-esr/writings/cathedral-bazaar/cathedral-bazaar/.

2 Source Code is the programming instructions that describe the intricate operation of a program. Microsoft's later actions show why this situation is dangerous: Microsoft insisted that the changes were trade secrets. Microsoft later released information about their modifications to the Kerberos protocol under the condition that the contents be kept a secret. The agreement was mutually exclusive with the development of Open Source Software, where anyone and everyone has access to the source code, where there arc no secrets.

Another fine example would be the wording regarding ''anti-piracy'' and ''digital rights management.'' Section III.J.I, in effect, gives Microsoft a monopolistic position in regards to digital content, as Microsoft will argue that their distal media file formats are inseparable from their digital fights management scheme and will allow competitors access to neither. For example, what would happen if an Open Source project wanted to extend one of the many Open Source video players on an operating system other than Windows to play Microsoft's video format, including files protected under Microsoft's digital fights management software? Microsoft would deny the project the specifications, as the openness of the code would allow anyone who wished to know how the distal rights management system worked to find out easily. At the same time, Microsoft would be under no obligation to help the other operating system by writing a video player that would play Microsoft's video format, allowing Microsoft to maintain it's monopoly.

In fact, Microsoft has already kept others from using their digital video formats. Microsoft owns patent #6,041,345, which is a patent on the ASF file format. In May of 2000, Microsoft forced Avery Lee, the main author of the popular Open Source project VirtualDub to remove support for their ASF files. This is dangerous because ASF has become the dominant streaming format on the Internet, and only Microsoft can control it. ASF files are now only legal on Microsoft desktops.

In both examples, Microsoft was able to use patents or trade secrets to prevent competition, and force customer lock-in to Microsoft products.

Also troubling is Section III.J.2, as it gives Microsoft the right to discriminate on whom it to licenses information to. Microsoft can easily say that a competitor ''has a history of software counterfeiting or piracy or willful violation of intellectual property fights'' and can deny them access to vital interoperability information. I would be surprised if Microsoft doesn't use this as an excuse to deny information to Linux vendors, as they have already used the unorthodox development process of Open Source Software as the basis of flat out calling it ''un-American.'' Jim Allchin, Microsoft Corporation's Platforms Group Vice President, has also said ''Open source is an intellectual-property destroyer,''3 in a blatant attempt to break down the distinctions between software pirates and OSS writers.4 Microsoft will, beyond a shadow of a doubt, abuse this provision if it's allowed to stand as it is.

3 http://news.cnet.com/news/0–1003–200–4833927 html?tag=mn—hd

4 The argument is fundamentally flawed, as software pirates take the work of others, while OSS programmers freely give out their work as an act of generosity, both creating new intellectual-property, and holding to the American values of volunteerism and community service.

Moreover, Section III.E gives Microsoft even more ways to hurt the competition. The use of the terms ''reasonable and non-discriminatory'' may, at first, not appear to be problematic, yet one must consider the people who write Open Source Software: The majority of Open Source programmers write these programs in their spare time, as non-corporate entities for the benefit of the community. The mere term ''reasonable'' is relative. Is it ''reasonable'' for a large business like Apple or Sun Microsystems? Is it ''reasonable'' for a small start-up that has great ideas but can't implement them due to these fees? Is it ''reasonable'' for a middle-class programmer who wants to write software to better the community.'? Any licensing scheme that Microsoft may come up with which requires monetary compensation to Microsoft in return for information will, by definition, be discriminatory, as Microsoft's largest competitor will be unable to afford the licensing fees for the information necessary to compete.

This proposal is woefully inadequate. Between the combination of Section III.E and Section III.J, we, in effect, have a settlement that gives Microsoft full license to continue it's anti-competitive practices with the government's blessing. A good settlement to halt Microsoft's anticompetitive and destructive behavior must specifically assert the following points:

1. Microsoft must be forced to open any and all technical specs to anyone who asks for any reason. Microsoft must not have the right to discriminate who has access to this information. This solves the problems with Section III.E and III.J, and allows true interoperability to exist, in contrast to the facade presented in the current settlement. Technical specs includes, but isn't limited to:

a. All file formats that Microsoft saves information to. including Word Documents, Excel Spreadsheets, et cetera

b. All distal media file formats. I mention this separately to reiterate the loopholes opened by Section III.J.I.

c. All network protocols, including authentication and encryption protocols

d. All extensions and modifications to existing file formats and network protocols. (Recall that Microsoft's version of Kerberos was only a modification to an open standard.)

e. The Windows API (Application Programming Interface) in its entirety

2. Microsoft must also comply with the following terms regarding the licensing of said information.

a. Microsoft may not be allowed to require monetary compensation for the previously mentioned technical information. While Microsoft may argue that it must be compensated for this information, there is no way in which the information can be reasonably priced for everyone, especially for those that have the largest chance of breaking Microsoft's monopoly.

b. Microsoft may not use the excuse of trade secrets, patents, or any other forms of Intellectual Property protection to withhold information from competition, or to break compatibility. Microsoft has used both patents and trade secrets as an excuse to bully software developers, as seen with the above Kerberos example, and Microsoft's threatening of Avery Lee of the VirtualDub project.

3. New computers must be sold ''naked,'' meaning without an operating system or other bundled software. This would allow people to install the operating system of their choice, whether that be Windows, Linux, BeOS, et cetera. The operating system and related software become an added cost; meaning people who would rather use an alternative operating system would not be forced to pay Microsoft for software they wouldn't use.

4. Microsoft must not have the right to sell its software to anyone at a lower price then anyone else. This means that the price of a computer without Microsoft Windows would be drastically lower then the cost of a computer containing Microsoft software. This is necessary, as the difference in price between a computer loaded with Microsoft's software and a ''naked'' computer would otherwise be insignificant.

5. Any settlement that requires Microsoft to make financial reparations, must specifically forbid Microsoft from repaying the debt in the form of Microsoft software. In closing, I'd like to direct you to the points of Red Hat CEO Matthew Szulik, one of which I mentioned in the opening of this letter: ''...contrary to the statements of the US Department of Justice in its impact statement discussing the Consent Decree, the remedies settlement embodied in the Consent Decree fails to achieve the ends mandated by the Court for the following reasons:

—it fails to deny Microsoft the fruits of its statutory violations,- it fails to ensure that competition is likely to result,

—it was an agreement reached for the purpose of expediency, not for ensuring an adequate remedy and,

—it establishes an untenable precedent for future antitrust cases.''

Thank you,
Elliot Glaysher

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to the settlement that was reached in November between Microsoft and the government. This settlement is fair and reasonable, and I am anxious to see this dispute resolved at the federal level. Microsoft has agreed to all terms and conditions of this settlement. Microsoft has pledged to share more information with other companies and create more opportunities for them. Under this agreement, Microsoft must disclose for use by its competitors various interfaces that are internal to Windows operating system products. Microsoft must also make available any protocols implemented in Windows. A technical oversight committee has been created to monitor Microsoft compliance to this agreement.

This settlement will serve in the best public interest. Please support this settlement so we can focus our resources on more pressing issues. Thank you for your support.

Sincerely,
Tej Ram

Dear Mr. Ashcroft:

As a supporter of Microsoft, I write you concerning the recent developments in the Microsoft settlement. The terms of this agreement have been determined through a well thought out process and should, at this time, be supported.

Our technology industry, has been working toward a more unified IT sector, and needs our support. By supporting the agreement as it stands, we allow our technology, industry to work together to maintain our position in this highly competitive global market. Not only has Microsoft agreed to make changes in licensing and marketing, but has agreed to design future versions of Windows for easier installation of non-Microsoft software. Also, as an and-trust settlement first, Microsoft has agreed to disclose various interfaces that are internal to Windows'' operating system products. All of these concessions clearly point toward the IT sector working together to continue to advance in this industry.

I urge you to help support this agreement by stopping any further actions against it. Please help to get our technology industry back to business. I thank you for your help.

Sincerely,
Amy Caterina

Dear Mr. Ashcroft:

I am writing to you today to express my support of the Microsoft settlement. The

settlement that was reached constitutes significant compromise from the Microsoft Corporation. After three years of court mediation, continuing the federal case against Microsoft still further would serve only to waste necessary federal resources. Hence, I urge the Justice Department to enact the settlement at the end of January.

Microsoft serried on generous terms for its competitors and for the public. It will now agree to disclose protocols and internal interfaces of the Windows system. This will allow competing companies to design both hardware and software that is more fully Windows-compatible. Additionally, with an upcoming revision of Windows XP, users will be able to more easily reconfigure their desktops, including the ability to remove access to Microsoft applications and features.

These changes wi11 clearly benefit consumers and developers. I believe that Microsoft has been generous throughout this mediation process and further that the settlement agreement is just. Please finalize the settlement.

Sincerely,
Robert W Bums

Washington, DC 20530

Dear Mr. Ashcroft:

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. The case has languished long enough and it is time to put an end to it. Microsoft and the technology all need to move forward; the only way to move forward is to put this issue in the past.

Microsoft and the government have reached a compromise on all of the major issues involved in the suit. Microsoft has agreed to give computer makers the flexibility to install and promote any software that they see fit. Microsoft has also agreed to release part of the Windows base code, to their competitors, so other software developers will have the ability to develop more compatible software. The terms of the settlement are fair and cover the major concerns that are at issue in the suit.

This case has for over three years and it is time to put an end to it. Microsoft and the industry need to get back to business. It is time to stop this government over regulation. Please continue your support of the Microsoft antitrust settlement.

Sincerely,
James Wang

Dear Mr. Ashcroft,

According to the Tunney Act, I am free to comment on the Microsoft antitrust settlement; I briefly wanted to express my approval of the settlement between Microsoft and the Department of Justice. I believe that the lawsuit was a bit unwarranted to begin with, in that Microsoft has always endeavored to make its software compatible with its operating system, This compatibility—which is the very heart of the government's claim that Microsoft was monopolistic-is the one thing that has allowed the average computer user to actually make use of modern computer technology. Whether the issue is a spreadsheet program that works well with the word processor; or either (or both) working at all on the operating system; or the latest release of DirectX that allows for sophisticated gaming that the young people like so much—all of this is possible because of Microsoft's commitment to integration.

I am confident that the review process for the Department of Justice will bear this out. I am hoping that many other Microsoft detractors both in the corporate area, as well as within our government, will allow this settlement to proceed.

I appreciate the hard work that you and your colleagues do to safeguard the American people from abusive business practices. But this Microsoft suit is not one of those areas of corporate abuse. I believe that in fact, it is much more beneficial to have Microsoft continue to do what it has, as unhindered as possible. Thank you.

Sincerely,
Edward Land

Dear Mr. Ashcroft:

I am writing to participate in the public comments on the Microsoft antitrust settlement. I support the settlement. It is not perfect, but it. is far better than continuing to have lawyers haggle in court over the fate of one of America's chief engines of prosperity and innovation. It is gratifying to know that you directed your department to work to settle this case. and let Microsoft continue to innovate.

Since the settlement is acceptable to Microsoft, it is acceptable to me. Microsoft agreed up a lot of its property and a lot of its rights. That must not have been easy. Microsoft gives up to the software industry the code of its internal interfaces and server interoperability, It will license its intellectual properly to any company that wants to use it. on reasonable and non-discriminatory terms. It wi11 make it easy for computer makers, software companies and consumers to remove the programs Microsoft includes gralis in Windows, like Internet Explorer, and replace them with their own.

This case has gone on too long, with too little to show for it, and at too great a cost. Your efforts to have the federal court approve this settlement will be greatly appreciated.

Thank you.

Re: Comments on the Microsoft Proposed Settlement Agreement

Dear Ms. Hesse:

As you know, on June 28, 2001, the U.S. Court of Appeals for the District of Columbia Circuit overturned a lower court ruling that Microsoft be broken into two companies as remedy for so-called anti-competitive practices. On November 2, 2001, Microsoft and the Department of Justice announced a settlement to the U.S. v Microsoft antitrust case. Nine of the 18 states that were party to the suit have agreed to join this important settlement.

Innovations in technology and telecommunications are an important contributing factor to our nation's economic success. It is, therefore, vitally important that this innovation continues and accelerates, as the economy struggles to rebound from its recent downturn. Settlement of this suit will help ensure this happens.

As the nation's largest, bipartisan individual membership association of state legislators, the American Legislative Exchange Council (ALEC) applauds your efforts to settle this case. We hope that the states that are not party to this settlement will follow the lead of the Justice Department and seek a fair settlement that encourages innovation and secures our economic growth.

Sincerely,
Duane Parde
Executive Director,
American Legislative Exchange Council

Washington, DC 20530–0001

Dear Ms. Hesse:

This is a comment submitted pursuant to the Tunney Act, 15 U.S.C. section 16, on the proposed settlement between the Department of Justice and Microsoft. The Attorney General of Washington (''Attorney General'') enforces state and federal antitrust laws. The Attorney General oftentimes works cooperatively with the Department of Justice on enforcement issues which impact the public on a national and local level, and works cooperatively with other state Attorneys General Offices on cases of national interest.

The Attorney General participated in the initial multi-state review of numerous allegations of violations of the antitrust laws by Microsoft. Even before the suit was filed, the Attorney General urged the parties to consider settlement.

The Attorney General did not join the Department of Justice lawsuit for several reasons including:

1. The lawsuit alleged harm to each state's general welfare and economy. This argument was problematic for the state of Washington.

2. We had received very few comments concerning consumer harm in Washington arising from Microsoft's conduct. In fact, we had received contrary comments.

3. If the Department of Justice did successfully obtain an injunction, the injunction would benefit any injured consumers in Washington.

We have reviewed the proposed settlement agreement with the Department of Justice, including the additional requirements negotiated by nine of the litigating states. We compliment all parties on their efforts to fashion a settlement agreement to resolve the litigation. We also acknowledge and respect that nine of the litigating states believe that the proposed settlement does not fully address outstanding issues and are continuing forward with the litigation.

Under the circumstances, with the Federal District Court having found violations of antitrust laws, and the parties formulating an agreement which addresses the contested issues, we support the proposed settlement as being in the public interest and believe it should be approved as proposed by the parties.

Sincerely,
CHRISTINE O. GREGOIRE
Attorney General

January 24, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am in favor of an immediate settlement of the Microsoft anti-trust case by the ter now before your office for review. I see no reason to further delay an end to this long controversy. It has hobbled a great and productive corporation at a time of national economic decline. It has proved a drain on our entire IT industry. A settlement plan exists and stands endorsed by your own department and the court, Please see that it's ratified and adopted as soon as feasible.

This case arose out of the government's consternation with Microsoft's seeming monopolistic hold on the IT industry. The settlement amply addresses the government's concerns by directing Microsoft to open itself up to more competition by surrendering its hold on near-exclusive Windows software integration in Microsoft platforms. Microsoft will now not just tolerate competition; it will be constrained to promote it. It will in fact be required to radically alter its corporate ethos.

Please help bring an end to this case and allow Microsoft to work untethered towards a more dynamic future for this industry and this country.

Sincerely,

Jim Crumley

Dear Mr. Ashcroft:

I am delighted that a settlement has finally been reached between Microsoft and the federal government.

Microsoft has cooperated beyond what was required. They have agreed not to retaliate against computer makers and software or hardware developers that ship, develop or promote software that competes with Microsoft's operating systems, features, or applications.

Microsoft's compliance with this settlement will be monitored by a three-person Technical Committee established under the settlement by the Department of Justice and by those plaintiff states that are party to the settlement. In addition, any violations of the settlement are punishable as contempt of court.

So why isn't that enough?

This lawsuit has got to stop. The settlement should be accepted, and no more action should be taken at the Federal level.

Sincerely,

Christi Lones

Dear Mr. Ashcroft:

Last November the Microsoft Corporation reached a settlement with the Department of Justice, which brought an end to the three years of antitrust litigation between the two. I am writing to express my support for this settlement since it is in the best interests of the IT industry, and America.

There were concessions made in the settlement that went further than Microsoft would have liked, but the terms were agreed to because the ending the suit was the best thing to do. Microsoft will now work much closer and actually ??n This will make competing software more compatible, and encourage competition to work harder than they ever have before. They will do that because Microsoft has also agreed not to retaliate against competitors. ??s.

You cannot go wrong with this settlement. I fully support m and hope it is approved as soon as possible.

Sincerely,

Horst Seweron

Dear Mr. Ashcroft:

I am writing to express my full support of the recent settlement between the U.S. Department of Justice and Microsoft. Although I believe that the lawsuit was not justified in the first place, after three long years, I am happy to see that Microsoft is not being broken up and that a settlement has been reached.

Under the terms of the settlement Microsoft is not getting off easy. They must give up internal interfaces and protocols to their competitors. They must not retaliate against soft-ware developers or computer makers who promote no-Microsoft products. They must also grant computer makers broad new rights to configure Windows so as to more easily promote competitors'' products. Although I do not fully agree with the terms of the settlement, I want to see it finalized because it is in the best interests of the American public that there be no further litigation. I ask that your Office takes a firm stance and ends the lawsuits from the nine states trying to drag this thing through the mud.

Thank you.

Sincerely,

Calvin A. Roberts

January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft: Microsoft has done more for our economy in the last 5 years than many other companies. They have created jobs, made technological breakthroughs, and contributed to education and social causes for the good of our nation. Yet, three years of lawsuits still haunt their ability, to grow further. I am appalled that nine states want to continue litigation even after settlement has been reach

The terms of the settlement are more than fair and should appease competitors The reason being that they will be given access to internal interface technology and protocols that Microsoft has worked long and hard to develop. They will also be granted broad new rights to configure Windows so as to make it easier to promote non-Microsoft software.

While I believe parts of settlement are unjustified and in violation of Microsoft's intellectual property rights, I still believe the settlement is in the best interests of the public. We cannot afford further litigation. Please lake a strong stance against the opposition and make the settlement a reality.

Sincerely,

??

Washington, DC 20530

Dear Mr. Ashcroft,

Throughout this entire Microsoft lawsuit, it has been evident that the issues were obscured by all the animosity. While I have felt that there have been certain things that Microsoft gas done that should merit some control, this litigation was not adequately addressing them.

This is why I think that the settlement is so important. Rather than wasting time with all the divisive contentiousness, the settlement clearly enumerates specific remedies. It addresses the unpleasant quarrel over Microsoft using its OS to steamroll over other companies who wish to sell other software, and calls for interface disclosure so that software companies can write better software. These are just two provisions that help

to increase competition, which is what the antitrust case was supposed to do in the first place.

While some of the terms of the settlement certainly do not favor Microsoft, the settlement itself ends all the acrimony. For this reason, I am writing in support of its acceptance, and hope that with it, our country can get beyond this and move forward with more important priorities.

Sincerely,
David Fullerton=

Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530–0001

Dear Ms. Hesse:

The following document is a brief objection to the terms of the proposed settlements to Civil Action No. 98–1232 and 98–1233. It i, being sent on 25 January 2002 both as a signed FAX (202–616–9937 or 202–307–1454) and as an e-mail message (microsoft.atr@usdoj.gov) to aid in any transcription that might take place. As a defense engineer whose work has been associated with Information Technology for the past 15 years, I have witnessed the damage done by the monopolistic activities of the Microsoft Corporation. I am concerned that if these activities are allowed to continue (and the proposed settlement does not seem to do anythin8 to curb these practices) the company will continue to squeeze out competing operating systems and ISVs until there are no practical alternatives to the Microsoft products. For the sake of innovation, competition, and security we need viable alternatives for operating systems and applications that have been developed independently of Microsoft's codebase. The high numbers of macro viruses (both in documents and e-mail attachments) as well as the recent US worms demonstrates the danger of widespread adoption of a single product, With healthy competition, there are enough alternative products that it is impossible to attack them all since they will have different weaknesses.

Paragraph III. J of the proposed settlement is especially troubling, since the argument can be made that any component of a Communications Protocol has the potential to ''compromise the security of a particular installation or group of installations...'' Considering that Microsoft has recently announced that they are finally going to ''make security its first priority,'' I believe that this section will be used to withhold any useful data from release.

I recognize the positive aspects of Microsoft's role as the dominant provider of Intel Operating system software, middleware, and applications. The software industry can benefit from the leadership of one entity who has the power and resources to introduce new technologies. Unfortunately, I have seen Microsoft's dominance increasingly used to force alternative products and approaches out of the marketplace. For example, in my organization, no alternative to Microsoft Word is considered by management because it is presumed that no other product can read/write Word formatted text fides perfectly. Even those products that currently do a good job on Word file reading/writing are not guaranteed to be able to continue to be able to keep up with the changes to the largely undocumented Word format. The documentation of the modifications Microsoft made to the widely-accepted Kerberos authentication protocol was distributed under a restrictive license designed to prevent the information about the changes to an open standard to be used to create compatible software. This is a disturbing trend.

The proposed settlement does not appear to do anything to curb the monopolistic practices of Microsoft. It appears, in fact, to simply formalize them and allow the company to continue its practices with little interference. It does not touch on some of the most commonly used Barriers to Entry that the company puts up to discourage competition such as document formats and changing communications protocols. The proposed settlement appears to set up a system where any potential competitor is relegated to the role era Microsoft Developer (MSDN is explicitly mentioned as a delivery medium for some of the information) rather than a competitor. It is difficult to compete in an environment whet0 you can not get necessary information on a product until it is almost ready for release. Quality software demands extensive testing in addition to basic development time and if the required information is only released ''no later than the last major beta release,'' then by the time a competitor's product can be finished and tested, the Microsoft product would have long since been deployed.

In the interests of competition, security, and interoperability, Microsoft should be compelled to develop and deploy those protocols required for communication and authentication in cooperation with an appropriate standards body for the widest possible examination and testing. The standards body could then properly oversee the distribution of the protocol to ensure that competitor's software is truly interoperable with the Microsoft product as well as ensuring that competing products do not introduce incompatibilities with the Microsoft product. Microsoft should be compelled to disclose upfront which elements of a new and existing API, Communications Protocol, or Middleware product are covered by the company's own or licensed intellectual property as a part of this standards acceptance process. The result would be a set of protocols that benefit from community involvement and more extensive security testing than Microsoft is capable of on its own.

Sincerely,
Robert Wood

Washington, DC 20530

Dear Mr. Ashcroft:

This is to give my approval to the recent Department of Justice and Microsoft settlement. This has gone on long enough and it is time to put this thing to rest. I didn't agree with the initial lawsuit. I think if someone is smart enough to come up with something, then it is their right to sell it. Microsoft is just smarter than everyone else and the company keeps coming up with bright ideas. The other companies are just jealous. It is time to act like grown-ups and move on.

Further, I understand Microsoft has given away a great deal. Microsoft has agreed to allow computer makers to ship non-Microsoft product to a customer; Microsoft has agreed to a uniform price list; Microsoft has agreed to help companies better achieve a degree of reliability with regard to their networking software. Enough is enough. I urge you to let this settlement stand. We have more important things to worry about.

Sincerely,
Robert Willetts

January 25, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

I am writing to express my relief and my support for this lawsuit between the Department of Justice and Microsoft having ended in a settlement. From what relatively little specific information I have about the details of this settlement, I can say that it

appears to satisfy most of the complaints of the lawsuit. There is, for example, this provision that allows for Microsoft to refrain from penalizing computer manufacturers from installing non-Microsoft applications onto any new Microsoft OS. This is a good thing that will obviously allow more flexibility in the industry.

My greatest fear throughout this process has been that serious damage could have resulted from the splintering of a company like Microsoft. While it must be readily admitted that Microsoft has maintained a rather rigid control over the use of its product, even by its own customers, breaking apart a company of this size, as envisioned by the litigation, could have had far-reaching negative effects upon the entire industry.

With this settlement, it appears as if this eventuality is less likely. For this reason I am hoping that the settlement will ultimately prevail.

Sincerely,
Todd Epp??e
Senior Partner

Dear Mr. Ashcroft:

I support the Microsoft antitrust settlement agreement. I have witnessed first hand how this case has created a great deal of uncertainty in the technological industry. It is time for the litigation to end so that companies that are within and/or dependent on the industry can get back to focusing on their own business and the delivery of great new technologies. Continuation of litigation will result in a never-ending legal cycle as companies attempt to use the legal system to accomplish what they were unable to do when competing within the marketplace (as the recently filed AOL/Netscape case shows). More litigation has a negative Impact on the industry and economy, and with the current economic status, this is something the hl-tech industry does not need.

The terms of the agreement are both fair and reasonable. Microsoft will be subjected to restrictions that will help ensure no future antitrust violations occur. For example, Microsoft has agreed to not retaliate against computer manufacturers who install computers with its competitors'' software. They have also agreed to license out code to competitors that would normally be protected under intellectual property statutes. Additionally, a technical oversight committee will be created as a result of the settlement agreement. The oversight committee will act as a watchdog to ensure Microsoft does not engage in anticompetitive business practices. Nothing more should be required or expected of Microsoft.

I appreciate your efforts to resolve this case. I hope the court makes the wise decision to approve the settlement agreement.

Sincerely,
Dave Hafermann

Dear Mr. Ashcroft:

I am writing to express my support of the settlement agreement in the Microsoft antitrust case. The agreement's terms are both fair and reasonable, and the Court should approve the settlement. This settlement is important for our economy.

In the interest of resolving the litigation, Microsoft has agreed to a wide variety of concessions. They have agreed to design Windows in such a way that it will be easier for consumers to replace features of Windows with software programs made by Microsoft's competitors. This will result in greater choice for the consumer. Additionally, in an effort to allay fears of predatory behavior, Microsoft has agreed not to retaliate against those who distribute or promote software that competes with Windows. Microsoft has also agreed to give up its right in many cases to go after those who infringe on Microsoft's intellectual property rights. These types of concessions illustrate how the agreement provides the appropriate remedy for the complaints lodged against Microsoft.

I would like to see this case resolved. I appreciate your efforts in this regard.

Sincerely,

Dear Mr. Ashcroft:

Having spent 15 years as a computer programmer, I would like to share my approval of the pending Microsoft settlement being completed at the end of the month and letting the company continue as a successful innovator that has driven the growth of the PC industry. This lawsuit was brought on by desperate competitors, such as Sun and AOL, leading to an expensive litigation that has only succeeded in lost taxpayer dollars and should be ended immediately.

Judge Jackson overstepped his authority with his ruling, as a break up would be a disaster for this fragile economy. Microsoft has not been perfect, but they are superior to any alternative on the market, and should be allowed to continue their progress unimpeded by more government intervention. The negotiated deal already sacrifices several aspects of the company's autonomy and gives the rival factions a broad spectrum of tools to make their mark on the competitive playing field.

I ask for your go-ahead with this plan, which unfortunately provides a level of regulation unheard of in the IT industry. Yet no matter the obstacles, Microsoft deserves a compromise and to exist as one company.

Sincerily
Michael Sule

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to the Microsoft settlement issue. I support the settlement that was reached in November and I support Microsoft in this antitrust dispute. I believe it will benefit all of us to settle with Microsoft and stop this litigation.

Microsoft has agreed to carry out all provisions of this agreement. Microsoft has agreed to grant computer makers broad new rights to configure Windows so as to promote non- Microsoft software programs that compete with programs included within Windows. Microsoft has also agreed to design future versions of Windows, beginning with an interim release of Windows XP, to provide a mechanism to make it easy for computer makers, consumers and software developers to promote non- Microsoft software within Windows.

I urge you to support this settlement and allow Microsoft to devote its resources to designing innovative software, rather than litigation. Thank you for your support.

Sincerely,

Felix Yukilevich

To Whom It May Concern:

Subject: Microsoft Settlement

I'm writing you about the DOJ v Microsoft antitrust lawsuit, I've heard how important it is for the government, the interest of Americans. According to the Tunney Act, we (the people) have a given period of time when we can express our opinions on the case.

I want to take this time to express my opinions about the case. I'm a high school student (18 years of age), and in my senior year. I attend the Urban Academy High School (In Manhattan, the Borough of New York City). This case is very important 1:o Americans, and the students as well, for we are all American.

I've been following this case for quite a long time, and I believe, and know that Microsoft is guilty of no crime, unless you can count innovation as one. If we all take a brief moment end think, we can't remember who invented the steering wheel of the automobile; and yet every automobile company features this mechanical part in the car. So far, nobody has cried foul yet.

For another example: when Nissan manufactures its car, the company includes a (Nissan) thermos, and only Nissan's, no one else's; so companies have a right to litigate because the thermos is in any way ''anti-competitive''? So, if Microsoft doesn't feel that it needs to include more programs into its Operating System, it has the constitutional right not to. Why don't you bother Ford, or GMC about them being ''uncompetitive'' about their products if they happen to withhold their secret to their car engineering, and locking out competitors'' parts? I'll tell you why, because it's ludicrous to persecute a company (constantly)just because they don't want to pre-install certain programs.

Microsoft's main competitor Apple should be litigated for locking out competitors as well. The fact that Apple's Macintosh Operating system only runs on Apple's Macintosh computer, and no one else's. No other company has a pre-loaded Mac OS, and that is anti-competitive. Microsoft is being forced to include what we computer people call ''bloat ware''——loading up the OS with unnecessary programs, graphics, etc. People can install these programs on their own. Some of those (major) programs include:

. AOL (and all its products)
. NETSCAPE
. PRODIGY
. AT&T WORLDNET

By counting the hard drive space that these programs take up, the result would be unbelievable. Microsoft doesn't have to include them all, due to the fact that we can install programs of our choice. The same way you download software, freeware, and shareware off the Internet, you can install them just the same way. Why do we need all those programs bundled with Windows? I purchased Windows, so why do I have to get all those Online Services, and all those Instant Messengers (AOL, and Yahoo!)? It Just slows down the computer, no wonder Windows is the OS that is most expected to crash. Why isn't Apple being forced to do the same? How about Corel with its Linux OS? Mandrake's Linux, or Redhat's Linux?

Microsoft is a very innovative corporation. If not for Microsoft, I shudder to think how the world would look like today. Think about this: what do you at the DOJ use for word processing? Do you use the Windows OS? Or do you still use one of those typewriters? Think about it. The briefs for the U.S. Supreme Court cases are written on PC Computers, with Microsoft Word. The sad part is, is that the 9 Justices don't realize that they (or their clerks) are using them. Every court in The Nation uses Laptop computers, and I know they are not Apple's. I, as a professional computer user in the technical fields, I know the necessities, and making sure that Netscape has its browser pro-loaded in Windows is not one of them. AOL is a company that people have a tendency to dislike. My parents and canceled our AOL account, we now use Road Runner Cable service. So why are we being forced to include AOL's buggy software on Windows? We can install it if we want to. AOL's Instant Messenger has a new security problem that gives hackers the control of the victims'' computers.

Microsoft was also accused of forcing consumers to view pictures, play music files, etc... with Internet Explorer, but that [s not true; you don't have to associate the browser with picture file extensions, or music extensions, you can select a different program (Netscape). The reason why you can view pictures through Intemet Explorer is that it's a Web browser, and Web browsers are built to view information on the Intemet, (that includes pictures, music clips, etc...). In fact, you don't have to use Intemet Explorer; you can use Netscape, Lynx, Mosaic, and other third party Web Browsers. In fact, I've even installed other Operating Systems (Mandrake Linux) on my SONY VAIO computer and it works perfectly.

I know how our opinions are Important to you, and therefore, I've written you mine. I also know that it is vital to have opinions on Information Technology from students (high school, and/or college), for it is the ''hot topic'', and we are the future, I'm going to major in Computer Information Technology; therefore, I'm familiar with this field. I'm also interested in law and politics, and want to take Political Science in College.

I hope we can all settle, and move on. Continued litigation is not the right answer. Good luck with the decision.

Sincerely,

Felix Yukilevich.

Dear Mr. Ashcroft:

As a very satisfied user of Microsoft products and customer service, I would like to add my support for settling the Federal lawsuit after the public comment period ends later this month. I believe any further action would compromise the free market, as the idea of a break up or other extreme measure to rectify lack of competition in the industry was truly over the line.

Having seen the terms of the agreement, I support many of the gestures made in the settlement and see this deal as a fair compromise. The measures to provide an open architecture to competitors, not discriminate against computer makers utilizing non-Microsoft software programs and offer a uniform price list for licensing the Windows operating system to the top 20 computer manufacturers, all seem like good steps to guaranteeing free competition to all. As someone facing anti-competitive tactics in the pharmaceutical industry, the benefits of a uniform price structure have definitely resonated the most.

Now that a settlement has been reached and Microsoft is offering such a wide range of positive measures to give competitors more than their fair chance in the marketplace, I hope the Justice Department will accept this deal and move on to more pressing issues. Any more action would hurt businesses, consumers and the country. Thank you.

Sincerely,

MTC–00030297

Dear Mr. Ashcroft,

There has been a recent settlement to the antitrust case brought against Microsoft. This agreement came as a result of round-the-clock negotiations, with both sides agreeing to settle this dispute. I want to give my support to this agreement. Microsoft has been chastised and has opened the company significantly to competition. It is important for us to put this matter in the past since it has not only been decided in a U.S. District Court, but by the parties as well. I do not believe further litigation will be beneficial to our economy or country.

As I understand it, Microsoft has agreed to a great many terms that extend well beyond

the issues raised in the initial suit. Microsoft has agreed to allow computers to ship non-Microsoft products to customers; Microsoft has agreed to help companies achieve a greater degree of reliability with regard to their networking software; Microsoft has agreed to design future versions of Microsoft with a mechanism to make it easier to promote non-Microsoft software. I urge you to g-ire your support to this agreement. Thank you.

Sincerely,
Pauline Schwager

Dear Mr. Ashcroft

Today I write to express my opinion regarding the Microsoft antitrust settlement. I believe that the settlement is fair and beneficial to everyone involved. It is therefore in the best interests of our country that this issue be resolved.

Through a court appointed mediator Microsoft has settled on the terms of this agreement, which goes beyond the original scope of the case. Microsoft has agreed to change procedures that were not originally an issue in this lawsuit. An example of this is Microsoft's agreement to disclose the internal interfaces of its Windows system to its competitors.

Clearly Microsoft is interested in resolving this issue. I believe that it is time we do just that.

Sincerely,
James Caudill

Dear Mr. Ashcroft:

From seeing how the IT sector has affected Silicon Valley and the bay area's economy, I urge you to end any further litigation in this Microsoft antitrust case. Microsoft did not get off easy. After extensive negotiations, they agreed to terms beyond what is expected in any antitrust case. Microsoft has agreed to document and disclose various interfaces that are internal to Windows'' operating system to the competition, Also,

Microsoft has agreed to use a uniform price list when licensing Windows out to the 20 largest vendors in the U.S. It's obvious to me that Microsoft wants to settle this case so they can go back to business. Shouldn't we get back to business and put people back to work and out of this Recession. Please,

I urge you, no more litigation.

Sincerely,
Steven Horowitz

Dear Mr. Ashcroft:

Last November the Department of Justice and Microsoft agreed to terms on a proposed settlement that will bring an end to the antitrust suit against Microsoft. I support this settlement.

If you look back, the economic downturn started the day that the Department of Justice filed the antitrust suit against Microsoft. The market has been spiraling downward ever since. This settlement sets forth certain obligations that Microsoft must adhere to, and those terms will encourage competition and spur economic growth. Microsoft has agreed to design future versions of Windows that will make it much easier for software and hardware developers to reconfigure the Windows operating system to include non-Microsoft software. Technology companies will be working hard to create a product that will work well in Windows, and that will catch the eye of consumers. This is just what is needed, and the industry will benefit.

I support this settlement, and hope it is approved as soon as possible.

Sincerely,
David Dindy

Dear Mr. Ashcroft:

I believe that it is time for the Microsoft. case to come to an end. For the past three years, the government has wasted its time and energy on a case concerning the problem with Microsoft's success. I believe this to be a mistake. However, I understand that the issue at hand now is whether the settlement is fair to the consumer. Thus, being a consumer myself, I would like to support Microsoft in seeing the end of this settlement.

Three years is a long time for any lawsuit especially since Microsoft has agreed to many terms beyond the scope of these current issues. Basically, Microsoft has agreed to promote the competition as well as to provide them with valuable interfaces that will enable compatible software. Because of this, I believe Microsoft to have sufficiently fulfilled their debt to the competition.

Microsoft is a great company and their success should not be punished any longer. After the finalization of this settlement, I am confident that it will be to the best interest of not only the consumer but also the software industry so that new products and technologies can be developed. Thank you for taking the time out to listen to the public voice.

Sincerely,
Cindy H. Blaeuer

Attention: Microsoft Settlement

Dear Mr. Ashcroft:

I am writing to voice my opinion regarding the settlement of the Microsoft case. I am glad to see that there is an end in sight. I just hope that the settlement is accepted and we can all get on with our lives. Microsoft has given a lot to our economy and they need to be allowed to focus on developing new products instead of fighting legal battles.

I work in the Development office at a private school in Maryland; we use Microsoft products to run our department and I personally use Microsoft products at home as well. Even though the settlement is harsher than they have wanted, Microsoft is agreeing to a lot just so they can move forward with business. They are sharing an unprecedented amount of technology information with their competitors and will also be changing their anticompetitive business practices. All of the terms of the settlement are more than fair and will allow our computer industry to boom again.

Please do your part in ending this lawsuit. I believe it is for the good of our entire country that you accept the proposed settlement.

Sincerely,
Jane R. Maytin

RE: Microsoft Proposed Settlement Agreement
Dear Ms. Hesse

The Microsoft settlement is a nimble resolution that preserves competition, allows Microsoft and its rivals to freely continue to meet consumer demands, and helps define the direction of government's role in the high-tech industry. More than anything, certainty and resolution will help the economy and promote new investment in technology.

In my estimation, it will be very hard to justify rejecting a settlement that is good for consumers, the technology industry and the economy as a whole. Accordingly, I urge you to accept the proposed settlement agreement.

I thank you for your time.

Sincerely,
Guy R. Gregg
Assemblyman

Re: Comments on the Microsoft Proposed Settlement Agreement
Dear Ms. Hesse:

When word of a possible settlement in the Microsoft case broke, the markets surged. In spite of gloomy economic reports, the news was viewed by investors as a sign that our nation's critically important high-tech industry could move forward. The fact is that news of an impending settlement lifted the share price of technology companies across the spectrum, including Microsoft's rivals. AOL, Time Warner, Sun, Oracle, IBM—they all saw their stocks jump.

The economics of settlement were made clear by the markets. Public sentiment—from consumers to businesses to investors—favors settlement. This fair settlement prevents Microsoft from abusing the strength that it derives from its operating system, but still allows the company to continue to innovate in all areas of software development.

As elected officials from the New Jersey Legislature, we congratulate the Department of Justice for developing a strong but fair settlement and its efforts to put and end to this lawsuit.

Sincerely,
The Honorable Anthony Bucco

Washington, DC 20530
Dear Mr. Ashcroft:

I am writing to share my thoughts on the Microsoft Anti Trust case. l believe that the Clinton Administration's Justice Department should never have pursued a legal case against Microsoft in the first place, but I do think that the proposed settlement is in the best interests of everyone involved. From the moment this case began our economy has been negatively affected. It is imperative that Microsoft be free of legal entanglement so that the company can continue to provide innovative products to the marketplace and contribute to the recovery of our economy and the reversal of the recession.

Microsoft is one of the dynamos behind our leadership and superiority in the World Market today. Please don't allow the company's dynamism and innovation to be diminished any further by actions of the Justice Department. ''Dragging down'' Microsoft puts our county at greater peril.

Sincerely,
Christine Williams

Washington, DC 20530
Dear Mr. Ashcroft:

The settlement with Microsoft is in the best interests of the public and the economy. It is both fair and reasonable, and it will prevent future anticompetitive behavior. This case has dragged on for far to long and now is the time to end it. This settlement has placed many restrictions on Microsoft. For example, Microsoft has agreed to document and disclose for use by its competitors various interfaces that are internal to Windows'' operating system products—a first in an antitrust settlement. Also, Microsoft has agreed not to enter into agreements with any third party to promote any Windows technology exclusively. Plus, Microsoft has agreed to a ''Technical Committee'' that will monitor the company's compliance with the settlement. A quick return to business as usual should be the focus for all parties involved in this case, not a return to the courtroom. State and Federal budgets have already been spending millions of dollars on this case unnecessarily. Let's end this litigation as soon as possible.

Sincerely,
Fred Bothe

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington DC 20530–0001
Dear Mr. Ashcroft,

As a concerned citizen, I write you in support of the recent settlement between Microsoft and the Department of Justice. After three years of court battles, it seems ridiculous to waste our resources on scrutinizing a well-calculated and well-monitored agreement. The process was not only well monitored, but was carried on in the interest of the entire IT sector. Microsoft, as well as other IT companies, is ready to move forward and get back to business. Let us not be the ones to hold them back.

Not only did Microsoft agree to reconfigure licensing and marketing agreements, but also agreed to redesign future versions of Windows in order to help promote non-Microsoft software. If this isn't in the interest of the technology industry as a whole, I don't know what is. As we continue to delay this process, we continue to jeopardize our position in the global market. We need to move forward and get back to business so that we may help out our current economic situation.

I urge you to support the settlement in its current state, and help us to get our IT sector back to business. I thank you for your support.

Sincerely,
Joseph Kishman

Washington, DC 20530–0001

Dear Mr. Attorney General:

I am writing in Support of the Microsoft antitrust case settlement. I would like to see the litigation end. I am hopeful the Court will not hesitate to approve the settlement, agreement the parties recently hammered out.

It goes against my principles to settle a case just for the sake of getting out of the litigation. Especially when in a case like this the suit should not have been filed in the first place. However, there comes a time when a company must cut its losses and do what it takes to end the litigation insanity.

Microsoft has clearly gone above and beyond what should be required of them. They have agreed to not retaliate against third parties who distribute or promote software that competes with Windows. They have also agreed not to enter into contracts obligating third parties to exclusively sell Windows products. They have also agreed not to enforce their intellectual property rights. I don't think continuing the lawsuit will result in anything else of substance

The settlement agreement should be approved in its present form, and the parties: focus their efforts on more fruitful endeavors.

Sincerely,

Dear Ms Hesse:

On behalf of KLEAR, Inc., an association of Kansas state legislators representing nearly a third of this state's current House and Senate office holders, I write today with their explicit authorization in strong support of the proposed Final Judgment to the Microsoft antitrust case offered by the U.S. Department of Justice and endorsed by nine state attorneys general. Regrettably, Kansas is not yet among the states agreeing to end their pursuit of this ill-conceived litigation. However, we will continue to press the bee-market rationale for an end to this counter-productive legal course. With the direct means at our disposal, we have already severely restricted the state resources that may be devoted to its prosecution.

The rationale for ending the litigation is squarely in line with our KLEAR philosophy. We stand for the Constitutional principles of limited government, individual liberty, free enterprise and traditional family values. From its initiation forward, the antitrust action against Microsoft has been an affront to these principles that hold real hope in achieving the greatest good for the greatest number of people.

In harmony with a glut of esteemed economists and legal scholars from around the country, we consider the justification for the lawsuit to be baseless. New competitors have emerged to challenge Microsoft's well-earned dominance. Consumer have benefited greatly from reduced prices and improved products. In fact, conspicuously absent at trial and in endless media accounts of the controversy is any evidence that consumers have been harmed. To the contrary, Kansans have lost hundreds of millions of dollars as a result of the antitrust litigation. Our own pension program for government employees in this state has seen its unfunded liability mushroom as a direct product of the legal attack on Microsoft. When we take into account such tangible negative effects, the fragile case theory, the inappropriate and counter-productive remedies imposed by Judge Jackson, and the threat to this country's core principles of liberty, our decision to support the proposed Final Judgment to this lawsuit is KLEAR-cut.

Dear Mr. Ashcroft:

I would like to take this opportunity to express my feelings about the antitrust settlement made between Microsoft and the Department of Justice. I feel the settlement reached is more than Microsoft should have agreed to in the first place. Not only has this damaged Microsoft, but it has also hurt the economy and the rest of the IT industry.

Microsoft has taken many steps to help put this issue to rest. They have agreed to document and disclose for use by its competitors various interfaces that are internal to Windows'' operating system products. In conjunction with this they have agreed to a uniform price list. This means that Microsoft will license its Windows operating system products to the 20 largest computer makers on identical terms and conditions, including price.

It is obvious that I feel this issue needs to be resolved. This agreement is a step in the right direction.

Sincerely,
Carol Storm

I am writing about the proposed settlement in the U.S. vs. Microsoft anti-trust case. After reviewing the proposal, it seems to me that the Department of Justice let Microsoft off easy. I find it highly concerning that most observers of the case consider this settlement to be a victory for Microsoft that will allow them to continue with business as usual. Since Microsoft was found guilty as a predatory monopoly and they have already violated a prior agreement with the DoJ, much stronger remedies are in order.

Any settlement that allows Microsoft to determine what non-Microsoft products may be invoked by Windows and subject that product to a reasonable technical requirement, determined by Microsoft, is terribly is flawed, In addition, the ability of Microsoft to limit the disclosure of API's or communications protocols if they may compromise the security of a particular installation or group of installations is overly broad. Finally, the release of data cannot only be to those that meet objective standards established by Microsoft for certifying the authenticity and viability of their business.

In particular, the viability of business clause completely omits educational, non-profit, open source and free software developers from being eligible for disclosure of API's or communications protocols as the nature of their endeavors are not necessarily to be viable businesses. This is clearly a strategic move on Microsoft's part as it allows them to squeeze the open source Linux community from being able to compete as efficiently in the server and desktop markets. Any remedy must include full public disclosure of all API's and communications protocols. The information disclosed must be determined by an independent third party that is given sweeping investigative and enforcement powers with public accountability, Anything less will not restore competition to the software industry or prevent future anticompetitive behavior from Microsoft.

Sincerely,
Joy Lauderman

microsoft Settlement
Date: Jan 25, 2002.
To: Department Of Justice
From: William Peterson
Subject: Microsoft Settlement.

I'm very satisfied with the settlement between Microsoft and US Department of Justice. The following is the main reason. As a US citizen is my duty to try my best to provide any information that is good for our country.

I have read extensivly material and documents on this case and settlement including: Complaint(5/18/1998), Stipulation (11/06/2001) and Competitive Impact Statement (11/15/2001). Its a good thing you folks and Janet Reno weren't around at the turn of the last century. If you were I wouldn't be driving my ford.

The Department Of Justice gave Microsoft a very strong order, stronger than the compitition complainted about. I'm very happy that Microsoft agrees to this final settlement.

Sincerely
William G Peterson

Dear Ms. Hesse

Under the Tunney Act the Department of Justice is required, to provide a public comment period on the merits of the proposed settlement of the Microsoft Anti-Trust case. I gratefully accept this opportunity to participate m this public comment period.

Our new Attorney General, John Ashcroft and the Department of Justice were on target to actively pursue an equitable settlement with Microsoft. It is unfortunate that some states and several of Microsoft's competitors are insistent in their arguments that this case must continue to be prosecuted, in my view, this is proof that they are only focused on their own self-interest and not on the national economy or the growth of the technology industry.

It is unfortunate that companies like AOL and Oracle are apparently more interested in continuous legal wrangling instead of competing on the open market. Arguing that this case should continue ignores the major remedies found in this proposal. While I can only comment on those made public, it would seem to me that guaranteed flexibility for computer manufacturers, Microsoft's sharing of intellectual property and the establishment of a ''policing'' commission, all combine to create a very fair agreement.

I urge you to accept this settlement.

Dear Ms. Hesse:

It's great news for the country that a settlement has been reached between Microsoft and the Department of Justice and the nine Attorney Generals. The reaction from Americans was overwhelmingly in support of the settlement. It is so important that we try to stabilize the high tech industry at this time. And continuation of this lengthy lawsuit is not in the nations's best Interest as the country grapples with recession, business failure and stock market shocks.

I support your efforts to resolve this Issue with a meaningful and fair agreement.

Sincerely,

Dear Mr. Ashcroft:

I am writing to express my opinion about the Microsoft ant/trust settlement agreement. I understand flint the Justice Department is accepting public comment on this issue, and I would like to state that I am in full support of the current agreement, because I believe it is a fair and reasonable solution to this complex case.

It took more than three years to reach this agreement, and I believe that it should remain in its present form. Microsoft has agreed to share its technology and information, allow its rivals to be more competitive in the market, and permit non-Microsoft programs to be installed in Windows. In my view, Microsoft has agreed to the changes that most significantly affect the American public.

For this reason, and because the company produces a reliable, high-quality product, I will continue to support Microsoft. I certainly hope that file government will maintain the integrity of the current agreement and allow the computer company to do what it does best—create and innovate.

Sincerely,
Edward P. Franks, MD FRCOphth

RE: Proposed Settlement of US v. Microsoft

Dear Ms. Hesse:

I support the Department of Justice and the nine state Attorneys General for their efforts to finally put an end to US v. Microsoft and agree to a settlement that is in the best interest of the nation and Washington State.

A driving force for the new economy, Microsoft has provided a number of innovative, quality software solutions for businesses and individual consumers over the years. Microsoft has also created thousands of jobs in Washington State. The company's employment growth has had a positive multiplier effect on our economy—one study estimates that every Microsoft job results in an additional 3.4 Washington jobs. Microsoft's presence in this state contributes to a high-tech sector that employed more than 130,000 Washingtonians in 2000 and generated $15.5 billion in state payroll in 1999.

The provisions of this settlement, worked out with one of the nation's top mediators, will allow Microsoft and its competitors to continue developing new products and services. This is undoubtedly good for the

high technology industry, the Washington state economy and the nation's economy as a whole.

Sincerely,
Sid Snyder
State Senator, 19th District

Dear Mr. Ashcroft:

The Microsoft ?? within for resolution among comp??. This settlement will provide computer makers and software developers with flexibility when configuring Windows to better promote non-Microsoft software programs that compete with programs included within windows, without the threat of a lawsuit. Microsoft will also use a uniform price list when licensing Windows out to the twenty largest computer makers in the nation, and will not retaliate against companies that use or promote software that competes with Microsoft's programs.

As a retired professor of Engineering & Technology in Sierra College, Rocklin, California, I constantly researched different software programs and found Microsoft's software programs superior among the competition.

The steps taken to settle this case are important because it shows Microsoft has nothing to hide regarding its business practices, and competitors will have an equal playing field.

Sincerely,
Kenneth J. Weger

Washington, DC 20530–0001

Dear Mr. Ashcroft:

I want to take a little time to express my full support for the settlement concluded between Microsoft and the Department of Justice last November. I believe the settlement is good for consumers and our economy.

The terms of the agreement are fair and reasonable to both sides. Microsoft has agreed to many concessions in order to wrap this case up and move forward. For example, Microsoft has agreed not to retaliate against computer makers who ship software that competes with anything in its Windows operating system. Also, Microsoft will be monitored by a three-member Technical Committee to assure compliance with the settlement.

As a business owner, I fully understand the importance and value Microsoft provides to both businesses and consumers. This settlement will free them to continue to provide the innovation that has made our economy the engine for the entire world.

Sincerely,
Michael Reilly

Dear Mr. Ashcroft:

I am writing in order to express my relief over the settlement with Microsoft. I have waited three long years in order for this thing to finally be over and it seems as if the end is in sight. I hope that the federal settlement goes forward so that we can all put this thing behind us.

Microsoft has sacrificed much in order to reach an acceptable settlement with the Department of Justice and I hope that people will realize and respect that They have offered to forgo many of their intellectual property rights and license out software to their competitors. They will also give competitors some say in how computer manufactures can configure their product. This means that they stand to lose a substantial portion of their profits as well as aiding their competitors in contending against Microsoft's products.

Microsoft is willing to do this in order to end this case once and for all I hope that they will be allowed to do so and that this settlement will mean an end to any more action at the federal level.

Sincerely,
Eileen Kirby

Dear Ms. Hesse:

As a parent and a taxpayer, I am impressed by what I have heard about the proposed settlement of the Microsoft case. This litigation has gone on too long and cost too much of the taxpayers'' money. Our state's attorney general has accepted the settlement, and that is a welcome step. I hope the federal court will now do the same.

Microsoft may well be guilty of illegal and improper behavior. It is difficult for the average person to make that judgment. But one can recognize the wisdom of settling a case that distracts an important industry from its work during a time when our nation's economy faces an uncertain future.

Sincerely,
Caroline Raphun

Dear Ms. Hesse.

I am a business owner and legislator who wish to strongly encourage you to accept the proposed settlement between United Stats vs. Microsoft Corporation.

Rather than focusing on improving technology, creating jobs and helping the economy and our nation to rebound, AOL, Oracle, Apple, Sun and others engaged the Justice Department in their effort to compete with Microsoft, Their true intention has clearly been to deny consumers their market choices and instead force them. true paying higher prices for lesser quality products. Competition is the key, not government intrusion.

Without competition, the high technology industry would be completely insignificant. Microsoft, Sun, AOL, Netscape, and other all drive each other to Iowa prices and better products, all the to benefit of consumers.

The time has come to settle this case. Our country needs to see responsible companies mad our government working together on issues of national concern.

Sincerely,
Brian M. Duprey

Dear Ms. Hesse:

Recently, I was pleasantly surprised to learn that Microsoft had reached a settlement with nine states. I believe so for two key masons:

First, as a matter of principle, it is the right thing to do. This Ant/trust case has worn its welcome out and has gone on too long. Now is the right time to settle, given the state of the economy. Second, and most important, the terms of the agreement are fair and balanced to everyone. Microsoft agrees to share its intellectual property when necessary and will not penalize a company if it does not use Microsoft products. At the same time, Microsoft is allowed to move on and focus on its business without having to worry about this part of the Antitrust case.

This settlement benefits both sides, and I fully support it.

Thank you for your time.

Sincerely,
Joseph A. Sole

Dear Ms. Hesse:

As a business owner who relies heavily on computer technology to be competitive, I have Followed the antitrust suit against. Microsoft. While I appreciate the concerns expressed, I believe there is a danger in the government interfering too much with product development, and regulations that will inhibit innovation.

It is my understanding that Microsoft has tried to address these concerns in order to being the case to a conclusion and to allow the company to move forward with developing new products. It has been reported that Microsoft is agreeable to the proposed settlement. I hope the Department of Justice will agree as well, and allow Microsoft to settle and move on.

Respectfully yours,
Rodney Taylor

Dear Ms. Hesse,

I would like to add my thoughts to the others you receive regarding the proposed Microsoft settlement. In a nutshell, I believe the present settlement is inadequate to rectify a situation that, even while it helps some, also harms many others, both businesses and customers.

I am a private, self-employed, long-time computer user, and do not work in the computer or software industries. This makes me a customer. Let me state at the outset that I see no objection to a company, and company personnel, making large profits from a successful business. My objections are purely with the unethical, coersive, and harmful means with which that success was attained. The observations below are drawn from my own experiences and from news and anecdotes from select other sources, So I don't pretend to have complete and detailed knowledge, but am comfortably certain of the following:

—Microsoft has used pervasively the tactic of 'bundling' its software with new computers, forcing thousands of customers buying a new computer to pay for a Microsoft Windows operation system when they didn't want it and intended to erase it.

—Microsoft used blackmail tactics to induce companies with which they did business to use MS software or lose that business.

—Microsoft covertly employed people to pose as unaffiliated with MS but who issued concerted streams of lies and disinformation intended to instill Fear, Uncertainty, and Doubt (commonly known on usenet as FUD) in actual and potential users of non-Microsoft software. The Edelman PR and the Barkto incidents of four years ago are specific examples. Other similar tactics include the MS-fabricated 'grass roots' campaign to dissipate the increasing objections to Microsoft's nefarious tactics.

—Most directly experienced is Microsoft's concerted sabotage of non-MS software that competes with MS software. Most competing software applications went to some pains to describe how to work with MS Windows, while Windows ignored these apps and lavished attention on MS apps. But this neglect was only the beginning: Microsoft invariably 'tweakes' its OS to break competing apps. This has been happening so consistently, for so long, and requires such specific action, that it is not realistic to think it is accidental.

It is true that Microsoft's aggressive marketing has helped swell the number of computer users, and its enforced 'upgrading' regime has increased both hardware and software sales. These have lowered general costs, though at the expense of increased per-customer 'upgrading' cost. But their unethical business tactics have stifled competition and impeded diversification, exacting the additional cost on consumers of decreased choice and lowered quality (reliability and security of Microsoft software is generally deplorable by professional standards).

Some years ago the Department of Justice took IBM to task for its perceived business transgressions, issuing two decrees by which IBM needed to abide. It seems to me that Microsoft is at least as guilty of ethical misbehavior as IBM was, and therefore should be subjected to equally stern measures. In particular, mirroring the second IBM decree, the operating system should be open enough that independent software vendors have the information they need to write software that can compete with that written by Microsoft. This information needs to be equally accessible, with equal timeliness, to the independent software producer as to Microsoft's own applications producing department.

A specific case of this is document formats, whose specifications should be generally available so that Microsoft-produced documents could be read and edited by non-MS programs. Given Microsoft's established

record of unethical coercive business tactics, it is difficult to see how one can realistically expect Microsoft NOT to apply those tactics if they are able and have the motivation. If the same management entity controls both the OS producing department and the apps producing department, then it has the ability, and if it profits from both departments, it has the motivation. This is why I expect that as long as Microsoft's operations are combined, producing both 05s and apps, independent software producers will suffer large handicaps and customers, both business and private, will remain deprived of the advantages of product diversification and true competition.

Dear Ms. Hesse:

I am writing to encourage the Department of Justice to agree to the proposed settlement in the Microsoft Antitrust case. As a small business owner, t have benefited from the ease of use of Microsoft's software; it saves me money and employee hours.

I was glad to learn that Microsoft has agreed not to retaliate against software developers who develop competin9 software. This seems to have been a big part of the antitrust lawsuit, and I hope agreeing to this will enable DOJ to settle and allow Microsoft to continue to develop new products.

Sincerely,
President,

Dear Ms. Hesse.

The U. S. District Court has an opportunity to end one of the most misguid??d and wasteful lawsuits in the history of the United States by dismissing the remaining lawsuits against Microsoft Corporation and accepting the proposed settlement. The cost of the lengthy litigation has now exceeded $30 million and is rapidly rising as ??ch day passes. If the settlement is rejected, any eventual financial judgment against Microsoft will be so diminished by legal and administrative fees that vary little will actually find its way to the consumer.

The proposed settlement puts an end to the wasteful use off taxpayer dollars and requires Microsoft to make substantial concessions to its competitors. I am writing to ask the Court to accept the settlement and let consumers make the final determination as to the quality and usefulness of the products they buy.

Sincerely,
Freddie Maxwell Mayor

Dear Ms. Hesse:

I am writing in support of the settlement of the Microsoft antitrust case. In a nation where we pride ourselves on free trade and development of services and ideas, Microsoft has proven itself. The agreement contains significant rules and regulations on how Microsoft develops and licenses its software, but it also allows Microsoft to keep innovating on behalf of consumers. I hope you will resist the efforts of Microsoft's competitors, who try to continue their efforts to dissolve this company.

We have many computer and Internet companies throughout Virginia, with a large concentration m Northern Virginia, the area I represent. The economy depends upon technology and Internet success—including Microsoft.

It is extremely important to allow this facet of trade to grow and produce without restriction. It is equally as important to allow it to grow free from fear of developing a product that is accepted universally by computer users.

I urge you to accept the settlement as just and fair. if you have any questions, please do not hesitate to contact me.

Sincerely,
Michele B. McQuigg

Dear Attorney Hesse:

I have recently been made aware that you are accepting public comment in the case of U,S. v Microsoft. I would like to contribute letter in support of Microsoft.

This company has been at the forefront of technology and deserves to continue to be provided the opportunity to reach its company goals. Microsoft has provided Americans and the world with products and services at reasonable costs.

Although I can understand the concerns of the government and Microsoft's competitors, extreme restrictions and continued persecution on Microsoft's activities will only decrease the productivity of all computer companies and the American people. The settlement, as I understand it, gives a little to each party in this case without compromising the continual success of this industry.

Too much time has already been spent on this case. We should be concentrating our efforts on increasing national security, improving schools and healthcare, and offsetting the faltering economy. Government no longer has the luxury to be spending time and money on this issue. The United States needs to focus on the current problems facing the American people. Please approve this settlement as quickly as possible.

Comments

I am strongly opposed to the proposed find judgment in U.S. vs. Microsoft, there is no effective penalty & nothing to prevent similar future activities. These Comments (enclosed), which expand on this, are pursuant to the Tunney Act.

January 24, 2005

Dear Renata Hesse:

I am strongly opposed to the proposed final judgment in United States vs. Microsoft. Microsoft has been clearly convicted of illegal actions, and this is the penalty phase. Yet there is no effective penalty in the proposed final judgment, and in particular, nothing to prevent similar future activities. The proposed ''remedies'' are easily circumvented, indeed, they seem to be carefully crafted to ease circumvention! For example, APIs involving security need not be disclosed, so clearly Microsoft will simply re-label or modify many APIs to be security-relevant and thus circumvent the judgment. Microsoft has clearly harmed the computer industry and the consumer, robbing U.S. citizens of many innovative products, simply because so many organizations are now afraid to compete with Microsoft. Some have even been eliminated by Microsoft's illegal activities. A remedy must end these activities.

In addition to the current judgment, I believe that any remedy must ensure that there will be unfettered public access to all information necessary for interoperability. All interfaces, not just certain APIs, must be made public. Thus, in addition to the current judgment:

1. The specifications of Microsoft's present and future document file formats must be made completely public, so that documents created in Microsoft applications may be read and written by programs from other makers (this is in addition to the APIs already part of the settlement). Much of the world's most important information is trapped in these proprietary formats, making it very difficult for customers to switch to competitors even if competitors offer better functionality and lower prices.

2. There must be no exceptions for what interfaces must be publicly documented. For example, the exception for ''security'' issues must be removed. Indeed, security-related issues require the most public scrutiny.

3. Any Microsoft networking protocols must be published in full and approved by an independent network protocol body, and be re-implementable without royalty fee. This would prevent Microsoft from seizing de facto control of the Internet.

4. Since ''open source software'' is one of Microsoft's prime competitors, any judgment must ensure that open source software developers have equal access to such information, without interference in the form of royalty payments, nondisclosure agreements, and other schemes to prevent consumer choice.

5. Microsoft's claims of ''Intellectual Property Rights'' (IPR) must not be allowed to justify continued illegal activity. If such rights are used to continue illegal activity, then those rights must be forfeited.

Also, in addition to the current judgment, sales channels must be free to sell competing products. The proposed judgment tries to make this possible, but it does not go far enough. Thus, in addition to the proposed judgment:

6. Microsoft's product prices must be strictly based on volume (to prevent Microsoft from ''punishing'' vendors who sell competing products). There are some vague words about ''not punishing'' but their meaning and enforcement is not sufficiently clear.

7. Microsoft products must be extra-cost options in the purchase of new computers, so that users who do not wish to purchase Microsoft products are not forced to do so. If I choose to not use Microsoft's products, then Microsoft should not get a cut of my money. I want the freedom to not pay Microsoft.

8. Microsoft's agreements with resellers must be made and kept public, to prevent secret agreements from damaging the public. A capitalistic economic system only works when there is competition. When a company can gain and routinely exploit a monopoly to eliminate competition in other fields, the result is a loss of choice and quality for all. Without being reigned in, Microsoft might someday completely control essentially all communication media, a dangerous situation for any democracy. Microsoft has already tried to limit freedom of speech through its existing control (e.g., at one time Microsoft's Passport prevented their customers from publishing negative comments about Microsoft, and their database licenses prevented users from publishing benchmarks showing Microsoft product performance). Allowing a single company's products to so dominate an industry ''also presents a grave computer security risk—any flaw in their products opens the entire country to attack. Since there is currently little competition, there's little incentive for Microsoft to improve many of its products. As documented by computer security experts (such as those in ''Bugtraq''), Microsoft has a history of claiming to secure their products yet continuously releasing poorly-secured products.

Allowing Microsoft to continue flagrantly disregarding the law is dangerous, and in the long run may pose more danger to our country than the terrorists we are fighting now. Failing to impose a strong judgment may send a disturbing message—it suggests that we are no longer a country of laws, since nothing important will happen if those laws are repeatedly broken. Please, do not let this proposed judgment be a stain on this court. I urge you to require a real final judgment that actually inhibits future illegal activities.

Dear Ms. Hesse

Please accept my support of the proposed settlement between United States vs. Microsoft Corporation.

Rather than beating Microsoft in the free market, AOL and Sun and others engaged the Justice Department to do it for them. Thor true intention has clearly been to deny consumers their market choirs and instead force them into paying higher prices for lesser quality products, Competition is the key, not government intrusion.

Without competition, the high technology industry would be completely insignificant. Microsoft, Sun. AOL, Netscape, and others all drive each other to lower prices and better products, all to the benefit of consumers.

The time has come to settle this case, Taking into consideration the poor condition of the economy, the last thing we need is additional inane litigation.

Sincerely
Karl Turner

Attorney General John Ashcroft US:
Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I would like to take this opportunity to express my feelings about the antitrust settlement made between Microsoft and the Department of Justice. I feel the settlement reached is more than Microsoft should have agreed to in the first place. Not only has this damaged Microsoft, but it has also hurt the economy and the rest of the IT industry.

Microsoft has taken many steps to help put this issue to rest. They have agreed to document and disclose for use by its competitors various interfaces that are internal to Windows'' operating system products, in conjunction with this they have agreed to a uniform price list. This means that Microsoft will license its Windows operating system products to the 20 largest computer makers on identical terms and conditions, including price.

It is obvious that I feel this issue needs to be resolved. This agreement is a step in the right direction.

Sincerely,

Carol Storm

Dear Attorney Hesse,

I have been following the Microsoft lawsuit with an increasing level of concern over the past few years. Initially, it seemed that the action was heavy-handed to say the least. But, with every further disclosure of the role of the industry competition orchestrating many aspects of the litigation, it becomes clear that the United States citizenry will only be served justice if this case is ended.

There is apparently a settlement proposal now before Judge Kollar Kotelly, which will end the case and impose sanctions without creating too much new bureaucracy. This is a great time to turn this case around, and end the practice of using federal lawyers to advance private agendas. The economy needs the boost, and the citizens deserve better.

I respect the government attorneys who worked hard to hammer out this settlement, and hope their effort succeeds.

Respectfully,

Donald W Gallant

Microsoft Settlement
January 23, 2002

To Whom It May Concern:

AS a US citizen, I would like to express my views on the proposed Final Judgement in the United States vs. Microsoft Settlement. I have been in the software development field for 7 years I have felt for many years that Microsoft has monopolistic market positions and tendencies, and has continued these practices even through the current anti-trust investigations. I believe that these practices have hindered innovation and hurt consumers and businesses.

In general, I thing that the proposed Final Judgement is too soft on Microsoft and will not resolve the anti-trust issues at all. In particular:

*Section 3.A.2 of the proposed Final Judgement appears to prevent Microsoft from strong-arming OEMS that ship dual-boot machines, but offers no protection for OEMs shipping a single-boot machines that do not boot to Microsoft windows.

*Definition K of the proposed Final Judgement covers Microsoft's Java Virtual Machine, but does not affect Microsoft's NET strategy. NET, and the C# language specifically, appear to be designed to woo existing Java programmers with a minimum of new training, while C# is a documented standard, Microsoft's standard method of operation is to extend the standard with Microsoft-only features which eliminate any opportunity for inter-operability. If C# becomes as widely accepted as C++ or Java, I fully expect thee there will quickly be divergent ''Microsoft CS'' and ''Standard CS'' implementations.

*There appears to be no solution to the issue of Microsoft proprietary file formats in the proposed Final Judgement. This is huge hindrance, as more and more email attachments are being sent as Microsoft Word documents, etc. File formats were covered in the ''Applications Barrier to Entry'' section of the ''Findings of Fact''. These are just three of the issues that I was immediately drawn to in the proposed Final Judgement. I am also very concerned with Microsoft's continuing efforts to extend their stranglehold on US consumers and businesses including:

*New Microsoft XP licensing schemes which may raise costs for US consumers and businesses. As part of the XP licensing, consumers will not be allowed to 10ad multiple copies of XP on their own hardware. And licensing costs may increase for 59% of businesses (see article in Ci0 magazine, ''Software Licensing Debate'', http://www2.cio.com/research/surveyreport.cfm?idm50)

*Microsoft's forays into home entertainment (UltimateTV, XBox)

*Microsoft's new effort to be at the center of the Internet (.NET and Passport) Thank you for reviewing my opinions. I hope that any Final Judgement in she United States vs. Microsoft trial will be carefully considered.

TO Whom It May Concern:

I understand that, as part of the Tunney Act proceedings, public comments on the case of US v Microsoft should be sent to the fax number above. Last month, the Senate Judiciary Committee called for hearings on the settlement being proposed in US v. Microsoft. At that time I sent in testimony which was introduced into the record. With this letter I am including a copy of that testimony, I would like for this to be included with the materials in support of the settlement. I am small hi-tech businessman and I firmly believe settling the case against Microsoft is in the best interest of our industry.

If you have any questions, please feel free to contact me.

Sincerely,

Jerry Hilburn

Founder—Catfish Software

619–858–1390

Testimony by
Jerry Hilburn, President and Founder]
Catfish Software, Inc.
San Diego, CA
Provided to the U.S. Senate Committee on the Judiciary
December 12, 2001

I am very pleased to provide a written statement for your hearing on ''The Microsoft Settlement: A Look to the Future. Thank you, Chairman Leahy and Members of the Committee, for the opportunity to deliver a small businessperson s perspective on the case before this distinguished group.

I would like to tell you my point of view on the Microsoft case. I am a small businessman in San Diego, California. Catfish Software, Inc! started operations in 1994 providing network services and custom database applications for small business. In 1998, Catfish Software launched an E-mail Application Services branch providing double opt-in mail list service and web-based customer support applications and today, Catfish Software provides support to 300+ companies reaching 2,000,000+ subscribers of its software services.

One of my firm's top competitors is Microsoft's bCentral. So you may ask why I speak in favor of the Microsoft settlement.

Businesses large and small have mortgaged their futures against the impact of the terrorist war. Some smaller businesses—techology and otherwise—have already found themselves strangled by a lack of consumer demand and by slowdowns in corporate and consumer spending. Most of us are finding it is time to shore up resources and protect our assets from the impact of the war. In this time of so much uncertainty, we need the promise of a brighter day and the knowledge that the government—from the federal level on down—is doing everything possible to invigorate our flagging economy.

Competition and consumer preference should decide the direction of the marketplace and meanwhile, the government should not rush to intervene in the New Economy. The last thing our economy needs at this time is the burden of remedies which do nothing but slow the pace of development and limit the choices of consumer.

The Justice Department handled this case admirably, and the settlement they agreed upon is sound. The settlement outlines how Microsoft can operate, but more importantly it provides some assurances to an industry that has been on unstable ground lately.

Microsoft's ability to design and produce new software in turn creates opportunities for small and medium-sized developers to write applications which operate on a Windows-based platform. As the old saying goes, a high tide floats all ships. Calls for break-up of the company did not help the already tenuous situation. And when Microsoft looked like it might be pulled under, the Nasdaq was hit as well as the stocks of many high-tech companies.

But when announcements of the settlement were made public around the beginning of November 2001, everyone got a nice little bump. Consumers and other technology entrepreneurs were hopeful that this case could be put to bed and that the tech sector could get back to business. This litigation that has been an albatross around all our necks for so long—and ending the string of lawsuits associated with it—will have a positive effect on the tech economy With a little luck, that will ripple out to America's economy as a whole.

With so many technologies poised to enter the marketplace, Microsoft and many others, including Catfish Software are looking for ways to enhance the computing experience. The Internet has become a center of most everyone's daily lives—from toddlers typing their first strokes with learning games to seniors learning how to send and receive e-rural. Untapped markets and unimagined ideas abound, but we must not harness the creativity or the ability of software firms to bring those products to bear in the marketplace.

The olive branch of settlement was extended, and it is a solution that is good for the economy and good for the tech industry. Allow us the opportunity to get back to work and earn money with our products and ideas once again.

This concludes my testimony. Once again, I thank the Committee and its distinguished Members for the opportunity to provide written testimony on tilts important issue.

Re: Microsoft Settlement

Dear Ms. Hesse:

Microsoft has done, and continues to do, serious damage to consumers and competitors alike. I will list here the evidence I have witnessed personally.

Microsoft eliminated all competition in the spreadsheet industry, thus destroying Borland, a local company. Hundreds of jobs were lost in our city alone, costing hundreds of thousands of dollars lost in local revenue.

Microsoft blatantly gave away their Internet browser software, Explorer, virtually eliminating Netscape, a pioneer in the industry. Without remedy consumers will have no choice but to use Explorer. Then Microsoft will be free to charge whatever fees they please. They will be the only gateway to an enormous new marketplace. On-line consumers will be at their mercy.

Consumers already suffer, in a number of ways, just by using Microsoft software products. I have worked on both Microsoft and Macintosh operating systems, so I believe I am qualified and justified in comparing the two.

Microsoft Windows products have been notoriously unstable for years, They consistently crash computers for no apparent reason. They are tilled with ''bugs'' that often require specialized knowledge to repair. Users are strangely resigned to these problems since they feel they have no other choice in the business world. The new Windows OS was supposed to correct this problem, but hasn't I never have these types of problems with my Macintosh.

I have a friend who has been a computer hardware and software engineer for 25 years, He is a brilliant engineering consultant who has worked all over the world. He recently bought the new Windows OS. It took him three days of hard work to upgrade from his old system. He ended up buying an entirely new hardware system to run his old programs because the new Windows operating system was not compatible with most of his old software. He readily acknowledged that Microsoft does not care in the least about the grief and cost to its customers.

I recently upgraded my Macintosh system. It took my local dealer a couple of hours. It now runslikeacharm.

The average computer user has a choice. They can spend vast amounts of time mastering complex software and hardware technology Or, they can spend vast amounts of money, paying computer technicians to assist them in solving mundane computer problems that shouldn't exist in the first place. Or, they could buy a Macintosh, as long as Microsoft allows Apple to exist. In seventeen years I can count on one hand the number of times I've had to consult a technician in regards to my Macintosh. In two years I lost count of the number of times I needed a technician to solve software problems with Windows

The damage done to consumers is compounded by Microsoft's vulnerability to breaches of security of its on-line and email services. They are prone to hackers, viruses, and their own quality control problems.

It has been well documented that Microsoft has ignored pleas to improve security, and that they have had the capability, but chose not to implement it. Just another example of their arrogant disregard for the welfare of their customer.

The longer Microsoft is allowed to tighten their grip on the computer industry, the higher the cost will be to consumers. It will be much more than just the financial cost. There will be further losses in productivity, losses in innovation, and losses in consumer confidence, if the world comes to rely on an inheritently flawed system, with no hope of change.

My local congressman has chosen to abrogate his responsibility on this important issue. It is possible that he is ignorant of the dangers to his constituents, since Microsoft poses a serious threat to the Silicon Valley economy Or, perhaps Microsoft has ''persuaded'' our fine congressman that it would be in his best interest to look the other way. Whatever the case might be, I pray that you will seek justice for the consumer, and inflict the harshest penalties possible upon Microsoft.

Cordially,
George Haas

Dear Attorney Hesse:

Please consider this letter as public comment in the case of U.S. v Microsoft. I have been following the case in the press and believe that it is time for the government to accept the settlement as is and stop the litigation.

It is very easy in times of peace to prosecute companies and civilians for reasons that may be more theoretical than pertinent. We arc no longer in peacetime. Now, while this country is at war, it is crucial that all of our energies be focused on prosecuting war criminals and providing national security. Not only is prosecuting Microsoft wasting the time of our justice department it is wasting taxpayer dollars.

Microsoft is a large company and as such has great responsibilities to consumers and other technology firms. The settlement should case some of the concerns of the government and Microsoft competitors without diminishing Microsoft's importance to the economy and the industry. The purpose of this litigation should not be to decrease the productivity of Microsoft because if so American citizens will suffer the consequences.

The United States needs to lead the world in technology, not lag behind because of misinterpreted antitrust laws.

Sincerely,
Anne Porter Jackman

Re: Comment on the Microsoft Settlement

Dear Renata Hesse:

As provided for by the Tunney Act, I am writing to comment on the proposed settlement in the Microsoft case.

As someone who has spent a great deal of my adult life advocating policies that address the concerns of the American taxpayer, I view the use of taxpayer funds to pursue the break-up of Microsoft as little more than corporate welfare for Microsoft's competitors. There is no dispute as to why the government initiated this case—it was the result of a well-financed lobbying effort by Microsoft's competitors. What these companies could not achieve through competition, or even through direct legal action against Microsoft, they sought to do with taxpayer funds.

As many observers of this anti-trust case have already commented upon, it differed in a major way from the classic view of why monopolics harm the public, i.e., the monopolist uses their monopoly power to overcharge the public for the goods they supply. In this case, the public was benefitting enormously from Microsoft products and many of the prices of such products were dropping or—in some cases—were available free.

The bottom line was that taxpayers benefitting from Microsoft, as well as millions of individuals who directly or indirectly benefitted from Microsoft stock ownership, were forced to fund with their tax dollars a legal action that unquestionably benefitted the narrow economic interests of those who lobbied for the anti-trust action by the government. In short, this was a classic fleecing of the taxpayer.

I support the settlement for one reason—to close the door on this very expensive and shortsighted abuse of the anti-trust laws.

Sincerely,
Peter T. Flaherty

Dear Attorney Hesse:

I am writing to contribute to public comment in the case of U.S. vs Microsoft, I support the settlement that has been reached in this case, I believe it is time for the government to stop prosecuting Microsoft, We now know there are many groups who are trying to harm Americans. Microsoft is not one of these.

Millions of dollars have been spent arriving at the Microsoft decision. The settlement is appropriate and should not have further restrictions added to It. It is not necessary to continue spending money on this case, especially when there are so many people out of work and the threat of an even greater recession,

At this time the United States needs further technological advances not regulations that make such advances difficult or impossible. The economy also needs some help, Microsoft has contributed a tremendous amount to technology as well as the economy. Placing further restrictions on Microsoft will result in a decrease in the innovative products we've become accustomed to as well as an almost certain increase In cost.

Please settle this case as quickly as possible. Thank you for your time and your attention in this matter

Sincerely,
Christine Myote

Re: Public Comment on the Microsoft Settlement

Dear Renata Hesse:

Pursuant to the provisions of the Tunney Act, I am writing to comment on the proposed settlement in the Microsoft anti-trust case.

As an attorney and someone who has followed this case in the media from the onset, it's quite clear that the legal case was driven by Microsoft competitors seeking financial advantage, The detailed coverage of the case in Wired and other publications outlined a highly politicized effort by Microsoft's competitors which appears more motivated by a desire to break up Microsoft than to demonstrate any economic harm to the public.

In addition to a strong belief that using government to obtain what cannot be obtained in the free market is an abuse of government, I view my own experience with computers as evidence as to the hollowness of the cries of ''monopoly'' by the Microsoft competitors. For the last ten years I have exclusively used Apple computers and cannot think of anything Microsoft has done that remotely has harmed me economically in any way.

The settlement seems overly harsh to Microsoft insofar as it allows the very same competitors who lobbied for the lawsuit to abuse the terms of the settlement to frustrate any number of future Microsoft technical developments. The recent reaction of these competitors to the release of Windows XP indicates that they have no reluctance to use government to undercut their competition. Unfortunately, the settlement appears to provide a means for future harassment of Microsoft in the guise of holding Microsoft to the terms of the settlement.

Ultimately, the consumer benefits most from a legal environment that encourages and rewards technical advances. To the extent that Microsoft competitors have shown a predisposition to use government to delay or attack Microsoft's technical advances, the consumer is the loser to the degree the settlement facilitates such actions.

Despite my view that the anti-trust action and the proposed settlement are unfair to Microsoft, I reluctantly support the settlement to get the entire matter resolved. In the context of an economy in recession, it's hard to imagine a more indefensible policy than using government action to try to break up one of the most successful companies in the country.

The settlement appears to fully address many of the limited concerns about the ability of computer firms to remove or replace Microsoft middleware (browsers, instant messaging tools, et al.). Similarly it also appears to allow end users to very readily remove or replace such middleware.

The settlement also allows for an independent Technical Committee to makes sure the settlement is followed. This unprecedented step should answer any qualms as to enforcement although this untried approach may result in unfairly limiting Microsoft's ability to promote important innovations that work well with its existing software.

In the final analysis, our prosperity is dependent on innovation and property rights which reward innovation. The real test for the settlement will be whether it is abused by Microsoft competitors in an effort to tear down their competitor.

Sincerely,
Kenneth Boehm, Esq.

Comments
January 25, 2002

Dear Renata Hesse:

I am vigorously opposed to the proposed final judgment (penalty phase) in the case of United States vs Microsoft. The proposed ''remedies'' seem to be carefully written to ease circumvention of that judgment!

Microsoft has frightened many companies in the US computer industry so that they do not even compete with Microsoft. This effectively is a loss for the US citizen because many innovative products may no longer come to the marketplace. The final judgment does not seem to aid the US citizen or competitive companies at all.

The current judgment must be expanded! There must be easily available public access to all information necessary for

interoperability with Microsoft's products. All interfaces, not only certain APIs, must be made public. One of Microsoft's prime competitors is ''open source software''. Therefore, any judgment must ensure that developers of open source software have equal access to pertinent information—without interference—especially in the form of royalty payments and non-disclosure agreements. The current judgment must also be expanded so that competitive sales organizations are free to sell their competing products. Microsoft's product prices must be based strictly on volume. They must be unbundled additional-cost options, especially in the purchase of new computers, so that customers who do not wish to purchase Microsoft products are not forced to do so. Microsoft's agreements with resellers must be made public and kept public, to prevent secret agreements from damaging the public. I remember the government's anti-trust case against IBM a few decades ago—unbundling worked then, and it can work again now!

It is extremely dangerous to allow Microsoft to flagrantly disregard the law. I urge you to require a real final judgment that actually inhibits future illegal activities.

Thank you for your consideration.

Re: Comments on the Microsoft Proposed Settlement Agreement
Dear Ms. Hesse:

The settlement agreement between the U.S. Government and Microsoft comes at a critical time when our economy and nation most need reconciliation. The settlement is fair requiring significant changes in the way Microsoft develops, licenses and markets its software. In turn, the settlement allows innovation and competition to move forward on all sides and removes a critical point of uncertainty for high-tech companies. More importantly, the provisions of the settlement will foster greater competition in the software industry and give consumers more choice in purchasing and upgrading their computers.

I support the Department of Justice and nine Attorneys General for their efforts to finally put an end to this case and agreeing to a settlement that is in our nation's best interest.

Yours very truly,
Senator Robert Duncan

Dear Ms. Hesse,

I am writing this letter to urge the Justice Department to accept the proposed settlement negotiated with Microsoft Corp. and this costly lawsuit.

I feel it is in the best interest of the public and the government to accept the proposed settlement negotiated with Microsoft. Having read about and followed the issue and reviewed debates surrounding the proposal, I have come to the conclusion that it would be a beneficial arrangement for the general public in several ways.

It provides for the Introduction of functional and Integrated technology resources into the educational system. It offers the potential for widespread benefit, because. it includes money for training and support as well as hardware and software. These are more critical to the successful integration of technology into everyday life than are the latest versions of computers end associated programs.

At a time when the economy and our nation are recovering from disruption, I feel that settlement of this case is in the general public's best interest and I urge the Justice Department and all associated parties to settle this matter as soon as possible. Thank you for consideration of my comments.

Sincerely,
William J. Schneider

January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft:

I would like to take some time to express to you my feelings about the Microsoft antitrust suit. The government should have never initiated the suit to begin with, and I was relieved to see that both sides had come to terms on a settlement. The settlement between Microsoft and the Department of Justice is fair to all parties involved, and I would like to see this issue finally put to rest.

I am a big fan of the free enterprise system, and feel that less government involvement is business is better. Microsoft has been extremely beneficial to America, and there is no need to keep dragging them through court. They have donated millions of dollars to charities, simplified computing on a global level, and have been responsible for thousands upon thousands of jobs here in America and across the globe. Government interaction is not necessary, and the settlement actually tries to address that issue a little. An oversight committee has been set-up to watch over Microsoft and make sure they adhere to the terms of the settlement.

So, instead of having the Department of Justice and the federal government breathe down Microsoft's neck, the committee will make sure everything is going smoothly.

I support this settlement since it brings to an end the litigation against Microsoft at the federal level.

Sincerely,

Janice Adams

RE: MICROSOFT SETTLEMENT

Attached is my letter of 1/23 viewing my feelings about the Microsoft settlement. Please use it to represent my views in the matter.

WILLLAM B. ZOLLARS
3248 Comanche Road
Pittsburgh, PA 15241
January 23, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 205730

Dear Mr. Ashcroft:

I was really glad when the Department of Justice and Microsoft reached an agreement. Microsoft has been very generous ?? their willingness to donate over $100 million worth of computers in the public school system to foster computer literacy.

Microsoft did not get off easy. The settlement was arrived at after extensive negotiations with a court-appointed mediator. The Company agreed to terms that extend well beyond the products and procedures that were actually at issue in the suit, for the sake of wrapping up the suit. !n addition, Microsoft has agreed not to retaliate against computer makers who ship software that competes with anything in its Windows operating system.

Since Microsoft has done everything in their power to cooperate with the Government and get back to business, why does this case need to be dragged out costing the taxpayer more and Microsoft more resulting in computer user's paying more for software? I believe we need to move on. No more action should be taken at the Federal level.

Sincerely,

William B. Zollars

Dear Attorney General Ashcroft;

I would like to ask you for your help. The United States Government has finally reached a tentative settlement with the members of the Board of Directors of Microsoft Corporation. Please expedite the wrap-up of this case so that Microsoft can get back to the business of helping the United States be a World leader in high technology.

I am the Program Chairman of the 254 member Hendersonville, NC Area Computer Society. Our members all use Microsoft's high quality computer operating systems, including Windows 95, Windows 98, the Windows Millennium Edition and now many are moving up to Microsoft's new operating system, XP for Windows. This product is simply the best and has received rave reviews in all the computer magazines.

Please give my request your personal attention.

Best regards.

To whom it may concern:

As a software developer with over 10 years of experience: I would like to comment on the United States v. Microsoft Corporation Revised Proposed Final Judgement (PFJ), published in the **Federal Register** on November 28, 2001.

My reading of the PFJ has lead me to an opinion that it will not adequately curtail Microsoft's exclusionary, anticompetitive, and predatory practices: and therefore does not serve the public interest. Tiffs comment describes a number of my concerns.

One concern I have about the PFJ is its expiration date. This supposed remedy is set to expire five years from the date it is entered by the Court, with a potential one-time extension of up to two gears. Considering the fact that Microsoft has already been able to successfully circumvent judgements for Sherman Act infractions dating back to 1994, it seems unwise to limit the PFJ to a maximum term of seven years.

Section VI.N, the definition for ''Non-Microsoft Middleware Product'', includes a requirement that ''at least one million copies were distributed in the United States within the previous calendar year.'' This is a ridiculous requirement, as it requires any Non-Microsoft Middleware Product to first struggle against and overcome Microsoft's monopoly power and the applications barrier to entry for at least, one year before becoming eligible for pro, protection as middleware under the PFJ. This numerical constraint should be eliminated.

Section III.C.1 g-rants Microsoft authority to restrict an 0EM from displaying icons, shortcuts, etc. Granting this authority to Microsoft limits the ability of OEMs to compete through customization of their products. This section also does not clearly address middleware for which there is no Microsoft equivalent. Microsoft's authority to restrict the ability of OEMs to customize their systems should be eliminated.

Likewise, section III.C.2 prohibits OEMs from altering the user interface. This infringes on the ability of OEMs to compete by modifying the user interface. Microsoft's authority to stop OEMs from modifying the user interface should be eliminated.

Section III.C.3 requires Non-Microsoft Middleware to display a user interface similar to the corresponding Microsoft Middleware Product. This limits the ability of middleware producers to compete through user interface innovation. Microsoft's authority to control the user interfaces offered by competing middleware should be eliminated.

Section III.C.4 requires that a non-Microsoft boot-loader be used when launching other Operating Systems. OEMs should not be restricted to using a non-Microsoft hoot-loader for this purpose, and should be free to use any boot-leader: including a Microsoft boot-loader.

Section III. C.5 requires that the OEM comply with technical specifications established by Microsoft when presenting an IAP offer in the initial boot. sequence. This limits the ability of IAPs to compete against Microsoft's LAP (MSN.com) and aids Microsoft in its efforts to extend its monopoly into the LAP business. Microsoft's authority to control competing LAP offers should be eliminated.

Section III.H.1 grants Microsoft authority to rest, riot users and OEMs from displaying icons, shortcuts, etc. Greeting this authority to Microsoft, limits the ability of users and OEMs to compete by customizing their systems. This section also does not clearly address middleware for which there is no Microsoft equivalent. Microsoft's authority to restrict the ability of users and 0EMs to customize their systems should be eliminated.

Section III.H.2 grants Microsoft control over the way in which Non-Microsoft Middleware Products are presented to the user. This grants favored status to Microsoft, Middleware Products and thereby impairs the ability of Non-Microsoft Middleware Products to compete. Microsoft's authority to control the way in which Non-Microsoft

Middleware Products are presented to the user should be eliminated.

Section III.H also grants Microsoft, the authority to impose technical requirements, such as the ability to host a particular ActiveX control, upon Non-Microsoft Middleware Products. However, Netscape 4.x, for instance, does not host ActiveX controls, in part due to the security risks the3, present. This authority should be eliminated.

Section III. J enables Microsoft to withold documentation for some of its APIs and communication protocols based on the pretense of protecting the security of specific installations. It also enables Microsoft to impose limitations on the audience to whom such API documentation is made available. However, there is a general consensus among computer security experts that the witholding of such documentation (a.k.a. security by obscurity) does not establish true computer security. Microsoft should not, he allowed to withold documentation for its APIs and communication protocols based on this pretense.

The PFJ also omits an important consideration. Much of the present and future competition to Microsoft comes from non-commercial Open Source and freeware software products such as Linux, Apache, Sendmail, Samba, and Wine. In January 2001, Microsoft president and CEO Steve Ballmer identified the Linux phenomenon as ''threat number one.'' Apache and Sendmail are established mainstays of the internet. Samba sad Wine enable non-Microsoft systems such as Linux to interoperate with (monopolistically entrenched) Microsoft systems. It is reasonable to expect that these and other Open Source and freeware software products are potential targets of Microsoft. Under the existing PPJ, Open Source and freeware software products receive very little consideration, as important portions of the PFJ apply only to companies that meek Microsoft's criteria as a business (see Section III.J.2). The PFJ should be revised to offer specific protection to Open Source and freeware software products.

The above briefly outlines several of my concerns regarding t4e PFJ. It is possible, even likely, that the PFJ contains additional significant flaws not mentioned here. I am of the opinion that the existing PFJ would completely fail to accomplish its stated purpose of providing ''a prompt, certain, and effective remedy for consumers by imposing injunctive relict to halt continuance and prevent recurrence of the violations of the Sherman Act by Microsoft.'' The PPJ is in need of extensive rework and should not be accepted in its present form.

In addition to this comment, I have endorsed an open letter to the DO J, written by Dan Kegel (of Los Angeles, California.) and others. The open letter contains an analysis of deficiencies in the proposed Microsoft. Settlement, along with suggestions for addressing those deficiencies. At the time of this writing, the open letter is visible on the internet at http://www.kegei.com/remedy/lerter.html.

I hope the United States Department of Justice will take these comments into consideration and withdraw its consent from the PFJ. Failing that, I hope these comments will help the Court to reach a conclusion that entry of this PFJ does not serve the public interest.

Sincerely,

Jo??l Schneider

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

We have followed the lawsuit against Microsoft for the past three years and feel that it is time this matter was brought to a close. The settlement Microsoft has agreed to is more than fair and will insure that other companies are able to compete and in turn the consumer will receive a better product.

The state, the IT industry, and the economy will all bounce back from this set back if the matter is resolved soon. Microsoft has agreed to many terms that are more than fair. They have consented to a uniform price list which means Microsoft will license its Windows operating system products to the twenty largest computer makers on identical terms and conditions. Also, Microsoft will design future versions of Windows, beginning with an interim release of Windows XP, to provide a mechanism to make it easy for computer makers, consumers and software developers to promote non-Microsoft software within Windows. Microsoft has taken all the necessary steps to conclude this matter, it is time now for the DOJ to do the same. We hope that this issue is soon put to rest Thank you.

Sincerely,

John & Janet Baker

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania .&venue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

Throughout the course of this litigation against Microsoft, there has been discussion about how unfair Microsoft is, and how best to legally strip it of its success by breaking it up as a company.

Lost in this rhetoric is the effect that a Microsoft breakup would have on the hundreds of IT companies that depend upon the integrity and reliability of the Microsoft product line for their own business success, my own included.. Had this suit progressed through to its logical conclusion, and Microsoft been broken up as was anticipated, there would certainly have been serious repercussions throughout the IT industry. My business would have been one of the many forced into bankruptcy.

Fortunately'', such will not be the case. This settlement at least has the benefit of forestalling any such drastic outcome. The terms of the settlement provide for Microsoft to adopt a more flexible attitude and better policies regarding its OEMs and developers. Some of the terms appear to be harsh, but since both the Department of Justice and Microsoft have agreed to its terms, then I am hoping that this will end the litigation altogether. I am writing in support of the settlement's ultimate acceptance and hope that this entire suit can be put behind us.

Sincerely.

Ms. Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW—Suite 1200
Washington, DC 20530–0001

Dear Ms. Hesse:

I am writing to express my support for the proposed settlement between the State of Michigan and Microsoft in the Department of Justice Antitrust action against Microsoft. Thank you for your reviewing my comments.

The State of Michigan has decided to join with eight other states in agreeing to the terms of the Microsoft settlement which was

announced on November 2, 2001. I am writing to express my support for this settlement.

By agreeing to end this lawsuit, over three years of debate will be brought to an end. I feel the terms of this settlement are fair, which is evidenced by the hi-partisan group of Attorneys General who have endorsed it. Not only wi1l a quick settlement be good for the economy, it will also benefit consumers. Average Americans will benefit by having other software available on their personal computers. This will allow for greater competition, and help to generate new ideas for the next generation of'' software.

I appreciate the efforts of the Department of Justice in bringing this action to a quick resolution.

Again, thank you for considering my support.

Sincerely,
Bill Schuette
State Senator
WDS/rkh

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft,

I have been paying close attention to the developments of the antitrust case between Microsoft and the Department of Justice, and I am now taking some time to write this letter and go on record as being a staunch supporter of the settlement.

Not only does Microsoft benefit from this agreement, but consumers, the competition, and the economy of the United States will also benefit. Even though Microsoft did not get off easy in the settlement, the terms are reasonable, and this country needs all of its companies performing to the best of their abilities. The settlement paves the way for this by mandating that Microsoft grant computer makers vast new rights to configure Windows so as to promote non-Microsoft software programs that compete with programs included within Windows. This will encourage smaller software firms to work hard and make a good product that consumers will like. In turn, competition will be spurred, and the economy will benefit.

The settlement that has been reached is more than fair, and it will benefit everyone involved.

Microsoft can worry less about court and more about innovation. I support this settlement, and urge you to approve it as soon as possible. Thank you.

Sincerely,
Bruce Hermes
Sr. Partner

Washington, DC 20530–0001

Dear Ms. Hesse:

I am writing to suggest that the Microsoft settlement be affirmed as soon as possible, The case, which has wasted tens of millions of taxpayer dollars, has poisoned our economy when it was already sick.

Investors need assurance that our nation's high-tech industry will thrive, free of the meddling and interference of government gone awry. Our economy being in recession has resulted in large losses of revenue for Illinois and other states. We who are responsible for state budgets need restored public confidence in America's high-tech leadership.

This settlement will serve to revive the very industry that drives the engine of the economy. That will benefit our nation and every one of its citizens.

Please move forward with haste.

Thank you.

Sincerely,

Mary Lou Cowlishaw State Representative 41(st) District

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

We are writing to give our support to the settlement between Microsoft and the US Department of Justice. This three year antitrust suit has been ongoing for far to long. However, we feel that this case should not have gone to court in the first place, since Microsoft did not break any laws. Windows is an excellent operating system, since it is user friendly for both my husband and I. We can assure you that this settlement is not a ''sweet-heart'' deal to please the government. The company will be making changes in their business practices that will prevent any future antitrust violations. For example, Microsoft has agreed to license its Windows OS products to the 20 largest computer makers on identical terms and conditions, including price.

Furthermore, Microsoft has agreed to be monitored for compliance to this settlement by a three person technical committee that will also aid in dispute resolution. We ask the government to stop attacking Microsoft once and for all.

Sincerely,
Kenneth & Carolyn Shick

Dear Ms Hesse:

It is time to move on! The recent settlement offer by Microsoft Corporation appears to be a win-win situation. The U.S. Justice Department and the Federal Court can tam a very negative and potentially damaging lawsuit into an exciting and positive outcome for our nation's technology industry and consumers.

On behalf of our chambers twenty-eight board of directors and 1200 plus members, I writing to ask that you dismiss the remaining lawsuits and accept the terms of the most recent settlement offer.

Settling is the best solution to the lengthy and expensive lawsuit. Though terms of the agreement may not satisfy Microsoft's competitors, it will, m the end, benefit consumers most. I hope you agree with me that for the good of our nations' economy, business environment and consumer, a settlement is the best solution.

Dear Ms. Hesse:

It appears that the legal problems concerning the Microsoft Corporation never end. I read with interest, some time ago, the main details of the settlement between Microsoft and the Department of Justice. This settlement sounded like a good basis for resolving this matter and allowing Microsoft to get on with their business of producing products that are needed by the American consumer.

Let's stop dragging this controversy through the courts and use the settlement that was worked out between Microsoft and the Justice Department as a basis for resolving this matter.

Very truly yours,
Kathleen Kilgore

Dear Mr. Ashcroft:

The reason for this letter is to request that you make a good effort to ensure the settlement reached in the Microsoft antitrust case becomes a reality.

Challengers and foes of Microsoft may pressure officials to delay tiffs settlement in favor of continued litigation in this case. The), are working under the premise that the courts should punish Microsoft. I do not believe the courts should be used in this way.

Furthermore the settlement that is being offered is a good agreement. The settlement will allow easier placement of non-Microsoft products on Microsoft operating systems; including easier removal of Microsoft components. Additionally the settlement will permit computer makers to place non-Microsoft operating systems on computers with fewer restrictions, even if they also use Microsoft systems. Moreover the settlement creates a technical review committee that includes a full time government monitor to ensure all elements of the settlement are enforced. It is clear that this settlement should be implemented and this settlement is good.

Sincerely,
latch Hoffman ''

Dear Atty. Hesse:

As a small business owner who has seen a two-fold increase in business this past year, I am supportive of the tentative settlement in United States versus Microsoft. My office uses Microsoft products and we have only good things to say about their products, services, and pricing.

On many levels it seems like the ''American Way'' is in jeopardy when we try to punish people or companies for being successful. The markets have decided that Microsoft products and services are superior to their competition and litigation should not hold them back from continuing to bring quality products to the public, especially in the present economic situation.

The anti-trust laws were meant to protect consumers and were not meant to be a means to control a competitive industry. The Microsoft competitors are looking for overzealous government intervention instead of searching for innovative products and services of their own. The last thing we as consumers and business people need are lobbyists and lawyers setting technology and industry policy.

Now that over $30,000,000 of our tax dollars have been spent to help companies battle their competition, it is time for us to support this tentative settlement. It addresses the proper items and does not interfere with industry competition. The battle belongs in the market-place not in the courts.

Thank you for your time and consideration.

Sincerely
Timothy R. Kolpien,

Dear Mr. Ashcroft:

We have followed the lawsuit against Microsoft for the past three years and feel that it is time this matter was brought to a close. The settlement Microsoft has agreed to is more than fair and will insure that other companies are able to compete and in turn the consumer will receive a better product.

The state, the IT industry, and the economy will all bounce back from this set back if the matter is resolved soon. Microsoft has agreed to many terms that are more than fair. They have consented to a uniform p??

Microsoft will license its Windows operating system products to the twenty largest computer makers on identical terms and conditions. Also. Microsoft will design future versions of Windows: beginning with an interim release of Windows XP. to provide a mechanism to make it easy for computer makers, consumers and software developers to promote non-Microsoft software within Windows.

Microsoft has taken all the necessary steps to conclude this ??. It is time now for the DOJ to do the same. We hope that this issue is soon put to rest Thank you

Sincerely,

Re: Microsoft Antitrust Settlement

Dear Mrs. Hesse,

I am writing to express my concern over the proposed settlement terms of the current antitrust case against Microsoft. The terms are inadequate as a remedy for the antitrust violations for which Microsoft has been found guilty, and may in fact strengthen Microsoft's grip on the software industry.

To be effective, the settlement must promote interoperability between Microsoft software and that of other makers. At a minimum, the following provisions are required: 1. The specifications of all Microsoft document formats must be made public, so that documents created in Microsoft applications can be read by software from other makers, and vice versa. This is in addition to the publication of the Windows API, which is already included in the proposed settlement.

2. The specification of all Microsoft network protocols must also be made public, so that network software/hardware from other makers can interoperate with that from Microsoft. These measures will sharply reduce Microsoft's control over the largest barriers to entry to the software marketplace, without damaging Microsoft's ability to produce innovative software. A lever playing field in the software industry is at the heart of the national interest, and the effects of this settlement on the software industry—and on businesses in general—will be felt for many years to come. Therefore, I stress that a correct remedy to this issue is far more important than a speedy conclusion to this case, and respectfully urge the court to add provisions similar to those outlined above to the final settlement.

Respectfully,
Christopher Raser
Web Developer

Dear Mr. Ashcroft:

For the past three years, the Microsoft antitrust case has dragged on in the federal courts. The lawsuit has already had a detrimental effect on the economy by introducing additional uncertainty m an already turbulent climate. Isn't it time to put an end to this disrupting influence?

Microsoft and the Justice Department have agreed upon a number of terms that both sides of this suit support.

While this case has lingered in the federal courts, America has suffered. No good can come of additional federal action. I urge you to give your support to the settlement. It is time to move on!

Sincerely,
Alan Schaaf

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

I write to comment on the proposed settlement in the Microsoft v. DOJ case. I have practiced in the antitrust area for approximately 30 years. Although I am not fully aware of all the facts and circumstances of this particular case, and although I believe that break-up of Microsoft would be too stringent of a remedy, I do not believe the current proposal to settle the case is appropriate.

The district court judge made significant findings concerning antitrust violations committed by Microsoft. Although the Court of Appeals may have determined that the break-up remedy may have been inappropriate, that Court did not reverse the district court's findings on the antitrust violations. Therefore, it is neither prudent nor appropriate for the DOJ of a new administration to propose or support a settlement that does not reflect what our judiciary, after a full and fair airing of the arguments of all sides, might impose.
#112664 v1
Holme Roberts & Owen LLP
Renata B. Hesse
January 24, 2002
Page 2

I believe the most appropriate course of action would be for the court, on remand, to conduct a proceeding to determine an appropriate remedy. At such a hearing, all parties, including the attorneys general of the interested states, to present their positions concerning the appropriate remedy.

Respectfully,

Jay Gurmankin

Comment from the Small Business Survival Committee on the Proposed Settlement in United States v. Microsoft
January 25, 2002
Darrell MeKigney
President &
Raymond J. Keating
Chief Economist
Small Business Survival Committee
Small Business Survival Committee 1920 L Street, NW, Suite 200
Washington, DC 20036
Phone: 202–785–0238
Fax: 202–822–8118
E-mail: darrell@sbsc.com
E-mail: rkeat614@aol.com

The Small Business Survival Committee (SBSC) believes that the proposed settlement between Microsoft Corp., the federal government and nine U.S. states in the case of United States v. Microsoft Corp. generally serves the ''public interest'' and the nation's economic well being. In its settlement, Microsoft has agreed to a variety of restrictions on its business practices for at least five years. Microsoft also would be subject to (and have to pay for) a full-time, onsite monitoring panel of three computer experts, who would have complete access to Microsoft's software code, systems, books, records, personnel, etc.

Considering that the antitrust case against Microsoft had absolutely no basis in economic reality, and that the government brought its case at the behest of competitors—not consumers-who could not keep up in the marketplace, we view any findings against Microsoft, and related restrictions placed on the firm, as unwarranted. However, given the costs, looming uncertainties, the current economic climate, and penchant for bad law and convoluted economics to dominate in the antitrust realm, Microsoft certainly made the correct business decision in reaching this settlement. Investor's Business Daily hit the nail on the head when it recently (January 22) editorialized:

''Late Thursday, Microsoft reported its earnings for the fourth quarter. They included a hefty charge of $660 million, or 8 cents a share, for expenses linked to antitrust lawsuits and ongoing legal action by some states.

''Think about it: that's two-thirds of a billion dollars. It could fund a lot of research, give a lot of raises to workers, even fund more Microsoft charity around the country.''

So, the costs of this case for the company, the taxpayers and the economy in general have been formidable.

And make no mistake, these costs are felt by many small businesses. Small enterprises certainly can be affected by the costs of this antitrust case (and others) in their roles as consumers of Microsoft products, and as suppliers to Microsoft. In addition, entrepreneurship and business can be impacted by the message sent by government in a case such as this, i.e., that if a business works and competes hard to succeed and gain market share, the government may move against it through regulation and litigation. That is not a positive economic message for government to be broadcasting into the marketplace.

Microsoft, the many businesses which serve as its suppliers and consumers, and the software industry have been placed at risk due to the government's long antitrust inquisition against Microsoft, and real costs have been incurred. The government's antitrust case against Microsoft has boosted costs, increased uncertainty in the high-tech community, and thereby, hurt the entire U.S. economy.

Looking ahead, it is quite disturbing that government officials—including regulators, lawyers, and judges—have the ability to impose their own anachronistic views of how markets should work on the rest of us, including the high-tech industries of today and tomorrow. Antitrust regulation remains a dangerous wild card in the marketplace. Depending how the latest political breezes happen to be blowing, our nation's most successful companies are in a position to be punished for their success via antitrust actions.

Antitrust law is regularly presented as a bulwark of competition and free markets. In reality, however, antitrust law, for the most part, is distinctly anti-market and anti-competition because it allows government bureaucrats or judges to overrule decisions made by consumers in the marketplace. In the end, government antitrust actions in this case have amounted to nothing more than an effort to protect some of Microsoft's current rivals from the rigors of competition, and/or an effort to expand the reach and control of government.

It needs to be understood that in the free market, businesses compete against current and future competitors. The rapid pace of innovation in the computer industry makes this abundantly clear. Therefore, many antitrust actions exhibit an inability on the part of regulators, government lawyers and some judges to understand the dynamic nature of the marketplace. Markets are not static. The classroom lesson about ''perfect competition'' does not exist in the real world. Instead, the economy involves a rough-and-tumble competitive process whereby entrepreneurs and businesses create new products and services, innovations, and efficiencies, often generating temporary monopolies that are then obliterated by competitors. Prices and profits act as signals in the marketplace to other businesses and entrepreneurs. An activist antitrust regime, as was exhibited over the past several years in the Microsoft case, disrupts this beneficial economic process.

The fact that antitrust law looms unchanged—to be erratically used as a club by government—will continue to east a shadow over the U.S. economy, particularly dynamic high-tech industries in which temporary monopolies are the clear rule.

Ideally, the Microsoft case should have been dropped altogether, and looking ahead, dramatic antitrust reform needs to be undertaken to reflect economic reality.

Short of such action though, a settlement in this case, which obviously steps far back from a proposed break up of Microsoft, makes sense. Hopefully, since much of the government's case has been thrown out or overturned, perhaps this Microsoft settlement will serve as a warning that antitrust restraint on the part of the government far better serves consumers, entrepreneurship and innovation, than does antitrust activism.

Darrell McKigney is the president of the Small Business Survival Committee. Raymond J. Keating serves as chief economist for the Small Business Survival Committee (SBSC). SBSC is a nonpartisan, nonprofit small business advocacy group headquartered in Washington, DC

Dear officials of the Department of Justice:

As a small-business owner and software professional with more than a decade's experience creating software for Windows, Macintosh, Unix, and Linux operating systems, I am writing pursuant to the Tunney Act to comment on the revised proposed Final Judgment (PFJ) in United States v. Microsoft.

I am deeply troubled that the PFJ, when scrutinized from a technical viewpoint, fails to satisfy any of the requirements for a remedies decree as set forth by the Court of Appeals ruling (section V.D., p. 99). The PFJ does not unfetter the market from Microsoft's anticompetitive conduct, terminate Microsoft's illegal monopoly, deny Microsoft the fruits of its statutory violation, or ensure that there remain no practices likely to result in monopolization in the future. Rather, the PFJ allows many of Microsoft's anticompetitive practices to continue—effectively legitimizing these illegal practices—and provides license for Microsoft further to abuse and extend its monopoly.

Rather than enumerate my specific concerns here, I will refer you to the findings of Dan Kegel's analysis? which summarizes the technical failings of the PFJ. I agree with Mr. Kegel that the PFJ fails to take into account Windows-compatible competing operating systems, contains misleading and overly narrow definitions and provisions, fails to prohibit anticompetitive license terms currently used by Microsoft, fails to prohibit intentional incompatibilities historically used by Microsoft to protect and extend its monopoly, and fails to prohibit anticompetitive practices towards OEMS.

I also agree with Mr. Kegel's conclusion that the PFJ allows and even encourages anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore counter to the public interest. Further, I am appalled that, despite the best intentions of the Department of Justice, the PFJ permits so many of Microsoft's illegal practices to continue unfettered that it effectively legitimizes these practices and threatens to make Microsoft's abuses into a government-sanctioned benefit of its monopoly.

Therefore, I must urge the Department of Justice to withdraw its consent to the existing PFJ and begin work on a new proposal that provides meaningful and effective remedies for Microsoft's illegal business practices. To do otherwise would likely result in a monumental miscarriage of justice and, ultimately, irreparable harm to the competitive environment that is vital to our nation's promising technology industry and the economy it supports. Again, I must urge you to withdraw your consent for this fundamentally flawed proposal.

Sincerely,
Thomas G. Moertel

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Three years ago, Microsoft was found to be in violation of antitrust laws. The corporation was duly brought to trial in the Federal courts, and it was not until June of last year that a settlement even began to be negotiated. After six months of around-the-clock negotiation, Microsoft and the Department of Justice were finally able to reach a settlement, and finalization has been pending ever since, However, nine of the plaintiff states in the case are currently seeking to undermine the settlement and bring further litigation against the Microsoft Corporation. I do not believe this is either necessary or wise. The proposed settlement would not only prevent further antitrust violations and thereby negate the claims that Microsoft's opponents have against the corporation, it would also allow business within the technology industry to return to normal.

The settlement restricts various actions on the part of Microsoft and also requires them to make changes in the Windows operating system. For example, future versions of Windows will be reformatted in order to support non-Microsoft software. Additionally, Microsoft has agreed to refrain from entering into any contract that would require a third patty to promote or sell Microsoft products either exclusively or at a fixed percentage. Microsoft has been extremely compliant in reaching this agreement, and the Justice Department has been fair to Microsoft in return. Microsoft will be allowed to remain intact, instead of being divided in thirds as was initially proposed. Microsoft has, in turn, agreed to terms under the settlement that: extend to technologies and processes that were not determined to be unlawful by the Court of Appeals. It is time for the nine states that have thus far refused to settle to cease their compliant(s) and to allow justice to be served. I urge you, Sir, to support the settlement.

January 25, 2002

Dear Mr. Ashcroft:

My family is writing to express our support for the settlement reached between Microsoft and the Federal Government. Microsoft went beyond the products and procedures that were actually at issue in the suit, for the sake of wrapping up the suit.

Microsoft has agreed to grant computer makers broad new rights to configure Windows so as to promote non-Microsoft software programs that compete with programs included within Windows, not to enter into any agreements obligating any third party to distribute or promote any Windows technology exclusively or in a fixed percentage, and not to retaliate against computer makers who ship software that competes with anything in its Windows operating system.

This is a very generous settlement that addresses the government's concerns and Microsoft's competitors' concerns. Its time to let Microsoft get back to work, please approve this settlement

Sincerely,
James S. Serpico

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington., DC 20530

Dear Mr. Ashcroft,

I urge you to settle the lengthy antitrust lawsuit that the government has brought against Microsoft after this comment period. The concessions Microsoft is willing to make to end the case are more than fair, and the situation should be put to rest.

Whining competitors who are jealous of Microsoft's market dominance are driving many of the concessions Microsoft is making. Many of those companies engage in similar business practices, but are being hypocritical simply because Microsoft has performed

better. One of Microsoft's concessions is to disclose certain Windows codes to other companies in the marketplace, yet those companies have not agreed to do the same thing in relation to their products. Microsoft is being more than reasonable in trying to resolve the litigation.

It is high time that this lengthy legal process ceases to handicap Microsoft's ability to bring cutting edge innovations to both Corporate America and the private consumer, at the dazzling rates that it has been able to do in the past. Microsoft's concessions will not only further ensure market competition, but will in fact benefit their rivals more than themselves. The government should not ask any more of Microsoft than that.

I strongly urge you to finalize the settlement.

Sincerely,

Dear Ms Hesse:

I am the parent of three children, have run my own business for must of the past two decades, and am in my third four-year term on the Wake County Board of Education. So I come to my conclusions from a variety of viewpoints.

I believe Microsoft has put their offer on the table in their effort to bring to closure the action initiated by the Clinton Justice Department.

1. For the public schools, Microsoft's settlement offer contains desperately needed hardware, software and training. There is significant inequality in ?? schools in terms of technology. Some characterize the emerging ''digital divide'' and a change from the ''haves and have nots'' to the ''knows and the know nots'' The Microsoft proposal puts essential technology in the hands of our d??erving students immediately. And none too soon

2. For my business Microsoft continues to provide high value, cost effective products and services, even with significant resources d?? away by frivolous lawsuits.

3. For my family, prices of quality hardware and software continue to decline so that we ?? been able to provide appropriate educational tools for our college hound children. From the beginning, the federal government's pursuit of Microsoft has been politically inspired and ?? unwise. The case was ?? and oven subsidized in the beginning by Microsoft's competitors. They sought to win in the courts what they could not win in the market. The government should never have initiated this proceeding.

Now the courts have an opportunity to end this madness. Three years and 530 million of the taxpayers'' money is enough. At a time when terrorists threaten America and we are facing an economic slowdown, our nation, the information technology industry and Microsoft should not be forced to waste more time and money on this case.

It is time to move ahead Please ?? the Mrcrosoft offer and let's refocus our government's resources on more important issues.

Sincerely,
Bill Fletcher

Dear Ms. Hesse:

As a recruiter with more than 20 years in the business, I have observed the impact Microsoft products have had on business and industry, and in particular on small business. In the early days of computers, only very highly paid ''computer gurus'' could use the technology of the day. Recruiting and hiring these people was an expensive proposition, so much so that most small businesses had to do without.

Because of the innovation and ''Dear-friendly'' products of Microsoft, small businesses today can hire someone right out of high school to use software, which enables them to compete with much larger companies. Because we have access to the latest software and hardware at affordable prices, we have been able to develop a

reputation in the marketplace and are frequently called on by many of the Fortune 100 companies to conduct National and International searches for them. Without the access to the affordable technology we use this would not be possible.

One reason Microsoft and other computer and software makers have been so successful, in my opinion, is because they have been allowed to operate in a free marketplace, unencumbered by unnecessary government restrictions. Their success has in turn has allowed us to he successful. I suggest to you that a timely settlement of the antitrust lawsuit is in the best interests of everyone, especially business.

Sincerely,
David Blue

Delivering Internet Results
January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft, understand the government decided to settle its three-year-long antitrust lawsuit with Microsoft Corp. This is very good news, because settlement is in the best interests of the State of Michigan, the IT industry, and the economy.

Microsoft did not get off easy, but the settlement is fair and reasonable, and it will definitely benefit consumers and preclude future anticompetitive behavior. The recession has had a devastating effect on state on state budgets and the federal budget, and it is important that the technology industry be allowed to concentrate on business now.

One of the main accomplishments of the settlement is Microsoft's agreement not to retaliate against computer makers who ship software that competes with Microsoft in its Windows operating system. Microsoft's competitors should be very pleased with this clause. Additionally, Microsoft agreed to share its software code for various interfaces that are internal to Windows with its competitors. This should make its competitors ecstatic. It is my hope that this can all be worked out and that the settlement can take effect as soon as possible.

Thank you.
Sincerely,
e-Business Analyst

To Whom it May Concern:

I am writing you today to express my grave concern about the proposed settlement to the Microsoft anti-trust case, I hope you'll consider my comments under the Tunney Act, I am the Chief Technology Officer of a company that develops internet content and software applications for a variety of mid- to large-sized businesses. I have ten years'' experience as a computer programmer, systems engineer, and technologist.

After thoroughly reading the terms of the proposed settlement, I object to it on two equally important but distinct grounds,

First, the settlement fails to adequately punish Microsoft for its anticompetitive and illegal behavior, in order to be in the public interest. any settlement must substantially deny Microsoft the benefit of its illegal acts. The settlement further harms the public interest in this regard by failing to serve as a sufficient deterrent to future monopolies, Only an immensely large fine, of sufficient magnitude to madate immediate changes in the company's business practices, could achieve these goals.

I furge you to consider the opinions of former Supreme Court Justice Robert Bark on this matter, as he expressed in a recent interview: http://www.linuxplanet,com/linuxpianet/opinions/4020/3 My second objection to the settlement is that it is riddled with errors and other failings in terms and definitions, any one of which could allow Microsoft to evade all but the most convenient of the settlement's provisions, Specifically, any settlement terms requiring Microsoft to disclose APIs and other documentation to its competitors and the general public must specifically define the effect that disclosure must achieve. For example, the remedies that address Microsoft's anti-competitive use of file formats must specifically state that the company's competitors and customers must be able to use the documentation to build fools that are completely and effectively compatible with Microsoft's tools.

In an effort to make the terms legally abstract enough to remain relevant to future products and technologies, they have been rendered largely useless. These fallings, and others documented in the comments you've received under the Tunney Act, must be resolved before this or any settlement could be considered in the public interest.

Thank you for considering my comments.
Yours,
Matthew J, Rechs

Dear Mr. Ashcroft:

I am a practicing CPA and have been using Microsoft products for many years. I currently use Internet Explorer, Microsoft Excel, Microsoft Word and Microsoft Outlook. These axe all superior products. Never have I felt disadvantaged in not being able to use competing products since I could switch at any time if I wanted to. As far as Windows is concerned it is a superior operating system. I have never met anyone who felt handicapped in not being able to use another operating system.

Everyday as I read about the settlement process regarding the Microsoft anti-trust case, I become more annoyed with our federal legal system. After three years of litigation, I fail to see what can be scrutinized any longer. Microsoft has made numerous concessions in an attempt to resolve this case.

Under this settlement Microsoft will disclose the protocols and design interfaces of Windows. This will enable developers to design software that is increasingly compatible with the Windows system. In addition to this users will be able to delete Windows programs that they do not want on their system with greater ease.

The settlement can finally bring an end to this case that has drained resources for more than three years now. I support the settlement, and hope it is enacted soon.

Sincerely,
Willis F. Brown, CPA

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my support of the recent settlement in the antitrust case between Microsoft and the US Department of Justice. I think the lawsuit was unjustified in the first place, considering how much Microsoft has done for our country by way of creating jobs, generating income, and making technological breakthroughs. I realize that the competition is way behind, but this is the reality of a capitalist society and a free market. The most innovative will always succeed.

I feel that the lawsuit was initiated because Microsoft would not and did not play ball with the Democratic Party and specifically the Clinton's who wanted donations from Microsoft. The terms of the settlement are harsh and make Microsoft give away many secrets. For one, Microsoft is being forced to disclose interfaces that are internal to Windows operating system products. This seems to me to be in violation of their intellectual property rights.

Nevertheless, I think it is in the best interests of the American public to have the case finalized. Our economy and the IT sector in particular needs Microsoft focusing on business, not politics. I urge your office to take a stance against the nine states in opposition and do what is right for the American public.

Thank you.

Re: Microsoft Settlement

Dear Judge Kollar-Kotally:

As a practicing attorney in the intellectual property area for nearly 30 years, I write to object to the proposed settlement in the Microsoft v. DOJ case. While comment from the public or the bar is typically inappropriate, in this case the involvement of press suggests that it would seem highly appropriate that comments be supplied in reference to the proposed arrangement. My purpose in writing is not to comment on the correctness of the decision but the application of the proper remedy. I must assume that the district court correctly determined and the Court of Appeals correctly reviewed the determination that Microsoft violated the antitrust laws of the United States. The U.S. Supreme Court has determined not to hear an appeal of the Court of Appeals decision, therefore, Microsoft's legal remedies to challenge the trial court's findings are at an end. What remains is the Court of Appeals'' remand to the district court to determine how Microsoft should be punished for its violations.

I understand that with a change in the administration, the DOJ's desire to continue with the litigation has somewhat waned and that a settlement has been proposed that DOJ finds acceptable. In my experience and understanding, however, the determination that a monopoly exists and findings of antitrust violations require the imposition of remedies that follow certain logical principles. Specifically the remedy or disposition should lead to a termination of the monopolistic activities. In addition there should be some structure to level the playing field and allow those who have been disadvantaged to reenter the market place. Indeed, logic supports tilting that playing field toward the excluded for a time to dissipate the advantage unfairly and illegally obtained by the monopolizer.. Of course there should be some penalty for past conduct and something to prevent or deter future violations. I am at a loss to explain how the proposed settlement satisfies the requirements of these principles and how it complies with the standards set forth in the Court of Appeals'' decision.

Anytime a company's dominance in the marketplace and behavior reaches the levels of a monopoly as has been determined in this case, affirmative action must be taken to bring the marketplace into balance. The proposed settlement does not do so, and I suggest the court take evidence from others not party to the proceedings to develop proper and appropriate remedies. While there are experts who are better positioned to opine on the details, it seems entirely logical for sufficient portions of the programs including the source code to be made available so that others are able to access and develop compatible systems. There is some similar precedent for such because in the early 70's the Bell system was forced to allow others to access the Bell system through interface circuitry. Thus Bell's monopoly over the PBX systems ended. While Microsoft is not a utility, it dominates the industry to the point that it is tantamount to a utility. In turn, remedies that are somewhat regulatory would be logical if not compelling. Indeed, some continuing court supervision after the remedy has been fashioned would seem to be as important as court supervision of bussing to effect integration.

Respectfully,
Thomas J. Rossa

Dear Mr. Ashcroft:

I would like to see the Microsoft case brought to a conclusion. It is in the best interest of all involved that this case be settled.

The concessions made by Microsoft will achieve the goal of restoring fair competition. Microsoft will take steps to ensure computer manufacturers and consumers may more easily install its competitors'' software programs. Microsoft has also agreed to not retaliate against those who promote the competition's products. These types of changes in Microsoft's business practices will help ensure there are no future antitrust violations.

Like most members of the technology industry, I would like to see Microsoft concentrate its resources on developing new products, rather than on litigation. Drawing out the case any further will benefit no one.

Sincerely,
Patrick Neborg

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I would like to express my opinion on the recent settlement in the Microsoft antitrust case. This case needs to be ended and the current settlement is a good solution. There should be no question that this settlement serves the public interest, Microsoft is giving up so much in this case and it is only fair to leave them alone now.

I am a computer technician and I install computers for my employer as well as for friends, family and other personal business associates. We don't solely rely on Microsoft's products, but rather use a combination of software products. We have complete freedom to choose to use other products and have obviously done so with no problems. Additionally, when using the MS windows platform, never once was I, nor anyone I know, prohibited from installing or using other products. As a successful company, when providing a product, why would you want to include a competitors'' product within your own? That's not to say

that you are stopping from adding or installing others''. I don't see that Microsoft has acted unfairly, they are merely a hugely successful company who made smart business decisions to try and maintain that success. They are now being punished because less successful companies wanted a part of it and didn't have the means to step up to Microsoft without bringing the courts and lawyers into the process.

As it stands, the settlement already is more than fair. This issue needs to be ended and maintaining the settlement is the right thing to do. It indeed serves the public interest and it indeed addresses the issues brought up by Microsoft's competitors. Please allow this settlement to be the end of this drawn-out lawsuit. Our economy can't stand any further delay in this issue.

Sincerely,
Angelo J. Bello

Washington, D.C, 20530

Bear Mr. Ashcroft:

I would like to start off by saying that I am not a strong supporter of Microsoft. I don't really have any stong ties to them, but I don't agree with the antitrust suit against them. The settlement that was made between Microsoft and the Department of Justice is more than fair, and it is time this matter was over with. Millions of state and federal dollars have been wasted on this suit. The Untied Slates is based upon a free enterprise system; while we may not always agree with the tactics employed by big business, our interference in business undermines the very foundation this nation has been built upon.

Microsoft has agreed to terms that will enable other companies to compete. They have to license the internal codes of Windows to the top twenty companies so they can produce software that is compatible with Windows. Because of the competition that will arise from this settlement a wider variety of products will emerge. So now, not only will the consumer have a better product, but the prices will be more reasonable. Also, Microsoft will be forced to produce a better product in order to stay competitive.

I would like to reiterate that I am not writing this letter because the issue is personal to me. I am not a huge stockholder and I know no one who works for Microsoft. I do know what is right though, and ending this ridiculous suit against Microsoft is the right thing to do. Thank-you.

Sincerely,
Carl Carlsen

MTC–00030395

January 12, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am an architect with his own firm. I am well versed in business and business practices which is why I am thoroughly annoyed with the lawsuit brought against Microsoft. The whole process was one of professional jealousy than any monopolistic business practices.

The antitrust laws were set up to protect the consumer; Bill Gates did nothing but help the consumer. He standardized computer software; he made computer software more understandable; he made computer software more affordable. Software has gone down in price, not up. Does anybody remember how difficult computers were before Microsoft? And for this the company is being persecuted. This is wrong.

Furthermore, from what I understand of the agreement, Microsoft has done a great deal to assuage the demands of the Department of Justice. Microsoft has agreed to help companies achieve a greater degree of reliability with regard to their networking software; Microsoft has agreed to document for use by its competitors various interfaces that are internal to Windows'' operating system; and has even agreed to a technical committee to monitor future adherence. I would not do as much.

Microsoft, through Bill Gates, has made this country's technological revolution. Microsoft and the Department of Justice have made peace. Let's honor it and go forward.

Sincerely,
Herb Zelikoff

Dear Ms. Hesse:

As a member of the North Carolina Academy of Trial Lawyers, I believe that the government needs to end the Microsoft antitrust case. The case has already cost hard working American taxpayers over $30 million, and that figure is rising every day.

A settlement has been reached that is suitable to both parties. Under the agreement, the government has unprecedented oversight of Microsoft's operations and controls to prevent anti-competitive business practices. Consumers will have greater choice in the selection of their computer operating system than ever before.

In the free enterprise system, consumers dictate the success of a given firm or product. They control the system by voting with their pocketbook. I am certain that throughout American history, there have been many examples of companies egregiously violating antitrust laws. In this instance, however, I do not see the harm to consumers that is required in order to prosecute the Microsoft case further.

Settling the case not only helps the economy a great deal, but it frees up needed funds for the Justice Department to pursue more pressing concerns. I sincerely hope that we can end this antitrust saga soon. wall Street and Main Street are waiting.

I hope that Judge Kollar Kotelly approves the settlement.

Regards,
Tony Gurley

Dear Ms, Hesse:

I am writing this letter, as a consumer of high-tech products, to register my support for the recently negotiated settlement of the Microsoft lawsuit. It is clear that the best interest of all is for a quick resolution of this long and expensive lawsuit.

Even though some will say the terms of the settlement are not tough enough, I think it is far preferable to find a workable solution rather than mete out crippling sanctions against Microsoft that will do nothing more than dull America's cutting-edge technological superiority.

Antitrust laws were meant to protect consumers, yet at no time during this case has anyone shown that Microsoft has done harm to a consumer. I say it is time to put and end to this competitor-driven pursuit and let technological innovators, such as Microsoft continue to fight it out in the marketplace-not the courtroom.

Sincerely,
Darlene Causey
Executive Director

Washington, DC 20530

Dear Mr. Ashcroft:

I am a practicing CPA and have been using Microsoft products for many years. I currently use Internet Explorer, Microsoft Excel, Microsoft Word and Microsoft Outlook. These ate all superior products. Never have I felt disadvantaged in not being able to use competing products since I could switch at any time if I wanted to. As far as Windows is concerned it is a superior operating system. I have never met anyone who felt handicapped in not being able to use another operating system.

Everyday as I read about the settlement process regarding the Microsoft anti-trust

case. I become more annoyed with our federal legal system. After three years of litigation, I fail to see what can be scrutinized any longer, Microsoft has made numerous concessions in an attempt to resolve this case.

Under this settlement Microsoft will disclose the protocols and design interfaces of Windows. This will enable developers to design software that that increasingly compatible with the Windows system. In addition to this users will be able to delete Windows programs that they do not want on their system with greater ease.

The settlement can finally bring an end to this case that has drained resources for more than three years now. I support the settlement, and hope it is enacted soon.

Sincerely,

Willis F. Brown, CPA

Washington, DC 20530

Dear Madam:

I am writing this letter to express my support for the recently negotiated settlement of the Microsoft case For the past several months, I have watched as the Department of Justice and several state Attorneys General have relentlessly pursued a frivolous antitrust lawsuit against Microsoft. As a user of Microsoft products, I think it is time to bring this issue to a conclusion. The treat of government regulation has caused tremendous harm to the industry, consumers and the entire economy. At a time when the economy is heading into difficult times, the last thing the technology industry needs is more litigation and government regulation.

Further litigation will not improve quality or increase innovation. On the contrary, attempts to place limits or] any part of the tech sector—not just Microsoft—will Inhibit innovation, increase costs, and place America's technology at a disadvantage in the global market.

I think it is time to settle this matter and let the industry, and Microsoft, continue to develop affordable, innovative products.

Sincerely,

Diana Queen Koether
Manager
Hamilton Chamber of Commerce

RE: Microsoft

Dear Ms. Hesse:

As each day we see more of our industries faltering in the aftermath of September 11, 2001, I am writing to encourage the Justice Department to free companies in the high-tech industry to compete with one another in the marketplace without crippling them with unnecessary sanctions. Please lend your support to the negotiated settlement of the Microsoft lawsuit as it is clearly in the best interest of the national economy to quickly resolve this lawsuit and avoid further slowdown in one of our most important industries.

The terms of the settlement are strong enough. Consumers such as Sanders & Sanders Associates, Inc. have not been harmed by Microsoft, but rather, helped by this strong, innovative company.

Sincerely,

Janet R. Sanders

Dear Ms. Hesse,

The U.S. Department of Justice and nine state attorneys general decided to settle the Microsoft antitrust case. A recent survey done by Americans for Technology Leadership, a broad-based coalition of technology professionals, found that 70 percent of American consumers agreed with that decision.

Yet, the pursuit of Microsoft continues.

It seems that a handful of Microsoft's competitors have prevailed upon the remaining nine state attorneys general to reject any settlement—be it reasonable or not—and continue to chip away at Microsoft.

Of the 1001 individuals contacted in poll, 82 percent said that Microsoft's competitors should compete by creating new products rather than lobbying for the government to stop Microsoft's new products.

We lead the world in technological innovation thanks in large part to Microsoft. Let's not lose that advantage because we-re afraid to let one corporation get too far ahead in the market place. I say, settle this case quickly and let's get back to what made this nation great—competition.

Sincerely,

Rhonda Schrum
President

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

I write this letter to express my opinion regarding the antitrust suit against Microsoft. I support the settlement and the conclusion of the federal involvement in the suit. Continued litigation would have resulted the eventual destruction of Microsoft, thus causing detrimental effects on the progress of technology and the economy in the country. It is necessary that further litigation is prevented, and this settlement is implemented.

The settlement will help taxpayers and consumers save on taxes and costs of technology. It directs Microsoft to provide information regarding the various interfaces of its Windows operating system. Microsoft has also agreed not retaliate against computer makers that may ship software that would compete with Windows.

I urge you to realize the necessity for the conclusion of this case. It has been a suit that has created a state of ambiguity within the technology field. It is imperative that you stop all federal action and confirm the settlement.

Sincerely,

Shane Cosby

Re: Microsoft Proposed Settlement Agreement

Dear Ms, Hesse:

It is time to end the pursuit of Microsoft. It is time to accept the terms of the recently negotiated settlement.

A vast majority of American consumers feel they have benefited from Microsoft products and feel Microsoft has contributed to the economic growth of the United States. I consider myself one of those American consumers.

The settlement worked out with the nation's top mediators will be good for everyone, consumers, businesses, the technology industry and the economy.

On behalf of the Rowlett Chamber Commerce being part of the Texas Association of Businesses and Chambers of Commerce and a spokesperson for the Rowlett business community I urge there be an end to the Microsoft case'', agree to a settlement that is in our nation's best interest.

Sincerely,

CHICAGO TECHNICS, Inc.
January 17, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft,

The antitrust suit against Microsoft has not had an adverse affect upon my technology-

based company as of yet, but if this suit were to continue, it would surely affect it. In a worst-case scenario, if Microsoft were broken up, I could go out of business, even though I am not employed by Microsoft. There are probably thousands of businesses like mine that would face the same problem. The settlement that was reached between Microsoft and Department of Justice promises to prevent any adverse effects if litigation is stopped.

Under the settlement, Microsoft has agreed not to retaliate against any computer makers if they ship software that would compete with its Windows operating system. Microsoft has also agreed to make all future versions of Windows to be compatible with non-Microsoft products. The settlement also establishes a three-person ''Technical Committee'' that will monitor Microsoft's compliance to it.

I also do not want to see Microsoft forced to open the code for Windows?? to the world. I would not want to be forced to buy my software from India, Germany, Japan or China. If you think that opening the source code to Windows?? will help Microsoft's competitors, what do you think it will do to those same competitors when they have to compete with companies in other countries. To continue litigation is to squander all the time and money spent formulating this settlement. The government must not waste such scarce resources amid recession. I urge you confirm this settlement and allow the industry to move ahead.

Sincerely,
John G Miller

Washington, DC 20530

Dear Attorney Hesse:

Please accept my comments for consideration during the public comment period in the Microsoft anti-trust case. I support the settlement agreement that has been reached in this case, and urge the court to accept it as written as soon as possible. This case has dragged on too long with little discernible public benefit, and ought to be concluded once and for all.

The other players in the high tech industry would be better served to have their research and marketing divisions work as hard as their lawyers and lobbyists. This case has never been about protecting the consumer from anti-trust abuses, as much as it has been about picking sides in the marketplace. We would all be better off if the case is settled, and everyone can get back to business.

It is a shame that so much taxpayers'' money has been wasted chasing one company in a competitive field; it would only make matters worse if we were left with government bureaucrats micromanaging the industry. Please don't allow the terms of the settlement to be expanded. They go far enough as it its.

Respectfully,
Patricia Melvin

Mega-Data
January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft,

RE: Microsoft Settlement

I have been most disturbed by the Federal government's continued proceedings against Microsoft Corporation. In my opinion, the entire suit brought by the Federal government and several states was extremely ill-founded, and strikes a negative blow at the very heart of the free enterprise system through which this country has prospered

I bought my first ''personal'' computer in 1978. It was an Ohio Scientific brand, and it contained 3 separate CPUs and 3 separate operating systems. One of the operating systems was CP/M, which was the front-runner at that time. The second operating system was DOS (by Microsoft). I no longer remember the name of the third operating system, as it never became widely Used. There was no ''standard'' in PC operating systems at that time, but it was presumed at that time that CP/M would become the prevailing operating system.

Obviously, that did not happen. Microsoft's DOS and later its Windows operating system because the prevailing product in the market. There are many reasons for this, including:

1. Superior feature content which was readily accepted by users

2. Wide selection of compatible application software, due to a programmer-friendly development interface

3. Availability of information to enable developers to write applications to run on this operating system

4. Affiliate and partnership programs with developers, software and hardware vendors In short, Microsoft came to the forefront of the industry by offering ''a better mousetrap'' than the competition. The Federal government itself has affirmed this fact by making Microsoft products its own desktop standards. (Our company had the privilege of delivering training on Microsoft products to all of the regional offices of the General Services Administration several years ago.) Mega-Data Services, Inc, . 13667 Edith Road, Loxahatchee, Florida 33470–4911 Tel (561) 798–3940 . Fax (561) 798–3525 . e-mail: info @mega-data.com

Microsoft has contributed immensely to the prosperity of this country. And there are thousands of small businesses like ours that would probably not even exist today if we had not had the benefit of Microsoft's partner programs.

It is an extremely dangerous precedent to allow a competitor in the open market to bring suit when it fails to ''win'' in the market place. Forcing a company to share its proprietary and confidential research and development information in order to allow its competitors to better compete squelches the free market initiative to invest in R&D. It also has a decidedly malodorous aura of Socialism.

In my opinion, this continued legal action is motivated as much by the anticipated revenues of the legal firms involved as by the competitors'' wishes to gain marketplace by any means possible - an obvious instance of the ''deep pockets'' syndrome. Even though the settlement goes further than original complaints in the suit, Microsoft has chosen to settle so that it and the market can move forward The settlement requires Microsoft to disclose information regarding how it develops it software. Microsoft has also agreed not retaliate against computer-makers that may ship software that would compete with its Windows operating system. Just these two remedies by themselves will have an enormous impact on Microsoft, but there are even more stipulations than that, as you are well aware.

Although I firmly believe that Microsoft should not even be subject to these settlement requirements because I believe it won the prevailing market position by offering superior products, it would be beneficial to the entire industry and to this country to confirm the current settlement agreement and move on to other issues. Therefore, we are urging you to confirm the current :Settlement agreement as soon as possible and let the IT industry be free to develop products in an unfettered free enterprise environment.

Yours truly,
Patricia McDermott-Wells President

January 22, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft: I am thoroughly disgusted with the outright refusal of half of the plaintiff states in the Microsoft antitrust case to accept the settlement. It has not only had a negative impact on the economy and impeded the progress of the technology industry, but it has also cost the parties involved a great deal of time and money. I cannot imagine how Utah plans to finance additional litigation against Microsoft. Not only that, but it appears that the only reason flint these nine states are pursuing litigation against Microsoft is because the plaintiff states in the big tobacco suit were able to make such a profit off of their lawsuit.

The settlement, is, I believe, a little too heavy-handed with Microsoft. Microsoft has done its best to wrap up the case as speedily as possible, and I believe that is in the best interest of all parties involved to settle. The terms agreed upon are sufficient to prevent further antitrust violations. For example,

Microsoft has agreed not to enter into any contracts that would require a third party either to sell or distribute Microsoft products at a fixed percentage. The agreement also allows for a leveling of the playing field in the technology market. Microsoft's competitors, for instance, will be allowed to introduce their software into Windows, and Microsoft: has agreed to reformat the Windows operating system to this end.

I do not believe it is necessary for Microsoft to be held further accountable in the antitrust suit. No additional action needs to be pursued on the federal level. This has gone on for long enough, and, frankly, I think it's starting to do more harm than good. I urge you to support the settlement.

cc: Repres entative Chris Cannon

Sincerely,

Nathan Larsen

Re: Microsoft Settlement

Dear Ms. Hesse:

Microsoft's competitors are guilty of tying up the courts with litigation based on unsubstantiated, personal vendettas. I am even more appalled, however, that there are State Attorneys General pushing the case, seemingly more eager to make a name for themselves than adhere to the rule of law. As a consumer, I see no benefit in the continuation of protracted litigation based upon the spurious public interest proffered by the remaining States. Indeed, not only have millions of tax dollars been wasted, this frivolous litigation has taken money out of our economy as investors hold their breath, watchful of government involvement in business.

The Department of Justice has settled the case, as have a handful of State Attorneys General. The stolid AGs remaining should follow their lead. A suitable settlement is on the table and there is nothing left to gain. I appeal to you to use your power to put an end to this prejudicial litigation so that the country, the economy, trod the Court can focus on the more substantive issues that face our nation today.

Sincerely,

William Hunnicutt

To whom it may concern:

Pursuant to the Tunney Act, I am writing to express my opposition to the Proposed Settlement in the: United States vs. Microsoft antitrust case. The Proposed Settlement places much-needed restrictions on Microsoft's licensing practices by preventing Microsoft from retaliating against OEMs who ship Personal Computers that include both a Windows Operating System Product and a non-Microsoft Operating System. However, the Settlement completely ignores a critically important class of licenses: End-User License Agreements (EULAs).

Microsoft uses EULAs as a lever against competing Operating Systems with the ability to run Microsoft Windows programs. For example, the Microsoft Windows Media Encoder 7.1 Software Development Kit (SDK) EULA states in part:

...You may install and use the SOFTWARE on a single computer to design, develop, and test your software application products that utilize Microsoft Windows Media technology (your ''Application'') for any version or edition of Microsof5 Windows 98, Microsoft Windows NT 4.0, Microsoft Windows 2000 operating system or any Microsoft operating system that is a successor to any of those operating systems (the ''OS Platforms'')...

Thus even if a competing Operating System has the technical ability to run Microsoft software, the user is prevented from doing so by the EULA because it is not a ''sanctioned'' Microsoft Operating System. Microsoft doesn't stop there, however. The same EULA prevents the software from even being distributed with an Open Source system:

...you shall not: distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. ''Publicly Available Software'' means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models; and (ii) any software that requires as a condition of use, modification and/or distribution of such software that other software distributed with such software (aa) be disclosed or distributed in source code form; (bb) be licensed for %he purpose of making derivative works; or (cc) be redistributable at no charge. Publicly Available Software includes, without limitation, software licensed or distributed under any of the: following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); and the Sun Industry Standards License (SISL)...

Thus, through their EULAs Microsoft is able to effectively retard or even halt development of competing Open Source systems which might otherwise be competitors. However, they are still not satisfied with such restrictions. Microsoft goes further by placing limits on the end user's right to Free Speech. For example, the EULA included with Microsoft FrontPage 2002 (an application for creating web pages) states in part:

...You may not use the software in connection with any site that; disparages Microsoft, MSN, MSNBC, Expedia, or their products or services...

Thus, Microsoft is not content to simply squelch competition, they insist on squelching Free Speech as well.

The Proposed Settlement is a good start, but until it limits the restrictions Microsoft is permitted to place in their EULAs. the Settlement will be insufficient to curb their anticompetitive behavior.

Tristan Fillmore

Washington, DC 20530–0001

Dear Mr. Ashcroft:

I want to use this opportunity to convey my thoughts on the settlement between Microsoft and the Department of Justice. I believe the settlement is a good development for the economy and will end this unwarranted litigation. The settlement is strong and requires many concessions from Microsoft. And these concessions are backed by very strong enforcement measures. These measures include the creation of a Technical Committee to monitor Microsoft's actions. Also, any third party that believes Microsoft is not meeting their obligations can file a complaint with the Technical Committee, the Department of Justice, or any of the State plaintiffs that are party to the agreement.

Both sides in this dispute will benefit from this settlement. Microsoft can focus their attention on developing new technology that will make businesses more efficient. And the government will be able to focus on more urgent matters, such as stimulating the struggling economy and prosecuting our country's enemies.

Microsoft has been helpful to me in their supply of quality products.

Sincerely,

Thomas Hogen

RE: Comments on the Microsoft Proposed Settlement Agreement

Dear Ms. Hesse:

It goes without saying that the settlement agreement between the U.S. Government and Microsoft comes at a critical time when our economy and nation most need reconciliation. Microsoft is a company that has long provided good products to consumer and businesses, and it provides opportunities for other software companies as well to develop programs for the Windows platform. The provisions of the settlement, worked out with one of the nation's top mediators, will be good for consumers, businesses, the tech sector and the economy as a whole.

I fully support the Department of Justice and the nine Attorneys General for their efforts to finally put an end to this case and agree to a settlement that is in our nation's best interest. I congratulate you on developing a strong but fair settlement.

Sincerely,
Darryl C. Towns

Re: Microsoft antitrust suit

Dear Ms. Hesse:

Please accept my comments regarding the proposed settlement in the Microsoft antitrust suit. It is my understanding that the settlement imposes a broad series of restrictions and affirmative obligations on Microsoft, I have read that these restrictions and obligations extend to products and technologies that were not at issue in the lawsuit as welt as aspects of Microsoft's business and product development that were not found to be unlawful by the Court of Appeals.

Microsoft appears to be making more that a good-faith effort in order to conclude this case, I hope that the Department of Justice will agree with the proposed consent decree and allow this settlement

Sincerely,
Louise F. Ware

Herb Boome
506B Spring Lake Road
Ocala, FL 34472
January 25, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

After three long years of expensive court battles, Microsoft and the government have settled an antitrust suit that will permanently change the face of the computer industry. I think this will boost our economy, because it will free this innovative company to focus on what it does best. The agreement they came up with was the result of extensive negotiations with a court-appointed mediator. The company agreed to terms that extend well beyond the procedures and products that were actually at issue in the suit. For the sake of expediency—and a first in an antitrust settlement—Microsoft has even agreed to document and disclose, for use by its competitors, various interfaces that are internal to Windows'' operating system products.

The Federal Government has many more important issues to tackle. It should allow the provisions of this settlement to fall into place.

This agreement notwithstanding, I do not see any reason for the government to sue Microsoft in the courts ever again.

Sincerely,
Herb Boome

January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The reason for this letter is to request that you make a good effort to ensure the settlement reached in the Microsoft antitrust case becomes a really.

Challengers and foes of Microsoft may pressure officials to delay this settlement in favor of continued litigation in this case. They arc working under the premise that the courts should punish Microsoft. I do not believe the courts should be used in this way.

Furthermore the settlement that is being offered is a good agreement. The settlement will allow easier placement of non-Microsoft products on Microsoft operating systems; including easier removal of Microsoft components. Additionally the settlement will permit computer makers to place non-Microsoft operating systems on computers with fewer restrictions, even if they also use Microsoft systems. Moreover the settlement creates a technical review committee that includes a full time government monitor to ensure all elements of the settlement are enforced. It is clear that this settlement should be implemented and this settlement is good.

Sincerely,
Randy Hoffman

I am writre8 to have my thoughts on the proposed settlement between Microsoft and the United Sates Department of Justice entered into the record in accordance with the Tunny Act's requirement of public comment on such settlements.

I think the settlement plan is a good one, and one that reaches the necessary balance between antitrust enforcement and the need for as competitive a software market as the U.S, economy can have. Consumers benefit from a competitive market in ways that the kind of regulations previously argued in this case would nullify. Whereas a free and competitive market will drive down prices and hasten the pace of innovation, a heavily regulated market, or a software market including a carved-up Microsoft would slow the pace of innovation and allow companies to sit on their hands and let prices gradually rise.

Consumers deserve the best high tech market available to them. and the best high tech market is the one that innovates. The innovations of the last decade were primarily responsible for the creation of jobs, investment and wealth at rates never before witnessed in any economy anywhere, The success of the ''New'' Economy in the 1990s was not a boomlet, m my view, but a harbinger of things to come in the future, if the government will allow consumers and entrepreneurs to successfully guide the market toward higher levels of competition and innovation.

I hope my thoughts cart be entered into the record and also hope the court ?? fit to approve the seulement proposal. It is the heal way for the economy to start to put this recession behind it and begin to build for the future.

Sincerely,
Diane P. Davis

Dear Ms. Hesse:

Each time I think about those Enron employees whose 401k retirement accounts have been obliterated to nothing, my heart goes out. In this day and age, all of us are counting on corporate stocks to provide for our years after we finish working. That is why I hope the courts will resolve this Microsoft case by approving of the settlement.

Hundreds of thousands of Americans are now going to work longer than they, originally planned because of the recent stock market crash. I believe the uncertainty this case against Microsoft causes in the market is very threatening to those of us who are using the market to finance our retirement. This case has too much significance with too many people to get caught up in insignificant issue. It is time to settle.

Sincerely,
Chris Ernst

Washington, DC 20530–0001
To Whom It May Concern:

I am writing to express my support for the proposed settlement of the Department of Justice's antitrust suit against Microsoft Corporation, and my dismay at the actions of Microsoft's competitors in trying to derail this settlement. As a software developer, author, conference presenter, and small business owner, I have been working with Microsoft products for more than 5 years professionally, and for many more years in my personal life. I have also from time to time attempted to use products from Microsoft's competitors, including the Linux operating system, Sun Microsystems'' Solaris operating system (for the Intel platform), and database software from Oracle. In every case, I have found these products to be manifestly inferior to those I have used from Microsoft.

What's more, despite the ongoing assertions on the part of Microsoft's detractors and competitors that their purported monopoly has crushed innovation and harmed consumers, I find that Microsoft's operating system products have improved more during the period during which they were found to have a monopoly than at any period prior. Microsoft's Windows XP operating system is more stable, more secure, easier to install, and compatible with more devices than any Microsoft operating system I have worked with prior, and is far superior to any other operating system I have used, regardless of vendor. All of this is to say that I do not believe that it is Microsoft's alleged monopoly that has held back its competitors. Rather, it is these competitors'' inability (or unwillingness) to provide products and services that rival Microsoft's offerings in either value or quality.

Case in point of this is the Navigator browser, offered by Netscape Communications, now a division of AOL-Time-Warner, which recently filed suit against Microsoft in what appears to be an effort to derail the antitrust settlement through negative publicity. But Netscape did not lose the 'browser wars'' because of anti-competitive conduct on Microsoft's part It lost because it failed to produce a superior, or even equal, product. I say this as one who has developed Web applications for both Internet and intranet use, and who has had to code around flaws in Navigators support for accepted Web standards, and flaws in the implementation of the JavaScript language for browser interactivity (which was introduced by Netscape). Since version 4.0, Microsoft's Internet Explorer browser has been superior to Navigator in performance, standards compliance, and features, and has consistently been reviewed as superior in trade magazines. This is why Netscape lost, not because of Microsoft's actions, which were certainly not unusual in a competitive market.

I am also disturbed by the continuing trend of supposedly independent entities, such as ProComp, and most recently, the American Antitrust Institute, attempting to influence the outcome of the antitrust case and the settlement, without fully disclosing that they are, in fact, wholly or partly funded by Microsoft's competitors. For example, from the ProComp Web site (http://www.procompetition.org/procomplindex.html):

Among the companies and trade associations supporting ProComp are: American Society of Travel Agents, Computer and Communications Industry Association, Corel, Netscape Communications Corporation, Oracle Corporation, Preview Travel, Software Information Industry Association, Sun Microsystems, Inc., The Air Transport Association, the SABRE Group, Sybase, and worldweb.net. A number of other companies and organization are also working with or supporting ProComp but do not choose to be publicly identified at this time. Corel, Netscape, Sun Microsystems, and Oracle Corp. are all direct technology competitors to Microsoft, while the American Society of Travel Agents and the SABRE group (which operates the Travelocity.com travel Web site) are competitors to Microsoft's Expedia travel Web site. That these competitors are weighing in via a supposedly independent third party should be viewed with some skepticism, in my opinion. The American Antitrust Institute, meanwhile, is funded by, among others, Oracle Corp.:

Funding for the AAI comes from corporations such as Oracle, as well as from trade associations. foundations, and law firms.

Source: http://www.antitrustinstitute.org/recent/82.cfm

The voices of these advocacy groups, funded by Microsoft's harshest competitors, should not be allowed to drown out the voices of satisfied consumers across America, who have made their satisfaction clear by voting for Microsoft again and again with their wallets, despite the longtime availability of such alternatives as Linux and FreeBSD (both free operating systems whose adherents claim they are technically superior to Windows), and the products of Apple Computer, including their newest iMac computer, which recently was given the cover of Time magazine, if a company that is able to get its products on the cover of a national magazine cannot win in the marketplace, it is not due to lack of consumer awareness. Rather, it is due to not offering consumers what they want. Apple, true to form, has priced its new machine higher than comparable Windows-based machines, counting on the ''leading-edge'' style of their machines to increase their popularity. Whether this is a smart strategy or not remains to be seen, but it is a decision that should be made in the marketplace, not in the courts, and not due to political lobbying by Microsoft's competitors.

I and other small businessmen like me, am able to contribute significantly to the health and ongoing growth of the American economy in large measure because of the many productive tools provided by Microsoft. The antitrust trial, and other legal maneuverings by Microsoft's competitors, however, can only impose unnecessary costs on businesses and consumers alike. I strongly urge you to complete the proposed settlement with Microsoft, and end the antitrust action against them with all haste. Doing so will benefit consumers and competitors alike be removing a significant drag on the information technology industry.

Respectfully,
G. Andrew Duthie
President, Graymad Enterprises, Inc.

Attorney General John Ashcroft

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I believe the antitrust settlement case between Microsoft and the U.S. government is fair and reasonable, and I agree with the terms.

Microsoft has agreed to remove technical and contractual barriers to computer makers or consumers shipping or installing competing operating systems, applications, and other software. In fact, Microsoft has gone well beyond the products and procedures covered in the actual suit itself. Clearly, they are being cooperative and doing what they can to resolve this matter.

In this context, continuing with litigation would not merely be damaging to the economy and the consumer, but also unfair. The settlement that has been developed was done so in good faith by both parties and now is the time to eliminate the cloud hanging over this situation and let Microsoft get on with their business.

I believe the settlement is in the best interest of the people, industry, and economy of our state of Washington. Let's get this behind us and move on with our lives.

Sincerely,
Rich Jasper

RE: Microsoft Settlement

Dear Attorney General Ashcroft:

We have had Microsoft Windows on both of our computers, as well as, our previous computers, and use the internet extensively; however, we have never used the Microsoft Internet Explorer product that was ''maliciously'' bundled with the Windows Program. We preferred to use our local internet service provider and Netscape.

We are writing to you today to express our opinion in regards to the antitrust case being settled with Microsoft. We feel that this has drawn on long enough, and we would be truly relieved to see this issue settled. We sincerely hope that there will be no further action against Microsoft, as settling with this company would be in the best interest of our economy, which certainly needs all the help it can get at this time.

We are happy with this settlement and believe it is fair. Thank you for your time and effort in reaching an agreement with Microsoft. Also, thank you for the great job you are doing for our country, during this time of crisis.

Sincerely,
Charles Monfradi

January 25, 2002
To: U.S. Department of Justice
From: M. David Stirling
Subject: Microsoft Settlement

This letter is submitted pursuant to the Tunney Act public comment provision.

I served as Chief Deputy Attorney General of the California Attorney General's Office between January 1991 and December, 1998. The Chief Deputy is the chief operating officer of the California Department of Justice and more than 4,500 employees. Within the Legal Divisions of the Attorney General's office, 1, as Chief Deputy, provided overall general supervision and direction to the approximate 1,000 deputy attorneys general (lawyers), including the deputies in the Anti-trust Section and the Consumer Law Section of the Public Rights Division. From this experience, I am knowledgeable regarding the law of anti-trust and the law of unfair competition/business practices.

During my eight years as Chief Deputy, one of my primary concerns within the office was the consumer-activist, anti-business attitude of deputies in these sections, as well as their case filing motivations and litigation practices. Generally speaking, instead of working mine with amenable businesses to gain compliance with the laws, the attitude was to file suit immediately, and, using the vast resources of the state, leverage the defendant business into an eventual settlement at a higher dollar amount than perhaps the legal violation justified. While I attempted to reign in the use of this approach, my efforts were only partially successful due to its entrenched nature and the protections of civil service

My ''second-in-command'' position in the largest state attorney general's office in the country also gave me the opportunity to work with and observe elected state attorneys general, including how they regard their powerful roles, including how they prioritize the use of the legal resources of their offices. And while their general philosophy as reflected by their political party affiliation is a factor, in large, high-visibility cases, at least three other considerations play a more direct role in their litigation decisions. Indeed, in the case of the U.S. Justice Department's settlement of its anti-trust case with Microsoft, the decision by nine state attorneys general, including California's, to go forward with the anti-trust/unfair competition litigation against Microsoft is influenced by one or more of these other considerations. It is the position of this writer that none of these considerations constitute legitimate legal justification for their separately proceeding with the litigation.

First Consideration: Some of these nine elected state attorneys general are up for re-election in November, 2002. For those, there is much political visibility to be had, and spin to be made of a scrappy state attorney general not taking the easy road of settlement, but fighting the giant software company alone in court on behalf of higher state's residents. And if these nine state attorneys general prior to the November elections are able to settle their cases against Microsoft (mostly likely not having anything to do with the particular merits of their cases) for amounts larger Than what the Justice Department settlement provided, then the political mileage they will garner for carrying on the fight will be played to the hilt.

Second Consideration: Some of the nine state attorneys general have based in their states high technology companies that are not only competitors of Microsoft, but were the chief complainants against Microsoft in the Justice Department's anti-trust litigation. None of those competitors are satisfied with the federal Microsoft settlement, and each is pushing for their attorney general to go forward with the litigation against Microsoft. It could also be assumed that these companies have been, or have indicated their intention at a future time to be, political financial supporters of their state attorney general.

Third Consideration: Despite Judge Jackson's judicial finding that consumers were not harmed by Microsoft's marketing practices, the consumer-activists among the nine state attorneys general are driven by Microsoft's potential as an even bigger ''cash cow'' than the tobacco industry. In the mid-'90s, one state attorney general hired a local plaintiffs'' lawyer on a contingency fee arrangement to sue the tobacco companies. The notion of the states hiring contingency-fee lawyers to simultaneously wage legal warfare against the giant tobacco industry, without incurring the legal expenses or risks of litigation, quickly lead to a nationwide alliance between the states'' elected attorneys general and well-connected plaintiffs'' lawyers. In December, 1998, this powerful alliance settled its multiple lawsuits against the tobacco industry for $246 billion over 25 years. For the 200 to 300 contingency-fee lawyers who teamed with the state attorneys general, the Hudson Institute's Michael Horowitz estimates they will share $500 million each and every year—probably in perpetuity. This powerful alliance between state attorneys general and their favorite members of the plaintiffs'' bar still exists. It has been estimated that there are as many as 100 separate lawsuits against Microsoft filed by these lawyers in multiple jurisdictions around the country (for maximum leverage). These suits are not nearly as valuable, nor are there chances of establishing liability against Microsoft as great, under the Justice Department's settlement with Microsoft as they would be if these nine attorneys general are allowed to try to establish in court a greater degree of liability against Microsoft. Finally, those state attorneys general who have reputations as consumer-friendly and anti-business have reason to keep their state's plaintiffs'' bar happy. The plaintiffs'' bar is a major political funding source for those attorneys general. Consider how much of the enormous attorneys fees they received and will continue to receive from the tobacco settlement went to their favorite state attorneys general as political contributions.

All of the foregoing considerations undermine the nine state attorneys generals'' given reasons for being allowed to litigate against Microsoft beyond the Justice Department-Microsoft settlement. As in California, when a ''consumer-friendly, anti-business'' attorney general gives the green light to activist attorneys in the Anti-trust and Consumer Law sections of his office, the question of the legal validity of his case and whether it is so compelling as to warrant continued litigation beyond the Justice

Department-Microsoft settlement becomes lost in the political agendas of the numerous players involved.

Thank you for your consideration.

M. David Stirling

FROM Daniel Jones
SUBJECT Proposed Microsoft settlement
DATE 25 January, 2002
PAGES 1 (including this header)

I would like to express my opposition to the proposed antitrust settlement with Microsoft. I work in the information technology area, and can see clearly the ways that Microsoft takes unfair advantage of it monopoly position. This behavior continues even as the proposed settlement is being considered.

The narrow terms of the proposed settlement may hinder some of Microsoft's practices. Personally I think even that doubtful, but for the sake of argument [illegible]. However the outlines of equally effective substitute strategies can already be seen.

For instance, using its operating system monopoly as leverage. Microsoft used bundling of software to destroy potential competitors. That might be hindered by the proposed settlement. (Though even that is doubtful given the ease with which cosmetic changes in version numbering or file naming might be used to circumvent restrictions.) Even so Microsoft is already employing a highly different strategy [illegible] to systematically subvert industry standards that might allow competitors a niche in which to develop. For instance, Microsoft has ''extended'' euphemism for [illegible] subverting) the Javascript language used for many websites. It has then bundled tools for developing websites that incorporate these extensions in such ways that only the Microsoft Internet Explorer can properly access them This sort of Trojan Horse strategy is not addressed at all by the proposed settlement.

In my opinion there are very few ways to address the undesirable effect of the Microsoft monopoly. One would be to require that Microsoft publish ALL operating system APIs down to the least significant [illegible] call. Such publication would have to be done sufficiently far in advance that any developers could incorporate them. They could also have to be fully public, not simply available to a select group of major developers. Very harsh penalties would have to be in place for violations. Even so, this approach would remain open to manipulation.

The other approach is the one originally decided upon by the courts. Microsoft should be broken into two or more completely separate companies.

Whatever the ideal solution. It is clear that the proposed judgement is almost completely toothless. It appears to be a political fig leaf to allow the Justice Department to walk away from its legal responsibilities. Hopefully the courts will have more integrity.

Daniel Jones

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

I am writing to offer my support for the recent settlement between Microsoft and the Department of Justice. As a small business owner of a technology company, this has been a very important topic for me. Even though the anticipated Impact upon my company would have primarily been limited to higher prices for Microsoft products, It Is far better to have this lawsuit and all the bad publicity that it generated behind us.

I am not acquainted with all of the details of the settlement, but what I have heard is certainly good in that It will cause Microsoft to handle Its relations with computer makers and others to be improved with greater flexibility. This Is good for consumers as well as for IT customers that Microsoft serves, including small businesses like ours that depend on new Industry innovations. The provision that forces Microsoft to share more of its source code with software developers concerns me, but since Microsoft has agreed to that provision as well I see no reason to think that the company will not be able to adequately control the integrity of its own product.

I am supportive of the agreement, in that It is better to have this lawsuit resolved. I am hoping that no further action will be necessary, in that consumer confidence in the computer industry needs time to rebuild.

Sincerely,
Tina Filla

Dear Mr. Ashcroft:

The purpose of this letter is to express my support of the Microsoft settlement. After three years of litigation, I feel it is time that this issue is finalized. I strongly dispute the merits of this case, yet I believe the settlement of this case is in the publics'' best interest. I urge the Justice Department to enact the settlement with haste.

Further Microsoft has given up much under the terms of the settlement in the hopes of finding a resolution. Microsoft has agreed to relax relations with software developers so that developers will now be able to enter into multiple contracts with competing employers. Developers will also have access to the Windows design interfaces. This will allow developers to create software that is increasingly compatible with Windows.

Obviously Microsoft has done their part to resolve this dispute. I would hope that the Justice Department recognizes the importance of enacting this settlement.

Sincerely,
Thomas C. Morton

Re: Proposed Settlement with Microsoft

Dear Ms. Hesse:

As Attorney Genera of New Mexico, I determined shortly after the decision by the U.S. Court of Appeals for the District of Columbia that the Microsoft antitrust lawsuit should not be litigated any further and was ripe for a speedy resolution. I believed that the litigating stales'' continued pursuit of a structural remedy was no longer appropriate. Accordingly, in July 2001, I was the first to enter into a separate settlement agreement with Microsoft for the State of New Mexico. It was my hope that this decision to settle would open the way for the remaining litigating states to pursue their own acceptable settlement terms.

I am glad to see that hope finally realized. I have been of the firm belief that k was time to settle this case and to move forward. I believe the current settlement pending between Microsoft and the Department of Justice and nine of the remaining litigating states imposes appropriate conduct sanctions, while not unduly inhibiting Microsoft's ability to innovate and market its products. I believe that the best interests of consumers, the computer industry, and the national economy will be served by bringing this lawsuit to this agreed-to conclusion.

Sincerely
PATRICIA A. MADRID

Dear Mr. Ashcroft:

For more than three years now, the unfortunate Microsoft lawsuit has occupied the attention of the entire software industry. The resulting uncertainty about the future of the technology sector has discouraged hightech investment and damaged the economy. Fortunately, your department and Microsoft have recently agreed on a settlement.

Under its terms, Microsoft must now disclose important proprietary information regarding its Windows product to competitors. Microsoft must also function under the permanent scrutiny of a three-person technical committee. These two parts of the settlement should be enough to show that Microsoft is willing to do whatever it takes in order for the federal government to get out of the Microsoft's private business dealings.

Those who wish to see the lawsuit continue past the stipulated period of public comment are more concerned with how to take more of Microsoft's money than they are for the public interest in the case. Ending the suit now is imperative to the future of Microsoft and for the good of the IT industry. We urge you to do all you can in seeing the currently proposed settlement formalized as soon as possible.

Sincerely,
Ronald & Carol Hostetler

Dear Mr. Ashcroft:

This is a short note with tall intention. After almost four years of litigation, negotiation, controversy and self-serving political posturing, would you and the Administration please see you're way clear to settling the Microsoft case?

This case is ripe for settlement. The main parties have reached an agreement. The court supports it. The settlement addresses the salient complaints and concerns of ALL the parties. There is no justifiable reason to prolong this process.

The proposed settlement will essentially require Microsoft to refrain from any future trust-like activities. The company will be required to reconfigure its Windows systems so as to readily accommodate other company's software. It will have retool its product licensing practices to the benefit of the major computer manufacturers. It will in a nutshell have to open itself up to competition. These concessions and others more than justify the government's blessing and support of the settlement.

For the sake of our economy and the future of the IT industry a settlement is appropriate and needed now.

Sincerely,
Raymond Merritt

On December 2, 1998, I faxed you a letter. It refers to the micro-processing of privacy invasion. This involves a tort system. It is a wrongful act, not including a breach of contract or trust, that results in injury to another person, property, reputation, or the like, and for which the injured party in entitled to compensation. The dishonest computer hackers need to be prosecuted. Privacy invasion is a violation of the U.S. constitution. I believe its'' in Microsofts'' best interest to compensate for damages suffered. Microsoft can participate in acknowledging the relentless pursuit of injury to our central nervous systems. I will be informing the Inspector General at the U.S. Justice Department.

I have been online for nearly 1900 consecutive days, around the clock.

Environmental Defense Fund in Washington DC has offered to support me.

My case is about how word processors are converting electrical pulses into sound that is compressed and decompressed into digital code. It refers to software that has not been processed into voice recognition. Microsoft has not acknowledged this either. These interfaces have me a centralized PC within a Public Switched Telephone Network. I need these signals or pulses converted into modulation transmitted above the threshold. This will help me regain my privacy. Considering all the devastation, I will settle for a 1 billion dollar settlement. I will consider any, out court, counter offer. Please, have someone contact me by mail, phone call or fax at your earliest convenience.

Dear Mr. Ashcroft:

I want to use this opportunity to convey my thoughts on the settlement between Microsoft and the Department of Justice. I believe the settlement is a good development for the economy and will end this unwarranted litigation.

The settlement is strong and requires many concessions from Microsoft. And these concessions are backed by very strong enforcement measures. These measures include the creation of a Technical Committee to monitor Microsoft's actions. Also, any third party that believes Microsoft is not meeting their obligations can file a complaint with the Technical Committee, the Department of Justice, or any of the State plaintiffs that are party to the agreement.

Both sides in this dispute will benefit from this settlement. Microsoft can focus their attention on developing new technology that will make businesses more efficient. And the government will be able to focus on more urgent matters, such as stimulating the struggling economy and prosecuting our country's enemies.

Microsoft has been helpful to me in their supply of quality products.

Sincerely,
Thomas Hogen

Dear Attorney General,
re: Microsoft Settlement

Please count me in the opposed column to the pending suit against the Microsoft Corporation. Night after night I see on television or read in the newspapers adds for cars and trucks, appliances, and other products hawking giveaways if you will just buy this or that product. I see no difference in the marketing of many other corporations than the marketing of Microsoft. Is not the idea of building a better mousetrap or marketing a better mousetrap the ''American Way''? I am an ordinary citizen with no axe to grind, but I find it very distasteful to waste tax dollars on such a silly exercise. Microsoft has improved our way of life in so many ways by pursuing this legal action leaves me saddened and frustrated. Please Attorney General Ashcroft, stop this waste of manpower arid tax dollars and redirect the governments legal efforts to meaningful pursuits.

Very truly yours,
Ronald J. Markham

Washington, DC 20530

Dear Sir:

Given this open comment period, I am writing to give you my thoughts on the Microsoft settlement. I have been following this case for some time and am familiar with the issues involved. This compromise between the DOJ and Microsoft is long past due and accepting it now is a necessary action to help revitalize our computer industry.

I am self-employed and use Microsoft software to help run my business. Their company is responsible for building up our existing computer industry. They've provided consumers with superior products but now are being punished for that.

In a move toward the future, Microsoft is limiting its own competitiveness so that the lawsuit might end. They are sharing an unprecedented amount of their intellectual property with their competitors arid have agreed to tone down their often-aggressive marketing practices. This settlement is more than fair to Microsoft's rivals and is clearly in the public interest. Please make the necessary decision to end this lawsuit as so on as possible. Our struggling economy can afford no less.

Sincerely,
Brent Smith

To whom it may concern:

I am writing to express my views on the Microsoft antitrust case. If you are pursuing this case in the consumers best interest, please stop! The wonderful economist, Ludwig von Mises, wrote that the greatest democracy ever invented is the free market system. Everyone is constantly voting, with every dollar they spend, for what they want and what they, can do without Consumers have full power and authority to deal with supposed evil monopolists like Bill Gates.

They do this by either freely spending their dollars on his products, or deciding to do without (even boycott) Microsoft products, The most appropriate use of the US Dept of Justices'' time would be to fight terrorism and leave the American consumers to deal with legitimate businessmen in the most effective way possible; the free market system.

Sincerely,
Mike McCurdy (President)

Dear Mr. Ashcroft:

I writing to urge you to support the recent settlement created between the government and Microsoft. This prolonged period of court battles has sapped energy that could be better put into moving ahead in our economy.

This agreement allows manufacturers to compete on a more even footing while not penalizing Microsoft too greatly for their part in the vast technological revolution that has made life better for all Americans.

America has been a country of innovation and we need companies that can afford to and will spend money and time to bring new products to market. Microsoft has done this in the past and is eager to continue doing so if they are not unduly constrained. Our economy is sadly strained; our young people are out of work. Please do what you can to settle this issue and let us all get back to pulling ahead.

Thank you.
Sincerely,
Barbara Kehayes

Department of Justice
Subject: Microsoft Settlement

I believe it is time for the DOJ to terminate the proceedings against Microsoft. There never should have been a lawsuit. There has never been a shred of evidence that Microsoft has harmed the consumers. If anything Microsoft has been a tremendous force for uniting and standardizing the PC industry. No other company has stepped forward to do this. Microsoft has virtually no competition because no one else had the vision, foresight and nerve to invest and drive to develop an operating system that would make the PC the vital, universal tool that it is today. The companies that cannot compete have stooped to lawsuits through the government as the only way they can damage an industry leader. It only looks like sour grapes to me.

The US government should be giving Microsoft at-a-boys for being the driving force behind the most useful tool of the present generation and maybe of the 20th century. It is past time to stop harassing Microsoft. so they can get back to being the world leader in developing easy to use operating systems and other software which will keep the US in the forefront of this industry.

Sincerely,
Bob Maupin

Dear Mr. Ashcroft:

This is to give my approval to the agreement between the Department of Justice and Microsoft. I think the whole lawsuit has ruined the country. Microsoft was one of the major engines of our economy, producing not only a quality product, but providing thousands of jobs. This lawsuit was more the result of sour grapes on the part of Microsoft's rivals than any unethical business practices.

Microsoft has more than tried to meet the demands of the Department of Justice. Microsoft has agreed to help companies better achieve a greater degree of reliability with regard to their networking software; Microsoft has agreed to grant computer makers broad new rights to configure Windows to promote non-Microsoft software programs that compete with programs included within Windows.

This is more than fair. Give your support to Microsoft.

Sincerely,
Nancy Hardman

Dear Mr. Ashcroft: ,

I am writing to say that the lawsuit against Microsoft has gone on now for entirely too long. I am a proponet of a free market economy and this lawsuit seems to do everything to undermine the underlying reason to be innovative. How can our government go after a company that has created jobs, generated wealth, and made technolgical breakthroughs? The case was flawed from the beginning.

The terms of the settlement show this in that they do little to protect consumer rights. The settlement forces Microsoft to disclose interfaces internal to the Windows operating system products and also prohibits them from entering into agreements that obligate third parties from exclusively distributing Microsoft products. These concessions reflect the intense lobbying efforts of competitors.

I believe it is in the publics best interests to have this case sealed. Our economy cannot afford further litigation and that is why I am appalled at the nine states holding out. Please implement the settlement as soon as possible and suppress any state opposition. Thank you.

Sincerely,

Keith D. Wheeler

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

As a concerned citizen, I write you to discuss the recent developments of the Microsoft settlement. After three years of negotiations, it is time to support this agreement and get our technology industry back to business. I urge you to help support this agreement and help to assure that no more actions be taken against it.

Microsoft has agreed to make many alterations including changes in licensing and marketing. Along with this, Microsoft has agreed to not enter into any agreements obligating any third party to distribute or promote any Windows technology exclusively. Also, all of these concessions will be monitored to make sure that Microsoft is following procedure. The many concessions that Microsoft has made are bold statements toward a unified IT sector. Microsoft is obviously working hard to let our technology industry work together. By doing this, we can secure our place in this highly competitive global market.

Let's work together to support our technology industry and get everyone back to business. I thank you for your support.

Sincerely,

Mary Bruno

Re: Comments regarding Proposed Final Judgement United States v. Microsoft Corporation Civil Action No. 98–1232

Thank you for the opportunity to comment upon the US v. Microsoft Proposed Final Judgement, published in the **Federal Register** on November 28, 2001.

The Proposed Final Judgement as written is not in the public interest. I urge the Department to pursue remedies substantially different from those proposed, whether via further negotiations with Microsoft, or through adversarial proceedings. If the settlement is presented to the District Court without substantial modification, I would urge Judge Kollar-Kotelly make a determination under the Tunney Act that the Proposed Final Judgement would not serve the public interest.

The Proposed Final Judgement Would Do Positive Harm

It may seem odd to suggest that an antitrust remedy could be positively harmful. After all, regardless of the remedy, a convicted monopolist cannot leave an antitrust proceeding with more rights than it had when it arrived, and usually leaves with fewer. However, a poor remedy can indeed leave the public in a situation worse than the status quo ante. The current Proposed Final Judgement does so, in two ways. First, the PFJ describes, permits, and envisions specific future conduct on the part of Microsoft that would itself be anticompetitive. By providing implicit government endorsement for this conduct, the PFJ would make it difficult for the Department, the States, or private third parties to bring proceedings against Microsoft to curb it at a later date. Second, the PFJ contains enforcement provisions whose primary practical effect would be to delay and reduce the likelihood of further action should the company continue to behave unlawfully.

In other words, while the Proposed Final Judgement does place Microsoft under some new constraints, it places the DOJ and other potential litigants under even greater constraint. The net effect would be a diminishment rather than an increase in deterrence of Microsoft's anticompetitive behavior.

PEJ Explicitly Permits Continued Anticompetitive Practices

The purpose of the Proposed Final Judgement is to remedy Microsoft's unlawful conduct, specifically its unlawful maintenance of a monopoly in Intel-compatible PC operating systems. The reasoning behind the Court of Appeals upholding of the monopoly maintenance claim centered on the idea that there is an ''applications barrier to entry'' to operating systems markets, but that this barrier to entry could plausibly be chipped away at by a class of applications referred to as ''middleware''. The Court held that Microsoft engaged in various practices to ''protect[] Microsoft's monopoly from the competition that middleware might otherwise present'', in violation of Section 2 of the Sherman Act. It is these practices that must be remedied. In particular, the Court held that by virtue of restrictive contracts with computer manufacturers (''OEMs''), internet providers (''IAPs''), software companies (''ISVs'') and by other means, Microsoft impeded the widespread distribution of middleware that might have threatened its monopoly.

Section III.C.3 of the Proposed Final Judgement forces Microsoft to allow OEMs to automatically launch non-Microsoft middleware at the end of a PCs boot sequence, but only ''if a Microsoft Middleware Product that provides similar functionality would otherwise be launched automatically at that time''. By this caveat, the PFJ endorses a restriction in an OEM licensing agreement that would otherwise constitute a violation of Section 2 of the Sherman Act under the Court of Appeals'' reasoning. The caveat is anticompetitive on two counts. First, it permits Microsoft to ''choose its battles'': Microsoft need only face challenges from automatically launched middleware where the company feels its own offerings have an advantage. Should a competitor create an innovative middleware product that would threaten Microsoft's applications barrier to entry, Microsoft can prevent its distribution as a default running service indefinitely, by simply not fielding an offering of its own or by quietly integrating but not trademarking its offering (see the definition of a ''Microsoft Middleware Product'', PFJ, Section Vl.K.2.b.iii).

Secondly, the caveat necessarily permits competing middleware only if OEMs include Microsoft's offering as well, since by definition (again, PFJ, Section VI.K.2) a Microsoft Middleware Product is a part of a

Windows Operating System Product. The Appeals Court noted several reasons why OEMs are reluctant to include two products of the similar functionality in a default installation, including customer confusion; increased support and testing costs; and that it is a ''questionable use of the scarce and valuable space on a PCs hard drive.'' (the Appeals Court quoting the District Court's Findings of Fact) These considerations are cited by the Court in holding unlawful and exclusionary OEM contracts that forced a choice of including Microsoft middleware alone or Microsoft middleware plus a similar competitor. Additionally, even when competitive middleware is preinstalled alongside Microsoft's offering, ''network effects'' would put any one of several non-ubiquitous occasionally installed competitors at a serious disadvantage with respect to offering by Microsoft, even if inferior, that is guaranteed to be present on all installations. Should Microsoft force an ''ours or both'' decision with respect to competing middleware as a condition of OEM Windows licensing, it would most certainly be anticompetitive. However, it would also be explicitly sanctioned by the Proposed Final Judgement, and therefore difficult for the government or a third party to oppose. [1]

To the degree that Section III.C might have any effect in allowing OEMs to integrate third party middleware with a Microsoft OS, Section III.H.3 largely eviscerates the hazard to the monopolist by foreseeing a mechanism by which the company's operating systems could ask end-users to confirm an alteration or undoing of OEM additions to the OS fourteen days after the consumer first turns on a PC. For example, under this section, an operating system would be permitted to present a dialog box stating, ''Windows has detected that this configuration has been modified from Microsoft-recommended defaults. This may lead to incompatibilities or system faults. [Correct Now?] [Cancel]'' Clicking ''Correct Now?'' would replace OEM-installed non-Microsoft middleware with Microsoft's offering. If faced with the question, a court might determine that such a presentation (which Microsoft's competitors would be unable to make) would constitute unlawful monopoly maintenance by Microsoft. But it would be difficult for the government or for a private litigator to make that case in the face of a Final Judgement that clearly endorses the conduct.

The problems thus far mentioned are not unique. The Proposed Final Judgement is riddled with ''loopholes'' that not only make it a weak remedy, but that foresee and allow specific behavior by Microsoft that in the absence the Final Judgement would be actionable. By complicating potential future public or private antitrust enforcement against Microsoft, the Proposed Final Judgement would encourage misconduct and do positive harm to competition in the software industry.

PFJ Specifically Discriminates Against ''Open Source'' Competition

Over the past several years, a novel approach to software development known as ''open source'' has risen to prominence. Under the ''open source'' development model, many widely dispersed individuals, businesses, and other entities collaborate in the production of complex software products, contributing to what over time has become a rich commons of collectively authored software. ''Open source'' software is made available free of charge, under licenses that permit widespread redistribution and modification by users, sometimes with the restriction that any derived works must be made available to the public under the same terms. The business model that supports the continued development of open source software remains to be fully understood. The licensing terms of open source software prevent the exploitation by authors of any limited monopoly that would enable them to profitably ''sell'' software as traditional software vendors, such as Microsoft, have done. Nevertheless, a wide variety of actors including individual hobbyists, multinational companies, public and private universities, governments, and nongovernmental organizations have found sufficient incentive to invest substantial amounts of time and money into the production of open source software.

In the face of Microsoft's successful and unlawful monopoly maintenance, very few traditional software vendors still stand as competitors in the company's core market of Intel-compatible PC operating systems. Behemoths like IBM and scrappy upstarts like Be, Inc. have battled to gain a fingerhold, but failed to make any headway at all, and their products (IBM's OS/2, Be's BeOS) have all but faded from the computing landscape. The only non-Microsoft operating system that has managed to grow its share dramatically despite Microsoft's well-established pattern of anticompetitive behavior is the open source operating system Linux. Other open source projects that have competed effectively with Microsoft include Samba (which provides Windows interoperable file and print services to computer networks) and Apache (the most popular web server on the Internet).

It appears that the open source development model is somewhat resistant to the sort of anticompetitive behavior that has been effective for Microsoft in the past. One might even argue that the explosion of open source soil. ware over the past few years is a response by businesses, developers, and users to an artificially straitened ''traditional'' software landscape, and is perhaps attributable at least in part to Microsoft's anticompetitive behavior. As traditional vendors have receded from whole categories of software under the self-fulfilling truism that competing with Microsoft is akin to suicide, many entities have for one reason or another decided that the cost of contributing a small portion to the development of alternatives is less than the direct costs (continual licensing fees) and indirect costs (the failings of software not adequately tailored to their needs; uncertainty and future costs created by vendor lock-in) associated with relying on Microsoft products.

Regardless of the whys, open source software now stands as one of the few sources of effective competition against Microsoft. Indeed, while many of the battles that prompted the Justice Department's action against Microsoft are now past and prologue (e.g. the ''browser wars'' between Netscape and Microsoft), the struggles between open source Linux and Windows in the server space and between open source Apache and Microsoft's IIS remains, among many others, remain active and fierce. [2] Any remedy to Microsoft's anticompetitive behavior that diminishes the likelihood that open source projects can effectively interoperate with and compete against Microsoft's offerings would harm competition in the software industry. Unfortunately, the Proposed Final Judgement in several places explicitly permits Microsoft to discriminate against open source competitors.

Importantly for open source developers, Sections III.D and III.E of the Proposed Final Judgement would obligate Microsoft to disclose APIs, communication protocols, and documentation that might be required to interoperate with a Windows Operating System product. However, the caveats of Sections III.I and III.J restrict these earlier sections, and would allow Microsoft to essentially exclude open source competitors from access to or the use of this information. For the disclosure requirements of Sections III.D and III.E to have any effect, competitors must be able to use the information disclosed to develop and distribute competing and/or interoperating products. However, Section III.I foresees a regime under which the disclosed information must be licensed, as it continues to be the proprietary, intellectual property of Microsoft. Section III.I guarantees ''reasonable and non-discriminatory terms'' for such licensing, based on the payment of ''royalties or other payment of monetary consideration''. However, ''reasonable and non-discriminatory'' commercial terms inherently discriminate against open source software, which by virtue of its licensing must be freely distributable and modifiable.

Under ordinary circumstances, a company certainly should have the right to offer use of its proprietary technology only under commercial license, and this would legitimately prevent those who might wish to distribute open source applications based on that technology from doing so. But in the case of a company that has a monopoly over a substantial portion of the computing world and that has maintained that monopoly through unlawful anticompetitive conduct, allowing it to require competitors to pay even ''reasonable'' licensing fees in order to interoperate with its monopoly product provides the monopolist with unjustifiable reward for its misbehavior, in Microsoft's case, permitting such licensing is particularly insidious, because even if it were to provide licensing of its putative IP on absurdly generous terms, for example if it were to levy a royalty of 1¢ per thousand copies, it would immediately exclude what in the present real world are currently its most tenacious competitors from any possibility of interoperating with its software. By permitting ''reasonable and non-discriminatory'' commercial licensing of technologies the use of which is required in order to compete against and interoperate with Microsoft technologies, the Proposed Final Judgement condones and foresees a

practice that would exclude and discriminate against important open source competitors.

Section III.J restricts the scope of the PFJ disclosure requirements where security technologies (''anti-piracy, antivirus, software licensing, digital rights management, [and] encryption or authentication systems'') are concerned. Unfortunately, in today's networked world, no software is untouched by security concerns, and any non-trivial internet application must make use of and interoperate with encryption and authentication systems. Further, non-disclosure of security-critical techniques and protocols is unnecessary: the professional computer security community is nearly unanimous in its disavowal of the notion of ''security through obscurity''. A well-designed system should be secure even in the face of an attacker who fully understands the algorithms and protocols used to enforce the security. This is not as difficult as it sounds: the academic literature is filled with encryption algorithms and protocols that have never been broken despite massive peer-review, and even some that are ''provably secure''. Historically, non-disclosure of security techniques in software has more often served to provide cover for shoddy work than to even arguably enhance security. ''Security by trade secret'' is invariably broken, because, invariably, secret techniques are not subjected to sufficient peer review, and weak secret techniques can be reverse-engineered and then compromised. (See the recent history of CSS, a once-secret, easily broken, scheme for protecting DVDs, for a topical case-in-point.) Microsoft has a particularly poor security record, with respect to both the inadequate security of its products, and its attempts to restrict disclosure in hopes of covering up embarrassing lapses.

Open source software, in general, has a much better reputation for security, owing in large part to the fact that security algorithms in open source software are necessarily published, and are therefore subject to widespread review. Thus it is ironic that Section III.J.2 of the Proposed Final Judgement explicitly allows Microsoft to condition disclosure of security-sensitive technologies to those who ''meet[] reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business''. Since most open source software projects are not developed or ''owned'' by any one business, and since the terms of open source licensing often require disclosure of source code, III.J.2 effectively excludes open source software from any access to protocols, APIs, and other information that might be required to interoperate with or compete against Microsoft products that include a security component. Any significant application now must have security designed into it, so Section III.J.2 could be used to effectively lock open source competitors out of the disclosure requirements of the Proposed Final Judgement. It would be difficult to oppose Microsoft in court for discriminating against its troublesome open source competitors when the discrimination is based on the language of a court-sanctioned Final Judgement.

PFJ ''Enforcement Mechanisms'' Would Hinder Effective Enforcement

The following portions of the Proposed Final Judgement would hinder effective enforcement of the agreement:

. Section IV.B provides for the appointment of a Technical Committee to ''assist in enforcement and compliance'' with the PFJ. The constitution and role of the ''TC'' is described in detail. The Technical Committee would oversee Microsoft's compliance with the agreement in an ongoing way, and would respond to complaints from the plaintiffs or third parties. However, the Technical Committee has no power other than to assist in Voluntary Dispute Resolution, and, according to Section IV.D.4.d, ''No work product, findings, or recommendation by the TC may be admitted in any enforcement proceeding before the Court for any purpose, and no member of the TC shall testify by deposition, in court or before any other tribunal regarding any matter related to this Final Judgement.''

. Section IV.A.1 requires that ''the plaintiff States shall form a committee to coordinate their enforcement of this Final Judgement. A plaintiff State shall take no action to enforce this Final Judgement without first consulting with the United States and the plaintiff States'' enforcement committee.''

. Section VIII explicitly excludes third parties from taking any role in the enforcement of the Proposed Final Judgement.

Let us be perfectly clear: At the end of the day, the Proposed Final Judgement provides the United States and each of the plaintiff States with a right to sue to enforce its terms. But let's also be honest: the choice by a State of whether or when to enter into complex antitrust litigation against a well-known and well-heeled opponent is politically fraught under the best of circumstances. Under the terms of the PFJ, an unsatisfied plaintiff would be faced with two bad options: 1) the plaintiff can expend resources on a dispute resolution mechanism (the ''TC'') that the PFJ endorses, but that has no power, cannot be used at all as a basis for further proceedings, and will have no effect unless an amicable resolution is reached; or 2) eschew the dispute resolution mechanism endorsed by the settlement, thereby facing accusations of burdening Court resources unnecessarily, as well as a politically treacherous ''consulting'' process that would predictably lead to accusations of judicial overzealousness by reluctant former co-plaintiffs. A reasonable non-judicial enforcement mechanism would serve as a basis for judicial enforcement if required. Instead, the PFJ creates a ''middle path to nowhere'', that increases the political difficulty of undertaking any binding action against the company Under the PFJ, the real-world probability that misbehavior on Microsoft's part would bring legal consequences would be less than without the proposed enforcement mechanisms. Thus, the Proposed Final Judgement does positive harm to the public.

Complex, Vague, and Contradictory Language Hides New Anticompetitive Tools For Microsoft The ostensible purpose of Section III.1 of the Proposed Final Judgement is to require that Microsoft license under ''reasonable and non-discriminatory terms'' intellectual property that software vendors and other parties might require in order to offer middleware products interoperable with Windows. If the wording were less vague (and if ''reasonable and non-discriminatory'' were changed to ''royalty free'' to include open source developers), this would be a serious and legitimate remedy: Having unlawfully restricted the development of competing middleware, it is fair that Microsoft be compelled to license, under generous terms, whatever intellectual property nascent competitors would find necessary to interoperate with Windows.

However, the wording of this section is astonishingly vague. Microsoft may be compelled to license its IP to ''ISVs, IHVs, IAPs, ICPs, and OEMs'' only as required to ''exercise options and alternatives expressly provided to them under this Final Judgement''. Exactly what ''options and alternatives'' are provided to these parties by the Proposed Final Judgement is not a matter of scientific clarity, even to the avid reader of the document. What is crystal clear, however, is that those to whom the PFJ purports to offer this relief—the alphabet soup of third parties—have absolutely no standing to enforce (and therefore to enlist a Court's aid in interpreting and clarifying) this or any other section of the Proposed Final Judgement (Section VIII of the PFJ, see above).

Further, in an astonishing twist, Section III.I.5 exacts the remedy of compulsory licensing not only of the convicted monopolist, but of innocent competitors seeking relief. Section III.I.5 insists that a software vendor who wishes to provide a middleware product for a Microsoft operating system, if they require access to Microsoft IP to interoperate, must license to Microsoft its own intellectual property. The following language is no doubt intended to soothe competitors: ''[T]he scope of such license shall be no broader than is necessary to insure that Microsoft can provide such options or alternatives'' (Sec III.I.5). However, nowhere in the PFJ have I been able to discern any ''options and alternatives'' that Microsoft must provide to any third parties that would require a license on its part. Microsoft must merely permit practices that it has heretofore managed to prevent, in part by refusing to license its own IP, and it must disclose some of what it has heretofore kept secret. The requirements of Section III.I.5 unnecessarily and specifically envision a situation where a competitor, attempting to interoperate with Windows in ways that arguably would require some license of IP from Microsoft, could be asked to license its own IP to Microsoft, or else to cease and desist. If Microsoft and the putative competitor were to disagree about what ''no broader than necessary'' means, a competitor could not enlist, any court to resolve the dispute and compel licensing under the PFJ. Thus, the PFJ sets up a situation where Microsoft could ''leverage'' an interoperability requirement by a competitor or ISV in order to acquire access to the attractive IP of its competitors. In the absence of the PFJ, a court might look at a ''we'll show you ours only if you show us

yours'' requirement as anticompetitive, given that Windows Operating Systems are a de jure monopoly with which many third parties must interoperate or die. However, the Proposed Final Judgement gives cover to the practice by explicitly foreseeing and sanctioning a cross-licensing requirement, diminishing the likelihood of a successful outcome and increasing the burden in litigation for companies that may find themselves in the crosshairs of Microsoft's IP lawyers. Again, the public is positively harmed by the PFJ, because it diminishes the likelihood of legal consequences should Microsoft engage in foreseeable anticompetitive behavior.

Conclusion

A District Court found, and a Federal Court of Appeals, affirmed, that Microsoft engaged over a period of years in multiple unlawful and sometimes deceptive practices in order to maintain its monopoly on PC-compatable operating systems. The fruits of this illegally maintained monopoly have been and continue to be huge for the company and its principals. The Proposed Final Judgement fails to provide any strong remedy for this conduct, and instead shelters the monopolist from potential consequences of past and future misconduct. The Proposed Final Judgment, by providing court sanction to practices a court might well find to be anticompetitive absent the proposed settlement, leaves consumers, competitors, open source software developers, and other interested parties in a worse position than they would be in if Microsoft were simply left to face private litigation as a de jure monopolist without any specific remedy being imposed in the present case. The Proposed Final Judgement would therefore be harmful to the public interest, and, unless it is very substantially modified, it should be rejected.

Notes

[1] Section III.C.1 suffers from the same flaw. It permits OEMs to install ''icons, shortcuts, and menu entries'' for pre-installed, competing middleware, but ''Microsoft may restrict an OEM from displaying icons, shortcuts, and menu entries for any product in any list of such icons, shortcuts, or menu entries specified in the Windows documentation as being limited to products that provide particular types of functionality, provided that the restrictions are non-discriminatory with respect to non-Microsoft and Microsoft products.'' Microsoft would be freed again to create an ''ours or both'' situation, justified by language it could graft into contracts directly from the Proposed Final Judgement.

[2] For an informal measure of the perceived threat that open source software presents to Microsoft's monopoly, we might examine the lengths to which Microsoft has gone in disparaging such software recently. Microsoft CEO Steve Ballmer has called Linux ''a cancer'' [Chicago Sun-Times, June 1, 2001] that has ''the characteristics of communism.'' [The Register, August 2, 2000] Ballmer has explicitly described Linux as ''threat number 1.'' [upside.com, January 20, 2001i According to the public comments of Microsoft exec Jim Allchin, ''Open source is an intellectual property destroyer... I'm an American, I believe in the American Way. I worry if government encourages open source, and I don't think we've done enough education of policy makers to understand the threat.'' [CNet news.com, February 15, 2001] [URLs:

Washington, DC 20530

Dear Mr. Ashcroft,

I was recently surprised to hear of the recent development in the Microsoft settlement. After three years of negotiations, I cannot believe that this agreement may be held back even further. The terms of this agreement were part of a sophisticated, detailed process and all affected were involved. At this point in time, the settlement is fair and reasonable and should be used as a guideline to get our technology industry back to business.

Under the settlement, Microsoft will design all future operating systems so that competitors can easily place their components on the system. Also, under this settlement, the government will appoint a full-time monitor to observe Microsoft. These concessions are clearly a step toward a more unified, stronger II sector. By getting back to work. we can maintain our place in the competitive world market, and car, get our economy back on track To enforce this agreement would be beneficial to the consumer, the IT sector and the entire economy.

Please work to help stop any further actions against this agreement. As we support our technology industry, we support the growth of our economy and the advancement of this great country.

Sincerely.
I.R. Smith

Dear Mr. Ashcroft:

This letter is to inform you of my full support of the antitrust settlement that was reached by the Justice Department and Microsoft Corporation.

The settlement is fair and reasonable, and should be finalized as soon as possible, since Microsoft did not get off easy. In fact, Microsoft has agreed to share portions of its interfaces and protocols for its Windows operating system. This is nearly priceless intellectual property. It also agreed not to retaliate against software or hardware developers who develop or promote software that competes with Windows or that runs on software that competes with Windows. The settlement changes every aspect of the way Microsoft conducts business. I hope the settlement is finalized soon.

Thank you generously for your attention.

Sincerely,
Bert Sirkin

Dear Mr. Ashcroft:

I'm writing to encourage you to support the recent anti-trust settlement Microsoft reached with the U.S. Justice Department. I feel this is something Microsoft has agreed to merely so it could end the suit and so it can return to the business of making good and innovative software.

Microsoft has, for example, agreed to allow computer makers to change Windows so that Microsoft's products can be removed from the operating system and competing, non-Microsoft products can be installed in their places. AOL Instant Messenger can be installed in the place of Windows Messenger; RealNetworks RealPlayer can be installed in the place of Windows Media Player; and Netscape Navigator can be installed in place of Internet Explorer. Microsoft has also agreed to not take any actions against computer makers who choose to do this, or who decide to ship operating systems that compete with Windows, or who develop software that runs on such alternative operating systems.

That sounds pretty, far-reaching to me. To give its rivals a break: Microsoft is giving up all kinds of fights over its freedom to contract and over its own property. There's no point in hounding them with even more litigation.

I encourage you to accept the terms of the settlement so Microsoft can continue to make good software and provide jobs to thousands around the country.

Sincerely,
Carole Tovar

Dear Mr. Ashcroft:

My name is Ginger Todd. I am a resident of Crawfordsville, Indiana. I am happy to hear that a proposed settlement has been reached between the federal government and Microsoft in the antitrust case.

While I don't know all of the details of the lawsuit or this settlement proposal, one thing the proposal clearly deals with is the most frequently voiced consumer complaint against Microsoft: the lack of choice when utilizing the Windows operating system. Microsoft has agreed to allow computer makers to change Windows to have non-Microsoft programs built-in—programs that compete directly with Microsoft features and programs that usually come included with Windows.

The agreement by Microsoft to allow competition within Windows will be of great benefit to both consumers and competing software designers and manufacturers. I hope that you will approve the agreement so we consumers will be able to benefit from it soon. Thank you for taking time to read my comments.

Sincerely,

Ginger Todd

Subject: Comment on Proposed Final Judgment re Microsoft

Dear Sir or Madam:

I am writing to you on behalf of the Rio Grande Foundation of New Mexico, an independent, non-partisan policy research group dedicated to promoting free markets and open competition. I appreciate tile opportunity to comment.

In my capacity as Senior Fellow for Economic Research at the Foundation, I urge you to accept the proposed settlement in the anti-trust case involving Microsoft. In urging you to accept the settlement my arguments are that (1) we do not know enough about possible harms to take more aggressive action against MS and (2) we should be careful about opening up antitrust law to unproductive, rent-seeking activity.

The proposed settlement is file one that likely will do file least harm. I say that with a good deal of humility, since I think many economists tend greatly to overstate what we really know of tile possible harms alleged in this case. But one thing we do know is that competition is beneficial to society. Competition in an environment of economic freedom tends to promote human prosperity, an assertion strongly supported by recent empirical evidence.

What we don't know much about, however, is how the competitive process leads to prosperity. The economist's model of ''perfect competition'' is not particularly useful in informing us about antitrust law as it relates to possible harms that may reduce prosperity. Knowledge is not given; innovative change has been taking place at incredible speed. The premier scholar who wrote about competition and our lack of knowledge was Professor F. A. Hayek, who said in a famous essay about competitive process:[1] ''.–.–. we should worry much less about whether competition is perfect and worry much more about whether there is competition at all.'' Undoubtedly some of MS's restrictions on access to Windows were only intended to increase its market share while raising cost barriers to potential entrants. But it is hard to differentiate those restrictions from actions that substantially benefit consumers, as some of the alleged predatory behavior on the part of MS would appear to do. It is not readily apparent, for example, that the tying of Internet Explorer to the Windows desktop is anything but a benefit to those who purchase Windows. The issue boils down to whether or not this tying will result in differential harm to consumers over time. The only way that could happen is if the barriers to entry were so substantial and the resulting MS monopoly so inefficient as to erode away this short-run benefit. But those barriers actually seem to be quite small. Any time I surf the Internet I am amazed at how much competition there is. And how can we tell if MS is more or less efficient now than an unseen evolution under a different set of antitrust doctrine in which MS has a court-dictated constraint on behavior to reduce its market share? Market share as a measure of harm seems to be a red herring. The threat of entry, itself, tends to promote expanded service and lower costs. I think what we have observed over the past 40 years at least partially justifies my assertion.[1]

Hayek, F.A, ''The meaning of competition,'' in Individualism and Economic Order, Univ. of Chicago Press 1948, Midway reprint 1980, p 105.

As mentioned above, my second argument involves the unproductive cost of seeking differential advantage over competitors through the government in general and antitrust law in particular. In economics this is know as ''rent-seeking'' behavior. Economists are in wide agreement that rent-seeking is a loss the economy. Rather than seeking differential advantage from the government, firms could be using those resources to produce a better product at lower cost. The costs of rent-seeking behavior in this case alone seem to be enormous. And the draconian ruling by Judge Jackson would appear to open the door for like kind of wasteful activity. It would lead to severe impacts far beyond one company, acting as a drag on one of the most vibrant sectors of our economy. We can do nothing about the resources already used in this case, but we can prevent this kind of wasteful activity in the future.

That is why the settlement should be approved. It is a common-sense solution that recognizes the limitations in what we know about competition and innovation. And its approval also would serve to reduce predatory, rent-seeking behavior in the future.

Thank you for your consideration.

Sincerely,

Harry Messenheimer, Ph.D.

ISSUE: It is my understanding that the Dept. of Justice is asking for public comment concerning the negotiations over the Microsoft antitrust suit.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop. I personally believe, this case against Microsoft is little more than ''welfare'' for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. The Clinton/Reno Justice Dept. began this suit for some nebulous masons of their own, I have never trusted their motives in the situation, and I for one, would cheer Bill Gates if he shut down his complete US holdings and moved to Singapore or somewhere else where the government would not be trying to destroy a successful business during a recession. Please put a stop to this madness. The destruction to the economy already done

is huge, and continuing this blunder will only exacerbate an already bad situation.

Thank you for considering my opinion.

Dear Attorney General,

re: Microsoft Settlement

Please count me in the opposed column to the pending suit against the Microsoft Corporation. Night after night I see on television or read in the newspapers adds for cars and tracks, appliances, and other products hawking giveaways if you will just buy this or that product. I see no difference in the marketing of many other corporations than the marketing of Microsoft. Is not the idea of building a better mousetrap or marketing a better mousetrap the ''American Way''?

I am an ordinary citizen with no axe to grind, but I find it very distasteful to waste tax dollars on such a silly exercise. Microsoft has improved our way of life in so many ways by pursuing this legal action leaves me saddened and frustrated. Please Attorney General Ashcroft, stop this waste of manpower and tax dollars and redirect the governments legal efforts to meaningful pursuits.

Very truly yours,
Ronald J. Markham

Dear Ms. Hesse:

The case against Microsoft has been a tremendous waste of time and money. Monopolies are when train companies won't let other train companies use their rail system. Monopolies are not when companies load a browser on to a computer—when a consumer can simply download the competing browser at the click of a button. When did this country lose the idea of open competition in the market place?

The cries from Microsoft's competitors were not legitimate. However, assuming they were justified, those issues are certainly dealt with in the existing settlement. This settlement will end much of the case and get the software industry working again, I urge the courts to endorse the settlement.

Sincerely,
Bill Carlson

Dear Ms. Hesse:

I am writing the court because I am very concerned about the case of US v. Microsoft. From my reading on the case, I believe I am able to introduce public comments into the record. Please accept this letter as my public comment.

I am an attorney licensed to practice law in the State of California and in the Federal Courts. While I have not reviewed this case in depth, I understand its core issues. I am a concerned citizen who truly abhors government waste. My concern about wasted taxpayer dollars inspired me to write this letter.

Before September 11, the US Government spent more on the case against Microsoft than it did trying to stop the actions of Osama Bin Laden. We, the American taxpayers, have funded this case long enough. It has gone on almost four years and cost untold millions of dollars. To date, I know of nothing positive which has come from this case. The t??ch industry is down, innovations have slowed, and almost every state (including California) went from a surplus to a deficit in their budgets.

Novelist/philosopher Ayn Rand wrote that Antitrust is ''the penalizing of ability for being ability, the penalizing of success for being success, and the sacrifice of productive genius to the demands of envious mediocrity.'' Microsoft's competitors initiated this case so they could gain from the courts what they were unable to accomplish in the free market. Enough is enough! Wasting a single additional taxpayer dollar persecuting Bill Gates'' brilliant and innovative company is unacceptable—economic progress cannot be achieved at the point of a gun.

I urge the court to accept the proposed settlement in the interests of fiscal responsibility and economic justice.

Sincerely,
Michael Giorgino
Attorney at Law

Dear Ms. Hesse:

Thank you for this opportunity to state my opinion regarding the government's proposed settlement of its case against Microsoft.

First of all, the government had no business interfering with the operation of Microsoft when it began its pursuit of them back during the Clinton administration. The federal government was wrongly attempting to control and regulate a new, growing, and very vital part of our nation's economy. The last thing the technology industry needed was bureaucrats and Justice Department lawyers hovering over them like vultures.

I have read the proposed settlement/stipulation, and I believe Microsoft is being more than reasonable to agree to this document. Setting up the governmental *technical committee'' seems particularly onerous. However, in the interest of ending this whole misplaced attack, I urge you to approve this settlement.

Thank you for your consideration of my comments.

Judge Kolar Kottely
U.S. Department of Justice
601 D Street, NW, Suite 1200
Washington, D.C 20530

Dear Judge Kolar Kottely

It is my understanding that you are currently considering whether to accept the proposed settlement reached by the Department of Justice and Microsoft. I am writing m you in order to express my strong support for this settlement.

I am an investment officer in Cedar Rapids. The ebbs and flows of the economy, along with any outside forces that impact it, are of great interest to me. There is no doubt that bringing closure to the Microsoft case will have a positive impact on the national economy.

The government's case against Microsoft had potential to set far-reaching precedent for government intervention and regulation of an industry. This reality caused much concern for investors who worried that the growth of the technology industry would be hampered by government regulation. While there are many causes for our weakened economy, the uncertainty erented by this ease was a contributing factor in the decline of many technology stocks.

Bringing the Microsoft case to end is in the best interest of the economy and this proposed settlement is the vehicle to make it happen. While I do not know all of the intricate details of the settlement, what I have read lends me to Believe a fair compromise addressing the concerns of the complaint was reached. For example, Microsoft will be bound to share intellectual property and must create new versions of Windows that allow the promotion of non-Microsoft

products. The settlement also establishes a committee that will police Microsoft's compliance with the settlement.

Thank you for your consideration

Sincerely,

Chris H, Pipkin

The following six (6) pages of this facsimile are a comment on the Microsoft Settlement in the Microsoft antitrust case. This comment has been simultaneously submitted by email.

Mason Thomas

(805) 530–1502

As a professional working in the technology sector, I often have occasion to use Microsoft software and competing products. I am therefore concerned that the Revised Proposed Final Judgment in the Microsoft antitrust case has a number of deficiencies that prevent the Judgment from providing certain and effective relief for Microsoft's violations of the Sherman Act. Unless these flaws are corrected, the Revised Proposed Final Judgment is clearly against the public interest and will positively harm third parties.

This Comment addresses five serious deficiencies of the Revised Proposed Final Judgment, The deficiencies are discussed in the order they appear in the Judgment, not necessarily in their relative order of impact on injunctive relief. The deficiencies are:

1. The Judgment provides no remedies for past unlawful conduct.

2. Allowing volume discounts anticompetitively maintains Microsoft's monopoly (Section III.A. and III.B.).

3. Restrictions on disclosure of communications protocols maintains a barrier to competition (Section III.E.).

4. Arbitrary five year term of Judgment harms the public interest (Section V.).

5. The definition of ''Non-Microsoft Middleware Product'' maintains a barrier to competition (Section VI.N.).

Although it is unreasonable to expect a truly optimal Judgment that best serves the public interest, the existence of any one of the above deficiencies—and certainly the coexistence of several of them—will not end Microsoft's unlawful conduct nor avoid a recurrence of violations of the Sherman Act, and is thus outside the reaches of the public interest.

1. Judgment provides no remedies for past unlawful conduct

Although the Revised Proposed Final Judgment provides limited remedies ''to halt continuance and prevent recurrence of the violations of the Sherman Act by Microsoft'' (Competitive Impact Statement, Section I.), it does not in any way ''undo its anticompetitive consequences'' (Competitive Impact Statement Section IV.B.) , There is no provision in the Judgment to remedy any past anticompetitive actions by Microsoft: all provisions in the Judgment attempt to alter the current and future behavior of Microsoft. As such, the Judgment does not effectively restore the competitive conditions experienced by Microsoft prior to its violations of the Sherman Act. An effective remedy for Microsoft's past illegal actions requires a careful balance to empower injured competitors while not unduly damaging Microsoft. A simple but fair remedy would create a pool of Microsoft's money based on a percentage of sales of Microsoft Operating System Products since the filing of the antitrust complaint till the time of the Final Judgment entered by the Court. The parties damaged by Microsoft's anticompetitive behavior (e.g., Sun Microsystems, Netscape Communications Corp., etc.) would be payed from this pool. The size of the pool and the relative payment terms to competitors are details that require careful consideration.

2. Allowing volume discounts anticompetitively maintains Microsoft's monopoly allowing volume discounts serves no procompetitive interest and is in fact very much against the public interest as it serves to illegally maintain Microsoft's monopoly. Section III.A. of the revised proposed final judgment stipulates that ''Nothing in this provision shall prohibit Microsoft from providing Consideration .–.–. commensurate with the absolute level or amount of that OEM's development, distribution, promotion, or licensing of that Microsoft product or service.'' Section III.B.2 provides for a licensing fee schedule that ''may specify reasonable volume discounts based upon the actual volume of licenses of any Windows Operating System Product .–.–.'' These provisions allow Microsoft to continue to leverage its monopoly position to illegally maintain that monopoly. The Competitive Impact Statement entirely ignores the anticompetitive ramifications of these terms.

Unlike traditional manufacturing, where the production or distribution of a large quantity of a product can generate ''economies of scale'' and thereby procompetitively justify non-uniform pricing (e.g., volume discounts), the licensing of software has no significant economies of scale. A comparison with traditional manufacturing is useful. For a car dealership selling hundreds of cars per month, there is economic justification for the car manufacturer to provide a volume discount to the dealership: the distribution costs (shipping) per car are lower than for a dealership selling only ten cars per month, with software however, the only economy of scale obtained is slightly cheaper production materials: compact disks for distribution and paper for documentation and product boxes. OEMs typically only include a compact disk with a new computer purchase, for which the volume production cost is under one dollar (US$1.00). Hence the economies of scale afforded by large scale OEMs to Microsoft are less than one percent (1%) of the retail value of typical Windows Operating System Products. Hence there is no significant procompetitive reason to allow volume discounts to large OEMs.

Allowing Microsoft to offer volume discounts will further entrench its monopoly position. With volume discounts, Microsoft would retain the ability to price its Windows Operating System Product licenses at an artificially low cost to the largest OEM vendors. These vendors would thus have a strong incentive to continue to offer exclusively or predominantly the Microsoft Operating System Product on new Personal Computers, The largest OEM Personal Computer suppliers would have a free market incentive to choose alternate Operating System Products if Microsoft's Operating System Product were instead priced at an open market value. Avoiding volume discounts increases competition while preventing Microsoft from leveraging its monopoly to stifle competition.

This deficiency of the revised proposed final judgment is remedied by deleting the words ''distribution'' and ''licensing'' from the last paragraph of Section III.A. and by modifying Section III.B.2 to read ''the schedule may not specify volume discounts based upon the actual volume of licenses of any Windows operating System Product or any group of such products.'' These modifications will still allow Microsoft to compete in the marketplace based on the merits of the windows Operating System Products, but prevent Microsoft from anticompetitively erecting barriers to competitive products.

3. Restrictions on disclosure of communications protocols maintains barrier to competition The Revised Proposed Final Judgment maintains a significant barrier to competing Non-Microsoft Middleware Products by restricting the disclosure of Communications Protocols. Section III.E. of the Judgment provides that Microsoft shall disclose Communications Protocols ''on reasonable and non-discriminatory terms.'' Such terms, however, prevent a large number of established and nascent competitors from obtaining the Communication Protocols. ''Reasonable and non-discriminatory'' license terms act as an anticompetitive barrier to potential Microsoft competitors, while providing no procompetitive advantage for Microsoft.

''Shareware'' software developers typically provide software products (including middleware) free of charge for end users to evaluate, and only demand payment if the end user decides to continue using the software product. Such developers would be unable to comply with ''reasonable and non-discriminatory'' licensing terms unless a very large percentage of end users payed for the software product. Similarly, the entire ''open source'' class of software would be unable to meet ''reasonable and non-discriminatory'' terms as the ''open source'' licenses allow virtually unlimited duplication and derivation rights. Several important Non-Microsoft Middleware Products are ''open source'', notably the Samba program (http://www.samba.org), that provides file transfer and print Services through the Microsoft SMB Communications Protocol. The Samba program is a well-established and widely used alternative to Microsoft Middleware Products, but it would be effectively prevented from competing with Microsoft through the adoption of ''reasonable and non-discriminatory'' licensing terms for future changes in the SMB protocol.

This deficiency of the Revised Proposed Final Judgment can be remedied by a simple wording change. The phrase ''reasonable and non-discriminatory'' in Section III.E. of the Judgment should be changed to ''royalty

free''. Since Microsoft's ability to hide Communication Protocols serves only to prevent competitors from effectively interoperating with Microsoft products and does not in any way increase competition, a mandatory royalty free license would serve to allow both large and small competitors to interoperate with Microsoft products.

4. Arbitrary five year term of Judgment harms the public interest The Competitive Impact Statement in Section IV.C. claims that a five year time frame for the Judgment ''provides sufficient time for the conduct remedies contained in the Proposed Final Judgment to take effect .–.–. and to restore competitive conditions to the greatest extent possible.'' The Competitive Impact Statement provides neither evidence, nor precedence, nor logic to support this claim.

In fact, a five year term may well be too long. The provisions of the Revised Proposed Final Judgment may turn out to be so effective at restoring competition that Microsoft loses its dominance in less than two years in the Operating System market for Personal Computers and becomes unnecessarily hobbled by the restrictions of the Judgment. In such a case, Microsoft would be unfairly restricted from competing in the market for another three years, possibly causing great economic damage to Microsoft and depriving consumers of the fruits of a vibrant competition in the Operating System market.

Alternatively, the provisions of the Revised Proposed Final Judgment might not be sufficient to hinder Microsoft's anticompetitive actions, and Microsoft could continue to violate the Sherman Act through an extended seven-year Judgment period. Clearly such a situation would severely harm the public interest, again depriving consumers of the benefits of a competitive market and stilting the entire Operating System and Middleware market. The arbitrary five year Judgment term length would only be beneficial in the most serendipitous of circumstances, and the arbitrary two-year extension does not mitigate this fault.

The overriding concern of this Judgment is to prevent Microsoft's anticompetitive actions and to restore competitive conditions to the market, and it is that principle that should guide the term length of the Judgment. The most straightforward application of this principle would be to terminate the Judgment when Microsoft no longer enjoys monopoly status. This could be achieved with the following replacement for Section V. (Termination) of the Revised Proposed Final Judgment:

''This Final Judgment will expire when Microsoft's windows Operating System Product has less than fifty percent share of the Personal Computer Operating System market (as determined by a market study provided by a mutually agreed upon third party).''

With this revised termination clause, the Judgment will stand exactly as long as necessary for the public interest. An alternate definition of monopoly status (i.e., instead of ''fifty percent market share'') may also be acceptable, provided it is logically and legally defensible, and maintains the intent of the Judgment.

This new termination clause will ensure the return of healthy competition to the Operating System market without unduly burdening—or harming—Microsoft. At the point that Microsoft's windows Operating System Products have less than fifty percent share of the Personal Computer Operating System market, there is clearly healthy competition in that market, with at least one other dominant competitor to Microsoft. There is then no further reason to impose the conditions of the Judgment. However, Microsoft is not prevented from maintaining its monopoly on the technical merits of its products. The ongoing terms of the Judgment would not be onerous to Microsoft should it maintain a monopoly position without resorting to anticompetitive actions.

5. Definition of ''Non-Microsoft Middleware Product'' maintains barrier to competition Although the Revised Proposed Final Judgment seeks to ''restore the competitive threat that middleware products posed prior to Microsoft's unlawful conduct (Competitive Impact Statement, Section IV), the proposed definition of ''Non-Microsoft Middleware Product'' serves instead to maintain barriers to competition. Section VI.N. of the Revised Proposed Final Judgment stipulates that a software product, among other requirements, can only be considered a ''Non-Microsoft Middleware Product'' if ''at least one million copies were distributed in the United States within the previous year.'' This requirement is explained in the Competitive Impact Statement, Section IV.A. as being ''intended to avoid Microsoft's affirmative obligations .–.–. being triggered by minor, or even nonexistent, products that have not established a competitive potential in the market .–.–.'' As the Competitive Impact Statement makes clear, the definition of ''Non Microsoft Middleware Product'' intentionally limits the possible competitive impact of nascent middleware products. Such a limitation is antithetical to the desired goals of the Judgment.

This deficiency of the Revised Proposed Final Judgment can be easily remedied by deleting Section VI.N.(ii) and thus removing the restriction on number of copies distributed. The Competitive Impact Statement in Section IV.A. states that the restriction on number of copies distributed ''is intended to avoid Microsoft's affirmative obligations—including the API disclosure required by Section III.D. and the creation of the mechanisms required by Section III.H.—being triggered by minor, or even nonexistent, products .–.–.'' In other words, Microsoft should not endure an onerous burden in its obligations. However, deleting Section VI.N.(ii) would not create such a burden. Since Section III.D. already specifies that APIs and related Documentation shall be disclosed via the Microsoft Developer Network or similar mechanisms, Microsoft will not require any further effort to make the APIS and Documentation available to ISVs or other middleware developers that have not established a competitive potential in the market—but that nevertheless have the potential to become competitors with Microsoft, Furthermore, the mechanisms required in Section III.H. (such as the creation of Add/Remove icons) are sufficiently generic that they will only need to be created once—and likely already exist—to accommodate all Microsoft and Non-Microsoft Middleware, and hence the expansion of the number and kind of possible middleware competitors to Microsoft again does not create an undue burden on the company.

This Comment has been submitted through both e-mail and facsimile copy.

Attorney General John Ashcroft
United States Department of Justice
Washington, DC 205300001

Dear Attorney General Ashcroft:

I urge the Department of Justice to accept the proposed Microsoft anti-trust settlement, which goes far beyond the original scope of the lawsuit as it was originally filed. I feel Microsoft made this settlement so it can back to its business of developing software.

As terms of the settlement Microsoft has agreed to grant computer manufacturers and software developers the ability to remove Microsoft products and install competing products in their places. Examples include: Netscape Navigator, RealNetworks RealPlayer, and AOL Instant Messenger. You should note, though, that consumers can install these products on their computer systems regardless if those products came preinstalled on their systems. Microsoft has also agreed to not enter into agreements with third-party computer manufacturers or software developers that would require them to exclusively or in a fixed percentage distribute or promote Windows, unless there is no competitive issue.

Microsoft also must grant intellectual property rights to those third parties that choose to exercise any options in the settlement if those options would infringe on Microsoft's intellectual property. Also as part of the settlement, a three-person ''Technical Committee'' made of software engineers will be overseeing compliance and assisting in dispute resolution, when needed, The settlement also makes it easy for an individual or company who feels Microsoft is not complying with the settlement provisions to file a complaint, thus making it more likely that Microsoft will abide by all terms in the settlement. For these reasons, I support the Microsoft settlement. I look forward to seeing this matter finalized and put behind us so we can get on with the business of business. Thank you.

Sincerely,

MTC–00030470

Fairport, NY 14450
January 25, 2002
Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I was really happy when Microsoft and the Department of Justice reached an agreement; now my hopes were dashed when I learned that several states want to pursue further litigation. Why? Microsoft has already agreed that if a third party's exercise of any options, provided for by the settlement, would infringe any Microsoft intellectual property, Microsoft will provide the third party with a license to the necessary intellectual property on reasonable and nondiscriminatory terms.

They also agreed to license file Windows operating system to the largest computer companies on identical terms, conditions, and price.

I urge you to end all litigation so that we can move forward. No more action should be taken at the Federal level.

Sincerely,
Sharon Miller

Dear Mr. Ashcroft:

I am writing to let you know my views on the Microsoft settlement, First and foremost, this case has been in litigation for many years now. Secondly, this lawsuit should not have concerned the federal government, since no laws have been broken. Settlements have been reached in various states, all of which have involved appropriate concessions, including more information sharing and changes in Microsoft's business practices.

I have firsthand experience with big business. I previously worked in the steel industry, and due to government intervention and regulation, I was put out of work when the companies were broken up. Pennsylvania's steel industry will never be the same. I urge to you please do your best to see that this does not happen to Microsoft. Our nation's IT industry depends on companies such as Microsoft, and our economy also depends on the IT industry, Please discontinue these lawsuits and help our economy return to normalcy. I strongly suggest that it is in the best interests of everyone to discontinue these lawsuits so our economy can return to a sense of normalcy.

Sincerely,
John J.Petroci Jr.

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I think the federal government never should have filed the lawsuit against Microsoft. At this stage in the proceedings, however, I think it is in everyone's best interest that the case is settled. It is a shame that the remaining plaintiff states have not joined in the settlement efforts. The concessions Microsoft has made are more than reasonable. Microsoft has agreed to disclose portions of its code to its competitors. They have agreed to establish a uniform price list for computer manufacturers. They have agreed to make it easier for servers to interoperate with one another. They have agreed not to take actions against computer manufacturers who install the competition's software on their computers. All of these concessions amount to establishing fair competition for other software companies.

The settlement agreement should be approved, and the federal government should take no further action in this case.

The Clinton Administration should have never initiated this suit. They were totally anti-business and their motives were entirely political!

Sincerely,
Mark Wagoner

US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

We are writing to show our support for the settlement reached between Microsoft and the government. It is fair and reasonable.

The fact that Microsoft has agreed not to retaliate against software or hardware developers who develop or promote software that competes with Windows or that runs on software that competes with Windows shows me that Microsoft is not looking for ways to hurt consumers, but to help them, Further, Microsoft won't enter into any agreements forcing a third party to distribute or promote any Windows technology exclusively or in a fixed percentage. Finally, the government will establish a ''Technical Committee'' that will monitor Microsoft's compliance with the settlement and assist with dispute resolution.

This is a good settlement and Microsoft deserves a lot of credit for taking the lead on resolving these issues. We hope the settlement will be approved so Microsoft can get back to developing innovative software.

Sincerely,
Christopher & Sharon Moline

Washington, DC 20530–0001

Dear Mr. Ashcroft:

As a woman aspiring to start her own business, I am discouraged and disheartened by the manner in which the federal government treats success. I am bitterly disappointed that our government—MY government—feels it necessary to oversee the financial castration of inventors and creators, hobbling what is supposed to be free enterprise. I feel strongly that government has no right to insert itself into legitimate and successful business, to legislate and litigate, to attempt to regulate a product that clearly outshines other, similar products. Smaller companies, who can't compete became the quality of the product they offer is no match for the ''big guy'', cry foul and the government steps in to try to level the playing field, The playing field for business will never be level It is not only futile to attempt to level that field with legislation or legal action, it is a childish wish for fairness that assumes that it can be done. If Linux and Unix were such operating systems, they would be where Microsoft is now, became the consumer would have demanded their products over Windows. If WordPerfect or Lotus 1–2–3 were as user-friendly as MS Word or Excel, they would be the applications in great demand. The fact is, Microsoft is guilty of nothing more than being popular—popular became they provide an intuitive, user-friendly, and versatile environment in which to work. How can you, as Attorney General, support, represent, or oversee the punishment of a company whose only crime is that the consumer prefers its product over the competition's?

For example: The entry of Wal-Mart and Target into the discount department store business, offering better products at lower prices, drove KMart into Chapter 11 bankruptcy. Consumers regulated the market with their purchases. In the eyes of the consumer, Kmart just didn't measure up to the competition. It has always been consumers who ensure the success or demise of a business. We have, and should be allowed to retain, without legislative or litigious interference, the power to regulate business with our wallets.

I am not so naive as to think Microsoft is entirely without fault or abuse of power in their rise to their current market position. The proposed settlement with the government, which I have reviewed, appears to be genuinely equitable. It not only provides a solution to the anti-trust ''problem'' Microsoft presented (in the eyes of the Department of Justice), it also provides

concessions to Microsoft and its competitors. At this point, I do not believe additional action is necessary on the federal level.

I am concerned that the federal government has been so intrusive and vituperative against Microsoft. Success, innovation, and creativity should not be a federal offense, and are certainly no reason for litigation to continue. I urge you and your office to finalize the settlement and move on.

Sincerely,
Linnea Capps

Dear Mr. Ashcroft:

I was pleased to learn the federal government decided to settle its antitrust case against Microsoft. This should have been done a long time ago. Nonetheless, I am in favor of the steps that have recently been taken to resolve this lawsuit.

I am a very strong supporter of Microsoft. As a result of Microsoft's hard work and innovation, we live in a world where I can communicate with loved ones across the country with ease. I firmly believe this case was brought as a result of the misguided idea that a successful company should be knocked down, and its competitors should be awarded the fruits of their labor, Notwithstanding my belief that this case lacked merit from its inception, I think the settlement agreement's terms are fair. The court should not hesitate in its approval of the settlement. Microsoft has agreed to make it easier for its competitors to compete with Windows. They agreed to document and disclose to their competitors portions of the Windows code. They also agreed not to retaliate against those who promote software that competes with Windows. Nothing more should be expected or required of Microsoft beyond the terms of the settlement agreement.

Sincerely,
Natalie Dunlap

Dear Judge Kottaly.

From the perspective of a regulatory compliance officer for lowa's state-designates secondary market for student loans. I have followed the Microsoft antitrust case with great interest and look forward to a settlement.

Working with college graduates and students of lowa colleges and universities, we are well aware of the growing number of young people a??ting our state after compi??ting higher education. To start this tide, businesses and our state government continue to focus attention on how best to keep and attract college graduates to lowa—investment in our cities, increasing amounts and avaliability of vonture capital, creating a business ??mate that is Inviting to companies.

It is unfortunate our state is one of only nine others whose Attorney General did not sign onto the proposed Microsoft antitrust s??tlement before you. It does not help our state's cause to attract burg??ning tech companies or young professionals. I do not believe his position is representative of the majority of lowa residents or businesses—which is what com??iled me to write. The settlement on the table has taken a great deal of time and effort from the parties involved. It is a fair settlement and your approval of it would take a large pace toward the finish line in this marathon case.

Thank you for accepting my comments.

Sincerely.
camas G. Solo, CPA. CIA

From: Don Phillips, Consumer, Engineer, Voter

I believe the US Government should settle its antitrust suit against Microsoft immediately. The current proposed settlement should be approved and implemented as soon as possible. This lawsuit never, in any way, represented the interests of consumers. Microsoft has had a long track record of developing and selling software products that consumer like and use. The company's growth and profits are evidence of this. On the other hand, no credible evidence was ever presented during the trial (or after) to show that Microsoft ever did anything that was against consumer interests. Clearly this lawsuit never had any basis In fact and never should have been undertaken.

In fact, the lawsuit, itself, has caused major harm to consumers and to the entire US economy. Also, the government's reputation as being objective and fair has been seriously eroded. In short, the whole process has been a disgrace to justice and an insult to American consumers. I have worked in the semiconductor industry for 30 years and have had many dealings with Microsoft as well as many of Microsoft's competitors. Also, I have personally used many products from Microsoft and from its competitors. Based on my Long experience with technical products it is very clear to me why Microsoft's competitors have not prevailed in the marketplace. This lawsuit has clearly been shown to be nothing more than a thinly veiled attempt by weak competitors to do serious harm to a more successful company. This is very disgraceful behavior! For the government to continue to perpetuate this case would be a major miscarriage of Justice.

Respectfully, Don Phillips, Pale Alto, CA

Dear Mr. Ashcroft:

I understand the Courts will make a final decision at the end of this month on whether the proposed Microsoft settlement is in the best interest of the consumer. I personally believe that we need to leave it alone. It has already cost us billions of dollars in legal fees, lost production and loss of jobs in the technology sector of the economy.

Microsoft has agreed to grant computer makers broad new rights to configure Windows, in order to promote non-Microsoft software programs that compete with programs included within Windows. They have also agreed to document and disclose various interfaces that are internal to 'Windows' operating system for use by its competitors. This is definitely beyond what is expected in any antitrust settlement.

Let's end this before we get in over our head. There are far more pressing issues we need to concentrate on such as reviving this fragile economy.

Sincerely,
Edward Heffernan

Dear Attorney General Ashcroft:

As part of the public comment phase, I am writing to urge the Department of Justice to accept the settlement proposal in the Microsoft anti-trust case. I believe the terms of the proposed settlement will protect consumers and will shield Microsoft's competitors from unfair business practices. By accepting the proposed settlement, Microsoft will change many of its former business practices and will agree to abide by the stipulations therein. If Microsoft is willing to accept those terms, the Department of Justice should be willing to endorse the settlement and bring the issue to a close.

Our nation is facing profound challenges on several fronts. I think your department

and the various states'' Attorneys General should settle the Microsoft case in order to focus on other more pressing issues.

Sincerely,

Darlene Cooke

Dear Mr. Ashcroft:

I would very much like to see the Microsoft settlement agreement which, in my opinion is very well conceived, approved by the Court. It seems to me that the goals set forward were met and that no antitrust laws are in jeopardy.

From what I understand, Microsoft has agreed to significantly change the way it conducts business so that its competition has a level playing field, and it will not take negative actions against any competitor of Windows. They have also agreed not to enter into agreements with third parties obligating them to sell Windows exclusively.

I just can't see why taxpayer dollars would be spent wisely by litigating this case further. It is time to get on with business and allow Microsoft to help stimulate the economy and reward its patient shareholders like my family. Government actions have already cost our portfolio far more than we would like!

Thank you for your time and attention.

Sincerely,

Frederick & Coleen Walther

Dear Mr. Ashcroft:

I would like to propose finalization of the agreed settlement deal with Microsoft and the government. I don't think a company should be held down in its attempt to prosper, and this lawsuit has over-stepped any reasonable bounds of dealing with the free market.

The settlement proposed offers several steps to allow more competition. Microsoft will not require computer companies to use Microsoft software, and will allow competitors unheard-of access to Microsoft's proprietary technologies. This deal should be appear quite accommodating to the company's opponents, as it will be monitored regularly by industry experts. Meanwhile, I'm sure that a break-up would not offer such favorable cooperation and results for those groups.

Please move forward with this settlement and allow the PC industry to be stable and successful in the coming years ahead. Thank you for your time.

Sincerely,

Helga Gardetto

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to Microsoft and the antitrust dispute I support Microsoft in this dispute, and I believe this litigation is costly and a burden on taxpayers and consumers I support the settlement that was reached in November as an adequate means to end this dispute.

Microsoft has agreed to carry out all provisions of this agreement and will be monitored for compliance. Under this agreement, Microsoft must license its Windows operating system products to the 20 largest computer makers on identical terms and conditions, including price. Microsoft has also agreed to disclose various interfaces that are internal to Windows'' operating system products, which is a first in an antitrust settlement. Microsoft did not get off easy in this settlement.

This settlement not only keeps Microsoft together as a company but will also foster competition. Continuing this litigation will only have adverse effects on consumers and the economy Please support this settlement so our precious resources can be devoted to more pressing issues. Thank you for your support.

Sincerely.

Dear Mr. Ashcroft:

The intent of this letter is to go on public record and express my support for the settlement that was reached in the antitrust lawsuit between Microsoft and the Department of Justice. The settlement was reached on November 2, 2001, and I was relieved to see that the suit had finally come to an end.

There are still individual states that are continuing with litigation against Microsoft, and I hope that will soon come to an end, but I am happy to see that it has been settled at the federal level. Hopefully the remaining states will see that they are wasting funds that could be used for so many other more important issues. Microsoft had to concede more than they would have initially liked, but settling the dispute and getting back to business was more important. Microsoft will be monitored by an ongoing technical oversight committee, so. they will have to abide by the terms of the settlement. I am glad to see that two sides come to an agreement, and I fully support the settlement.

Sincerely,

Jerry Doser

Washington, DC 20530

Dear Mr. Ashcroft:

For the past three years, the people who depend on Microsoft's products everyday have waited for a settlement to be reached in this antitrust suit. Now it seems that the end is in sight. I hope that this settlement goes forward so that this case can finally be put to rest.

Microsoft is willing to give up a lot in order to reach a settlement and I for one hope they do. Out of the many elements that

Microsoft is willing to forfeit, one of the most overlooked is the right they're giving to computer manufacturers. By giving them the freedom to configure Windows with whatever applications they choose, Microsoft is ceding significant portions of its market share. Microsoft has also agreed to provide a uniform price list to them.

I hope that people will spend the time to go over the settlement, to see exactly what Microsoft is forgoing in order to put this case to rest. The settlement should be acceptable to everyone but the most ardent Microsoft opponents. I hope that it will be finalized soon so that everyone can just move on.

Sincerely,
Henry Gubitosi

Dear Mr. Ashcroft:

I am taking this moment to write you concerning the current settlement between the US Federal government and Microsoft. I feel it necessary to voice my opinion during this period of public comment, after all, it is people like myself, the American consumer, that are suffering throughout this overdrawn litigation.

The current settlement plan is, in my view, a fair and just compromise and the federal government should remove itself from the corporation's future business tactics. Microsoft has only made the face of technology easier for America, not to mention the whole world, and thanks to Microsoft, America has continued to be one of the leaders in the global economy. Please take into consideration my opinion as an active member of my community and an American consumer who wants to see Microsoft back in the business of innovation.

Sincerely,
Anthony De Paul

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Attorney General Ashcroft:

I would like to convey to you my support for the settlement reached between Microsoft and the Department of Justice. This settlement ends an expensive court battle and will facilitate the American technology industry in its efforts to once again flourish.

This unprecedented settlement will create more openness in the technology sector. The settlement gives competitors more access to Microsoft's product information and code than any other company has ever had to disclose in the history of the technology industry. More expensive courtroom battles and conflict will serve only to increase the legal bills of the government and Microsoft. Microsoft has agreed to more terms in the settlement than were actually at issue in the lawsuit to facilitate a reasonable conclusion to the suit.

Undoubtedly this settlement's time has come. No further Federal action is required in this case. Microsoft and the DOJ should finalize the settlement and help to focus the high tech sector of our economy on technology and not lawyers.

Sincerely,
Robert Jones

Washington, DC 20530

Dear Ms. Hesse,

The basis of the Microsoft lawsuit has been weak from the start, a failed attempt to shake Microsoft through negative media attention and distraction. Microsoft has been hog tied by fresh legal complaints answering each advance they have made since the original suit. I fail to see how Microsoft is more corrupt than any other of the litigating parties, as opposition has blatantly used the courts to stall Microsoft in hopes of their own gain.

The lawsuit against Microsoft may have originated with legitimate concerns regarding modern day antitrust issues, but has digressed to a manipulation of the courts by misguided ambition. Enough resources have been wasted on this debacle. The proposed settlement should be an acceptable solution for all After all, Microsoft's competition has already won more than three years worth of media battles and scrutiny throughout the trial.

Sincerely,
Tim L. Long

Washington, DC 20530

Dear Ms. Hesse,

Thank you so much for considering comments from the consumer in your deliberation of the Microsoft antitrust suit. What may have begun as a test of modem day antitrust law has become a corrupt forum for corporate lobbyists. It seems as though this suit has gone strangely awry, focusing on corporate influence and loopholes rather than law.

The speed of advancement in the tech sector today is scarcely confinable by current antitrust law. Microsoft's competition may have gained better results at challenging antiquated antitrust law rather than Microsoft's specific business practices.

The abuse of corporate power in this case certainly dispels any merited changes to current law. Paradoxically, the competition hemmed themselves in to more government scrutiny rather than gaming a leg up on Microsoft.

Quiet, prompt settlement is the most graceful exit from such poorly intentioned litigation.

Sincerely,
Gary A. Bean

Dear Attorney Hesse:

I am aware of a period of public comment in the case of the U.S .and Microsoft is now open and will be until January 27, 2002. I would like to express my support of the settlement that has been reached.

I understand that these settlements are difficult to reach. Knowing how much time and effort goes into these cases I believe that no more time should be spent on this case. Further litigation in the Microsoft case will only keep government lawyers and staff from more meaningful business. The government now needs to focus on other more pressing national matters. Needless to say, too much money has already been spent.

Microsoft lawyers and staff should also be allowed to concentrate on the business of technology. They should be allowed to continue to be a progressive and productive company. As such, Microsoft will contribute to the economy and the computer industry. At a time when many companies are failing the government should be encouraging all

companies, especially large and productive ones, to continue to grow—not restrict or regulate them needlessly.

Thank you for your consideration and for your service in the United States government.

Sincerely,

Samantha Gudheim

Dear Ms. Hesse,

American consumers have been bilked out of tens of millions of dollars enduring prolonged litigation in the Microsoft antitrust case. And their own attorneys general and the very companies trying to woo their business have done the bilking.

Microsoft's competitors would tell like they are the proverbial ''David'' to Microsoft's ''Goliath'', but several of these companies have grown and merged to monolithic conglomerates themselves. In the biblical story, it is David who threw stones, and Microsoft's competitors have fervently done so, encouraging media frenzy through bitter accusations and editorial campaigns. Somehow excusing their own anti-competitive behaviors, competition has rabidly sought to achieve through the courts what they haven't been able to in the marketplace.

This shameful abuse &our judicial system should not be tolerated. I understand this highly publicized case has come to you through a questionable course of litigation. I am confident that prompt settlement ends this tragic scene of corporate manipulation, and I hope you'll agree.

Sincerely,

Patricia E. Masteller

Dear Ms. Hesse:

The settlement proposed in the Microsoft antitrust case deserves strong consideration. The independent Technical Committee set out in the proposal provides an enforcement device. If compliance backsliding by Microsoft should occur, the committee would be engaged ?? the cost of Microsoft.

End users would receive the kind of continued flexibility that we have already seen in the release of their new Windows XP operating system guaranteeing consumers the freedom to select applications from competitor providers with ease.

Information technology consumers of Microsoft's operating system would have access to technical specifications of Windows that actually makes it easier for its competitors to provide compatible applications to be used on computers and with servers of Microsoft's operating system.

Although shor?? of breaking apart the company, there are also fair provisions set forth in this settlement that would punish the company for the sections of which they have been found guilty.

I trust you will give this settlement offer sufficient deliberation.

Thank you

Dear Ms. Hesse,

There is a growing sentiment among economists that we are finally seeing the light at the and of the tunnel of our nation's recession. The markets are improving, and the economic forecast is generally positive. However, state revenues are down and most states will have to consider tough outs on spending in coming budgets.

In Massachusetts, we have witnessed a shrinking state revenue base mostly caused by the recession. Many growth opportunities were squandered in the 1990s, and now, in ?? of trading on our accomplishments, we are ?? over what might have been.

On thing that can be done to aid states'' economies is to end the Microsoft lawsuit. We are writing in support of the nine states and the Department of Justice's settlement agreement. It is a fair and reasonable agreement which brings a satisfactory conclusion to this long-running anti-trust case. As the old saying goes, a rising tide floats all boats. And just as a rising tide will float a boat sitting at the lowest point first, so the resolution of this case will help those who have the farthest to rise first.

The technology-driven ''innovation economy'' has created tremendous opportunities for the citizens of the Commonwealth. But we must act now to take some of the uncertainty out of the economy. We urge you to endorse this settlement agreement, which would provide states greater confidence in fiscal planning and would allow entrepreneurs and businesses to get back to the business of creating new and better products for consumers.

Dear Ms. Hesse,

I am a ??red teacher and current legislator I am writing to express my support for the proposed settlement reached with Microsoft, by the Department of Justice and nine of the States involved. In reviewing the settlement I see several benefits particularly for our schools.

The opportunity to provide funding for critically need training of educators and staff. Hardware and software, available for use on multiple operating systems, and for the critical resources needed to acquire hardware for financially strapped schools across the nation.

Microsoft has been put on notice they need to change their business practices, and has agreed to do so. The Federal and State Governments have exercised their rightful authority in protecting the public interests, have reached a reasonable solution.

Now is the time to show the public that we are being responsible and ??nd the long drawn out legal process. We must be responsible with the resources of the people with which the government has been entrusted. It is time to restore faith in our legal system by showing that we know when to end the seemingly endless stream of

litigation. Thank you for consideration of my comments and for all you do.

Sincerely,

Roge?? L. Sherman

State Representative

Washington, DC 20530

Dear Judge Kottely,

Since the Clinton years the federal government and several states have been pursuing on anti-trust case against Microsoft which has been one of our country's leading producers of innovative technology. It appears that we are now faced with an opportunity to clear our courts of this case for good. I am hopeful that those in charge will cease this opportunity.

While I am not directly involved with the technology industry and am not a legal scholar, I am a consumer and taxpayer that follows current events very closely. When this case was first brought I was disappointed to learn that my own Attorney General, Carla Stovall, was dragging Kansas into this litigation. It is my belief this case should have never been brought in the first place because it serves no public good.

The theory under which this case was brought is that Microsoft was harming the consumers of their product and had established a sort of monopoly. I do not believe this theory has been borne out with substantial evidence.

What I see is a company that has put products on the market that are appreciated and purchased by consumers. Because of Microsoft's ability to provide customers with products they want, the company has experienced tremendous growth. This is not a reason to punish them! Rather, it is more proof that our system of free enterprise and competition works.

Companies like Microsoft that succeed through supplying innovative and highly demanded goods to consumers should be celebrated not torn down. It is just these types of companies that help stimulate our economy by encouraging consumer confidence, creating jobs, and growing their industry. When the government steps in to flex its regulatory muscle real harm is done. Again, the settlement on the table provides those in charge with an opportunity to end a case that has been harmful to the public good. I urge you to take that opportunity and give your approval to the settlement.

Thank you,

Sharla S. Poage

VIA FACSIMILE (202) 616–9937

Dear Ms. Hesse:

One of the reasons the American economy is in such a weakened state is the flaws in our system. Specifically, special interests have too much power in Washington DC. The Microsoft case is a perfect example.

Microsoft's competitors don't want to compete against Microsoft in the marketplace, They spend their money on politicians rather than research and development—next thing you know—Microsoft is facing antitrust investigation.

US v. Microsoft has been competitor driven since the day it began. Those opposed to the settlement are still promoting their self interest over the interests of the rest of the country.

Sincerely,

Pete Whittet

To Whom It May Concern:

It is my understanding that the Justice Department is seeking input, regarding the proposed settlement in the Microsoft lawsuit.

As a small business owner, I understand competition and know that it is healthy for our economy. I use Microsoft products daily in my business and they have been a great help to me. They have allowed me to better serve my customers clients, to manage our business and to actually expand. Given the state of our economy right now, we should do everything possible to spur growth, not hinder it.

There has been no consumer harm as a result of any actions taken by Microsoft. Microsoft's innovations have, in fact, have helped many small businesses like mine grow.

It is also my understanding that an additional benefit to settling the suit is the proposal to donate about 200,000 computers to the public schools. It think this is a great idea. We need workers who are computer literate.

I would suggest that we end this action and approve the settlement.

Sincerely yours,

John J. DiPietro

January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am pleased that a settlement has been proposed to Microsoft by the U.S. Department of Justice. This settlement is long overdue. I understand that we are currently in a sixty-day period for comments on what is in the best interest of the public. In light of this, I am taking this opportunity to express my views on the matter.

Microsoft opponents persistently seek to give the impression that Microsoft has gotten away with easy terms. I beg to differ! If the millions of dollars that they had to spend in their defense is no indication the very opposite is true, then look at all the concessions they have agreed to make. For example, Microsoft has agreed to grant their competitors licensure to their intellectual property. Competitors will now also have the assurance of interoperability within the Windows environment because Microsoft has agreed to disclose Windows protocols. Future versions of Windows will also allow users and computer makers to reconfigure Windows to remove potions of the operating system and substitute competing alternatives.

In my estimation, Microsoft obvious willingness to cooperate with these terms should be enough to abate the concerns of the dissatisfied states. hope that your decision will bring this matter well-needed closure.

Sincerely,

Frank Lempert

Dear Mr. Ashcroft:

I want to take a moment to express my support for the settlement that was reached between Microsoft and the Department of Justice in November. I believe it is time to move forward and stop this unnecessary litigation.

I believe Microsoft has agreed to many tough concessions to reach this agreement. One such concession is that Microsoft has agreed to grant computer makers broad new rights to configure Windows. This should satisfy those consumers who felt they were locked into only using Microsoft products as it allows them to buy competing products if they so desire.

This agreement will allow Microsoft to return their focus solely to producing the next generation of innovations. Microsoft can turn its attention to the competitive environment instead of the legal environment. I hope your support of this consumer-friendly settlement will continue. Let's remember that this country was founded on competitive ideas.

Sincerely,
Verne Kaminski

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I express my fullest support regarding the Microsoft settlement. This settlement should bring any pending issues against Microsoft to closure. Microsoft did not deserve to go through such a long litigation.

The terms in the settlement are very beneficial to software developers. As a writer of database programs in the chemical engineering field I have personally enjoyed using Microsoft programs. The only real concern Z have is the recent allegations from AOL/TIME Warner (Netscape) about the Internet web browsers. I am confident the U.S. Government will try and resolve their issues. Overall, the settlement should reap big benefits for businesses and individual consumers.

Because it allows computer-makers the flexibility to configure Windows as well as the ability to promote non-Microsoft software programs that compete with programs included within Windows.

Sincerely,
Stephen Erickson

Washington, DC 20530

Dear Mr. Ashcroft:

I am writing you today to inform you of my position in regards to the Microsoft antitrust dispute. I fully support Microsoft and the settlement that was reached in November, and I am anxiously waiting for an end to this dispute.

The settlement that was reached in November is fair and reasonable. Microsoft has agreed to all provisions, including provisions that extend well beyond the products and procedures that were actually at issue in the suit, for the sake of wrapping up the suit, Microsoft is willing to license its Windows operating system products to the 20 largest computer makers on identical terms and conditions, including price. Microsoft has also agreed to design future versions of Windows, beginning with an interim release of Windows XP, to provide a mechanism to make it easy for computer makers, consumers, and software developers to promote non- Microsoft software within Windows.

This settlement will serve in the best public interest. I strongly urge you to support this settlement so consumers and the economy can feel the positive effects of allowing Microsoft to get back to business as usual. Thank you for your support.

I actually believe Microsoft did no wrong.

Sincerely,

MTC–00030503

59 Laurel Avenue

January 24, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

We would like to use this opportunity of public comment to give our support for the settlement reached between Microsoft and the Department of Justice. The settlement is good for our country and gives each side the chance to move forward.

The terms of the settlement are comprehensive and mandate many changes in Microsoft's past business practices. For example, Microsoft has agreed to grant computer makers broad new rights to configure Windows so as to promote non-Microsoft software programs that compete with programs included within Windows. This gives computer makers the ability to replace access to features of Windows with access to non-Microsoft so—re such as programs from AOL Time Warner. Finally, the agreement calls for the creation of Technical Committee to supervise Microsoft's compliance with their responsibilities.

This case has gone on for too long and neither side wins with continued litigation. The settlement gives Microsoft the opportunity to focus on innovation while the federal government can focus dwindling resources on stimulating the economy.

Sincerely,

MTC–00030504

January 21, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I cannot see how a case was ever brought against Microsoft in the first place. They are not a monopoly; they simply make the product that most people enjoy. That's why I was so pleased when a settlement has finally reached in November.

I was sorry, however, that Microsoft had to give up so much in order for the Justice Department to agree to end its suit. Microsoft is being asked to hand over software, that it has taken time and hard work to create, to its competitors for free. They even have to make sure that subsequent versions of Windows are more geared toward non-Microsoft products.

I feel that while this is all a bit extreme, it would be worth it in order to put an end to this case. Both Microsoft and the Justice Department have more important issues to worry about right now, and it would be good to have them free to do so.

Sincerely,

MTC–00030505

Washington, DC 20530

Dear Mr. Ashcroft,

It has become apparent that some anti-Microsoft forces are attempting to derail the settlement that was reached in the antitrust case this November. It would be very unfortunate if the case was resumed, and Microsoft was forced to continue wasting time and money on this case.

A settlement was agreed to by all sides, and approved by a federal judge. Sadly, forces opposed to the settlement are trying to interfere and have this case resuscitated. Many want to see Microsoft face injury in the court because they are unable to compete with Microsoft in the free market.

It is unfortunate that this opposition exists because the settlement is beneficial to all, including Microsoft's rivals. The settlement give non-Microsoft companies the ability to view and use Microsoft code to create better software. It also will make it very simple for non-Microsoft software to be placed on Microsoft operating systems. Undoubtedly, it is time to conclude this case, and promote competition in the market, not the courts.

Sincerely,
Jim Carleton

Dear Attorney General Ashcroft:

I am writing to give my support to the recent settlement between the Department of Justice and Microsoft The proposed agreement was a long time coming, and we are only' days away from the end of the comment period. ! hope that once everything is all said and cone, the settlement is approved and implemented as soon as possible.

It is time to move on The Department of Justice has accomplished its goal of making Microsoft. technology more accessible to competing companies Microsoft has agreed to a number of changes opening up its codes and books to other manufacturers. The Justice Department has held Microsoft's ''feet to the fire'' long enough, and the settlement even goes as far as having a ''Big Brother'' feel to it. A three-member committee of software engineering experts has been assembled and will monitor Microsoft's compliance to the agreement. Please support the proposed agreement between the Department of Justice and Microsoft as I do, and approve it with haste Thank you.

Sincerely,
David Delory

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I have been following the Microsoft antitrust case in the federal courts since its inception three years ago. Last November, a settlement was proposed, and it is curtly pending approval. This bodes well for the economy, which has been steadily declining since the case began.

Unfortunately, Microsoft's opponents are not happy that Microsoft will emerge intact in this settlement, and are striving both to undermine agreement of the settlement and to bring additional litigation against Microsoft.

Further litigation will serve no one. Microsoft has agreed to make the necessary adjustments in policy and product to prevent further antitrust violations; no further action is necessary. The settlement reached late last year is fair both to Microsoft and its competitors. Microsoft will be allowed to retain control over the bulk of its operations, but will be required to restrict some other practices deemed monopolistic and alter certain products in order to facilitate fair competition.

For example, Microsoft has agreed not to retaliate if software is introduced into the market that directly competes with Microsoft software. Microsoft also plans to allow computer makers broad fights to reconfigure Windows to their own specifications using non-Microsoft software, and enable them to do so by reformatting upcoming versions of Windows in order to support non-Microsoft programs.

I believe the settlement is fair and that no additional measures need to be taken against Microsoft on the federal level. I urge you to support finalization of the settlement.

Sincerely,
Darryl LaRocque

Dear Mr. Ashcroft:

We have taken this opportunity to write in and express our opinion of the antitrust suit against the Microsoft Corporation. We feel that this suit has been bogged down in the judicial system for long enough and it is time for the government to allow Microsoft to get back to work. It needs to continue setting the standard in the worldwide technology industry.

It is our opinion that this suit has pulled the American economy down, especially in the vital IT sector. The bottom line is, Microsoft is one of this nation's largest employers, and the perpetuation of this case during these times of economic uncertainty is imprudent. Microsoft is and always has been a great company. They have given millions of dollars to charity and have changed the way we view computers forever. Microsoft made technology accessible to Americans in a form that was usable. Without this company, there would have been no ''P.C. revolution.'' We believe that the terms of this settlement will ensure that there are no further violations of antitrust committed by the company, especially with the establishment of a technical committee which will monitor Microsoft and prevent them front any future violations.

We are please that an end to this litigation is in sight. Please continue to support the settlement and the future of free enterprise in this nation.

Sincerely,
Robert Rude

Dear Mr. Ashcroft:

Please do whatever you can to help expedite a settlement of the Microsoft anti-trust case. This nearly four-year-old case has produced little, but controversy. There is now, as you know, a settlement agreement that has been preliminarily accepted by the major parties and the court. This agreement fairly balances the concerns of the parties and offers a fair solution to the dispute. In return for retaining its corporate integrity, Microsoft has agreed to adopt certain practices, which will render it more vulnerable to its competitors. It has, in fact, agreed to help raise its competitors to its own level of play. For example, Microsoft will now invite competition by configuring its Windows platforms to easily incorporate non-Windows software. Microsoft will now offer computer manufacturers licensing agreements without a condition of Windows software exclusivity. Microsoft has even promised to disclose to competitors certain internal Windows interfaces. In other words, Microsoft has agreed to encourage the industry to catch up with itself.

These concessions and this change in philosophy will inure to the benefit of the industry and the public. Please support this settlement.

Sincerely,
Jerry Stark

January 24, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. A settlement is available and the terms are fair, Microsoft has agreed to a wide rang of concession in order to settle. I would like to see the government accept the settlement and allow Microsoft and the industry to move on.

Many people think that Microsoft has gotten off easy, in fact they have not. The settlement was arrived at after extensive negotiations with a court-appointed mediator. Microsoft has agreed to terms that extend well beyond the products and procedures that were actually at issue in the suit. To make sure that Microsoft complies with the settlement a technical committee will be set up to monitor Microsoft's compliance. The settlement that was reached is fair and it is guaranteed to be followed.

Microsoft and the industry need to move forward, and in order to move forward this issue needs to be put in the past. Please accept the Microsoft antitrust settlement.

Sincerely,

MTC–00030512

Justice Department:

Three years of litigation is enough. Dragging out this legal battle further will only benefit a few.

The aggressive lobbying campaign to undermine the settlement is only serving to line the pockets of wealthy competitors, lawyers and special interest bigwigs. Not one new product that helps consumers will be brought to the marketplace.

I strongly urge the U.S. Department of Justice to end this wasteful investigation. The proposed settlement offers a reasonable compromise. It is time to move on with the agreed settlement negotiated and allow businesses who wish to compete to compe??. Those who can't muster up the competitive edge need to either merge or get out of the business arena

Sincerely
Ben Jones

Dear Mr. Ashcroft:

I am in favor of the Microsoft antitrust settlement agreement. The terms of the settlement agreement are more than fair. I urge the court to approve the agreement. Among other things, Microsoft has agreed to grant computer makers many new rights. The manufacturers will be able to remove various features of Windows. such as Microsoft's web browser. Internet Explorer, and replace them with browsers made by Microsoft's competitors. This will result in giving consumers more choice when it comes to software they purchase. Microsoft has also agreed not to take retaliatory action against those who promote or develop software that competes with Windows.

The settlement agreement will help level the playing field among the software companies. Litigating this case further will not prove to be as beneficial to consumers as this agreement will be.

Sincerely,
Dorothy Klughers

Dear Mr. Ashcroft:

I am writing to strongly urge you to support the current settlement between Microsoft and the Department of Justice. I firmly believe that there should be no further action against Microsoft regarding the proposed negotiated settlement A/though the litigation should have never brought forth several yearn ago, this current settlement is the result of a fair, judicious and reasonable process that should be respected.

This settlement is unique in that it has the necessary enforcement powers to ensure that the terms of the agreement are abided by. The agreement contains a provision that allows private companies such as SUN Microsystems, Apple and IBM to sue Microsoft should the company not follow the terms of the settlement. Additionally, the agreement requires Microsoft to submit to a government technical oversight committee and to change their business, licensing and marketing practices to foster greater competition. This settlement signals the end of a long and drawn out process and should be respected.

With all that is going on in the world, a faltering economy, and more significant national priorities I hope that you will help support this settlement in its current state. It is a shame that a company like Microsoft who builds a superior product and is a major contributor to the economy would be consistently hounded by a government that is supposed to support free enterprise.

Sincerely,
Allen Sisson

January 25, 2002
Dear Mr. Ashcroft:

I am in support of Microsoft and its right to practice ethical business in a free market economy. I am also in support of the proposed antitrust settlement between them and the Department of Justice. I believe this is a fair resolution to this lawsuit,

Microsoft is disclosing much of the features that give it a competitive edge. This includes disclosure of interfaces that are internal to Windows'' operating system, and allowing software developers to develop competitive software. The release of this information should be enough to satisfy the government.

I urge you to support this settlement and conclude this case. I would feel more comfortable with the Government focusing its efforts on pursuing more suspicious and illegal companies.

Thank you.

Washington, DC 20530–0001
Dear Mr. Ashcroft:

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. It disappoints me that the government has in the past chosen to harass a company like Microsoft. Microsoft has added such a great economic contribution to this country. The contribution extends from Washington State all the way to Washington, DC Microsoft is a core holding of most company retirement plans, 401Ks, IRAs and mutual funds throughout America Therefore it is in the best interests of almost every American to get this case settled.

In order to settle this issue Microsoft has agreed to many terms. It has agreed to design future versions of Windows to be more compatible with non-Microsoft soft-ware. It has also agreed to change several aspects of the way it does business with computer makers. Microsoft did not get off easy, there are pages of terms agreed to in addition to these two.

Microsoft needs to be able to get back to business. This suit has bogged down the company for over three years now. For the good of American's everywhere ! urge you to accept the Microsoft antitrust settlement

Respectfully
J. Bradford Borland

Washington, DC 20530–0001
Dear Mr. Asberoft:

I am writing in support of the settlement that you have reached with Microsoft in November. I know that, while not yet finalized, this settlement brings the promise of an end! to the Microsoft lawsuit at the federal level.

I hope that everyone will see just how much Microsoft is willing to sacrifice in order to bring about an end to this settlement. By offering its proprietary code and the rights that go along with it, Microsoft is forgoing billions in creative profits. And that provision is merely a small portion of the overall settlement.

This settlement should be agreeable to everyone and I feel that the states that refuse to settle are only trying to pad their own budgets like they did with the tobacco companies. But this time, they are attacking a company that is vital to the average American and the economy. Hopefully, with this settlement finalized, they will fall in line with the rest of America.

Sincerely,
Jim Engel

January 26, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft:

I would like to point out some of my views regarding the Microsoft antitrust case. I do not agree with every decision that Microsoft has made, but understand that business is business. I feel that there was merit behind many of the issues that brought about this case, but that was three years and countless taxpayers'' dollars ago. I feel that the settlement agreement is the best way to close this case, and ensure that it never reaches the federal level again.

Although the settlement calls for concessions, Microsoft has agreed in an effort to end this case sooner rather than later. Microsoft has agreed to change the way it markets, licenses, and develops its software, as well as the way it deals with independent vendors. Microsoft Ins agreed to stop retaliating against those that promote or design non-Microsoft programs, and computer makers will be allowed to configure Windows so as to promote those programs.

It appears to me that Microsoft has made the necessary concessions, and now we must move our focus to the states that are pursuing further litigation. I fear that since the tobacco settlements, states have seen corporate lawsuits as additional forms of state revenue. I hope you are Wing to recognize when states are using consumer protection as a veil for return on investment. As long as Microsoft is willing to give up some of its market share and competitive advantage, there will always be those requesting more. I hope you will do everything in your power to attempt to close this case as soon as possible, or we might be back in a few years trying to protect Microsoft.

Sincerely,
Catherine McNamara

Dear Mr. Ashcroft:

I am very much in favor of the Microsoft antitrust case settlement agreement. The remedies provided in it are good for everyone involved, and I would not like to see the case dragged on through the courts any further.

The terms of the settlement agreement are quite reasonable by any standards. Once the agreement is approved, Microsoft will be helping the competition by leveling the playing field in the high-tech industry. For example, Microsoft has agreed to make it easier for consumers to run other software programs simultaneously with the Windows operating system. They also agreed not to retaliate against retailers that promote software that competes with Windows. Additionally, Microsoft has agreed to implement a uniform price list for the top 20 largest computer manufacturers. Microsoft's competitors should be satisfied with these types of concessions.

I appreciate your efforts toward settling this case. Thank you.

Sincerely,
Ron Beman

Dear Mr. Ashcroft:

I would like to take a moment to express my opinions regarding the Microsoft antitrust case. I think I might feel differently about Microsoft if it had become powerful by malicious intent, but it achieved its position because it made a better mousetrap and sold it at the lowest price. I am a supporter and avid user of Microsoft products, and would like to see this case put behind us. Although the settlement may reach further than Microsoft may have wished, it realizes that settling the case sooner, is better than later. In order to do this, it has agreed to concessions that make antitrust precedent. Microsoft has granted broad new rights to computer makers, software engineers, and to consumers. It has allowed them to configure Windows so as to promote non-Microsoft programs that compete with the programs already included within. Also, Microsoft has agreed to document and disclose various interfaces within its Windows operating system. This boils down to Microsoft opening its doors to the competition, and allowing them to use its invention to promote their own competing products. Imagine if Nike put Reebok logos on its shoes, or if Ford built cars with Toyota engines. It seems ridiculous when considering products that we are more familiar with, bat nevertheless, Microsoft has a agreed to these concessions to speed a conclusion. We should consider the very foundations of free enterprise and competition and realize that the longer this case precedes, the greater the risk that we may cause irreparable damage to the IT industry, and the economy.

Sincerely,
Berjamin Friedman

Dear Mr. Ashcroft:

I am writing you today to express to opinion in regards to the Microsoft anti- trust dispute. I support Microsoft in this dispute, and I favor the settlement reached in November. This settlement is complete and thorough, and I am anxious to see this dispute resolved permanently. Microsoft has agreed to carry out provisions in this agreement. such as: designing future versions of Windows to provide a mechanism to make it easy for computer makers, consumers, and software developers to promote non-Microsoft software within Windows. The mechanism will make it easy to add or remove access to features built into Windows or to non- Microsoft software. Microsel5 has pledged to create more opportunities for competing companies. ''

Microsoft is a company that delivers quality product to the marketplace. I have used Microsoft's products for years now, and I hope I will be able to enjoy these products for years to come. Please do your part to stop litigation against Microsoft. Thank you for your support.

Sincerely

950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear General Ashcroft:

I am writing, as a long time admirer of yours as well as a small shareholder in Microsoft, to voice my support for the federal settlement with Microsoft. I believe that Microsoft has earned a position of leadership in the technology sector through its focus on excellence. It has consistently and continually provided its customers with innovative products. I feel that it is improper to stifle creativity by permitting those less innovative companies to go to the federal government to file lawsuits as a substitute for their own lack of imagination, and I therefore believe that the case against Microsoft is without merit.

The time has come to finally resolve this lawsuit to let Micorsoft concentrate on doing what they do best—developing innovative products. Microsoft has made plenty of concessions. The government should not be wasting funds on this lawsuit when we need to spend more on fighting terrorism. The third-party oversight committee which Microsoft has agreed to will keep everybody honest. Please see that the Department of Justice recognizes the importance of finalizing this settlement and does so soon.

I can't close this letter without commending you on the outstanding work you are doing on the terrorism front. May God continue to bless you, the President, and all of the others working to preserve our way of life. Cc: Senator Strom Thurmond

January 22, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I urge you as strongly as possible to settle the Microsoft antitrust case and to end the extensive and costly legal proceedings against them. I find the amount of money spent fighting the case an irresponsible use of resources, and the case should be wrapped up as quickly as possible at this point.

As an everyday computer user, I find a uniform operating system to be beneficial in my ability to smoothly operate my PC. Though some of Microsoft's tactics have been heavy-handed, there is no denying the success they have had in making programs work seamlessly with each other and creating a standard other companies have yet to match. Though they will lose some of their entrepreneurial freedom in disclosing Windows coding to competitors, it will allow Microsoft to get back to business, and to continue paving the way for innovations that benefit millions of people.

Therefore, I am in favor of settling the case as soon as possible. If our past President, Mr. Clinton had spent as much time, energy and money pursuing Bin Laden and company as he had pursuing Bill Gates and company (Microsoft), we as a nation would be in better shape. One of the main reasons I voted for President Bush was in the belief that he would do the right thing.

Sincerely,
John Sosenko

Dear Mr. Ashcroft:

I believe that the antitrust lawsuit against Microsoft has gone too far. I feel that it has been fueled by political motives and personal avarice since its conception three years ago. It is not my belief that Microsoft was guilty of antitrust violations in the first place, and finally I believe that the settlement that has been reached in this case must be accepted for the simple reason that it is the quickest way to end this case.

This settlement will require Microsoft to design all future versions of Windows to be compatible with the products of its competitors. While I believe that this is a bit harsh I would like to urge you to accept this settlement. Microsoft has agreed to the terms because it understands the importance of ending this litigation—not just for its own sake, but for the sake of the U.S. economy as well as the technology industry.

Thank you for the work that you have done in this case and for your support of this settlement.

Sincerely,
Sandra Drake

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The court should approve the Microsoft antitrust settlement. Entering into the settlement agreement will ensure Microsoft will be able to get back to focusing on developing innovative products while safeguarding against the complaints made about anticompetitive business practices. Continued prosecution of this case by the federal government is unnecessary. Microsoft has agreed to make many changes in the way it conducts its business. They agreed to design future versions of Windows in a way that will make it easier for consumers to run software made by other companies along with Windows software.

While I have not been directly impacted by this lawsuit, I have friends in the technology industry who have. Drawing out this lawsuit is not beneficial to them, or to the tech community as a whole.

Thank you for working toward a resolution of this case.

Sincerely,
John Gilstrap

Dear Mr. Ashcroft:

I want to express my support of the settlement reached between Microsoft and the Department of Justice. I do not believe the anti-trust case against Microsoft had any merit in the first place. Yet, I was pleased to hear that Microsoft and the Department of Justice had agreed to the terms of a settlement. I urge the Justice Department to enact the settlement this month.

The proposed settlement contains many stipulations that will benefit the IT industry. Microsoft has agreed to disclose the protocols and interfaces of its Windows system, which provides for the development of new software. This new software should be more compatible with the Windows system. Competing developers will clearly benefit from the disclosure of this information. Finally, everyone will benefit from this settlement. Microsoft will be allowed to return its full focus to business, and technology companies will benefit from the increased confidence in the sector. For these reasons, and many more, the Justice Department must enact the settlement.

Sincerely,

MTC–00030529

Carlotta Boyd

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am in favor of the Microsoft antitrust settlement agreement. It is in the public's best interest that this protracted litigation come to an end.

The terms of the settlement agreement are fair. Microsoft has taken appropriate steps to restore fair competition in the software industry. Microsoft has agreed to make available to its competitors the information necessary to enable servers to interoperate natively with Microsoft server operating systems. They also agreed to not to enter into contracts with third parties which would require that third party to exclusively sell Windows products. Concessions such as these will help foster competition.

I appreciate your commitment to resolving this case. Further litigation is obviously not going to accomplish anything more than running up legal expenses and creating more uncertainty in the tech world.

I support the settlement, and I look forward to the end of this case. Thank you for your time and consideration.

Sincerely,
Carlotta Boyd

Dear Attorney General Ashcroft:

Extending litigation In the Microsoft antitrust case would be a mistake. A settlement has been reached between Microsoft and the Justice Department, Our Justice Department should continue to support this settlement,

Certain spatial interests would like to see the case continue. The continuation of this case, however, will benefit no one but some special Interests. The settlement is fair and balanced. It will create more openness in the technology Industry, It allows competitors unprecedented access to Microsoft cede, In addition to the code openness, Microsoft has agreed to submit to a three person, government appointed technical oversight committee who will ensure that Microsoft is complying with the terms of the agreement.

Unquestionably the Microsoft antitrust case should be settled. Despite the wishes of some special Interests to continue with this case, It Is time for this costly and time-consuming case to and. Attorney General Ashcroft, please continue your outstanding support for the settlement.

Sincerely,
Albert Andresen

Dear Mr. Ashcroft:

I wish to express my frustration about the fact that it took the Department of Justice three years to end its costly antitrust lawsuit against Microsoft. Our tax money can be far more properly spent. The agreement they came up with is strict. It requires Microsoft to grant computer makers broad new ways to set up Windows with non-Microsoft software programs. Computer makers will now be free to remove the means by which consumers access various features of Windows. They can also replace access to those features with access to non-Microsoft software.

The big deal in this settlement, however, is that Microsoft has also agreed to disclose various interfaces for its rivals, so that they can write more effective software programs and applications. Certainly this agreement is more than fair and reasonable. The federal government should now allow the provisions of this settlement to fall in to place. No more litigation should be brought against Microsoft beyond this agreement.

Sincerely
Fran Henshaw

Washington DC 20530

Dear Mr. Ashcroft:

I am deeply disturbed by the travesty of justice caused by legal actions that have been and are icing taken against Microsoft. Microsoft, in fact, is one of the primary contributors to the success of our economy. The efficiency and productivity of our entire workforce has been dramatically increased by Microsoft's software.

Along with other companies such as Intel, Microsoft has enabled computer users to speedily communicate and handle complicated problems efficiently on PCs and network by replacing numerous cumbersome, complicated and slow operating systems with Windows and other products that are amazingly effective and economical.

Before Microsoft s software was available, only engineers and sophisticated mathematicians were able to program and operate the massive computers in use, Now anyone who can read and write can expertly operate their PCs and business networks.

As a reward for this massive contribution to oar economy and improvement in the work forces efficiency, Microsoft has been severely penalized by actions brought by competitors who could not develop competitive systems and turned instead to the government in an attempt to limit Microsoft's effectiveness.

Even though the proposed settlement is severe, Microsoft has agreed to make future programs easier for other companies to release their products. Windows XP will have a device that enables other companies to add or remove computer attributes built into Windows, so if anyone comes up with better programs, (which I doubt will happen) these programs can be easily introduced into new computers.

Yet some greedy State Attorney Generals are trying to exceed the already unjust penalties proposed for Microsoft and AOL is bringing a lawsuit which can only lead to more unnecessary and unproductive litigation to the detriment of all except attorneys.

Let's conclude this hassle and get on with making America more efficient.

R. Milton Laird
cc. Senator Dianne Feinstein

Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am writing in support of settling the Microsoft antitrust case according to the settlement agreement negotiated in November. The case should never have been brought in the first place and has resulted in enormous expense to taxpayers and a great waste of everyone's time. In the settlement agreement Microsoft has made a number of concessions, including the implementation of a uniform price list for the largest computer manufacturers, and an agreement not to take retaliatory action against competing software companies. With these concessions Microsoft has gone far to level the playing field, giving these companies a meaningful opportunity to compete with Windows and with the applications Microsoft writes for it. Microsoft has earned its dominant position because they earned it in the hurly-burly of the market-place. It ill becomes giving sore losers the opportunity to bring down a company, especially one so important in our ''new economy'', simply because of its success. It would be better for all parties to see this case resolved. The November settlement agreement is an appropriate way to put an end to at least a portion of this needless litigation.

With best wishes.

Sincerely,

Haskell Rosenberg

Washington, DC 20530–0001

Dear Mr. Ashcroft,

I am writing to you to express my support for Microsoft and the sttlement in the antitrust case. This case has dragged on for long enough and it is time to conclude these legal proceedings. Microsoft has offered generous terms in the settlement: the licensing of intellectual property, [illegible] on Windows for rival software developers free reign for computer makes in relation to what software they install, and a uniform price for the top 20 computer makes to purchase Microsoft products. These are only a few of the concessions Microsoft has offered in the November 2001 settlement.

Microsoft is a great company that has revolutionized the technology industry. It is time [illegible] move forward once again and continue to make fine products without the threat of a lawsuit hanging over them. I strongly urge you to accept this settlement because it is fair to all parties involved.

[illegible]

Judge Kollar Kotelly
Antitrust Division
U.S. Department of Justice
601 D Street, NW, Suite 1200
Washington, DC 20530
Attention: Renata Hesse

Dear Judge Kotelly:

After years in the courtroom and millions of dollars of taxpayer money spent, the Department of Justice has reached a proposed settlement with Microsoft, I am aware that you are considering the merits of this settlement and that the law allows for comments from the general public on this matter. I am grateful for this opportunity to participate in this way.

When news of this settlement was first announced I was very pleased to know this case seemed to be drawing to a dose, While I have never seen the merit of the 9overnment's case in this matter, my greatest concern was the clear lack of regard for the financial impact this case would have on our national economy.

Since this case started over $30 million dollars of taxpayer money has been spent pursuing this boondoggle, This is unacceptable at a time when states like mine are facing real budget constraints and the federal government should be placing its resources in areas that truly protect the interests of Americans.

At this time of economic recession and heightened budget concerns this proposed settlement is the best solution. I am hopeful you will agree to support this proposed settlement.

Dear Mr. Ashcroft:

I am writing to you today to express my support of the settlement that was reached between Microsoft and the Department of Justice. While I ardently question the merits of this case, I was pleased to hear that a resolution may finally be in sight given the three-month mediation process that has already ensued. The enactment of this settlement would be beneficial. I urge the Justice Department to enact the settlement and suppress any further action against Microsoft. Some people have made the mistake of seeing Shunt's work as a load of rubbish about railway timetables.

Microsoft has done more for this country under the leadership of Bill Gates than any many other entrepreneurs in American history. Further, Microsoft, as a corporation, has gone above and beyond the scope of the original litigation in an attempt to resolve this issue. Microsoft has agreed to disclose the internal interfaces of the Windows system. This is a first in any antitrust settlement.

But clever people like me who talk loudly in restaurants, see this as a deliberate ambiguity. A plea for justice in a mechanized society.

I would hope that the Justice Department recognizes the immense benefits of enacting this settlement and proceeds accordingly at the end of the month. When Shunt says the 8:15 from Paddington he really means the 8:17 from Paddington. The places are the same, only the time is altered.

Washington, DC 20530

Dear Ms. Hesse:

I am writing in support of the Microsoft settlement. It is time for the federal government to stop spending millions on a lawsuit, when a reasonable settlement is at hand. This settlement, which all parties have agreed to, will put this issue to rest.

At a time when the stock market at is down and the economy is in recession, the market is looking for stability—not the uncertainty of an ongoing lawsuit against one of America's most successful companies. There are many more important issues that the government can fund—from programs for children to paying down the national debt.

The consent decree is a fair compromise. Please support it. Thank you.

Sincerely,

Ka by Yoshihara

President

Dear Ms. Hesse:

I am writing in support of the Microsoft settlement. The time has come for the federal government to jet its spending prior straight. Instead of wasting millions o?? dollars on a lawsuit that will do??thing for the consumer except make an already shaky economy worse, the time has come to and the ch??ade.

By supporting the co??ent degree, you will put the issue behind us and help refocus the spending priorities of the administ??ation. Hopefully, the consumer backlash?? this west??ful spending will in??cause this administration to focus its effects on important priorities such as working men and women, programs for our nation's youth and paying down the national debt. The first step, ??owever, is to avoid wasting the millions of dollars fun??ed into it is laws it that could be better spent almost anywhere else.

Thank you.

Sincerely,

Bob H??ndy
Director, Region 10

Des Ms. Hesse:

I urge the Department of Justice to end the class action lawsuits against Microsoft. The millions of dollars being spent on this lawsuit would offer more of a benefit to the public if they were spent on programs for youth it our communities.

There is a severe lack of funding for mentoring programs, after-school activities, sponsor programs, summer reading programs, gang violence prevention, school facilities monies, and many other important youth-serving programs.

Children are the future for this great country. Please, help to redirect the money that is being wasted on a class action lawsuit this provides no benefit to the consumer, to programs that will make a positive difference in the lives of our children. Please support the settlement.

Sincerely,
Harold P. [illegibel]

Dear Ms. Hesse:

I was a dot-tom victim. My previous employer was partially funded by Microsoft. It was a new and amazing telecommunications concept.

When we went back to Microsoft for more funds in late 1999, they refused on the grounds that the Anti-trust lawsuit would make it more difficult to move investments into the telecommunications space. They feared what the media and the courts might say.

I know that the settlement can't bring back my failed dot-corn. But ending a three-year lawsuit that has cost Microsoft and the Government millions will allow everyone to get back to work,

That's just what our economy needs right now.

Thank you,
David Mires

Dear Ms. Hesse:

Millions of average Americans like myself have invested in Microsoft; many directly, even more through their pension funds. We've witnessed with alarm your office's case against the company cause dramatic flux in the stock market. All investors, not just those holding Microsoft shares, have been hurt by the general downturn in the market.

Speaking of ''markets,'' in my view it was only an extremely narrow, and unrealistic definition of the ''operating-system market'' that allowed the judge to conclude that Microsoft was ''monopolizing.'' Microsoft is big—it shipped product to 100 million people just in the last year—but this is because Americans, and many people overseas, have made Windows the operating system of choice, not because there is no competition, or any illegal restraint of trade. The fact that there are other competing operating systems such as Apple's Macintosh platform, and the Linux share-ware platform seems to have been lost.

All high-tech companies live and die by guarding the make-up of their key intellectual products, particularly software. Yet the proposed remedy that Microsoft, and of course the government, agreed upon would force the company to share such information with its competitors. Although this may trample the heart of commercial and intellectual property law in the country with untold harm done not just to this one company, but also to an entire sector of our economy, Microsoft appears to have agreed to it in an effort to, in the currently popular phrase, ''move on.'' It's important we let the high-tech sector of the American economy continue to increase the standard of living of the average American to levels never before seen in history If Microsoft's competitors and the government act like the greedy persons who killed ''the goose that laid the golden eggs,'' our economy is likely to end up as dead as the goose did in the fairy tale. It's time to ''close the book'' on this case by approving the proposed settlement.

Sincerely,
Dr. Don Racheter, President

Dear Attorney Hesse:

I am writing to contribute public comment in the case of U.S. v Microsoft. It is time for the government to stop spending time and money on the Microsoft case.

Millions of dollars have already been spent arriving at the current settlement. The settlement should allow both Microsoft and its competitors to be productive. It is unfortunate that individual companies have tied up the government's time on this issue, but the reality is that they have, We should recognize it and move on.

Microsoft has contributed greatly to the technology industry and the economy. In this time of recession and national insecurity we need companies like Microsoft to help pull the country out of difficult economic times and continue to lead the world in technological advances. As an elected official, I work hard to make sure that taxpayer dollars are spent wisely and in areas that make a positive difference in peoples lives. I urge you to do the same and end this needless spending spree.

Please accept this letter as support of the Microsoft settlement. There are many other important issues facing our country at this time. It would be in everyone's best interest if the government spent our money and time dealing with these rather than Microsoft.

Sincerely,
Jacqueline Bartol, DVM

January 27, 2002

Dear Mr. Ashcroft:

The reason for this letter is because I am interested in American business, and I am also interested in having the stock market make a comeback. With that said, the settlement between Microsoft is good for two reasons. First, the absurd antitrust suit is finally over. Second, Microsoft can now devote all of its resources to bringing new and advanced products to the market instead of to wasting time in court.

Better products in the marketplace will result boost the ailing tech sector. The litigation against Microsoft started the economic downturn, and now we are in a recession. While all of this was happening, Microsoft's competitors were lobbying as hard as they could to keep Microsoft in court. Innovation was stifled. Who cares how much money Bill Gates makes? I consider myself successful, and if he makes more money than me, fine. The more money people make, the stronger the economy. The one good thing that came out of the settlement is that Microsoft will not be able to retaliate against companies who ship software that competes with Windows. This will encourage competition and benefit the economy.

Although there should have never been a suit in the first place, I am in support of anything that will put an end to the litigation.

Sincerely,
Paul Dow Dawson

Dear Mr, Ashcroft:

The Microsoft antitrust case has dragged through the federal courts for nearly four years now last year, a settlement was reached between Microsoft and the Dep??mont of Justice, and that se??tlemem is currently pending, in the federal courts Unfor??naiel Microsoft's opponents are currently seeking to undermine the settlement and bring additional litigation against the Microsoft Corporation in the federal corals. ??urther sail would be a waste of time and money, and I think it is in the best interest of the public to finalize the settlement, rather than allow the federal courts to become the playground for personal vendettas to be hashed out.

The settlement is by no means unfair, especially to Microsoft's competitors In fact in the interest of wrapping up the case, Microsoft has agreed to terms and conditions that extend to aspects of the corporation that were not found to be in violation of antitrust laws. In other words, the settlement represents generosity on Microsoft's part Microsoft has agreed to refrain from retaliating against computer makers who introduce software into the market flint directly competes with Microsoft technology. Microsoft has also agreed to license the Windows operating system to twenty of the largest computer makers on identical terms, including price. I do not believe that, with a perfectly reasonable settlement available, further litigation is necessary. Microsoft has paid its debt to society and it is time to move on. I ask you to support the finalization of the settlement as soon as possible.

Sincerely,
Helen Tester

Dear Mr. Ashcroft:

Now that the Department of Justice has reached an antitrust agreement with Microsoft, what's next? Will this matter get dragged on for another three years, leaving the technology sector in a major recession?

Microsoft has been more than willing to settle this matter. They have agreed to license their Windows operating system to the largest computer makers, with identical terms and conditions. They have also agreed to design future versions of Windows to provide a mechanism to make it easy for computer makers, consumers, and software developers to promote non-Microsoft software within Windows.

Let's end this dispute and allow economic law—supply and demand—determine how business is done. I support the settlement and look forward to the end of this case.

Sincerely,
Jordan Driks

Dear Mr. Ashcroft:

I have been an avid user of Microsoft and am happy to see the government finally reach a settlement in their antirust case against Microsoft. I feel that the settlement is fair and I just wish the whole issue were already resolved.

While I have been pretty neutral throughout the whole case, I have anxiously been awaiting an outcome. Microsoft was not wholly innocent, but that was three years ago and the concessions they make in the settlement more than cover for what was asked of them. By giving over their source code to the competition, while at the same time designing Windows to work better with outside programs, Microsoft will be helping to increase the diversity of choices for people to use in what have been predominantly Microsoft dominated areas.

In short, I would like to thank you for taking the time to read opinions like mine on this case. I feel that it is important to know how a decision of this magnitude will affect the public before finalizing it.

Sincerely,
Tom Gerhart

Dear Mr. Ashcroft:

I am writing to you today to express my support for the settlement agreement between Microsoft and the Department of Justice. After three years of litigation, the time has come to finally put this issue to rest. The settlement agreement that was reached is fair and should be quickly enacted.

The terms of the agreement indicate Microsoft's desire to resolve the antitrust dispute. Under the terms of the settlement, Microsoft will now disclose the protocols and internal interfaces of the Windows system. This will allow developers to create software that is increasingly compatible with the Windows system. Information sharing, then, should provide consumers with an increased choice in operable software. Clearly, Microsoft has agreed to disclose this information in an attempt to resolve the dispute.

Please enact the settlement at the end of January. Enough litigation has already gone through the courts.

Thank you for your time regarding this issue.

Sincerely,
H. Norris

Dear Mr. Ashcroft,

Although I believe this situation should not have arose in the first place, I wanted to write to express my support for finalizing the Microsoft settlement deal announced in November. Considering Microsoft's incredible contribution to the PC industry—offering a user-friendly, standardized software platform that has changed the world—keeping this company intact should be a priority of this legal action.

The incredible costs that have been endured by this lawsuit, from years of prior litigation to future monitoring, are a major sacrifice of taxpayer time and money. Now that Microsoft has offered guidelines to open up more competition in the industry, changing licensing agreements and design of Windows, let's end this process and move on to more important issues. Leave Windows alone, unlike the government, it works!

To further the course of breaking up a company because of competitive business practices, just because it is so successful at it, would be a major mistake and would preclude the potential opportunity for cooperation from here forward. Please approve the agreement and let the technology industry get back into position to rebound and grow in 2002. Thank you.

Yours trul??
William R. Johnson, C.R.S. G. R. I.

Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am in favor of the Microsoft antitrust case settling. I urge the court to approve the settlement agreement, and hope that no further action will be taken against Microsoft by the federal government

The terms of the settlement agreement are more than reasonable. Microsoft has agreed to make it easier for their competitors to compete with Windows technology. They have also agreed to design future versions of Windows in such a way that computer manufacturers will be able to more easily add or remove features of Windows and replace those features with non-Microsoft software. Additionally, Microsoft has agreed not to enter into contracts that would obligate third parties to exclusively sell Windows products. Concessions of this type should certainly do away with concerns of predatory business practices on Microsoft's part.

The settlement agreement is good for consumers, and is good for the technology industry as a whole. I would like to see the court approve this agreement without any further delay.

Sincerely,
Ann Rothstein

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing this letter to express my opinion on the settlement reached between the Department of Justice and Microsoft. For three years I have followed the case against Microsoft with avid interest. I'' have become increasingly annoyed with the length of the litigation process. The terms of the federal settlement are extremely fair and I believe that it should be enacted without hesitation. Any continued mediation in this case would be poor judgment by the Justice Department.

Further, the terms of the settlement include many concessions on behalf of Microsoft. The terms of the agreement call for the disclosure of protocols and internal interface designs of the Windows system. This will result in the ability for competing developers to produce software that may be more compatible with the Windows system. In addition to this Microsoft has allowed for the formation of a technical review board that is composed of outside members. This panel will ensure Microsoft's compliance with the terms of the settlement. It becomes increasingly clear that the enactment of this settlement is important. Resolution in this case will benefit the technology industries and the economy. Please enact the settlement.

Sincerely,
Kurt Buecheler

Response to the Proposed Settlement of the Microsoft Case:

I am writing because I am unhappy about the proposed settlement of the Microsoft antitrust trial. I do not wish to try to enumerate the flaws of the settlement. I think other people have done a good job of that; for instance, I approved of Daniel Kegel's petition and signed it. In addition, I feel uncomfortable saying anything that might imply that I know better than I he judge how to decide issues of law or apply them to a remedy. I am a software engineer; I don't know anything about law. The only special understanding I have is of technology.

However, the problem of the ''understanding of technology'' is an issue in this case. There has been much griping in technology circles that this settlement shows how thoroughly the legal system doesn't ''get'' technological issues. But most of this griping is just that—griping. You legal people must wonder about us: if there really is something you don't ''get,'' why can't we explain to you what it is?

For instance, recently an engineer complained to Lawrence Lessig: ''Members of the judiciary are largely unqualified to comment or judge upon issues of a technical nature, simply because their careers do not incorporate a great deal of technical knowledge, and also because they have not sought it ... My concern is that...we won't have a lot of judges with a high awareness of the intricacies involved for several years. However, the judges presently sitting are essentially creating a body of law to govern what they do not understand.'' In reply, Lessig shot back a challenge to us:

''There was a time when I thought that lawyers wouldn't do too much damage... All that has changed now ... This is, in part, because courts don't understand the technology. But I don't think it's because courts don't know how to code. I think the problem is that courts don't see the connection between certain kinds of technology and legal values. And this is because we've not done a good job in demonstrating the values built into the original architecture of eyberspace:

That the Internet embraced a set of values of freedom...that those values produced a world of innovation that otherwise would not have existed. If courts could be made to see this, then we could connect this struggle to ideals they understand.

Sometimes when I read Slashdot debates, I wonder whether you guys get this connection either... And this leads me to the greatest pessimism: If you guys don't get the importance of neutral and open platforms to innovation and creativity; if you get bogged down in 20th century debates about libertarianism and property fights; if you can't see how the .commons was critical to the .com revolution, then what do [you] expect from judges?

You guys ... built an architecture of value. Until you can begin to talk about those values, and translate them for others, courts and policy makers generally will never get it. Lessig is basically telling us we are being a bunch of inarticulate crybabies. He is right. If we want to claim the right to complain that courts do not understand us, we need to provide a ''translation of our values'' in terms that a layman can understand.

My goal in this letter is to attempt to provide such a translation, and then use it to make an analysis of the nature of the public interest in the settlement of the Microsoft trial. I am deeply involved with the society that created the values to which Lessig refers. I have spent a large part of the last eight years at the MIT Lab for Computer Science—a place whose extraordinary qualities were better characterized by another student from my floor:

[I]t is tough for most people to imagine a building where a young herd can walk out of his office on the 4th floor, argue with the founder of the free software movement (Richard Stallman), annoy the authors of the best computer science book ever written (Abelson and Sussman), walk up one floor to run a few ideas past Dave Clark, Chief Protocol Architect for the Internet from 1981–1989, and walk down two floors to talk to Tim BernersLee, developer of the World Wide Web. I know all these people; many of them feel like family to me. I know what they care about, what they hope for, what they dream about, what they fight, for, and what they fear. I never imagined that, as an MIT engineer, so much of what I would struggle with would not be the ''intricacies involved'' in the practice of engineering, but instead the problems of defining and communicating the value that technology can and can't provide to society. The engineers here are in a constant battle to prevent society from destroying the value they try to build for it: this struggle takes up so much of their energy that it is hard to think of what they do as just engineering anymore. I do not, like this: I want to simply be an engineer. I wish that you, the court, could take from us the job of defining and communicating values, so we could go back to being ordinary engineers. It is much more natural for you to take on this role, than it is for us to have it. But in order for you to do that, first we would have to explain these values to you.

I am unhappy with the proposed settlement because it shows how deeply the courts do not understand the value that engineers here are trying to build. I could pick on the specifics of the settlement terms ad infiniturn, but I feel it would be a pointless exercise, because only a basic failure of understanding of the nature of the public interest could make such a flawed settlement, seem acceptable in the first place. But if I claim that there is a basic failure of understanding, that raises a question: ''What exactly is it that I think government, officials don't understand?'' It is rather shocking that we have failed to effectively answer this question. We have told you many things: long stories of power struggles in the browser market, mind-bendingly technical analysis of the proper design of network protocols, plenty of satirical accounts of Microsoft's shady shenanigans, and many other similar things. But we never have given a simple answer to the simple question ''What is the nature of the public interest in all these matters?'' It is the goal of t, his letter to try to fill this gap. I will make my argument in a context so ordinary that it may well seem childish, but please bear with me: in my silly example, I think I can capture the essential issues at stake and then tie them back to our complex and confusing real situation.

So here is my simple picture—instead of talking vaguely about the ''old economy'' and the ''new economy,'' and about the mysterious difference between them, I want instead to talk about two ordinary household tasks: mowing the lawn and cleaning the basement. In my picture ''mowing the lawn'' will represent the old economy, and ''cleaning the basement'' will represent the new. (I warned you this would sound silly; but please hang on—it is not as dumb as it sounds). Why did I choose these particular examples? Because I think the fundamental change that we are calling ''the appearance of a new economy'' is a shift from an economy that strives to increase productivity by automating manufacturing, to one that strives to increase productivity by automating organizational tasks. The new frontier is the reorganization of supply chains and business processes to take advantage of ''information technology''—the ability of machines to do the organizational tasks that used to be handled by armies of clerks and middle managers. But this shift, is so huge, complex, and hard to picture, that I want to pull it down to earth and discuss its central principles in the context of the kind of organizational task we all are familiar with: the problem of how to bring some order to a messy basement. By way of contrast, I want to compare this task to another one we all know and love: the problem of how to tame an unruly lawn. (You might ask, how is mowing the lawn manufacturing? Well, it is manufacturing shorter grass.) Now that I have identified my representative ''industries'', I want to talk about how we can think about the nature of the ''public interest'' in the context of these tasks. As I continue this description, I hope you will see the advantages of translating our discussion to such a down-to-earth context. In this setting, it is easy to use one's ordinary intuition to understand the public interest, in a conflict. Maybe it is hard to interpret the public's interest in the ''future of an online architecture for e-business,'' but how hard is it to think about what you want for the future state of your basement? I want you to see what our conflict with Microsoft would look like if it occurred in this ordinary context.

So, to start my story, let me describe a conflict which illustrates a threat to the public interest in the context of the ''old economy.'' Suppose I need my lawn mowed, and the kid who I usually hire to push my clunky old gas mower around the yard, instead shows up to work with a shiny, spiffy new lawnmower of his very own. He has broken his piggy bank to buy it: he is very proud of himself and shows it off to everyone on the block. His beautiful new lawnmower mows the lawn twice as fast as the old one did. As a result, he can mow twice as many lawns in the same time. Pretty soon he is raking in the cash. He is making so much money, he can afford to lower his lawn-mowing rates, so he begins to steal business from the other lawn-mowing kids on the block. The other kids get upset. ''He's cheating!'' they cry. They gang up on him, beat him up, and smash his new lawnmower. The original kid, recovering in the hospital, appeals to the adults on the block for justice. ''The other kids were jealous of my success!'' he cries. ''They had no right to hurt, me or my lawnmower. You should protect me so that nothing like this ever can happen again!''

Should the adults listen to him? Absolutely. Not only was what happened to the kid unfair, it also damaged the public interest. When a kid can mow lawns twice as fast for less money, everyone on the block benefits. He put considerable investment and risk into obtaining his lawnmower, and it provided a benefit for everyone. Yes, he also

made a lot of money from his new lawnmower, and maybe he was a little obnoxious about showing it off, but his good fortune was good fortune for everyone. Therefore, his investment deserved to be protected from the destructive jealousy of the other kids. The rich kid should be protected, and the jealous kids should be punished.

Now, to continue, let me introduce another story of a situation that causes harm to the public interest, this time in the context of the ''new economy.'' Suppose I decide to hire a kid to help me clean my basement. This kid works very hard, sorting all the stuff in the basement, building appropriate-sized boxes for various categories of stuff, and carefully labelling all the boxes so it is easy to find things later. His hard work is useful to me: it helps me find tilings more easily. But, there is trouble in my little paradise. One day, my little helper cannot come, so I hire another kid to help out. But this kid is different. He is careless: he puts things in the wrong boxes, and mislabels the boxes. Worse, he is devious: he discovers that if he puts things in the wrong boxes deliberately, and labels the boxes in a scrawl only he can understand, then he can make extra money off me, because I will need his help to be able to find things again. Worse still, he is ambitious: he realizes that if he puts the potting soil in a place where only he can find it, then pretty soon I will be forced to ask him to take charge of organizing the gardening shed as well. Thus he can double the amount of money he can make off me, and there is nothing I can do about it.

So how do we think about the ''nature of the public interest'' in this situation? Well, in order to answer that question, it is important to ask first ''what is the result I am trying to achieve?'' If I hire someone to clean my basement, the result I want is a well-organized basement, a basement in which it is easy to find things. The kid who worked hard to sort things accurately and label the boxes clearly helped me achieve my goal. The kid who deliberately mislabeled the boxes and misplaced the potting soil did not help me achieve my goal. He hurt my interests, not merely because he over-charged me, took over my basement, and hatched devious designs on my gardening shed, but much more simply, because he failed to deliver to me the basic effect I wanted and needed. I needed a basement where I can find things easily: he didn't give it to me. By contrast, the first kid, the one who built me a good system of well-organized; wen-labelled boxes, did give me the effect I needed. The first kid's actions served the public interest; the second kid's did not.

This observation is the whole secret to understanding the ''architecture of value'' of which Lessig spoke. What is an ''architecture of value?'' It is nothing fancy: one can think of it as an information architecture that would remind one of a well-organized basement. This architecture is valuable because the careful sorting and clear labels make it easier to find things. There is nothing terribly subtle or difficult about this idea. The only really deep concept here is the observation that it is useful to ask the question: ''what is the fundamental goal we are trying to achieve?'' We are entering into an ''organization economy,'' and in such an economy, we want to achieve the goal of being well-organized. These central value of such an economy is no more complicated than the admonition we have all heard a thousand times from our mothers: ''it, is nice to put things away where they belong so it will be easier to find them again later.'' But if it is all so simple, why does it seem so hard? It seems hard because it IS hard, but it is not hard because anything about the situation is complicated. It is hard for quite another reason, which I want to illustrate using a third story. This, my final story, is a classic tragedy.

Let us suppose that the first kid I hired to clean my basement returns from his vacation and ventures downstairs to view the state of his handiwork. When he sees what the second kid has done, words cannot describe what he feels at the sight of the ruin of all his hard work. He grabs the second kid by his shirt collar and drags him to me to face judgment. ''He's cheating!'' he cries. (He doesn't say much else: unfortunately this first kid—though a good, honest worker—is not exactly the articulate type.) The second kid replies: ''He is just, complaining because he is jealous of my success! He has no right to handle me this way or damage the valuable ''intellectual property'' I have created. You should protect me so that nobody can ever treat me like this again!'' Now when I hear these words, I remember my earlier trauma when I witnessed the kid with the new lawnmower get beaten up by a jealous gang. I remember how I pledged to the kid on his hospital bed that nothing like that would ever be allowed to happen again. This recollection plunges me into a state of fear and confusion. The first kid comes to me and begs for the right to re-label the boxes correctly: it is hard to deny such a heartfelt request. On the other hand, I made a solemn pledge to the kid in the hospital that I would never, ever allow anything like the disaster that happened to him to happen to anyone else. I am riven in two: I do not know what to do. So I propose a compromise. I propose that certain of the boxes in the basement are to be declared ''Middleware'', and I will require of the kid who now owns the organization system of my basement that he reveal the meaning of the labels on those boxes. ''To protect his ''intellectual property,'' I only require that he reveal these labels to another party when they agree to sign a non-disclosure agreement. The second kid is happy enough to agree to that, especially since he alone knows exactly where he has hidden the potting soil, and he has carefully made sure that the box where it is hidden is not declared ''Middleware.'' In this way, his designs for the takeover of my gardening shed are unaffected. Since summer is coming, the control of the gardening shed is the only thing that really matters anyway, so he loses nothing by signing on to my ''compromise''. Now, what can we say about, this compromise? Should I say that it is a bad compromise because I was not. careful enough to locate the hidden potting soil before I settled on my definition of ''Middleware''? Should I say that it is unfair to require people to sign a non-disclosure agreement whenever they want to get a hammer from the basement? I could say all these things, and more, but they seem to skim over the surface of the problem. Much more fundamentally, this compromise represents a failure to think clearly about what we are trying to accomplish. It is in our statement of the nature of the values which we are ''compromising'' that we have failed. We have failed to understand the essential values that we are pledged to protect. To appreciate the tragedy of this failure, imagine how this situation would appear to the first kid, the one who cares more than anything about properly organizing the basement. He worked hard and honestly to do the very best job he could, but to no avail: all his hard work was ruined, it wasn't even accidentally ruined it was ruined on purpose. But when he tries to protest about this betrayal of his values, not only is he not listened to, he is also treated like a jealous, violent gang leader. Since he is not a sophisticated kid, he cannot figure out why any of this is happening to him. It simply feels to him like all the adults around him have gone mad.

I might ask: what exactly were the essential values I failed to understand when I devised my compromise? One might say that my compromise shows how little I understand the values associated with the ''new economy.'' It is true that I have failed [o understand how overwhelmingly important it is to have clearly labeled boxes in my basement. But this concept of ''value'' in the new economy is so very simple and easy to understand, that one might also maintain that I understood it perfectly clearly. When I insisted that the ''Middleware'' boxes should be clearly labelled, I showed that I do understand what constitutes value in the new economy.

Nonetheless, my judgment was confused, but it was not a lack of understanding of the new economy that caused this confusion. Instead, my judgment was clouded by the pain and confusion that the reminder of an old-economy conflict invoked in me. I ran into difficulties because I was led to apply ''old economy thinking to a new economy problem.'' In particular—this is the key point—my real failure carne not from a failure to understand the values of the ''new economy,'' but from a failure to understand the values of the old one. When I promised to the kid in the hospital that nothing like what happened to him would ever be allowed to happen again, I did not define very clearly in my head what exactly it was I was pledging myself to protect. What exactly did I promise? Did I promise that in every circumstance where a rich and successful kid was challenged by a poorer, less successful kid, I would always side with the rich kid?

No, that is not what][promised. I made the promise to the kid in the hospital because I saw that his good fortune was good fortune for everyone, and therefore I pledged myself to protect it. But when I later found myself in a situation when a rich and successful kid demanded that I protect his good fortune, I forgot the rationale behind my original promise. If I had remembered it, I might have thought to ask myself ''in this new situation, is riffs rich kid's good fortune good fortune for everyone?'' Hopefully it is clear that this

question receives a rather different answer in this situation. So, does my old promise bind me anymore? Am I required to devise a compromise between the interests of the two children in my charge? No, such a compromise doesn't make sense. I could make things much easier on myself if I just worried about protecting my own interests. My interest is to be able to easily find things in my own basement. The first kid fought for my interests, the second kid did not. It is that simple: there is no need for the terrible pain and confusion this case evokes, or the strange and convoluted compromises that are the result. So, to wrap up my Story, I want to summarize the four conceptual errors I made which drove me to devise such a thoroughly flawed compromise.

First, I made two mistakes in my understanding of the ''new economy'':

1. I did nor understand how much value the first, kid provided for me when he carefully sorted and labeled all my stuff.

2. I did not understand how badly the second kid hurt me when he destroyed this careful labeling system. I did not understand how dangerous it is that I have become dependent on his aid to find anything in his system of artfully mislabeled boxes. Second, I made two mistakes in nay application of principles that came from the ''old economy'':

3. When the second kid claimed to me that I had an obligation to protect his incentive to invest, I forgot that the statement of this obligation is that we must protect the ''incentive to invest in machinery to make a manufacturing job more productive.'' I need to protect a kid's incentive to break his piggy bank and buy a lawnmower, or I will have to put up with the fumes and noise from my old gas mower forever. But, this obligation does not apply to the conflict between the kids who are cleaning my basement, because there is no machinery that will aid the task of ''manufacturing'' a cleaner basement. So there is no need to protect the incentive to invest in such machinery.

4. More generally, I made a mistake when I failed to notice how the second kid manipulated and abused my commitment to the values of the old economy with his carefully chosen words. Earlier I said that this kid was careless, and worse, devious: and worse still, ambitious. But worst of all, he is manipulative. He is perfectly willing to take our most central, sacred values and twist them into a empty caricature of themselves to serve his own interests. It is our mistake and our shame that we cannot see what is being done to us.

So now I have completed my story. I have explained the essential failures of understanding that caused me to make a dreadful mistake. I promised earlier that when I was done I would take the lessons I have explained and tie them back to our complex and confusing real situation. So I will describe again the four mistakes I have just identified, this time as they appear in the real world. I contend that this settlement reveals that public officials fail to understand four important concepts that are crucial to understanding the nature of the public interest in the conflict with Microsoft.

First, it reveals that there are two ways that public officials basically misunderstand the ''new economy.''

1. They do not understand the tremendous value to society provided by the creators of the open standards of the Internet, the World Wide Web. the associated free software that supports the Internet (Apache, Bind, Perl, etc) and the free operating systems Linux and BSD. They do not understand the tremendous value to society of open, well-specified APIs on every level of the information architecture we are trying to build to support the future productivity of our society.

2. They do not understand how badly society is hurt by Microsoft's manipulation of its APIs and file formats. They do not understand how much the constantly changing proprietary file formats hurt ordinary people's ability to get work done, nor do they understand the loss of potential productivity that occurs when a API is obscured or destroyed. They do not understand how Microsoft's control of the platform hurts the prospect for real competition and progress in the computer industry.

Second, more seriously, it reveals two ways that public officials are confused about how to apply the values of the ''old economy'' in this new situation.

3. They haven't noticed that, just as you don't need a lawnmower to clean a basement, you don't need a lawnmower to write an opera, ting system. All the effort to preserve a delicate balance between the need for open APIs, and the need to preserve the incentive to invest, have missed the point that we are protecting the incentive to invest in a purely imaginary lawnmower. There is no machinery that will make the job of writing an operating system any easier, so there is no need to protect the incentive to invest in imaginary machinery.

4. Finally, they haven't noticed that Microsoft is lying to them Microsoft is lying in a horrible way: they are invoking the values that honorable public officials have spent their whole lives protecting, and they are manipulating them, using them, twisting them around so they come to mean something entirely different. The government does not detect this duplicity—that is their greatest mistake. We engineers have a name for these kinds of lies: we call them FUD, which stands for ''fear, uncertainty and doubt.'' We watch Microsoft deliberately spread fear, uncertainty and doubt in the government, the courts and the general population, and we view with amazement and horror the enormous power that these lies have over the world.

We are lost: we do not know what to do to combat lies which have such terrible power. We are like children who live in a world where all the adults have gone mad.

Yours sincerely,
Rebecca Frankel

Washington, DC 20530

Dear Mr Ashcroft:

As a supporter of Microsoft, I cannot say how pleased I was to see that the Justice Department finally came to its sense and resolved to settle with Microsoft. This case has gone in far too long for people like me, who depend on Microsoft's products in our daily lives

I hope that the settlement will not be too harsh on Microsoft. With giving over their trade secrets to their competitors and allowing people who ship computers to configure Windows anyway they want, Microsoft could lose out on a lot of money. However, I feel that they will continue to succeed like they always have despite these handicaps,.

I hope that the government will refrain in the future from attacking business that are integral to our economy like Microsoft is. This whole case, which has taken up so much of their time, could be the reason why we are currently in a recession. End this case and let Microsoft get back to work.

Washington, DC 20530–0001

Dear Mr. Ashcroft:

Now that the Courts will make a final decision next week on whether the proposed settlement benefits the public, I'd like to express my opinion.

Microsoft has agreed to not enter into any agreements obligating any third party to distribute or promote any Windows technology, exclusively or in a fixed percentage, subject to certain narrow exceptions where no competitive concern is present. The company has also agreed not to enter into agreements relating to Windows that obligate any software developer to refrain from developing or promoting software that competes with Windows. Microsoft has also agreed to not retaliate against software or hardware developers who develop or promote applications of operating systems that compete with Microsoft's.

So why should we pursue further litigation? The agreement seems more than fair. Let's move on.

No more litigation!!

Sincerely,
Nikolaos Natsoulis

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to the antitrust dispute involving Microsoft. I support Microsoft in this dispute and feel that this litigation is a waste of precious resources, time, and talent.

I believe the settlement that was reached in November is a fair and reasonable agreement to end this three-yearlong dispute.

This settlement is thorough, and Microsoft did not get off easy. Microsoft has agreed to license its Windows operating system to the 20 largest computer makers on identical terms and conditions, including price. Microsoft has also agreed to grant computer makers broad new rights to configure Windows so as to promote non- Microsoft software programs that compete with programs included within Windows.

This settlement will benefit companies attempting to compete with Microsoft. This settlement will also benefit consumers by allowing tiffs company to remain together and continue delivering innovative products to the marketplace. Please support'' this settlement. Thank you for your time.

Sincerely,

Sesil Rubain

Dear Mr, Ashcroft:

As a concerned constituent, I write to inform you of my support of the Microsoft settlement. Over the last three years I have followed the federal suit against Microsoft. I have been increasingly annoyed with the Justice Department's pursuit of Microsoft. Microsoft has been more than willing to compromise In attempts to resolve this issue.

With the release of Windows XP, Microsoft will now put into effect a mechanism that will allow users to add or delete Microsoft programs at their own discretion. This will revolutionize consumer ability to configure their operating systems and should be beneficial.

I believe Microsoft has gone above and beyond themselves to meet the demands of the Justice Department. It is finally time to resolve this issue once and for all. Thank you for your concern regarding this issue.

Sincerely,

Marle Olson

Dear Mr. Ashcroft:

I urge you to accept the settlement with Microsoft. We should one the begal?? system to insure a highly competitive marketplace. We should not, however, be misged??ded by constructs of competitiveness in an industrial economy when analyzing an informationed one. Microsoft has made a major contribution to growing the American economy. It has a lead?? po??ition in the software market, but its station is easy prey to innovative comp??sons. Microsoft has made concessions that will enhance the ability of others to challenge it. It is time to ?? the conflict from the courtroom to the marketplace.

The real danger we face is excessive government incursion in the marketplace. If the last hundred years tell us anything, it is flee peoples and free markets knock the socks off bureaucratic decision making.

Dear Mr. Ashcroft:

I support the settlement of the Microsoft antitrust lawsuit ??hile your office primarily seems concerned with Microsoft's impact with?? the technology industry, I feel that it is important to consider their role in our overall e??nomy, which has slowed considerably in the past few years. Aside from the economy slowing, the U.S. still retains a large surplus in exporting software, Microsoft is a leader in that market and why mess with a good thing? As a small-scale software developer, t appreciate the standard platform that Microsoft has created. Many average PC users probably do as well. It simplifies all of our lives.

The changes Microsoft is making in the settlement are reasonable and favorable to its competition Easing its bundling and exdus??ity pacts with computer makers will immediately open the door wider for other com??nies to market their software. Because that is the government's main contention with Microsoft, the company's endorsement of the settlement should leave you with no reason not to finalize it

Sincerely,

Everett Jo??ne

January 26, 2002
Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft,

I am writing to voice my support to an end to the Microsoft antitrust case. The proposed settlement between Microsoft and the Justice Department reflects a fair balancing of the interests and should be approved and implemented.

If given the opportunity, I am sure Microsoft's opponents will nickel and dime tiffs agreement to death. This should tell you that they are not after fairness, but are truly after a permanently crippled Microsoft. This snow job on Microsoft by competitors is most certainly not in the public interest any more than any alleged antitrust violations.

Microsoft has responded to the main complaint against it by agreeing that non-Microsoft software programs can be installed in the Windows operating system. They do this both by changing their licensing scheme and their program as a whole. I do not see the need to return to court when the main objective can be accomplished short of further litigation.

Thank you for considering my comments.

Sincerely,

Walter W. Lerch

950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Sir:

We are a small business and develop products targeting Microsoft??* Windows??* platforms. The general economy as you are aware is not helping any business, especially small business. Add another dimension to the problem—the Microsoft, Justice Department legal battle. We see customers have taken a wait and see attitude toward new purchases and upgrades, on account of both the delays in the lawsuit settlement and the general economy. We are also unable to plan our future business for the same reason as our products generally support Microsoft technologies. I feel the suit should have been resolved one way or the other long time ago.

At long last, there is a settlement that covers the points in the suit. It fairly changes Microsoft's business practices, particularly with respect to licensure and software development, and prevents the retaliatory action Microsoft allegedly used to keep its hold on the market. I am hopeful that the current review process will come to a speedy conclusion so that consumers and other software publishers such as us will be able to move forward. Let's break this period of uncertainty, and accept the current settlement. Let's channel our efforts and time to innovate for the benefit of the consumer, instead of wasting it on long drawn legal wrangling.

Sincerely,
Ganesh Srinivasan
President

Re: Microsoft Trial Tunney Act Comments

I am very concerned about the proposed settlement of the antitrust case against Microsoft. I don't think this settlement is in the public interest. After enduring years of litigation and continued anti-competitive action on the part of Microsoft, the public deserves an effective remedy. The proposed remedy, if adopted, will not be effective. The proposed remedy restricts Microsoft's actions very little and allows them to continue the same anti-competitive business practices that have resulted in the bleak software business of today.

The most important and most critical effect of any final judgment in this case should be to restore competitive conditions in the markets affected by Microsoft's unlawful conduct. The proposed settlement is bound to fail in this goat because it is ill-conceived, ambiguous, and full of holes. Effective relief would be based on principles, not an enumeration of prohibited conduct. Just as a judge must avoid even the appearance of impropriety, Microsoft should be required to avoid even the appearance of anti-competitive conduct. Given its history of unlawful behavior, Microsoft must be held to the highest standards of ethical, pro-competitive behavior. There must also be an effective, efficient, and powerful enforcement authority.

The proposed settlement has none of these properties. Rather it is full of holes, restrictions, and limitations that will make it wholly ineffective:

1. The proposed settlement is confusing and ambiguous. Given Microsoft's history, one must assume that every ambiguity will be interpreted in the most advantageous possible way by Microsoft. This practically ensures future litigation over the meaning of the terms and conditions.

2. The proposed settlement is backward looking. Rather than focus on restoring competitive conditions to the markets as they are now or will be, it focuses on the past.

3. There is no effective means for enforcement. Some sort of oversight board with actual power is necessary, as are actual penalties for noncompliance. The proposed settlement permits only further litigation.

4. The proposed settlement aims to protect the market for personal computer operating systems, but not the market for server operating systems. Should not Microsoft be enjoined from using anti-competitive practices to monopolize the server market in addition to the PC market?

5. The proposed 'Technical Committee'' is worthless, in part because of its secrecy. It needs real investigative and oversight powers. It should be a resource for further litigation. It should have the right and responsibility of reporting the behavior of Microsoft to the public.

6. The proposed settlement fails to adequately protect 'open source' competition. As 'open source' software is generally provided to the public with source code as a public service at no charge, it is deserving of the highest protections from unlawful anti-competitive practices. 'Open source' software is commonly written as a hobby by individuals or small associations. The proposed settlement discriminates against open source software by allowing Microsoft to deny access to those with out a 'legitimate business need'. Similarly, the 'reasonable and non-discriminatory' terms for API and communications protocol licensing may be used to discriminate against open source developers and products. Microsoft could impose non-disclosure licensing terms that prohibit distribution of source code, for example.

7. The protections of OEM's are inadequate. The proposed settlement provides maximum protection to only the largest twenty. All OEM's should be treated equally, and price schedules should be published for all to see.

8. The term of 5 years, extensible to 7, of the proposed agreement is inadequate, given Microsoft's record of ignoring such agreements and litigating.

9. Microsoft's competitors need to be protected against the 'Embrace and Extend' strategy of hijacking established standards and modifying them to be incompatible. Microsoft should be enjoined from using these tactics, and rather should be required to work with standards groups. Java and Kerberos are two standards that have suffered this fate in recent years.

10. Recent price increases in volume licensing agreements have demonstrated to the public that the Microsoft monopoly is alive and well despite the ongoing litigation. The final judgment should ensure that pricing is kept at a reasonable level,

11. Microsoft should be enjoined from using patents to prohibit or discriminate against 'Open Source' software. Perhaps Microsoft should be required to license for free 'Open Source' use any patent that it owns or otherwise licenses.

12. Microsoft has been recently trying to leverage its operating systems monopoly and Internet subsidiaries to promote its 'Passport' on-line authentication service. Microsoft should be enjoined from using its currently monopoly to eliminate or prevent competition in the on-line authentication service business.

13. The definition of middleware is poor. Middleware should be defined based upon functionality or character of a product, not on whether it is trademarked.

I have enumerated but a few of the serious limitations of the proposed settlement. The proposed settlement is wholly inadequate and is not in the public interest.

Sincerely,
Stephen D. Holland

MTC–00030572

6803 244th Street Court E
Graham, WA 98338
January 26, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am a small business owner and I have used Microsoft products to help run my business for years. I feel that the antitrust case against Microsoft is senseless. The settlement should stand the way it is and this whole mess should be over.

Microsoft has contributed greatly to the IT industry and I feel that they've earned what they have. According to one of the terms of the settlement, as I understand it, Microsoft is required to release their internal codes to Windows so that other companies can use them to produce their software. I feel as though others are simply taking advantage of Microsoft, I don't think the courts should support that.

I hope that the Department of Justice decides to clear this matter up. To finalize the settlement is clearly in the best interest of all involved. I would hate to see any more money wasted on this.

Sincerely,
Jerry Taylor

Watts and Associates
22622—50th Avenue S E
Bothell, WA 98021
January 25, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am in favor of the proposed Microsoft vs. The Department of Justice antitrust settlement. In my opinion, the settlement as put forth, is a reasonable one providing all of the participants fair and just resolution; not to mention putting all of this government financed litigation behind us. This settlement accomplishes a number of specific changes. For instance, computer makers will be able to replace access to various features of Windows with access to non-Microsoft software. Another change that I believe to be very generous on Microsoft's part is the proposed licensing of Windows operating system to computer makers.

I am particularly disturbed that while the government was searching for ways to break up Microsoft, other institutions were getting

away with countless acts of corruption. It's time that Microsoft got back to business and the government went back to governing. Why is it that we allow the liberals in the government to continue rewarding the do-nothing persons and punishing those who accomplish and contribute to the economy?

Sincerely,
G W Watts

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001

Dear Mr. Ashcroft:

I am writing to give your support to the Department of Justice and Microsoft. I think the government should leave Microsoft and Bill Gates alone and allow the company to get back to be the creative, innovative company it is. The Department of Justice had no business bringing the suit against Microsoft. This suit was more a political ploy brought about by Microsoft's competitors. This lawsuit sets a dangerous precedent in that the government is being used as a weapon against a competing company. This lawsuit also threatens the innovative and creative spirit of our country. What effect do you think this action has on those who have dreams of creating a product, but then see a very creative company being hounded? Yes, the company was aggressive, but business is aggressive. Microsoft did nothing more or less than what their rivals did.

Microsoft will ultimately be giving up its interfaces and protocols to other software developers so that they can more comprehensively write software for Windows. The company will also be held to a regimented licensing code that will ensure that computer makers are able to use the software they want with Windows. A Technical Committee will make sure these rules as well as others are followed.

Leave the company be. Give your support to this agreement.

Sincerely,
Shirley Sebright

Washington, DC 20530

Dear Mr. Ashcroft:

Microsoft has had to suffer through three years in the antitrust case with the Justice Department. It is pleasing to know a settlement was reached in this case, however it is unsettling that this case could be re-opened.

The fact is that this case has a good settlement available to end it, and it should be implemented.

The settlement will allow Microsoft's competitors to access Microsoft code so they can design better software. Competitors under this settlement will have the ability to effortlessly place their software on Microsoft operating systems. Despite these improvements opponents of the settlement have launched a campaign to have it revoked, and Microsoft dragged back to court. There is no good reason to let this happen, the settlement is good and it is too expensive to continue this case.

Once more I would like to state that this case should be concluded with the current settlement.

Sincerely,
Ron La Mange

Washington, DC 20530

Dear Mr. Ashcroft:

The settlement reached between Microsoft and the Department of Justice, appears to be fair. It is my strong belief that at this point additional litigation will not help anyone, including the States that are seeking to continue suit. It is now time to settle and move on.

Microsoft tins agreed to a number of terms and conditions, all of which restrict monopolistic behavior and promote competition within the technology industry. Microsoft will refrain from engaging in retaliatory behavior should software developers and computer makers introduce a product into the market that directly competes with Microsoft technology. Microsoft has also agreed to license its Windows operating system to twenty of the largest computer makers on identical terms and conditions, including price, and to grant them broad fights to reconfigure Windows to their own specifications.

I do not believe additional action is necessary on the federal level. The proposed settlement is equally beneficial to Microsoft and its competitors, and a cessation of litigation would most definitely be beneficial to the consumer. I urge you to give your support to the settlement.

Sincerely,
Michel G. Bernard

January 26, 2002
Attomey General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Today I write to voice my support of the Microsoft settlement. It is true that the Microsoft Corporation has been at the forefront of the technology industries in recent years. Their leadership, however, is the result of a dedication to excelence that is not matched within the industry. The result is the continual production of quality products that out perform any substitutes. This is in by no means a crime. I therefore take issue with the federal pursuit of a case based upon outdated statutes.

Regardless of this opinion, I believe that the settlement agreement is in the best interests of the public. Too much time has already been spent in the litigation process and the entire technology industry has suffered for it. Further, anyone wary of Microsoft's compliance with the terms of the agreement should be cased as the agreement calls for the formation of a watchdog group.

I adamantly believe that enacting the settlement will encourage confidence and growth within the tech. industry. The Justice Department should suppress any opposition to the enactment of this settlement.

Sincerely,
Lori Buecheler

Washington, DC 20530

Dear Mr. Ashcroft:

During the period of the past three years, the IT industry, and the general public have been forced to endure the US vs Microsoft lawsuit. This unfortunate quit has slowed innovation and movement in the software industry and has hurt investment in technology as a whole. Consumers have taken the suit in stride even though it is they who will receive the bill for the case by way of higher prices on technology products through the corning years.

The settlement has teeth that force Microsoft to disclose proprietary software code to competitors and will exist under the

constant scrutiny of a three-person committee in its future business dealings. These and other points in the settlement make it more than fair to all the plaintiffs in the lawsuit.

Now that all. the involved parties have been served, a settlement must be formalized. The Department of Justice must see that the needs of the consumer are met in ending this lawsuit as soon as legally possible. I urge the Department of Justice to formalize the proposed settlement as soon as this period of public comment concludes.

Sincerely,
Arthur C. O'Neil

January 26, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

As you are well aware, Microsoft has been under public and government scrutiny concerning their business tactics as being a monopoly. In my view, this lawsuit has been going on for far too long and I'd like to see it finished once and for all. The continuation of its opposing competitors who keep pressuring Microsoft are doing damage to this nation far beyond what they could possibly realize.

Thousands of Americans rely on Microsoft in various ways, some in terms of jobs, most in terms of computer technology that they use in their homes and businesses. If we let this suit go back to the Federal Court, our people will continue to lose out on millions of dollars and the possibility of improved software to evolve our way of life.

The settlement is fair and reasonable and it will most definitely benefit consumers and eliminate future possibilities of competitors attacking Microsoft for unjustly dominating the IT market. This country needs to consider the money being spent on file lawsuit and realize that re-direction of funds is in need. Your help m Microsoft's defense is greatly needed and appreciated.

Sincerely,
William Woodbury

MTC–00030582

January 27, 2002
From: Steven White, 5125 Logan Avenue South, Minneapolis, Minnesota 55414
About: Microsoft Settlement

I am sending this in a way that verifies its authenticity (hand writing) because it is regarding a company that has been reported to have commissioned ''spontaneous'' letter writing campaigns to state attorneys general which, in one case, included letters from two dead people. I want to report tht I am alive and strongly opposed to any lieniency toward Microsoft. Three courts have declared that they have broken the law. They should pay the price of their freely-chosen actions. i would like to address one point that I hope has not escaped your notice. This is a company famous for its willingness and ability to squirm around restrictions and whatever it can to win at any cost. They have squashed or stolen innovative ideas from others, driven companies out of business, and finally been convicted of illegal tactics, and they not only show no penitance, but, based on their public statements, seem to be convinced they are in the right.

If you make a settlement that has any imaginable loophole, they will be through it the day it goes into effect. If you say that programming interfaces to Windows must be made public, they will move the interfaces to some layer of ''middleware'' and declare that they are not part of Windows.

They will behave as they did when ordered to release Windows 95 without Internet Explorer; they released a version that didn't work. They will ''comply,'' but, as one journalist phrased it, ''with middle finger extended.''

For the sake of the future of the computer industry, Micorost's anti-competitive grip must be broken.

Sincerely yours,
Steven White

January 28, 2002
VIA FACSIMILE: 202–616–9937

Dear Judge Kolar Kottely

I am writing to express my overall concern with for the technology sector with the pursuance of the Microsoft antitrust case.

I am the resident of a rural town and owner of a small online business. I am able to conduct business with customers all over the world thanks to the innovation and developments in the technology and telecommunications industries.

What I don't see is the lack of competition in the high-tech industry addressed by this case. Over the last decade the number of jobs in the software industry has grown from 290,000 to close to some 860,000. The 24,000 software companies in 1990 can be compared to the 57,000 software companies today. The growth in this industry is like nothing we've seen in recent history, yet the case against Microsoft was brought on by an alleged lack of competition in the market.

In just the past few years the number of software companies and employees have nearly tripled. This year the software industry alone will add nearly $20 billion in surplus to America's balance of trade. Microsoft is on a list of indicators for the Dow Jones Average and is considered a market bellwether.

These factors do not add up to a lack of competition in the industry. They are instead indicators that the high-tech industry is a flourishing, rapidly growing industry that changes so quickly that tomorrow's Linux will replace today's Microsoft.

Continued litigation in this case will only slow competition and growth in the industry. I hope you see fit to sign off on the fair settlement in this case.

FAX To:
202–307–1454

Dear Mr. Ashcroft:

I am writing to support the settlement between the Justice Department and Microsoft that will bring an end to their long antitrust dispute.

Some groups do not think the settlement is fair, but they are wrong. The only possible way the settlement could be unfair is if it unfairly harm Microsoft Look at the stipulations Microsoft is willing to accept. It disclose documentation on the internal interfaces of its Windows operation system. It will make future versions of Windows easier to work with terms of removing Microsoft programs and adding non-Microsoft ones. will guarantee that Windows runs as well with the new software as it c with the original Microsoft software. It will not retaliate against any of the companies that sued it. It will change its licensing practices to increase competitors'' viability in the IT market. Microsoft will even submit constant government oversight of their business practices. How mayo outside of Microsoft's boardroom could possibly be dissatisfied with the settlement is a mystery to me.

Microsoft is willing accept these terms. For that reason alone, I think ?? settlement ought to go forward. Thank you for your time.

Sincerely,

Dear Mr. Ashcroft:

The consistent persecution and harassment of the Microsoft Corporation must cease immediately, both for the good of our country and because it is the fight thing to do. The past three years of litigation have resulted in nothing besides wasting my money, and the recently settlement services the public interest in this matter and its provisions go beyond the government's original complaints.

The provisions of this settlement, among other things, require Microsoft to submit to a federal technical oversight committee which is required to review Microsoft's business and software practices. Additionally, Microsoft must make its intellectual property available to those compentors who use it in their application of this agreement.

These provisions, the general settlement and the process in which it was reached are all fair, judicious and reasonable. It is my hope that there is no further federal action in this matter.

Sincerely,

Fred Billand

Dear Mr. Ashcroft:

I am writing today to encourage you and the Department of Justice to accept the Microsoft antitrust settlement. Microsoft has given up a lot to be able to settle the issue. The terms of the settlement are fair and they should be accepted.

Many people think that Microsoft is getting off easy, in fact this is not so. In the terms of the settlement, Microsoft has agreed to release part of their Windows base code to their competitors. This is so their competitors can make more compatible software. Microsoft is being forced to give up their patented trade secrets. Microsoft has spent years and millions of dollars developing their products, now they have to simply hand part of them over to their competitors. In the technology industry there are companies that develop new products and companies that copy products. Not surprisingly the companies that develop new products are more successful, it is a shame that the government has chosen to harass a company simply because it is successful. This issue has been dragged out for over three years; it is time to put an end to it. The terms of the settlement are more than fair and they should be accepted. Please accept the Microsoft antitrust settlement.

Sincerely,

Diana M. Campbell

Dear Mr. Ashcroft:

I am writing today to encourage you and the Department of Justice to accept the Microsoft antitrust settlement. Microsoft has given up a lot to be able to settle the issue. I would like to tell you exactly how I feel about this issue, please think back to articles of history of the United States and the Auto Industry. Mr. Henry Ford certainly was not the first automaker competing with other industrialist of his time, His story is fabulous. One story that really talks about the ''American dream.'' And this is only one story of such struggle to produce a sellable product that has lasting quality, No Mr, Ford was not the only automaker of his time but he produced a good competitive product.

Mr. Gates and his company have been producing a sellable competitive product. What is the Justice Department trying to tell the American businessperson? What is this new attack? The United States of America is the home of the free. If we do not have the freedom to create a better ''mouse trap'', then why are our borders flooded with immigrants?

Mr. Gates has not asked to have the status of a King in the United States, He has built a team of people that are of the highest regard working with ideas and values to build competitive soft wear for a very fast growing industry.

Please know Mr. Ashcroft that I am a normal everyday housewife, and I know something about cooking and recipes, some of the ingredients are private, some are family secrets. Are you telling me that I must tell people what I put in a cake should I want to compete in a contest, for my personal gain. I believe in the American Dream. I grew-up having the ability to choose my way of life, I think you are treading on sacred ground.

Please Mr. Ashcroft do not use any more of your precious time and my money. Please accept the

Microsoft antitrust settlement.

Sincerely,

Washington, DC 20530

Dear Attorney General Ashcroft,

I support the settlement that has been reached between Microsoft and the Department of Justice. The settlement will bring an end to the costly and contentious court conflict between the two.

Some may criticize the settlement and say it lets Microsoft off too easy. That is simply not the case. Microsoft will agree to many restrictions on its method of doing business. First and foremost among these restrictions is the requirement that Microsoft share its code for Windows with its competitors, thereby allowing them to place their own programs on the Windows system.

Additionally, Microsoft will eliminate any possibility of favoritism in its licensing procedures by using a uniform price list when dealing with the top twenty computer business in the nation.

These two provisions alone would be enough, but Microsoft has also agreed to forgo any retaliation against companies that sell or promote software that competes with Microsoft's products. Some people may claim that Microsoft will just ignore these requirements, but the settlement will establish a technical review committee to make sure that Microsoft adheres to all of its terms. With all of these restrictions, Microsoft will be severely hampered and its competitors will be aided.

There comes a time in any conflict when the sides sit down and ask themselves if the time and effort would really be worth continuing to fight. Microsoft and the Justice Department have decided that the answer to that question is no. This settlement will end their battle, and no one should block an agreement that is amenable to both of them. Thank you for your time and efforts in Washington.

Sincerely,

Stan Eischen

Trial Attorney
Antitrust Division
U.S. Department of Justice
601 D Street, NW, Suite 1200
Washington, D.C 20530

Dear Judge Kolar Kottely:

Thank you for the opportunity to participate in the public comment period regarding the settlement of the government's antitrust case against the Microsoft Corporation. As an executive with the Iowa Association of Business and Industry in Des Moines, Iowa I was pleased to hear that a settlement in this case has been reached. While this case has implications for most American consumers, the implications for those of us in the business sector are even greater.

The negative impact this case has had on the technology industry was apparent nearly from its inception, technology stocks began their slide downward at the same time the district court ruled that Microsoft should be broken up. This ruling caused major uncertainty within the tech community and with its investors.

This proposed settlement would provide much needed subility to the technology industry that was absent during the period this case remained unresolved. The conclusion of this suit will send the signal to both investors and innovators that they no longer need to be concerned with unnecessary government regulations as they work to create new technology products and services for the future.

I encourage you to accept the settlement reached by the Department of Justcie and the Microsoft Corporation .

Sincerely,
John R. Gilliland

Ms. Renata Hesse
Department of Justice, Antitrust Division
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse,

The appeal and success of our great country lies in the opportunity to succeed and to make a better way of life for our families. This has been possible because of our economic and personal freedoms. Those with innovative and pioneering spirits are the reason our country rose so quickly to become a world leads.

Most of those who drive our country because of their innovation and willingness to take risks never become global figures or even nationally known. But there is one such individual who is known worldwide for his technological developments. Bill Gates has prodded software and Interact technologies that have forever changed our personal and business relationship with the computer. With his great ideas turned into reality, he has created thousands of jobs for Americans and provides a great deal of financial support for humanitarian relief. For example, The Bill and Mclinda Oates Foundation announced on January 4, 2001 a $7.5 million grant to help combat the spread of HIV in sub-Saharan Africa and worldwide. And this is just one. example of the impact he has had on our world.

Because we are a lawful society, we certainly have an obligation to enforce our national laws. But that obligation has been met in the Microsoft antitrust lawsuit, it no longer can serve any relevant purpose. A fair and realistic settlement has been proposed and should be signed in order to conclude tiffs case and allow Microsoft to move forward with all new business activities, and to allow Bill Gates to continue providing humanitarian relief throughout the world through his foundation.

Thank you,
Arnanda Carstens Steward

Ms. Renata Hesse
Department of Justice,, Antitrust Division
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse,

Antitrust is defined by Merriam-Webster, as consisting of laws to protect trade and commerce from unlawful restraints and monopolies or unfair business practices. A lawsuit was filed against Microsoft several years ago alarming the company was in violation of the antitrust laws of our country. In other words, theó claim is that other companies competing for the, game customer base were not able to fairly compete with Microsoft. A lower court ruled that the company would have to be broken up, This ruling did not stand up in the Court of Appeals. But in the process, the Federal government has spent millions of dollars and Microsoft has been forced to spend similar amounts defending its case. Now a settlement has been proposed and agreed to by many of the parties involved in the lawsuit.

Until this case is permanently closed, the biggest loser is the American consumer. Not only have our tax dollars been the source of income for the federal government to fund their rose, but it is likely that Microsoft will offset of the millions they have spent by increasing costs on their products.

I think the only reasonable course reasonable is to agree to the proposed settlement, It is in theo best interest of all parties involved, including the American consumer. Your efforts are truly appreciated. Thank you.

Sincerely,
Ron Hanser Prosident

D??? Asheroft:

I am willing to express my support for Microsoft in light, of recent litigation against them Microsoft is a great company with great products available to the public at very reasonable prices. It has been an industry leader who has done much to stabilize the IT industry and the economy. With this lawsuit. Microsoft has been forced to shift their attention from producing new products to defending themselves in court. This reduced production has doubtless made., damaging impact on the IT industry and the economy as a whole.

In the interest of settling the matter mote quickly Microsoft agreed to procedures and obli??ons that the US Court of Appeals did not even find problems with. For one example, Microsoft decided to allots'' computer makers to remove the ''paths'' that consumers use to access venous Windows programs. These include programs like Explorer and Media Player. D??ing ???us well enable sofrware made by companies such as Netscape or RealNetworks to use those paths instead. This will intensity competition, which will benefit consumers.

I look forward to this matter being wrapped up as soon as possible It has gone on for far too long, and has done severe damage to the country on a whole I appre???ate the willingness of your office to hear the views of the public. I trust that you will conclude that wrapping this matter up will be in the best interest of the public.

Sincerity,
Ahe ??

Dear Mr. Ashcroft,

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. I cannot understand why the government has gone after Microsoft in the first place. As soon as the government started their suit against Microsoft the entire technology industry went downhill. Now that there is a settlement in place, the government should accept it and allow business to return to normal.

In order to put this .issue behind them Microsoft has agreed to a long list of provisions. Microsoft has agreed to allow computer makers the flexibility to install and promote any software that they see fit, or that consumers request. Microsoft has also agreed to design future versions of Windows to be more compatible with non-Microsoft software. Microsoft has agreed to many compromises to reach the settlement. It is time for the government to accept the settlement and move on.

Please accept the Microsoft antitrust settlement. A settlement this fair has no business languishing in court

Sincerely,
H. Pankratz

January, 26, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530–0001
Dear Mr. Ashcroft:

As a supporter of Microsoft, I write you with concern over the recent developments in the settlement. It is strange to see that, after three years of negotiating, this settlement may be subject to still further litigation. It is ridiculous to waste our time and money on fighting a battle that has already been won.

Microsoft has made sweeping commitments to prove that they are willing to work with their competitors. They have agreed to make changes in licensing and marketing and even design. Microsoft has agreed to design future versions of Windows that will allow for easier installation of non-Microsoft software. They have also agreed to be monitored for proper procedure and even allow- themselves to be sued if a competitor does not feel that they are acting properly.

With concessions such as these it only makes sense to support this settlement. It is clearly beneficial for the consumer, the IT sector and our economy as a whole. I urge you to help support it in its current state and not waste more time, energy and money that could be better spent elsewhere.

Sincerely,
Marcia Levinson

Dear Mr. Ashcroft:

I would like to express my support for Microsoft in the government's antitrust case. A settlement has been reached and I think that it should be respected. Microsoft has been punished enough in the last three years. This lawsuit has been a waste of time and money. Everyone, the government included, has better things to do than pursue a lawsuit that punishes a company for being successful.

It is a total injustice to allow every competitor of Microsoft to continue their influence over the courts and to blame Microsoft for their own inability to have and market a better product. I don't believe there has been one consumer financially damaged by Microsoft's business tactics. Enough is Enough.

Microsoft may have made some mistakes, but they are ready to change their ways. The settlement is evidence of that. Microsoft is conceding a great deal in order to move on. They are giving away some of their technology information and making it easier for consumers to use non-Microsoft programs within their Windows platform. Please respect the efforts of Microsoft and their supporters. This settlement is fair and is a good ending to this whole mess.

Sincerely,
Richard R Beatty

Dear Sir or Madam:

I strongly urge the U.S. Department of Justice to settle the Microsoft case now and enter the revised proposed Final Judgment. The case brought against Microsoft was motivated primarily by competitive malice. Settling this case is certainly in the public interest.

Microsoft has been a boon to me by bringing lower PC prices, faster and better computing, and better software development tools. In addition, this lawsuit has cost investors, literally hundreds of billions of dollars.

I have gladly purchased and used Microsoft products for over 20 years. Professionally, 1 have developed many systems based on Microsoft software products. During this time I have interacted with Microsoft personnel at many levels. At no time did I think that the relationship with Microsoft was not fair or beneficial to me as well as to other parties involved To the contrary, I believe that Microsoft to a large degree is responsible for the current economic good health of the USA, as well as many other countries of the world.

It is time to end this antitrust action begun in 1997

Sincerely,
Dale G Lillie

Dear Mr. Ashcroft:

I am writing to express my disapproval with the last three years of litigation brought against Microsoft by the US department of Justice. Microsoft has been the cornerstone of the Technology Industry, and its capacity to generate wealth and create jobs for our nation should not be overlooked. Our Government needs to stop interfering in free enterprise and start worrying about more pertinent issues like security.

The terms of the settlement do not let Microsoft off easily as they stipulate Microsoft will have to disclose interfaces that are internal to Windows operating system products and also grant computer makers broad new rights to configure Windows so as to make it easier for non-Microsoft products to be promoted. This, I believe will be a detriment to Microsoft, the consumer and the free market as we know it.

I urge your office to do what is right for the American public and the Information Technology sector by implementing the settlement. The nine states that want to continue litigation should be reprimanded and this case should come to an end. Thank you for your time.

Sincerely,
Carol Vincent

Re: AAI Tunney Act Comments

The American Antitrust Institutes submits these comments under the Tunney Act. Separately, we have filed with the U.S. District Court a complaint for declaratory and injunctive relief, arguing that failures of the U.S. and Microsoft to comply fully with the requirements of the Tunney Act have kept us and the public generally from receiving all the information that is required by statute as a basis for these comments. With that in mind, these comments must be viewed as preliminary, subject to amendment or expansion if and when additional public disclosures are made.

The American Antitrust Institute (''AAI'') is an independent non-profit education, research and advocacy organization, described in detail at www.antitrustinstitute.org. The mission of the AAI is to support the laws and institutions of antitrust. To our knowledge, we are the only public interest organization devoted solely to the field of antitrust.

Executive Summary

This Court should reject the Proposed Final Judgment (''PFJ'') between Microsoft, the U.S. Department of Justice (''DOJ''), and the settling states. The PFJ is not in the ''public interest,'' as this term is defined under the Tunney Act.[1] 1 The PFJ is ambigous, will be extraordinarily difficult, if not impossible, to implement and affirmatively harms consumers and other third parties. Most importantly, however, the PFJ constitutes a mockery of judicial power since it fails to satisfy any of the remedial goals established by the Court of Appeals.

Standard of Review. Under the Tunney Act a reviewing court is not permitted to ''rubber stamp'' a proposed consent order if that consent order makes a ''mockery of judicial power.''[2] Normally, this standard gives substantial discretion to the DOJ's determination of what is in the ''public interest.'' But this deference is not appropriate in cases like this one where there has been a full trial and decision on the merits.[3] In such cases the court has a special obligation to ensure that the remedial goals of the court that imposed liability on the defendant—in this case the D. C. Court of Appeals[1]—have been met. A consent judgment, such as the PFJ, which effectively ignores the findings of liability and remedial goals expressly stated by a unanimous en banc decision of the Court of Appeals is a mockery of judicial power.

Even when courts are reviewing consent orders entered before a trial, a consent judgment is not in in the ''public interest'' if it: (1) is ambiguous;[1] 5 (2) presents foreseeable problems in compliance and implementation;[6] or (3) affects third parties detrimentally.[7] Since virtually every key provision in the PFJ is ambiguous, will be extraordinarily difficult to implement, and will have a direct and substantial detrimental effect on consumers and other third parties, the PFJ is not in the ''public interest'' even under the lower standards of scrutiny applied to pretrial settlements.

Substantive Failings of the PFJ. The DOJ asserts that the PFJ ''will provide a prompt, certain and effective remedy.''[8] While a prompt, certain and effective remedy is often better than a perfect remedy achieved after extended litigation, virtually any remedy this Court would order after litigation would be better than the PFJ. The PFJ is neither prompt, certain, nor effective.

A prompt remedy would take effect quickly and provide procedures to enforce swift compliance. Most of the so-called restrictions on Microsoft's conduct will not take effect for 12 months.[9] Given the rapid pace of change in information technology, Microsoft's dominance of the covered middleware markets may well be a fait accompli before much of the PFJ would take effect. The procedural provisions also fail to provide for quick resolution of disputes over compliance. The Technical Committee cannot resolve disputes, but only ''advise'' Microsoft and the government of its conclusions.[10]

A certain remedy, at the very least, would set forth a clear delineation of what Microsoft can and cannot do. Yet many of the most important putative restrictions on Microsoft are vague and all are riddled with exceptions and qualifications. This lack of clarity will almost certainly compound the delay already present in the PFJ since the inevitable differences of opinion cannot be resolved without extended litigation to determine the ''intent'' of the parties according to the rules of contract law.

Finally, and most fundamentally, the remedy should be effective. As the Court of Appeals explained, a remedy should (1) free the market place from the effects of Microsoft anticompetitive conduct, (2) deny to Microsoft the fruits of its illegal monopolization, and (3) ensure that Microsoft does not undertake similar practices likely to result in future monopolization.[11] Yet the PFJ affirmatively allows some of the most egregious anticompetitive acts such as the commingling of middleware and operating system software.[12]

The following comments focus upon the deficiencies of the PFJ rather than attempt to propose alternative measures. Nonetheless, we urge the Court to consider the proposals put forward by the nine dissenting states. These proposals correct many of the PFJ's deficiencies identified in these comments.

Discussion

I. Standards of Review: The Tunney Act Requires Careful Review of the PFJ To Determine Whether It Is In The Public Interest

The Microsoft case is widely considered the most important antitrust case of our time. It is critically important to the future of antitrust that this case be decided—or settled—on the merits in a way that the public will perceive justice to have been achieved. All the more so when Microsoft has been found (after a full trial and by a unanimous landmark appellate opinion) to have abused a monopoly in an industry that all agree will have a profound impact on our future. With so many economic interests affected in cases like this, it is important that special efforts be made to keep antitrust settlements transparent so that the public will recognize them to be free of political taint or corruption.

A. Especially Careful Review Is Warranted in a Fully Litigated Case

The Tunney Act directs Courts to carefully scrutinize proposed antitrust Consent Orders.[13] The Tunney Act mandates that the Court shall make an independent inquiry into whether the decrees, and it will assure that the courtroom rather than the backroom becomes the final arbiter in antitrust enforcement.'' The Antitrust Procedures and Penalties Act of 1974: Hearings on S. 782 and $. 1088 Before the proposed consent order is in the ''public interest,''[14] and authorizes the Court to take evidence and receive arguments to assure itself that the consent order serves the public interest.[15] As noted in the landmark Tunney Act decision of United States v. AT&T, a degree of deference to the DOJ in the reviewing the consent order is appropriate—otherwise, parties would have no incentive to compromise and settle.[16] The

[9] See, e.g., PFJ sections III.D and III.H.

[10] See PFJ section IV.D.4.c. Moreover, the PFJ's ''gag orders'' prohibiting both testimony from Committee members and use of their work product in enforcement proceedings will cause further delay since enforcement will always require the government to duplicate the Committee's work in amassing evidence.

[11] United States v. Microsoft Corp., 253 F.3d 34, 103 (DC Cir. 2001). The PFJ does nothing to deprive Microsoft of the fruits of illegal monopolization, and the DOJ's Competitive Impact Statement (''CIS'') omits this goal in its discussion of the remedial goals. CIS, pp. 2 and 24.

[12] See Section II infra.

[13] The Tunney Act ''will make our courts an independent force rather than a rubber stamp in reviewing consent Subcomm. on Antitrust and Monopoly of the Senate Comm. on the Judiciary, 93d Cong. 1 (1973). (opening remarks of Senator Tunney).

[14] 15 U.S.C. 16(e).

[15] 15 U.S.C. 16(0.

[16] See United States v. AT&T, 552 F. Supp. 131, 151 (1982) (''If courts acting under the Tunney Act disapproved proposed consent decrees merely because they did not contain the exact relief which the court would have imposed after a finding of liability, defendants would have no incentive to consent to judgment and this element of

AT&T court also noted, however, that the standard of review would vary depending on the circumstances.[17] AT&T rejected the notion that courts must unquestioningly accept a proffered decree as long as it somehow, and however inadequately, deals with the antitrust and other public policy problems implicated in the lawsuit. To do so would be to revert to the ''ber stamp, role which was at the crux of the congressional concerns when the Tunney Act became law.'' [18]

The need for deference is important in cases where there has been no trial since the ''public interest'' must include consideration not only of an appropriate remedy but also whether and for what the defendant may be found liable at trial.[19] More importantly, the court has little knowledge of the determinative facts. But once a trial has established the defendant's liability, the need for deference diminishes greatly. As the court in AT&T stated, the concern ''that the courts would generally not be able to render sound judgments on settlements because they would not be aware of all the relevant facts ... is of relatively little relevance here, for this Court has already heard what probably amounts to well over ninety percent of the parties'' evidence both quantitatively and qualitatively, as well as all of their legal arguments[, and the reviewing court] is thus in a far better position than are the courts in the usual consent decree cases to evaluate the specific details of the settlement.'' [20] Once liability has survived appellate scrutiny, as in the case at bar, the need for deference to the DOJ's understanding of the public interest almost completely vanishes since the only consideration left in determining the public interest is whether the consent order does in fact remedy the defendant's violation of the law.

The DOJ argues for a cursory review, limited to the allegations contained in the complaint.[21] The DOJ's argument, however, relies on cases such as the 1995 Microsoft consent decree case (''Microsoft/''),[22] where the case settled prior to a trial. Microsoft I, however, was expressly concerned with the entry of a consent decree where ''there are no findings that the defendant has actually engaged in illegal practices.'' [23] While Microsoft I was correct in stating that it would be ''inappropriate for the judge to measure the remedies in the [pretrial settlement] decree as if they were fashioned after trial,'' [24] in the case at bar, there has in fact been a trial, a finding of liability and an affirmance of that finding on appeal. The DOJ also relies on selected passages from AT&T while ignoring the passages quoted here. Simply put, the law does not compel the court to ignore the record developed at trial and affirmed on appeal as the DOJ asserts.

The Court in this case faces an unprecedented situation. Although almost all Tunney Act proceedings have involved cases where the litigation has not started, in this case the facts and law have been fully argued. There are findings of liability by both a District Court and Court of Appeals.[25] The public has expended large amounts of money and time in establishing the facts and the specific nature of a substantial violation of the antitrust laws. The only thing remaining in this historic, massive and protracted case, before the PFJ was signed, was the remedy proceeding.

We have not located another case in which the settlement occurred this late in a proceeding. In prior Tunney Act proceedings there were few, if any facts established through the legal process and the Court's knowledge of the facts was admittedly limited.[26] Here, all of the trial court's Findings of Fact were affirmed by the Court of Appeals.[27] It also agreed with Judge Jackson that Microsoft had violated the antitrust laws.[28]

These unique circumstances require that this Court should carefully follow the instructions of the Court of Appeals as to what constitutes an appropriate remedy.[29] As was held by the Court of Appeals: the remedy must (a) restore competition to the illegally monopolized market,[30] (b) deprive the violator of the ''fruits'' of its illegal acts,[31] and (c) prevent the violator from engaging in similar behavior in the future.[32]

In a case that has proceeded as far as this one, this Court should use its substantial discretion to see that the views of the Court of Appeals as to what constitutes appropriate relief is implemented. Accordingly, this Court is only under a limited obligation to give deference to the DOJ as to whether the Court of Appeals requirements have been satisfied. Indeed, at this stage of the proceedings, the very nature of this task is more of a judicial function than a prosecutorial function. Accordingly, a settlement at this stage will be in the ''public interest'' only if these three requirements of a remedy are strictly achieved. This Court has an obligation to the Court of Appeals to ensure that this occurs.

B. Especially Careful Review Is Warranted By the Importance of this Case to the Economy

All cases are of great importance to the litigants, but few cases have far reaching economic consequences on their own. From this point of view, it is no exaggeration to say that this Court is reviewing the most important consent order since the break up of AT&T a generation ago. The words of the court in A T& T apply with equal force to the case at bar: This is not an ordinary antitrust case. The American Telephone and Telegraph Company, with its various components and affiliates, is the largest corporation in the world by any reckoning, and the proposed decree, if approved, would have significant consequences for an unusually large number of ratepayers, shareholders, bondholders, creditors, employees, and competitors .... [the decree would have] a potential for substantial private advantage at the expense of the public interest. In view of these considerations, and of the potential impact of the proposed decree on a vast and crucial sector of the economy and on such general public interests as the cost and availability of local telephone service, the technological development of a vital part of the national economy, national defense, and foreign trade, the Court would be derelict in its duty if it adopted a narrow approach to its public interest review responsibilities.[33]

Virtually the same thing could be said with respect to the position of Microsoft within

compromise would be destroyed. The consent decree would thus as a practical matter be eliminated as an antitrust enforcement tool, despite Congress'' directive that it be preserved. See S.Rep. No. 93–298, supra, at 6; H.R.Rep. No. 93-1463, supra, at 6.'')

[17] ''It follows that [where no evidence has been taken and no liability has been found] a lower standard of review must be applied in assessing proposed consent decrees than would be appropriate in other circumstances. H.R.Rep. No. 93–1463, supra, at 12. For these reasons, it has been said by some courts that a proposed decree must be approved even if it falls short of the remedy the court would impose on its own, as long as it falls within the range of acceptability or is ''within the reaches of public interest.'' United States v. AT&T, 552 F. Supp. 131, 151 (1982)

[18] United States v. AT&T, 552 F. Supp. 131,151 (1982), aff'd sub nom. Maryland v. United States, 460 U.S. 1001 (1983).

[1] At pretrial stage, ''[r]emedies which appear less than vigorous may well reflect an underlying weakness in the government's case, and for the district judge to assume that the allegation in the complaint have been formally made out is quite unwarranted.'' United States v. Microsoft Corp., 56 F.3d 1448, 1461 (DC Cir. 1995) (''Microsoft I'').

[20] us v. A T & T, 552 F. Supp. 131,152 (D.DC 1982).

[21] CIS, pp. 65–68.

[22] United States v. Microsoft Corp., 56 F.3d 1448 (DC Cir. 1995) (''Microsoft I'').

[23] Id. at 1460–61.

[24] Id. at 1461.

[26] The closest example was the AT&T settlement, US v. A T & T, 552 F. Supp. 131 (D.DC 1982), aff'd sub nom. Maryland v. United States, 460 U.S. 1001 (1983). The Settlement was agreed upon during the trial, before the Court had issued its decision.

[27] United States v. Microsoft Corp., 253 F.3d 34, 117 (DC Cir. 2001).

[28] Id., 60–80.

[29] See, Jonathan B. Baker and Andrew I. Gavil, Ill-Gotten Gains, Toothless Settlement Lets Microsoft Keep Rewards of Monopolization, The Legal Times, Nov. 12, 2001, available at. http://www.antitrustinstitute.org/recent/152.cfm. (''When the settlement follows trial and appeal, judicial concerns about encroaching on prosecutorial power to decide what charges to bring and congressional concerns about uninformed courts venturing into the realm of prosecutorial discretion—both of which underlie the narrow role allotted the District Court in the usual Tunney Act review—are mooted. Once the nature and scope of the violations have been determined, as they have here, all that is left is to set the appropriate remedy—a peculiarly judicial task, concerning which the executive branch may advise but not encroach'')

[30] The Court of Appeals explained: ''The Supreme Court has explained that a remedies decree in an antitrust case must seek to ''unfetter a market from anticompetitive conduct,'' United States v. Microsoft Corp., 253 F.3d 34, 103 (DC Cir. 2001).

[31] Quoting the Supreme Court, the goal is to ''terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation...'' Id.

[32] ''[E]nsure that there remain no practices likely to result in monopolization in the future,'' United States v. United Shoe Mach. Corp., 391 U.S. 244, 250, 20 L. Ed. 2d 562, 88 S. Ct. 1496 (1968), quoted in United States v. Microsoft Corp., 253 F.3d 34, 103 (DC Cir. 2001).

[33] United States v. A T & T, 552 F. Supp. 131,151 (D.DC 1982) (emphasis added).

the personal computer and Internet industry. The personal computer industry and the Internet now reach into almost every facet of the economy. Consumers of personal computers, just like consumers of telecommunications services a generation ago, have an enormous stake in ending the monopoly and enjoying the choices of new technologies and other benefits from a newly competitive marketplace. With so much at stake, any court would be derelict in its duty under the Tunney Act if it did not carefully review the PFJ to ensure that its entry is in fact in the public interest.

C. Especially Careful Review Is Warranted Because the PFJ Is Ambiguous, Difficult to Implement and Enforce, and Will Harm Consumers and Other Third parties

Under the Tunney Act, even when courts review consent orders entered into before a trial, they are charged with providing an especially close review to those portions of the consent order that: (a) are ambiguous (i.e., the reviewing judge ''should pay special attention to the decree's clarity'' [34] since it will be very difficult for the Court to administer unclear provisions); (b) relate to compliance mechanisms (if the judge ''can foresee difficulties in implementation we would expect the court to insist that these matters be attended to'') [35] and (c) affect third parties detrimentally (''certainly, if third parties contend that they would be positively injured by the decree, a district judge might well hesitate before assuming that the decree is appropriate.'') [36]

Every key provision in the PFJ is ambiguous and therefore unlikely to effectively achieve its desired result, will be extraordinarily difficult if not impossible effectively to implement, and will have direct and substantial detrimental effect on a number of third parties, including consumers.

These are three additional reasons why this Court should scrutinize the PFJ especially closely. Section II of this Discussion also will show that this scrutiny will reveal to the Court that the PFJ is not in the ''public interest.'' Section II of this discussion will demonstrate why this Court should reject the PFJ because: (a) key terms are so ambiguous or riddled with loopholes that they will not achieve any of the objectives of the relief portion of this litigation; and (b) difficulties in implementation, including the ineffective and cumbersome enforcement mechanism, will similarly serve to render the PFJ toothless. These two problems will exacerbate other features of the PFJ, which will cause significant injury to many third parties, including in particular consumers.

D. Especially Close Review Is Warranted Because the PFJ Is a ''Mockery of Judicial Power''

Finally, under the Tunney Act a reviewing court should not ''rubber stamp'' a proposed Consent Order that makes a ''mockery of judicial power.'' [37] The PFJ does exactly this.

Although a prompt, certain and effective remedy is often better than a perfect remedy achieved after extended litigation, virtually any remedy that this Court would order after litigation would be better than the PFJ. Section II of this discussion will demonstrate that the PFJ is neither prompt, certain, nor effective.

If the Court of Appeals'' three requirements for an adequate remedy are not satisfied, the public's investment in this case will be wasted and the public interest will not be served. Worse, future monopolists will be sent a signal that they will not be made to account for their illegal behavior, and so many might conclude that the entire Microsoft proceeding has been a mockery of judicial power.

E. The Court Should Not Make its Tunney Act Determination Until It Has Heard The Nonsettling States'' Evidence As To Which Remedy Is In The Public Interest Not only is this case unique in that the consent order has been submitted after a finding of liability has been made and upheld on appeal, it is also unique in that the Court continues to have a responsibility to fashion a remedy independent of whether it accepts the PFJ in its current or in modified form. This is because nine of the Plaintiff states did not accept the terms of the PFJ.

Clearly, these non-settling Plaintiff states in the Microsoft case believe that the PFJ is an unsatisfactory remedy for Microsoft's illegal conduct.[38] They believe that only much more stringent remedies would constitute an effective remedy.[39] They have asked for, and are entitled to, a hearing on their proposed remedy, and this remedy hearing is scheduled to start on March 11.[40]

The peculiar situation of this ''two track'' proceeding requires that the Court hold off its decision under the Tunney Act until after it has heard the arguments to be presented by the nine non-settling States. These plaintiffs have a constitutional right to completion of the trial, and this includes the right to a Hearing before a Court that not only is unbiased, but also a Court that appears to be unbiased. However, if this Court rules under the Tunney Act that the PFJ is in the ''public interest'' prior to the completion of the non-settling States'' hearing, this Court will appear to be biased. It will appear that, even before this Court has heard the evidence that the plaintiff states produce during the March 11 hearing, this Court already had determined the appropriate remedy in the Microsoft case.

To avoid even the appearance that this Court has prejudged the plaintiff-states'' case, this Court should receive and carefully review the public comments on the PFJ, and receive and carefully review the Justice Department's responses. But then this Court should hold off making a Tunney Act determination until the plaintiff-states'' hearing is completed.

This is especially true in light of the overall purpose of the Tunney Act. The Tunney Act granted authority to the Court to take additional evidence in order to ascertain whether the remedy is in the ''public interest.'' It sets deadlines for the DO J, the defendant and the public, but it does not prevent this Court from waiting until the remaining parties have presented their evidence.

Moreover, this delay will not cause any hardship to Microsoft, which has sought to delay the remedial proceedings in this case on numerous occasions. Since not postponing of the Court's Tunney Act determination would harm the remaining plaintiffs by depriving them of their right to a remedy determination that appears to be unbiased, and will not adversely affect Microsoft, a balancing of the equities (as would be done in a preliminary injunction proceeding) clearly suggests that the Court should not make a Tunney Act ''public interest'' determination until all of the evidence concerning the appropriate remedy is before this Court.

It is important to stress the need for further evidence and argumentation with respect to the remedy in this complicated case. As commentators under the Tunney Act, we are asked to rely on the Competitive Impact Statement (''CIS'') filed by the Department of Justice. The CIS mentions that the Department considered a variety of alternative remedies, but it fails utterly to analyze them, saying in less than one page, conclusorily and in disregard of its obligation to help the public comment on the case, that it has rejected all alternatives. Without the detailed explanation by the Government of why various alternatives (including many that were proposed by the American Antitrust Institute) were rejected, it is impossible for the public commentors to play their proper role under the Tunney Act in providing the Court with advice as to the implications of the PFJ. Because of this shortcoming, it is especially appropriate for the Court to hear the evidence in support of alternative remedies that will be promulgated by the non-settling States before judging what is in the public interest.

II. Substantive Failings of the Proposed Final Judgment

As noted in the previous section, the Court is not to ''rubber stamp'' whatever settlement the DOJ puts forward. The degree of deference given the DOJ depends on the stage of the proceeding.

Where, as here, the issues of liability been fully litigated and the remedial goals clearly established, the Court is obligated to ensure that any consent order fulfills those goals. Under this standard, the Court should reject the PFJ as a mockery of judicial power. But

even under the more deferential standards used to review pretrial consent orders, the Court should reject the PFJon grounds that it is ambiguous, unenforceable, injures consumers and other third parties.

A. The PFJ Constitutes a Mockery of Judicial Power

This case presents unique circumstances in that the issues of liability have been fully litigated and affirmed by the Court of Appeals in an unanimous en banc decision. Consequently, the Court must strictly follow the standard for a proper remedy established by the Court of Appeals: ''a remedies decree in an antitrust case must seek to [1] ''unfetter a market from anticompetitive conduct,'' [2] ''terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and [3] ensure that there remain no practices likely to result in monopolization in the future.'' [41] The PFJ fails to prohibit the most pernicious anticompetitive conduct identified by the Court of Appeals and does nothing to inhibit Microsoft's power to continue to use these tactics to maintain its operating system (''OS'') monopoly or to expand that monopoly into other markets. Not only does the PFJ do absolutely nothing to deprive Microsoft of the fruits of its monopoly, the Competitive Impact Statement (''CIS'') filed by the DOJ does not even mention this remedial goal mandated by the Court of Appeals. A proposal which completely ignores critical holdings of the Court of Appeals consitutes a mockery of judicial power.

1. Failure to Prohibit Anticompetitive Integration of Middleware and the Operating System

The PFJ fails to restrict, let alone prohibit, the most egregious types of illegal activity identified by the Court of the Appeals, Microsoft's integration of its products into the Operating System. As with many of the deficiencies in the PFJ, Microsoft's continuing and unfettered ability to integrate products into the operating system transgresses all three remedial goals established by the Court, for it is not only the most important tool used by Microsoft to maintain its current monopoly and create new ones, the exclusive power to integrate software into the operating system is a fruit of Microsoft's illegally maintained monopoly.

While the DOJ completely ignores the Court of Appeals mandate to deprive Microsoft of the fruits of illegal monopoly, the CIS concedes that appropriate relief should, among other things, ''end the unlawful conduct.'' [42] The Court of Appeals unanimously and squarely held that Microsoft's integration of the browser middleware and the operating system ''constitute exclusionary conduct, in violation of § 2'' of the Sherman Act.[43] More specifically, the Court of Appeals found that Microsoft violated the law by commingling software code and by failing to create a way to remove the commingled code from the operating system.[44] Not only does the PFJ fail to end this unlawful conduct by requiring Microsoft either to stop the commingling or to provide a way to remove the commingled code, the PFJ actually endorses such anticompetitive integration by giving ''Microsoft in its sole discretion'' the right to determine the ''the software code that compromises a Windows Operating System Product.'' [45] It is hard to imagine anything that could more readily constitute a mockery of judicial power than to authorize the defendant to engage in conduct which the court has specifically found to be illegal. Yet that is precisely what the PFJ does.

The importance of integration to Microsoft's ability to maintain and extend its monopoly can hardly be understated. It is Microsoft's weapon of mass destruction against competition. Network effects assure that middleware distributed with every new PC will dominate the market and drive out even superior products simply because the middleware is distributed with every new PC. In markets characterized by network effects, ubiquity beats quality. Microsoft can achieve this universal distribution without resort to threats of retaliation or contractual restrictions simply by commingling its middleware code with the operating system software code. As the Court of Appeals found, Microsoft can and has used this type of integration to snuff out middleware that threatened the applications barrier to entry which protects Microsoft's operating system monopoly. So important is this weapon to Microsoft that it sought a rehearing on this matter, despite the fact that the Court had unanimously found that the conduct violated Section 2 of the Sherman Act. Not surprisingly, the Court of Appeals refused to rehear the issue.[46]

The Court of Appeals identified two types of illegal integration, commingling the browser middleware code with the operating system and excluding the browser middleware code from the Add/Remove programs utility. Yet the PFJ neither prohibits commingling nor mandates a method of removing commingled code. Section III.H of the allows OEMs and end users to hide Microsoft middleware products, but Microsoft can force the OEMs to install Microsoft middleware products as part of the operating system. OEMs and consumers can remove the icons for Microsoft middleware products, but neither OEMs nor consumers remove the middleware product itself. It is simply untrue to say that OEMs will have ''freedom to make middleware decisions'' [47] when Microsoft ''in its sole discretion'' can force OEMs to distribute and consumers to accept Microsoft's middleware product as part of the operating system.[48]

Similarly, OEMs and end users can change the settings so that, for example, the PC will launch RealPlayer instead of Microsoft's Windows Media Player middleware to play certain types of music, but neither the OEM nor the end user can really turn off the Windows Media Player. Windows Media Player will still play the music whenever ''necessary for valid technical reasons to supply the end user with functionality consistent with a Windows Operating System Product.'' [49]

Given the existence of network effects, this inability to turn off, let alone remove, Microsoft middleware will ensure that Microsoft defeat rivals offering cross platform alternatives. Consider the music example. RealPlayer does not play music streamed in Microsoft's proprietary format and Windows Media Player does not play music streamed in RealNetworks proprietary format.

Consequently, whenever consumer wants to hear music streamed in Microsoft's format, the PC will automatically play the music using Windows Media Player even though the consumer or the OEM has installed RealPlayer. But the situation is not reciprocal. If the consumer or OEM has not installed RealPlayer and chosen it as the option to play music, when the consumer attempts to listen music streamed in RealNetwork's format the PC will not automatically invoke RealPlayer.

Instead, the PC will display an error message, probably leading the consumer to believe that the content provider's products are defective. Now consider the position of content provider. She can stream her music in RealNetwork's format, which may provide superior features, but which can only be listened to on a subset of PCs. Alternatively, she can stream her music in Microsoft's format and have it play on all PCs, even PCs where the OEM or end user has attempted to disable Windows Media Player. Of course, she will choose to stream in Microsoft's format and as more and more content providers reach the same obvious conclusion, demand for RealPlayer will evaporate regardless of which format provides the better quality music or lower prices. (Note that price is an issue. Even if Microsoft does not charge a separate price for Windows Media Player, Microsoft does sell the server software, encoding tools, etc., to content providers.)

Realistically, ISVs cannot avoid the implications of integration by purchasing installations from OEMs. The obstacles to successful implementation of such a strategy are overwhelming. First, network effects dictate that an ISV will have to purchase installation from every OEM or it will fail to achieve the universal distribution necessary to have a fighting chance against Microsoft.

The price for universal distribution will not be cheap. Again, consider the plight of RealNetworks. Since an OEM cannot remove Windows Media Player, Real Networks would have to compensate the OEM for the additional testing, support and hardware costs of having two media players installed on the PC.[50] OEMs will demand payment because the universal distribution needed by RealNetworks to survive will also mean that an OEM cannot achieve a competitive advantage over its rivals by installing RealPlayer, e.g., IBM cannot differentiate its PCs from Dell's by installing RealPlayer when Dell also installs RealPlayer, and if

RealPlayer is not installed on both IBM and Dell PCs, RealNetworks cannot reasonably hope to survive against Microsoft in this middleware market. The cost to RealNetworks is compounded by the fact that Microsoft not only does not have to compensate the OEM for the cost of installation, Microsoft also gets paid by the OEM for installation of Windows Media Player as part of the overall royalty for Windows. Consequently, every PC shipped would represent an expense to RealNetworks and income to Microsoft. In short, any ISV who seeks to challenge Microsoft in a middleware market will do so at an enormous and probably insurmountable cost disadvantage.

The PFJ contains provisions which further discourage ISVs from challenging Microsoft's integrated middleware and diminish their chances of success if they do. For example, the PFJ gives Microsoft the right to have Windows automatically request the end user to change back to Microsoft middleware fourteen days after the PC's first use.[51] Assume that RealNetworks convinces an OEM to install RealPlayer and to configure the PC to use RealPlayer instead of Windows Media Player for music. Two weeks after the consumer purchases her new PC, she may be confronted with a pop up window asking her to switch to Windows Media Player every time she tries to listen to music. Microsoft is free to make it impossible to turn off these incessant requests except by agreeing to turn off RealPlayer and turn on Windows Media Player. Just to get rid of the annoying message, at least some consumers will agree to switch to Windows Media Player. In other words, RealNetworks cannot really purchase more than fourteen days worth of installation on a PC. Microsoft, however, will Windows Media Player permanently installed as part of the operating system.

Microsoft also has an unrestricted right to automatically override the consumer's or OEM's configuration whenever the consumer installs ''a new version of a Windows Operating System Product.'' [52] There are no restrictions on Microsoft's power to issue ''new versions'' of Windows. Nor is there any restriction on Microsoft's ability to update a consumer's PC to these new versions automatically when the consumer connects to the Internet. Microsoft is free to issue automatic updates to new versions of Windows which do little more than sweep away the configuration. So even among consumers who refuse Microsoft's repeated requests to switch to Windows Media Player, the RealPlayer installation may last only until Microsoft issues its next operating system update.

At best, therefore, all an ISV can purchase from an OEM will be a temporary presence on many PCs. Not only will this discourage ISVs from entering the market with competitive middleware products, those who do will find that a temporary presence creates the same problems as lack of universal distribution due to network effects. Why should someone stream audio, write applications, etc., for a non-Microsoft middleware product that is available on a hit or miss basis when Microsoft middleware is universally present on a permanent basis?

There are two effective tools to deal with the issue of anticompetitive integration: (1) prohibit integration by Microsoft or (2) require Microsoft to include competitive middleware with the operating system. The PFJ contains neither tool. Given a unanimous en banc decision of the Court of Appeals holding that Microsoft illegally commingled middleware code with the operating system, the failure of the PFJ to provide either tool constitutes a mockery of judicial power.

2. Microsoft Remains Free to Withhold Vital Information

Without disclosure of the operating system's APIs and related information, IHVs, IAPs, ICPs, OEMs, and perhaps most importantly ISVs cannot develop functional products that will work on Windows. Microsoft used selective disclosure of this information as a reward/retaliation mechanism in order to obtain compliance from third parties in its effort to eliminate competition from cross platform middleware products. Furthermore, by withholding information from ISVs that is available to Microsoft's own developers or by disclosing the information to ISVs later than the information is made available to Microsoft's own developers, Microsoft can retard an ISV's ability to develop competitive products, including middleware.

In a competitive market for operating systems, Microsoft would fully disclose all APIs and related information in order to attract support from third parties and to make sure that their products worked as well as they possibly could with the Windows operating system. But Microsoft does not operate in a competitive marketplace, and Microsoft has an incentive to engage in selective, incomplete and delayed disclosures in order to prevent the development of cross platform middleware products.

Rather than simply compel Microsoft to make the complete and timely disclosures that would ordinarily be required by a competitive marketplace, the PFJ puts into place a regime which seems designed to preserve Microsoft's unbridled ability to exploit its monopoly power through selective disclosure. For example, the PFJ does not require disclosure of all APIs but only the subset of ''the APIs and related documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product.'' [53] There are a number of problems with this restricted set of mandatory disclosures. First, ISVs may want to use APIs in Windows that Microsoft does not happen to use for its own middleware. While a certain API or set of APIs may be the best way for Microsoft to implement its middleware on Windows, a different set of APIs may prove better for a competitor's middleware. Under the terms of the PFJ, however, Microsoft only has to disclose the APIs used by its own middleware. In other words, and contrary to the CIS, competitiors do not have access to the same APIs as Microsoft's own middleware developers. Rather, they have access only to those APIs used by Microsoft's middleware developers.

Second, Microsoft has complete discretion over which APIs fall into this subset of mandatory disclosures. Under the PFJ, an API is limited to the interfaces ''that Microsoft Middleware running on a Windows Operating System Product uses to call upon that Windows Operating System Product in order to obtain any services from that Windows Operating System Product.'' [54] The PFJ also gives Microsoft complete control over what constitutes the ''Windows Operating System Product.'' [55] The repeated references to ''Windows Operating System Product'' in the definition of APIs make clear that Microsoft can refuse to disclose APIs simply by exercising its unfettered discretion under the PFJ to remove those APIs from the ''Windows Operating System Product.''

Third, the APIs used by important Micorosoft Middleware Products such as Windows Media Player may not be subject to mandatory disclosure. The PFJ does not require disclosure of the APIs used by ''Microsoft Middleware Products.'' Instead, the PFJ requires disclosure of the APIs used by ''Microsoft Middleware.'' [56] The definition of ''Microsoft Middleware Products'' expressly includes not only Windows Media Player, but also other important middleware such as Microsoft Internet Explorer.[57] However, these products are not expressly included in the definition of ''Microsoft Middleware.'' [58] Not all software which provides ''the same or substantially similar functionality as a Microsoft Middleware Product'' [59] falls within the definition of ''Microsoft Middleware.'' It must also be ''distribute[d] separately separately from a Windows Operating System Product to update that Windows Operating System Product.'' [60] If, for example, Microsoft ceases to distribute Internet Explorer and Windows Media Player separately from Windows or if Microsoft no longer treats these separate distributions of Internet Explorer and Windows Media Player as Windows updates, then Internet Explorer no longer constitutes ''Microsoft Middleware'' and Microsoft no longer has an obligation to disclose the APIs used by Internet Explorer.[61]

Whether a product falls within the definition of ''Microsoft Middleware,'' and hence whether the APIs it uses must be disclosed, also depends on whether the product is trademarked.[62] Under PFJ section VI.T, a product is ''Trademarked'' if Microsoft claims a trademark in the product, separate from its trademark claims for ''Microsoft??'' and ''Windows??,'' by, for example, marking the name with the ??

[60] PFJ, sec. VI.J. 1.

[61] Note that Microsoft's current distribution of these products for the Macintosh platform will not constitute the required separate distribution because the Macintosh versions cannot be updates to Windows.

[62] PFJ, sec. VI.J.2.

character. But a product is not Trademarked if its name is ''comprised of the Microsoft ?? or Windows?? trademarks together with descriptive or generic terms.'' In other words, Microsoft Internet Explorer?? and Windows Media Player?? would be Trademarked and the APIs used by those products would be subject to disclosure. But Microsoft?? Internet Explorer and Windows?? Media Player would not be Trademarked and the APIs used by those products would not be subject to any mandatory disclosure. Under PFJ Section VI.T, Microsoft ''disclaims any trademark rights in such descriptive or generic terms.''

Consequently, if the Court enters the PFJ, Microsoft Internet Explorer?? and Windows Media Player?? will automatically become Microsoft?? Internet Explorer and Windows?? Media Player and the APIs used by those products will fall outside the scope the PFJ's mandatory disclosure provisions.

Fourth, the number of APIs subject to mandatory disclosure is further reduced by PFJ section III.J.1 (a) which allows Microsoft to refuse disclosure of APIs ''which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems.'' The importance of the APIs for these functions can be seen from the fact that anyone who wishes to play music distributed by the PressPlay joint venture created by two of the five major record labels will need access to the digital rights management APIs. The CIS asserts that ''the APIs ... for the Secure Audio Path digital rights management service ... must be disclosed.'' [63] Unfortunately, the CIS is wrong. Section III.J.1(a) of the PFJ states: ''No provision of the Final Judgment shall ... [r]equire Microsoft to ... disclose ... portions of APIs ... which would compromise the security of a particular installation or group of installations of ... digital rights management.'' The CIS appears to assume that ''installation'' refers to an ''end-user installation,'' [64] when, in fact, the the term ''end-user installation limitation'' is not stated anywhere in Section III.J.1.a. Installation could just as easily mean Microsoft particular installation of this technology in Windows generally as it could an consumer's particular installation on his own PC. Indeed, the former interpretation is more probable, at least with respect to APIs, since it is hard to conceive of a Windows API installed only on the PC of one particular consumer.

Fifth, not only are ISVs limited to an artificially and anticompetitively limited subset of the APIs, ISVs do not get access to those APIs until the ''last major beta test release'' of the Microsoft Middleware. In other words, ISVs can never hope to catch up with Microsoft's own developers. While Microsoft's developers presumably have access to new APIs as soon as they are created, ISVs do not get access to new APIs until Microsoft releases a beta version of the revised operating system to 150,000 or more beta testers.[65] It is not clear that Microsoft has ever had 150,000 beta testers in any of its beta testing programs.

Sixth, the PFJ delays the initial disclosure of the APIs for a year.[66] There is no need for this delay. Microsoft already discloses the APIs it wants to disclose through the Microsoft Developer Network mechanism utilized by the PFJ. The CIS restates the one year delay, but provides no justification for it. Consequently, it is a mockery of judicial power to allow Microsoft to continue this anticompetitive conduct for another year.

Finally, PFJ section J.2 empowers Microsoft to exclude Open Source developers from access to many, if not all, APIs. The most important source of competition for Microsoft may well come not from commercial ISVs but the Open Source movement, i.e., the creators of Linux, Apache, etc. While the Open Source movement has significant potential for creating competition, the Open Source movement does not constitute a for profit business or even a traditional nonprofit business. Section III.J.2(b), however, gives Microsoft the right to condition access to many APIs on proof of ''a reasonable business need for the API'' and section III.J.2(c) allows Microsoft to limit access to those who meet ''reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business.'' Participants in the Open Source movement will have difficulty establishing that they are a business with business needs under many tests, but it will certainly be impossible to meet the standards established by Microsoft given that Microsoft has already attacked the Open Source model as ''unhealthy'' and doomed to failure.[67] Indeed, Microsoft has even branded all Open Source software as ''a virus.'' [68]

The CIS is simply wrong when it states that ''Subsection III.J.2, by it explict terms, applies only to licenses for a small subset of the APIs and Communications Protocols that Microsoft will have to disclose.'' [69] In reality, Section III.J.2, ''by its explicit terms,'' covers APIs and other information ''related to anti-piracy systems, anti-virus technologies, license enforcement mechanisms, authentication/authorization security, [and] third party intellectual property protection mechanisms.'' Virtually all APIs fall into this category, depending on how one defines ''related to'' and Microsoft will have no incentive to define the phrase narrowly. But even under a narrow interpretation of section III.J.2, participants in the Open Source movement may still be excluded from disclosures of APIs and other critical information on grounds that they are not ISVs because they do not constitute an entity. Sec. Vii.

The District Court found, and the Court of Appeals affirmed, that Microsoft illegally maintained its monopoly by engaging in selective and delayed disclosures of APIs. The PFJ allows this practice to continue virtually unabated. Consequently, the PFJ is a mockery of judicial power.

3. Failure to Prohibit Anticompetitive Corruption of Cross-Platform/Open Standards

Microsoft's assault on middleware threats to its Operating System monopoly has not been limited to integration. Java represented a perhaps even greater threat to Microsoft's Operating System than Netscape's web browser, and unlike the Netscape web browser, Java continues to be a viable product. Created by Sun, Java is at its essence a technology that allows programmers to write applications that will run on any operating system with a Java Virtual Machine installed.

Microsoft licensed Java from Sun and began to market programming tools for ISVs to use in writing Java applications. Microsoft also created its own version of the Java middleware for Windows. Microsoft, however, secretly altered its implementation of Java so that applications written using Microsoft's programming tools would not run correctly under any operating system other than Windows. The Court of Appeals condemned Microsoft's use of these tactics as part of an ''embrace and extend'' strategy—Microsoft embraced an open/cross-platform and then extended it with Windows-only proprietary technology—as a violation section 2 of the Sherman Act. Use of the ''embrace and extend'' strategy, whether done openly or in secret, effectively renders any cross-platform technology useless as a means of breaking down the applications barrier to entry.[70]

While the PFJ does purport to contain language which restricts—but does not eliminate—Microsoft's use of exclusive dealing agreements and threats of retaliation for using competing middleware products, including, presumably, Sun's Java Virtual Machine, nothing in the PFJ restricts Microsoft's ability to subvert an open standard by engaging in a surreptitious embrace and extend strategy. If, as the CIS asserts, ''[c]ompetition was in this case principally because Microsoft's illegal conduct maintained the applications barrier to entry into the personal computer operating system market by thwarting the success of middleware that would have assisted competing operating systems in gaining access to applications and other needed complement,'' then Microsoft must be prohibited from polluting the open standards on which cross-platform middleware relies. The failure of the PFJ to do so constitutes a mockery of judicial power.

[63] 63 CIS, p. 35.

[64] Page 51 of the CIS states that Section III.J.1.a is ''limited to specific end-user implementations of security items.''

[65] PFJ, sec.III.D and. VI.R.

[66] More specifically, the PFJ section III.D states that the mandatory disclosures will begin ''[s]tarting a the earlier of the release of Service Pack 1 for Windows XP or 12 months after submission of the [Proposed] Final Judgment for to the Court.''

[69] 69 CIS, p. 53.

[70] Microsoft III, 253 F.3d at 74–78.

4. Microsoft Remains Free to Retaliate Against Those Who Favor Competitive Products

Section III.A of the PFJ initially purports to prohibit retaliation against OEMs who distribute competitive middleware products. Yet section III.A then renders this prohibition meaningless by giving Microsoft the right to provide ''Consideration ....commensurate with the absolute level or amount of that OEM's development, distribution, promotion, or licensing of that Microsoft product or service.'' Consideration includes both ''monetary payment'' and ''the provision of preferential licensing terms.'' [71] So Microsoft may reward OEMs who distribute, promote or license Microsoft products to the exclusion of competitive middleware products. Of course, those OEMs who favor competitive middleware products will not receive ''Consideration'' from Microsoft. It does not matter that this use of Consideration is limited to ''absolute'' versus ''relative'' levels of distribution. The additional support costs of installing two products which provide the same functionality will deter most OEMs from installing competitive product when they are already installing the Microsoft product. By any reasonable standard, therefore, Microsoft's ability to give consideration to OEMs for the distributing, promoting and licensing of Microsoft's products amounts to an unrestricted right to retaliate against OEMs who distribute, promote or license non-Microsoft products.

Similarly, Section III.G.1 purports to prohibit Microsoft from offering ''Consideration'' to OEMs as well as IAPs, ICPs, ISVs, and IHVs in exchange for their distribution of Microsoft Platform software in a fixed percentage, but the section goes on to state Microsoft may enter such agreements whenever ''Microsoft in good faith obtains a representation that is commercially practicable for the entity to provide equal or greater distribution, promotion, use or support for software that competes with Microsoft Platform Software.'' Note that the OEMs and others are not required to distribute any competitive product, only to represent that they could distribute competitive products. The CIS points out that Microsoft could grant an ISV preferential marketing, technical and other support ''on the condition that the ISV ship the Windows Media Player along with 70% of the ISV's products'' so long as ''the ISV affirmatively states that it is commercially practicable for it also to ship competing media players with at least the same (or greater) number of shipments.'' [72] Commercial practicability is not defined in the PFJ, and it is difficult to imagine that an ISV (or OEM, IAP, etc.) would refuse to make such a representation in exchange for preferential treatment from Microsoft. At the same time, it is difficult to believe that an ISV would distribute two products that perform the same function. As with OEMs, the additional distribution costs may be small, but the additional support costs to help consumers sort out which product to use are likely to be prohibitive.

Section III.F.2 also purports to prohibit Microsoft from giving an ISV Consideration in exchange for the ISV's agreement to refrain from ''developing, using, distributing, or promoting any software'' that competes a Microsoft or runs on a competing platform. Yet the very same section gives Microsoft the right to enter into these exclusive agreements as part of a ''bona fide contractual obligation of the ISV to use, distribute or promote any Microsoft software.'' All ISVs who write software for Windows must use Windows, even if only to test whether products will run under Windows. Consequently, Microsoft is relatively free to offer Consideration, including preferential developer support, to any ISV as part of the ISV's other contractual obligations with Microsoft. Section III.F.2 does, to be sure, require that the restrictions be connected to ''bona fide contractual obligations'' and limits the permissible restrictions to those that are ''of reasonable scope and duration.'' But these are all undefined terms, so challenges to conduct under this section as unreasonable in scope or duration may require years of litigation. Since the Technical Committee (''TC'') cannot issue binding decisions, nor can its members testify, nor can its work product be used in any enforcement proceeding, the TC will add a layer of delay rather than expedite resolution of these disputes.

B. Consumers and Other Third Parties Will Be Injured

Independently of whether the PFJ consitutes a mockery of judicial power, the Court can and should refuse to a consent order which poses a high risk of injury to consumers or other third parties. The PFJ contains provisions which will affirmatively make matters worse in at least four important ways. First, the PFJ contains language which Microsoft may be able use to require competitors to license their intellectual property to Microsoft. This would take away the rights of third parties to negotiate with Microsoft over whether and on what terms Microsoft may use their property. Second, the Court of Appeals modified the standard for tying from ''illegal per se'' to ''rule of reason,'' but the PFJ purports to immunize Microsoft from tying claims altogether. This poses an unacceptable risk that the third party victims of Microsoft's tying may lose some or all their rights to challenge this conduct. Third, whereas Microsoft now makes it possible to remove certain middleware such as Windows Messenger from middleware, the PFJ will limit Original Equipment Manufacturers (''OEMs'') and consumers to deleting icons. Finally, the PFJ enables Microsoft to retaliate with legal immunity against OEMs and others in a variety of ways.

1. The PFJ Requires Cross-Licensing of Third Party Intellectual Property to Microsoft.

Currently, ISVs and other third parties are at least theoretically free to license their intellectual property to Microsoft or not as they see fit. The extent to which third parties actually have the power to exercise this legal right may remain in doubt due to Microsoft's monopoly power, but the PFJ, with no consideration for the possible anticompetitive effects of cross licensing with a monopolist in networked markets, appears to sweep away the intellectual property rights of third parties who deal with Microsoft.

The loss of the legal right to refuse to cross license intellectual property with Microsoft is found in section III.I.5 which provides:

an ISV, IHV, IAP, ICP, or OEM may be required to grant to Microsoft on reasonable and nondiscriminatory terms a license to any intellectual property rights it may have relating to the exercise of their options or alternatives provided by this [Proposed] Final Judgment; the scope of such license shall be no broader than necessary to insure that Microsoft can provide such options or alternatives.

The scope of this provision and its potential impact on third parties is astonishing. Assume, for example, that an OEM wishes to enable dual booting, i.e., to allow the end user to choose between using Linux (or some other OS) and Windows when she turns on her PC. Can Microsoft insist that it receive a license from the OEM for the software that makes the choice possible? The answer would seem to be yes. After all, the OEM would be attempting to take advantage of ''options or alternatives provided'' by the PFJ and Section III.I.5 does say that Microsoft may require the OEM to grant Microsoft ''a license to any intellectual property rights it may have relating to the exercise of [its] options or alternatives.'' Expanding Microsoft's ability to insist on cross-licensing will likely have two types of negative effects. In some cases, it will raise the price of dealing with Microsoft too high for the other company, in which case the company will be disadvantaged in the marketplace. In other cases, the cross-licensing will occur and Microsoft may gain important intellectual property that will give it a competitive advantage over its competitors. In either instance, the incentives for other companies to produce new intellectual property will be reduced and consumers will suffer.

2. The PFJ May Immunize Microsoft From Tying Claims.

One of the more remarkable phenomena in this case has been Microsoft's success at escaping liability for tying under Section 1 of the Sherman Act. When the lawsuit began, Microsoft, like everyone else, was subject to the rule that tying is illegal per se. The Court of Appeals ignored at least a half century of Supreme Court precedent and held that the rule of reason analysis should apply to Section 1 claims of tying against Microsoft.[73] (Note that the Court of Appeals already found that this conduct violated the rule of reason standard under Section 2 of the Sherman Act.) Section VI.U of the PFJ, however, dispenses with even the rule of reason analysis and tries to immunize Microsoft from tying claims altogether when it states that the ''software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion.'' Even the failed 1995 Consent Decree required Microsoft to offer at least a plausible procompetitive reason for its tying of software to the Operating System.[74] It is

[71] PFJ, sec. VI.C.

[72] CIS, pp. 42–43.

[73] Microsoft Ill, 253 F.3d at 89–95.

[74] See United States v. Microsoft Corp., 147 F.3d 935 (DC Cir. 1998).

difficult even to conceive of a greater victory for a convicted abusive monopolist who is already in the process of tying new products to its core operating system monopoly. This provision of the PFJ alone makes a mockery of the entire case, but it also could mean that the victims of tying, whether it be consumers forced to purchase products they do not want or ISVs whose products are excluded from the OEM channel of distribution, may also be left without remedy. Clearly, the PFJ gives consumers and other third parties no legally enforceable rights.[75] The PFJ also presents an unacceptably high risk of depriving them of their existing rights. Such a consent order is not in the public interest.

3. The PFJ Delays Changes in Microsoft's Conduct which Should Already Be in Place. Section III.H allows OEMs and consumers to hide certain Microsoft middleware by deleting the icons for the Microsoft products and replacing them with icons for competitive products beginning ''at the earlier of the release of Service Pack 1 for Windows XP or 12 months after submission of this [Proposed] Final Judgment to the Court.'' In the rapidly changing middleware markets affected by this provision, a year may provide Microsoft more than enough time to eliminate viable competitors by excluding them from access to consumers, and there is no justification for giving Microsoft a year to implement this provision. On July 11,2001, Microsoft issued a press release stating these changes would be incorporated into Windows XP when it shipped in October 2001.[76] If Microsoft could implement this flexibility in October 2001, why must competition take a battering for another full 12 months? The delay can only serve to entrench Microsoft's efforts to eliminate competition in the middleware markets covered by Section III.H of the PFJ.

4. The PFJ Enables Microsoft to Retaliate Against OEMs and Others. As noted in our comments on justice and ambiguity, Microsoft may in fact remain free to retaliate against OEMs, Independent Software Vendors (''ISVs'') and others who do not favor Microsoft middleware products. While the other comments focus on Microsoft's ability to take advantage of loopholes and vague and ambiguous provisions within the PFJ, perhaps it is as important to note that the PFJ covers only a small number of Microsoft products. Programming tools and Application Programming Interfaces (''APIs'') not used by Microsoft are critically important to ISVs and others. Similarly, Microsoft Office's commanding market share makes it an indispensible product to OEMs. The Court of Appeals noted the willingness of Microsoft to use these products in its illegal efforts to maintain the Windows monopoly, yet the PFJ leaves Microsoft free to retaliate against ISVs, OEMs and others by discriminating on price and other terms of access to these products. Without realistic protections against retaliation, the record of this case indicates strongly that many remedial portions of the PFJ will be ineffective. C. The Proposed Final Judgment Is Ambiguous ''A district judge pondering a proposed consent decree understandably would and should pay special attention to the decree's clarity.'' [77] The PFJ fails to set forth specific and precise remedies for the antitrust concerns identified by the Court of Appeals. There are no clear prohibitions on Microsoft's conduct in the Proposed Final Judgment. Many of the putative restrictions on Microsoft are vague and all are riddled with exceptions and qualifications. As the experience over the 1995 Consent Decree shows, Microsoft and the government may have enormous differences of opinion as to the meaning of the terms. This lack of clarity will almost certainly compound the delay already present in the Proposed Final Judgment since the inevitable differences of opinion cannot be resolved without extended litigation to determine the ''intent'' of the parties according to the rules of contract law.

1. Unclear Whether Microsoft Can Retaliate Against OEMs Who Favor Competitive Products A critical issue in Microsoft's illegal maintenance of its monopoly has been its ability to retaliate against those who stand in its way, especially OEMs. OEMs provide an extraordinarily important distribution channel for software, including any cross-platform middleware that could serve to break down the applications barrier to entry. Unlike Microsoft, OEMs face intense competition and operate on razor thin profit margins. Consequently, they are especially vulnerable to retaliation from Microsoft. Seemingly small differences in the price charged for Windows can account for the success of one OEM and the demise of another. Nor is retaliation limited to price differences for Windows. If Microsoft can retaliate through the prices it charges for other products, such as Microsoft Office, and through the level of support that Microsoft gives an OEM. Since OEMs currently have no viable alternative to Windows, they simply cannot afford incur Microsoft's disfavor.

Section III.A. 1 appears to prohibit Microsoft retaliating against OEMs who favor rival products: Microsoft shall not retaliate against an OEM by altering Microsoft's commercial relations with that OEM, or by withholding newly introduced forms of non-monetary Consideration ... from that OEM, because it is known to Microsoft that the OEM is or is contemplating ... developing, distributing, promoting, using, selling, or licensing any software that competes with Microsoft Platform Software ...

Now assume that an OEM wants to develop, distribute and promote a new type of software that will compete with JAVA as a tool for creating applications that will run on multiple Operating Systems. As such, this technology threatens to erode the Applications Barrier to Entry that protects Microsoft's monopoly. Can Microsoft retaliate against the OEM for doing this? No one can tell from the language of the PFJ. First, there is the question of whether this new technology competes with a ''Microsoft Platform Product.'' Microsoft Middleware products are included within the PFJ's definition of a ''Microsoft Platform Product.'' [78] It is still unclear, however, whether this new OEM middleware would compete with ''Microsoft Platform Software.'' The PFJ narrowly defines ''Microsoft Middleware Products.'' [79] Microsoft's ''Java Virtual Machine'' is included in the definition of Microsoft Middleware Products,[80] but the OEM is not offering a different ''Java Virtual Machine,'' The OEM is offering an alternative to using Java. True, this technology threatens Microsoft's monopoly in the same way as Java does, but it remains unclear whether this new technology competes with any Microsoft Middleware Products. Therefore, it remains unclear whether the new technology competes with Microsoft Platform Software. Therefore, it remains unclear whether Microsoft may retaliate against the OEM for offering this technology. Consider another example where an OEM seeks to distribute the Netscape web browser, and the OEM promotes its use of Netscape in advertising, etc. Presumably this presents a clearer case since the definition of Microsoft Middleware Products expressly includes the Internet Explorer web browser and, therefore, it would seem almost certain that the Netscape web browser competes with Microsoft Platform Software. May Microsoft retaliate against the OEM for distributing the Netscape web browser? Again, the answer is unclear. As previously noted, section III.A. 1 does state that Microsoft cannot condition any Consideration that it gives an OEM based on whether the OEM distributes or promotes software that competes with Microsoft Platform Software. But Section III.A also states that ''[n]othing in this provision shall prohibit Microsoft from providing Consideration to any OEM with respect to any Microsoft product or service where that Consideration is commensurate with the absolute level or amount of that OEM's development, distribution, promotion, or licensing of that Microsoft product or service.'' In other words, Microsoft cannot withhold Consideration for promoting Netscape, but Microsoft can withhold Consideration for failing to promote Internet Explorer. OEMs have limited resources to devote to the distribution and promotion of software, and if an OEM devotes its marketing budget to Netscape, the OEM cannot also spend those funds distributing and promoting Internet Explorer. Consequently, the OEM's distribution and promotion of Netscape may mean that the OEM has not given the required level of distribution or promotion to Internet Explorer, thereby entitling Microsoft to withhold the Consideration that Microsoft gives to competing OEMs who do not distribute and promote Netscape. This contradiction recreates the same type of ambiguity found the 1995 Consent Decree which prohibited Microsoft from tying products to Windows, but expressly allowed Microsoft to integrate products into Windows.

2. Unclear Whether Non-Microsoft Middleware and Non-Microsoft MiddleWare Products as Defined by the PFJ Could Ever Exist

[75] PFJ, see. VIII.

[76] See Microsoft Press Release.

[77] United States v. Microsoft, 56 F.3d 1448, 1461(DC Cir. 1995).

[78] PFJ, sec. VI.L(ii).

[79] PFJ, sec. VI.K

[80] PFJ, Sec. VI.K.1

Some of the most important provisions of the PFJ concern the rights of OEMs, consumers, and others to use Non-Microsoft Middleware and Non-Microsoft Middleware Products. Section III.H, for example, allows an OEM or end user to hide Microsoft Middleware Products and install Non-Microsoft Middleware Products as the default mechanism to perform the same functions. Thus, it would seem that an OEM could remove the icon for Internet Explorer and replace it with an icon for Netscape's web browser, but in reality this will depend on whether Netscape's web browser constitutes a Non-Microsoft Middleware Product. To constitute a Non-Microsoft Middleware Product, Netscape's web browser must, among other things, expose ''a range of functionality to ISVs through published APIs.'' [81] Generally speaking, APIs are the special codes that an application uses to communicate with Middleware or the Operating System. Indeed, Middleware constitutes a competitive threat to Microsoft's Operating System monopoly because Middleware contains its own set of APIs so that an application does not have to communicate directly with the Operating System. As long as the PC contains the appropriate Middleware, the application will run regardless of whether the PC uses Windows or some other Operating System. This is not to say that the Operating System APIs are irrelevant. The Middleware still uses the Operating System's APIs, but the applications use the Middleware APIs. Netscape's web browser does expose APIs as that term is commonly used.

The PFJ, however, contains a much narrower definition of APIs than that commonly used. Under PFJ section VI.A, only ''the interfaces ... that Microsoft Middleware running on a Windows Operating System Product uses to call upon that Windows Operating System Product in order to obtain any services from that Windows Operating System Product'' constitute APIs. In other words, APIs that exist outside the Windows Operating System do not appear to constitute APIs at all. These APIs are, of course, Microsoft's intellectual property.

So, for an OEM to have the right to install Netscape as the default web browser the question is not whether Netscape exposes Netscape APIs, but whether Netscape exposes Windows APIs. This makes no sense since it could easily mean that there is no such thing as Non-Microsoft Middleware Product, thereby rendering a significant portion of the PFJ meaningless. But this interpretation is more than plausible given the express language of the PFJ. Ultimately, the Court may reject this interpretation and refuse to use the PFJ's definition of APIs for purposes of determining what constitutes a Non-Microsoft Middleware Product. Then again, the Court might not. Either way, the PFJ is ambiguous on this fundamental point.

3. Unclear Whether Microsoft May Retaliate Against ISVs Who Favor Competitive Products Just as Section III.A. 1 initially appeared to limit Microsoft's ability to retaliate against OEMs, so too Section III.F.1 provides that ''Microsoft shall not retaliate against any ISV ... because of that ISV's ... developing, using distributing, promoting or supporting any software that competes with Microsoft Platform Software or any software that runs on any software that competes with Microsoft Platform Software'' and Section III.F.2 states that ''Microsoft shall not enter into any agreement relating to a Windows Operating System Product that conditions the grant of any Consideration on an ISVs refraining from developing, using, distributing, or promoting any software that competes with Microsoft Platform Software or any software that runs on any software that competes with Microsoft Platform Software.'' As with the prohibition against OEM retaliation, whatever clarity these provisions might otherwise have vanishes upon careful examination.

Assume that an ISV plans to develop a game that will make use of some RealPlayer's multimedia functionalities. Does the PFJ allow Microsoft to punish the ISV for not using RealPlayer instead of Windows Media Player? Could Microsoft, for example, refuse to provide the ISV with technical support in retaliation? The answer is far from clear. RealPlayer competes with Windows Media Player, which is included in the definition of Microsoft Middleware Products and, therefore, within the definition of Microsoft Platform Product which would seem to invoke Section III.F's ban on retaliation. But Section III.F.2 contains an exception to the general rule against withholding Consideration in retaliation for the use of competing software: Microsoft may enter into agreements that place limitations on an ISV's development, use, distribution or promotion or any such software if those limitations are reasonably necessary to and of reasonable scope and duration in relation to a bona fide contractual obligation of the ISV to use, distribute or promote any Microsoft software ... The PFJ does not define or give any guidance as to how to define what is ''reasonably necessary,'' ''reasonable scope and duration,'' or ''a bona fide contractual obligation.'' If Microsoft wants to retaliate, Microsoft would simply argue that it offered Consideration only as part of a contract to promote Windows Media Player and that the ISV who uses RealPlayer either did not enter into such a contract or breached the contract by using RealPlayer. Such an interpretation of the exception would render the main prohibition meaningless and the Court might interpret the exception more narrowly, but then again the Court might accept the broad interpretation of the exception. Either way, the provisions that relating to retaliation against ISVs who favor non-Microsoft products are ambiguous.

4. Unclear Whether Microsoft Must Make Any Disclosures to Third Parties.

The PFJ contains language which standing on its own might require Microsoft to make certain disclosures of APIs, Communications Protocols, and related documentation that enable ISVs and others to write software capable of running on Windows. These comments have already pointed out that the loopholes contained in the API provisions allow Microsoft almost complete discretion to continue to withhold APIs. The ambiguities surrounding the mandatory disclosure provisions for Communications Protocols allow Microsoft to withhold critical information. PFJ section III.E states that ''Microsoft shall make available for use by third parties ... any Communications Protocol that is ... (1) implemented in a Windows Operating System Product ... and (ii) used to interoperate natively ... with a Microsoft server operating system product.'' There are three critical terms in determining what Microsoft must disclose: ''Communications Protocol,'' ''Windows Operating System Product,'' and ''Microsoft operating system product.'' The PFJ defines ''Communications Protocol'' as:

[T]he set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product and a server operating system connected via a network, including, but not limited to, a local area network, a wide area network or the Internet. These rules govern the format, semantics, timing, sequencing, and error control of messages exchanged over a network.[82]

The incorporation of ''Windows Operating System Product'' and ''server operating system'' into the definition of ''Communications Protocol'' makes the definition of these terms especially important in understanding what Microsoft must disclose. The PFJ definition of ''Windows Operating System Product'' expressly allows Microsoft to include whatever it wants and by implication to exclude whatever it does not want from the ''Windows Operating System Product.'' [83]

The definition of ''Windows Operating System Product'' and its incorporation into the definition of ''Communications Protocol'' makes Microsoft's obligation to disclose ''Communications Protocol'' a moving target. But the third critical term, ''server operating system product,'' is not defined at all. Nor does the PFJ define server operating system. The CIS, perhaps in belated recognition of this issue, purports to define the term,[84] but there is no reason to believe that Microsoft agrees with the CIS definition. Thus, exactly what Microsoft must disclose as under the Communications Protocol provision remains ambigous.

Microsoft's obligations to disclose Communications Protocols are also subject to the same exceptions in PFJ section III.J that apply to the API disclosure provisions. Just as PFJ section III.J. 1 threatens to remove a broad set of APIs from disclosure, so too it may exempt many if not most of the Communications Protocols that Microsoft would otherwise have to disclose. Similarly, PJF section III.J.2 may well mean that Microsoft can deny disclosure of Communications Protocols to competitors, including the Open Source movement, just as it does for APIs.

5. Unclear Whether Open Source Developers Are ISVs.

The Open Source Movement presents one of the biggest threats to Microsoft. Linux is undoubtedly the most famous Open Source

[81] PFJ, see. VI.N.

[82] PFJ, see. VI.B

[83] PFJ, sec. VI.U

[84] CIS, p. 37

project, but a wide variety of Open Source Projects are underway. Although some commercial enterprises bundle Open Source software with additional proprietary software, documentation or services, e.g., Red Hat, the Open Source software itself is distributed without charge. A number of references in the PFJ suggest that its protections may not apply to Open Source developers despite their unusual potential for creating competition against Microsoft.

For example, section III.J.2(c) specifically states that Microsoft can refuse to license ''any API, Documentation or Communcations Protocol related to anti-piracy systems, anti-virus technologies, license enforcement mechanisms, authentication/authorization security, or third party intellectual property protection mechanism of any Microsoft product'' to any one who fails to meet ''reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business.'' Ambiguity exists on two levels here. First, Microsoft could argue that virtually all of its APIs, etc., are in some way ''related to'' this wide range of key technologies. Second, Microsoft would seem to have almost carte blanche to refuse access to anyone on grounds that they do not meet Microsoft's standards for ''authenticity and viability.'' What constitutes ''reasonable, objective standards'' is anyone's guess, but even if this language sufficiently protects commercial enterprises, Microsoft may still be able to refuse to grant access to Open Source developers since, by definition, they do not even charge for their software, let alone make a profit.

More fundamentally, the PFJ defines an ISV as ''an entity other than Microsoft that is engaged in the development or marketing of software products.'' [85] Much of the Open Source community remains a loose collection of individuals who post changes to software code on an ad hoc basis in a variety of sometimes shifting locations on the Internet. Whether these communites constitutes ''entities'' is unclear.

6. Additional Ambiguities

Trying to pin down what Microsoft may or may not do is like trying to hold water in your hand. Virtually every provision raises questions. The preceding discussion identifies the most important ambiguities, but there are more. Fore example: When does an OEM installed ''shortcut'' for Non-Microsoft Middleware ''impair the functionality of the user interface''?[86] What constitutes ''a user interface of similar size and shape to the user interface displayed by the corresponding Microsoft Middleware Product?[87] What constitutes ''commercially practicable''?[88] . What constitutes a ''bona fide joint venture'' or a ''joint development or joint services arrangement''?[89] What constitutes ''a reasonable technical requirement'' or ''valid technical reasons''? PFJ, sec. III.H. What constitutes a ''bona fide join venture''?[90] What constitutes ''a reasonable period of time'' ? [91]

D. The Enforcement Mechanism Is Inadequate

The PFJ cannot possibly achieve its purported goals without an enforcement mechanism adequate to deter violations by Microsoft or bring about compliance when violations occur. For this to occur, the line between permissible and impermissible conduct must be clearly drawn. Unfortunately, most of the ''prohibitions'' contained in Section III of the PFJ are riddled with exceptions and undefined terms. Consequently, even under the best of circumstances, fairly extensive litigation would be necessary to determine the exact parameters of permissible conduct. But the Microsoft case does not present the best of circumstances. The delay inevitably caused by disputes over the interpretation of vague language and complex exceptions inevitably play to Microsoft's advantage. The PFJ lasts at most seven years. PFJ, sec. V. Consider the issue of Microsoft's ''integration'' of middleware with the operating system. This issue appeared to be settled with the consent decree that Microsoft agreed to in 1994 and which the Court entered in 1995. Microsoft never accepted the government's interpretation of the 1995 Consent Decree or the law on that issue. This dispute ultimately led to the current litigation. Microsoft eventually lost the dispute in 2001 when the Court of Appeals held that Microsoft's integration of the browser middleware with the operating system violated Section 2 of the Sherman Act (a decision which will effectively be reversed if the Court enters the PFJ in 2002). In the meantime, Microsoft has effectively eliminated all competition in the browser middleware market largely by integrating its browser into the operating system.

The rapidly changing nature of the software markets compounds the necessity of a swift and certain enforcement mechanism. ''By the time a court can assess liability, firms, products, and the marketplace are likely to have changed dramatically.'' [92] Despite the pressing need of swift and sure enforcement, the PFJ seems designed to enable and to reward delay.

1. The Enforcement Mechanism Lacks Appropriate Penalties.

An effective enforcement mechanism must contain a penalty sufcient to deter misconduct by the defendant. Ideally, the enforcement mechanism would reward the defendant for extending itself to accomplish the remedial goals, but at the very least the mechanism should severely punish a pattern of willful misconduct. The PFJ, however, does neither. The PFJ provides no incentives for Microsoft to cooperate in the effort to break down its Operating System monopoly. Worse, the PFJ does not punish Microsoft for deliberate and repeated violations of the PFJ's restrictions. Microsoft's only stated penalty for ''engag[ing] in a pattern of willful and systematic violations'' of the restrictions is ''a one-time extension of this [Proposed] Final Judgment of up to two years.'' PFJ, sec.V.B. The base period of the PFJ is five years. If Microsoft has repeatedly violated the PFJ for five years, why should it care if the PFJ is extended to seven years.'? If Microsoft can get away with ignoring the restrictions for five years, surely it will not pose any problem for Microsoft to ignore the restrictions for another two years.

2. The Technical Committee Will Only Delay Enforcement.

The Technical Committee can only serve to delay resolution of complaints about Microsoft's failure to comply with the restrictions contained in the PFJ. The Technical Committee cannot resolve disputes, but only ''advise'' Microsoft and the government of its conclusions. The Proposed Final Judgment's ''gag orders'' prohibiting both testimony from Committee members and use of their work product in enforcement proceedings will cause further delay since enforcement will always require the government to duplicate of the Committee's work in amassing evidence.

Assume, for example, that Microsoft refuses to disclose an API to an ISV in retaliation for the ISV's use of RealPlayer technology. This denial immediately places the OEM at a significant disadvantage over ISVs who comply with Microsoft's wishes that they only use Windows Media Player. Assume further that the ISV immediately contacts the TC with its complaint alleging violations of sections III.D and F of the PFJ. The TC must then begin the investigation. While it is impossible to know how long such an investigation would take, the powers and duties of the TC outlined in section IV.B.8.b enable the TC to undertake a truly exhaustive investigation: The TC may, on reasonable notice to Microsoft:

(i) interview, either informally or on the record, any Microsoft personnel, who may have counsel present; any such interview to be subject to the reasonable convenience of such personnel and without restraint or interference by Microsoft;

(ii) inspect and copy any document in the possession, custody or control of Microsoft personnel;

(iii) obtain reasonable access to any systems or equipment to which Microsoft personnel have access;

(iv) obtain access to, and inspect, any physical facility, building or other premises to which Microsoft personnel have access; and

(v) require Microsoft personnel to provide compilations of documents, data and other information, and to submit reports to the TC containing such material, in such form as the TC may reasonably direct.

While such expansive investigatory powers are laudable in many respects, they do represent a tradeoff in favor of accuracy over speed. After such a thorough investigation, however, the TC may only conclude whether the ''complaint is meritorious,'' and if so, ''it shall advise Microsoft and the Plaintiffs of its conclusion and its proposal for cure.'' PFJ, sec. IV.D.4.c. Assuming that the TC finds merit in the ISV's complaint, it is not clear whether the TC may inform the ISV of its findings. PFJ section IV.B.8 states that ''TC members may communicate with non-parties

[85] PFJ, see. VI.I

[86] 86 PFJ, sec. III.C.2.

[87] PFJ, see. III.C.3.

[88] PFJ, sec. III.G.1

[89] PFJ, sec. III G.

[90] PFJ, sec. III.I.

[91] PFJ, sec. III.I.

[92] Microsoft III, 253 F.3d at 49.

about how their complaints ... might be resolved with Microsoft,'' but whether communication ''about how their complaints might be resolved'' includes the TC's findings and recommendations remains unclear. PFJ section IV.D.4.c authorizes the TC to communicate its findings only to Microsoft and the Plaintiffs. PFJ section IV.B.9 provides that ''any report and recommendations prepared by the TC ... shall not be disclosed to any person other than Microsoft and the Plaintiffs.'' It is certainly possible to construe these provisions as prohibiting the TC from informing the complaining ISV of anything other than a range of possible outcomes. What happens if, after extensive investigation, the TC finds merit in the ISV's claim and recommends that Microsoft disclose the APIs to the ISV? If Microsoft resists the decision, whether to proceed against Microsoft rests not with the OEM victim or the TC, but with the Plaintiffs. Section IV.A.1 of the PFJ gives the Plaintiffs ''exclusive authority'' to enforce the restrictions. Any one of the Plaintiff's may now take up the ISV's complaint, but if the Plaintiff who is willing to pursue the OEM's complaint is one of the settling states, it must first consult with ''with the United States and with the plaintiff States'' enforcement committee.'' PFJ, sec. IV.A.1. After consulting with the United States and the plaintiff States'' enforcement committee, the enforcing state must then ''afford Microsoft a reasonable opportunity to cure'' the alleged violation. PFJ, sec. IV.A.4. Note that this is a second opportunity for Microsoft to cure the violation, since the first opportunity was given with the TC's decision. If the United States decides to take up the ISVs complaint, then it apparently avoids the delay of consulting with the enforcement committee, but the United States must still give Microsoft an opportunity to cure. The ''consultation'' and ''reasonable opportunity to cure'' delays are merely the tip of this iceberg. Although the TC has conducted an extensive investigation and gathered much, perhaps even all of the relevant evidence, neither an enforcing state nor the United States use the evidence accumulated by the TC and the TC members are prohibited from testifying. Section IV.D.4.d specifically provides:

No work product, findings or recomendations by the TC may be admitted in any enforcement proceeding before the Court for any purpose, and no member of the TC shall testify by deposition, in court or before any tribunal regarding any matter related to this [Proposed] Final Judgment.

In other words, the United States or the enforcing state will needlessly duplicate the discovery work of the TC and the Court will have to conduct a de novo review of the evidence without the benefit of the TC's insights and expertise.

3. The Court Will Be Denied Access to the Insights and Expertise of the Technical Committee. Despite the fact that the Technical Committee cannot render enforceable decisions, the TC will be in an excellent position to evaluate both Microsoft's overall conduct and the appropriateness of various alternative remedies for specific complaints and problems. The TC members will have expertise ''in software design and programing.'' PFJ, see. IV.B.2. The TC will have considerable access to Microsoft documents and personnel. PFJ, sec. IV.B.8.b. In addition to its own experience with complaints, the TC will apparently receive reports from Microsoft advising the TC of the nature and disposition of complaints filed with Microsoft's compliance officer. PFJ, sec. IV.D.3.c. The TC, in short, has an exceptional vantage point from which to ''monitor Microsoft's compliance with its obligations under [the Proposed] [F]inal [J]udgment.'' PFJ, sec. IV.B.8.a. Despite the exceptional value of the TC to the Court as both expert witnesses on technical issues and as eye witnesses to larger issues, including whether Microsoft ''engaged in a pattern of willful and systematic violations,'' PFJ, sec. V.B, section IV.D.4.d expressly prohibits members of the TC from testifying ''by deposition, in court or before any other tribunal.'' By denying the Court access to witnesses with critical information and expertise, the PFJ ensures that the Court will have to make rulings without regard to some of the most important evidence on the issues that will inevitability arise under the ambiguous provisions of the PFJ.

Conclusion

The acid test of the PFJ must be whether it would have protected Netscape as it tried to launch a middleware challenge to Microsoft's operating system monopoly in 1994. Sadly, even a cursory reading of the PFJ reveals that the answer is no. Since Microsoft did not have comparable middleware, there would, even under the most favorable interpretations of the API disclosure provisions in PFJ section III.D, have been nothing to prevent Microsoft from engaging in selective disclosures to Netscape. Microsoft would have been free to deny Netscape access to many, if not all, of the Communications Protocols necessary for any Internet middleware to work on Windows since the new, untested company would certainly have failed to meet Microsoft's test of a viable business under PFJ section III.J.2(c). Most importantly, nothing in the PFJ could change the economics of the OEM industry which make it unprofitable to install two web browsers and therefore, in what can only be called a mockery of judicial power, PFJ VI.U would expressly allow Microsoft to choke off Netscape's acess to the crucial OEM distribution channel by declaring Internet Explorer to be a part of the Windows Operating System Product. For the foregoing reasons, we urge the Court to reject the Proposed Final Judgment.

BEFORE THE UNITED STATES DEPARTMENT OF JUSTICE ANTITRUST DIVISION COMMENTS OF THE WASHINGTON LEGAL FOUNDATION SUPPORTING THE PROPOSED JUDGMENT IN UNITED STATES v. MICROSOFT

Robert A. McTamaney, Daniel J. Popeo, Carter, Ledyard & Milburn, Paul D. Kamenar,

2 Wall Street Washington Legal Foundation New York, New York 10005 2009 Massachusetts Ave., NW (212) 238–8711 Washington, DC 20036 (202) 588–0302

Date: January 25, 2002

COMMENTS OF THE WASHINGTON LEGAL FOUNDATIONIN SUPPORT OF THE PROPOSED JUDGMENT IN UNITED STATES v. MICROSOFT

Introduction and Summary. The Washington Legal Foundation (WLF), pursuant to the Tunney Act (Antitrust Procedures and Penalties Act, 15 U.S.C. § 16), hereby submits these comments in support of tee settlement reflected in the Revised Proposed Final Judgment dated November 6, 2001 in United States v. Microsoft Corp., Civil No. 98–1232.[1]

WLF is the nation's preeminent center for public interest law and policy, advocating free-enterprise principles, responsible government, property fights, a strong national security and defense, and a balanced civil and criminal justice system. WLF devotes substantial resources to these issues through litigation, by publishing through its Legal Studies Division, and by educating the public through its Civic Communications Program. With respect to antitrust law, and the Microsoft case m particular, WLF filed a brief in the United States Supreme Court supporting the petition for writ of certiorari filed by Microsoft to review the judgment of the court of appeals that left intact the district court's findings of fact and conclusions of law, despite the flagrant judicial misconduct of the trial court in giving interviews to the press expressing his bias and hostility to Microsoft and Bill Gates. Microsoft Corporation v. United States, 122 S.Ct. 350 (2001). WLF's Legal Studies Division has also published studies and other materials on antitrust issues and the Microsoft case. See Antonio F. Perez, U.S. v. Microsoft: DOJ's ''New'' Antitrust Paradigm

[1] The case is on remand from the Court of Appeals which vacated the Final Judgment, affirmed in part the market maintenance claims, ordered reconsideration of the Section 1 tying claim, reversed the browser market attempted monopolization claim, and ordered new remedy proceedings. U.S. v. Microsoft Corp., 253 F.3d 34 (DC Cir. 2001).

Resurrects Outdated Economics (WLF Legal Backgrounder, Feb. 4, 2000); Robert A. McTamaney, Microsoft On Appeal: ''Monopolies'' In A Complex Society (WLF Working Paper Feb. 2001). WLF supports the Proposed Judgment (the result of intense negotiations with the assistance of two of the nation's top mediators) as a rational resolution to a case formally initiated in May 1998, but effectively tracing its roots to an FTC investigation begun more than a decade ago, therefore now rivaling in time and burden the IBM antitrust litigation of the 1980's. The matter is overly ripe for resolution, and the States which have declined to join the settlement should in our judgment be urged by the Department and the Court to reconsider and adopt it. The Standard for Entry. The Tunney Act contemplates that the Court will evaluate the relief set forth in the Proposed Judgment and enter the judgment if the settlement is within the reaches of the public interest and within the government's rather broad discretion, considering (1) the competitive impact and adequacy of the judgment and (2) the impact on the public generally, and on affected individuals, and the benefit, if any, of an eventual trial determination. The Court reviews the Proposed Judgment in light of the Complaint's allegations, and withholds approval only if there is ambiguity, art inadequate enforcement mechanism, if third parties would be positively injured, or if the decree somehow makes a 'mockery'' of judicial power.[2] The belief that other remedies might be preferable does not warrant rejection of the Proposed Judgment; the Tunney Act does not authorize the imposition of different terms or permit de novo review of the settlement.[3]

The Complaint Versus the Proposed Judgment. Under the Tunney Act, whether the public interest is served by entry of the judgment is first tested by comparing the allegations of the Complaint with the Proposed Judgment. As will be demonstrated, the comparison is more than a favorable one.

The Complaint is dated May 18, 1998. There are 141 numbered paragraphs in the Complaint, of which, read fairly, 128 paragraphs relate to Microsoft's browser technology, including its Interact Explorer (IE) in Windows 98, and the promotion and distribution of that technology to Windows 98 users. The principal responsible author of the Complaint described the case as an extremely limited, discrete, ''surgical strike'' directed solely against the Company's integration of browser technology with its operating system.[4]

On June 23, 1998, the U.S. Court of Appeals for the District of Columbia Circuit held that the IE Browser was not a product separate from Windows for purposes of the 1995 consent decree that had resolved the Department's 1994 case, and the related European Commission (EC) case, against Microsoft.[5] While the Court reserved its position on any future market power allegations, most observers believed that the May 18 Complaint had been rendered moot, since any arguably illicit tie requires, by definition, two products.

The trial judge disagreed, and permitted the case to proceed, and premised his eventual breakup order, in effect, on the sparse references in the Complaint to the alleged market dominance of Windows in a narrowly-defined market of Intel-powered personal PCs.[6] In its reversal and remand of the trial judge's conclusions and remedies, the Court of Appeals specifically reversed the conclusion that Microsoft attempted to monopolize a browser market, and remanded the issue of an illegal tie for reconsideration under the Rule of Reason.[7] In recognition of the rigors of this test, and in light of the demonstrated insistence of consumers on a browser-operating system combination, the Department determined not to pursue this claim.

To the extent therefore that the Tunney Act dictates measuring the judgment against the Complaint,[8] the Proposed Judgment is a remarkable result. The judgment exacts dramatic conduct remedies and imposes massive costs on a defendant, when the essential allegations of the Complaint were first deflated by the Court of Appeals, then carefully either selected or avoided by the Department and the State plaintiffs, then momentarily revived by the trial judge, only to be excised again by the Court of Appeals, which set a standard for resolution that the Department itself has decided unilaterally could never be met.

Certainty of the Proposed Judgment. The Tunney Act as interpreted next suggests that the Judgment should be examined for ambiguities. Ambiguity is measured by the trial judge interested in the reasonably manageable enforcement of the judgment, rather than by competitors who might parse every comma to suggest ambiguities where none fairly exist. And of course ambiguity is anathema to the defendant, since it is the party most at risk from an overly broad interpretation urged by its competitors or others. In that respect, the Proposed Judgment is a strikingly plain-worded document, difficult (for anyone versed or educated in the field) to misinterpret mad even more difficult, it would seem, to avoid. The Proposed Judgment is accompanied by a thorough and convincing Competitive Impact Statement that explains the theory underlying each section of the Proposed Judgment, how it addresses and cures the conduct found wanting by the Court of Appeals, and how it would operate in practice. The Competitive Impact Statement itself would surely assist in, if not dictate, the resolution of may arguable ambiguity.

The Proposed Judgment broadly prohibits any retaliation against OEMs that distribute competitive middleware or operating systems (Section III.A), requires uniform licensing terms (which cannot include exclusive or percentage promotion of Microsoft middleware) to the significant universe of OEMs (Section III.B), and leaves most desktop decisions to the OEMs'' discretion. (Section III.C). This all seems very plain. The Proposed Judgment permits OEMs to install icons or shortcuts to access products that provide particular types of functionality, even if they compete with Microsoft's own installed versions (Section III.C.1), so long as they do not impair the user interface. Basically, the Original Equipment Manufacturers (OEM) can add an icon to access, for example, a competing photo program, provided that shortcut works without unseating Windows itself. Surely there is little room for ambiguity here.

Under the Proposed Judgment, Microsoft can override a competing product only if that product ''fails to implement a reasonable technical requirement.'' Basically, Microsoft can provide the consumer with its own product if the competitor's doesn't work, and even then the failing product's proponent is given the right to remedy the problem. Competitors have objected to the use of the word 'reasonable,'' which is obviously a standard the Courts have dealt with successfully since the outset of the common law. There is no ambiguity apparent here. Next, the Judgment requires Microsoft to disclose the Application Programming Interfaces (API) for new products to makers of interoperable products, whether they make hardware or software or are Internet carriers, unless the disclosure would compromise security or anti-privacy safeguards (Section III.D). No ambiguity exists here, and the burden would certainly be on Microsoft to demonstrate that the API disclosure would impair security or privacy, which should in any event be a primary goal of the competitor as well.[9] And the API disclosure must be made timely and in good faith, again well-recognized standards in the courthouse. Microsoft also agrees not to automatically alter competitors'' icons or shortcuts placed on the desktop by OEMs (Section III.H.3). It can offer its own alternatives to consumers, but they can accept or decline as they see fit,

[2] E.g., U,S. v. Microsoft Corp., 56 F.3d 1448 (DC Cir, 1995)

[3] ''The court should therefore reject the [judgment] only if 'it has exceptional confidence that adverse antitrust consequences will result...''' U.S. v. Enova Corp., 107 F. Supp. 10, 27 (D.DC 2000); accord, U.S. v. Central Parking Corp., 2000 U.S. Dist, Lexis 6226 (D.DC 2000). Applying these legal standards, the Proposed Judgment should be entered.

[4] In its 1994 maintenance case against Microsoft, the Department did not contend that the company's obtaining of its market position was illegal, but rather that it was the fortuitous result of IBM's choice of Microsoft's MSDOS for IBM's PCs. In that ease the government's economic witness said that only artificial barriers such as restrictive license provisions should be prohibited since the company's market position was entirely natural and not the result of anticompetitive behavior. Id.

[5] U.S. v. Microsoft Corp., 147 F. 3d 935 (DC Cir. 1998),

[6] Compare U.S. v. Microsoft, supra note 2 (''The government... urges us to flatly reject the district judge's efforts to reach beyond the complaint to evaluate claims that the government did not make ...'').

[7] The Court of Appeals dismissed 4 of the 5 principal claims against Microsoft, and alas dismissed 23 of the 35 acts found wrong by the trial judge.

[8] E.g., U.S. v. Alcoa, 152 F.Supp. 2d 37, 44 (D.DC 2001) (''[T]he court is confined to the factors alleged in the government's complaint.'').

[9] This has been a goal for Microsoft, which has just announced a company-wide suspension of development while security concerns are assessed and resolved. The New York Times, January 17, 2002.

and many a court has said in other contexts that there's no harm in asking.

Under the judgment, OEMs can even include a competing operating system as easy to access as Windows, arid even give it preference in the boot sequence. Again, this seems to be as clear as it reads.

In short, the Proposed Judgment is plainly worded and devoid of apparent ambiguity. One competitor has suggested that Microsoft improperly seized on art ambiguity to avoid the 1995 Consent Decree to the extent that the decree prohibited the integration of the IE browser with Windows. This is an intriguing fallacy, but a fallacy nonetheless. Microsoft certainty did seek to integrate IE with Windows, but this was consistent in its judgment with the 1995 Decree; and the Court of Appeals agreed that it was entirely legal for Microsoft to do so, under the plain wording of that document. Impact Upon Third Parties. The Proposed Judgment goes far beyond the prohibition of the handful of specific and isolated instances of conduct found wanting by the Court of Appeals, to generic relief which presumably will benefit all those to which it is directed and all others within its ambit. Will consumers be satisfied? Presumably they will vote with their pocketbooks. Will competitors be satisfied? Presumably never, but the correct test is whether the proposed decree would positively injure third parties, not whether some competitor claims that it could be better treated.[10]

For example, California and the other States dissenting thus far from the settlement have proposed instead that the Company completely redesign Windows (and then presumably maintain, update, and support it) to offer a version stripped even of the browser, then force open-source licensing of the browser, require Java (a competitive operating system of sons), to be included in Windows, and require licensing of the Office Suite to third parties like Apple (although Apple now already has it). A new 60-day version of Hart Scott Rodino Act would also be imposed on Microsoft acquisitions, another and entirely new commercial burden on a company never even accused of growth through acquisition. Conduct specifically upheld by the Court of Appeals would be specifically baited. We submit that this is a wish list for competitors, not consumers, and has nothing to do with fostering competition as anticipated by the U.S. antitrust laws.[11] To the extent that alternative remedy proposals were put forward by all parties, including the competitors intent on imposing their own punitive schadenfreude on Microsoft, they were considered by the Department in formulating the Proposed Judgment, including specifically the very remedies now proposed again by the dissenting States.[12] ''The United States has ultimately concluded that the requirements and prohibitions set forth in the [Proposed Judgment] provided the most effective and certain relief in the most timely manner.'' [13]

The Enforcement Mechanism. The final substantive prong of the Tunney test is whether the Proposed Judgment is readily enforceable. In this respect, the Proposed Judgment contemplates contempt sanctions and other relief if violated. Microsoft has agreed to appoint an Internal Compliance Officer [14] to supervise an internal compliance program, and has also agreed to the extraordinary remedy of an onsite, court-approved Technical Committee, experienced in software design and programming, with virtually unfettered access, for at least five years, to the Company's design and business planning and implementation, for the purpose of ongoing and constant oversight regarding the Company's compliance.[15] In this respect, as well as in the breadth of the conduct remedies which will be supervised, the Proposed Judgment vastly exceeds the typical constraints imposed upon a settling defendant. Courts are most reluctant to impose sanctions which require the ongoing observations of a defendant's commercial activities. Here, to the contrary, the oversight established by the onsite observers will give the Court, and interested outsiders as well, more assurance than could reasonably be ever expected regarding the Company's ongoing good faith adherence.

Adequacy of the Remedy. First, the Proposed Judgment should be considered in light of the remedies one might expect to have been imposed after further evidentiary hearings, briefs, arguments, conclusions, and the inevitable appeals. In this respect, one searches in vain for precedents as broad and inhibiting as the Proposed Judgment in a case where all claims except isolated, specific findings of market position maintenance have been dismissed or unilaterally discarded by the principal prosecutors. We submit that judicial remedies might well be expected to be far more 'surgical'' and conduct-specific than the broad and thoroughgoing conduct requirements imposed by the Proposed Judgment, not the least of which is the ongoing oversight to assure good faith compliance.

Certainly office Remedy: Second, there is no assurance that an eventual judicial remedy would survive appeal, since the case is presently proceeding on remand on the basis of findings of fact and, in part, on conclusions of law [16] expressed by a trial judge with deepseated, privately expressed, actively concealed, personal bias against the company and its president reflected by the drastic remedies ordered after the briefest of further proceedings.[17] The Supreme Court has deferred consideration of this issue, and so observers in the meantime must accept the illogic of an appellate court finding that the District Judge had repeatedly violated law and the judicial canons, but nonetheless feeling constrained to accord his findings of tact and law the same presumptions of correctness usually reserved for judges with no appearance of impartiality.[18]

If the case proceeds to judicial remedies, with the inevitable appeals, there is more than a fair likelihood that the Supreme Court would refuse to accept any of the former trial judge's findings under the circumstances; rather, the Court would likely remand the case to begin again before an unbiased jurist. The Proposed Judgment obviates that possibility to some extent, and would avoid it completely if it were joined by the thus far dissenting States, and thereby achieve a final resolution.

The Remedy and Innovation. In 1998, when the then Assistant Attorney General made his often-quoted 'surgical strike'' comments, his purpose was to allay concern in the computer industry that the Government was opening a broadside attack on Microsoft, which is, sadly, exactly what the ease then became. His purpose was to assure innovators that they could continue to innovate without governmental interruption or interference, provided that they stayed within the principal antitrust boundaries.

Microsoft has been reported publicly as saying that innovation, at least its own, will not be impeded by the Proposed Judgment. We submit that is a critically important issue for the Court in considering the public interest overall.

For example, Windows XP, Microsoft's latest rendition of the operating system, presents users, according to its reviewers, with improvements in reliability, performance, and system security, and also facilitates multi-use end user customization, workplace enhancements, and marked file improvements. It continues to integrate IE, and adds instant messaging (a favorite feature of AOL), digital photography and movie making, and other media features to the new design. Industry reaction has been fascinating. Some competitors have reportedly been encouraging the Department and certain of the States to resurrect the original IE integration ease, arguing that the Company should make the various components of its integrated design (some of which have been part of Windows for many

[10] U.S. v. Microsoft, 56 P.3d 1448, 1461 n.9.

[11] Netscape, the competitor whose objections set off the 1998 case, has objected that it never would haw corn, into being if the Proposed Judgment had been in place when Netscape's own monopoly was created in 1994. Dow Jones Newswires Dec. 12, 2001. If this is to be believed, then presumably Netscape's multi-billion dollar combination with AOL also would have been avoided.

[12] Competitive Impact Statement, p. 35

[13] Id. at 36.

[14] Microsoft on December 13, 2001 announced the appointment of its internal compliance officer as contemplated by the Proposed Judgment. He is a former enforcement lawyer with the Federal Trade Commission. The Public Interest. Overall, the Tunney Act contemplates an affirmative finding that the settlement is in the public interest, There are several other factors relevant to this consideration, beyond the specific traditional tenets of approval discussed above.

[15] By Stipulation, Microsoft began complying with the Proposed Judgment effective December 16, 2001.

[16] U.S. v. Microsoft Corp., 84 F. Supp. 2d 9 (D.DC 1999); U.S. v. Microsoft Corp., 87 F. Supp. 2d 30 (D.DC 2000).

[17] U.S. v. Microsoft Corp., 97 F. Supp. 2d 59 (D.DC 2000).

[18] According to the Court of Appeals, the District Judge's violations of the Code of Conduct for United States Judges and Section 455(a) of the Judicial Code by speaking to reporters about the case while it was pending were ''deliberate, repeated, egregious, and flagrant.'' 253 F.3d 34, 107 (DC Cir. 2001). The judge's insistence to the reporters to embargo his comments until the trial was over implied full knowledge of the improprieties. This arrangement made it impossible for Microsoft to have objected sooner, an objection that the appellate court said would have succeeded by the removal of the trial judge from the case.

years) available separately. Others, notably Apple, have instead decided to compete where competition belongs—in the marketplace instead of the courthouse. Apple is scheduled to begin shipping the elegant and affordable ''iMac,'' which will incorporate ''iDVD,'' a DVD recording software, ''iPhoto,'' a photo organizer and processor, ''iTunes,'' a CD and internet music player and converter, and ''iMovie,'' which enables easy home-movie production, and other features, all on a 15-inch fiat panel display connected to a computer half the size of a basketball at a very competitive price.

Would Apple have created this incredible device had Microsoft not raised the bar with Windows XP? Perhaps, but far less likely. We submit therefore that an important component of the Court's Tunney Act determination is to ensure that any proposed judgment does not stifle the very innovation the antitrust laws were enacted to promote. Otherwise, such a judgment could surely serve the private interests of competitors rather than the public interest of competition and consumers, and thereby make a mockery of the very process which the Tunney legislation cautions against and condemns.

Conclusion. The United States has said it best: ''[T]he [Proposed Judgment], once implemented by the Court, will achieve the purposes of stopping Microsoft's unlawful conduct, preventing its reoccurrence, and restoring competitive conditions in the personal computer operating system market, while avoiding the time, expense and uncertainty of a litigated remedy.'' [19] We support the Proposed Judgment. The matter is long overdue for resolution, and the States that have declined to join the settlement should, in our judgment, be urged by the Department and the Court to reconsider and adopt it.

January 2002

Introduction

My name is Rebecca Henderson. I am the Eastman Kodak LFM Professor of Management at the MIT Sloan School of Management, where I have been teaching since 1988. I am also a Research Associate at the National Bureau of Economic Research. My C.V. is attached.[1]

I write to express my deep concern with the terms of the proposed settlement between the United States and the Microsoft Corporation. In my view it does almost nothing to remedy the harm caused by Microsoft's prior illegal conduct, and the provisions that it includes in an attempt to forestall future anticompetitive conduct fall short on a number of important dimensions, Moreover it creates incentives for Microsoft to engage in behavior that has the potential to create significant harm for consumers.

1. A failure to remedy the harm caused by prior illegal conduct. As the Court found and the Appeals Court maintained, Microsoft engaged in a systematic pattern of illegal conduct in an attempt to undermine Netscape's position in the browser market. Microsoft came to believe that the Netscape Browser had the potential to develop into ''cross-platform middleware,'' since it potentially enabled the development of full-featured PC applications on a range of platforms. Microsoft viewed this possibility as a potent threat to its monopoly and moved against Netscape with devastating effect. Microsoft's predatory conduct crushed the possibility that Netscape might emerge as a viable alternative platform for full-featured applications development.

Microsoft's success in preventing the emergence of browser-based alternative platforms that would threaten the applications barrier to entry, along with its current overwhelming and increasing share of browser usage, puts the firm in an extraordinarily strong position to prevent the emergence of other threats to its desktop monopoly. The proposed settlement does almost nothing to attempt to redress this harm.

A world in which Netscape had succeeded in building a dominant share of the browser market would have been one that was significantly more conducive to competition (and significantly more threatening to the Microsoft monopoly). A successful independent browser would not only have been potentially important cross platform middleware in its own right: it would also have been of enormous assistance to the further development of additional independent middleware. Both would have greatly increased the possibility that Microsoft's desktop monopoly would have faced significant competition. Had Netscape succeeded the world would probably be different in three important respects. First, the Netscape browser might have become an ideal platform for web-centric and network-centric applications cross-platform applications. Second, if there had been a widely-distributed browser outside Microsoft's control, new middleware initiatives such as Java, that involve software running on the client would certainly have been able to achieve widespread distribution without Microsoft's sufferance. Third, the existence of such a browser would have given Microsoft much less control over the evolution of important Internet interfaces, increasing the possibility that new types of middleware running on the server might emerge to facilitate challenges to the Windows monopoly.

(i) The Netscape Browser might have become a platform for applications development An independent browser might have become an ideal platform for web-centric and network-centric cross-platform applications. An independent browser enables developers to write cross-platform applications without additional porting costs. As the Court found, ''for at least the next few years, the overwhelming majority of consumers accessing server-based applications will do so using an Intel-compatible PC system and a browser,'' (FOF 27) and a ''browser product is particularly well positioned to serve as a platform for network-centric applications that run in association with Web pages.'' (FOF 69). Or as Microsoft's Ballmer expressed it: ''the browser is as much a platform for what people will want to do in the Internet over the next several years as DOS was the platform for what people would want to do on personal computers.'' (RX 21, at 4). Microsoft's illegal actions ensured that Netscape did not have the opportunity to develop into this kind of cross platform middleware, and the proposed settlement does nothing to reverse this.

(ii) A successful Netscape Browser would have developed into a distribution vehicle for additional non Microsoft cross platform middleware As both the Court and the Appeals Court found, one of the goals of Microsoft's illegal conduct was the suppression of platform independent Java. An independent, widely distributed Netscape Browser would have become an ideal vehicle for the distribution of this kind of platform independent middleware. Microsoft, in contrast, has very little incentive to distribute client based middleware that might facilitate the development of cross platform applications. Netscape's defeat in the browser war means not only that the browser itself is not available as a platform for applications development but also that the Java virtual machine, and other middleware technologies like it, are much less likely to be widely available on the PC. The proposed settlement attempts to make the distribution of alternative middleware possible, but its provisions are incomplete and are likely to be ineffective.

(iii) Microsoft's control of the browser gives it enormous influence over the future

[19] Competitive Impact Statement, p. 34.

[1] In 1999 1 was retained by the Department of Justice as an expert witness in connection with the remedies phase of the Microsoft trial. The declaration that I filed in the spring of 2000 as a result of this work is available on the Department of Justice's web site. While I do not believe that anything in this document is inconsistent with the opinions that I would have expressed in court had I been called as a witness, the opinions expressed here are entirely my own. Nothing in this document draws in any way on confidential information to which I was given access in the course of my work with the Justice Department.

development of the Internet, allowing it to ensure that server based technologies that might lower the applications barrier to entry and facilitate threats to the OS monopoly are unlikely to emerge. Owning the dominant browser gives Microsoft great influence over the evolution of the Internet, and in particular over the evolution of important Internet interfaces. As Paul Maritz recognized, ''By controlling the client, you also control the servers.'' GX 498, at MS980168614. This set of interfaces goes beyond the browser APIs to which developers can directly write applications, to include the set of interfaces that constitute the communications protocols between the browser and the network. For information to be received and viewed in Internet Explorer, the developer has to follow these interfaces, and so has to conform to Microsoft standards. The importance of browser interfaces is widely acknowledged. Ron Rasmussen, an executive with operating system supplier Santa Cruz Operation, testified: ''if there is one person or one company who controlled the browser and its look and feel and how it presented applications, it could severely enhance or detract from the application functionality of ... the server.'' Rasmussen Dep., 12/15/98am, at 67:14—68:3. Similarly Brian Croll of Sun testified that ''having a degree of control over the browser'' is ''critical'' because the browser is ''linked very closely to whether a server is useful or not.'' Because the ''two sides need to talk to each other,'' Sun cannot sell servers if the browser ''can't talk to the server.'' Croll Dep., 12/15/98pm, at 60:22—61:16. Control over the browser thus gives Microsoft significant control over the software running on the server, and this in turn makes it significantly less likely that software running on servers will develop into potentially powerful ''cross platform middleware'', facilitating competition to the Microsoft Windows OS. Just as a platform independent browser might have become an attractive platform for cross platform applications development, so a server operating system that could be accessed through Microsoft independent standards by an independent browser might have become an attractive platform for applications development, greatly increasing the probability that serious competition to the Windows OS might emerge.

Microsoft's control of the browser greatly reduces the probability that this will happen. Developers and content providers will generally choose to write to the interfaces that will enable them to reach the broadest possible audience (FOF 361). This led Microsoft, when it had a low market share in browsers, to pledge to write Internet Explorer to conform to some of the public interfaces promulgated by the World Wide Web Consortium (W3C). RX 15 (Microsoft Press Release, 7/8/97). In fact, Microsoft itself had difficulty when its market share was only 30% in convincing its own Office developers to take advantage of IE 4 features. GX 514, at MS7 0075706.

Given IE's dominant position today, web developers have an incentive to write to IE's interfaces first and foremost, and now that it has a dominant share, Microsoft has stated that it may not always choose to support public interfaces. RX 16 (MSDN Online 2/7/00). To the extent that Microsoft is able to impose Microsoft-specific interfaces on the Internet, the capabilities of users of non-Microsoft browsers to view content may be degraded or eliminated. Cf. FOF 322 (Microsoft contracts requiring that content providers offer content viewable only with IE or ''with acceptable degradation when used with other browsers''), and the ability of server based software to develop into cross platform middleware will be severely curtailed. The ability to influence the development of web-based applications is a highly valuable tool for future anticompetitive campaigns should Microsoft choose to mount them. As web-based applications grow in importance, so does Microsoft's ability to steer them towards being IE-centric, and, given its control over the browser-to-operating system interface, Windows-centric as well. The proposed settlement does nothing to address this issue.

(iv) Conclusion

In summary, the proposed settlement does little or nothing to redress the harm caused by Microsoft's destruction of the browser threat. Microsoft's victory leaves it in control of all browser interfaces, without the need to accommodate an independent browser that might have served as an important platform for cross platform applications, and without any real threat that a Java virtual machine (or other comparable cross platform middleware) might be widely distributed.

Prevention of Future Harm

The proposed settlement instead attempts to ensure that Microsoft will not act against future middleware threats as it acted against Netscape. Unfortunately its provisions in this respect are insufficient to prevent the harm they seek to guard against.

(i) The definition of Middleware

Many of the most important provisions of the proposed settlement refer to actions that Microsoft must take in regard to ''Middleware'' products. For example, in section III D, Microsoft is required to ''disclose to ISVs, IHVs etc... the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product.'' Similarly section III H requires that Microsoft allow end users and OEMs to make a number of choices with respect to the nature of the Middleware that is installed and invoked on the end user's PC. In both cases the definitions of ''Middleware'' are overly restrictive, and omit both current software that might well be considered ''middleware'' in the terms of the original case and new software that might emerge to take on the characteristics of middleware. In the case of section III D, Middleware is defined in section VI, point K as:

1. the functionality provided by Internet Explorer, Microsoft's Java Virtual Machine, Windows Media Player, Windows Messenger, Outlook Express and their successors in a Windows Operating System Product and

2. for any functionality that is first licensed, distributed or sold by Microsoft after the entry of this Final Judgment and that is part of any Windows Operating System Product

a. Internet browser, email client software, networked audio/video client software, instant messaging software or

b. functionality provided by Microsoft software that—-

i. is, or in the year preceding the commercial release of any new Windows Operating System Product was distributed separately by Microsoft (or by an entity acquired by Microsoft) from a Windows Operating System Product;

ii. is similar to the functionality provided by a Non-Microsoft Middleware Product; and

iii. is Trademarked

There are two problems with this definition. The first is that it omits a number of types of software that might reasonably be considered potentially platform independent middleware. For example it omits Handheld Computing Device synchronization software. Handheld computers are probably currently complements to the PC: their use encourages PC use and vice versa. But if the power and speed of these devices increases sufficiently, and if a significant number of important applications become available over the web via server hosting and other kinds of services, one can imagine a world in which the existence of Handheld Computing Devices might greatly facilitate the development of substitutes for Windows. Thus software that enables a PC to synchronize with a Handheld Computing Device is arguably ''Middleware'' in the sense of the case. Other types of software that might plausibly develop into ''Middleware'' in the sense of the case but that are omitted from the settlements definition include voice recognition software, and directory and directory service support software.

The second problem with this definition is that it is inherently static. In focusing on a subset of current Middleware products it omits, by definition, any future middleware products that might emerge. The path of technological progress in an industry as dynamic as the computer industry is impossible to predict. In focusing on current Middleware products rather than on the more general question of which classes are software are likely to facilitate competition to the Windows monopoly, the settlement makes it unlikely that entirely new Middleware—the kinds of products that are perhaps most likely to facilitate challenges to Windows—will be covered by any of the provisions of the settlement.

This static focus is particularly evident in the definition of ''Middleware'' in operation in the case of Section III H. Here ''Middleware'' is defined by the statement: Microsoft's obligations under this Section 111.H as to any new Windows Operating System Product shall be determined based on the Microsoft Middleware Products which exist seven months prior to the last beta test version Notice that this means that these obligations apply only to those Middleware Products for which Microsoft has produced a product of its own. They would not cover, for example, the first editions of the Netscape browser! More generally, if new forms of Middleware emerge, the settlement gives Microsoft strong incentives to bind them to the operating system immediately. If Microsoft never issue the Middleware as a

separate product, by the terms of this clause it is never ''Middleware'', and Microsoft never has to meet its obligations under Section III H. (ii) Giving Microsoft control over the pace and shape of technological development The agreement as currently written is also flawed in that much of the assistance it purports to offer to potentially important competitive Middleware is not only very slow, but is also technically limited in important ways.

The provisions of Section III.D, for example, require Microsoft to release key information about the ways in which Middleware can interoperate with the Windows Operating system ''no later than the last major beta release of that Microsoft Middleware.'' The timing of a beta release varies by product, but in most cases the availability of a beta release signals that the hard work of new product development has been done, and the product is more or less ready for sale. Delaying the release of key technical information to third party suppliers until the time of a beta release puts third party suppliers under a very significant handicap, since it forces them to enter the market significantly after Microsoft.

In the case of Netscape, for example, denying them access to key interface information until after the beta release of Microsoft's first browser product would have forced them to delay their entry to the marketplace very significantly and would have deprived them of the early entry, ''first mover'' advantage that is often the one of the most advantages that third party suppliers can offer consumers. Competition thrives where new, innovative firms can enter a market quickly with dramatically new offerings. This provision would serve to slow competition to the speed at which Microsoft wishes to compete.

The provisions of Section III.D. are also flawed in that they restrict the release of critical technical information to ''the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product.'' This effectively forces potentially competitive Middleware to use the same interfaces as Microsoft's middleware. Clearly some information is better than none. But to the degree that the purpose of competition is precisely to encourage the generation of alternatives that do not mirror Microsoft's offerings, forcing competitive software to use the same kinds of interfaces as Microsoft's own offerings leaves tremendous control over the direction of technological development in Microsoft's hands. Those competitive offerings that wish to interoperate with the operating system in different ways will get no help from this provision.

(iii) Who counts?

Section J.2. of the proposed settlement allows Microsoft to condition the license of ''any API, Documentation or Communication Protocol related to anti-piracy systems, antivirus technologies, license enforcement mechanisms, authentication/authorization security...'' to persons or entities that: ''meets reasonable, objective standards established by Microsoft (my emphasis) for certifying the authenticity and viability of its business.'' I read this provision as suggesting that Microsoft can refuse to release key information—information that is increasingly critical to the development of any third party Middleware—to any firm that Microsoft deems ''inauthentic'' or ''not viable.'' Would Microsoft have deemed Netscape viable, in its early days? Will the company believe that firms whose business model is based on the exploitation of Linux are viable? This provision allows Microsoft to deny critical information to precisely those kinds of firms that are most likely to provide significant competition in the marketplace—those firms that may be too small or too new or too unconventional to be ''viable.''

(iv) Forced Licensing

Section I. 5 provides that: ''an ISV, IHV, IAP, ICP or OEM may be required to grant to Microsoft on reasonable and nondiscriminatory terms a license to any intellectual property rights it may have relating to the exercise of their options or alternatives provided by this Final Judgment; the scope of such license shah be no broader than is necessary to insure that Microsoft can provide such options or alternatives.''

I find this wording ambiguous and potentially troubling. First, I wonder why any third party should be required to license anything to Microsoft. Microsoft's obligations extend to the provision of technical information about interfaces and to offering to OEMs and to end consumers the ability to remove Microsoft supplied Middleware. It is not at all clear to me why Microsoft should need to know anything about third party software in order to meet these obligations. Second, I am troubled by a possible interpretation of this language. One interpretation is that it forces third parties to license their software to Microsoft in order that Microsoft should be able to offer the same options and alternatives as the third party supplier. Would this language not have forced Netscape to license their browser to Microsoft so that Microsoft could provide the Netscape browser as an alternative? If an OEM chooses to install Real Player as the default media player, does this language imply that Microsoft has the right to license Real Player so that Microsoft also has the option to offer Real Player as the default media player? Surely this kind of forced licensing can only suppress competition?

(v) Second guessing consumer choice:

Although the current agreement purports to make it much easier for OEMs to install alternative Middleware and thus to offer end users a real choice of systems, the agreement severely restricts this choice in two important respects. In the first place, Section C.3. allows for the installation of third party Middleware provided that ''any such Non-Microsoft Middleware displays on the desktop no user interface or a user interface of a similar size and shape to the user interface displayed by the corresponding Microsoft Middleware Product.''

Just as section III.D. restricts the design of competitive Middleware by limiting competitive knowledge of key interfaces to knowledge of only those technical interfaces used by equivalent Microsoft authored Middleware, so this provision restricts the presentation of potentially competitive Middleware to a ''look and feel'' roughly similar to Microsoft Middleware. How can this restriction increase consumer welfare? If OEMs believe that end users would welcome Middleware that uses a very different kind of user interface for their alternative Middleware, should they not be allowed to install it?

In the second place, Section H.3. permits Microsoft to offer end users the choice to install Microsoft middleware as default software 14 days after the first boot of their system. While this provision may seem innocuous, its real effect will be to remove choice from the OEM. As the trial established, OEMs cannot afford the costs of widespread consumer confusion. Imagine a world in which consumers face every day—or every hour (!)—a screen saying something like ''are you sure you want to use Product ABC? Why not use Microsoft XXX, a product designed to work seamlessly with the operating system?'' Many consumers may be effectively forced into switching products in the face of what may well be perceived as an implicit threat. Real competition cannot thrive under such circumstances. OEMs should have the power to configure systems in the ways they wish. Competition in the market place can decide if these configurations create value for end users.

Microsoft incentives from this agreement.

Lastly, the agreement is flawed in that it creates incentives for Microsoft to take actions that may significantly reduce consumer choice. Framed as it is, the current agreement creates very strong incentives for Microsoft never to release another piece of separate ''Middleware''! Releasing Middleware will incur obligations—Microsoft will need to release technical information and to permit OEMs to remove the Microsoft authored product. These obligations can be easily evaded by immediately bolting new applications to the operating system. This will create two kinds of harm. In the first place, it will lead inevitably to increasingly ''bloated'' code, Consumers that might have preferred to purchase a ''slimmer'' Operating System will be unable to do so. Indeed in the worst case Microsoft might actively invest in the generation of ''spaghetti code''—systems in which the code necessary to provide the new functionality and the code necessary to run the operating system are deliberately commingled. Such commingling may significantly lower the overall performance of the operating system. In the second place, such immediate ''bolting'' will defeat the intention oft he settlement: potential third party suppliers of such Middleware will not have access to the key technical information that would enable them to seamlessly interoperate with the operating systems, nor will OEMs have the opportunity to install them in place of the Microsoft Middleware. It is possible, of course, that the fully integrated Microsoft solution that this agreement gives Microsoft strong incentives to provide may be a technologically superior solution. But this solution will be imposed on consumers without the process of competition that has historically proven to be such a source of consumer benefit.

Conclusion

The proposed settlement falls short in two critically important respects. Not only does it

do almost nothing to redress the harm caused by Microsoft's illegal conduct with respect to Netscape, leaving Microsoft with all the fruits of its illegal victory, but the provisions that it includes in an attempt to prevent a repetition of Microsoft's conduct in the browser case are limited and incomplete.

Suppose a Middleware threat with the potential impact of the Netscape browser were to emerge next year, or two years from now. The terms of the proposed settlement do little to ensure that Microsoft could not engage in an anticompetitive campaign to successfully crush it. Unless Microsoft chooses to recognize it as ''Middleware'' by producing a competing product, as opposed to simply copying the functionality and immediately bolting it to the operating system, it would not be covered by the terms of this settlement. Even if Microsoft were to choose to recognize it (and they would have strong incentives to avoid so doing), the current settlement would allow Microsoft to decide that the firm producing it did not have a ''viable'' business: to delay releasing critical technical information until after the release of its own beta product; to insist that its user interface be of ''similar size and shape'' to Microsoft's own product and, 14 days after first boot up, to bombard consumers with the option to switch to the Microsoft alternative.

Microsoft's victory in the browser war leaves it in a significantly stronger position to protect its operating systems monopoly and to block threats from any competition that might emerge to challenge it. The settlement does very little to remedy this situation and is instead rife with the potential for significant consumer harm.

January 28, 2002
VIA FACSIMILE (202) 307–1454
The Honorable Charles James
Assistant Attorney General for Antitrust
c/o Renata Hesse, Antitrust Division
U.S. Department of Justice
601 D Street, N-W, Suite 1200
Washington, DC 20530–0001

Dear Assistant Attorney General James: The proposed Final Judgment submitted in U.S. v. Microsoft Corporation, mad State of New York et al. v. Microsoft Corporation, triggers obligations by you under the Antitrust Procedures and Penalties Act (the ''Tunney Act''), set forth at 15 U.S.C. § 16. Under the Act, you are designated to ''receive and consider any written comments relating to the proposal for [a] consent judgment submitted under... this section.'' i5 U.S.C. § 16(d). On November 8, 2001, Judge Colleen Kollar-Kotelly ordered ''that members of the public may submit written comments concerning the proposed Final Judgment to [the Justice Department.]'' This letter is sent to you pursuant to this statute and court order.

As Chairman of the Subcommittee on Antitrust, Business Rights, and Competition of the Senate Committee on the Judiciary, I have studied the proposed settlement of the government's antitrust lawsuit against Microsoft very closely, and I write to express my concern about whether the settlement is in fact ''in the public interest.'' 15 U.S.C. § 16(e). Accordingly, I respectfully ask that you address the issues raised in this letter when you file with the district court your mandatory ''response'' to these comments. See 15 U.S.C. § 16(d). This settlement affects vast and important segments of the U.S. economy, and thus, its significance cannot be overstated. As a result, I believe it should only be approved if it can truly be shown that the settlement is ''is m the public interest,'' Such a determination will require the court to assess ''the competitive impact of such judgment, including termination of alleged violations, provisions for enforcement and modification, duration of relief sought, [and] anticipated effects of alternative remedies actually considered.'' 15 U.S.C. § 16(e)(1). These comments and questions are designed to inform this inquiry.

(1) Does the proposed settlement contain significant loopholes that render it largely ineffective to cure the damage to competition caused by Microsoft's illegal behavior? The unanimous District of Columbia Circuit Court of Appeals held that Microsoft violated section 2 of the Sherman Act by illegal conduct designed to maintain its monopoly on personal computer operating systems. The proposed settlement is designed to ''provide a prompt, certain and effective remedy for consumers'' arid ''halt continuance mad prevent recurrence of the violations of the Sherman Act by Microsoft... and restore competitive condition, s to the market.'' Competitive Impact Statement at 2.

However, it appears that, in many respects, the Revised Proposed Final Judgment (''PFJ''), contains so many loopholes, exceptions, qualifications, and definitional limitations that Microsoft can easily avoid its requirements. I have serious concerns that these loopholes and qualifications in the proposed settlement render it inadequate to accomplish its task of remedying Microsoft's illegal conduct and restoring competition in the computer software market. I will list a few examples below, but this list is not exhaustive.

(a) Million software copy limitation—Under the proposed consent decree, competitive access to the computer desktop has to be provided for certain types of firs.1 software application makers. More specifically, Microsoft must permit computer manufacturers and computer users to replace the icons, short-cuts, or menu entries for Microsoft Middleware Products on the desktop or start menu with Non-Microsoft Middleware Products. See PFJ ¶III.H.1. But the proposed consent decree contains a loophole in the definition of Non-Microsoft Middleware Products that denies that protection unless, in the prior year, ''at least one million copies [of that rival software] were distributed m the United States.'' Id. ¶VI.N. Thus, many start-up software companies with promising yet unproven technology in the pipe]me—precisely the companies most in need of protection from exercise of market power by a monopolist—will be left unprotected by the settlement. This could have a negative impact on the flow of venture capital and investment to technology start-ups—precisely the engine that drove the economic expansion of the late 1990s and a key to further expansion of our all-important technology sector. Requiring the distribution of a million copies in the United States in a year seems a very high threshhold. Why was this limitation written into the settlement? Why was the one million number chosen? In this era of internet downloads, how can a software maker prove that a million copies were distributed in the United States? What purpose does this limitation serve? Should the consent decree be modified to close that loophole and foster

new investments and growth by protecting those investments from monopoly practices?

In answering this inquiry I would request that you conduct a survey of a representative sample of non-Microsoft middleware product manufacturers to determine how long it took them to distribute one million copies of their software in the United States (if in fact they have done so). For example, it would be fruitful to determine how long it took products such as Kodak photofinishing software or the Palm OS to reach this threshhold, even though they might not qualify as non-Microsoft middleware products under the decree.

(b) Definitional limits on API disclosures—A cornerstone of the proposed settlement is the requirement that Microsoft disclose certain Application Programming Interfaces (''APIs'') that are used by Microsoft Middleware to interoperate with a Windows Operating System Product. See ¶III.D. Yet the definition of Microsoft Middleware is limited in such a way that raises doubts about the true extent of the requirement of API disclosure. Microsoft Middleware must be distributed seperately from a Windows Operating System Product and must be trademarked. Id. ¶VI.J. And any product comprised of the Microsoft or Windows trademark together with descriptive or generic terms are not considered to be trademarked. Id ¶VI.T. It appears that these definitional limitations will make it easy for Microsoft to avoid having to disclose APIs. Why can Microsoft simply decide not to trademark software and thereby have it fall outside this definition? Why does the definition of trademark exclude products identified by the Microsoft or Windows trademark plus a generic term?

In addition, Microsoft need not release any API to a software maker unless Microsoft determines that the software maker ''has a reasonable business need for the API'' and ''meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business.'' Id. ¶III.J. Many are concerned that permitting Microsoft to determine the ''business need'' and ''viability'' of potential competitors will be another way Microsoft can avoid the API disclosure requirements.

Another limit on API disclosure applies to new versions of Windows Operating Systems Products. With respect to new versions, disclosures of APIs need only be made in a Timely Manner. Id. ¶III.D. Timely Manner is defined to mean when Microsoft releases a test version of a Windows Operating System Product to 150,000 beta testers. Id. ¶VI.R. Microsoft could avoid this provision by simply having the new version—and the obligation to release APIs tested by less than 150,000 beta testers. What assurance is there that Microsoft will not avoid the API disclosure limitation in the future in this manner? There are many other definitional limits and qualifications found throughout the proposed consent decree. Beyond their specific provisions, these limitations raise the broader—and fundamental—question: is the proposed settlement is strong enough to make sure that Microsoft cannot use its monopoly power to squelch competition and innovation?

(2) Is the scope of the settlement's protection of middleware adequate to promote competition ? Before even running the gauntlet of the decree's restrictions outlined above, software must qualify as non-Microsoft middleware under the restrictive definitions of middleware used in the decree, see PFJ ¶¶VI.J, VI.K, VI.M, VI.N. The decree's protections are largely limited to competitors of ''Microsoft Middleware Products.'' But the definition of what is (or is not) a Microsoft Middleware Product remains somewhat ambiguous. Windows Messenger is covered, but MSN Messenger does not appear to be. Internet Explorer is covered, but MSN Explorer seems to be missing. Popular products such as software for personal digital assistants and photofinishing are excluded. What accounts for these gaps? And why did the Department of Justice and Microsoft abandon the definition of middleware that had been employed by, the District Court and affirmed unanimously on appeal? These definitions lie at the core of the consent decree's potential effectiveness. The heart of the Court of Appeals'' ruling was that Microsoft's acts of illegal monopoly maintenance blocked the ability of competitors to develop middleware which could effectively become an alternative platform to compete with the Windows operating system. The goal of the consent decree therefore must be to encourage and protect innovation in the middleware field. Yet the more restrictive and unclear the definitions are, the more they introduce uncertainty into this field and the more ineffective the consent decree will be. If potential innovators believe that Microsoft can avoid the ambit of the decree, then hopes for spurring innovation and competition among middleware products will be lost.

(3) Why is Microsoft ever allowed to retaliate against the computer makers? The settlement rests on the computer makers'' ability to promote competition on the desktop and in the industry generally. A key provision of the consent decree bans Microsoft from retaliating by agreement for a computer makers loading certain types of non-Microsoft software on its computers. See PFJ ¶III.A. Yet, the ban on Microsoft retaliation against computer makers is limited: the decree only bans retaliation in commercial agreements (not other forms of retaliation); only bans retaliation for removing specifically named ''Microsoft Middleware Products'' (not other Microsoft products); and only bans retaliation, for promoting specific competitive products (and not other products that could challenge Microsoft's desktop dominance). Will these loopholes ''swallow the rule'' that Microsoft should be banned from retaliating against computer makers? Would it not be far simpler to ban all Microsoft retaliation against the computer makers?

(4) Will Microsoft be able to accomplish through incentives what it could not accomplish by retaliation.? The ban on retaliation in no way prevents Microsoft from paying incentives to computer makers to strongly prefer—or install exclusively—Microsoft software products. Indeed, the proposed consent decree expressly provides that nothing ''shall prohibit Microsoft from providing Consideration to any OEM with respect to any Microsoft product or service where that Consideration is commensurate with the absolute level of that OEM's development, distribution, promotion, or licensing of that Microsoft product or service.'' PFJ ¶III.A. Given Microsoft's market power and financial resources, what will prevent Microsoft from using its financial resources, what will prevent Microsoft from paying bounties to computer manufacturers to ''voluntarily'' exclusively install or at least to prefer, Microsoft products, thereby accomplishing through incentive payments what it could not achieve by retaliation?

(5) Why does the settlement abandon the ban on commingling that the Court of Appeals found to be illegal? Nothing in the agreement prohibits Microsoft from commingling code or binding of its middleware to the Operating System (OS), even though the Court of Appeals specifically found Microsoft's commingling of browser and OS code to be anti-competitive and rejected a Microsoft petition for rehearing that centered on this issue. Computer manufacturers are likely to be discouraged from installing competing middleware products to those commingled with OS code, as these are likely to slow down the computer's speed and performance. Why should the proposed settlement permit this commingling to continue in the face of an explicit finding of illegality from the Court of Appeals?

(6) Is the five year term of the settlement sufficient to restore competition? The proposed consent decree has a five year term (extendable for two years only if the Court finds Microsoft has engaged in willful and systematic violations of the decree). PFJ ¶V. This is an unusually short time for an antitrust consent decree, which is typically ten years in length. Many wonder if this term is sufficient to remedy Microsoft's illegal conduct and restore competition. Why was the term of the decree limited to five years? How can we be sure that five years will be sufficient to restore competition?

In addition, under the decree, Microsoft has up to a year after submission of the decree before implementing several of its provisions, including the crucial API disclosure requirements and the provisions granting computer manufacturers and users the right to modify the start-up menus and icons with competing products. See PFJ ¶¶III.D, III.H. Thus the effective time that Microsoft must live under these restrictions is substantially shorter than the five year term of the agreement. And yet, this summer, when Microsoft made some very, minor changes to Windows to respond to the Court of Appeals ruling, it took just three weeks to make the changes. Given Microsoft's proven ability to make rapid changes, would it not be in the public interest to require Microsoft to live by the consent decree immediately and not wait another year?

(7) Is the enforcement mechanism sufficient? The proposed Final Judgment does not set forth vigorous enforcement mechanisms to keep Microsoft within the framework of this settlement. The proposed consent decree requirements the appointment of a ''Technical Committee'' to

monitor compliance with the decree, but its findings are entirely advisory and not binding on Microsoft. PFJ ¶IV.B. The only true enforcement mechanism would be for the Justice Department to go to Court in art enforcement action. In such an enforcement action, no work product findings or recommendations of the Technical Committee can be admitted as evidence in court. Id. ¶IV.D.4.d. ''While Microsoft is required to ''be reasonable'' in its conduct: violations of such ''be reasonable'' provisions can only be remedied through proceedings that will become, in essence, mini-retrials of U.S. v. Microsoft itself. Are these provisions sufficient to ensure that the settlement can be enforced properly? Without an iron-clad enforcement mechanism, how can the public take solace in the ''promise'' that Microsoft will ''be reasonable'' given the history of litigation in this case, and earlier antitrust lawsuits against Microsoft?

(8) What will the settlement's effect be on Microsoft's future conduct? Microsoft is has dubbed its aggressive Internet strategy .NET or ''Hailstorm''—a strategy to give consumers a one-stop shop on the Internet. How will the consent decree foster competition for these future ''platforms?'' If the purpose of this case was to check Microsoft's monopoly power, how will the Justice Department ensure that this monopoly dominance is not extended from the desktop to the Internet? And why are critical new technologies, such as digital rights management and identity-authentication, exempted from the proposed settlement's disclosure provisions? In closing, we today stand on the threshold of writing the rules for competition in the digital age, and we have two choices. One option involves one dominant company controlling the computer desktop, facing minor restraints that expire in five years, but acting as a gatekeeper to 95% of all personal computer users. The other model is the flowering of innovation and new products that resulted from the ending of the AT&T telephone monopoly nearly twenty, years ago. From cell phones to faxes, from long distance price wars to the development of the Interact itself, the end of the telephone monopoly brought an explosion of new technologies and services that benefit millions of consumers every day. We should resist on nothing less from this proposed settlement. In sum, any settlement in this case should make the market for computer software at least as competitive as the market for computer hardware is today. We should insist on a settlement that has an immediate, substantial, and permanent impact on restoring competition in this industry. I recognize the extraordinary effort that the Justice Department has expended in the litigation of this case, and I thank you and your staff for the vigor with which you have pursued this challenging case. I believe that answers to the questions and issues posed above are essential for determining whether the proposed settlement is in the public interest. Thank you for your attention to this matter.

Sincerely,

HERB KOHL

Chairman

Subcommittee on Antitrust, Business Rights and Competition

Dear Ms. Hesse: The attached are the Comments of NetAction and Computer Professionals for Social Responsibility on the Proposed Final Judgment in United States v. Microsoft. A copy has already been provided to you via E-mail.

Please feel free to contact me at 202–955–6300 with any questions or concerns.

Regards,

Patrick O'Connor

Counsel to NetAction and Computer Professionals for Social Responsibility

Comments of NetAction and Computer Professionals for Social Responsibility On the Proposed

Final Judgment

INTRODUCTION

The Government's Competitive Impact Statement claims that ''[t]he relief contained in the Proposed Final Judgment provides prompt, certain and effective remedies for consumers.'' [1] However, any potential relief is far from ''certain'' or ''effective'' for the average (non-corporate) consumer, and relief certainly will not be ''prompt'' since it will arrive, if at all, only as Microsoft rolls out later versions of its Windows Operating System.

Unfortunately, the Proposed Final Judgment does not offer consumers any hope of relief in the market for the non-middleware software applications on which they rely, such as word processing and spreadsheets. Nor does the Proposed Final Judgment attempt to offer any hope of relief to consumers using Windows 95, Windows 98, Windows NT, or Windows 2000. By its terms, the Proposed Final Judgment only applies to Microsoft's dealings with third pasty developers for Windows 2000 Professional, Windows XP, and later Windows versions. Thus, to achieve even the uncertain benefits of the Proposed Final Judgment, consumers will have to pay a high price for new software and, as explained below, new hardware, including new computers. For these reasons, the Proposed Final Judgment is suspect in terms of both the public interest and the goals of antitrust relief described by the Government.[2]

Moreover, the Proposed Final Judgment must be rejected because the record does not permit the Court to determine, with any reasonable degree of comfort or certainty, exactly what relief the Proposed Final Judgment provides. The language of the Proposed Final Judgment, in combination with the numerous exceptions to its prescriptions, necessarily leaves the Court and the public at a loss to confidently predict what conduct is prohibited and what conduct is permitted. Indeed, in a number of specific instances, the exceptions provided for in the Proposed Final Judgment appear to enable Microsoft to escape large portions or even all of its obligations. As the Court is fully aware, the Government's current lawsuit-now approaching its fourth anniversary-was triggered by Microsoft conduct that the Government thought it had prohibited in a previous consent decree. Only when it attempted to enforce the decree against that conduct did the Government discover that the language of the decree-language perhaps inserted by Microsoft and ''protecting'' its rights to innovate-could be interpreted to permit Microsoft to require that customers purchase its browser as a component of Microsoft's Windows Operating System, the exact conduct that the earlier decree ostensibly would have prevented.[3] The very. same sorts of ambiguity are evident in the Proposed Final Judgment. If it is approved, Microsoft and the Government will find themselves back in this Court yet again, arguing over interpretation, while non-corporate consumers are forced to endure yet another round of anticompetitive effects.

Because the Court has no power under the Tunney Act to modify the terms proposed by the parties, the Court must either reject the Proposed Finn Judgment as inconsistent with the public interest, or order additional proceedings to clarify its terms.[4] Such additional proceedings should provide the parties to the Proposed Final Judgment with an opportunity to prove that there has been an actual ''meeting of the minds'' with regard to the terms of the agreement. Only where that has occurred should the Court consider approving the Proposed Final Judgment; otherwise, rejection is the Court's only recourse.

DISCUSSION

NetAction is a national nonprofit organization dedicated to promoting use of the Internet for effective grassroots citizen action campaigns, and to educating the public, policymakers, and the media about technology policy issues. Among other projects, NetAction manages the Consumer Choice Campaign to focus public attention on Microsoft's growing monopolization of the Internet.

Computer Professionals for Social Responsibility (''CPSR'') is a public-interest alliance of computer scientists and other interested individuals concerned about the impact of computer technology on society. CPSR provides the public and policymakers with realistic assessments of the power, promise, and limitations of computer technology and directs public attention to critical choices concerning the applications of computing and how those choices affect society.

I. A Large Segment of the Consumer Market Will Be Unable to Avail Themselves of the

Limited and Uncertain Benefits of the Proposed Final Judgment Unless They Invest Substantial Sums in Hardware and Software Upgrades

A. The Proposed Final Judgment Would Do Nothing to Increase Competition for Software Applications

Despite Microsoft's substantial dominance in the market for software applications-such as email, word processing, and spreadsheets-the Proposed Final Judgment limits its modest proposed remedies co the market for ''middleware.'' The Government's loftiest description of its anemic proposed remedy promises only to ''restore the competitive threat that middleware products posed prior to Microsoft's unlawful undertakings.'' [5] The ''bulleted'' enumeration of those benefits offered by the Government further clarifies that only the market for middleware is targeted for relief.[6]

It is certainly true, as the Government points out, that middleware poses-or perhaps more accurately ''posed'' when the case was filed nearly four years ago-a significant threat to the dominance of Microsoft's Windows Operating System. By exposing its own ''APIs,'' middleware allows software developers to write applications that will run on multiple operating system platforms, thus decreasing the importance of any particular operating system.[7] And the middleware category is particularly important as computing evolves towards a model in which users go outside their desktop/laptop hardware not only for their data-as Internet has taught them to do-but also for applications by which to interact with that data.

While the Government certainly was correct to make middleware an important focus of its case, the Government certainly is not correct to make middleware the sole focus of its proposed remedy. It is one thing to say that the existence of a competitive market for middleware could undercut Microsoft's monopoly of operating system software if computing moves away from a desktop/server environment to a Net-based environment. It is quite another to say, as the Proposed Final Judgment does, that the public interest is satisfied when consumers can achieve some benefits of competition only if computing moves away from a desktop/server environment to a Net-based environment.

It is simply not in the public interest-certainly not in the non-corporate consumers'' interest-to conclude what by now is nearly a decade of Government antitrust litigation by providing for some uncertain possibility of middleware competition while ignoring file monopoly position that Microsoft has built in the applications market over that same period.

B. Consumers Will Be Forced to Buy Software and Expensive New Hardware To Get Any Benefits From the Proposed Final Judgment

Even assuming that the Proposed Final Judgment has the potential, over time, to create a more competitive market in the narrow middleware product line which is its sole aim, consumers will have to buy a very expensive ''admission ticket'' to obtain any of those benefits.

The Government acknowledges that relief should, at a minimum, end the unlawful conduct, prevent its recurrence, and ''undo its anticompetitive consequences.'' [8] Curiously, despite this acknowledgement, the Proposed Final Judgment is purely prospective: by its terms it would apply only to the conduct of Microsoft and the opportunities of third party software and hardware vendors in relation to Windows 2000 Professional, Windows XP, and later generations of Microsoft's Windows Operating System.[9] While not evident on the face of the Proposed Final Judgment, this result flows from the interplay among the Proposed Final Judgment's operative provisions and definitions. All of Microsoft's proposed obligations would be limited to conduct relating to a ''Windows Operating System Product'' which is defined as the ''software code ... distributed ... by Microsoft ... as Windows 2000 Professional Windows XP Home, Windows XP Professional, and successors[.]'' [10]

Thus, by its terms the Proposed Final Judgment would not even attempt to ''undo [the] anticompetitive consequences'' of Microsoft's conduct for consumers who continue to use earlier versions of Windows, including Windows 95, Windows 98, and even Windows Me. Perversely, consumers will have to fill Microsoft's coffers by purchasing upgraded operating system software in order to obtain relief. Under the Proposed Final Judgment, only those consumers who upgrade to Windows 2000 Professional or a later version of the Windows Operating System would see any of the benefits of increased competition in the range of software choices available to them.[11]

And the cost of admission to the realm of greater choice is not just the price of the new software product. As anyone who has attempted a system upgrade on his or her own can attest, it is an endeavor best left to professionals. The process is enormously complex, takes hours of time, requires the user to make numerous decisions, often without adequate information, and is prone to crashing the computer, requiring professional help for recovery.[12] Even the IS departments in corporate America are wary of upgrading their entire user community before they have thoroughly tested both the new operating system and the process of upgrading to it. And outside corporate America-that is, for the average (non-corporate) consumer-the task is so difficult that most consumers avoid it, continuing to use the operating system that came with their computers, and changing operating systems only if and when they buy a new computer.

To compound the problem and increase the price of admission even further, each new generation of operating system is significantly more resource-intensive than the last, as clearly indicated by the ''minimum system requirements'' notice Microsoft includes on its packaging and on its web site. The ''minimum system requirements'' for random access memory (RAM) have doubled with each succeeding consumer version of Windows. Windows Me required 32 megabytes (MB) of RAM; Windows 2000 Professional required a minimum of 64 MB; Windows XP recommends at least 128 MB.[13] The ''minimum'' CPU and hard disk requirements have accelerated even more rapidly.[14] And as every computer user knows, the ''minimum'' hardware requirements rarely provide adequate performance under the new operating system. So consumers are forced to buy enhancements to their existing computers, such as more memory and larger hard drives, to ''catch up'' with the demands of the new operating system. Even the consumer who upgrades her computer faces significant performance limitations stemming from the processor and bus architecture of existing systems. This history of Microsoft operating system evolution is that a

[5] Competitive Impact Statement § 1 <http://www.usdoj.gov/atr/cases/f9500/9549.htm>.

[6] Id.; see also Competitive Impact Statement § III, IV <http://www.usdoj.gov/atr/cases/19500/9549.htm>.

[7] This would be true so long as several conditions obtain: (1) those applications depend only on the middleware's APIs, and not on the APIs of the underlying operating system, (2) the middleware runs equally effectively on multiple operating system platforms, and (3) all of every user's applications run on middleware.

[8] Competitive Impact Statement § IV.B <http://www.usdoj.gov/atr/cases/f9500/9549.htm>.

[9] Proposed Final Judgment § VI.U <http://www.usdoj.gov/atr/cases/f9400/9495.htm>.

[10] Proposed Final Judgment §§ III.A–I VI.U <http://www.usdoj.gov/atr/cases/f9400/9495.htm>; Competitive Impact Statement § I (bullet points) <http://www.usdoj.gov/atr/cases/19500/9549.htm>.

[11] A massive migration to later Windows operating system products carries additional problems for consumers, Indeed, another of the hidden costs to consumers of both Microsoft's anticompetitive conduct and the Proposed Final Judgment is the cost in network security. The continued dominance of the Windows Operating System and related applications means that Microsoft is a target for hackers and all those who would compromise the privacy and security of network systems. Elinor Mills Abreu, Hack this! Microsoft and its critics dispute software security issues, but users make the final call, InfoWorld (Sept. 27, 1999) <http://iwsun3.infoworld.com/??qibin/displayStory,p12/features/990927haek.htm>. Thus, a breach of privacy or security in a given Microsoft product will be visited upon millions of consumers worldwide. Absent continued anticompetitive conduct, leading to continued dominance in operating system, browser and office applications, such costs would be significantly decreased as the risk of breach would be more dispersed among several operating systems. See Letter from the Electronic Privacy Information Center to United States Senator Patrick Leahy, Senate Judiciary Committee (Dec. 11, 2001), <http://msdn.microsoft.com/msdnews/2001/July/hess/prior.as??>.

[14] 14 Id.

consumer will, as a practical matter, need to buy a new computer to make effective use of a new operating system.

The reality, then, is that even if the Proposed Final Judgment would allow the development of a more competitive market for middleware, consumers would have to purchase new software and new computers (or spend almost as much to upgrade their existing systems) to obtain any benefits. As a result, a large percentage of consumers would simply be unable to afford the price of admission in their homes, or in their schools, or in their libraries. No proposed antitrust remedy can be in the public interest when it excludes the most vulnerable members of the public from any potential benefits.

II. Important Provisions of the Proposed Final Judgment Will Not Accomplish Their Intended Purposes

The Proposed Final Judgment is vague or subject to evasion by Microsoft to such an extent that it is not in the public interest as it currently stands. In Tunney Act proceedings—particularly where the litigation was required by a failure of precision in a prior settlement decree—a court should insist on precision in the proposed decree, so that the task of enforcing the decree does not become unmanageable.[15] As discussed below, however, the Proposed Final Judgment is fiddled with provisions that make its interpretation and enforceability highly problematic.

A. Microsoft I Illustrates the Importance of Eliminating Ambiguities and Loopholes from the Proposed Final Judgment

In assessing the Proposed Final Judgment, there are important lessons to be learned from past dealings between the Government and Microsoft, in particular the unfortunate history of the first Microsoft consent decree. That decree provided, among other things, that Microsoft can not require OEMs, as a condition of a license to an operating system, to license another Microsoft product.[16] Soon after that decree was approved, however, Microsoft integrated its web browser code into the Windows Operating System, causing the Government to seek an injunction. The decree, however, contained an exception that doomed its very object: it could not be ''construed to prohibit Microsoft from developing integrated products.'' [17] Because the appellate court found that the Government was unlikely to prevail on this question of integration, Microsoft was free to integrate its web browser into the operating system.[18]

It was only last year, after extensive litigation, that Microsoft's integration of the browser code into the Windows Operating System was finally found to be illegal as an improper effort to prevent entry by rival browsers.[19] By that time, however, Netscape Navigator, the browser at which Microsoft had directed many of its tactics, was no longer a threat to Microsoft's monopoly. In a very real sense, the presence of a vague exception for ''integration'' in the first Microsoft decree, and Microsoft's ability to exploit that exception, made. possible the monopolistic behavior and anticompetitive distortion that was at issue in Microsoft II.[20] It is crucial that that scenario not be repeated here, and that the Proposed Final Judgment be cleansed of similar opportunities for Microsoft to ''design around'' the decree's restrictions. Regrettably, there are many aspects of the Proposed Final Judgment that require such cleansing.

B. The Proposed Final Judgment Will Allow Microsoft To ''Design Around'' Its Obligations Despite the fact that ambiguous language is exactly the reason this case was initiated, the Proposed Final Judgment suffers chronically from the same defect. Loose language and a plethora of exceptions would permit Microsoft to ''design around'' the restrictions that are currently being proposed by the Government:

First, the Proposed Final Judgment would allow Microsoft alone to determine the definition of its Windows Operating System. Combined with loose language in the definition of Microsoft Middleware, this provision raises the possibility that Microsoft would be able to escape its API disclosure obligations by incorporating middleware products into future versions of its operating system. If such is the case, contrary to the intent of the Proposed Final Judgment, Microsoft could thereby prevent competition in middleware;

Second, under the Proposed Final Judgment, Microsoft alone would be able to determine when its disclosure obligations arise, as it would determine what constitutes a ''major version'' release under the definition of Microsoft Middleware. By releasing updates, as opposed to ''major versions,'' Microsoft could continue to advance the development of Microsoft Middleware, while precluding competition from other middleware producers;

Third, when a major version is released by Microsoft, the terms of the Proposed Final Judgment regarding the release of information on APIs would permit Microsoft a perpetual advantage in the relevant markets: by the time Microsoft was obligated to release information on APIs, it would already have developed its next major version for release. Thus, under the terms of the Proposed Final Judgment, competitors will always remain at least one step behind Microsoft;

Fourth, Microsoft would unilaterally control whether the user can designate a competitive middleware product by determining the technical compatibility of such products with the Windows Operating System. By continually establishing new (and potentially irrelevant) technical requirements, Microsoft can ensure that consumers are forced to use Microsoft products for an increasing number of applications;

Fifth, and finally, Microsoft would be able to escape all of its disclosure obligations under the Proposed Final Judgment where it would be able to determine that a particular product threatens the ''security'' of any number of integrated systems. In the current environment where applications are increasingly tied to both the operating system and other programs, such claims are easy to make and difficult to disprove. By invoking this exception, Microsoft would be free to preclude competition altogether;

Each of these shortcomings is discussed in further detail below. Given the ambiguities and exceptions, consumers have no reason to expect that the Proposed Final Judgment would effectively prevent the Microsoft monopoly from expanding beyond the operating system and browser markets into every facet of digital life. For these reasons, the Proposed Final Judgment should be rejected or additional proceedings ordered by this Court.

Under Section VI.U of the Proposed Final Judgment, ''It]he software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion.'' This overarching provision would permit Microsoft to unilaterally alter one of the bedrock terms of the Proposed Final Judgment and, thus, to alter the terms of the agreement. As in 1995, the actual implications of this provision of the decree are unclear (except, perhaps, to Microsoft). Nevertheless, it is not difficult to imagine instances in which Microsoft would attempt to, for example, integrate potential Microsoft Middleware Products into its Windows Operating System in order to escape its disclosure obligations (a possibility discussed further below).[21] The provision would also allow Microsoft to implement code designed to make competing middleware products incompatible with the Windows Operating System and thus prevent consumers from using that product as is ostensibly permitted under Section III.H. Indeed, the overarching problem with this provision for both competitors and consumers is its ambiguity and the uncertainty that is associated with it. At a minimum, definitional control of the Proposed Final Judgment should reside first with the agreement itself and, next, with the Court; it certainly should not reside with Microsoft. There is hardly any point in a decree that gives the defendant the right to determine its meaning.

Similarly, under Section III.D of the Proposed Final Judgment, Microsoft must disclose to competitors any and all APIs used by Microsoft Middleware to function effectively on the Windows Operating System. However, because the definition of Microsoft Middleware appears to be limited to ''software code that Microsoft distributes separately from a Windows Operating System

[21] ''A monopoly in operating system software is a platform for unprecedented control over the flow of information to consumers. Control over this software can be leveraged to near total control over the computer screen, Dominating the screen means controlling ... what [consumers] see and when they see it.'' The Project to Promote Competition & Innovation in the Digital Age. At the Crossroads of Choice, <http://procompetition.org/researchlcrossroads/crossexec.htm>.

Product,'' [22] the possibility arises that Microsoft could avoid the required disclosure of its APIs simply by integrating potential Microsoft Middleware into the operating system.[23] Integration would have the same effect upon potential competitors as nondisclosure; the applications barrier to entry would remain impenetrable and innovation by anyone other than Microsoft would be prevented. Moreover, further integration of middleware products would permit Microsoft to extend its monopoly power into adjacent markets.'' [24]

Moreover, assuming that Microsoft determines to release future Microsoft Middleware, Section VI.J would egregiously permit it to determine when or even if its API disclosure obligations are triggered. Specifically, this provision would allow Microsoft to unilaterally determine which releases are ''updates'' to existing Microsoft Middleware and which are ''new major version[s]'' of such.[25] Microsoft would avoid disclosure (triggered by release of a new major version) simply by denominating the release anything other than ''a whole number or ... a number with just a single digit to the right of the decimal point.'' [26] The implications of this type of control on the part of Microsoft make the API disclosure provisions of the Proposed Final Judgment effectively meaningless.

Even where disclosure of APIs to competitors was to occur under Section III.D, it would not be required until ''the last major beta test release'' of the relevant Microsoft Middleware.[27] Microsoft would thus have two incentives with regard to the release of the updated version: (1) to push the date of release of its last beta test as close as possible to the release of a commercial product, and (2) to use the interval until the last beta test to plan a subsequent and improved version of the same software to be released once competition with the updated version is threatened. After release, potential competitors would hurriedly attempt to implement the APIs to enable their products to interoperate with the Windows Operating System. Meanwhile, Microsoft's product would have been commercially re]eased and gaining market share. Thus, before competitors would have been able to convince consumers of the value of their products, Microsoft would have developed a subsequent and improved version of the product, effectively foreclosing competition. The timing of competitors'' access to APIs is crucial for compettion to have any chance of developing. But the timing provided for in the Proposed Final Judgment does not accomplish its purpose.

Section III.H ostensibly ''ensures that OEMs will be able to choose to offer and promote, and consumers will be able to choose to use, Non-Microsoft Middleware Products[.]'' [28] However, the same section would provide Microsoft with yet another exception that effectively swallows the obligation: Microsoft would be permitted explicitly to override a consumer's default choice of middleware product with its own Microsoft Middleware Product where the non-Microsoft product ''fails to implement a reasonable technical requirement ... that is necessary for technical reasons to supply the end user with functionality consistent with a Windows Operating System Product[.]'' [29] Even a superior middleware product could be preempted where it did not conform to Windows Operating System Product code, over which Microsoft would have exclusive control (described above). It is not difficult to imagine Microsoft creating a series of ''technical requirement'' obstacles that would need to be navigated by competitors and consumers in order to permit them choice in middleware products. Granting Microsoft such control over this important provision would permit Microsoft to avoid its impact entirely, continuing the exact anticompetitive conduct this provision was ostensibly designed to prevent.

Finally, the Proposed Final Judgment would grant Microsoft an overarching exception to all of its disclosure obligations where, in Microsoft's determination, ''the disclosure ... would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria[.]'' [30] In an environment where each and every piece of software is increasingly integrated with both the underlying operating system and companion programs, each piece of software could be interpreted by the platform provider as a vehicle for potential interference with vital systems. This is a common argument of monopolists, for it is designed to delay or prevent competition in network services. Given this amount of discretion, Microsoft would be able to effectively prevent competitors from introducing products based upon Microsoft's ''determination'' that such products would be ''dangerous'' to the platform or other components.

The litany of ambiguities described in the preceding paragraphs are not a complete listing of the faults of the Proposed Final Judgment; rather, they are indicative of a systematic failure to consider the machinations of Microsoft and the extent to which even the smallest exception will undoubtedly be employed to preclude competition. Ultimately, consumers will suffer the most from these anticompetitive tactics because, with few alternative resources, they will be forced to buy what the incumbent has to offer, without the benefits of innovation and competition. For these reasons, the Court should reject the Proposed Final Judgment or order additional proceedings as described below.

III. The Court Should Either Reject the Decree As It Currently Stands or Order Additional Proceedings to Eliminate Evident Ambiguities

Unfortunately, under the Tunney Act, the Court has no power to modify the terms agreed to by the parties to the Proposed Final Judgment.[31] This leaves the Court with the difficult decision of whether to accept or reject the Proposed Final Judgment in its entirety. NetAction and CPSR respectfully recommend that the Court not shy away from rejection of the Proposed Final Judgment where it is apparent that ambiguous provisions, described above, will not ameliorate the extant competitive situation for consumers. Such approval would not be in the public interest as required by statute.[32] As an alternative to outright rejection, the Court should consider instituting additional proceedings to assure itself of a ''meeting of the minds'' among all parties to the agreement.

Microsoft, the Government, and the state parties to the Proposed Final Judgment will undoubtedly argue that the expenditures in time and resources necessary to come to a workable agreement justify approval of the Proposed Final Judgment at this time. On the contrary, however, the time and energy spent upon formulating a solution to a competitive problem that has plagued competitors and consumers for the better part of a decade argues for, and not against, an agreement that is stable, workable and not subject to multiple interpretations. The Court should nor rush to approve an agreement that will return to its docket in the near future as a result of ambiguities.

Instead, the Court must be careful to define the terms of the Proposed Final Judgment such that it neither inadvertently accepts an agreement that will not solve the problem nor rejects an agreement that would successfully ameliorate the problem and benefit consumers in the marketplace. Such terms have not yet been defined with respect to the Proposed Final Judgment. Fortunately, under the Tunney Act, the Court has broad powers to order further proceedings to ensure that the public interest is served.[33] In aid of its enforcement authority, then, the Court should order additional proceedings in this

[22] Proposed Final Judgment § VI.J <http://www.usdoj.gov/atr/cases/f9400/9495.htm>.

case to ''pin down'' the meaning of the various provisions of the Proposed Final Judgment that appear to be subject to dispute.

In order to assure itself that Microsoft, the Government, and the state parties have reached an actual ''meeting of the minds,'' the Court should permit participants to the Tunney Act process to submit written questions to each of the three parties to the Proposed Final Judgment. Such questions should only cover what is or what is not permissible under the provisions of the Proposed Final Judgment, Each of the three parties should answer separately, with no consultation among them, as to whether the action in question is permissible. In order to prevent any ''backsliding'' in interpretation, each party should be required to submit an affidavit agreeing to be bound by its answers in any additional proceedings. If the three separate answers are in agreement as to the questions posed, the Court should recognize that a ''meeting of the minds'' has occurred and approve the Proposed Final Judgment forthwith. If the answers are not in agreement, the Court should reject the Proposed Final Judgment until such a ''meeting of the minds'' is reached and conclusively proven.

CONCLUSION

The Proposed Final Judgment, as it currently stands, does not offer consumers any hope of relief in the market for non-middleware software applications. Nor does it attempt to offer any relief to consumers using Windows 95, Windows 98, Windows NT, or Windows 2000. To achieve even the uncertain benefits claimed by the Proposed Final Judgment, consumers will have to buy new software and hardware, including new computers.

Moreover, the Proposed Final Judgment is disturbingly reminiscent of Microsoft I in its ambiguities. Indeed, it was an ambiguity in Microsoft I that led to this proceeding and forced consumers to endure five long years of legal wrangling over an issue that the Government thought had been decided between the parties. As it stands, the Proposed Final Judgment does not permit the Court to determine, with any reasonable degree of comfort or certainty, what relief in fact would be provided by the Proposed Final Judgment. Indeed, in a number of specific instances, the exceptions provided for in the Proposed Finn Judgment appear to permit Microsoft to escape large portions or even the entirety of its obligations.

On the present record, the Proposed Final Judgment cannot be found to be in the public interest. The Court should either reject the Proposed Final Judgment outright, or order additional proceedings, as described herein, to definitively clarify its terms.

Re: United States v. Microsoft Corp. & State of New York v. Microsoft Corp., United States District Court for the District o[Columbia, Case Nos. 98–1232, 98–1233

Dear Ms. Hesse: On behalf of Sony Corporation (''Sony''), a Japan corporation, we offer the following comments pursuant to 15 U.S.C. °16(d) with regard to the Revised Proposed Final Judgment (the ''Proposed Judgment'') in the above captioned matter.

Introduction and Summary

As one of the world's leading technology and entertainment companies, Sony develops and manufactures a wide variety of audio, video, communications and information technology products. Sony is also an original equipment manufacturer (''OEM'') of personal computers and a direct licensee of Microsoft Corporation (''Microsoft'').

Microsoft maintains that certain provisions of the Proposed Judgment require it to impose ''standard'' licensing terms on Sony and other OEMs that could possibly erode protections for their intellectual property. Sony and other OEMs have made, and continue to make, significant investments in such intellectual property. These companies should be free to negotiate more favorable licensing provisions that restrict Microsoft's ability to leverage its market power to gain access to this intellectual property. Accordingly, Sony requests a clarification or modification of the Proposed Judgment to ensure that Sony and other similarly situated OEMs can negotiate appropriate protections for their intellectual property beyond those available in ''standard'' licensing terms and conditions.

Background

Like other OEMs, Sony has entered into a series of one-year Desk Top Operating System (DTOS) license agreements with Microsoft that contain terms relating to operating system products, royalties and payments. These license agreements incorporate other terms and conditions from longer term ''Business Terms Documents'' negotiated between Microsoft and its OEMs. Last year, Sony and Microsoft entered into the current Business Terms Document, which is effective for several years.

The current Business Terms Document contains several provisions relating to intellectual property. These provisions include ''non-assertion covenants'' in which OEMs, under certain conditions, agree not to assert patent claims against Microsoft and Microsoft licensees. Sony and its various affiliates, however, have a significant history and patent portfolio in various areas, including audio, video, software applications and other technologies. To protect its rights to assert these patents, Sony negotiated with Microsoft important limitations on the scope of these non-assertion covenants. Sony believes these limitations are necessary to protect its investments in intellectual property.

Section III.B of (he Proposed Judgment
