

(Milwaukee, WI) to mate with the three female sea lions; and (3) conduct the same research on the three female sea lions while pregnant. All procedures are performed voluntarily by the sea lions. Types of take include mating; blood, milk, saliva, fecal, and urine sampling; open flow respirometry, swimming and walking, and voluntary breath holding. The purpose of this research is to test the hypothesis that physiological adaptations for the marine environment result in elevated energetic costs in otariids compared to terrestrial mammals, which will be tested by measuring locomotor, thermal, maintenance, and reproductive costs in sea lions.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of this application to the Marine Mammal Commission and its Committee of Scientific Advisors.
