SUPPLEMENTARY INFORMATION: The construction, operation, and maintenance of a 500-kV transmission line in King and Kittitas Counties,

Washington, is necessary to maintain reliable electrical service during severe winter conditions in the growing northwest Washington area. The intended effect on the public is to maintain a reliable high-voltage transmission system for Seattle area utilities and avoid an increasing risk of partial blackouts in the Puget Sound area during winter weather events that create a high demand for energy. The action would also enhance BPA's ability to provide firm energy to Canada to meet the requirements of the Columbia River Treaty of 1961. BPA proposes to construct the 500-kV transmission line in 2003-04 to meet these purposes.

This action may involve floodplain and wetlands. In accordance with DOE regulations for compliance with floodplain and wetlands environmental review requirements, BPA will prepare a floodplain and wetlands assessment and will perform this proposed action in a manner so as to avoid or minimize potential harm to or within the affected floodplain and wetlands. The assessment and a floodplain statement of findings will be included in the Supplemental Draft EIS and Final EIS being prepared for the proposed project in accordance with NEPA.

Alternatives Proposed for Consideration

In response to comments received on the Draft EIS, BPA identified four additional alternatives for location and configuration of a transmission line outside the Cedar River Municipal Watershed that would meet the intended purpose of the transmission line. Two of the alternatives to be considered cross land managed by the U. S. Forest Service north and east of the Cedar River Municipal Watershed, a large natural area in the Cascade Mountains used by the City of Seattle to collect drinking water for about 1.3 million people in King and Snohomish Counties. The added alternatives are described below.

Alternative A

Rebuild BPA's existing Covington to Maple Valley 230-kV transmission line to a double-circuit 500-kV line. New transmission towers would be about 175 feet tall. The new 500-kV line would be constructed on existing right-of-way. Each end of the new line would be connected to existing unused 500-kV circuits such that the new line would be connected to BPA's Raver and Echo Lake substations. The northern vacant circuit would need to be connected to Echo Lake Substation with a short line on BPA property.
