

covering the costs of data collection of their own sample and the sharing of all other costs.

The purpose of the survey is to move the national health surveys of both countries toward closer comparability so the health status among residents of countries can be compared in a more concrete manner. This will allow researchers to study the effect of

variations in health systems on health care, health status and functional status. This effort can also serve as a model for improving comparability among national health studies generally. A need for such comparability has been noted by the World Health Organization, the Centers for Disease Control and Prevention and the Robert

Wood Johnson Foundation who is funding the study in part.

The specific data from the CUJHS may well contribute toward meeting some of the research needs directly. Its longer term impact will be to demonstrate best practices for use in bi-national and multi-national health surveys. The annual burden for this data collection is 2,292 hours.
