Description: 29 CFR parts 1917 and 1918 contain a number of collections of information requirements which are used by employers to ensure that employees are informed properly about the safety and health hazards associated with marine terminal and longshoring operations. These standards contain requirements related to the testing, certification and marking of specific types of cargo lifting appliances and associated cargo handling gear and other cargo handling equipment such as conveyors and industrial trucks. The collections of information required from employers by OSHA are necessary to reduce employee injuries and fatalities associated with cargo lifting gear, transfer of vehicular cargo, manual cargo handling, and exposure to hazardous atmospheres. The Agency uses the records developed in response to a number of the information collection requirements to find out if employers are complying adequately with the provisions of the standards.
