

Federal Aviation Administration (FAA)

Title: Research for Development and Distribution of Enhanced or New Cockpit Graphical Products for Terminal Operations.

Affected Public: A total of 200 individual airmen and airline dispatchers.

Abstract: The Department of Transportation (DOT), in accordance with 49 CFR part 141, delegated responsibility for aviation safety oversight to the FAA. The FAA, on October 4, 1995, established the Aviation Weather Division (now Aerospace Weather Policy and Standards Staff, ARS-20) to centralize all aviation weather policy and requirements in one organization. ARS-20 continues to serve as the focal point for all weather activities and is conducting a user needs analysis to identify how well current and future aviation weather products for use in the cockpit meet operational needs. The survey is tailored for the flight crew and dispatcher decision-makers. Feedback will aid in decisions affecting research, development and distribution of enhanced or new graphical products for terminal operations.

Estimated Annual Burden Hours: An estimated one-time 100 hours.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently approved OMB Control Number. Once assigned by OMB, the control number will be provided to the respondents with the survey.

Issued in Washington, DC, on September 27, 2002.

Judith D. Street,

FAA Information Collection Clearance Officer, Standards and Information Division, APF-100.
