BILLING CODE 4151-05-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Notice of Meeting of the Advisory Committee on Minority Health

AGENCY: Office of the Secretary, Office of Public Health and Science, Office of Minority Health.

ACTION: Notice.

The Advisory Committee on Minority Health will meet on Thursday, December 12, 2002 from 9 a.m. to 5 p.m., and Friday, December 13, 2002 from 8:30 a.m.-12 Noon. The meeting will be held at the Hyatt Regency Bethesda, Lalique Room, One Bethesda Metro Center (Wisconsin Avenue at Old Georgetown Road), Washington, DC, 20814.

The Advisory Committee will discuss racial and ethnic disparities in health, as well as, other related issues.

The meeting is open to the public. There will be an opportunity for public comment, which will be limited to five minutes per speaker. Individuals who would like to submit written statements should mail or fax their comments to the Office of Minority Health at least two business days prior to the meeting.

For further information, please contact Ms. Sheila P. Merriweather, Rockwall II Building, 5515 Security Lane, Suite 1000, Rockville, Maryland 20852. Phone: 301-443-9923; Fax: 301-443-8280.

Dated: November 15, 2002.

Nathan Stinson, Jr.,

Deputy Assistant Secretary for Minority Health.

[60 Day-03-18]

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call the CDC Reports Clearance Officer on (404) 498-1210.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Send comments to Seleda M. Perryman, CDC Assistant Reports Clearance Officer, 1600 Clifton Road, MS-D24, Atlanta, GA 30333. Written comments should be received within 60 days of this notice.

Proposed Project

An Evaluation of Targeted Health Communication Message: Folic Acid and Neural Tube Defects (OMB No. 0920-0461)—Extension—The National

Center on Birth Defects and Developmental Disabilities (NCBDDD), Centers for Disease Control and Prevention (CDC).

Background

The Division of Birth Defects and Developmental Disabilities, within NCBDDD launched a national education campaign in January 1999 to increase women's knowledge about neural tube birth defects (NTDs) and the beneficial role folic acid, a B vitamin, plays in the prevention of NTDs. Studies show that a 50 to 70 percent reduction in the risk of neural tube birth defects is possible if all women capable of becoming pregnant consume 400 micrograms of folic acid daily both prior to and during early pregnancy. Studies also indicate that Hispanic women have a greater risk for NTD-affected pregnancies than women in the general population. Specific, culturally sensitive, targeted media messages need to be directed at this population.

CDC and the March of Dimes Birth Defects Foundation developed health communication media messages and educational materials targeted to health care providers and English and Spanish-speaking women. These media messages and educational materials consist of television and radio public service announcements (PSA), brochures and resource manuals. The Spanish-language folic acid communication evaluation survey examines the impact of Spanish-language media messages on the levels of awareness, knowledge, and vitamin use among Hispanic women of childbearing age.

Hispanic women's exposure to Spanish-language media messages and educational materials on folic acid information will be collected and measured to determine whether these exposures influenced the women's knowledge and usage of folic acid. The number and frequency of women's exposures to the media messages such as television and radio PSAs will be collected from media channels and compared to information collected from survey data, National Council on Folic Acid organizations and the National Clearinghouse on Folic Acid activities. The cost to participants will be \$0.

Respondents	No. of respondents	No. of responses/respondent	Avg. burden/response (in hours)	Total burden (in hours)
Telephone Interview	1,000	1	20/60	333

Dated: November 22, 2002.

Nancy E. Cheal,

Acting Associate Director for Policy, Planning and Evaluation, Centers for Disease Control and Prevention.

Proposed Project:

Exposure to Aerosolized Brevetoxins During Red Tide Events (OMB No. 0920-0494)—Extension—National Center for Environmental Health (NCEH), Centers for Disease Control and Prevention (CDC).

Background

Gymnodinium breve is the marine dinoflagellate responsible for extensive blooms (called "red tides") that form in the gulf of Mexico. *G. breve* produces potent toxins, called brevetoxins, that have been responsible for killing millions of fish and other marine organisms. The biochemical activity of brevetoxins is not completely understood and there is very little information regarding human health effects from environmental exposures, such as inhaling brevetoxin that has been aerosolized and swept onto the coast by offshore winds. The National Center for Environmental Health (NCEH), Centers for Disease Control and Prevention (CDC) is planning to recruit 100 people who work along the coast of

Florida and who potentially will be occupationally exposed to aerosolized red tide toxins some time during the year following recruitment. We plan to administer a base-line respiratory health questionnaire and conduct pre- and post-shift pulmonary function tests during a time when there is no red tide reported near the area. When a red tide develops, we plan to administer a symptom survey and conduct pulmonary function testing (PFT) on a group of study participants who are working in the area where the red tide is near shore and on a control group of study participants who are not working in an area where the red tide is near shore (*i.e.*, are not exposed to the red tide). We will then compare (1) symptom reports before and during the red tide and (2) the changes in baseline PFT values during the work shift (differences between pre- and post-shift PFT results without exposure to red tide) with the changes in PFT values during the work shift when individuals are exposed to red tide.

In addition, we plan to assist in collecting biological specimens (inflammatory cells from nose and throat swabs) to assess whether they can be used to verify exposure and to demonstrate a biological effect (*i.e.*, inflammatory response) from exposure to red tide. We have collected part of the data, but, because we are dealing with natural phenomena and are subject literally to the tides, we must extend our data collection time for an additional two years. There is no cost to respondents.

Respondents	No. of respondents	No. of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
Pulmonary History Questionnaire	100	1	20/60	33
Symptoms Questionnaire	100	20	5/60	167
Nasal and Throat Swabs	100	20	5/60	167
Pulmonary Function Tests	100	20	20/60	667
Total	1,034

Dated: November 22, 2002.

Nancy E. Cheal,

Acting Associate Director for Policy, Planning and Evaluation, Centers for Disease Control and Prevention.
