

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 2, 25 and 87

[ET Docket No. 02-305; FCC 02-261]

World Radiocommunication Conferences Concerning Frequency Bands Above 28 MHz

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document the Commission proposes to amend our rules in order to implement domestically various allocation decisions from several World Radiocommunication Conferences ("WRCs") concerning the frequency bands between 28 MHz and 36 GHz and to otherwise update our rules in this frequency range. The following proposals are the most significant to non-Federal Government operations: implementing generic mobile-satellite service ("MSS") allocations in the bands 1525-1559 MHz and 1626.5-1660.5 MHz ("L-band"); allocating the band 1164-1189 MHz to the radionavigation-satellite service ("RNSS"); and removing unused and limited fixed-satellite and broadcasting-satellite allocations from the band 2500-2690 MHz. In addition, at the request of the National Telecommunications and Information Administration ("NTIA"), the Commission has proposed various allocation changes for the space science services and the inter-satellite service ("ISS"), most of which involve spectrum primarily used by the Federal Government. These proposals would conform the Commission's rules to previous WRC agreements and are expected to provide significant benefits to the American public.

DATES: Written comments are due February 10, 2003, and reply comments are due March 10, 2003.

Summary of Notice of Proposed Rule Making

1. The *Notice of Proposed Rulemaking* ("NPRM") proposes to provide for generic MSS allocations across the bands 1525-1559 MHz and 1626.5-1660.5 MHz. Specifically, we proposed to expand the primary allocation in the bands 1545-1549.5 MHz, 1558.5-1559 MHz, 1646.5-1651 MHz, and 1660-1660.5 MHz from the aeronautical mobile-satellite (route) service ("AMS(R)S") to all services within the MSS while preserving the requirements of AMS(R)S. The effect of our proposal is that the bands 1545-1559 MHz and 1646.5-1660.5 MHz would be made available to all types of MSS communications on a primary basis, rather than segmented for specialized use. This action will permit more efficient use of this radio spectrum and will facilitate the expansion of MSS use globally. In addition, because the bands 1530-1544 MHz and 1626.5-1645.5 MHz are currently allocated to the maritime mobile-satellite service ("MMSS") and the MSS on a co-primary basis, we proposed to remove superfluous MMSS allocations. We are also requesting comment on whether the secondary allocation for aeronautical telemetry should be removed from the band 1525-1535 MHz.

2. The Commission proposes to allocate the band 1164-1189 MHz to the RNSS for space-to-Earth ("downlink") and space-to-space transmissions in order to accommodate a new civil global positioning system ("GPS") signal. This action would permit the addition of a new GPS signal and support the safety-of-life requirements demanded by civil aviation. We also proposed to allocate the bands 1215-1240 MHz and 1559-1610 MHz, which are currently limited to RNSS downlinks, for RNSS space-to-space transmissions as well. This action would allow use of spaceborne RNSS receivers for scientific and commercial applications.

3. The Commission proposes to downgrade the primary flight test and radiolocation allocations to secondary status in the band 2320-2345 MHz

because the Satellite Digital Audio Radio Service ("Satellite DARS") has been brought into operation. We also propose to delete limited allocations for the fixed-satellite service ("FSS") and the broadcasting-satellite service ("BSS") from the band 2500–2690 MHz in order to remove allocations that are not compatible with two-way, point-to-multipoint fixed uses.

4. The Commission proposes to implement domestically various allocation decisions concerning the space science services and the ISS from several WRCs that have not previously been addressed by the Commission. These proposals deal with the following issues:

- Raising secondary allocations for the Earth exploration-satellite service ("EESS") and the space research service ("SRS") to primary status in 1035 megahertz of spectrum in eight frequency bands and to specify that these allocations are to be used for active sensor operations ("EESS (active)" and "SRS (active)"): 1215–1240 MHz, 1240–1300 MHz, 5250–5255 MHz, 5255–5350 MHz, 8550–8650 MHz, 9500–9800 MHz, 13.4–13.75 GHz, and 17.2–17.3 GHz.

- Allocating 550 megahertz of additional spectrum to the EESS (active) and SRS (active) on a primary basis in the bands 13.25–13.4 GHz and 35.6–36 GHz. We would also change the primary footnote allocation for active spaceborne sensors in the band 35.5–35.6 GHz to a direct Table listing.

- Allocating 110 megahertz of additional spectrum to the EESS (active) on a primary basis in the band 5350–5460 MHz.

- Upgrading the allocation status of EESS uplinks and meteorological-satellite service ("METSAT") uplinks in the band 401–403 MHz from secondary to primary.

- Allocating the band 410–420 MHz to the SRS on a primary basis for space-to-space transmissions.

- Allocating the band 7750–7850 MHz for METSAT downlinks on a primary basis, limited to non-geostationary satellite systems.

- Allocating the band 8400–8450 MHz for SRS downlinks from deep space on a secondary basis.

- Allocating the band 25.25–27.5 GHz to the ISS on a primary basis.

- Raising the secondary EESS allocation to primary status in the band 25.5–27 GHz and changing its directional indicator from space-to-space to space-to-Earth.

5. In addition, we proposed to: (1) Remove the primary ISS allocation from the band 32–32.3 GHz; (2) remove the secondary allocation for the aeronautical mobile-satellite (route)

service ("AMS(R)S") from the band 136–137 MHz; (3) more than double the size of the geographic area in New Mexico and Texas where amateur stations in the band 420–450 MHz would be limited in power and where spread spectrum radiolocation systems in the sub-band 420–435 MHz should not expect to be accommodated; (4) reflect NTIA's recent action, which specified that Federal Government wind profiler radar systems ("wind profilers") will operate in the sub-band 448–450 MHz; (5) permit U.S. flagged ships to use more spectrum-efficient equipment for on-board mobile radiotelephony communications in areas outside the territorial waters of the United States; (6) remove unused allocations for the International Fixed Public Radiocommunication Services from the bands 2.1–2.2 GHz and 10.7–11.7 GHz; and (7) allocate the band 14–14.5 GHz to the mobile-satellite (Earth-to-space) except aeronautical mobile-satellite service on a secondary basis. The Commission also proposes to make numerous ministerial amendments to part 2 of our rules.

Initial Regulatory Flexibility Certification

6. The Regulatory Flexibility Act of 1980, as amended ("RFA"),¹ requires that an initial regulatory analysis be prepared for notice-and-comment rule making proceedings, unless the agency certifies that the "the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities."² The RFA generally defines the term "small entity" as having the same meaning as the terms "small business," "small organization," and "small governmental jurisdiction."³ In addition, the term "small business" has the same meaning as the term "small business concern" under the Small Business Act.⁴ A "small business concern" is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration ("SBA").⁵

¹ See U.S.C. 603. The RFA, *see* 5 U.S.C. 601–612, has been amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), Pub. L. 104–121, Title II, 110 Stat. 857 (1996).

² 5 U.S.C. 605(b).

³ 5 U.S.C. 601(6).

⁴ 5 U.S.C. 601(3) (incorporating by reference the definition of "small business concern" in the Small Business Act, 15 U.S.C. 632). Pursuant to 5 U.S.C. 601(3), the statutory definition of a small business applies "unless an agency, after consultation with the Office of Advocacy of the Small Business Administration and after opportunity for public comment, establishes one or more definitions of

7. The *Notice of Proposed Rule Making* ("NPRM") proposed to amend parts 2, 25, and 87 of the Commission's rules in order to implement domestically various allocation decisions from several World Radiocommunication Conferences concerning the frequency bands between 28 MHz and 36 GHz and to otherwise update our rules in this frequency range. These allocation proposals mainly affect Federal agencies.⁶ Those proposals that are most significant to non-Federal Government operations are: (1) Implementing generic L-band MSS allocations; (2) allocating the band 1164–1189 MHz to the RNSS; and (3) removing unused and limited FSS and BSS allocations from the band 2500–2690 MHz. Concerning L-band MSS, currently there is only one U.S. licensee. Concerning the RNSS allocation, only one or at most a few large companies are expected to be able to launch and maintain RNSS systems, which are expensive. The last proposal merely deletes unused allocations, with no direct effect on licensees or regulatees.

8. We have determined that the rules proposed in the *NPRM* will not, if promulgated, have a significant economic impact on a substantial number of small entities. Accordingly, we hereby certify that this *NPRM* will not have a significant economic impact on a substantial number of small entities. The Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, will send a copy of this *NPRM*, including this certification, to the Chief Counsel for Advocacy of the Small Business Administration.⁷

9. Pursuant to sections 1, 4, 301, 302(a), 303, 307, 309, 316, 332, 334, and 336 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154, 301, 302(a), 303, 307, 309, 316, 332, 334, and 336, the notice of proposed rule making is adopted.

US276 Except as otherwise provided for herein, use of the band 2360–2385

¹ Medical telemetry equipment shall not cause harmful interference to radio astronomy operations in the band 608–614 MHz and shall be coordinated under the requirements found in 47 CFR 95.1119.

MHz by the mobile service is limited to aeronautical telemetering and associated telecommand operations for flight testing of manned or unmanned aircraft, missiles or major components thereof. The following three frequencies are shared on a co-equal basis by Government and non-Government stations for telemetering and associated telecommand operations of expendable and reusable launch vehicles whether or not such operations involve flight testing: 2364.5 MHz, 2370.5 MHz, and 2382.5 MHz. All other mobile telemetering uses shall be secondary to the above uses.

US277 The band 10.6–10.68 GHz is also allocated on a primary basis to the radio astronomy service. However, the radio astronomy service shall not receive protection from stations in the fixed service which are licensed to operate in the one hundred most populous urbanized areas as defined by the 1990 U.S. Census.

US278 In the bands 22.55–23.55 GHz and 32.3–33 GHz, non-geostationary inter-satellite links may operate on a secondary basis to geostationary inter-satellite links.

Such transmissions shall not cause harmful interference to authorized Federal Government stations. The power flux-density produced by such non-Federal Government stations at the Earth's surface in any 4 kHz band for all conditions and methods of modulation shall not exceed:

- 148 dB(W/m²) for 0° < * ≤ 5°
- 148 + (* – 5)/2 dB(W/m²) for 5° < * ≤ 25°
- 138 dB(W/m²) for 25° < * ≤ 90°

where * is the angle of arrival of the radio-frequency wave (degrees above the horizontal). These limits relate to the power flux-density and angles of arrival which would be obtained under free-space propagation conditions.

US316 The band 2900–3000 MHz is also allocated on a primary basis to the meteorological aids service. Operations in this service are limited to Federal Government Next Generation Weather Radar (NEXRAD) systems where accommodation in the 2700–2900 MHz band is not technically practical and are subject to coordination with existing authorized stations.

* * * * *

US320 The use of the bands 137–138 MHz, 148–150.05 MHz, and 400.15–401 MHz by the mobile-satellite service is limited to non-voice, non-geostationary satellite systems and may include satellite links between land earth stations at fixed locations.
