Title: National Health Protection Survey of Beaches (OMB Control No. 2040-0189, EPA ICR Number 1814.03). This is a request to renew an existing approved collection that is scheduled to expire on 1/31/2003. Under the OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB.

Abstract: Bacterial and other microbiological contaminants continue to pose potentially serious human health problems for the Nation's

recreational waters, including bathing beaches. These adverse effects have been one of EPA's long-standing concerns. They are directly related to such Clean Water Act responsibilities as water quality standards and surface water quality, and to the Agency's efforts to ensure that the waters of the United States are "fishable" and "swimmable." In 1986, EPA formally issued a revision to its bacteriological ambient water quality criteria recommendations to protect persons participating in body contact recreation. In addition, recent studies have confirmed the adverse health effects resulting from bathing in contaminated waters. Therefore, water quality in bathing beach areas is a critical concern to EPA.

EPA believes there is a need to improve the overall quality and availability of public information about health protection activities at beaches, which include, but are not limited to, water quality standards, monitoring and assessment activities, and beach closures. Many organizations share responsibility for these activities. Consequently, EPA's Office of Water will conduct an annual "beach" survey which will be sent to environmental health officials from State, tribal, county, and city agencies, as well as representatives from various interest groups. It will obtain and verify information on the location and condition of swimming beaches and the agencies and persons responsible for maintaining and issuing advisories or closings for those beaches at inland sites around the Nation. Responses to the questionnaire (either on paper or electronically via the Internet) will help to determine compliance with water quality standards, to assess public health risks, and to determine what steps EPA should take next, if any. Completion of the questionnaire and map marking will be voluntary.

EPA will assemble the information (maps and questionnaire responses) into electronic database and graphic formats that can be readily analyzed and shared with responsible parties (e.g., EPA program and regional offices, other federal, state, tribal, county, and city agencies), as well as the public. The nationwide collection of information is being conducted in phases over three years, with an average estimated number of respondents of 130 per year. When the survey is fully implemented, it is estimated that 391 respondents per year will be involved. The estimated annual cost for the survey per respondent is anticipated to decrease each year, since respondents will only

be requested to provide information that has changed during the year.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15, and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 2.4 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: State and county, public health, and environmental protection agencies.

Estimated Number of Respondents: 130.

Frequency of Response: annual.

Estimated Total Annual Hour Burden: 312.

Estimated Total Annualized Cost Burden (non-labor costs): \$195.

Changes in the Estimates: There is a decrease of 968 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This decrease is due to a reduction in the number of respondents for this ICR. This ICR will collect information only from inland beaches that are not required to report to EPA, or those states that do not apply for the BEACH Act Grants.
