

Plan in accordance with its NEPA regulations (10 CFR 1021.331(a)), which will serve as a tool for monitoring mitigation commitments.

Decision

DOE will implement the Proposed Action of providing approximately \$60 million in cost-shared federal funding support to design, construct, and demonstrate the co-feed BGL technology proposed by KPE. The project is intended to demonstrate the combined removal of SO₂, NO_x, and particulate matter in a BGL co-feed technology at a size (540 MW) approximately 40 to 50 percent larger than other currently operating, 100 percent coal-fed gasifier systems. The project is expected to generate sufficient data from design, construction, and operation to allow private industry to assess the potential for commercial application of the larger scale co-feed BGL technology. This decision to provide cost-shared funding for the proposed project was made after careful review of the potential environmental impacts, as analyzed in the EIS.

DOE's decision incorporates all practicable means to avoid or minimize environmental harm. In accordance with Section 1021.331(a) of the DOE NEPA regulations, DOE will prepare a Mitigation Action Plan that addresses mitigation commitments expressed in this ROD. Copies of the Mitigation Action Plan may be obtained from Roy Spears, NEPA Document Manager, U.S. Department of Energy, National Energy Technology Laboratory, 3610 Collins Ferry Road, Morgantown, WV 26507; telephone: (304) 285-5460.

Issued in Washington, DC on, this 29th day of January 2003.

Carl Michael Smith,

Assistant Secretary for Fossil Energy.

Title: NSPS for Pressure Sensitive Tape and Label Surface Coating (40 CFR part 60, subpart RR) (OMB Control No. 2060-0004, EPA ICR Number 0658.08). This is a request of an existing approved collection expiring January 31, 2003. Under the OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB.

Abstract: The New Source Performance Standards (NSPS) for Pressure Sensitive Tape and Label Surface Coating, published at 40 CFR part 60, subpart RR were proposed on December 30, 1980, and promulgated on October 18, 1983. These regulations apply to each coating line used in the manufacture of pressure sensitive tape and label materials, and on which construction or reconstruction commenced after December 30, 1980. This information is being collected to assure compliance with 40 CFR part 60, subpart RR. Facilities that input 45 Mg of volatile organic compounds (VOC) or less per 12 month period are not subject to the emission limit established by the subpart. This information is being collected to assure compliance with 40 CFR part 60, subpart RR.

Owners and operators of the affected facilities must make the following one-time-only reports: notification of the date of construction or reconstruction; notification of the anticipated and actual dates of initial startup; notification of any physical change to an existing facility that may increase the regulated pollutant emission rate; notification of initial performance test and the results of the initial performance test. Owners or operators are also required to maintain records of the occurrence and duration of any startup, shutdown or malfunction in the operation of an affected facility, or any period during which the monitoring
