Petitions for Modification

This notice revises the safety standard number referenced in a petition for modification notice that was published in the **Federal Register** on February 4, 2003 (68 FR 5664), for the Dakota Westmoreland Corporation, Beulah Mine. In a letter from the petitioner dated March 7, 2003, the petitioner requests that the safety standard in its petition for modification, docket number M-2003-005-C, be changed from 30 CFR 77.405(b) to 30 CFR 77.803. The petitioner's request is to modify the existing safety standard, 30 CFR 77.803, to allow an alternative method to permit its boom/mast machine to be raised or lowered during initial dragline assembly or disassembly at construction sites. The petitioner asserts that its proposed alternative method would not result in a diminution of safety to the miners but would provide at least the same measure of protection as the existing standard.

The petitioner proposes to use hand-held continuous-duty methane and oxygen detectors in lieu of machine mounted methane monitors on three-wheel tractors with drag bottom buckets. The petitioner proposes to use two ten-pound portable chemical fire extinguishers in the operator's deck of each Mescher tractor operated at its No. 1 Mine. The petitioner states that the equipment operator will inspect each fire extinguisher on a daily basis prior to entering the primary escapeway. The petitioner further states that a record of the daily inspection will be kept at the mine, and a sufficient number of spare fire extinguishers will be maintained at the mine in case a defective fire extinguisher is detected. The petitioner asserts that the proposed alternative method would provide at least the same measure of protection as the existing standard.
