SUPPLEMENTARY INFORMATION: The subject modifications are requested under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222-226).

Permit No. 1266-01 authorizes REMSA, Inc. to capture via trawl, handle, flipper and PIT tag, and release sea turtles while removing them from the path of hopper dredges. Annually, 350 loggerhead, 150 green, 150 Kemp's ridley, 10 hawksbill and 10 leatherback sea turtles may be taken in this manner. Research is conducted in the Atlantic Ocean and the Gulf of Mexico. In this modification, the permit holder requests authorization to biopsy sample sea turtles. A maximum of 350 loggerhead, 150 green, 150 Kemp's ridley, 10 hawksbill, and 10 leatherback sea turtles could be biopsy sampled annually until the permit's expiration on April 30, 2006. Biopsy sampling will follow the protocol for tissue collection established by the NMFS Southeast Fisheries Science Center and will only be performed by trained personnel.

Permit No. 1388 authorizes Dr. David Nelson to conduct sea turtle research in the northwestern Atlantic Ocean and the Gulf of Mexico. The first project involves relocation trawling in association with hopper dredge activity. A total of 200 loggerhead, 100 green, 30 Kemp's ridley, 2 hawksbill, and 2 leatherback sea turtles are authorized to be captured, handled, measured, flipper and PIT tagged, and released. The second project uses a subset of the turtles caught via relocation trawling to investigate large-scale movements and diving behavior. Twenty loggerhead, 5 Kemp's ridley, and 5 green turtles will be satellite tagged in addition to the above activities before being released. The third project is an abundance and habitat survey of green sea turtles along the shoreline of Cape Canaveral. A total of 75 green sea turtles may be captured, handled, flipper and PIT tagged, and fitted with a radio/sonic transmitter or a time-depth recorder/radio transmitter, before being released. The permit holder requests authorization to biopsy sample 30 of the 200 loggerhead turtles that may be captured annually during relocation trawls in association with dredging activity. Biopsy sampling will follow the protocol for tissue collection established by the NMFS Southeast Fisheries Science Center and will only be performed by trained personnel.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.
