ACTION: Notice of intent.

SUMMARY: In accordance with the President's Council of Environmental Quality (CEQ) Rules and Regulations, as defined and amended in 40 Code of Federal Regulations (CFR), Parts 1500–1508, the U.S. Army Corps of Engineers (USACE), New York District (District), is preparing a Draft Environmental Impact Statement (DEIS) to determine the feasibility of implementing flood damage protection and aquatic ecosystem restoration measures along the Woodbridge River Basin in Middlesex, NJ. The Woodbridge River Basin (Basin) is approximately 5 miles in length with a drainage area of approximately 10 miles. Tidal surges and inadequate channel capacities to contain increased stormwater runoff account for flooding problems within the Basin. The Basin has experienced numerous flood events that have incurred damages to homes, businesses and pubic infrastructure; the latest occurring in October of 1996 during which the Township of Woodbridge sustained damages in excess of $1 million. Direct impacts to the Basin's aquatic ecosystem as a result of urbanization include the loss of wetland acreage, floodplain encroachment, stream bank erosion, increased sedimentation and nutrient and pollutant loading. The District will develop and evaluate various structural and non-structural flood damage reduction measures and will investigate opportunities to restore aquatic ecosystem structure and functions.
