SUPPLEMENTARY INFORMATION:

1 Brake drums and rotors are defined as brake
drums and rotors made of gray cast iron, whether
finished, semifinished, or unfinished, ranging in
diameter from 8 to 16 inches (20.32 to 40.64
centimeters) and in weight from 8 to 45 pounds
(3.63 to 20.41 kilograms). The size parameters
(weight and dimension) of the brake drums and
rotors limit their use to the following types of
motor vehicles: automobiles, all-terrain vehicles, vans
and recreational vehicles under “one ton and a half.”

Finished brake drums and rotors are those that
are ready for sale and installation without any
further operations. Semifinished drums are those on
which the surface is not entirely smooth, and has
undergone some drilling. Unfinished drums are
those which have undergone some grinding or
turning.

These brake drums and rotors are for motor
vehicles, and do not contain in the casting a logo
of an original equipment manufacturer (OEM)
which produces vehicles sold in the United States
(e.g., General Motors, Ford, DaimlerChrysler,
Honda, Toyota, Volvo). Brake drums and rotors
covered in this investigation are not certified by
OEM producers of vehicles sold in the United
States. The scope also includes composite brake
drums that are made of gray cast iron, which
contain a steel plate, but otherwise meet the above
criteria.

The imported products are provided for in
subheading 8708.39.50 of the Harmonized
