

Summaries of potential impacts from the alternatives, including the resulting generation of LLW and TRUW, are presented in the IMNM EIS, Table 2-2 through Table 2-12 (pp. 2-48 through 2-58). As described below, the direct disposal of the materials discussed herein as waste could reduce the impacts slightly.

The impacts caused by the disposition of cobalt-60 and thulium-170 slugs, and the remaining materials in the Other Aluminum-Clad Targets material category, as LLW would be within those described in Table 2-15 of the SRS WM EIS, and remain consistent with the moderate treatment alternative selected by DOE in the October 30, 1995, ROD (60 FR 55249). The 1,145 cubic meter reduction forecast from this decision is a very small fraction of both the LLW volume forecast in the SRS WM EIS (approximately 475,000 cubic meters) and the current SRS forecast (approximately 300,000 cubic meters) resulting from program changes, waste minimization, and volume reduction activities. Any material disposed of as LLW must meet the definition of LLW and the disposal facility's waste acceptance criteria.

Some of the Plutonium and Uranium Stored in Vaults materials, and potentially the plutonium-242 flux monitor pins in the Other Aluminum-Clad Targets material type, may be determined to be TRUW. If so, they would represent a small fraction of the TRUW generated and stored at the SRS, and the potential impacts would not exceed those described for TRUW treatment and storage in Table 2-17 of the SRS WM EIS. TRUW would be stored at the SRS pending shipment to DOE's Waste Isolation Pilot Plant near Carlsbad, New Mexico, for disposal. SRS has the capacity to store 34,400 cubic meters of TRUW and has a TRUW inventory of approximately 11,000 cubic meters. The *Waste Isolation Pilot Plant Disposal Phase Supplemental EIS* (DOE/EIS-0026-FS2) evaluated the transportation and disposal of up to 23,000 cubic meters of waste originating from the SRS. The most recent estimate of SRS-originated TRUW, which includes TRUW to be generated from the Mixed Oxide Fuel Fabrication Facility, is 21,155 cubic meters. Therefore, the estimated 120 cubic meter reduction that could result from implementation of this decision is a small fraction of both the SRS storage capacity and the analyzed WIPP disposal capacity.

#### Decision

DOE is amending the December 12, 1995, ROD and the February 21, 1996,

ROD by canceling, in part, the processing alternative selected for the Plutonium and Uranium Stored in Vaults material type and the Other Aluminum-Clad Targets material type. DOE instead will dispose of, as TRUW, that portion of the remaining Plutonium and Uranium Stored in Vaults, and possibly the plutonium-242 flux monitor pins in the Other Aluminum-Clad Target material type, which meets the criteria set forth below for TRUW. DOE also will dispose of, as LLW, the cobalt-60 and thulium-170 slugs, and any of the remaining Other Aluminum-Clad Target materials that meet the criteria set forth below for LLW. This LLW will be disposed of at the SRS, or at an offsite facility, along with other SRS LLW as discussed in the September 22, 1995, and June 28, 2001, RODs for the SRS WM EIS.

Any material disposed of as LLW or TRUW must meet the definition of the relevant waste type under DOE Guide 435.1-1, which provides guidance for implementation of DOE Order 435.1, Radioactive Waste Management. In addition, disposal of any materials would be contingent upon a demonstration that they meet the appropriate treatment, storage, or disposal facility waste acceptance criteria. The environmental impacts of treatment, storage, and disposal of LLW and TRUW at the SRS are analyzed in the SRS WM EIS (DOE/EIS-0217, July 1995).

Adding disposal as LLW or TRUW to the management methods available for Other Aluminum-Clad Targets and Plutonium and Uranium Stored in Vaults will allow DOE to optimize the use of the SRS canyon facilities to process higher priority materials. Additionally, implementing this additional management method for qualifying plutonium materials will reduce the amount of plutonium that would otherwise need to be processed to meet the plutonium storage standard (DOE-STD-3013), reduce vault storage space requirements for plutonium and the associated storage containers, and lower vault surveillance and maintenance costs. There is no programmatic need for the materials covered by this decision.

Issued in Washington, DC, July 17, 2003.
