#### Preliminary Conclusions

NMFS has preliminarily determined that the short-term impact of conducting a seismic survey program in the ETP will result, at worst, in a temporary modification in behavior by certain species of marine mammals. While behavioral modifications may be made by these species as a result of seismic survey activities, this behavioral change is expected to result in no more than a negligible impact on the affected species.

While the number of potential incidental harassment takes will depend on the distribution and abundance of marine mammals in the vicinity of the survey activity, the number of potential harassment takings is estimated to be small. In addition, no take by injury and/or death is anticipated, and the potential for temporary or permanent hearing impairment is low and will be avoided through the incorporation of the mitigation measures mentioned in this document.

#### Proposed Authorization

NMFS proposes to issue an IHA to Scripps for conducting a 2-GI gun seismic survey program in the ETP, provided the proposed mitigation, monitoring, and reporting requirements are incorporated. NMFS has preliminarily determined that the proposed activity would result in the harassment of only small numbers of marine mammals; would have no more than a negligible impact on the affected marine mammal stocks; and would not have an unmitigable adverse impact on the availability of stocks for subsistence uses.

#### Information Solicited

NMFS requests interested persons to submit comments and information concerning this request (see **ADDRESSES**).
