

need new and updated water quality criteria and information for SABS.

Charge: While many questions and much research remain, EPA seeks the opportunity for a consultation with the Science Advisory Board to gain advice and recommendations on the best potential approaches to developing water quality criteria for suspended and bedded sediments as will be described in the draft discussion paper entitled Developing Water Quality Criteria for Suspended and Bedded Sediments (SABS)—Potential Approaches. The Office of Water is also seeking recommendations on additional criteria development approaches for different types of water body uses, other than aquatic life, and is also seeking advice on any potential criteria derivation methodology not included in the discussion paper.

More Specific Consultation Questions:

(1) Is it a legitimate premise that SABS in natural amounts (background levels) are beneficial to ecosystems and therefore water quality criteria should attempt to simulate background levels or natural regimes?

(2) Can SABS criteria be stratified by water body type or by some other scheme? If by water body-type, by what level of classification—lotic and lacustrine? Rivers and streams, wetlands, lakes/reservoirs and estuaries/coastal areas? Other? If some other classification scheme is necessary, what type and how much resolution must it have?

(3) Should a water quality criterion for SABS include components that address turbidity, suspended solids, and deposited solids.

(4) Can biological assessments and biocriteria play a role in SABS criteria? If so, what role?

(5) Should EPA reconsider the inclusion of organic particulate material in its definition of suspended and bedded sediments?

(6) Which of the EPA proposed criteria methods do you believe have the greatest potential? Why? Which ones should EPA pursue further?

(7) Do any of the recent efforts of the States or other Countries hold promise for a national criteria method?

If SABS criteria are established to protect aquatic life in water bodies, is it reasonable to assume that these criteria will be stringent enough to also protect other uses of the water body (recreation, industrial water intake, drinking water source, etc.)
