Title: Mobile Air Conditioner Retrofitting Program.

Abstract: Section 612 of the Clean Air Act (CAA) requires EPA to promulgate rules making it unlawful to replace any

ozone-depleting substance with any substitute that the Administrator determines may present adverse effects to human health or the environment where the Administrator has identified an alternative that (1) reduces the overall risk to human health and the environment, and (2) is currently or potentially available. In 1994, the Significant New Alternatives Policy (SNAP) Program was enacted, enabling the Agency to review available substitutes for ozone-depleting substances and determine their acceptability. The SNAP program includes review of potential alternatives to ozone-depleting refrigerants used for air conditioning motor vehicles. EPA is concerned that the existence of several substitutes in this end-use may increase the likelihood of significant refrigerant cross-contamination and potential failure of both air conditioning systems and recovery/recycling equipment. In addition, continuing the smooth transition to the use of substitutes strongly depends on the continued purity of the recovered, recycled and/or reclaimed R-12 supply. The purpose of this Information Collection Request (ICR) is to estimate the burden associated with the 40 Code of Federal Regulations (CFR) part 82 requirement that service technicians label mobile air conditioners with information about new refrigerants when they retrofit a system. These labels acknowledge that the retrofitting has been completed and that the mobile air conditioner should no longer use chlorofluorocarbon (CFC) refrigerant. In addition, the labels provide essential information to technicians about the specific refrigerant used in the air conditioning system. The following information is required on the label:

- The name and address of the technician and the company performing the retrofit.
- The date of the retrofit.
- The trade name, charge amount, and, when applicable, the numerical designation of the refrigerant as determined under the latest version of Standard 34 of the American Society of Heating, Refrigerating, and Air-conditioning Engineers (ASHRAE), Inc.
- The type, manufacturer, and amount of lubricant used.
- If the refrigerant is or contains an ozone-depleting substance, the phrase "ozone depleter".
- If the refrigerant displays flammability limits as measured according to latest version of Standard E681 of the American Society for Testing and Materials (ASTM) International, the statement "This

refrigerant is FLAMMABLE. Take appropriate precautions.”

This information assists the technician in avoiding service practices that might result in cross-contamination, system failure and/or system performance degradation. Responses to the collection information are mandatory (section 612 of the CAA and 40 CFR part 82).

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in 40 CFR are listed in 40 CFR part 9 and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 5 minutes per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: New and used car dealers, Gas service stations, Top and body repair shops, General automotive repair shops, and Automotive repair shops not elsewhere classified, including air conditioning and radiator specialty shops.

Estimated Number of Respondents: 87,000.

Frequency of Response: Once per and upon retrofit of a motor vehicle air conditioner.

Estimated Total Annual Hour Burden: 83,333 hours.

Estimated Total Annual Cost: \$5,933,333, which includes \$100,000 annualized capital or O&M costs and \$5,833,333 labor costs.

Changes in the Estimates: There is a decrease of 333,334 hours per year in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. The decrease is because the EPA estimates fewer CFC-12 motor vehicle air conditioners will be retrofitted in the next three years than the previous three years.

Dated: September 11, 2003.

Acting Director, Collection Strategies Division.
