SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of January 19, 2001 (67 FR 5515), FDA and FSIS announced the availability of a draft risk assessment on the relationship between foodborne *Listeria monocytogenes* and human health that considers categories of ready-to-eat food. FDA, FSIS, and CDC held a public meeting on March 19, 2001 (66 FR 13544), to receive comments on the technical aspects of the draft risk assessment. Interested persons were given until March 20, 2001, with extensions to May 21, 2001, and to July 18, 2001, to comment on the document. The risk assessment has been revised in response to the public comments, newly available data, and updated modeling techniques.

II. Risk Assessment

The purpose of the quantitative risk assessment is to examine systematically available scientific data and information to estimate the relative risks of serious illness and death associated with consumption of different types of ready-to-eat foods that may be contaminated with *L. monocytogenes*.
