

Committee also advises the Assistant Secretary for Health in the implementation of sections 2102, 2103, and 2104 of the PHS Act; and identifies annually the most important areas of government and non-government cooperation that should be considered in implementing sections 2102, 2103, and 2104 of the PHS Act.

Qualifications and Information

Required: Nominations are being sought for individuals who are engaged in vaccine research or the manufacture of vaccines, as well as individuals who are physicians, members of parent organizations concerned with immunizations, representatives of State or local health agencies or public health organizations. Individuals selected for appointment to the Committee will serve as voting members. Individuals selected for appointment to the Committee can be invited to serve terms with periods of up to four years.

Nominations should be typewritten. The following information should be included in the package of material submitted for each individual being nominated for consideration: (1) A letter of nomination that clearly states the name and affiliation of the nominee, the basis for the nomination (*i.e.*, specific attributes which qualify the nominee for service in this capacity), and a statement that the nominee is willing to serve as a member of the Committee; (2) the nominator's name, address, and daytime telephone number, and the home and/or work address, telephone number, and email address of the individual being nominated; and (3) a current copy of the nominee's curriculum vitae. Applications cannot be submitted by facsimile. The names of Federal employees should not be nominated for consideration of appointment to this Committee.

The Department makes every effort to ensure that the membership of DHHS Federal advisory committees is fairly balanced in terms of points of view represented and the committee's function. Every effort is made to ensure that a broad representation of geographic areas, females, ethnic and minority groups, and the disabled are given consideration for membership on DHHS Federal advisory committees. Appointment to this Committee shall be made without discrimination on the basis of age, race, ethnicity, gender, sexual orientation, disability, and cultural, religious, or socioeconomic status.

Dated: November 19, 2003.

Bruce G. Gellin,

*Director, National Vaccine Program Office
and Executive Secretary, National Vaccine
Advisory Committee.*

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call the CDC Reports Clearance Officer on (404)498-1210.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Send comments to Seleda Perryman, CDC Assistant Reports Clearance Officer, 1600 Clifton Road, MS-D24, Atlanta, GA 30333. Written comments should be received within 60 days of this notice.

Proposed Project: Thyroid Disease in Persons Exposed to Radioactive Fallout from Atomic Weapons Testing at the Nevada Test Site: Phase III (OMB No. 0920-0504)—Extension—National Center for Environmental Health (NCEH), Centers for Disease Control and Prevention (CDC).

In 1997, the National Cancer Institute (NCI) released a report entitled, *Estimated Exposures and Thyroid Doses Received by the American People from I-131 in Fallout Following Nevada Nuclear Bomb Test*. This report provided county-level estimates of the

potential radiation doses to the thyroid gland of American citizens resulting from atmospheric nuclear weapons testing at the Nevada Test Site (NTS) in the 1950s and 1960s. The Institute of Medicine (IOM) conducted a formal peer review of the report at the request of the Department of Health and Human Services. In the review, IOM noted that the public might desire an assessment of the potential health impact of nuclear weapons testing on American populations. The IOM also suggested that further studies of the Utah residents who have participated in previous studies of radiation exposure and thyroid disease might provide this information.

CDC, National Center for Environmental Health proposes to conduct a study of the relation between exposure to radioactive fallout from atomic weapons testing and the occurrence of thyroid disease on an extension of a cohort study previously conducted by the University of Utah, Salt Lake City, Utah. This study is designed as a follow-up to a retrospective cohort study begun in 1965. This is the third examination (hence Phase III) of a cohort of individuals comprised of persons who were children living in Washington County, Utah, and Lincoln County, Nevada, in 1965 (Phase I) and who were presumably exposed to fallout from above-ground nuclear weapons testing at the Nevada Test Site in the 1950s. The cohort also includes a control group comprised of persons who were children living in Graham County, Arizona, in 1966 and presumably unexposed to fallout.

The study headquarters will be at the University of Utah in Salt Lake City, Utah. The field teams will spend the majority of their time in the urban areas nearest the original counties if the same pattern of migration holds that was found in Phase II. These urban areas include St. George, Utah; the Wasatch Front in Utah; Las Vegas, Nevada; Phoenix/Tucson, Arizona; and Denver, Colorado. In addition, some time will be spent in California as a number of subjects had relocated there at the time of Phase II. The purposes of Phase III are three fold. First, the participants in Phase II will be reexamined for occurrence of thyroid neoplasia and other diseases since 1986, and residents of the three counties who moved before they could be included in the original cohort will be located and examined. Second, disease incidence will be analyzed in addition to period prevalence as used in the Phase II analysis, incidence analysis will allow for greater power to detect increased

risk of disease in the exposed population through the use of person-time. Third, disease specific mortality rates for Washington County, Utah, and a control county, Cache County, Utah,

will be compared for people who lived in these two counties during the time of above-ground testing. This comparison will determine if the risk of mortality in Washington County (the exposed group)

is significantly greater than Cache County (the control group). CDC, NCEH is requesting a three-year clearance. There is no cost to respondents.

Respondents	Number of respondents	Number of responses/respondent	Average burden per response (in hrs.)	Total burden hours

Proposed Project: Evaluation of James A. Ferguson Emerging Infectious Diseases Fellowship Program—New—National Center for Infectious Diseases (NCID), Centers for Disease Control and Prevention (CDC).

CDC is particularly concerned with the racial, ethnic, and gender health disparities in the distribution of infectious diseases in the U.S. To help address the health and well-being of minority and underserved populations, CDC endeavors to train a racially and ethnically diverse public health workforce. Since 1989, the James A. Ferguson Emerging Infectious Disease Summer Fellowship Program, which is administered by the Minority Health Professions Foundation (MHPF), has been providing an 8-week program of educational and experiential opportunities for racial and ethnic minority medical, dental, pharmacy, veterinary, and public health graduate students. The Fellows are given

opportunities to explore the wide range of public health career options available to them once their formal training is completed. As of summer 2003, 311 Fellows have completed the program.

The purpose of this study is to conduct a multi-facet evaluation of the Ferguson Fellowship Program. The data from this study will be used to develop planning and decision making initiatives regarding expansion and funding. The study aims to evaluate and measure the success of the program for the dual purposes of program expansion and encouraging other organizations to implement similar mechanisms to increase the presence of racial and ethnic minorities in public health.

Data for this study will be collected from relevant documents, telephone interviews with key stakeholders, and a mail survey of Ferguson Fellows.

CDC proposes to conduct the study to (1) Examine the views and perspectives of the constituents and their experiences with the Ferguson Fellowship Program and (2) assess the impact of the program on strengthening and diversifying the workforce and addressing racial and ethnic health disparities in the field of Public Health. To minimize respondent burden, the mail survey questionnaire will be carefully developed with appropriate guidance from CDC to develop survey items that are relevant and succinct.

Prior to fielding the surveys, an evaluation contractor with guidance from CDC, will select nine Fellows from
