

within four target populations: (1) The general public, (2) students and educators, (3) personnel in state and local governments, and (4) potential users of hydrogen fuel and technologies in business and industry. Four distinct information collections will be required, one for each of the target populations. These collections will be conducted in stages, with the general public study conducted first. Changes relative to baseline knowledge levels will be determined when, after three years, each population group will be surveyed again using the same survey instrument and methodology. The instrument for assessing baseline knowledge will be specifically targeted to the population group. The public survey, for example, will assess a general knowledge of the production, storage, delivery, applications, and safety of hydrogen and fuel cells. Information gathered in this assessment will assist the HFCIT program in formulating an overall education plan for hydrogen technologies. Future surveys will provide a basis for determining changes in public awareness and understanding of the hydrogen economy, which is an important tool for knowing whether the education strategies should be modified and, if so, how.

(5) *Type of Respondents:* There are four populations to be surveyed; however, the general scope and temper of the four collections will be the same. The general public will be surveyed first. For the general public, a random (probability sample) survey of adults, age 18 and over, will be conducted via computer-assisted telephone interviews (CATI) or by other appropriate mechanism. About twenty closed-end questions will be posed. The second survey population will consist of a random sample of students—that is, teens (ages 12–17) and pre-teens (ages 6–11)—and educators. The third population will be randomly selected from energy agencies in all 50 states and the District of Columbia, plus a limited number of local (*i.e.*, municipal) agencies. Finally, a limited number of large-scale or potential large-scale users of energy sources powered by hydrogen and fuel cells will also be interviewed using both closed-end and open-end questions.

(6) *Estimated Number of Respondents:* The numbers of respondents will differ for each of the populations. The general public survey will be of 1,000 adults; the educational survey is planned to include 1,000 students and approximately 100–150 educators; it is estimated that the total number of contacts with state and local agencies will be less than 100; finally,

less than 50 interviews with large-scale users are planned.

(7) *Estimated Number of Burden Hours:* For the general public survey, the burden is estimated at ten minutes per respondent for 1,000 respondents, for a total time and cost burden of 167 hours and \$0. The total burdens for the other populations will depend on the designs of those surveys but will be similar in temper and scope to the burden for the general public survey. The total time and cost burden for the student survey is tentatively estimated to be 133 hours and \$0; the total burden for educators is estimated to be no more than 25 hours and \$0. The total burden for the state and local government and large-scale user surveys is expected to be less than the burden for the student survey.
