

standards (VCS), EPA has no authority to disapprove a SIP submission for failure to use VCS. It would thus be inconsistent with applicable law for EPA, when it reviews a SIP submission, to use VCS in place of a SIP submission that otherwise satisfies the provisions of the Clean Air Act. Thus, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply. This rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate,

the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by March 29, 2004. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide,

Intergovernmental relations, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: January 5, 2004.

A. Stanley Meiburg,
Acting Regional Administrator, Region 4.

■ Chapter I, title 40, *Code of Federal Regulations*, is amended as follows:

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 300
[FRL-7612-8]

National Oil and Hazardous Substance Pollution Contingency Plan; National Priorities List

AGENCY: Environmental Protection Agency.

ACTION: Direct final notice of partial deletion of the Hubbell/Tamarack City parcel of Operable Unit I (OUI) of the Torch Lake Superfund Site from the National Priorities List.

SUMMARY: The Environmental Protection Agency (EPA), Region V is publishing a direct final notice of partial deletion of the Hubbell/Tamarack City parcel of OUI of the Torch Lake Superfund Site (Site), located in, Houghton County Michigan, from the National Priorities List (NPL).

The NPL, promulgated pursuant to section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act

(CERCLA) of 1980, as amended, in appendix B of 40 CFR part 300, which is the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). This direct final deletion is being published by EPA with the concurrence of the State of Michigan, through the Michigan Department of Environmental Quality (MDEQ), because EPA has determined that all appropriate response actions under CERCLA have been completed and, therefore, further remedial action pursuant to CERCLA is not necessary at this time.

DATES: This direct final notice of partial deletion will be effective March 29, 2004 unless EPA receives adverse comments by March 1, 2004. If adverse comments are received, EPA will publish a timely withdrawal of the direct final notice of deletion in the **Federal Register** informing the public that the deletion will not take effect.

ADDRESSES: Comments may be mailed to: Dave Novak, Community Involvement Coordinator, U.S. EPA (P-19J), 77 W. Jackson Blvd., Chicago, IL 60604.

Information Repositories: Comprehensive information about the Site is available for viewing and copying at the Site information repositories

located at: EPA Region V Record Center, 77 W. Jackson, Chicago, IL 60604, (312) 353-5821, Monday through Friday 8 a.m. to 4 p.m.; Lake Linden/Hubbell Public Library, 601 Calumet St., Lake Linden, MI 49945, (906) 296-0698 Monday through Friday 8 a.m. to 4 p.m., Tuesday and Thursday 6 p.m. to 8 p.m.; Portage Lake District Library, 105 Huron, Houghton, MI 49931 (906) 482-4570, Monday, Tuesday and Thursday 10 a.m. to 9 p.m., Wednesday and Friday 10 a.m. to 5 p.m., and Saturday 12 p.m. to 5 p.m.

FOR FURTHER INFORMATION CONTACT: Brenda Jones, Remedial Project Manager at (312) 886-7188, Jones.Brenda@epa.gov or Gladys Beard, State NPL Deletion Process Manager at (312) 886-7253, Beard.Gladys@epa.gov or 1-800-621-8431, (SR-6J), U.S. EPA Region V, 77 W. Jackson, Chicago, IL 60604.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. NPL Deletion Criteria
- III. Deletion Procedures
- IV. Basis for Site Deletion
- V. Deletion Action

I. Introduction

EPA Region V is publishing this direct final notice of deletion of the Hubbell/Tamarack City parcel of OUI of the Torch Lake, Superfund Site from the NPL.

The EPA identifies sites that appear to present a significant risk to public health or the environment and maintains the NPL as the list of those sites. As described in § 300.425(e)(3) of the NCP, sites deleted from the NPL remain eligible for remedial actions if conditions at a deleted site warrant such action.

Because EPA considers this action to be non-controversial and routine, EPA is taking it without prior publication of a notice of intent to delete. This action will be effective March 29, 2004 unless EPA receives adverse comments by March 1, 2004 on this document. If adverse comments are received within the 30-day public comment period on this document, EPA will publish a timely withdrawal of this direct final partial deletion before the effective date of the deletion and the deletion will not take effect. EPA will, as appropriate, prepare a response to comments and continue with the deletion process on the basis of the notice of intent to delete and the comments already received. There will be no additional opportunity to comment.

Section II of this document explains the criteria for deleting sites from the NPL. Section III discusses procedures that EPA is using for this action. Section IV discusses the Hubbell/Tamarack City portion of the Torch Lake Superfund Site and demonstrates how it meets the deletion criteria. Section V discusses EPA's action to delete the Site from the NPL unless adverse comments are received during the public comment period.

II. NPL Deletion Criteria

Section 300.425(e) of the NCP provides that releases may be deleted from the NPL where no further response is appropriate. In making a determination to delete a release from the NPL, EPA shall consider, in consultation with the State, whether any of the following criteria have been met:

- i. Responsible parties or other persons have implemented all appropriate response actions required;
- ii. All appropriate Fund-financed (Hazardous Substance Superfund Response Trust Fund) responses under CERCLA have been implemented, and no further response action by responsible parties is appropriate; or
- iii. The remedial investigation has shown that the release poses no

significant threat to public health or the environment and, therefore, the taking of remedial measures is not appropriate.

Even if a site is deleted from the NPL, where hazardous substances, pollutants, or contaminants remain at the deleted site above levels that allow for unlimited use and unrestricted exposure, CERCLA section 121(c), 42 U.S.C. 9621(c), requires that a subsequent review of the site be conducted at least every five years after the initiation of the remedial action at the deleted site to ensure that the action remains protective of public health and the environment. If new information becomes available which indicates a need for further action, EPA may initiate remedial actions. Whenever there is a significant release from a site deleted from the NPL, the deleted site may be restored to the NPL without application of the hazard ranking system.

III. Deletion Procedures

The following procedures apply to deletion of this Site:

(1) The EPA consulted with Michigan on the deletion of the Site from the NPL prior to developing this direct final notice of deletion.

(2) Michigan concurred with deletion of the Site from the NPL.

(3) Concurrently with the publication of this direct final notice of deletion, a notice of intent to delete is published today in the "Proposed Rules" section of the **Federal Register**, is being published in a major local newspaper of general circulation at or near the Site, and is being distributed to appropriate federal, state, and local government officials and other interested parties. The newspaper notice announces the 30-day public comment period concerning the notice of intent to delete the Site from the NPL.

(4) The EPA placed copies of documents supporting the deletion in the site information repositories identified above.

(5) If adverse comments are received within the 30-day public comment period on this document, EPA will publish a timely notice of withdrawal of this direct final notice of deletion before its effective date and will prepare a response to comments and continue with a decision on the deletion based on the notice of intent to delete and the comments already received.

Deletion of a site from the NPL does not itself create, alter, or revoke any individual's rights or obligations. Deletion of a site from the NPL does not in any way alter EPA's right to take enforcement actions, as appropriate. The NPL is designed primarily for informational purposes and to assist

EPA management. Section 300.425(e)(3) of the NCP states that the deletion of a site from the NPL does not preclude eligibility for future response actions should future conditions warrant such actions.

IV. Basis for Site Deletion

The following information provides EPA's rationale for deleting this Site from the NPL.

Site Location

The Torch Lake Superfund Site (the Site) is located on the Keweenaw Peninsula in Houghton County, Michigan. The Site includes Torch Lake, the west shore of Torch Lake, the northern portion of Portage Lake, the Portage Lake Canal, Keweenaw Waterway, the North Entry to Lake Superior, Boston Pond, Calumet Lake, and other areas associated with the Keweenaw Basin. Tailing piles and slag piles deposited along the western shore of Torch Lake, Northern Portage Lake, Keweenaw Waterway, Lake Superior, Boston Pond, and Calumet Lake are also included as part of the Site. Tailing piles are located at Lake Linden, Hubbell/Tamarack City, Mason, Calumet Lake, Boston Pond, Michigan Smelter, Isle-Royale, Dollar Bay, and Gross Point. Slag piles are located at Quincy Smelter and Hubbell City.

Site History

Torch Lake was the site of copper milling and smelting facilities and operations for over 100 years. The lake was a repository of milling wastes, and served as the waterway to transportation to support the mining industry. The first mill opened on Torch Lake in 1868. At the mills, copper was extracted by crushing or "stamping" the rock into smaller pieces and driving them through successively smaller meshes. The copper and crushed rock were separated by gravimetric sorting in a liquid medium. The copper was sent to a smelter. The crushed rock particles, called "tailings", were discarded along with mill processing water, typically by pumping into the lakes.

Mining output, milling activity, and tailing production peaked in the Keweenaw Peninsula in the early 1900s to 1920. All of the mills at Torch Lake were located on the west shore of the lake and many other mining mills and smelters were located throughout the Keweenaw Peninsula. In about 1916, advances in technology allowed recovery of copper from tailings previously deposited in Torch Lake. Dredges were used to collect submerged tailings which were then screened, recrushed, and gravity separated. An

ammonia leaching process involving cupric ammonium carbonate was used to recover copper and other metals from conglomerate tailings. During the 1920s, chemical reagents were used to further increase the efficiency of reclamation. The chemical reagents included lime, pyridine oil, coal tar creosotes, wood creosote, pine oil, and xanthates. After reclamation activities were complete, chemically treated tailings were returned to the lakes. In the 1930s and 1940s, the Torch Lake mills operated mainly to recover tailings in Torch Lake. In the 1950s, copper mills were still active, but by the late 1960s, copper milling had ceased.

Over 5 million tons of native copper was produced from the Keweenaw Peninsula and more than half of this was processed along the shores of Torch Lake. Between 1868 and 1968, approximately 200 million tons of tailings were dumped into Torch Lake filling at least 20 percent of the lake's original volume.

In June 1972, a discharge of 27,000 gallons of cupric ammonium carbonate leaching liquor occurred into the north end of Torch Lake from the storage vats at the Lake Linden Leaching Plant. The Michigan Water Resources Commission (MWRC) investigated the spill. The 1973 MWRC report discerned no deleterious effects associated with the spill, but did observe that discoloration of several acres of lake bottom indicated previous discharges.

In the 1970s, environmental concern developed regarding the century-long deposition of tailings into Torch Lake. High concentrations of copper and other heavy metals in Torch Lake sediments, toxic discharges into the lakes, and fish abnormalities prompted many investigations into long- and short-term impacts attributed to mine waste disposal. The International Joint Commission's Water Quality Board designated the Torch Lake basin as a Great Lakes Area of Concern (AOC) in 1983. Also in 1983, the Michigan Department of Public Health announced an advisory against the consumption of Torch Lake sauger and walleye fish due to tumors of unknown origin. The Torch Lake Site was proposed for inclusion on the National Priorities List (NPL) in October of 1984. The Site was placed on the NPL in June 1986. The Torch Lake Site is also on the list of sites identified under Michigan's Natural Resources and Environmental Protection Act 451 part 201.

A Draft Remedial Action Plan (RAP) for the Torch Lake AOC was developed by Michigan Department of Natural Resources (MDNR) in October 1987 to address the contamination problems

and to recommend the remedial action for Torch Lake. Revegetation of lakeshore tailings to minimize air-borne particulate matter was one of the recommended remedial actions in the RAP.

Attempts to establish vegetation on the tailing piles in Hubbell/Tamarack City have been conducted since the 1960s to stabilize the shoreline and to reduce air particulate from tailings. It has been estimated that 40 to 50 percent of tailings in this area are vegetated.

Remedial Investigation and Feasibility Study (RI/FS)

On May 9, 1988, Special Notice Letters were issued to Universal Oil Products (UOP) and Quincy Mining Co. to perform a Remedial Investigation/Feasibility Study (RI/FS). UOP is the successor corporation of Calumet Hecla Mining Company which operated its milling and smelting on the shore of Lake Linden and disposed of the generated tailings in the area. On June 13, 1988, a Notice Letter was issued to Quincy Development Company, which was the current owner of a tailing pile located on the lake shore of Mason City. Negotiations for the RI/FS Consent Order with these Potentially Responsible Parties (PRPs) were not successful due to issues such as the extent of the Site, and the number of PRPs. Subsequently, U.S. EPA contracted with Donohue & Associates in November 1988 to perform the RI/FS at the Site.

On June 21, 1989, U.S. EPA collected a total of eight samples from drums located in the Old Calumet and Hecla Smelting Mill Site near Lake Linden, the Ahmeek Mill Site near Hubbell City, and the Quincy Site near Mason. On August 1, 1990, nine more samples were collected from drums located above the Tamarack Site near Tamarack City. Based on the results of these samples, U.S. EPA determined that some of these drums may have contained hazardous substances. During the week of May 8, 1989, the U.S. EPA also conducted ground penetrating radar and a subbottom profile (seismic) survey of the bottom of Torch Lake. The area in which this survey was conducted is immediately off-shore from the Old Calumet and Hecla Smelting Mill Site. The survey located several point targets (possibly drums) on the bottom of Torch Lake. Based on the drum sampling results and seismic survey, U.S. EPA executed an Administrative Order by Consent, dated July 30, 1991, which required six companies and individuals to sample and remove drums located on the shore and lake bottom. Pursuant to the Administrative Order, these entities

removed 20 drums with unknown contents off-shore from the Peninsula Copper Inc., and the Old Calumet and Hecla Smelting Mill Site in September 1991. A total of 808 empty drums were found in the lake bottom. These empty drums were not removed from the lake bottom. A total of 82 drums and minor quantities of underlying soils were removed from the shore of Torch Lake. The removed drums and soils were sampled, over packed, and disposed off-site at a hazardous waste landfill.

Due to the size and complex nature of the Site, three OUs have been defined for the Site. OU I includes surface tailings, drums, and slag piles on the western shore of Torch Lake. Approximately 500 acres of tailings are exposed superficially in OU I. The Hubbell/Tamarack parcel is included in OU I, in addition to the Lake Linden and Mason parcels.

OU II includes groundwater, surface water, submerged tailings and sediment in Torch Lake, Portage Lake, the Portage channel, and other water bodies at the site.

OU III includes tailing slag deposits located in the north entry of Lake Superior, Michigan Smelter, Quincy Smelter, Calumet Lake, Isle-Royale, Boston Pond, and Grosse-Point (Point Mills).

Remedial Investigations (RIs) have been completed for all three operable units. The RI and Baseline Risk Assessment (BRA) reports for OU I was finalized in July 1991. The RI and BRA reports for OU III were finalized on February 7, 1992. The RI and BRA reports for OU II were finalized in April 1992. The Ecological Assessment for the entire Site was finalized in May 1992.

Record of Decision Findings

A Record of Decision (ROD) was completed to select remedial actions for OU I and III on September 30, 1992. A ROD was completed to select remedial actions for OU II on March 31, 1994.

The remedies primarily address ecological impacts. The most significant ecological impact is the severe degradation of the benthic communities in Torch Lake as a result of metal loadings from the mine tailings. The remedial action required that the contaminated stamp sands (tailings) and slag piles contributing to site-specific ecological risks at the Torch Lake Superfund Site (OU I & OU III) be covered with a soil and vegetative cover as identified in the RODs for this Site and as documented in the Final Design Document dated September 10, 1998. The ROD requires deed restrictions to control the use of the tailing piles so that tailings will not be left in a

condition which is contrary to the intent of the ROD. No further response action was selected for OU II. OU II will be allowed to undergo natural recovery and detoxification.

In addition, the RODs for OU I and OU III required long-term monitoring of Torch Lake to assess the natural recovery and detoxification process after the remedy was implemented. Torch Lake was chosen as a worst-case scenario to study the recovery process. It was assumed that other affected water bodies would respond as well, or better, than Torch Lake to the implemented remedy.

Characterization of Risk

No additional response action(s) is required at the Hubbell/Tamarack City parcel of the Torch Lake Superfund Site. The Hubbell/Tamarack City parcel has been designated as operational and functional. The current conditions at the Hubbell/Tamarack City parcel are protective of human health and the environment.

Response Action

A final design for OU I and OU II was completed in September 1998. Also in September 1998, U.S. EPA obligated \$15.2 million for the implementation of the selected remedies for OU I and OU III. As of January 1, 2001, the remedial actions at the Hubbell/Tamarack City portion of OU I have been completed.

The Interagency Agreement (IAG) was signed with USDA-NRCS to perform remedial action (RA) management and oversight. EPA believes that USDA-NRCS was the best choice for construction management and oversight because of its extensive history with soil erosion and stabilization projects, and its experience with the Site.

Actual on-Site construction began in June 1999. Currently, about 85 percent of the Site remedy is complete, including all of OU1 (parcels at Lake Linden, Hubbell/Tamarack and Mason). Hubbell/Tamarack (140 acres covered) was completed by October 2000.

However, a washout occurred in 2001 and again in 2002 near the lake outlet of a surface water diversion path. Both washouts were promptly repaired and are expected to remain stable. Copies of the required deed restrictions for the Hubbell/Tamarack parcel were obtained by EPA in 2003 to verify the completion of this component of the remedy and filed in the EPA's Torch Lake Site Administrative Record.

Remediated areas include cover material consisting of six to ten inches of sandy-loam soil and a vegetative mat. The vegetative mat was achieved through a seed mix applied directly on

top of the sandy-loam soil. The seed mix was typically applied at approximately 90 pounds per acre. The typical seed mix contained six species of plants, including perennia ryegrass (*Lolium perene*), tall fescue (*Festuca arundiancea*), creeping red fescue (*Festuca rubra*), red clover (*Trifolium pratense*), alfalfa (*vernal Medicago falcata*), and birds foot trefoil (*Lotus comiculatus*). This mix of plant species was selected because of their rapid growth rate and because they are relatively resilient. Rapid stabilization of the soil cover material with vegetation is important at the Site in order to avoid soil washouts and to accommodate the short growing season. Variations of this seed mix were applied to a small number of areas to accommodate landowner preference. Overall, the vegetative growth in most areas is well established and is stabilizing the soil portion of the cover material.

Shoreline protection was also installed along much of the shoreline where the remedy was implemented. Shoreline protection includes rip-rap rock (rock boulders averaging about one-foot in diameter in the shape midway between a sphere and a cube with a specified density and integrity) which protects the remedy from wave erosion.

EPA and MDEQ have determined that RA construction activities have so far been performed according to specifications and anticipate that cover material and shoreline protection installed at the Site will meet remedial action objectives for the Site.

Cleanup Standards

The objectives of the remedies were to ensure that all soil parcels were soil covered with vegetation. All Hubbell/Tamarack City parcels were operational and functional for a period up to three years after the construction of the parcel or until the remedy is jointly determined by the U.S. EPA and the MDEQ to be functioning properly and performing as designed.

Operation and Maintenance

In 1999 and 2000, as part of the remedy requirement for long-term monitoring, EPA conducted environmental sampling as a way to establish the environmental baseline conditions of Torch Lake. It is anticipated that future long-term monitoring events will be conducted by the MDEQ and the results compared to the 2001 baseline study to identify changes and/or establish trends in lake conditions.

The RODs for OU I & OU III required long-term monitoring of Torch Lake to

assess the natural recovery and detoxification process after the remedy was implemented. Other O & M activities include site inspections, repairs and fertilization of the vegetative cover, if necessary. Based on site inspections conducted during Summer 2002 and 2003, repairs and fertilization of the soil and vegetative cover at the Hubbell/Tamarack City parcel are no longer necessary.

Five-Year Review

Because hazardous substances will remain at the Site above levels that allow for unrestricted use and unlimited exposure, the EPA will conduct periodic reviews at this Site. The review will be conducted pursuant to CERCLA 121 (c) and as provided in the current guidance on Five Year Reviews; OSWER Directive 9355.7-03B-P, Comprehensive Five-Year Guidance, June 2001. The first five-year review for the Torch Lake Site was completed on March 4, 2003. This first five-year review stated that EPA intended to pursue partial NPL deletion of Hubbell/Tamarack in 2003.

Community Involvement

Public participation activities have been satisfied as required in CERCLA section 113(k), 42 U.S.C. 9613(k), and CERCLA section 117, 42 U.S.C. 9617. Documents in the deletion docket which EPA relied on for recommendation of the deletion on this Site from the NPL are available to the public in the information repositories.

V. Deletion Action

The EPA, with concurrence of the State of Michigan, has determined that all appropriate responses under CERCLA have been completed, and that no further response actions, under CERCLA are necessary. Therefore, EPA is deleting the Hubbell/Tamarack City parcel of Torch Lake Superfund Site from the NPL.

Because EPA considers this action to be non-controversial and routine, EPA is taking it without prior publication. This action will be effective March 29, 2004 unless EPA receives adverse comments by March 1, 2004. If adverse comments are received within the 30-day public comment period, EPA will publish a timely withdrawal of this direct final notice of deletion before the effective date of the deletion and it will not take effect. Concurrent with this action EPA will prepare a response to comments and as appropriate continue with the deletion process on the basis of the notice of intent to delete and the comments already received. There will be no additional opportunity to comment.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 300

[FRL–7614–5]

National Oil and Hazardous Substances Pollution Contingency Plan; National Priorities List Update

AGENCY: Environmental Protection Agency.

ACTION: Notice of deletion of the River Road Landfill Site from the National Priorities List (NPL).

SUMMARY: The Environmental Protection Agency (EPA) Region III announces the deletion of the River Road Landfill Site (Site) in Hermitage, Pennsylvania, from the National Priorities List (NPL). The NPL constitutes appendix B of 40 CFR part 300, which is the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), which EPA promulgated pursuant to section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 as amended, (CERCLA). EPA and the Commonwealth of Pennsylvania, through the Pennsylvania Department of Environmental Protection (PADEP), have determined that the remedial action for the Site has been successfully implemented under CERCLA. For this Site, the selected remedy is protective of human health and the environment as long as deed

restrictions and continued operation and maintenance of the Existing Treatment Scheme described in EPA’s 1995 Record of Decision currently being implemented in accordance with the attached PADEP Post-Closure Plan (or modification as required and/or approved by PADEP or EPA), are continued.

EFFECTIVE DATE: January 29, 2004.

ADDRESSES: Comprehensive information on this Site is available through the public docket which is available for viewing at the Site information repositories at the following locations: U.S. Environmental Protection Agency, Region III, Administrative Records, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Telephone (215) 814–3157; and Buhl-Henderson Community Library, 11 North Sharpville Avenue, Sharon, PA 16146.

FOR FURTHER INFORMATION CONTACT: Donna Santiago (3HS22), U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, PA 19103. Telephone 215–814–3222.

SUPPLEMENTARY INFORMATION: The site to be deleted from the NPL is: River Road Landfill Site.

EPA published a Notice of Intent to Delete (NOID) the River Road Landfill Site from the NPL on September 26, 2003, in the **Federal Register** (65 FR 45013). The closing date for comments on the NOID was October 28, 2003. EPA did not receive any comments on the proposed deletion. Therefore, no responsiveness summary is necessary for attachment to this Notice of Deletion.

EPA identifies sites that appear to present a significant risk to public health, welfare, or the environment and it maintains the NPL as the list of these sites. As described in § 300.425(e)(3) of the NCP, sites deleted from the NPL remain eligible for remedial actions in the unlikely event that future conditions at the site warrant such action.

Deletion of a site from the NPL does not affect responsible party liability or impede EPA efforts to recover costs associated with response efforts.
