DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[OR-115-5900-JE-MQ99; HAG 04-0043]

Notice of Availability of the Timbered Rock Fire Salvage and Elk Creek Watershed Restoration Final Environmental Impact Statement; Medford District, Oregon

AGENCY: Bureau of Land Management.

ACTION: Notice of availability.

SUMMARY: In accordance with Section 202 of the National Environmental Policy Act of 1970 (NEPA), a FEIS has been prepared by the Bureau of Land Management (BLM), Medford District, to analyze possible salvage opportunities resulting from the Timbered Rock Fire and proposed restoration projects designed to move resource conditions closer to the desired future conditions identified in the Medford District Resource Management Plan, Northwest Forest Plan, Elk Creek Watershed Analysis, and the South Cascades Late-Successional Reserve Assessment. The subject lands were designated Late-Successional Reserve in the Northwest Forest Plan. Restoration projects are designed to accelerate establishment or protection of late-successional forest conditions. Scientific debate surrounds the fire salvage issue and related NEPA documentation is continually challenged. In response to these disputes, an alternative was developed including scientific investigations that could be implemented within the Late-Successional Reserve to respond to these controversial issues related to salvage of fire-killed trees or fire effects

on critical resources. The FEIS addresses whether to pursue salvage, levels of snags and coarse wood debris to be retained, and restoration projects on BLM-administered lands within and adjacent to the Late-Successional Reserve and Elk Creek Watershed.

DATES: The period of availability for public review of the FEIS ends 30 days after publication of the Environmental Protection Agency (EPA) Notice of Availability (NOA) in the **Federal Register**. At that time public comments will be reviewed and considered in the decision making process.

ADDRESSES: Written comments on the document should be addressed to Timbered Rock EIS, 3040 Biddle Road, Medford, Oregon, 97504; or e-mail or110treis@or.blm.gov. Copies will be available at the Jackson and Josephine County libraries, and on the Timbered Rock Fire Salvage and Elk Creek Watershed Restoration Web site at <http://www.or.blm.gov/Medford/TimbrockEIS/index.htm>. Copies of the FEIS will be mailed to individuals, agencies, or companies who previously requested copies. A limited number of copies of the document will be available at the Medford District Office, 3040 Biddle Road, Medford, Oregon, 97504. Pursuant to 7 CFR Part 1, Subpart B, Section 1.27, all written and electronic submissions in response to this notice, public scoping letters, and draft and final Environmental Impact Statements will be made available for public review at the Medford District Office during regular hours (7:45 a.m. to 4:30 p.m., Monday through Friday, except holidays) including the submitter's name and address.

Individuals may request confidentiality with respect to their name, address, and phone number. If you wish to have your name or street address withheld from public review, or from disclosure under the Freedom of Information Act, the first line of the comment should start with the words "CONFIDENTIALITY REQUESTED" in uppercase letters in order for the BLM to comply with your request. Such request will be honored to the extent allowed by law. Comments content will not be kept confidential. All submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses will be available for public inspection in their entirety.

FOR FURTHER INFORMATION CONTACT: Jean Williams at (541) 944-6620 or John Bergin at (541) 840-9989.

SUPPLEMENTARY INFORMATION: The FEIS addresses seven alternatives for possible salvage opportunities and proposed restoration projects designed to move resource conditions closer to the desired future conditions identified in the Northwest Forest Plan, Elk Creek Watershed Analysis, and the South Cascades Late-Successional Reserve Assessment. Two types of salvage, area and roadside are discussed in Alternatives C through G. Alternatives A and B proposes no salvage. Alternatives C, D and G were designed using specific guidance relating to post-fire salvage and/or Late-Successional Reserve guidelines. Roadside salvage is designed to reduce existing or potential public safety concerns while recovering economic value. Included in the design of Alternative G, the Preferred Alternative, is research to evaluate mixed-species reforestation plantings to identify and characterize temporal patterns of vegetation structural development and species diversity; to assess temporal dynamics of fuels loading and fire risk; and to determine impacts of snag retention on survival and growth of planted and naturally regenerated trees. Also included in Alternative G is research designed to evaluate various snag retention levels on wildlife species (birds and small mammals).

Four levels of restoration projects are proposed in the six action alternatives: focused, moderate, extensive and focused within the fire perimeter only. The restoration varies by the scope of the projects (acres, miles of roads, etc.), intensity of the treatments, and location of the treatments. Restoration projects are located both within the Timbered Rock Fire perimeter and outside the fire area. Most projects are located within the Elk Creek Watershed; however, a proposed eagle nest project and some fuel management zone projects are located on ridge tops within adjacent watersheds. Projects are based on recommendations presented in the Late-Successional Reserve Assessment and/or Elk Creek Watershed Analysis, or were developed to address specific issues.

Projects proposed within the fire area focus on road projects to reduce existing and potential sedimentation from the road network, fish improvement projects, development of Fuel Management Zones, and reducing future hazardous fuel conditions within existing Northern Spotted Owl activity centers. Reforestation of the burned area was assessed in the Emergency Stabilization/Rehabilitation Plan Environmental Assessment. Alternatives A and E follow these recommendations.
