SUPPLEMENTARY INFORMATION:

Title of Collection: Evaluation of the Research Experiences for Teacher (RET) Program.

OMB Number: 3145-NEW.

Type of Request: Intent to seek approval to carry out a new information collection for one year.

Abstract: Proposed Project: The Directorate for Engineering (ENG) initiated the Research Experiences for Teachers (RET) Supplements activity in FY 2001 to be add-ons to active award funded by ENG programs. The intent was to build on the popular NSF-wide Research Experiences for Undergraduates (REU) Supplements activity by providing opportunities for K-12 teachers to conduct hands-on experiences in the laboratories/facilities of ENG-funded researchers interested in participating in RET. Typically the supplements supported one or two teachers. The assumption was that the teachers could also benefit from involvement in research and direct exposure to the scientific method and transfer what they learned into classroom activities. Since then, ENG has funded RET Site awards, which are similar to REU Sites in that NSF awards fund groups of teachers to work with faculty members at the same institution and to engage in group activities related to the research. In 2003, community college faculty became eligible as participants in RET awards.

This study of RET will include participants in RET Supplement and

Site awards from 2001-2003 funded by the Division of Engineering Education and Centers, the Division of Bioengineering and Environmental Systems, and the Division of Design, Manufacture, and Industrial Innovation. The study will examine whether the scale and programmatic characteristics of the larger group awards, such as those funded as RET Sites, bring about different outcomes and impacts on the teachers and their subsequent instructional and professional activities, compared with those resulting from involvement in the typical small-scale RET Supplement. NSF wishes to know how RET experiences have affected participating teachers' subsequent teaching techniques and content modifications made as a result of teachers' RET activities. In addition, outcomes and impacts beyond the teachers' own classrooms from the research experiences, *e.g.*, follow-up knowledge transfer activities, any formal partnerships formed between the awardee and the teachers' school system/district, or community college, etc. should also be examined. The collection will be done on the World Wide Web.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 30 minutes per response.

Respondent: Individuals.

Estimated Number of Responses per Form: 596.

Estimated Total Annual Burden on Respondents: 298 hours—596 respondents at 30 minutes per response.

Frequency of Responses: One time.

Comments: Comments are invited on (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information shall have practical utility; (b) the accuracy of the Agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information on respondents, including through the use of automated collection techniques or other forms of information technology; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.
