Proposed Project

The National Death Index, (0920-0215)—Extension—National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention (CDC).

Background

The National Death Index (NDI) is a national data base containing identifying death record information submitted annually to NCHS by all the state vital statistics offices, beginning with deaths in 1979. Searches against the NDI file provide the states and dates of death, and the death certificate numbers of deceased study subjects. Since the implementation of the NDI Plus service, researchers have the option of also receiving cause of death information for deceased subjects, thus reducing the need to request copies of death certificates from the states. The NDI Plus option currently provides the ICD codes for the underlying and multiple causes of death for the years 1979-2002. Health researchers must complete five administrative forms in order to apply for NDI services, and submit records of study subjects for computer matching against the NDI file. There is no cost to respondents except for their time.
