SUPPLEMENTARY INFORMATION: Port-Orford-cedar is killed by an exotic root disease (*Phytophthora lateralis*) that is linked, at least in part, to transport of spore-infested mud by humans and animals. Water-borne spores then readily spread the disease down slope and down stream.
 The Management of Port-Orford-Cedar in Southwest Oregon ROD/RMP Amendment was developed with public participation through a year-long planning process. This ROD/RMP Amendment, together with a similar one signed by the Forest Service in March, 2004, addresses management on approximately 270,000 acres of Port-Orford-cedar stands in the planning area. The ROD/RMP Amendment will help maintain Port-Orford-cedar as an ecologically and economically significant species on BLM lands. It includes a series of generally required actions, actions that can be applied to specific projects when there is a management risk to Port-Orford-cedar, and an emphasis on keeping the disease out of uninfested watersheds.
 The Port-Orford-cedar RMP Amendment is essentially the same as Alternative 2 in the Proposed RMP Amendment/Final SEIS published on January 23, 2004 (see Notice of Availability, **Federal Register**, p. 3340). The BLM received five protests to the Proposed Amendment/Final SEIS. As a result of the protests, minor modifications were made in preparing the ROD/RMP Amendment. These modifications adopted a mitigation measure described in the SEIS, adopted NOAA-Fisheries consultation recommendations for monitoring and examining stream temperatures,

corrected errors that were noted during review of the Proposed Amendment/Final SEIS, and provide further clarification for the decision. No inconsistencies with state or local plans, policies, or programs were identified during the Governor's Consistency Review of the Proposed Amendment/Final SEIS.
