

Consultation—Public Participation

Original sponsoring organizations include the Gwinnett County Government, Gwinnett County Soil and Water Conservation District, and the Upper Ocmulgee River Resource Conservation and Development Council. At the initiation of the planning process, meetings were held with representatives of the original sponsoring organizations to ascertain their interest and concerns regarding the Yellow River Watershed. Gwinnett County agreed to serve as "lead sponsor" being responsible for leading the planning process with assistance from NRCS. As lead sponsor they also agreed to provide non-federal cost-share, property rights, operation and maintenance, and public participation during, and beyond, the planning process. Meetings with the project sponsors were held throughout the planning process, and project sponsors provided representation at planning team, technical advisory, and two public meetings.

An Interdisciplinary Planning Team provided for the "technical" administration of this project. Technical administration includes tasks pursuant to the NRCS nine-step planning process, and planning procedures outlined in the NRCS-National Planning Procedures Handbook. Examples of tasks completed by the Planning Team include, but are not limited to, Preliminary Investigations, Hydrologic Analysis, Reservoir Sedimentation Surveys, Economic Analysis, Formulating and Evaluating Alternatives, and Writing the Watershed Plan—Environmental Assessment. Data collected from partner agencies, databases, landowners, and others throughout the entire planning process, were evaluated at Planning Team meetings. Informal discussions amongst planning team members, partner agencies, and landowners were conducted throughout the entire planning period.

A Technical Advisory Group was developed to aid the Planning Team with the planning process. The following agencies were involved in developing this plan and provided representation on the Technical Advisory Group:

- Gwinnett County Government
- Gwinnett County Soil and Water Conservation Districts
- Georgia Department of Natural Resources, Environmental Protection Division [EPD], Safe Dams Program
- Georgia Department of Natural Resources, Wildlife Resources Division [WRD], Game and Fisheries Section
- United States Environmental Protection Agency [EPA], Region IV

- USDA, Natural Resources Conservation Service [NRCS]
- USDI, Fish and Wildlife Service [F&WS]
- U.S. Army Corps of Engineers [COE]

A meeting and field tour with the Technical Advisory Group was held on February 27, 2002 to assess proposed measures and their potential impact on resources of concern. A review of National Environmental Policy Act [NEPA] concerns was initiated at this meeting. Effects of proposed measures on NEPA concerns reviewed were documented. Additional field tours were held with the COE on March 11, 2002 to determine the most efficient 404 permitting process.

Suzanne Kenyon, Cultural Resources Specialist with the NRCS-National Water Management Center, visited the project site in the fall of 2001. She provided a methodology for considering culturally significant resources, which was followed in this planning process. An inventory of the watershed, and associated downstream impacted area was completed with no culturally important or archaeological sites noted. The area of potential effect was provided to the Georgia State Historic Preservation Office with passive concurrence provided.

Public Participation

A public meeting was held on November 13, 2002 to explain the Watershed Rehabilitation Program and to scope resource problems, issues, and concerns of local residents associated with the Y-16 project area. Potential alternative solutions to bring Y-16 into compliance with current dam safety criteria were also presented. Through a voting process, meeting participants provided input on issues and concerns to be considered in the planning process, and identified the most socially acceptable alternative solution.

A second public meeting was held on April 1, 2004 to summarize planning accomplishments, convey results of the reservoir sedimentation survey, and present various structural alternatives.

The roller compacted concrete chute spillway was identified as a complete, acceptable, efficient, and effective plan for the watershed and is the alternative preferred by the homeowners as indicated in the public meetings.

Conclusion

The Environmental Assessment summarized above indicates that this Federal action will not cause significant adverse local, regional, or national impacts on the environment. Therefore, based on the above findings, I have

determined that an environmental impact statement for the recommended plan of action on Yellow River Watershed Structure No. 16 is not required.
