

they contain gene sequences from plant pathogens.

The purpose of the proposed field trial is to produce grain, hybrid seed, and to develop a research line in a nursery. The tests will be conducted through use of a combination of biological and physical containment measures. In addition, the experimental protocols and field plot design, as well as the procedures for termination of the field tests, are designed to ensure that none of the subject corn plants persist in the environment beyond the termination of the experiments.

To provide the public with documentation of APHIS' review and analysis of any potential environmental impacts and plant pest risk associated with the proposed confined field test of the subject corn plants, an environment assessment (EA) has been prepared. The EA was prepared in accordance with (1) The National Environmental Policy Act of 1969 (NEPA), as amended (42 U.S.C. 4321 *et seq.*), (2) regulations of the Council on Environmental Quality for implementing the procedural provisions of NEPA (40 CFR parts 1500–1508), (3) USDA regulations implementing NEPA (7 CFR part 1b), and (4) APHIS' NEPA Implementing Procedures (7 CFR part 372).
