

in the **Federal Register** (68 FR 67152) that a request for a scientific research permit to take loggerhead, leatherback, Kemp's ridley, green and hawksbill sea turtles had been submitted by the above-named organization. The requested permit has been issued under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226).

This permit authorizes the Permit Holder to handle, photograph, measure, weigh, collect a tissue biopsy from, flipper and Passive Integrated Responder (PIT) tag, and release turtles that have already been captured during the bottom longline fishery. The capture is covered under the incidental take statement issued as part of the Biological Opinion for the Highly Migratory Species Fishery Management Plan for Atlantic Tunas, Swordfish, and Sharks. The research will contribute to the understanding of the pelagic ecology of sea turtle species, assist in the development of more complete models of their population dynamics, and allow more reliable assessments of commercial fishery impacts.

Issuance of this permit, as required by the ESA, was based on a finding that such permit (1) was applied for in good faith, (2) will not operate to the disadvantage of the endangered species which is the subject of this permit, and (3) is consistent with the purposes and policies set forth in section 2 of the ESA.

Acting Chief, Permits, Conservation and Education Division, Office of Protected Resources, National Marine Fisheries Service.
