Title: Air Emission Standards for Tanks, Surface Impoundments and Containers (40 CFR Part 264, Subpart CC and 40 CFR Part 265, Subpart CC) (Renewal).

Abstract: This ICR contains recordkeeping and reporting requirements that are mandatory for compliance with 40 CFR part 264, subpart CC and 40 CFR part 265, subpart CC. RCRA subpart CC requires controls for minimizing release of volatile organic air emissions from tanks, surface impoundments and containers holding hazardous waste. Records and reports are necessary in order for the EPA to determine that the standards are implemented and maintained to protect human health and the environment.

Organic air emissions from hazardous waste Treatment, Storage and Disposal Facilities (TSDFs) can contain toxic chemical compounds. Cancer and other adverse noncancerous human health

effects can result from exposure to these emissions. Organic emissions from TSDFs react photochemically with other compounds in the atmosphere to form ground level ozone. Excessive ambient ozone concentrations are a major air quality problem in many cities throughout the United States. Nationwide organic emissions from TSDFs are estimated to be approximately one million megagrams per year. These organic emissions are estimated to result in 48 excess incidences of cancer per year nationwide and a 3×10^{-2} maximum individual risk (MIR). The experience of the EPA in implementing and enforcing New Source Performance Standards (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP) promulgated under authority of the Clean Air Act has demonstrated that certain information must be collected to ensure compliance with air emission standards. Information collection is needed by the EPA to determine: (a) Whether a hazardous waste contains sufficiently low concentrations of volatile organics to allow the waste to be managed in a tank, surface impoundment, or container without the use of emission controls, and (b) for units requiring emission controls, whether the controls are being properly operated and maintained. The collected information will be used by the EPA enforcement personnel to ensure that the requirements of the recommended rules are being properly applied and that emission control devices are being properly operated and maintained on a continuous basis.

In addition, records and reports are necessary to enable the EPA to identify TSDF owners or operators that may not be operating in compliance with the standards. The reported information is used by the EPA to target TSDFs for inspection and identify what records or waste management units should be inspected at the TSDF. The information that TSDF owners or operators are required to maintain is recorded in sufficient detail to enable owners or operators to demonstrate their means of complying with the applicable standards. The data collected by the affected facility is retained at the facility for a minimum of three years.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15, and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 114 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Hazardous waste treatment, storage and disposal facilities and large quantity generators.

Estimated Number of Respondents: 6,209.

Frequency of Response: On occasion, semiannually.

Estimated Total Annual Hour Burden: 711,477 hours.

Estimated Total Annual Costs: \$57,432,910 which includes \$0 annualized capital/startup costs, \$12,418,000 annual (O&M) costs, and \$45,014,910 annual labor costs.

Changes on Estimates: There is an increase of 38,837 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This increase is due to an adjustment of the burden based on including some recordkeeping and reporting requirements that have never been included in this ICR before. The estimated total capital and operations and maintenance costs have increased because operations and maintenance costs were not previously reported for this ICR.

Dated: June 26, 2004.

Oscar Morales,

Director, Collection Strategies Division.
