

critical navigational information to mariners. Current computer/communication technology makes worldwide data transfer both rapid and reliable. Thus, mariners will not longer need to wait weeks for time-sensitive navigational information as is currently required with mailing hard copy *U.S. Notice to Mariners* around the globe. Additionally, the phase out of hard copy *U.S. Notice to Mariners* production will conserve critical resources. For example, NGA annually produces a volume of *U.S. Notice to Mariners* that, if stacked in a column, would measure roughly 22,000 feet high. Put another way, transitioning from hard copy production and distribution will conserve roughly 2,360 trees per year.

In conclusion, the NGA hard copy transition strategy will reduce the time required for mariners to receive important marine navigational information, eliminate costs associated with the printing and distribution of this publication, and conserve natural resources such as pulpwood and the fossil fuels needed to produce paper and transport this weekly product to numerous destinations around the globe.
