Federal Register

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, *www.archives.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** *www.gpoaccess.gov/nara,* available through GPO Access, is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

For more information about GPO Access, contact the GPO Access User Support Team, call toll free 1-888-293-6498; DC area 202-512-1530; fax at 202-512-1262; or via email at *gpoaccess@gpo.gov.* The Support Team is available between 7:00 a.m. and 9:00 p.m. Eastern Time, Monday–Friday, except official holidays.

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, *bookstore@gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 69 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register
Vol. 69, No. 154
Wednesday, August 11, 2004

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

7 CFR Part 1435

RIN 0560–AH08

Flexible Marketing Allotments for Sugar

AGENCIES: Commodity Credit Corporation, USDA.

ACTION: Final rule; correction.

SUMMARY: This document corrects a final rule published on July 1, 2004 that amended the sugar marketing allotment regulations with respect to processors' marketings of sugar, the permanent termination of processor operations, processors purchasing assets of another processor, processors sharing allocations among producers, appeals, and other related matters. A correction is needed to clarify a provision regarding transfers of allocations.

DATES: Effective July 1, 2004.

FOR FURTHER INFORMATION CONTACT: Barbara Fecso, Dairy and Sweeteners Analysis, Economic and Policy Analysis Staff, Farm Service Agency (FSA), United States Department of Agriculture (USDA), Stop 0516, 1400 Independence Ave., SW., Washington, DC 20250–0516. Phone: (202) 720–4146. E-mail: *barbara.fecso@usda.gov.* Persons with disabilities who require alternative means for communication (Braille, large print, audio tape, etc.) should contact the USDA Target Center at (202) 720–2600 (voice and TDD).

SUPPLEMENTARY INFORMATION: This publication corrects the final rule published in the **Federal Register** on July 1, 2004 (69 FR 39811) that amended the sugar marketing allotment regulations at 7 CFR 1435 with respect to processors' marketings of sugar, the permanent termination of processor operations, processors purchasing assets of another processor, processors sharing allocations among producers, appeals, and other related matters. The correction clarifies section 1435.308(b) to correspond more closely with previous regulatory language and thus avoid possible confusion.

List of Subjects

7 CFR Part 1435

Loan programs—agriculture, Price support programs, Reporting and record keeping requirements, and Sugar.

■ Accordingly, 7 CFR part 1435 is corrected by making the following correcting amendments:

PART 1435—SUGAR PROGRAM

■ 1. The authority citation for part 1435 continues to read as follows:

Authority: 7 U.S.C. 1359aa–1359jj and 7272 *et seq.*; 15 U.S.C. 714b and 714c.

■ 2. Paragraph (b)introductory text of § 1435.308 is revised to read as follows:

§ 1435.308 Transfer of allocation, new entrants.

(a) * * *

(b) Subject to a transfer of allocation, if any, described in paragraph (a) of this section being completed, CCC will permanently eliminate the processor's remaining allocation and distribute it to all other processors on a pro-rata basis when the processor:

* * * * *

Signed in Washington, DC, on August 4, 2004.

James R Little,

Executive Vice President, Commodity Credit Corporation.

14 CFR Part 71

[Docket No. FAA–2003–14849; Airspace Docket No. 03–AWP–7]

Establishment of Class E Airspace; Beckwourth, CA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; correction.

SUMMARY: This action corrects an error in the geographic coordinates of a Final Rule that was published in the **Federal Register** on June 14, 2004 (69 FR 32859), Docket No. FAA–2003–14849; Airspace Docket No. 03–AWP–7.

EFFECTIVE DATES: 0901 UTC August 5, 2004.

FOR FURTHER INFORMATION CONTACT: Jeri Carson, Airspace Specialist, Airspace Branch, AWP–520, Air Traffic Division, Western-Pacific Region, Federal Aviation Administration, 15000 Aviation Boulevard, Lawndale, California, 90261, telephone (301) 725–6611.

SUPPLEMENTARY INFORMATION:

History

Federal Register Document 04–13298, Docket No. FAA–2003–14849; Airspace Docket No. 03–AWP–7, published on June 14, 2004 (69 FR 32859), revised the geographic coordinates of the Class E airspace area at Beckwourth, CA. A typographical error was discovered in the geographic coordinates for the Beckwourth, CA, Class E airspace area. This action corrects those errors.

Correction to Final Rule

■ Accordingly, pursuant to the authority delegated to me, the geographic coordinates for the Class E airspace area at Beckwourth, CA, as published in the **Federal Register** on June 14, 2004 (69 FR 32859), (**Federal Register** Document 04–13298; page 32860, column 3) is corrected as follows:

§ 71.1 [Corrected]

* * * * *

AWP CA E5 Beckwourth, CA [Corrected]

Beckwourth-Nervino Airport, CA
(Lat. 39°49′07″ N. long. 120°21′10″ W.)

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2004–18609; Airspace Docket No. 03–AWP–15]

Establishment of Class E Airspace; California City, CA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Direct final rule; request for comments.

SUMMARY: As Area Navigation (RNAV) Global Positioning System (GPS) Standard Instrument Approach Procedure (SIAP) RNAV (GPS) Runway (RWY) 6 and RNAV (GPS) RWY 24 have been developed to serve California City Municipal Airport, California City, CA. This action expands Class E airspace extending upward from 700 feet or more above the surface at California City, CA to contain aircraft executing these RNAV (GPS) approaches. This action provides controlled airspace for Instrument Flight Rules (IFR) operations.

DATES: This direct final rule is effective on 0901 UTC, November 25, 2004. Comments for inclusion in the Rules Docket must be received on or before August 31, 2004.

ADDRESSES: Send comments on this proposal to the Docket Management System, U.S. Department of Transportation, Room Plaza 401, 400 Seventh Street, SW., Washington, DC 20590–0001. You must identify the docket number FAA–2004–18609/ Airspace Docket No. 03–AWP–15, at the beginning of your comments. You may also submit comments on the Internet at *http://dms.dot.gov*. You may review the public docket containing the proposal, any comments received, and any final dispositions in person in the Docket Office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The Docket Office (telephone 1–800–647–5527) is on the plaza level of the Department of Transportation NASIF Building at the above address.

FOR FURTHER INFORMATION CONTACT: Debra Trindle, Air Traffic Division, Airspace Branch, AWP–520, Western–Pacific Region, Federal Aviation Administration, 15000 Aviation Boulevard, Lawndale, California 90261. telephone (310) 725–6623.

SUPPLEMENTARY INFORMATION: This amendment to 14 CFR part 71 establishes a Class E airspace area at California City, CA. An RNAV (GPS) RWY 6 and RNAV (GPS) RWY 24 SIAP have been developed to serve California City, CA. These SIAPs require additional controlled airspace to contain aircraft executing the new approach procedures. This action expands Class E airspace to support Instrument Flight Rules (IFR) operations to California City, CA. Class E airspace areas extending upward from 700 feet or more above the surface of the earth are published in Paragraph 6005 of FAA Order 7400.9L, Airspace Designations and Reporting Points, dated September 2, 2003, and effective September 16, 2003, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

The Direct Final Rule Procedure

The FAA anticipates that this regulation will not result in adverse or negative comment and therefore is issuing it as a direct final rule. Previous actions of this nature have not been controversial and have not resulted in adverse comments or objections. Unless a written adverse or negative comment, or a written notice of intent to submit an adverse or negative comment is received within the comment period, the regulation will become effective on the date specified above. After the close of the comment period, the FAA will publish a document in the **Federal Register** indicating that no adverse or negative comments were received and confirming the date on which the final rule will become effective. If the FAA does receive, within the comment period, an adverse or negative comment, or written notice of intent to submit such a comment, a document withdrawing the direct final rule will be published in the **Federal Register**, and a notice of proposed rulemaking may be published with a new comment period.

Comments Invited

Although this action is in the form of a final rule and was not preceded by a notice of proposed rulemaking, comments are invited on this rule. Interested persons are invited to comment on this rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified under the caption **ADDRESSES**. All communications received on or before the closing date for comments will be considered, and this rule may be amended or withdrawn in light of the comments received. Factual information that supports the commenter's ideas and suggestions is extremely helpful in evaluating the effectiveness of this action and determining whether additional rulemaking action is needed.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the rule that might suggest a need to modify the rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA–public contact concerned with the substance of this action will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this rule must submit a self-addressed, stamped postcard on which the following statement is made: ''Comments to Docket No. 03–AWP–15.'' The postcard will be date stamped and returned to the commenter.

Agency Findings

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various level of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

The FAA has determined that his regulation is noncontroversial and unlikely to result in adverse or negative comments. For the reasons discussed in the preamble, this regulation only involves an established body of technical regulations that require frequent and routine amendments to keep them operationally current. Therefore, this regulation—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air)

Adoption of the Amendment

■ Accordingly, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

■ The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854; 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389

§ 71.1 [Amended]

■ The incorporation by reference in 14 CFR 71.1 of the Federal Aviation Administration Order 7400.9L, dated September 2, 2003, and effective September 16, 2003, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

AWP CA E5 California City, CA [New]

California City Municipal Airport, CA

(Lat. 35°09′04″ N. long. 118°01′00″ W.)

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of the California City Municipal Airport, excluding the portion within the Edwards AFB, CA, and Mojave, CA, Class E airspace areas and excluding that airspace within Restricted Area R–2515.

BILLING CODE 4910–13–M

SOCIAL SECURITY ADMINISTRATION

20 CFR Part 429

RIN 0960–AF39

Filing Claims Under the Federal Tort Claims Act and the Military Personnel and Civilian Employees Claims Act

AGENCY: Social Security Administration (SSA).

ACTION: Final rule.

SUMMARY: We are modifying our regulations in part 429 of title 20 in two ways. First, we are establishing a new subpart B in part 429 that prescribes the procedures SSA follows when claims are filed by employees against SSA for personal property damage or loss incident to their service with SSA. This new subpart is necessary both to reflect SSA's status as an independent agency and to comply with the requirement in the Military Personnel and Civilian Employees Claims Act of 1964 (MPCECA) that the head of each federal agency prescribe its own regulations for handling such claims.

Second, we are making several minor clarifications and corrections to our current procedures and practices on claims against the Government for damage to, or loss of, property or personal injury or death that is caused by the negligent or wrongful act or omission of an SSA employee. We have also rewritten the current rules on such claims in plain language.

EFFECTIVE DATES: These regulations are effective September 10, 2004.

FOR FURTHER INFORMATION CONTACT: Doug Cohen, Attorney-at-Law, Office of General Law, Office of the General Counsel, Social Security Administration, Suite No. 56, P.O. Box 26430, Baltimore, Maryland 21207, (410) 966–6583 or TTY (410) 966–5609.

Electronic Version

The electronic file of this document is available on the date of publication in the **Federal Register** on the Internet site for the Government Printing Office, *http://www.gpoaccess.gov/fr/index.html.* It is also available on the Internet site for SSA (*i.e.*, Social Security Online) at *http://policy.ssa.gov/pnpublic.nsf/LawsRegs.*

SUPPLEMENTARY INFORMATION:

Employee Claims for Personal Property Damage or Loss

The MPCECA, 31 U.S.C. 3721, establishes the guidelines Federal agencies must follow when an agency employee files a claim for personal property damage or loss incurred incident to his or her Federal service. Under the MPCECA, the head of each Federal agency is required to promulgate its own regulations setting forth the procedures and practices the agency will follow in handling such claims (31 U.S.C. 3721(j)). The Social Security Independence and Improvements Act of 1994 (Pub. L. 103–296) established SSA as an independent agency in the executive branch of the United States Government effective March 31, 1995, and vested general regulatory authority in the Commissioner of Social Security. In order to comply with the requirement in the MPCECA that SSA have its own regulations dealing with employee claims, we are establishing a new subpart B in part 429 of title 20 of the Code of Federal Regulations.

The rules in new subpart B of part 429 are modeled after those routinely published by other Federal agencies and contain the following sections:

- Section 429.201 explains that the new subpart applies to employee claims under the MPCECA, sets a $40,000 limit on the amount of payment for a claim, and defines several terms used throughout the subpart.
- Section 429.202 explains the procedures an employee should follow to file a claim for personal property loss or damage incident to service.
- Section 429.203 explains the circumstances under which a claim for personal property loss or damage is allowable.
- Section 429.204 describes the restrictions that apply to employee claims for personal property damage or loss.
- Section 429.205 contains a list of the types of losses that are not allowable under subpart B.
- Section 429.206 explains the procedures that are applicable when a claim involves a commercial carrier or an insurer.
- Section 429.207 explains how an employee should file a claim for personal property damage or loss.
- Section 429.208 explains how the SSA Claims Officer determines the amount of an award.
- Section 429.209 contains the maximum fee an agent or attorney may receive for his/her services in connection with an individual claim under subpart B.
- Section 429.210 explains the appeal process for claims under subpart B.
- Section 429.211 contains the penalties for filing false claims.

Tort Claims

These final rules also modify our existing rules dealing with the procedures SSA follows when claims are asserted under the Federal Tort Claims Act (FTCA), 28 U.S.C. 2672, for money damages against the United States for injury or death caused by the negligent or wrongful act or omission of any SSA employee. We are revising our regulations on tort claims as follows:

- We are revising § 429.101 to reflect the statutory provision in the FTCA that the FTCA does not apply to those tort claims identified in 28 U.S.C. 2680. Our current rules do not contain this statutory limitation.
- We are revising § 429.102 to correct the mailing address in this section.
- We are revising the time limit in § 429.104 for submitting evidence in a claim for money damages from 3 months to 60 days. Under the FTCA, this time limit is to be determined by the agency and we believe 60 days constitutes a reasonable limit for submitting evidence after being asked to do so.

• We are revising § 429.107 to clarify an ambiguity in current regulations. If a claim is approved that exceeds $2,500, our rules are revised to specify that the payment will come from the Judgment Fund in the Department of the Treasury, rather than from SSA. This reflects current procedure and the change only serves to increase the efficiency of the claims process and to speed delivery of the payment to the claimant.

• We are revising § 429.109 to reflect changes in both the criminal and civil False Claims Act regarding the penalties for filing false claims.

We have also rewritten the existing regulations on tort claims to comply with Executive Order 12866, as amended by Executive Order 13258, which requires Federal agencies to write all rules in plain language. None of these plain language changes are substantive; they are merely intended to make the existing regulations more readable and easier to understand.

Public Comments

On December 20, 2002, we published a Notice of Proposed Rulemaking (NPRM) in the **Federal Register** at 67 FR 77942 and provided a 60-day period for interested individuals and organizations to comment on the proposed rules. We received comments from two individuals. One individual's comments did not pertain to the proposed rules. Following is our response to the comments we received that were pertinent to the proposed rules.

Comment: One commenter raised several concerns relating to the processing of administrative claims under MPCECA. The first recommendation concerned the use of depreciation as a method of determining the actual value of an item of property at the time of the damage to or loss of the property under § 429.208. The commenter suggested that specific depreciation tables be incorporated into the rules and published.

Response: We are not adopting this recommendation because we believe that the rule already addresses this concern. Although SSA may use publicly available depreciation tables or adjustment rates to determine the actual value of property at the time of the damage to or loss of the property, SSA may also use other methods, such as the amount requested by the individual, the actual or estimated cost of repair, or replacement cost, to determine this amount.

Comment: The commenter's next suggestion concerned adding language to the rules to address the level of qualifications of the Claims Officer and the individual examiners.

Response: We are not adopting this recommendation. The Claims Officer and employees involved in adjudicating the claims are trained in determining claims under the FTCA and the MPCECA.

Comment: The commenter's next suggestion concerned appeal rights under § 429.210. The commenter suggested allowing for an in-person oral presentation when an individual seeks reconsideration of a decision on his or her claim, allowing reconsideration by a different Claims Officer, and providing an informal third-party avenue to mediate a disputed adjudication instead of forcing employees into court when they disagree with a decision on reconsideration.

Response: We are not adopting this suggestion because, although SSA could adopt a more elaborate reconsideration process, we believe that the process described in the rules under which an individual files a request for reconsideration and then obtains a decision on that request from the SSA Claims Officer is reasonable and appropriate given the nature of employee claims. Similar processes for reconsideration are used in other Federal agencies and in the private casualty industry. Moreover, employees will not be forced into court because the decision of the SSA Claims Officer is final and conclusive under the MPCECA. *See* 31 U.S.C. 3721(k).

Comment: The commenter's next suggestion concerned limitations on representative and attorney's fees. The commenter suggested altering the amount that can be charged as fees.

Response: We are not adopting this suggestion because the MPCECA explicitly limits fees for representatives of employees who file a claim to not more than 10 percent of the amount paid in settlement of the claim. *See* 31 U.S.C. 3721(i).

We are, however, making a minor non-substantive modification to the regulations. Since we published the NPRM, we have relocated and are now using a different mailing address. We changed the mailing address in §§ 429.102 and 429.202 to reflect the new address. In addition, we made some minor non-substantive technical changes.

Regulatory Procedures

Executive Order 12866

We have consulted with the Office of Management and Budget (OMB) and determined that these final rules do not meet the criteria for a significant regulatory action under Executive Order 12866, as amended by Executive Order 13258. Thus, they were not subject to OMB review.

We have also determined that these final rules meet the plain language requirement of Executive Order 12866 as amended by Executive Order 13258.

Regulatory Flexibility Act

We certify that these final rules will not have a significant economic impact on a substantial number of small entities because they only affect individuals. Therefore, a regulatory flexibility analysis as provided in the Regulatory Flexibility Act, as amended, is not required.

Paperwork Reduction Act

The Paperwork Reduction Act provides that no persons are required to respond to a collection of information unless it displays a valid OMB control number. In accordance with the Paperwork Reduction Act, SSA is providing notice that OMB has approved the information collection requirements contained in §§ 429.102, 429.103, 429.104(a)(b)(c) and 429.106(b) of these final rules. The OMB Control Number for these collections is 0960–0667, expiring 02/28/2006.

List of Subjects in 20 CFR Part 429

Tort claims, Indemnity payments, Administrative practice and procedure, Government employees.

(Catalog of Federal Domestic Assistance Program Nos. 96.001 Social Security—Disability Insurance; 96.002 Social Security—Retirement Insurance; 96.003 Social Security—Special Benefits for Persons Aged 72 and Over; 96.004 Social Security—Survivors Insurance; 96.005 Special Benefits for Disabled Coal Miners; 96.006, Supplemental Security Income; 96.007 Social Security—Research and Demonstration; 96.020, Special Benefits for Certain World War II Veterans.)

Dated: August 4, 2004.

Jo Anne B. Barnhart,

Commissioner of Social Security.

■ For the reasons set out in the preamble, we are revising part 429 of chapter III of title 20 of the Code of Federal Regulations to read as follows:

PART 429—ADMINISTRATIVE CLAIMS UNDER THE FEDERAL TORT CLAIMS ACT AND RELATED STATUTES

Subpart A—Claims Against the Government Under the Federal Tort Claims Act

Sec.

Authority: Section 702(a)(5) of the Social Security Act (42 U.S.C. 902(a)(5)); 28 U.S.C. 2672; 28 CFR 14.11; 31 U.S.C. 3721.

Subpart A—Claims Against the Government Under the Federal Tort Claims Act

§ 429.101 What is this subpart about?

(a) This subpart applies only to claims filed under the Federal Tort Claims Act, as amended, 28 U.S.C. 2671–2680 (FTCA), for money damages against the United States for damage to or loss of property or personal injury or death that is caused by the negligent or wrongful act or omission of an employee of the Social Security Administration (SSA). The loss, damage, injury or death must be caused by the employee in the performance of his or her official duties, under circumstances in which the United States, if a private person, would be liable in accordance with the law of the place where the act or omission occurred. This subpart does not apply to any tort claims excluded from the FTCA under 28 U.S.C. 2680.

(b) This subpart is subject to and consistent with the regulations on administrative claims under the FTCA issued by the Attorney General at 28 CFR part 14.

§ 429.102 How do I file a claim under this subpart?

(a) *Filing an initial claim.* You must either file your claim on a properly executed Standard Form 95 or you must submit a written notification of the incident accompanied by a claim for the money damages in a sum certain for damage to or loss of property you believe occurred because of the incident. For purposes of this subpart, we consider your claim to be filed on the date we receive it at the address specified in paragraph (c) of this section. If you mistakenly send your claim to another Federal agency, we will not consider it to be filed until the date that we receive it. If you mistakenly file a claim meant for another Federal agency with SSA, we will transfer it to the appropriate Federal agency, if possible. If we are unable to determine the appropriate agency, we will return the claim to you.

(b) *Filing an amendment to your claim.* You may file an amendment to your properly filed claim at any time before the SSA Claims Officer (as defined in § 429.201(d)(3)) makes a final decision on your claim or before you bring suit under 28 U.S.C. 2675(a). You must submit an amendment in writing and sign it. If you file a timely amendment, SSA has 6 months in which to finally dispose of the amended claim. Your option to file suit does not begin until 6 months after you file the amendment.

(c) *Where to obtain claims forms and file claims.* You may obtain claims forms and must file your claim with the Social Security Administration, Office of the General Counsel, Office of General Law, Administrative Claims Unit, Suite No. 56, P.O. Box 26430, Baltimore, Maryland 21207.

§ 429.103 Who may file my claim?

(a) *Claims for damage to or loss of property.* If you are the owner of the property interest that is the subject of the claim, you, your duly authorized agent, or your legal representative may file the claim.

(b) *Claims for personal injury.* If you suffered the injury, you, your duly authorized agent, or your legal representative may file the claim.

(c) *Claims based on death.* The executor or administrator of your estate or any other person legally entitled to do so may file the claim.

(d) *Claims for loss wholly compensated by an insurer with the rights of a subrogee.* The insurer may file the claim. When an insurer presents a claim asserting the rights of a subrogee, the insurer must present with the claim appropriate evidence that it has the rights of a subrogee.

(e) *Claims for loss partially compensated by an insurer with the rights of a subrogee.* You and the insurer may file, jointly or separately. When an insurer presents a claim asserting the rights of a subrogee, the insurer must present with the claim appropriate evidence that it has the rights of a subrogee.

(f) *Claims by authorized agents or other legal representatives.* Your duly authorized agent or other legal representative may submit your claim, provided satisfactory evidence is submitted establishing that person has express authority to act on your behalf. A claim presented by an agent or legal representative must be presented in your name. If the claim is signed by the agent or legal representative, it must show the person's title or legal capacity and must be accompanied by evidence that the person has the authority to file the claim on your behalf as agent, executor, administrator, parent, guardian or other representative.

§ 429.104 What evidence do I need to submit with my claim?

(a) *Property damage.* To support a claim for property damage, either real or personal, you may be required to submit the following evidence or information:

(1) Proof of ownership.

(2) A detailed statement of the amount claimed with respect to each item of property.

(3) An itemized receipt of payment for necessary repairs or itemized written estimates of the cost of such repairs.

(4) A statement listing date of purchase, purchase price, market value of the property as of date of damage, and salvage value, where repair is not economical.

(5) Any other evidence or information that may have a bearing either on the responsibility of the United States for the injury to or loss of property or the damages claimed.

(b) *Personal injury.* To support a claim for personal injury, including pain and suffering, you may be required to submit the following evidence or information:

(1) A written report from your attending physician or dentist setting forth the nature and extent of your injury, nature and extent of treatment, any degree of temporary or permanent disability, your prognosis, period of hospitalization, and any diminished earning capacity. You may also be required to submit to a physical or mental examination by a physician employed or designated by SSA. If you submit a written request, we will provide you with a copy of the report of the examining physician provided you agree to make available to SSA any other physician's reports made of the

physical or mental condition that is the subject of your claim.

(2) Itemized bills for medical, dental, and hospital expenses incurred, or itemized receipts of payment for such expenses.

(3) If your prognosis reveals that you will need future treatment, a statement of expected duration of and expenses for such treatment.

(4) If you claim a loss of time from employment, a written statement from your employer showing actual time lost from employment, whether you are a full or part-time employee, and wages or salary you actually lost.

(5) If you claim a loss of income and are self-employed, documentary evidence showing the amount of earnings you actually lost. For example, we may use income tax returns for several years prior to the injury in question and the year in which the injury occurred to indicate or measure lost income. A statement of how much it cost you to hire someone to do the same work you were doing at the time of the injury might also be used in measuring lost income.

(6) Any other evidence or information that may have a bearing on either the responsibility of the United States for the personal injury or the damages claimed.

(c) *Claim Based on Death*. To support the claim, we need the following evidence or information:

(1) An authenticated death certificate or other believable documentation showing cause of death, date of death, and age at the time of death.

(2) The decedent's employment or occupation at time of death, including monthly or yearly salary or earnings (if any), and the duration of last employment or occupation.

(3) Full names, addresses, birth dates, kinship, and marital status of the decedent's survivors, including identification of those survivors who were dependent upon the decedent for support at the time of death.

(4) Degree of support the decedent provided to each survivor dependent on the decedent for support at the time of death.

(5) The decedent's general physical and mental condition before death.

(6) Itemized bills for medical and burial expenses incurred, or itemized receipts of payments for such expenses.

(7) If damages for pain and suffering prior to death are claimed, a physician's detailed statement specifying the injuries suffered, duration of pain and suffering, any drugs administered for pain and the decedent's physical condition in the interval between injury and death.

(8) Any other evidence or information that may have a bearing on either the responsibility of the United States for the death or the damages claimed.

(d) *Time limit for submitting evidence.* You must furnish all the evidence required by this section within a reasonable time. If you fail to furnish all the evidence necessary to determine your claim within 60 days after being asked to do so, we may find that you have decided to abandon your claim.

§ 429.105 What happens when you receive my claim?

When we receive your claim, we will investigate to determine its validity. After our investigation, we will forward your claim to the SSA Claims Officer with our recommendation as to whether your claim should be fully or partially allowed or denied.

§ 429.106 What happens if my claim is denied?

(a) If your claim is denied, the SSA Claims Officer will send you, your agent, or your legal representative a written notice by certified or registered mail. The notice will include an explanation of why your claim was denied and will advise you of your right to file suit in an appropriate U.S. District Court not later than 6 months after the date of the mailing of the notice if you disagree with the determination.

(b) Before filing suit and before expiration of the 6-month period after the date of the mailing of the denial notice, you, your duly authorized agent, or your legal representative may file a written request with SSA for reconsideration by certified or registered mail. If you file a timely request for reconsideration, SSA has 6 months from the date you file your request in which to finally dispose of your claim. Your right to file suit will not begin until 6 months after you file your request for reconsideration. Final SSA action on your request for reconsideration will occur in accordance with the provisions of paragraph (a) of this section.

§ 429.107 If my claim is approved, how do I obtain payment?

(a) *Claims under $2,500.* If your claim is approved, you must complete a ''Voucher for Payment under the Federal Tort Claims Act,'' Standard Form 1145. If you are represented by an attorney, the voucher for payment (SF 1145) must designate both you and your attorney as ''payees''; we will then mail the check to your attorney.

(b) *Claims in excess of $2,500.* If your claim is approved, SSA will forward the appropriate Financial Management Service (FMS) Forms 194, 195, 196, 197, and/or 197–A to the Judgment Fund Section, Financial Management Service, Department of the Treasury, Room 6D37, 3700 East-West Highway, Hyattsville, Maryland 20782. FMS will then mail the payment to you.

§ 429.108 What happens if I accept an award, compromise, or settlement under this subpart?

If you, your agent, or your legal representative accept any award, compromise, or settlement under this subpart, your acceptance is final and conclusive on you, your agent or representative, and any other person on whose behalf or for whose benefit the claim was filed. The acceptance constitutes a complete release of any claim against the United States and against any employee of the Government whose act or omission gave rise to the claim, by reason of the same subject matter.

§ 429.109 Are there any penalties for filing false claims?

A person who files a false claim or makes a false or fraudulent statement in a claim against the United States may be imprisoned for not more than 5 years. (18 U.S.C. 287, 1001). In addition, that person may be liable for a civil penalty of not less than $5,000 and not more than $10,000 and damages of triple the loss or damage sustained by the United States, as well as the costs of a civil action brought to recover any penalty or damages. (31 U.S.C. 3729).

§ 429.110 Are there any limitations on SSA's authority under this subpart?

(a) An award, compromise or settlement of a claim under this subpart in excess of $25,000 needs the prior written approval of the Attorney General or his designee. For the purposes of this paragraph, we treat a principal claim and any derivative or subrogated claim as a single claim.

(b) An administrative claim may be adjusted, determined, compromised, or settled under this subpart only after consultation with the Department of Justice when, in the opinion of SSA:

(1) A new precedent or a new point of law is involved;

(2) A question of policy is or may be involved;

(3) The United States is or may be entitled to indemnity or contribution from a third party and SSA is unable to adjust the third-party claim; or

(4) The compromise of a particular claim, as a practical matter, will or may control the disposition of a related claim in which the amount to be paid may exceed $25,000.

(c) An administrative claim may be adjusted, determined, compromised or settled only after consultation with the

Department of Justice when it is learned that the United States, or an employee, agent, or cost-plus contractor of the United States, is involved in litigation based on a claim arising out of the same incident or transaction.

Subpart B—Claims Under the Military Personnel and Civilian Employees' Claims Act of 1964

§ 429.201 What is this subpart about?

(a) *Scope and Purpose.* This subpart applies to all claims filed by or on behalf of employees of SSA for loss of, or damage to, personal property incident to their service with SSA under the Military Personnel and Civilian Employees Claims Act of 1964, as amended, 31 U.S.C. 3721 (MPCECA). A claim must be substantiated and the possession of the property determined to be reasonable, useful, or proper.

(b) *Maximum payment under this part.* The maximum amount that can be paid for any claim under the Act is $40,000 or, in extraordinary circumstances, $100,000, and property may be replaced in kind at the discretion of the Government.

(c) *Policy.* SSA is not an insurer and does not underwrite all personal property losses that an employee may sustain incident to employment. We encourage employees to carry private insurance to the maximum extent practicable to avoid losses that may not be recoverable from SSA. The procedures set forth in this subpart are designed to enable you to obtain the proper amount of compensation from SSA and/or a private insurer for the loss or damage. If you fail to comply with these procedures it could reduce or preclude payment of your claim under this subpart.

(d) *Definitions.*

(1) ''Quarters,'' unless otherwise indicated, means a house, apartment, or other residence that is an SSA employee's principal residence.

(2) ''State,'' unless otherwise indicated, is defined by § 404.2(c)(5) of title 20 of the Code of Federal Regulations.

(3) ''SSA Claims Officer'' means the SSA official designated to determine claims under the MPCECA. The current designee is the Associate General Counsel for General Law.

§ 429.202 How do I file a claim under this subpart?

(a) *Who may file.* (1) You, your duly authorized agent, your legal representative, or your survivor may file the claim. If your survivor files the claim, the order of precedence for filing is spouse, child, parent, sibling.

(2) You may not file a claim on behalf of a subrogee, assignee, conditional vendor, or other third party.

(b) *Where to file.* You must file your claim with the Social Security Administration, Office of the General Counsel, Office of General Law, Administrative Claims Unit, Suite No. 56, P.O. Box 26430, Baltimore, Maryland 21207.

(c) *Evidence required.* You are responsible for proving ownership or possession, the facts surrounding the loss or damage, and the value of the property. Your claim must include the following:

(1) A written statement, signed by you or your authorized agent, explaining how the damage or loss occurred. This statement must also include:

(i) A description of the type, design, model number, or other identification of the property.

(ii) The date you purchased or acquired the property and its original cost.

(iii) The location of the property when the loss or damage occurred.

(iv) The value of the property when lost or damaged.

(v) The actual or estimated cost of the repair of any damaged item.

(vi) The purpose of and authority for travel, if the loss or damage occurred while you were transporting your property or using a motor vehicle.

(vii) All available information as to who was responsible for the loss or damage, if it was not you, and all information as to insurance contracts, whether in your name or in the name of the responsible party.

(viii) Any other evidence about loss or damage that the SSA Claims Officer determines is necessary.

(2) Copies of all available and appropriate documents such as bills of sale, estimates of repairs, or travel orders. In the case of damage to an automobile, you must submit at least two estimates of repair or a certified paid bill showing the damage incurred and the cost of all parts, labor, and other items necessary to the repair of the vehicle or a statement from an authorized dealer or repair garage showing that the cost of such repairs exceeds the value of the vehicle.

(3) A copy of the power of attorney or other authorization if someone else files the claim on your behalf.

(4) A statement from your immediate supervisor confirming that possession of the property was reasonable, useful, or proper under the circumstances and that the damage or loss was incident to your service.

(d) *Time limitations.* You must file a written claim within 2 years after accrual of the claim. For purposes of this subpart, your claim accrues at the later of:

(1) The time of the accident or incident causing the loss or damage;

(2) The time the loss or damage should have been discovered by the claimant by the exercise of due diligence; or

(3) Where valid circumstances prevented you from filing your claim earlier, the time that should be construed as the date of accrual because of a circumstance that prevents the filing of a claim. If war or armed conflict prevents you from filing the claim, your claim accrues on the date hostilities terminate and your claim must be filed within 2 years of that date.

§ 429.203 When is a claim allowable?

(a) A claim is allowable only if you were using the property incident to your service with SSA, with the knowledge and consent of a superior authority, and:

(1) The damage or loss was not caused wholly or partially by the negligent or improper action or inaction of you, your agent, the members of your family, or your private employee (the standard to be applied is that of reasonable care under the circumstances); and

(2) The possession of the property lost or damaged and the quantity and the quality possessed is determined to have been reasonable, useful, or proper under the circumstances; and

(3) The claim is substantiated by proper and convincing evidence.

(b) Claims that are otherwise allowable under this subpart will not be disallowed solely because you were not the legal owner of the property for which the claim is made.

(c) Subject to the conditions in paragraph (a) of this section and the other provisions of this subpart, any claim you make for damage to, or loss of, personal property that occurs incident to your service with SSA may be considered and allowed. For the purpose of this subpart, if you were performing your official duties at an alternate work location under an approved flexiplace agreement, the alternate work location will be considered an official duty station even if it is located in your principal residence. The alternate work location is not considered to be quarters. The following are examples of the principal types of claims that are allowable, but these examples are not exclusive and other types of claims are allowable, unless specifically excluded under this subpart:

(1) *Property damage in quarters or other authorized places.* Claims are allowable for damage to, or loss of,

property arising from fire, flood, hurricane, other natural disaster, theft, or other unusual occurrence, while such property is located at:

(i) Quarters within a state that were assigned to you or otherwise provided in kind by the United States; or

(ii) Any warehouse, office, working area, or other place (except quarters) authorized or apparently authorized for the reception or storage of property.

(2) *Transportation or travel losses.* Claims are allowable for damage to, or loss of, property incident to transportation or storage of such property pursuant to order or in connection with travel under orders, including property in your custody or in the custody of a carrier, an agent or agency of the Government.

(3) *Mobile homes.* Claims may be allowed for damage to, or loss of, mobile homes and their contents under the provisions of paragraph (c)(2) of this section. Claims for structural damage to mobile homes, other than that caused by collision, and damage to contents of mobile homes resulting from such structural damage, must contain conclusive evidence that the damage was not caused by structural deficiency of the mobile home and that it was not overloaded. Claims for damage to, or loss of, tires mounted on mobile homes are not allowable, except in cases of collision, theft, or vandalism.

(4) *Enemy action or public service.* Claims are allowable for damage to, or loss of, property that directly result from:

(i) Enemy action or threat of enemy action, or combat, guerrilla, brigandage, or other belligerent activity, or unjust confiscation by a foreign power or its nationals.

(ii) Action you take to quiet a civil disturbance or to alleviate a public disaster.

(iii) Efforts you make to save human life or Government property.

(5) *Property used for the benefit of the Government.* Claims are allowable for damage to, or loss of, property when used for the benefit of the Government at the request of, or with the knowledge and consent of, superior authority, up to the amount not compensated by private insurance.

(6) *Clothing and accessories.* Claims are allowable for damage to, or loss of, clothing and accessories a person customarily wears and devices such as eyeglasses, hearing aids, dentures, or prosthetics.

(7) *Expenses incident to repair.* You may be reimbursed for the payment of any sales tax and other such fees incurred in connection with repairs to an item. The costs of obtaining estimates of repair (subject to the limitations set forth in § 429.204(c)) are also allowable.

§ 429.204 Are there any restrictions on what is allowable?

Claims of the type described in this section are only allowable subject to the restrictions noted:

(a) *Money or currency, including coin collections.* Allowable only when lost because of fire, flood, hurricane, other natural disaster, theft from quarters (as limited by § 429.203(c)(1)), or under other reasonable circumstances in which it would be in the Government's best interest to make payment. In cases involving theft from quarters, the evidence must conclusively show that your quarters were locked at the time of the theft. Reimbursement for loss of money or currency is limited to the amount it is determined reasonable for you to have had in your possession at the time of the loss.

(b) *Government property.* Allowable only for property owned by the United States for which you are financially responsible to an agency of the Government other than SSA.

(c) *Estimate fees.* Allowable for fees paid to obtain estimates of repairs only when it is clear that you could not have obtained an estimate without paying a fee. In that case, the fee is allowable only in an amount determined to be reasonable in relation to the value of the property or the cost of the repairs.

(d) *Automobiles and motor vehicles.* (1) Claims may only be allowed for damage to, or loss of, automobiles and other motor vehicles if:

(i) You were required by your supervisor to use a motor vehicle for official Government business (official Government business, as used here, does not include travel, or parking incident to travel, between quarters and office, quarters and an approved telecommuting center, or use of vehicles for the convenience of the owner. However, it does include travel, and parking incident thereto, between quarters and an assigned place of duty specifically authorized by your supervisor as being more advantageous to the Government); or

(ii) Shipment of such motor vehicles was being furnished or provided by the Government, subject to the provisions of § 429.206; or

(2) When a claim involves damage to or loss of automobile or other motor vehicle, you will be required to present proof of insurance coverage, the deductible amount, and the amount, if any, you recovered from the insurer. If your claim is for an amount that exceeds the deductible on the insurance policy, the maximum allowable recovery will be for the amount of the deductible. If the vehicle is uninsured, the maximum allowed will be $500.00.

(e) *Computers and Electronics.* Claims may be allowed for loss of, or damage to, cellular phones, fax machines, computers and related hardware and software only when lost or damaged incident to fire, flood, hurricane, other natural disaster, theft from quarters (as limited by § 429.203(c)(1)), other reasonable circumstances in which it would be in the Government's best interest to make payment, or unless being shipped as a part of a change of duty station paid for by the Agency. In incidents of theft from quarters, it must be conclusively shown that your quarters were locked at the time of the theft.

(f) *Alternate Work Locations.* When a claim is filed for property damage or loss at a non-Government alternate work location at which you are working pursuant to an approved flexiplace work agreement, you are required to present proof of insurance coverage, the deductible amount, and the amount, if any, you recovered from the insurer. If your claim is for an amount that exceeds the deductible on the insurance policy, the maximum allowable recovery will be for the amount of the deductible. If the property is uninsured, the maximum allowed will be $1,000.00.

§ 429.205 What is not allowable under this subpart?

Claims are not allowable for the following:

(a) *Unassigned quarters in United States.* Property loss or damage in quarters you occupied within any state that were not assigned to you or otherwise provided in kind by the United States.

(b) *Business property.* Property used for business or profit.

(c) *Unserviceable property.* Wornout or unserviceable property.

(d) *Illegal possession.* Property acquired, possessed, or transferred in violation of the law or in violation of applicable regulations or directives.

(e) *Articles of extraordinary value.* Valuable articles, such as cameras, watches, jewelry, furs, or other articles of extraordinary value. This prohibition does not apply to articles in your personal custody or articles properly checked or inventoried with a common carrier, if you took reasonable protection or security measures.

(f) *Intangible property.* Loss of property that has no extrinsic and marketable value but is merely representative or evidence of value, such as non-negotiable stock certificates, promissory notes, bonds,

bills of lading, warehouse receipts, insurance policies, baggage checks, and bank books, is not compensable. Loss of a thesis, or other similar item, is compensable only to the extent of the out-of-pocket expenses you incurred in preparing the item such as the cost of the paper or other materials. No compensation is authorized for the time you spent in its preparation or for supposed literary value.

(g) *Incidental expenses and consequential damages.* The MPCECA and this subpart authorize payment for loss of, or damage to, personal property only. Except as provided in § 429.203(c)(7), consequential damages or other types of loss or incidental expenses (such as loss of use, interest, carrying charges, cost of lodging or food while awaiting arrival of shipment, attorney fees, telephone calls, cost of transporting you or your family members, inconvenience, time spent in preparation of claim, or cost of insurance premiums) are not compensable.

(h) *Real property.* Damage to real property is not compensable. In determining whether an item is considered to be an item of personal property, as opposed to real property, normally, any movable item is considered personal property even if physically joined to the land.

(i) *Commercial property.* Articles acquired or held for sale or disposition by other commercial transactions on more than an occasional basis, or for use in a private profession or business enterprise.

(j) *Commercial storage.* Property stored at a commercial facility for your convenience and at your expense.

(k) *Claims for minimum amount.* Loss or damage amounting to less than $25.

§ 429.206 What if my claim involves a commercial carrier or an insurer?

In the event the property that is the subject of the claim was lost or damaged while in the possession of a commercial carrier or was insured, the following procedures will apply:

(a) Whenever property is damaged, lost, or destroyed while being shipped pursuant to authorized travel orders, the owner must file a written claim for reimbursement with the last commercial carrier known or believed to have handled the goods, or the carrier known to be in possession of the property when the damage or loss occurred, according to the terms of its bill of lading or contract, before submitting a claim against the Government under this subpart.

(b) Whenever property is damaged, lost, or destroyed incident to your service and is insured in whole or in part, you must make demand in writing against the insurer for reimbursement under the terms and conditions of the insurance coverage, before filing a claim against the Government.

(c) Failure to make a demand on a carrier or insurer or to make all reasonable efforts to protect and prosecute rights available against a carrier or insurer and to collect the amount recoverable from the carrier or insurer may result in reducing the amount recoverable from the Government by the maximum amount that would have been recoverable from the carrier or insurer had the claim been timely or diligently prosecuted. However, no deduction will be made where the circumstances of your service preclude reasonable filing of a claim or diligent prosecution, or the evidence indicates a demand was impracticable or would have been unavailing.

(d) After you file a claim against the carrier or insurer, you may immediately submit a claim under this subpart, without waiting until the carrier or insurer finally approves or denies your claim.

(1) Upon submitting your claim, you must certify whether you have not gained any recovery from a carrier or insurer, and enclose all pertinent correspondence.

(2) If the carrier or insurer has not taken final action on your claim, you must immediately tell the carrier or insurer to address all correspondence regarding the claim to the SSA Claims Officer, and you must provide a copy of this notice to the SSA Claims Officer.

(3) You must advise the SSA Claims Officer of any action the carrier or insurer takes on the claim and, upon request, must furnish all correspondence, documents, and other evidence pertinent to the matter.

(e) You must assign to the United States, to the extent you accept any payment on the claim, all rights, title, and interest in any claim you may have against any carrier, insurer, or other party arising out of the incident on which your claim against the United States is based. After payment of the claim by the United States, you must, upon receipt of any payment from a carrier or insurer, pay the proceeds to the United States to the extent of the payment you received from the United States.

(f) If you recover for the loss from the carrier or insurer before your claim under this subpart is settled, the amount of recovery will be applied to the claim as follows:

(1) If you recover an amount that is greater than or equal to your total loss as determined under this subpart, no compensation is allowable under this subpart.

(2) If you recover an amount that is less than such total loss, the allowable amount is determined by deducting the recovery from the amount of such total loss.

(3) For this purpose, your total loss is determined without regard to the maximum payment limitations set forth in § 429.201. However, if the resulting amount after making this deduction exceeds the maximum payment limitations, you will only be allowed the maximum amount set forth in § 429.201.

(g) In a claim arising from damage to an automobile or other motor vehicle, in no event may recovery exceed the reasonable deductible on the insurance policy.

§ 429.207 What are the procedures for filing a claim?

(a) *Form of claim.* Your claim must be presented in writing (SSA Form 1481 is available for this purpose). Any writing received by the SSA Claims Officer within the time limits set forth in § 429.202(d) will be accepted and considered a claim under the MPCECA if it constitutes a demand for compensation from SSA. A demand is required to be for a specific sum of money.

(b) *Award.* The SSA Claims Officer is authorized to settle claims filed under this subpart.

(c) *Notification.* The deciding official will provide you with a written determination on your claim.

§ 429.208 How do you determine the award? Is the settlement of my claim final?

(a) The amount allowable for damage to or loss of any item of property may not exceed the lowest of:

(1) The amount you requested for the item as a result of its loss, damage, or the cost of its repair;

(2) The actual or estimated cost of its repair; or

(3) The actual value at the time of its loss, damage, or destruction. The actual value is determined by using the current replacement cost or the depreciated value of the item since you acquired it, whichever is lower, less any salvage value of the item in question, if you retain the item.

(b) Depreciation in value is determined by considering the type of article involved, its cost, its condition when damaged or lost, and the time elapsed between the date you acquired it and the date of damage or loss.

(c) Current replacement cost and depreciated value are determined by use

of publicly available adjustment rates or through use of other reasonable methods at the discretion of the SSA Claims Officer.

(d) Replacement of lost or damaged property may be made in kind wherever appropriate at the discretion of the SSA Claims Officer.

(e) At the discretion of the SSA Claims Officer, you may be required to turn over an item alleged to have been damaged beyond economical repair to the United States, in which case no deduction for salvage value will be made in the calculation of actual value.

(f) Settlement of claims under the Act are final and conclusive.

§ 429.209 Are there any restrictions on attorney's fees?

No more than 10 percent of the amount in settlement of each individual claim submitted and settled under this subpart shall be paid or delivered to, or received by, any agent or attorney on account of services rendered in connection with that claim. A person violating this subsection shall be fined not more than $1,000.00 (31 U.S.C. 3721(i)).

§ 429.210 Do I have any appeal rights under this subpart?

(a) *Deciding Official.* While you may not appeal the decision of the SSA Claims Officer in regard to claims under the MPCECA, the SSA Claims Officer may, at his or her discretion, reconsider his or her determination of a claim.

(b) *Claimant.* You may request reconsideration from the SSA Claims Officer by sending a written request for reconsideration to the SSA Claims Officer within 30 days of the date of the original determination. You must clearly state the factual or legal basis upon which you base your request for a more favorable determination. Reconsideration will be granted only for reasons not available or not considered during the original decision.

(c) *Notification.* The SSA Claims Officer will send you a written determination on your request for reconsideration. If the SSA Claims Officer elects to reconsider your claim, the final determination on reconsideration is final and conclusive.

§ 429.211 Are there any penalties for filing false claims?

A person who files a false claim or makes a false or fraudulent statement in a claim against the United States may be imprisoned for not more than 5 years (18 U.S.C. 287, 1001). In addition, that person may be liable for a civil penalty of not less than $5,000 and not more than $10,000 and damages of triple the loss or damage sustained by the United States, as well as the costs of a civil action brought to recover any penalty or damages (31 U.S.C. 3729).

BILLING CODE 4191–02–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 2004N–0287]

21 CFR Parts 1, 5, 26, 203, 207, and 314

Change of Names and Addresses; Technical Amendment

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule; technical amendment.

SUMMARY: The Food and Drug Administration (FDA) is amending its regulations to reflect name and address changes for the Office of Compliance, Center for Drug Evaluation and Research (CDER). This action is editorial in nature and is intended to provide accuracy and clarity to the agency's regulations.

EFFECTIVE DATE: August 11, 2004.

FOR FURTHER INFORMATION CONTACT: Mary C. Hennessey, Office of Compliance, Center for Drug Evaluation and Research (HFD–300), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–827–8910.

SUPPLEMENTARY INFORMATION: FDA is amending its regulations in 21 CFR parts 1, 5, 26, 203, 207, and 314 to reflect name and address changes for certain divisions of the Office of Compliance, CDER. The name changes are the result of a reorganization in CDER's Office of Compliance to improve coordination and communication and to enhance the office's capacity to implement risk management approaches to compliance activities. The address changes are due to the relocation of CDER's Office of Compliance.

Under this reorganization, the following organizational changes are reflected in the amendments made by this final rule:

- The name of the former Division of Labeling and Nonprescription Drug Compliance has been changed to the Division of New Drugs and Labeling Compliance,
- The name of the former Division of Prescription Drug Compliance and Surveillance has been changed to the Division of Compliance Risk Management and Surveillance, and
- Information sent to or obtained from the Drug Listing Branch is now maintained and distributed by CDER's Records Repository Team.

The amendments also include:

- The new mailing address of the Office of Compliance, CDER, and
- The new mailing addresses of specific divisions within the Office of Compliance (CDER) and for the Records Repository Team.

Publication of this document constitutes final action on these changes under the Administrative Procedure Act (5 U.S.C. 553). Notice and public procedure are unnecessary because these amendments are nonsubstantive.

List of Subjects

21 CFR Part 1

Cosmetics, Drugs, Exports, Food labeling, Imports, Labeling, Reporting and recordkeeping requirements.

21 CFR Part 5

Authority delegations (Government agencies), Imports, Organization and functions (Government agencies).

21 CFR Part 26

Animal drugs, Biologics, Drugs, Exports, Imports.

21 CFR Part 203

Labeling, Prescription drugs, Reporting and recordkeeping requirements, Warehouses.

21 CFR Part 207

Drugs, Reporting and recordkeeping requirements.

21 CFR Part 314

Administrative practice and procedure, Confidential business information, Drugs, Reporting and recordkeeping requirements.

■ Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 1, 5, 26, 203, 207, and 314 are amended as follows:

PART 1—GENERAL ENFORCEMENT REGULATIONS

■ 1. The authority citation for 21 CFR part 1 continues to read as follows:

Authority: 15 U.S.C. 1453, 1454, 1455; 19 U.S.C. 1490, 1491; 21 U.S.C. 321, 331, 332, 333, 334, 335a, 343, 350c, 350d, 352, 355, 360b, 362, 371, 374, 381, 382, 393; 42 U.S.C. 216, 241, 243, 262, 264.

■ 2. Section 1.101 is amended by revising paragraph (d)(2)(ii) to read as follows:

§ 1.101 Notification and recordkeeping.

* * * * *

(d) * * *

(2) * * *

(ii) For human drug products—Division of New Drugs and Labeling Compliance (HFD–310), Office of Compliance, Center for Drug Evaluation and Research, Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857.

* * * * *

PART 5—ORGANIZATION

■ 3. The authority citation for 21 CFR part 5 continues to read as follows:

Authority: 5 U.S.C. 552; 21 U.S.C. 301–397.

§ 5.1100 [Amended]

■ 4. Section 5.1100 is amended under the heading ''CENTER FOR DRUG EVALUATION AND RESEARCH.[1]'' by removing the entries

''Office of Compliance.[6]

Division of Manufacturing and Product Quality.

Division of Prescription Drug Compliance and Surveillance.

Division of Labeling and Non-Prescription Drug Compliance.'' and by adding in its place the entries

''Office of Compliance.[1]

Division of New Drugs and Labeling Compliance (HFD–310).

Division of Manufacturing and Product Quality (HFD–320).

Division of Compliance Risk Management and Surveillance (HFD–330).''

PART 26—MUTUAL RECOGNITION OF PHARMACEUTICAL GOOD MANUFACTURING PRACTICE REPORTS, MEDICAL DEVICE QUALITY SYSTEM AUDIT REPORTS, AND CERTAIN MEDICAL DEVICE PRODUCT EVALUATION REPORTS: UNITED STATES AND THE EUROPEAN COMMUNITY

■ 5. The authority citation for 21 CFR part 26 continues to read as follows:

Authority: 5 U.S.C. 552; 15 U.S.C. 1453, 1454, 1455; 18 U.S.C. 1905; 21 U.S.C. 321, 331, 351, 352, 355, 360, 360b, 360c, 360d, 360e, 360f, 360g, 360h, 360i, 360j, 360l, 360m, 371, 374, 381, 382, 383, 393; 42 U.S.C. 216, 241, 242l, 262, 264, 265.

■ 6. Appendix E to Subpart A of part 26 is amended under the heading ''B. For the United States:'' in the entry for ''Human Drugs'' by removing the phrase ''MPN I, 7520 Standish Pl., Rockville, MD 20855–2737, phone: 301–594–0054, fax: 301–594–2114'' and by adding in its place the phrase ''5600 Fishers Lane, Rockville, MD 20857, phone: 301–827–8910, fax: 301–827–8901''.

PART 203—PRESCRIPTION DRUG MARKETING

■ 7. The authority citation for 21 CFR part 203 continues to read as follows:

Authority: 21 U.S.C. 331, 333, 351, 352, 353, 360, 371, 374, 381.

§ 203.12 [Amended]

■ 8. Section 203.12 is amended in the first sentence by removing the phrase ''7520 Standish Pl., Rockville, MD 20855'' and by adding in its place the phrase ''5600 Fishers Lane, Rockville, MD 20857''.

■ 9. Section 203.37 is amended by revising the first sentence of paragraph (e) to read as follows:

§ 203.37 Investigation and notification requirements.

* * * * *

(e) *Whom to notify at FDA.* Notifications and reports concerning prescription human drugs shall be made to the Division of Compliance Risk Management and Surveillance (HFD–330), Office of Compliance, Center for Drug Evaluation and Research, Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857. * * *

§ 203.70 [Amended]

■ 10. Section 203.70 is amended in paragraph (b)(1) by removing the phrase ''7500 Standish Pl., Rockville, MD 20855'' and by adding in its place the phrase ''5600 Fishers Lane, Rockville, MD 20857''.

PART 207—REGISTRATION OF PRODUCERS OF DRUGS AND LISTING OF DRUGS IN COMMERCIAL DISTRIBUTION

■ 11. The authority citation for 21 CFR part 207 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 355, 360, 360b, 371, 374, 381, 393; 42 U.S.C. 262, 264, 271.

§ 207.7 [Amended]

■ 12. Section 207.7 is amended in paragraph (d) by removing the phrase ''Drug Listing Branch (HFD–334)'' and by adding in its place the phrase ''Records Repository Team (HFD–143)''.

§ 207.22 [Amended]

■ 13. Section 207.22 is amended in paragraph (a) by removing the phrase ''Drug Listing Branch (HFD–334)'' and by adding in its place the phrase ''Records Repository Team (HFD–143)''; and in paragraph (b) by removing the phrase ''Drug Listing Branch (HFD–334)'' and by adding in its place the phrase ''Records Repository Team (HFD–143)''.

■ 14. Section 207.37 is amended by revising the introductory text of paragraph (a) to read as follows:

§ 207.37 Inspection of registrations and drug listings.

(a) A copy of the Form FDA–2656 (Registration of Drug Establishment) filed by the registrant will be available for inspection in accordance with section 510(f) of the act, at the Records Repository Team (HFD–143), Center for Drug Evaluation and Research, Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857. In addition, copies of these forms for establishments located within a particular geographic area are available for inspection at FDA district offices responsible for that geographical area. Copies of forms submitted by foreign drug establishments are available for inspection at the Division of Manufacturing and Product Quality, Foreign Inspection Team (HFD–325), Office of Compliance, Center for Drug Evaluation and Research, Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857. Upon request and receipt of a stamped, self-addressed envelope, the Records Repository Team, the Foreign Inspection Team, or the appropriate FDA district office will verify registration numbers or provide the location of a registered establishment. The mailing address for the Foreign Inspection Team is: Division of Manufacturing and Product Quality, Office of Compliance, Center for Drug Evaluation and Research (HFD–325), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857.

* * * * *

PART 314—APPLICATIONS FOR FDA APPROVAL TO MARKET A NEW DRUG

■ 15. The authority citation for 21 CFR part 314 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 355a, 356, 356a, 356b, 356c, 371, 374, 379e.

§ 314.81 [Amended]

■ 16. Section 314.81 is amended in paragraph (b)(3)(iii)(*b*) by removing the phrase ''Drug Listing Branch (HFD–334)'' and by adding in its place the phrase ''Records Repository Team (HFD–143)''.

§ 314.200 [Amended]

■ 17. Section 314.200 is amended in the second sentence of paragraph (a)(3) by removing the phrase ''Division of Drug Labeling Compliance (HFD–310)'' and by adding in its place the phrase ''Division of New Drugs and Labeling

Compliance (HFD–310), Office of Compliance''.

Dated: August 3, 2004.

Jeffrey Shuren,

Assistant Commissioner for Policy.

BILLING CODE 4160–01–S

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 520

Oral Dosage Form New Animal Drugs; Oxytetracycline Hydrochloride Soluble Powder

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule, technical amendment.

SUMMARY: The Food and Drug Administration (FDA) is amending the animal drug regulations to reflect approval of a supplemental abbreviated new animal drug application (ANADA) filed by Agri Laboratories, Ltd. The supplemental ANADA provides for a new packet size and strength of oxytetracycline hydrochloride soluble powder used to make medicated drinking water.

DATES: This rule is effective August 11, 2004.

FOR FURTHER INFORMATION CONTACT: Lonnie W. Luther, Center for Veterinary Medicine (HFV–104), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 301–827–8549, e-mail: *lonnie.luther@fda.gov*.

SUPPLEMENTARY INFORMATION: Agri Laboratories, Ltd., P.O. Box 3103, St. Joseph, MO 64503, filed a supplement to ANADA 200–066 that provides for use of AGRIMYCIN 166 (oxytetracycline hydrochloride) Soluble Powder for making medicated drinking water for the treatment of various bacterial diseases of livestock. The supplemental ANADA provides for a new packet size and strength of oxytetracycline hydrochloride soluble powder used to make medicated drinking water. The supplemental application is approved as of July 13, 2004, and the regulations are amended in 21 CFR 520.1660d to reflect the approval. The basis of approval is discussed in the freedom of information summary.

In accordance with the freedom of information provisions of 21 CFR part 20 and 21 CFR 514.11(e)(2)(ii), a summary of safety and effectiveness data and information submitted to support approval of this application may be seen in the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852, between 9 a.m. and 4 p.m., Monday through Friday.

The agency has determined under 21 CFR 25.33(a)(1) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

This rule does not meet the definition of ''rule'' in 5 U.S.C. 804(3)(A) because it is a rule of ''particular applicability.'' Therefore, it is not subject to the congressional review requirements in 5 U.S.C. 801–808.

List of Subject in 21 CFR Part 520

Animal drugs.

■ Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, 21 CFR part 520 is amended as follows:

PART 520—ORAL DOSAGE FORM NEW ANIMAL DRUGS

■ 1. The authority citation for 21 CFR part 520 continues to read as follows:

Authority: 21 U.S.C. 360b.

§ 520.1660d [Amended]

■ 2. Section 520.1660d is amended in paragraph (a)(6) by adding ''Each 2.73 grams of powder contains 1 gram of OTC HCl (packet: 9.87 oz).'' after the last sentence.

Dated: July 30, 2004.

Steven D. Vaughn,

Director, Office of New Animal Drug Evaluation, Center for Veterinary Medicine.

[FR Doc. 04–18361 Filed 8–10–04; 8:45 am]

BILLING CODE 4160–01–S

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 917

[KY–216–FOR]

Kentucky Regulatory Program

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Final rule; approval of amendment.

SUMMARY: We are approving, with certain exceptions, an amendment to the Kentucky regulatory program (the ''Kentucky program'') under the Surface Mining Control and Reclamation Act of 1977 (SMCRA or the Act). Kentucky proposed revisions to the Kentucky Administrative Regulations (KAR) pertaining to water replacement, subsidence, bonding, definitions, hydrology, and permits. Kentucky revised its program to be consistent with the corresponding Federal regulations.

DATES: Effective August 11, 2004.

FOR FURTHER INFORMATION CONTACT: William J. Kovacic, Telephone: (859) 260–8400. Internet address: *bkovacic@osmre.gov*.

SUPPLEMENTARY INFORMATION:

I. Background on the Kentucky Program

Section 503(a) of the Act permits a State to assume primacy for the regulation of surface coal mining and reclamation operations on non-Federal and non-Indian lands within its borders by demonstrating that its State program includes, among other things, ''a State law which provides for the regulation of surface coal mining and reclamation operations in accordance with the requirements of the Act'; and rules and regulations consistent with regulations issued by the Secretary pursuant to the Act.'' See 30 U.S.C. 1253(a)(1) and (7). On the basis of these criteria, the Secretary of the Interior conditionally approved the Kentucky program on May 18, 1982. You can find background information on the Kentucky program, including the Secretary's findings, the disposition of comments, and conditions of approval in the May 18, 1982, **Federal Register** (47 FR 21404). You can also find later actions concerning Kentucky's program and program amendments at 30 CFR 917.11, 917.12, 917.13, 917.15, 917.16 and 917.17.

II. Submission of the Proposed Amendment

By letter dated July 30, 1997 (administrative record no. KY–1410), Kentucky sent us, the Office of Surface Mining Reclamation and Enforcement (OSM), a proposed amendment to its program under SMCRA (30 U.S.C. 1201 *et seq.*) The amendment revises 405 KAR at Sections 8:001, 8:030, 8:040, 16:001, 16:060, 16:090, 16:100, 16:160,

18:001, 18:060, 18:090, 18:100, 18:160, and 18:210.

We announced receipt of the proposed amendment in the September 5, 1997, **Federal Register** (62 FR 46933), and in the same document invited public comment and provided an opportunity for a public hearing on the adequacy of the proposed amendment. The public comment period closed on October 6, 1997. On November 14, 1997, a Statement of Consideration of public comments was filed with the Kentucky Legislative Research Committee. As a result of the comments and by letter dated March 4, 1998, Kentucky made changes to the original submission (administrative record no. KY–1422). The revisions were made at 405 KAR 8:040, 16:060, 18:060, and 18:210. By letter dated March 16, 1998, Kentucky made additional changes to the original submission (administrative record no. KY–1423). The revisions were made at 8:001, 8:030, 8:040, 16:001, 16:060, 16:090, 16:100, 16:160, 18:001, 18:060, 18:090, 18:100, 18:160, and 18:210. By letter dated July 14, 1998, Kentucky submitted a revised version of the proposed amendments (administrative record no. KY–1431). All the revisions, except for a portion of those submitted March 16, 1998, were announced in the August 26, 1998, **Federal Register** (63 FR 45430).

During our review of the amendment, we identified concerns relating to the provisions at 405 KAR 8:001, 8:030, 8:040, 16:001, 16:060, 16:090, 16:100, 16:160, 18:001, 18:060, 18:090, 18:100, 18:160, and 18:210. We notified Kentucky of the concerns by letter dated May 26, 2000 (administrative record no. KY–1479). Kentucky responded in a letter dated August 10, 2000, and submitted additional explanatory information (administrative record no. KY–1489). The explanatory information and those revisions not included in previous notices were announced in the June 5, 2002, **Federal Register** (67 FR 38621). On October 29, 2003, we asked Kentucky to clarify its notification procedures pertaining to water loss. Kentucky responded with an electronic message on the same day (administrative record no. KY–1604) with the requested information. Because the information clarified existing procedures and did not constitute a revision of the regulations or add new provisions, we did not reopen the comment period.

We addressed a portion of Kentucky's revisions to the subsidence control regulations at 405 KAR 18:210 in a **Federal Register** final rule notice published on May 7, 2002 (67 FR 30549). The remaining subsidence issues will be discussed in this notice. We addressed a portion of Kentucky's revisions at 405 KAR 16/18:090 Sections 1, 4 and 5 and added Section 6 pertaining to sedimentation ponds and ''other treatment facilities'' in a **Federal Register** final rule notice published on May 8, 2003 (68 FR 24644). Lastly, we addressed Kentucky's revisions to its definitions of ''impounding structure,'' ''impoundment,'' and ''other treatment facilities'' at 405 KAR 8/16/18:001 and its impoundment and sedimentation pond regulations at 405 KAR 16/18:090 Sections 1 through 5, 16/18:100, and 16/18:160 in a **Federal Register** final rule notice published on July 17, 2003 (68 FR 42266).

III. OSM's Findings

Following are the findings we made concerning the amendment under SMCRA and the Federal regulations at 30 CFR 732.15 and 732.17. We are approving the amendment, with exceptions as described below. Any revisions that we do not specifically discuss below concern nonsubstantive wording or editorial changes.

[a] Revisions To Kentucky's Rules That Have the Same Meaning as the Corresponding Provisions of the Federal Regulations

Kentucky proposed revisions to the following rules containing language that is the same as or similar to the corresponding sections of the Federal regulations.

State rule	Subject	Federal counterpart
405 KAR 8/18:001 Section 1(60) and (61)	Material Damage	30 CFR 701.5.
405 KAR 8/18:001 Section 1(65) and (67)	Noncommercial Building	30 CFR 701.5.
405 KAR 8/18:001 Section 1(69) and (68)	Occupied Residential Dwelling and Structures Related Thereto.	30 CFR 701.5.
405 KAR 8/16/18:001 Section 1(86), (81) and (84).	Previously Mined Area	30 CFR 701.5.
405 KAR 8:040 Section 26(1)(a) and (b)	Subsidence Control	30 CFR 784.20(a)(1) and (2).
405 KAR 8:040 Section 26(2)(3)(a–d) and (f–i)	Subsidence Control	30 CFR 784.20(b), (b)(1–4) and (6–9).
405 KAR 18:210 Section 1(1–3)	Subsidence Control	30 CFR 817.121(a)(1), (2), (3) and (b).
405 KAR 18:210 Section 3(1–3)	Subsidence Control	30 CFR 817.121(c)(1–3).
405 KAR 18:210 Section 4(1–3)	Subsidence Control	30 CFR 817.121(d), (e) and (f).

Because these proposed rules contain language that is the same as or similar to the corresponding Federal regulations, we find that they are no less effective than the corresponding Federal regulations and can be approved.

[b] Revisions To Kentucky's Rules That Are Not the Same as the Corresponding Provisions of the Federal Regulations

1. In the following sections, and their Federal counterparts, each rule contains a descriptive phrase followed by ''including, but not limited to,'' or a derivative of such language and then a list of examples. Kentucky proposes to delete the phrase ''but not limited to'' which follows ''including'' from each of these rules. Kentucky is not proposing to substantively revise the descriptive phrases in any of these rules, nor is it proposing any changes to the specific examples that should be considered as included within those descriptive phrases. The intent of the Federal rules, in each case, is to clarify the reach of the descriptive phrase and specify that certain items should be included while providing the authority to reach other unspecified terms if they also fall within the descriptive phrase of the rule. The word ''including'' is, by its very nature, not limiting; nor does it restrict the descriptive phrase of each rule. Therefore, having the phrase ''but not limited to'' in each of these rules could be considered redundant; although it does clarify that the listed examples are not all inclusive.

Kentucky, in its letter dated August 10, 2000, expresses concern that having the phrase ''but not limited to'' after the word ''including'' makes its rules too vague and open ended. Kentucky goes on to indicate that it believes the deletion of ''but not limited to'' in each of these rules significantly restricts its discretion, but does not necessarily eliminate it. We do not concur that the

phrase ''but not limited to'' makes these rules too vague and open ended because the reach of each rule is still proscribed by the descriptive phrase that precedes the list of examples. However, we do concur that Kentucky would still have the authority and discretion, under the proposed changes, to reach items not listed in the examples, when necessary. In fact, Kentucky would still have the obligation to do so when such items fall within the descriptive phrase of each rule. That is because the word ''including'' is not limiting nor has the descriptive phrase of each rule, which proscribes its reach, been revised. Based upon that understanding, we find these changes do not render the Kentucky program less effective than the Federal rules and can be approved. Should we, through future oversight, find that Kentucky is no longer, in fact, reaching items that should have been addressed by these regulations because they are not contained in the lists of examples, we will revisit the issue and may require an amendment to the Kentucky program to reinstate this phrase.

State rule	Federal counterpart
405 KAR 8/18:001 Section 1(20)—Definition of Coal Processing Plant	30 CFR 701.5.
405 KAR 8/18:00l Section 1(24)—Definition of Community or Institutional Building	30 CFR 761.5.
405 KAR 8:030/8:040 Section 11(2)(a)	30 CFR 779.12(b)(1)/783.12(b)(1).
405 KAR 8:030 Section 23(1)(g)	30 CFR 779.24(e).
405 KAR 8:030/8:040 Section 24(4)(e)	30 CFR 780.18(b)(5)/784.13(b)(5).
405 KAR 8:030 Section 27(2)(e)	30 CFR 780.35(b)(5).
405 KAR 8:040 Section 26(3)(e)	30 CFR 784.20(b)(5).
405 KAR 16/18:001 Section 1(53) and (55)—Definition of In Situ Process	30 CFR 701.5.
405 KAR 16:001 Section 1(99)—Definition of Significant, Imminent Environmental Harm	30 CFR 701.5.
405 KAR 16/18:060 Section 2(2)	30 CFR 816.45(b)/817.45(b).

2. In the following sections, Kentucky proposes to delete the phrase ''but not limited to.'' The Federal rules listed below do not include the phrase ''but not limited to'' or otherwise state that the requirements are not inclusive. Therefore, we find that the deletion of the phrase ''but not limited to'' does not render the Kentucky regulations listed below, less effective than the corresponding Federal regulations and can be approved.

State rule	Federal counterpart
405 KAR 8/16/18:001 Section 1(108), (98) and (100)—Definition of Sedimentation Pond	30 CFR 701.5.
405 KAR 8:030/040 Section 3(3)(d)(1)	30 CFR 778.14(c)(6).
405 KAR 8:030/040 Section 13(1)(b) and (3)	30 CFR 780.22 (b)/784.22(b).
405 KAR 8:030/040 Section 14(5) and 15(5)	30 CFR 780.21(b)/784.14(b).
405 KAR 8:030/040 Section 37(1)(b)	30 CFR 780.23(b)/784.15(b).
405 KAR 16/18:060 Section 1(4)(b)	30 CFR 816.41(a)/817.41(a).

3. 405 KAR 8/16/18:001 Section 1(46) and (49)—Kentucky proposes revisions to its definition of ''historically used for cropland,'' by deleting the description of the term ''acquisition'' and reorganizing the remainder of the definition to provide a more straightforward reading. OSM approved the 1 definition of ''historically used for cropland'' in 1982. (47 FR 21409 (May 18, 1982)). Because Kentucky is adding the definition of ''acquisition'' to include the old description, we find that Kentucky's proposed changes to its definition are no less effective than the Federal definition of ''historically used for cropland'' at 30 CFR 701.5 and can be approved.

4. 405 KAR 8:030/8:040 Section 4(3)—Kentucky proposes to delete these sections which read, ''Nothing in this section shall be construed to afford the cabinet the authority to adjudicate property title disputes.'' Kentucky stated in its August 10, 2000, response that the deletion of this subsection does not render Kentucky's program less effective because there is nothing in the Kentucky statutes that gives Kentucky the authority to adjudicate property title disputes. Because Kentucky lacks the authority to decide property disputes and the Federal regulations at 30 CFR 778.15(c) do not provide the regulatory authority with the authority to adjudicate property rights disputes, we find that Kentucky's proposed revisions are no less effective than the Federal regulations and can be approved.

5. 405 KAR 8:030 Section 12(4)—Kentucky revises this subsection to require that water quality analysis and sampling shall be conducted according to the 14th edition of Standard Methods for the Examination of Water and Wastewater or 40 CFR Parts 136 and 434. Kentucky's regulations are substantively identical to the Federal regulations at 30 CFR 780.21(a), except the Federal regulation refers to the 15th edition of the publication. Because the 15th edition is not substantively different from the 14th edition, we find that Kentucky's proposed revision is no less effective than the Federal regulation and can be approved.

6. 405 KAR 8:030/8:040 Section 16—Kentucky proposes to require that if the determination of probable hydrologic consequences (PHC) (required in Section 32) indicates that proposed surface or underground mining activities may proximately result in contamination, diminution, or interruption of an underground or surface source of water within the proposed permit area or adjacent area which is used for domestic, agricultural, industrial, or other legitimate use, then the application will identify and describe the adequacy and suitability of the alternative sources of water supply that could be developed for existing premining and approved postmining land uses. The Federal regulation at 30 CFR 780.21(e) also requires that if the PHC determination indicates that the surface coal mining operation proximately results in contamination, diminution or interruption of a protected water source then the permit application must contain information on water availability and water sources. The Federal regulation at 30 CFR 784.14(e)(3)(iv) requires a PHC finding on whether or not underground mining activities conducted after October 24, 1992, may result in contamination, diminution or interruption of a well or spring that is used for protected water

supplies. Even though the Federal regulation for underground mining activities and section 720 of SMCRA do not explicitly include the terms ''proximately result'' we find the use of Kentucky's term for both surface and underground mining activities is consistent with SMCRA.

Legislative history to a predecessor of Section 720 of SMCRA indicates that Congress believed Section 717(b) of SMCRA, which delineates water rights and replacement requirements for surface mining activities, would apply to underground mining. *See*, H.R. Rep. No. 102–474 at 132 (1992). Section 717(b) uses the term ''proximately resulting.'' Thus, absent explicit Congressional intent to the contrary, we find that the most reasonable construction is to use ''proximate result.'' Accordingly, we find the proposed Kentucky regulations are no less effective than the Federal regulations at 30 CFR 780.21(e) and 784.14(e)(3)(iv) and can be approved.

7. 405 KAR 8:030/8:040 Section 32(3)(e)—Kentucky proposes to require that the determination of PHC in the permit application include a finding on whether the proposed mining activities may proximately result in contamination, diminution, or interruption of an underground or surface source of water within the permit or adjacent area that is used for domestic, agricultural, industrial, or other legitimate use at the time the application is submitted. Section 405 KAR 8:040 also requires that the finding should include underground mining activities after July 16, 1994. Even though the Federal regulation for underground mining activities does not explicitly include the terms ''proximately result'' we find the use of Kentucky's term for both surface and underground mining activities is consistent with SMCRA. As discussed in the previous finding, we find that Kentucky's proposed regulations are no less effective than the Federal regulations at 30 CFR 780.21(f)(3)(iii) and 784.14(e)(3)(iv) and can be approved.

Kentucky has stated to OSM that it does not have the statutory authority to enforce water replacement requirements prior to July 16, 1994. In implementing 30 CFR 843.25 [Energy Policy Act enforcement in States with approved State programs], OSM has previously found for the Kentucky regulatory program that ''[f]or those underground mining activities conducted after October 24, 1992, and before July 16, 1994, OSM will enforce the provisions of 30 CFR 817.41(j).'' 60 FR 38682, 38685 (July 28, 1995). Thus, where Kentucky cannot enforce the provisions of 30 CFR 817.41(j), OSM will continue to enforce the provisions of 30 CFR 817.41(j) for underground mining activities conducted after October 24, 1992, and before July 16, 1994.

8. 405 KAR 8:030/8:040 Section 34(1) and(4)—Kentucky proposes to change the term ''coal processing waste'' to ''coal mine waste.'' Kentucky's regulations are nearly identical to the Federal regulations at 30 CFR 780.25(a) and (d) and 784.16(a) and (d). The Federal rules use the term ''coal processing waste.'' However, the Federal regulations at 30 CFR 701.5 define ''coal mine waste,'' in part, as ''coal processing waste.'' We, therefore, find that Kentucky's proposed revisions are no less effective than the corresponding Federal regulation at 30 CFR 780.25(a) and (d), and 784.16(a) and (d) and can be approved.

9. 405 KAR 8:030/8:040 Section 34(2)—Kentucky proposes to delete subsection (b) and revise subsection (a) to require that temporary and permanent sedimentation ponds be designed to comply with the requirements of 405 KAR 16:090 and 16:100. The deleted requirement that mine reclamation plans comply with the requirements of the Mine Safety and Health Administration (MSHA) is added at subsection (3). We find that Kentucky's proposed revisions are no less effective than the corresponding Federal regulations at 30 CFR 780.25(b) and 784.16(b) which also requires compliance with the applicable performance standards and can be approved.

10. 405 KAR 8:030/8:040 Section 34(3)—Kentucky proposes to require that the plans for permanent and temporary impoundments that are required to be submitted to MSHA also be submitted to Kentucky as part of the permit application. After the plan has been approved by MSHA, the permit applicant must submit a notarized copy of the final approved plan and any other MSHA-related correspondence or documents. The Federal regulations at 30 CFR 780.25(c)(2) and 784.16(c)(2) require the submission of the plans as part of the permit application. The regulations do not, however, specify that the final MSHA-approved plans be submitted. We find that this additional requirement does not render Kentucky's program less effective than the corresponding Federal regulations and can be approved.

11. 405 KAR 8:030/8:040 Section 34(5)—Kentucky proposes to require the same submissions for coal mine waste dams and embankments as those described above for impoundments. The Federal regulations at 30 CFR 780.25(e) and 784.16(e) require the submission of plans as part of the permit application. The regulations do not, however, specify that the final MSHA-approved plans be submitted. We find that Kentucky's proposed requirements do not render the Kentucky program less effective than the corresponding Federal regulations and can be approved.

12. 405 KAR 8:030/8:040 Section 34(6)—Kentucky proposes to require that, if an impoundment or embankment structure is classified as Class B or C, or if it meets the size or other criteria of MSHA, the corresponding plan must include a stability analysis of each structure. The Federal regulations at 30 CFR 780.25(f) and 784.16(f) refer to the B or C dam classification criteria as specified in the Soil Conservation Service (currently the Natural Resource Conservation Service—NRCS) Technical Release No 60, Earth Dams and Reservoirs, 1985 (TR–60). Kentucky includes a reference to its counterpart criteria to TR–60: 405 KAR 7:040 Section 5 and 4:030. Additionally, Kentucky proposes to delete the phrase ''but not limited to'' in reference to what a stability analysis must contain. We refer to our discussion at finding b–1 above in which we approved the deletion of the phrase. Accordingly, we find Kentucky's proposed regulations are no less effective than the corresponding Federal regulations and can be approved.

13. 405 KAR 8:040 Sections 26(1)(c) and (1)(d)—Kentucky proposes to require that a permit application include an example of a letter by which the applicant proposes to notify owners of all structures for which a presubsidence survey is required under 405 KAR 18:210 Section 1(4). The application must also include a survey of the quantity and quality of each protected water supply within the permit and adjacent areas. The applicant must pay for the technical assessment or engineering evaluation used to determine the quantity and quality of a water supply and must provide copies of the survey and assessment or evaluation to the property owner and to Kentucky. If the owner disagrees with the survey results, he or she may submit any concerns in writing to the regulatory authority.

The Federal regulations at 30 CFR 784.20(a)(3) require the completion of a presubsidence survey prior to permit approval. The survey should include the condition of all non-commercial buildings or occupied residential dwellings that may be materially damaged as well as a survey of drinking, domestic and residential water supplies

within the permit and adjacent areas. The Federal rules also require the applicant to supply copies to the property owner and the regulatory authority and to pay the costs of the assessment, etc. It should be noted, however, that the Federal regulations at 30 CFR 784.20(a)(3), as they pertain to the requirements to perform a survey of the condition of all noncommercial buildings or occupied residential structures that may be materially damaged within the areas encompassed by the applicable angle of draw, were suspended by OSM pursuant to an earlier court order. 64 FR 71653 (December 22, 1999).

Kentucky subsequently deleted 405 KAR 18:210 Section 1(4) because it was substantively identical to the suspended portion of the corresponding Federal regulation. OSM approved the deletion on May 7, 2002 (67 FR 30549). However, Kentucky is retaining its requirements with regard to a presubsidence survey for water supplies. Therefore, we find 405 KAR 8:040 Section 26 (1)(d) no less effective than the Federal rule because its requirements are the same as the Federal rule and can be approved. Because 405 KAR 8:040 Section 26(1)(c) relates to the presubsidence structure survey requirement of 405 KAR 18:210, which was proposed as an amendment but then deleted, 8:040 Section 26(1)(c) has no effect and is not considered part of Kentucky's approved program.

14. 405 KAR 8:040 Section 32(1)(b)5—Kentucky proposes to require that each underground coal mining permit application include a description that identifies the protective measures to be taken to protect or replace the water supply of present users as required by 405 KAR 18:060 Section 12. Section 12 requires the permittee to provide a replacement water supply that is equivalent to the premining quantity and quality with an equivalent water delivery system. The Federal definition of ''replacement of water supply'' requires that the replaced water supply must be equivalent to premining quantity and quality with an equivalent delivery system. The replaced water supply is not subject to the current use, but to the premining supplies. 60 FR 16722, 16726 (March 31, 1995). Kentucky acknowledged in its Statement of Consideration that the Kentucky statute (KRS 350.421) does not limit the replacement of water supplies to the uses in existence at the time of the permit issuance. Accordingly, Section 32(1)(b)5, when read together with 405 KAR 18:060 Section 12, is consistent with the Federal rules and can be approved.

15. 405 KAR 16:001 Section 1(63)/18:001 Section 1(62)—Kentucky proposes to delete the definition of ''noxious plants.'' Kentucky stated in its August 10, 2000, response that there is no official list of noxious plants for the State of Kentucky. The Federal regulations at 30 CFR 701.5 define ''noxious plants'' to mean ''species included on official State lists of noxious plants for the State.'' Because Kentucky has no official State list of noxious plants, and Kentucky still requires at 405 KAR 16/18:200 Section 1(5)(a) that plant species for revegetation must meet the applicable Federal laws for noxious plants, we find that Kentucky's proposed deletion is not inconsistent with the Federal regulations which also require that a vegetative cover meet Federal noxious plant laws and regulations and can be approved.

16. 405 KAR 16/18:060 Section 4(1)—Kentucky proposes to revise its general hydrologic provisions to require ''identifying, burying, and treating'' materials in accordance with 405 KAR 16/18:190 Section 3. The Federal regulations at 30 CFR 816/817.41(f)(1)(i) require ''identifying and burying and/or treating, when necessary, materials * * *'' When we asked if this meant all three procedures would be required, Kentucky indicated in a letter dated August 10, 2000, that the Federal rules do not require all three actions and that section 3 prescribes the appropriate cover and treatment as necessary (administrative record no. KY–1489). As with the Federal rules, Kentucky's rules do not require all three actions. Accordingly, we find that the revisions are no less effective than the Federal regulations and can be approved.

17. 405 KAR 16:060 Section 8 and 18:060 Section 12—Kentucky proposes to revise Section 8 and add Section 12 to establish requirements for the replacement of water supplies. At subsection (1)(a), Kentucky is required to promptly notify the permittee if the Natural Resources and Environmental Protection Cabinet (the Cabinet) receives a complaint alleging the permittee's activities have adversely affected the complainant's water supply. At subsection (1)(b), Kentucky is requiring the operator or permittee to promptly replace a water supply that has been adversely affected by the contamination, diminution or interruption proximately resulting from the mining operation. For underground mines, the replacement requirement is applicable to underground mining activities conducted after July 16, 1994.

The Federal regulation at 30 CFR 816.41(h) requires the replacement of certain affected water supplies proximately resulting from surface mining activities. The Federal regulation at 30 CFR 817.41(j) requires prompt replacement of a more limited range of water supplies adversely affected by underground mining activities. As discussed in earlier findings, even though the Federal regulation for underground mining activities does not explicitly include the term ''proximately resulting'' we find that Kentucky's use of that term for both surface and underground mining activities is not inconsistent with SMCRA. Accordingly, we find the proposed Kentucky regulations at subsections (1)(a) and (b) no less effective than the Federal regulations and can be approved. We would also note that SMCRA requires the enforcement of Section 720(a) as soon as it was enacted, which was October 24, 1992. Kentucky has stated to OSM that it does not have the statutory authority to enforce water replacement requirements prior to July 16, 1994. Thus, as we also stated earlier, ''[f]or those underground mining activities conducted after October 24, 1992, and before July 16, 1994, OSM will enforce the provisions of 30 CFR 817.41(j).'' 60 FR 38682, 38685 (July 28, 1995).

Kentucky also proposes to delete the existing requirement that the Cabinet shall issue a notice of noncompliance—Kentucky's equivalent to a federal notice of violation—to the permittee or operator and order the replacement of the water supply if it determines that a protected water supply has been contaminated, diminished, or interrupted by the mining operation. Just because the water supply has been contaminated, diminished or interrupted by a mining operation, it is not a violation of SMCRA. A violation occurs under SMCRA when a permittee fails to replace the protected water supply. Kentucky must still issue, and still has the authority to issue, an NOV when a permittee does not timely replace a protected water supply. Thus, we are approving Kentucky's deletion.

At subsection (2)(a), Kentucky establishes timetables for the replacement of a domestic water supply; within 48 hours for an emergency water supply, within two weeks for a temporary water supply and within two years for a permanent supply. The timetables are triggered by a notice from the Cabinet that the water supply was adversely impacted by mining. In an e-mail notification to OSM on October 29, 2003, (administrative record no. KY–1604), Kentucky clarified its citizen complaint process by stating that it sends an initial letter to provide notice

to the permittee that a complaint has been received. A second letter to the permittee follows Kentucky's investigation and gives notice of the obligation to replace the water supply and provides the regulatory timeframes for replacement. If the permittee fails to replace the supply in accordance with the regulatory timeframes, an NOV is issued.

Section 720(a)(2) of SMCRA and 30 CFR 817.41(j) require the permittee to promptly replace any drinking, domestic, or residential water supply from a well or spring that was in existence at the time of permit application and that has been adversely affected by underground mining operations.

Additionally, the definition of ''replacement of water supply'' at 30 CFR 701.5 requires a permittee to replace water on a temporary and permanent basis and ''is intended to apply to replacement of water supply under both Sections 717(b) and 720(a)(2) of SMCRA.'' 60 FR 16721, 16726 (March 31, 1995). As discussed above in this finding, Kentucky's proposed revisions specify timeframes for emergency, temporary, and permanent replacement of domestic water supplies. Because the proposed regulations include surface (16:060) and underground (18:060) mining operations, we find that these specific timeframes are sufficient to meet the requirement for replacement of water supplies on a temporary and permanent basis as mandated by the Federal rules. These revisions are sufficient to resolve the required amendment found at 30 CFR 917.16(m). We make this finding with the understanding that any drinking or residential water supply from a spring or well impacted by underground mining is considered a domestic water supply and is covered by the timeframes contained in 2(a). We are therefore removing the existing requirement at 30 CFR 917.16(m) that required Kentucky to amend its program to provide for the prompt replacement of water supplies.

At subsection 2(b), Kentucky is required to establish the replacement timetable on a case-by-case basis for water supplies other than domestic supplies. The Federal regulations at 30 CFR 816.41(h) and 817.41(j) do not specify a timetable for the replacement of these water supplies. Again, OSM finds that this subsection is not inconsistent with the Federal regulations and is approving it with the understanding that Kentucky does consider domestic water supplies covered by 2(a) to include any drinking or residential water supply from a well or spring in existence at the time of the permit application and that is adversely affected by underground mining operations.

At subsections 2(c) and (d), the replacement water supply must be of quantity and quality equivalent to the premining water supply and an equivalent water delivery system must be provided. At subsection 2(e), the permittee is required to pay, for a period of 20 years or other period agreed to by the permittee and owner, any operation and maintenance costs in excess of customary and reasonable operation and maintenance costs for the premining supply. Several alternative methods of payment are proposed. The Federal regulation at 30 CFR 701.5 defines ''replacement of water supply'' as ''provision of water supply on both a temporary and permanent basis equivalent to premining quality and quantity * * * and payment of operation and maintenance costs in excess of customary and reasonable delivery costs for premining water supplies.'' The maintenance costs may be paid ''for a period agreed to by the permittee and the water supply owner.'' In the Federal rule preamble, we gave as an example, that in determining the useful life of a delivery system, 20 years may be a reasonable amount of time to calculate the lump sum payment by a permittee (60 FR at 16726). Kentucky has incorporated that 20-year timeframe directly into its regulations. However, the regulation also includes authority to modify that period when agreed to by the permittee and the owner. Accordingly, we find these subsections are no less effective than the Federal rule and can be approved.

At subsection (3), Kentucky establishes certain conditions under which it may not actually be necessary to replace a damaged water supply. If the affected water supply was not needed for the land use in existence at the time of loss, contamination, or diminution, and if the supply is not needed to achieve the postmining land use, replacement requirements may be satisfied by demonstrating that a suitable alternative water source is available and could feasibly be developed. With this approach, written concurrence from the owner of interest is required. The Federal definition of ''replacement of water supply'' also provides that a delivery system does not need to be replaced as long as it is demonstrated that a suitable alternative water source is available for future development. Accordingly, we find that Kentucky's proposed regulations at subsection (3) are no less effective than the Federal regulation at 30 CFR 701.5 and can be approved.

At subsection (4)(a), Kentucky requires that if the permittee does not complete the water replacement within 90 days, he/she must post an additional performance bond to cover the replacement. Under certain conditions, the 90-day period may be extended up to one year. The Federal rule at 30 CFR 817.121(c)(5), which is applicable to underground mining operations, requires an adjustment to the bond amount for water supplies protected under 30 CFR 817.41(j), if water supplies are not replaced within 90 days of the occurrence, with an extension of the grace period for up to one year. The Federal regulations do not specify a timeframe for adjusting a bond when water supplies are affected by surface coal mining operations. Nonetheless, we find Kentucky's provision for surface coal mining operations not inconsistent with the Federal requirements and we find that Kentucky's surface and underground mining provisions for bonding of affected water supplies are no less effective than the Federal rule at 30 CFR 817.121(c)(5) and are approving the revisions.

At subsection (4)(b), Kentucky allows the permittee's liability insurance coverage to take the place of additional bond coverage for the water supply, to the extent that applicable coverage is available. We find that Kentucky's proposed regulations at subsections (4)(b) are consistent with and no less effective than the Federal regulation at 30 CFR 800.14(c), which allows liability insurance in lieu of a bond, and can be approved.

At subsection (4)(c), Kentucky provides for the prompt release of the additional bond amount after the water replacement has been completed successfully based on the permittee's application and submitted information and Kentucky's own investigation as appropriate. This proposal regarding release of additional bond addresses two aspects: first, when bond release may be granted for water replacement, and second, the process/requirements to be used in releasing the additional bond. The Federal rule for underground mining activities at 30 CFR 817.121(c)(5) expressly requires that the additional bond must be held ''until the * * * replacement is completed.'' There is no parallel regulation for surface coal mining operations. Nonetheless, that aspect of Kentucky's proposed rules for surface and underground mining operations is consistent with and no less effective than the Federal rule. Unlike the Kentucky proposal, however, the Federal rule does not include a separate

bond release process as proposed by Kentucky. Instead, in response to comments that no bond release provisions were included in the Federal rule, the preamble states ''procedures for bond release are set forth in sections 800.17 and 800.40.'' 60 FR 16742. Generally, section 800.17 requires compliance with 30 CFR 800.40. Thus, it is clear that the bond release process of Section 800.40 is to be followed in releasing the additional bond. Because the Kentucky proposal circumvents much of that procedure, we are not approving the proposed rule to the extent that it provides for a less effective bond release process than the Federal rule. Kentucky's existing approved bond release procedures will continue to be applicable to the release of bond following water replacement.

18. 405 KAR 18:001 Section (1)—Kentucky proposes to define ''Angle of Draw'' as the angle of inclination between the vertical at the edge of the underground mine workings and the point of zero vertical displacement at the edge of a subsidence trough. As noted in finding b–13 above, the Federal regulations at 30 CFR 784.20(a)(3), as they pertain to the requirements to perform a survey of the condition of all noncommercial buildings or occupied residential structures that may be materially damaged within the areas encompassed by the applicable angle of draw, were suspended by OSM. Kentucky subsequently deleted 405 KAR 18:210 Section 1(4) because it was substantively identical to the suspended portion of the corresponding Federal regulation. OSM approved the deletion on May 7, 2002. Because the related regulations to which the definition of ''Angle of Draw'' pertained were deleted, the definition has no effect and OSM is not taking any action on this definition and it is not considered part of Kentucky's approved program.

19. 405 KAR 18:210 Section 2(1) and (3)—Kentucky proposes to require that a permittee mail a notification to all owners and occupants of surface property and structures within the area above the underground workings at least 90 days prior to mining. The notification shall include at a minimum the specific areas in which mining will take place, dates that 2 specific areas are anticipated to be undermined and the location where the subsidence control plan may be examined. The Federal regulations at 30 CFR 817.122 require that a notification be made at least six months prior to mining, or within that period if approved by the regulatory authority. Because the regulatory authority has discretionary authority to alter the notification period and the notification includes those items listed in the Federal regulations, we find that Kentucky's proposed regulations are no less effective than the Federal regulations and can be approved.

20. 405 KAR 18:210 Section 3(5)(a)—Kentucky proposes to require that the permittee obtain additional performance bond if subsidence-related material damage to land, structures, or facilities occurs. If repair or compensation is completed within 90 days, no additional bond is necessary. Kentucky may extend the grace period for up to one year. The proposed regulations are substantively identical to the Federal regulations at 30 CFR 817.121(c)(5) with one exception; the Federal regulations also require an additional performance bond if a protected water supply is affected. Kentucky, however, addresses this contingency at 405 KAR 16:060 Section 8 and 18:060 Section 12 at subsection 4(a) (see finding b–17 above). We find that Kentucky's proposed regulations at 18:210 Section 3(5)(a), when read in conjunction with the proposed regulations at 16:060 Section 12 and 18:060 Section 12, are no less effective than the corresponding Federal regulations and can be approved.

21. 405 KAR 18:210 Section 3(5)(b)—Kentucky proposes to allow the reduction of the additional performance bond required at Section 3(5)(a) by the amount of a permittee's liability insurance applicable to subsidence damage. Such insurance would not prevent bond forfeiture under 405 KAR 10:050. The Federal rules allow a permittee's liability insurance policy to cover the obligations under 30 CFR 817.121(c) instead of a performance bond. Because both the Federal and Kentucky regulations allow for the substitution of liability insurance in lieu of bonding, we find that Kentucky's proposed regulation is no less effective than the Federal regulation at 30 CFR 800.14(c) and can be approved.

22. 405 KAR 18:210 Section 3(5)(c)—Kentucky proposes to provide for the prompt release of the additional bond amount described in Section 3(5)(a) if it determines that the permittee has satisfactorily completed the required repair or compensation. As discussed above in finding b–17, at 405 KAR 16:060 Section 8 and 18:060 Section 12(4)(c), to the extent that this section provides a bond release process that is less effective than that contained in 30 CFR 800.40, we are not approving it.

23. 405 KAR 18:210 Section 5(1) and (2)—Kentucky proposes to require that a permittee submit an annual plan of existing and proposed underground workings that includes maps and descriptions of significant features, extraction ratios, protective measures, full extraction areas and other information. Other maps may be used so long as all the required information is provided. The Federal regulation at 30 CFR 817.121(g) requires that a plan with the same information as required by Kentucky be submitted within a schedule approved by the regulatory authority. The Federal rules also provide that the operator may request confidentiality of information pursuant to 30 CFR 773.6(d). In the May 26, 2000, letter, we noted that Kentucky's rules did not allow for confidentiality of submitted information. Kentucky, in its response dated August 10, 2000, stated that the procedures for requesting confidentiality are set forth in 405 KAR 8:010 Section 12. We find that Kentucky's proposed regulations in conjunction with its clarification of confidentiality procedures are no less effective than the corresponding Federal regulations and can be approved.

[c] Revisions To Kentucky's Rules With No Corresponding Federal Regulations

1. 405 KAR 8:001/16:001/18:001 Section 1(3)—Kentucky proposes to add the term ''acquisition'' and defines it as the purchase, lease, or option of the land for the purposes of conducting or allowing through resale, lease, or option, the conduct of surface coal mining and reclamation operations. This definition was formerly included in Kentucky's definition of ''historically used for cropland.'' Kentucky submitted the definition in response to OSM's finding on October 22, 1980, (45 FR 69947) that the term was not defined in Kentucky's regulations. The Federal rules have no counterpart definition. However, the Federal rules define ''historically used for cropland.'' In that definition, OSM discusses the acquisition of lands citing the examples used by Kentucky in its definition of ''acquisition.'' Accordingly, we find that Kentucky's proposed definition of the term is not inconsistent with the requirements of SMCRA and the Federal regulations and can be approved.

2. 405 KAR 8:001 (reference to ASTM Standard D 388–77 only)/16:001 and 18:001 Section 2—Kentucky proposes to incorporate by reference ASTM Standard D 388–77, Standard Specification for Classification of Coal by Rank, 1977; and Method for Determination of Slake Durability Index, Kentucky Method 64–513–79, 1979. The Federal rules at 30 CFR 700.5 define ''anthracite'' and ''coal'' as coal classified in ASTM Standard D 388–77, which is also incorporated by reference into the Federal regulations. Therefore, the incorporation by reference to the

ASTM Standard D 388–77 is no less effective than the Federal rules. There is no Federal counterpart to Slake Durability Index. However, we find that Kentucky's proposed regulations add specificity to the Kentucky program and are not inconsistent with the requirements of SMCRA and the Federal regulations and can be approved.

3. 405 KAR 8:030/8:040 Section 20(3)—Kentucky proposes to revise its requirement that wetland delineations in permit applications must be conducted in accordance with the Corps of Engineers Wetlands Delineation Manual, U.S. Army Corps of Engineers Regulatory Guidance Letter No. 90–7, National Lists of Plant Species that Occur in Wetlands and Biological Reports and Summary and List of Hydric Soils of the U.S., All Kentucky Counties. The Federal regulations at 30 CFR 780.16 and 784.21 require site specific resource information when the permit and adjacent areas are likely to include wetlands. However, the Federal regulations do not specify what the permittee must follow to delineate the wetlands. Because the wetland references provide an additional level of specificity, we find that Kentucky's proposed regulations are not inconsistent with the requirements of SMCRA and the Federal regulations and can be approved.

4. 405 KAR 8:030 Section 38/8:040 Section 39—Kentucky proposes to incorporate by reference: Standard Methods for the Examination of Water and Wastewater, 1975; Corps of Engineers Wetlands Delineation Manual, 1987; U.S. Army Corps of Engineers Regulatory Guidance Letter No. 90–7, 1990; National Lists of Plant Species that Occur in Wetlands, and Biological Reports and Summary, 1988; and List of Hydric Soils of the United States, All Kentucky Counties, 1991. As previously stated, the Federal regulations at 30 CFR 780.21(a) and 784.14(a) refer to the 15th edition of the Standard Methods for the Examination of Water and Wastewater. Because the 15th edition is not substantively different from the 14th edition, we find that Kentucky's proposed incorporation by reference is no less effective than the Federal regulations and can be approved.

Also as previously discussed, we find the remaining references add specificity to the Kentucky program and are not inconsistent with the requirements of SMCRA and the Federal regulations.

5. 405 KAR 16:001 Section 1(32) and 18:001 Section 1 (35)—Kentucky proposes to add the term ''durable rock'' and defines it as ''rock that does not slake in water, is not reasonably expected to degrade to a size that will adversely affect the effectiveness of the internal drainage system, and has a slake durability index value of 90 percent or greater''. The Federal regulations have no counterpart definition but address durable rock fills at 30 CFR 816/817.73(b). In response to comments, the Federal rules were revised to refer to durable rock as that type of rock that does not slake in water and will not degrade to soil materials. Soil materials are, in relation to durable rock fills, any materials that have degraded or will degrade to such a size as to block or cause failure of the underdrain system. 48 FR 32910, 32921 (July 19, 1983). Thus, the Federal rules contemplated that ''the rock must remain rock'' and not block the drainage. Kentucky's definition is no less effective than 30 CFR 816/817.73 because it refers to rock that will not slake and meets the objective of the Federal rule, *i.e.,* that it will not degrade to a size that will adversely affect the drainage system. Accordingly, we find that the definition is not inconsistent with the Federal rules at 30 CFR 816/817.73 and can be approved.

6. 405 KAR 16:001 Section 1(108) and 18:001 Section 1 (109)—Kentucky proposes to add the term ''surface blasting operations'' and defines it as the on-site storage, transportation, and use of explosives in association with a coal exploration operation, surface mining activities, or a surface disturbance of underground mining activities. It includes the design of the actual blast; implementation of a blast design; initiation of a blast; monitoring of an airblast and ground vibration; the use of access, warning and all-clear signals; and other protective measures. The Federal regulations have no counterpart definition but address surface blasting activities at 30 CFR 816/817.61–68. We find that Kentucky's proposed definition is not inconsistent with the requirements of SMCRA and the Federal regulations at 30 CFR 816/817.61–68 and can be approved.

IV. Summary and Disposition of Comments

Public Comments

We solicited public comments and provided an opportunity for a public hearing on the amendment. Because no one requested an opportunity to speak, a hearing was not held. The Kentucky Resources Council, Inc. (KRC) submitted written comments on four different occasions in response to the original Kentucky submission and the subsequent revisions. The comments are summarized below and organized by date of submission. Only those comments pertaining to the issues contained in this rule are included here.

July 11, 2002 (administrative record no. KY–1553)—KRC addressed several issues contained in OSM's May 26, 2000, issue letter and Kentucky's subsequent response on August 10, 2000. The remarks supplement previous comments on record by the KRC.

(a) 405 KAR 8:040 Section 16/8:040 Section 32(3)(e)/18:060 Section 12—KRC believes that Kentucky's use of ''proximate cause'' is problematic to the extent that the State would reject a claim of water damage traceable to mining. As we stated in our findings, we believe Kentucky's use of the phrase ''proximate result'' is consistent with Congressional intent and that it is reasonable to use ''proximate result.''

(b) 405 KAR 16:060 Section 8/18:060 Section 12—KRC objects to the removal of the requirement that a notice of violation be issued when a water supply is damaged. We refer to our findings at b–17. It is the failure to promptly replace a damaged water supply, rather than damaging a water supply, that constitutes a violation under the Federal rule.

(c) 405 KAR 16:060 Section 8(2)(e)/18:060 Section 12(2)(e)—KRC does not support the 20-year timeframe specified by Kentucky as the repayment period for operation and maintenance costs related to water replacement. KRC feels that a fixed 20 years may ''understate the durability of some private well water systems which have functioned * * * well beyond 20 years.'' In its letter dated August 10, 2000, Kentucky stated that it uses the 20-year standard, but the permittee and water supply owner may agree on an alternate time period, as specified in the Federal definition of ''replacement of water supply'' at 30 CFR 701.5. As discussed in finding b–17, we found Kentucky's provisions acceptable in light of the option to prescribe a period of time, which could be longer than the 20-year standard (OSM issue 11 in the May 26, 2000, letter).

(d) 405 KAR 8:030/8:040 Section 34(6)—KRC states that a reference to TR–60 should be included in the Kentucky impoundment regulations. We agree that a reference to TR–60 or equivalent criteria should be included. As discussed in finding b–12, we found Kentucky's reference to 405 KAR 7:040 Section 5 and 4:030 acceptable (OSM issue 16 in the May 26, 2000, letter).

(e) 405 KAR 16:060 Section 8(4)(c)/18:060 Section 12(4)(c)/18:210 Section 3(5)(c)—KRC feels that the proposed release of the additional bond after water replacement has been successfully

completed is not acceptable. KRC feels the bond should remain in place through Phase II and the bond release determination be subject to reopening if the system proves to not be adequate over the long term. As discussed in finding b–17, the Federal rule requires the additional bond only until water replacement has been completed.

(f) 405 KAR 16:001 Section 1(63)—KRC opposes the deletion of the ''noxious plants'' reference and feels that Kentucky should be required to develop a list of noxious plants. OSM does not have the authority to require state regulatory authorities to develop state noxious plant lists. Because the Federal definition of ''noxious plants'' is limited to state noxious plant lists, and Kentucky lacks such a list, the deletion of the definition is not inconsistent with the Federal regulations.

December 9, 1998 (administrative record no. KY–1446)—KRC addressed those changes submitted by Kentucky on November 14, 1997, and formally submitted to OSM on March 4, 1998.

(a) 405 KAR 8:030—KRC commented that OSM should include specific language in its approval of the proposed amendment binding the state to the broader interpretation of ''surface mining activities'' as it appears in Section 16. KRC sought and received clarification from Kentucky that the scope of the alternative water supply requirement is as broad in coverage as that required of surface coal mines. We note that because the term ''surface mining activities'' is not being revised in this submission, the comment is outside the scope of this rulemaking. KRC also asserts that the identification of alternative water sources ''that could be developed'' is a substantially lower threshold than the provisions of Section 508(a)(13) of SMCRA. We again note that this portion of the Kentucky regulations is not being revised. The comment is therefore outside the scope of this rulemaking. KRC notes that in Section 34, it sought and received clarification that Kentucky's use of the broader term ''coal mine waste'' which replaced ''coal processing waste,'' is not intended to allow use of underground development waste in a manner that is inconsistent with 405 KAR 16/18:060 Section 4.

KRC also received clarification that the provision does not eliminate any obligation to account for any disposal of underground waste that is generated within the permit area and disposed of under another permit, or the requirement that all such disposal areas be under permit. KRC asserts that the proposal in Section 34 to defer much of the technical review of impoundment stability to MSHA is illegal. We disagree with the comment. Kentucky is not waiving any technical reviews of the design, location, foundation, or other requirements of impoundments and sedimentation structures. Kentucky affirms in its November 14, 1997, Statement of Consideration, that it ''does not intend to accept MSHA's approval in lieu of its own, nor will it rely on MSHA's approval to avoid making its own review.'' Kentucky is complying with Federal requirements at 30 CFR 780.25(c) as discussed in finding b–10.

(b) 405 KAR 8:040—KRC opposes the proposal in Section 26 and 405 KAR 18:210 (Section 1(4) to allow the permit applicant to defer collecting the presubsidence condition information until after permit issuance. KRC asserts this deprives the landowners of the opportunity to assure before the permit is approved that their concerns regarding subsidence control are fully addressed. We disagree. In its Statement of Consideration dated November 14, 1997, Kentucky stated that property owners are identified in the public notice published in the newspaper, and have the opportunity to comment on all aspects of the application, including the subsidence control plan. 405 KAR on 8:040 Section 26(1) specifically requires that the permit application include a water quality and quantity survey for each protected water supply. As noted in finding b–13, because of a Federal court decision vacating portions of the Federal rules, our subsequent suspension and modification of the Federal rules at 30 CFR 784.20(a)(3), and Kentucky's proposed corresponding changes, we find Kentucky's revisions no less effective than the corresponding Federal regulations. OSM's decision on a portion of 405 KAR 18:210 Section 1(4) was addressed in a previously published **Federal Register** Notice dated May 7, 2002, (67 FR 30549, KY–229–FOR).

KRC seeks clarification that the term ''present users'' in Section 32 is not intended to limit Kentucky's protective obligations to those users at time of permit issuance. As discussed in finding b–14, we reference Kentucky's clarification that ''users of water'' should not be limited to present users. In a related point in Section 32, KRC indicates that the term ''at the time the application is submitted'' is ambiguous and could be read to limit the water supply replacement obligation to supplies in existence at the time of permit issuance, rather than to limit the PHC determination to current water users. In fact, Federal rules do limit the water supply replacement obligation to the supplies in existence at the time of permit application (but not those users or owners of the supplies). We are satisfied that Kentucky's regulation is not inconsistent with the Federal regulation at 30 CFR 784.14(e)(3)(iv) which states that the permittee must identify any well or spring that was in existence at the time the permit application was submitted.

(c) 405 KAR 16:060 Section 8/18:060 Section 12—KRC supports the inclusion of ''promptly'' as it modifies replacement of water supply. KRC notes that it sought and received clarification that the phrase ''an owner of interest'' includes a joint owner of an undivided interest in a property who desires water replacement, even where the coal company acquires an undivided interest in the same property and does not want water replacement. KRC believes that the proposed time frames for water replacement appear generally appropriate. KRC does, however, believe that more rigorous timeframes for temporary replacement supplies be imposed. KRC notes that subsection (1) appears to exclude the presubsidence survey information. We refer to KRC's prior comment at (b) above and the discussion at finding b–17. With respect to water replacement, KRC opposes the use of ''a presumptive 20-year limit to the obligation to pay operation and maintenance costs in excess of customary and reasonable delivery costs.'' KRC also opposes payments that exceed the permit term. The Federal rules allow for annual or periodic payments. Terms and conditions of the payments are within the discretion of the parties. However, as stated in the preamble to the Federal rule, a lump sum payment may be preferable to avoid excessive paperwork/calculations or to avoid the risk of permittee's financial insolvency. *See* 60 FR at 16726 and our discussion in comment section (c) above. Both the 20-year period and the option to allow a series of payments are acceptable in light of the Federal definition of ''replacement of water supply.'' KRC asserts that the most ''significant and troubling'' of Kentucky's proposed changes is the deletion of the requirement to issue a notice of noncompliance if a protected water supply has been affected. KRC made the same comment in its July 11, 2002, letter, which we addressed in an earlier portion of this rule.

(d) 405 KAR 18:210—KRC again registers its objection to the provision allowing presubsidence surveys to be delayed until after permit issuance. KRC also objects to the change in notice requirements as insufficient to allow a landowner to implement measures to

protect structures and property from potential subsidence damage. These comments pertain to issues addressed in a previously published **Federal Register** Notice dated May 7, 2002 (67 FR 30549, KY–229–FOR) and are not relevant to this rulemaking. Next, KRC points out that Kentucky cannot allow an insurance policy to stand in lieu of a bond where subsidence has occurred unless it is adequate to cover all costs and to insure against all other risks, and the duration of the policy equals that of the bond. Kentucky's regulation allows liability insurance if the permittee can show that the insurance will cover the increased bond amount. Additionally, as Kentucky stated in its Statement of Consideration, a ''performance bond may be forfeited if the permittee fails to fulfill his water replacement obligations, even if the applicable liability insurance is available.'' Please see our finding b–22 for additional discussion. Kentucky acknowledged that the insurance may not cover all the costs or there may be delays. If so, bond forfeiture is available as a remedy. KRC also commented that a bond posted for repair cannot be released until after the applicable liability period has lapsed. The Federal rule is clear that the additional bond is required until replacement is completed. Therefore, we disagree with the comment. As stated in our findings, Kentucky does have its existing approved bond release procedures that will be applicable in all cases.

July 25, 1998 (administrative record no. KY–1432)—KRC submitted a request for a reopening of the comment period for a 30-day period based on Kentucky's final regulations submitted to OSM on July 14, 1998. OSM did reopen the comment period on June 5, 2002. KRC notes its concern with the proposed changes to 405 KAR 16/18:060 in which the provision to issue a notice of noncompliance for a damaged water supply is deleted. We disagree and note that this comment was addressed in response to KRC's letter dated July 11, 2002. We refer to the discussion at comment section (b) above.

October 6, 1997 (administrative record no. KY–1415)—KRC submitted comments on several issues already addressed in the comment sections above. To avoid redundancy, we will not repeat them here. KRC stated that the term ''replacement of water supply'' should be defined in the regulations, as well as in 405 KAR 16/18:060; though it appears from the July 11, 2002, comments that KRC changed its position and supports Kentucky's interpretation. We agree with Kentucky's clarification that, because Kentucky has placed the substantive requirements of the definition in its performance standards at 405 KAR 16/18:060, it is not necessary for Kentucky to add the definition.

KRC also suggested that the order of some of the language of 405 KAR 8:030 be reorganized to track the Federal language. Kentucky did make the changes in its subsequent submission.

Federal Agency Comments

According to 30 CFR 732.17(h)(11)(i), we solicited comments on the proposed amendment submitted on July 30, 1997, and revised on March 4, 1998, and July 14, 1998, from various Federal agencies with an actual or potential interest in the Kentucky program. By letters dated June 20, 2002, and July 18, 2002, the Department of Labor's Mine Safety and Health Administration commented that the proposed amendment had no apparent impact on its program (administrative record nos. KY–1542 and KY–1554).

Environmental Protection Agency (EPA)

Pursuant to 30 CFR 732.17(h)(11)(ii), OSM is required to obtain the written concurrence of the EPA with respect to those provisions of the proposed program amendment that relate to air or water quality standards promulgated under the authority of the Clean Water Act (33 U.S.C. 1251 *et seq.*) or the Clean Air Act (42 U.S.C. 7401 *et seq.*) This amendment did not pertain to air or water quality standards, but by letter dated November 28, 2000, the EPA submitted comments (administrative record no. KY–1501). We note that the comments EPA made in response to the proposed changes at 405 KAR 16/18:090 were addressed in the July 17, 2003, rulemaking. We also note that the comments EPA made referencing 405 KAR 16/18:060 Sections 1 and 11 pertain to regulations previously approved by OSM and not being revised at this time. Those specific comments are, therefore, outside the scope of this rulemaking. EPA commented that the provisions of 405 KAR 18:210 Section 3 should be revised to require that stream subsidence and its repair be held to the same feasibility criteria as subsidence damage to structures. As discussed in finding III(a) above, Kentucky's proposed regulations are no less effective than the corresponding Federal regulations. The Kentucky program requires the same level of subsidence damage prevention and mitigation for streams as required by the Federal regulations.

V. OSM's Decision

Based on the above findings, we are not approving 405 KAR 16:060 Section 8(4)(c), 18:060 Section 12(4)(c), and 18:210 Section 3(5)(c) and approving the remainder of the amendment as submitted by Kentucky on July 30, 1997, and revised on March 4, 1998, and July 14, 1998, and as clarified by Kentucky. We are removing the required amendment at 30 CFR 917.16(m) that required Kentucky to amend its program to specify that it provides for the prompt replacement of water supplies.

To implement this decision, we are amending the Federal regulations at 30 CFR part 917 which codify decisions concerning the Kentucky program. We find that good cause exists under 5 U.S.C. 553(d)(3) to make this final rule effective immediately. Section 503(a) of SMCRA requires that Kentucky's program demonstrate that it has the capability of carrying out the provisions of the Act and meeting the Act's purposes. Making this regulation effective immediately will expedite that process. SMCRA requires consistency of State and Federal standards.

Effect of OSM's Decision

Initial enforcement of the underground coal mine subsidence control and water replacement requirements in Kentucky will be accomplished with a combination of State enforcement and direct Federal enforcement. This portion of the notice explains how OSM's decision on this proposed amendment affects the regulation of underground mining impacts in Kentucky. After consultation with Kentucky and consideration of public comments on this issue, OSM announced its decision in a **Federal Register** Notice dated July 28, 1995 (60 FR 38682). Kentucky will enforce its provisions that correspond to the Federal regulations at 30 CFR 817.42(c)(2) pertaining to the repair or compensation of material damage resulting from subsidence. Kentucky has statutory provisions in place that correspond to the Federal regulations and has the authority to implement its provisions for all underground mining activities conducted after October 24, 1992. It will also enforce its provisions that correspond to 30 CFR 817.41(j) pertaining to water replacement for the period after July 16, 1994, the effective date of Kentucky's statutory provisions for water replacement. For those underground mining activities conducted after October 24, 1992, and before July 16, 1994, OSM will enforce the provisions of 30 CFR 817.41(j) because Kentucky does not have the statutory authority to retroactively apply water replacement requirements to water losses prior to the effective date of its statute.

As discussed in this notice, OSM is approving provisions that are no less effective than the Federal regulations. However, we are not approving several provisions affording less protection than the minimum level required by the counterpart Federal regulations.

Section 503 of SMCRA provides that a State may not exercise jurisdiction under SMCRA unless the State program is approved by the Secretary. Similarly, 30 CFR 732.17(a) requires that any change of an approved State program be submitted to OSM for review as a program amendment. The Federal regulations at 30 CFR 732.17(g) prohibit any changes to approved State programs that are not approved by OSM. In the oversight of the Kentucky program, we will recognize only the statutes, regulations, and other materials we have approved, together with any consistent implementing policies, directives, and other materials. We will require Kentucky to enforce only approved provisions.

VI. Procedural Determinations

Executive Order 12630—Takings

This rule does not have takings implications. This determination is based on the analysis performed for the counterpart Federal regulation.

Executive Order 12866—Regulatory Planning and Review

This rule is exempted from review by the Office of Management and Budget under Executive Order 12866.

Executive Order 12988—Civil Justice Reform

The Department of the Interior has conducted the reviews required by section 3 of Executive Order 12988 and has determined that this rule meets the applicable standards of subsections (a) and (b) of that section. However, these standards are not applicable to the actual language of State regulatory programs and program amendments because each program is drafted and promulgated by a specific State, not by OSM. Under sections 503 and 505 of SMCRA (30 U.S.C. 1253 and 1255) and the Federal regulations at 30 CFR 730.11, 732.15, and 732.17(h)(10), decisions on proposed State regulatory programs and program amendments submitted by the States must be based solely on a determination of whether the submittal is consistent with SMCRA and its implementing Federal regulations and whether the other requirements of 30 CFR Parts 730, 731, and 732 have been met.

Executive Order 13132—Federalism

This rule does not have Federalism implications. SMCRA delineates the roles of the Federal and State governments with regard to the regulation of surface coal mining and reclamation operations. One of the purposes of SMCRA is to ''establish a nationwide program to protect society and the environment from the adverse effects of surface coal mining operations.'' Section 503(a)(1) of SMCRA requires that State laws regulating surface coal mining and reclamation operations be ''in accordance with'' the requirements of SMCRA, and section 503(a)(7) requires that State programs contain rules and regulations ''consistent with'' regulations issued by the Secretary pursuant to SMCRA.

Executive Order 13175—Consultation and Coordination With Indian Tribal Governments

In accordance with Executive Order 13175, we have evaluated the potential effects of this rule on Federally-recognized Indian tribes and have determined that the rule does not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. The basis for this determination is that our decision is on a State regulatory program and does not involve a Federal regulation involving Indian lands.

Executive Order 13211—Regulations That Significantly Affect the Supply, Distribution, or Use of Energy

On May 18, 2001, the President issued Executive Order 13211 which requires agencies to prepare a Statement of Energy Effects for a rule that is (1) considered significant under Executive Order 12866, and (2) likely to have a significant adverse effect on the supply, distribution, or use of energy. Because this rule is exempt from review under Executive Order 12866 and is not expected to have a significant adverse effect on the supply, distribution, or use of energy, a Statement of Energy Effects is not required.

National Environmental Policy Act

This rule does not require an environmental impact statement because section 702(d) of SMCRA (30 U.S.C. 1292(d)) provides that agency decisions on proposed State regulatory program provisions do not constitute major Federal actions within the meaning of section 102(2)(C) of the National Environmental Policy Act (42 U.S.C. 4332(2)(C)).

Paperwork Reduction Act

This rule does not contain information collection requirements that require approval by OMB under the Paperwork Reduction Act (44 U.S.C. 3507 *et seq.*).

Regulatory Flexibility Act

The Department of the Interior certifies that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). The State submittal, which is the subject of this rule, is based upon counterpart Federal regulations for which an economic analysis was prepared and certification made that such regulations would not have a significant economic effect upon a substantial number of small entities. In making the determination as to whether this rule would have a significant economic impact, the Department relied upon the data and assumptions for the counterpart Federal regulations.

Small Business Regulatory Enforcement Fairness Act

This rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This rule: (a) Does not have an annual effect on the economy of $100 million; (b) Will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; and (c) Does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises. This determination is based upon the fact that the State submittal which is the subject of this rule is based upon counterpart Federal regulations for which an analysis was prepared and a determination made that the Federal regulation was not considered a major rule.

Unfunded Mandates

This rule will not impose an unfunded mandate on State, local, or tribal governments or the private sector of $100 million or more in any given year. This determination is based upon the fact that the State submittal, which is the subject of this rule, is based upon counterpart Federal regulations for which an analysis was prepared and a determination made that the Federal regulation did not impose an unfunded mandate.

List of Subjects in 30 CFR Part 917

Intergovernmental relations, Surface mining, Underground mining.

Dated: February 20, 2004.

Brent Wahlquist,

Regional Director, Appalachian Regional Coordinating Center.

■ For the reasons set out in the preamble, 30 CFR part 917 is amended as set forth below:

PART 917—Kentucky

■ 1. The authority citation for part 917 continues to read as follows:

Authority: 30 U.S.C. 1201 *et seq.*

■ 2. Section 917.15 is amended in the table by adding a new entry in chronological order by the ''Date of Final Publication'' to read as follows:

§ 917.15 Approval of Kentucky regulatory program amendments.

* * * * *

Original amendment submission date	Date of final publication	Citation/description
*	*	* * * * *
July 30, 1997	August 11, 2004	405 KAR 8:001 Section 1(3), (20), (24), (46), (60), (65), (69), (86) and (108), Section 2(1) and (2); 405 KAR 8:030 Section 3(3)(d)1, Section 11(2)(a), Section 12(4)(a) and (b), Section 13(1)(b) and (3), Section 14(5), Section 15(5), Section 16, Section 20(3), Section 23(1)(g), Section 24(4)(e), Section 26(3), Section 27(2)(e), Section 32(3)(e), Section 34, Section 37(1)(b), Section 38(1) and (2); 405 KAR 8:040 Section 3(3)(d)1, Section 11(2)(a) and (4)(a), (b), Section 13(1)(b)2 and (3), Section 14(5), Section 15(5), Section 16, Section 20(3), Section 26, Section 32(1)(b)5 and (3)(e), Section 34, Section 37(1)(b), Section 39(1) and (2); 405 KAR 16:001 Section 1(3), (32), (46), (53), (63)- deleted, (81), (98), (99), (108), Section 2(1) and (2), 405 KAR 16:060 Section 1(4)(b), Section 2(2), Section 4(1), Section 8(1)(a), (b), (2)(a)–(e); 405 KAR 18:001 (3), (6), (24), (35), (49), (55), (61), (62)– deleted, (67), (68), (84), (100), (109), Section 2(1) and (2); 405 KAR 18:060 Section 1(4)(b), Section 2(2), Section 4(1), Section 12(1)(a), (b), (2)(a)–(e); 405 KAR 18:210 Section 1(1), (2) and (3), Section (1) and (3), Section 3, Section 4 and Section 5.

§ 917.16 [Amended]

■ 3. Section 917.16 is amended by removing and reserving paragraph (m).

■ 4. Section 917.17 is amended by revising the section heading and adding paragraph (a) to read as follows:

§ 917.17 State regulatory program amendments not approved.

(a) The amendment to Kentucky's regulations at 405 KAR 16:060 Section 8(4)(c); 18:060 Section 12(4)(c) and 18:210 Section 3(5)(c) which were originally submitted by Kentucky on July 30, 1997 and later amended are disapproved.

BILLING CODE 4310–05–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[COTP San Francisco Bay 04–020]

RIN 1625–AA87

Security Zone; Suisun Bay, Concord, CA

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary security zone in the navigable waters of the United States adjacent to Pier Three at the Military Ocean Terminal Concord (MOTCO), California (formerly United States Naval Weapons Center Concord, California). In light of recent terrorist actions against the United States, this security zone is necessary to ensure the safe loading of military equipment and to ensure the safety of the public from potential subversive acts. The security zone will prohibit all persons and vessels from entering, transiting through or anchoring within a portion of Suisun Bay within 500 yards of Pier Three at the MOTCO facility unless authorized by the Captain of the Port (COTP) or his designated representative.

DATES: This rule is effective from 7 a.m. on August 6, 2004, to 11:59 p.m. on September 6, 2004. If the need for this security zone ends before the scheduled termination time, the Captain of the Port will cease enforcement of the security zone and will announce that fact via Broadcast Notice to Mariners.

ADDRESSES: Documents indicated in this preamble as being available in the docket are part of docket (COTP San Francisco Bay 04–020) and are available for inspection or copying at Coast Guard Marine Safety Office San Francisco Bay, Coast Guard Island, Alameda, California 94501, between 9 a.m. and 4 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Lieutenant Doug L. Ebbers, U.S. Coast Guard Marine Safety Office San Francisco Bay, at (510) 437–2770.

SUPPLEMENTARY INFORMATION:

Regulatory Information

We did not publish a notice of proposed rulemaking (NPRM) for this regulation. Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing an NPRM because the duration of the NPRM rulemaking process would extend beyond the actual period of the scheduled operations and defeat the protections afforded by the temporary rule to the cargo vessels, their crews, the public and national security.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register** as the schedule and other logistical details were not known until a date fewer than 30 days prior to the start date of the military operation. Delaying this rule's effective date would be contrary to the public interest since the safety and security of the people, ports, waterways, and properties of the Port Chicago and Suisun Bay areas would be jeopardized without the protection afforded by this security zone.

Background and Purpose

Since the September 11, 2001, terrorist attacks on the World Trade

Center in New York, the Pentagon in Arlington, Virginia and Flight 93, the Federal Bureau of Investigation (FBI) has issued several warnings concerning the potential for additional terrorist attacks within the United States. In addition, the ongoing hostilities in Afghanistan and the conflict in Iraq have made it prudent for U.S. ports to be on a higher state of alert because Al-Qaeda and other organizations have declared an ongoing intention to conduct armed attacks on U.S. interests worldwide.

The threat of maritime attacks is real as evidenced by the attack on the *USS Cole* and the subsequent attack in October 2002 against a tank vessel off the coast of Yemen. These threats manifest a continuing threat to U.S. assets as described in the President's finding in Executive Order 13273 of August 21, 2002 (67 FR 56215, September 3, 2002), that the security of the U.S. is endangered by the September 11, 2001, attacks and that such aggression continues to endanger the international relations of the United States. *See also* Continuation of the National Emergency with Respect to Certain Terrorist Attacks (67 FR 58317, September 13, 2002), and Continuation of the National Emergency with Respect to Persons Who Commit, Threaten To Commit, Or Support Terrorism (67 FR 59447, September 20, 2002). The U.S. Maritime Administration (MARAD) in Advisory 02–07 advised U.S. shipping interests to maintain a heightened status of alert against possible terrorist attacks. MARAD more recently issued Advisory 03–05 informing operators of maritime interests of increased threat possibilities to vessels and facilities and a higher risk of terrorist attack to the transportation community in the United States. Ongoing foreign hostilities have made it prudent for U.S. ports and waterways to be on a higher state of alert because the Al-Qaeda organization and other similar organizations have declared an ongoing intention to conduct armed attacks on U.S. interests worldwide.

In its effort to thwart terrorist activity, the Coast Guard has increased safety and security measures on U.S. ports and waterways. As part of the Diplomatic Security and Antiterrorism Act of 1986 (Pub. L. 99–399), Congress amended section 7 of the Ports and Waterways Safety Act (PWSA), 33 U.S.C. 1226, to allow the Coast Guard to take actions, including the establishment of security and safety zones, to prevent or respond to acts of terrorism against individuals, vessels, or public or commercial structures. The Coast Guard also has authority to establish security zones pursuant to the Act of June 15, 1917, as amended by the Magnuson Act of August 9, 1950 (50 U.S.C. 191 *et seq.*) and implementing regulations promulgated by the President in subparts 6.01 and 6.04 of part 6 of title 33 of the Code of Federal Regulations.

In this particular rulemaking, to address the aforementioned security concerns, United States Army officials have requested that the Captain of the Port, San Francisco Bay, California, establish a temporary security zone in the navigable waters of the United States within 500 yards of Pier Three at the Military Ocean Terminal Concord (MOTCO), California, to safeguard vessels, cargo and crew engaged in military operations. This temporary security zone is necessary to safeguard the MOTCO terminal and the surrounding property from sabotage or other subversive acts, accidents or criminal acts. This zone is also necessary to protect military operations from compromise and interference and to specifically protect the people, ports, waterways, and properties of the Port Chicago and Suisun Bay areas.

Discussion of Rule

In this temporary rule, the Coast Guard is establishing a fixed security zone encompassing the navigable waters, extending from the surface to the sea floor, within 500 yards of any portion of Pier Three at Military Ocean Terminal Concord (MOTCO), California. There are 3 existing piers at the MOTCO facility. Originally there were 4 piers, numbered One through Four from west to east, but Pier One was destroyed in an explosion in 1944. Therefore, Pier Three is the middle of the 3 remaining piers. The area encompassed by this security zone includes a portion of the Port Chicago Reach section of the deepwater channel. Persons and vessels are prohibited from entering, transiting through or anchoring within this security zone unless authorized by the Captain of the Port (COTP) or his designated representative.

The Captain of the Port will enforce this zone and may enlist the aid and cooperation of any Federal, State, county, municipal, and private agency to assist in the enforcement of the regulation. Section 165.33 of title 33, Code of Federal Regulations, prohibits any unauthorized person or vessel from entering or remaining in a security zone. Vessels or persons violating this section may be subject to the penalties set forth in 33 U.S.C. 1232 and 50 U.S.C. 192. Pursuant to 33 U.S.C. 1232, any violation of the security zone described herein, is punishable by civil penalties (not to exceed $32,500 per violation, where each day of a continuing violation is a separate violation), criminal penalties (imprisonment from 5 to 10 years and a maximum fine of $250,000), and in rem liability against the offending vessel. Any person who violates this section using a dangerous weapon, or who engages in conduct that causes bodily injury or fear of imminent bodily injury to any officer authorized to enforce this regulation, will also face imprisonment from 10 to 25 years. Vessels or persons violating this section are also subject to the penalties set forth in 50 U.S.C. 192: Seizure and forfeiture of the vessel to the United States, a maximum criminal fine of $10,000, imprisonment up to 10 years, and a civil penalty of not more than $25,000 for each day of a continuing violation.

Regulatory Evaluation

This rule is not a ''significant regulatory action'' under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order. It is not ''significant'' under the regulatory policies and procedures of the Department of Homeland Security (DHS).

Although this regulation restricts access to a portion of navigable waters, the effect of this regulation will not be significant because mariners will be advised about the security zone via public notice to mariners, and the zone will encompass only a small portion of the waterway for a short duration. In addition, vessels and persons may be allowed to enter this zone on a case-by-case basis with permission of the Captain of the Port or his designated representative.

The size of the zone is the minimum necessary to provide adequate protection for MOTCO, vessels engaged in operations at MOTCO, their crews, other vessels operating in the vicinity, and the public. The entities most likely to be affected are commercial vessels transiting to or from Suisun Bay via the Port Chicago Reach section of the channel.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this rule would have a significant economic impact on a substantial number of small entities. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and

governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities. This rule will affect the following entities, some of which may be small entities: The owners and operators of vessels intending to anchor or transit to or from Suisun Bay via the Port Chicago Reach section of the channel. Although the security zone will occupy a section of the navigable channel (Port Chicago Reach) adjacent to the Marine Ocean Terminal Concord (MOTCO), vessels may receive authorization to transit through the zone by the Captain of the Port or his designated representative on a case-by-case basis. Additionally, vessels engaged in recreational activities, sightseeing and commercial fishing will have ample space outside of the security zone to engage in those activities. Small entities and the maritime public will be advised of this security zone via public notice to mariners.

Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we offer to assist small entities in understanding the rule so that they could better evaluate its effects on them and participate in the rulemaking process. If the rule will affect your small business, organization, or government jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT** for assistance in understanding this rule.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247).

Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. We have analyzed this rule under that Order and have determined that it does not have implications for federalism.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

Taking of Private Property

This rule will not effect a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes.

Energy Effects

We have analyzed this rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a ''significant energy action'' under that order because it is not a ''significant regulatory action'' under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The Administrator of the Office of Information and Regulatory Affairs has not designated it as a significant energy action. Therefore, it does not require a Statement of Energy Effects under Executive Order 13211.

Technical Standards

The National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the Office of Management and Budget, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.,* specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

Environment

We have analyzed this rule under Commandant Instruction M16475.lD, which guides the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have concluded that there are no factors in this case that would limit the use of a categorical exclusion under section 2.B.2 of the Instruction. Therefore, this rule is categorically excluded, under figure 2–1, paragraph (34)(g), of the Instruction, from further environmental documentation because we are establishing a security zone.

A final ''Environmental Analysis Check List'' and a final ''Categorical Exclusion Determination'' will be available in the docket where located under **ADDRESSES**.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

■ For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701; 50 U.S.C. 191, 195; 33 CFR 1.05–1(g), 6.04–1, 6.04–6, and 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T11–037 to read as follows:

§ 165.T11–037 Security Zone; Navigable Waters of the United States Surrounding Pier Three at Military Ocean Terminal Concord (MOTCO), Concord, California.

(a) *Location.* The security zone will encompass the navigable waters, extending from the surface to the sea floor, within 500 yards of any portion of Pier Three at Military Ocean Terminal Concord (MOTCO), California.

(b) *Regulations.* (1) In accordance with the general regulations in § 165.33 of this part, entering, transiting through or anchoring in this zone is prohibited unless authorized by the Coast Guard Captain of the Port, San Francisco Bay, or his designated representative.

(2) Persons desiring to transit the area of this security zone may contact the Patrol Commander on scene on VHF–FM channel 13 or 16 or the Captain of the Port at telephone number 415–399–3547 to seek permission to transit the area. If permission is granted, all persons and vessels must comply with the instructions of the Captain of the Port or his designated representative.

(c) *Effective period.* This section becomes effective at 7 a.m. on August 6, 2004, and terminates at 11:59 p.m. on September 6, 2004. If the need for this security zone ends before the scheduled termination time, the Captain of the Port will cease enforcement of the security zone and will announce that fact via Broadcast Notice to Mariners.

Dated: July 30, 2004.

Gerald M. Swanson,

Captain, U.S. Coast Guard, Captain of the Port, San Francisco Bay, California.

[FR Doc. 04–18293 Filed 8–10–04; 8:45 am]

BILLING CODE 4910–15–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[COTP Charleston–04–100]

RIN 1625–AA87

Security Zones; Charleston Harbor, Cooper River, SC

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary fixed security zone in the waters from the Don Holt, I–526 Bridge, on the Cooper River to the entrance of Foster Creek on the Cooper River. This security zone is necessary to protect the public and ports from potential subversive acts during port embarkation operations. Vessels are prohibited from entering, transiting, anchoring, mooring, or loitering within this zone, unless specifically authorized by the Captain of the Port, Charleston, South Carolina or his or her designated representative.

DATES: This regulation is effective from 8 a.m. on July 23, 2004, until 8 a.m. on December 1, 2004.

ADDRESSES: Documents indicated in this preamble as being available in the docket, are part of docket (COTP Charleston 04–100) and are available for inspection or copying at Marine Safety Office Charleston, between 7:30 a.m. and 4 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: LTJG Matthew Meskun, Coast Guard Marine Safety Office Charleston, at (843) 720–3272.

SUPPLEMENTARY INFORMATION:

Regulatory Information

We did not publish a notice of proposed rulemaking (NPRM) for this regulation. Under 5 U.S.C. 553 (b)(B), the Coast Guard finds that good cause exists for not publishing a NPRM. Publishing a NPRM would be contrary to public safety interests and national security. These regulations are needed to protect the public, the ports and waterways and the national security of the United States from potential subversive acts against vessels, port facilities and infrastructure during port embarkation operations. For the security concerns noted, it is in the public interest to have these regulations in effect without publishing a NPRM. Notifications will be made via marine information broadcasts to inform the public about the existence of this security zone.

For the same reasons, under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**.

Background and Purpose

Based on the September 11, 2001, terrorist attack on the World Trade Center and Pentagon, there is an increased risk that vessels or persons in close proximity to the Port of Charleston, South Carolina, may engage in subversive or terrorist acts against military installations or operations occurring within the security zone. The security zone is necessary to protect the safety of life and property on navigable waters and prevent potential terrorist threats aimed at military installations during strategic embarkation operations. The temporary security zone will encompass all waters from the Don Holt I–526 Bridge over the Cooper River to the entrance of Foster Creek on the Cooper River.

Regulatory Evaluation

This rule is not a ''significant regulatory action'' under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order. It is not significant under the regulatory policies and procedures of the Department of Homeland Security (DHS).

The limited geographic area impacted by the security zone will not restrict the movement or routine operation of commercial or recreational vessels through the Port of Charleston. Also, an individual may request a waiver of these regulations from the Coast Guard Captain of the Port or his or her designated representative.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this rule would have a significant economic effect on a substantial number of small entities. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities

because the limited geographic area encompassed by the security zone will not restrict the movement or routine operation of commercial or recreational vessels through the Port of Charleston. Also, an individual may request a waiver of these regulations from the Coast Guard Captain of the Port of Charleston.

Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we offered to assist small entities in understanding the rule so that they could better evaluate its effects on them and participate in the rulemaking process. If the rule will affect your small business and you have questions concerning its provisions or options for compliance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Small businesses may also send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247).

Collection of Information

This rule calls for no new collection of information requirements under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

Federalism

A rule has implication for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. We have analyzed this rule under that Order and have determined that it does not have implications for federalism.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 or more in any one year. Although this rule will not result in such expenditure, we do discuss the effects of this rule elsewhere in this preamble.

Taking of Private Property

This rule will not effect a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationships between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes.

Energy Effects

We have analyzed this rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a ''significant energy action'' under that order because it is not a ''significant regulatory action'' under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. It has not been designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action. Therefore, it does not require a Statement of Energy Effects under Executive Order 13211.

Environment

We have analyzed this rule under Commandant Instruction M16475.1D, which guides the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have concluded that there are no factors in this case that would limit the use of a categorical exclusion under section 2.B.2 of the Instruction. Therefore, this rule is categorically excluded, under figure 2–1, paragraph (34)(g), of the Instruction, from further environmental documentation. Under figure 2–1, paragraph (34)(g), of the Instruction, an ''Environmental Analysis Check List'' and a ''Categorical Exclusion Determination'' are not required for this rule.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

■ For the reasons discussed in the preamble, the Coast Guard amends 33 CFR Part 165, as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 50 U.S.C. 191; 33 CFR 1.05–1(g), 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. A new temporary section 165.T–07–100 is added to read as follows:

§ 165.T–07–100 Security Zone; Charleston Harbor, Cooper River, South Carolina.

(a) *Location.* The following is a security zone: All waters of the Cooper River, from surface to bottom and bank to bank, from the Don Holt I–526 Bridge to the intersection of Foster Creek.

(b) *Regulations.* (1) Vessels and persons are prohibited from entering, transiting, mooring, anchoring, or loitering within the security zone unless authorized by the Captain of the Port Charleston, South Carolina or his or her designated representative.

(2) Persons desiring to transit the area of the security zone may contact the Captain of the Port via VHF–FM channel 16 or by telephone (843) 720–3240 to seek permission to transit the area. If permission is granted, all persons and vessels must comply with the instructions of the Captain of the Port or his or her designated representative.

(c) *Effective Period.* This section is effective from 8 a.m. on July 23, 2004 until 8 a.m. on December 1, 2004.

Dated: July 23, 2004.

John E. Cameron,

Commander, U. S. Coast Guard, Captain of the Port, Charleston, South Carolina.

BILLING CODE 4910–15–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 81

[CA 109–RECLAS; FRL–7800–5]

Finding of Failure To Attain and Reclassification to Serious Nonattainment; Imperial Valley Planning Area; California; Particulate Matter of 10 Microns or Less

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: EPA is taking final action under the Clean Air Act (CAA) to find that the Imperial Valley Planning Area (Imperial Valley), a moderate nonattainment area for particulate matter of 10 microns of less (PM–10), failed to attain the National Ambient Air Quality Standards (NAAQS) by the statutory deadline of December 31, 1994, and to reclassify the area as a serious PM–10 nonattainment area. Today's action is in response to a recent decision by the U.S. Court of Appeals for the Ninth Circuit that vacated EPA's earlier approval of Imperial County's demonstration that the Imperial Valley would have attained the NAAQS by December 31, 1994, but for emissions emanating from outside the United States, *i.e.*, Mexico. EPA's approval had the effect of allowing Imperial Valley to remain a moderate nonattainment area. In vacating that approval, the Court specifically directed EPA to reclassify Imperial Valley as a serious PM–10 nonattainment area.

EFFECTIVE DATE: This rule is effective on September 10, 2004.

ADDRESSES: You can inspect and copy the docket for this action at our Region IX office during normal business hours (*see* address below). Due to increased security, we suggest that you call at least 24 hours prior to visiting the Regional Office so that we can make arrangements to have someone meet you. The **Federal Register** notice is also available as an electronic file on EPA's Region 9 Web page at *http://www.epa.gov/region09/air.*

SUPPLEMENTARY INFORMATION: Throughout this document, the words ''we,'' ''us,'' or ''our'' mean U.S. EPA.

I. Background

Imperial County is located in the southeastern corner of California. It has borders with Mexico to the south, Arizona to the east, and San Diego County to the west. Most of Imperial County falls within the Imperial Valley Planning Area (Imperial Valley). 40 CFR part 81.

Since the 1990 Amendments to the CAA, Imperial Valley has been classified as a moderate PM–10 non-attainment area. The CAA requires that moderate areas attain the PM–10 NAAQS by December 31, 1994. CAA section 188(c)(1). Moderate areas failing to attain the NAAQS by the prescribed attainment date must be reclassified as ''serious'' under CAA section 188(b)(2). However, CAA section 179(B)(d) provides that any area that establishes to the satisfaction of EPA that it would have attained the PM–10 NAAQS by the applicable attainment date but for emissions emanating from outside the United States, is not subject to the provisions of CAA section 182(b)(2), *i.e.*, reclassification to ''serious'' nonattainment.

The Imperial County Air Pollution Control District (ICAPCD) and the California Air Resources Board (CARB) submitted evidence that Imperial Valley would have attained the PM–10 NAAQS by the 1994 attainment date but for transport from Mexico. The primary information prepared by ICAPCD is the ''Imperial County PM–10 Attainment Demonstration'' (179B(d) demonstration) which CARB submitted to EPA on July 18, 2001.

On August 10, 2001, EPA published in the **Federal Register** a proposed rule that considered two alternatives. 66 FR 42187. Our first alternative proposed to find that the State of California had established to EPA's satisfaction that Imperial Valley would have attained the PM–10 NAAQS by the applicable CAA attainment date, December 31, 1994, but for emissions emanating from Mexico. Our second alternative proposed, based on monitored data during the years 1992–1994, to find that Imperial Valley did not attain the PM–10 NAAQS by its CAA mandated attainment date. This second proposal, if finalized, would have resulted in the area's reclassification to serious.

After consideration of the 179B(d) demonstration and the comments received on the proposal, on October 19, 2001, we finalized our first proposed alternative which found that Imperial Valley would have attained the PM–10 NAAQS by December 1994 but for PM–10 emissions emanating from Mexico. 66 FR 53106.

The Sierra Club petitioned for review of our October 2001 final action in the U.S. Court of Appeals for the Ninth Circuit. On October 9, 2003, the Court issued its opinion. *Sierra Club* v. *United States Environmental Protection Agency*, et al., 352 F.3d 1186. The Court rejected EPA's factual determination with respect to two days, January 19 and 25, 1993, on which PM–10 exceedances of the 24-hour PM–10 NAAQS occurred, finding that ''[b]ased on the data and the reports in the record, there simply is no possibility that Mexican transport could have caused the observed PM–10 exceedences. * * *'' The effect of this conclusion is that the Imperial Valley had exceedances of the PM–10 NAAQS that preclude a finding that the area would have attained the NAAQS by 1994. The Court, concluding that further administrative proceedings with respect to the 1994 exceedences would serve no useful purpose, instructed EPA to reclassify Imperial Valley as a serious PM–10 nonattainment area.

On December 18, 2003, the Ninth Circuit denied a petition for rehearing by ICAPCD, an intervener in the case, slightly revised its October 9, 2003, opinion, and granted ICAPCD's motion to stay the mandate until March 17, 2004, to permit ICAPCD to file a petition for a writ of certiorari in the U.S. Supreme Court. Imperial County did so on March 17, 2004. On June 21, 2004, the Supreme Court declined to hear the case. *Imperial County Air Pollution Control District* v. *Sierra Club, et al.,* 72 U.S.L.W. 3757. Thereafter the stay was lifted and the mandate issued.

II. Final Action

A. Rule

In response to the Ninth Circuit's October 9, 2003, opinion, and pursuant to CAA section 188(b)(2), EPA is finding that Imperial Valley failed to attain the PM–10 NAAQS by the statutory deadline of December 31, 1994, and is therefore reclassifying the area from a moderate to a serious PM–10 nonattainment area.[1] Today's final action applies to the entire Imperial Valley planning area which includes the Quechan Indian Tribe in the southeastern corner of the area, and the Torrez-Martinez Tribe in the northwestern corner of the area. EPA

[1] Note that as a result of the Court's opinion and order, we are not taking action on our August 10, 2001, alternative proposal to find that Imperial Valley failed to attain the PM–10 NAAQS by the moderate area statutory deadline. Instead we are adopting the Court's factual determination in today's final finding.

has contacted both Tribes to discuss the non-discretionary nature of this action and how the rulemaking may impact them.

All serious PM–10 nonattainment areas were required to attain the standards by no later than December 31, 2001, unless granted a one-time extension of up to five years. CAA section 188(c)(2) and (e). Elsewhere in this **Federal Register**, we are proposing to find that Imperial Valley failed to attain by December 31, 2001.

B. Notice and Comment Under the Administrative Procedure Act

While this rule constitutes final agency action, EPA finds good cause to forego prior notice and comment under the Administrative Procedure Act (APA), 5 U.S.C. 553(b). Notice and comment are unnecessary because no EPA judgment is involved in adopting the Ninth Circuit Court of Appeals' factual determination in *Sierra Club* that Imperial Valley failed to attain the PM–10 standards by December 31, 1994, and in carrying out the Court's order to reclassify the area from moderate to serious nonattainment. In short, EPA is simply implementing administratively a result that was compelled by the Court.

III. Administrative Requirements

Under Executive Order 12866 (58 FR 51735, October 4, 1993), this action is not a ''significant regulatory action'' and therefore is not subject to review by the Office of Management and Budget. EPA has determined that the finding of failure to attain would not result in any of the effects identified in Executive Order 12866 sec. 3(f). Findings of failure to attain under section 188(b)(2) of the CAA are based solely upon air quality considerations and the subsequent nonattainment area reclassification must occur by operation of law in light of those air quality conditions. These actions do not, in and of themselves, impose any new requirements on any sectors of the economy. In addition, because the statutory requirements are clearly defined with respect to the differently classified areas, and because those requirements are automatically triggered by classifications that, in turn, are triggered by air quality values, findings of failure to attain and reclassification cannot be said to impose a materially adverse impact on State, local, or tribal governments or communities. For the aforementioned reasons, this action is also not subject to Executive Order 32111, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001). Accordingly, the Administrator certifies that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). These actions do not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Public Law 104–4) for the following reasons: (1) The finding of failure to attain is a factual determination based on air quality considerations; and (2) the resulting reclassification must occur by operation of law and will not impose any Federal intergovernmental mandate. Two Indian tribes have reservations located within the boundaries of Imperial County. EPA is responsible for the implementation of Federal Clean Air Act programs in Indian country, including reclassifications. EPA has notified the affected tribal officials and will be consulting with them, as provided for by Executive Order 13175 (65 FR 67249, November 9, 2000). Because EPA is required by Court Order to reclassify the Imperial Valley PM–10 planning area to serious nonattainment, and because reclassifications in and of themselves do not impose any Federal intergovernmental mandate, this rule also does not have Federalism implications as it does not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999). These actions are also not subject to Executive Order 13045, *Protection of Children from Environmental Health Risks and Safety Rules,*'' (62 FR 19885, April 23, 1997), because they are not economically significant. As discussed above, findings of failure to attain under section 188(b)(2) of the CAA are based solely upon air quality considerations and the subsequent nonattainment area reclassification must occur by operation of law in light of those air quality conditions. In this context, it would thus be inconsistent with applicable law for EPA, when it makes a finding of failure to attain to use voluntary consensus standards. Thus, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply. This rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

RIN 2050–AC62

Oil Pollution Prevention and Response; Non-Transportation-Related Onshore and Offshore Facilities

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA or we) is today extending by eighteen months certain upcoming compliance dates for the July 2002 Spill Prevention Control and Countermeasure (SPCC or Plan) amendments. The dates affected by today's final rule are the date for a facility to amend its Plan and the date for a facility to implement that amended Plan in a manner that complies with the newly amended requirements (or, in the case of facilities becoming operational after August 16, 2002, prepare and implement a Plan that complies with the newly amended requirements). We are also amending the compliance deadline for onshore and offshore mobile facilities. In light of a recent partial settlement of litigation involving the July 2002 amendments, we are extending the compliance dates to, among other things, provide sufficient time for the regulated community to undertake the actions necessary to update (or prepare) their Plans. The final rule is also intended to alleviate the need for individual extension requests.

DATES: This final rule is effective August 11, 2004.

ADDRESSES: The docket for this rulemaking is located in the EPA Docket Center at 1301 Constitution Ave., NW., EPA West, Suite B–102, Washington, DC 20460. The docket number for the final rule is OPA–2004–0003. The docket is contained in the EPA Docket Center and is available for inspection by appointment only, between the hours of 8:30 a.m. and 4:30 p.m., Monday through Friday, excluding legal holidays. You may make an appointment to view the docket by calling 202–566–0276. You may copy a maximum of 100 pages from any regulatory docket at no cost. If the number of pages exceeds 100, however, we will charge you $0.15 for each page after 100. The docket will mail copies of materials to you if you are outside of the Washington, DC metropolitan area.

FOR FURTHER INFORMATION CONTACT: For general information, contact the RCRA/CERCLA Call Center at 800–424–9346 or TDD 800–553–7672 (hearing impaired). In the Washington, DC metropolitan area, call 703–412–9810 or TDD 703–412–3323. For more detailed information on specific aspects of this final rule, contact Hugo Paul Fleischman at 703–603–8769 (*fleischman.hugo@epa.gov*); or Mark W. Howard at 703–603–8715 (*howard.markw@epa.gov*), U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue, NW., Washington, DC 20460–0002, Mail Code 5203G.

SUPPLEMENTARY INFORMATION: This final rule concerns an eighteen-month extension of the current deadlines contained in 40 CFR 112.3(a) and (b), and an amendment of the compliance dates for 40 CFR 112.3(c). The contents of this preamble are as follows:

I. General Information

Introduction. For the reasons explained in Section V of this notice, the Environmental Protection Agency (EPA or we) is today extending by eighteen months the dates in 40 CFR 112.3(a) and (b) for a facility to amend and implement its Plan that complies with the newly amended requirements (or, in the case of a facility becoming operational after August 16, 2002, prepare and implement a Plan in a manner that complies with the newly amended requirements). Today's rule extends these deadlines for eighteen months from the dates promulgated in the April 17, 2003, SPCC rule amendment. *See* 68 FR 18890. Since today's action extends the compliance dates, it is not necessary to file a request for an extension of time pursuant to § 112.3(f) beyond the existing compliance dates. If a facility owner or operator has already filed for an extension, such a request is invalidated by today's action. If an extension beyond the additional eighteen months is necessary, a request for an extension of time pursuant to § 112.3(f) must be submitted.

We are also amending the compliance deadlines in 40 CFR 112.3(c) for mobile facilities.

How Can I Get Copies Of The Background Materials Supporting Today's Final Rule or Other Related Information?

1. EPA has established an official public docket for this final rule under Docket ID No. OPA–2004–0003. The official public docket consists of the documents specifically referenced in this final rule and other information related to this final rule. Although a part of the official docket, the public docket does not include Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. The official public docket is the collection of materials that is available for public viewing at the EPA Docket Center located at 1301 Constitution Ave., NW., EPA West Building, Room B–102, Washington, DC 20004.

2. *Electronic Access.* You may access this **Federal Register** document electronically through the EPA Internet under the **Federal Register** listings at *http://www.epa.gov/fedrgstr*.

You may use EPA Dockets at *http://www.epa.gov/edocket/* to access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Once in

the system, select ''search,'' then key in the docket identification number.

Certain types of information will not be placed in the EPA Dockets. Information claimed as CBI, and other information whose disclosure is restricted by statute, which is not included in the official public docket, will not be available for public viewing in EPA's electronic public docket. EPA's policy is that copyrighted material will not be placed in EPA's electronic public docket, but will be available only in printed, paper form in the official public docket. To the extent feasible, publicly available docket materials will be made available in EPA's electronic public docket. When a document is selected from the index list in EPA Dockets, the system will identify whether the document is available for viewing in EPA's electronic public docket. Although not all docket materials may be available electronically, you may still access any of the publicly available docket materials through the docket facility identified above.

II. Entities Affected by This Rule

Industry category	NAICS code
Crop and Animal Production	111–112
Crude Petroleum and Natural Gas Extraction	211111
Coal Mining, Non-Metallic Mineral Mining and Quarrying	2121/2123/213114/213116
Electric Power Generation, Transmission, and Distribution	2211
Heavy Construction	234
Petroleum and Coal Products Manufacturing	324
Other Manufacturing	31–33
Petroleum Bulk Stations and Terminals	42271
Automotive Rental and Leasing	5321
Heating Oil Dealers	454311
Transportation (including Pipelines), Warehousing, and Marinas	482–486/488112–48819/4883/48849/492–493/71393
Elementary and Secondary Schools, Colleges	6111–6113
Hospitals/Nursing and Residential Care Facilities	622–623

The list of potentially affected entities in the above table may not be exhaustive. Our aim is to provide a guide for readers regarding those entities that EPA is aware potentially could be affected by this action. However, this action may affect other entities not listed in the table. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the preceding section entitled **FOR FURTHER INFORMATION CONTACT**.

III. Statutory Authority

33 U.S.C. 1251 *et seq.*; 33 U.S.C. 2720; E.O. 12777 (October 18, 1991), 3 CFR, 1991 Comp., p. 351.

IV. Background

On July 17, 2002, at 67 FR 47042, EPA published final amendments to the SPCC rule. The rule was effective August 16, 2002. The rule included compliance dates in § 112.3(a) and (b); however, the original compliance dates were extended for eighteen months on April 17, 2003 (68 FR 18890).

V. Today's Action

EPA is extending by an additional eighteen months the compliance dates in § 112.3(a) and (b), and amending the compliance deadline in § 112.3(c). Thus, an onshore or offshore facility that: (1) Was in operation on or before August 16, 2002, must maintain its Plan, but must amend it, if necessary to ensure compliance, on or before February 17, 2006, and must implement the amended Plan as soon as possible, but not later than August 18, 2006; (2) becomes operational after August 16, 2002, through August 18, 2006, and could reasonably be expected to have a discharge as described in 40 CFR 112.1(b), must prepare a Plan on or before August 18, 2006, and fully implement it as soon as possible, but not later than August 18, 2006; and (3) becomes operational after August 18, 2006, and could reasonably be expected to have a discharge as described in 40 CFR 112.1(b), must prepare and implement a Plan before it begins operations. An onshore or offshore mobile facility must amend its Plan, if necessary, and implement such amendments by August 18, 2006. Today's rule is immediately effective; EPA is invoking the exception to the 30-day notice requirement in the Administrative Procedure Act because the purpose of the rulemaking is to relieve a restriction (5 U.S.C. 553(d)(1)). Furthermore, the existing compliance date for amending a Plan is August 17, 2004, and a 30-day notice requirement will extend past that date.

After the publication of the July 17, 2002, final rule amending the SPCC regulation (67 FR 47042), several members of the regulated community filed legal challenges to certain aspects of the rule. *See, American Petroleum Institute* v. *Leavitt* et al., No. 1:102CV02247 PLF and consolidated cases (D.D.C. filed November 14, 2002).[1] Settlement discussions between EPA and the plaintiffs have led to an agreement on all issues except one. In a separate notice, EPA recently published clarifications developed by the Agency during the course of settlement proceedings (and which provided the basis for the settlement agreement) regarding the SPCC regulation. *See* 69 FR 29728, May 25, 2004.

We believe it is appropriate to provide members of the regulated community with sufficient time to understand these clarifications and be able to incorporate them, as appropriate, in preparing and updating their SPCC Plans in accordance with the 2002 amendments. Therefore, we believe that the current compliance dates are insufficient for this purpose, and that it would be inefficient to use scarce Agency resources to address this problem by processing individual extension requests.

A. Comments[2]

Extension of Time. On June 17, 2004, EPA proposed to extend certain upcoming SPCC compliance dates by 12 months. The majority of commenters[3] supported this one-year compliance deadline extension to allow the

[1] Lead plaintiffs in the cases were American Petroleum Institute (API), Marathon Oil Co., and the Petroleum Marketers Association of America (PMAA).

[2] This section, and Section B below, contain a summary of the comments received on the proposal, and the Agency's responses to such comments. For more detailed and additional information, see the response-to-comments document in the docket for today's rule.

[3] Commenters mainly represented oil industry interests, as well as a number of other industrial sectors (agriculture, paints and coatings, electrical, construction materials, transportation, etc.) and professional engineers.

regulated community sufficient time to understand and incorporate recent clarifications of the SPCC rule. However, several commenters suggested extension time frames longer than one year, one commenter believed that no extension was necessary, and still another commenter suggested that EPA withdraw the SPCC rule altogether.

Commenters who recommended extending compliance deadlines confirmed the Agency's view at the time of proposal that an extension is appropriate to provide the regulated community with sufficient time to understand and incorporate, as appropriate, the clarifications to the SPCC rule when preparing and updating their SPCC Plans in accordance with the 2002 amendments. Commenters also agreed that an extensionis appropriate to eliminate the need for individual extension requests during this time. In addition, commenters also supported the extension of the compliance deadlines in order to provide more time to the regulated community to perform implementation-related activities such as staff training; fiscal budgeting; obtaining professional engineer certification; and to prevent a shortage of materials, equipment, and technical expertise to implement the Plans. Numerous commenters stated that the additional time would also be useful in order to receive and incorporate additional clarification and guidance on the SPCC rule from EPA.

As noted above, several commenters suggested extensions longer than the proposed one-year extension. These suggestions ranged from 18 months to two years to ''a much greater time'' for facilities to amend and/or implement their Plan. Some commenters cited a variety of reasons for a longer extension, including issues cited above, as well as weather-related concerns for a February implementation deadline, a preference for longer-term budgetary planning, time to develop industry-specific best management practices, and a need for an additional construction season. Some commenters requested that compliance dates be extended until after the completion of a further rule revision. Finally, a number of commenters suggested a longer time extension for further clarification and resolution of issues outside the scope of the litigation settlement discussions; that is, commenters were concerned about the number and scope of technical issues that EPA plans to clarify, and suggested that more than 12 months would be necessary for EPA to develop guidance and for facilities to make appropriate changes to their Plans.

Scope of the Extension. A few commenters requested that an extension of the compliance deadlines also apply to the facilities described in § 112.3(c), mobile facilities. Another commenter requested that EPA reaffirm the statement that the Agency made in the preamble to the April 17, 2003, final rule, which clarified that the extension granted at that time applied only to ''new or more stringent compliance obligations'' imposed by the July 2002 amendments and not to provisions in the amendments that provide regulatory relief.

Some commenters expressed concern that EPA would not be able to publish the final rule extending the deadlines by July 17, 2004, in which case they requested that the Agency issue an interim final rule by that date, extending the deadlines as long as necessary to finalize this proposed rule.

B. Response to Comments

Extension of Time in General. In reviewing the comments, we have been persuaded that more than one year is appropriate for facilities to come into compliance with the SPCC amendments. This is due to the need to provide sufficient time for the regulated community to take actions necessary to update (or prepare) their Plans in light of the partial settlement of litigation involving the July 2002 amendments.

However, two commenters did not support any extension. One commenter expressed a concern that political interests motivated the Agency's decision to extend the compliance deadlines. Accordingly, the commenter did not support an extension and instead stated that the compliance deadline should be, at the latest, January 1, 2005, although no rationale for this date was given. The Agency reiterates that the compliance date extension is intended to give members of the regulated community sufficient time to understand and incorporate recent clarifications to the SPCC rule.

Another commenter opposed promulgating the extension of the compliance deadline and instead suggested that EPA withdraw the revised final SPCC rule (67 FR 47042) entirely. The commenter suggested that EPA repropose the SPCC rule employing full notice and comment rulemaking procedures, and until then rely on the 1973 version of the SPCC rule (38 FR 34164). The commenter suggested the proposed rule be withdrawn because he felt: (1) EPA failed to use a single notice and single comment rulemaking procedure on the SPCC rule, (2) the proposed rule is necessitated by an incorrect economic analysis of the impact of the 2002 amendments, and (3) the proposed rule is flawed by lack of closure regarding the definition of ''navigable waters.'' EPA does not believe that any of these issues provide a legitimate justification for withdrawing the revised SPCC rule. Moreover, these issues are not within the scope of today's rulemaking. The Agency confirms its belief that extending the compliance dates is necessary.

Extension of Time. Although the majority of commenters indicated that a one-year extension was warranted, several commenters made a compelling case for a time frame different than the proposed one-year extension. With respect to comments requesting additional guidance, the Agency notes that in an effort separate from this rulemaking, EPA has been working to assess the need for guidance on implementing various areas relating to the 2002 SPCC amendments and will continue this process, as appropriate.

In situations where the extension does not provide sufficient relief for an individual facility, that facility may seek an extension under 40 CFR 112.3(f), where applicable. It is EPA's belief, however, that the eighteen-month extension will provide enough relief to prevent the Agency from again being faced with the prospect of an overwhelming number of requests for individual extensions under § 112.3(f).

Scope of the Extension. With regard to the comments asking for a revised compliance date for the requirements in § 112.3(c), we are persuaded that the compliance deadlines for onshore and offshore mobile facilities should also be amended because such facilities face the same challenges to amend and implement their Plans in light of the partial settlement of litigation.

In response to the commenter asking EPA to reaffirm the statement that the Agency made in the preamble to the April 17, 2003, final rule, EPA restates that to the extent that the July 2002 rule imposes new or more stringent compliance obligations than in the 1973 SPCC rule, the deadlines in 40 CFR 112.3(a) and (b) for the fulfillment of those obligations are again extended under today's final rule, as well as the deadline in 40 CFR 112.3(c). A provision that provides regulatory relief in the revised rule is not affected by today's compliance deadline extensions because such provisions are not addressed by 40 CFR 112.3(a), (b), or (c), and these are not provisions for which it would be ''necessary'' to amend existing Plans ''to ensure compliance with'' the July 2002 amendments.

In response to the commenter who recommended that EPA either publish this final rule by July 17, 2004, or issue an interim final rule to extend the deadlines as long as necessary to finalize this rule, EPA states that it is aware of the scheduling concerns regarding the extension of compliance deadlines and believes it has issued the final rule such that the regulated community will not be burdened with preparing individual extension requests.

VI. Statutory and Executive Order Reviews

A. Executive Order 12866—OMB Review

Under Executive Order 12866 (58 FR 51735, October 4, 1993), the Agency must determine whether a regulatory action is ''significant'' and therefore subject to Office of Management and Budget (OMB) review and the requirements of the Executive Order. The order defines ''significant regulatory action'' as one that is likely to result in a rule that may:

(1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

Pursuant to the terms of Executive Order 12866, it has been determined that this final rule is a ''significant regulatory action'' because it (4) raises novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order. As such, this action was submitted to the Office of Management and Budget (OMB) for review. Changes made in response to OMB suggestions or recommendations are documented in the docket for today's final rule.

B. Paperwork Reduction Act

This final rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

C. Regulatory Flexibility Act

The Regulatory Flexibility Act (R.F.A.) generally requires an agency to prepare a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements under the Administrative Procedure Act or any other statute unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small organizations, and small governmental jurisdictions.

For purposes of assessing the impacts of today's final rule on small entities, small entity is defined as: (1) A small business as defined in the Small Business Administration's (SBA) regulations at 13 CFR 121.201—the SBA defines small businesses by category of business using North American Industry Classification System (NAICS) codes, and in the case of farms and production facilities, which constitute a large percentage of the facilities affected by this final rule, generally defines small businesses as having less than $500,000 in revenues or 500 employees, respectively; (2) a small governmental jurisdiction that is a government of a city, county, town, school district or special district with a population of less than 50,000; and (3) a small organization that is any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.

After considering the economic impacts of today's final rule on small entities, I certify that this action does not have a significant economic impact on a substantial number of small entities. In determining whether a rule has a significant economic impact on a substantial number of small entities, the impact of concern is any significant adverse economic impact on small entities, since the primary purpose of the regulatory flexibility analysis is to identify and address regulatory alternatives ''which minimize any significant economic impact of the proposed rule on small entities.'' 5 U.S.C. Sections 603 and 604. Thus, an agency may certify that a rule will not have a significant economic impact on a substantial number of small entities if the rule relieves regulatory burden, or otherwise has a positive economic effect on all of the small entities subject to the rule.

This final rule will temporarily reduce regulatory burden on facilities by extending for eighteen months the compliance dates in § 112.3(a) and (b), as well as amend the compliance deadlines in § 112.3(c). We have therefore concluded that today's final rule would relieve regulatory burden for small entities.

D. Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under section 202 of UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with ''Federal mandates'' that may result in expenditures to State, local, and tribal governments, in the aggregate, or to the private sector, of $100 million or more in any one year. Before promulgating an EPA rule for which a written statement is needed, section 205 of UMRA generally requires EPA to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows EPA to adopt an alternative other than the least costly, most-effective or least burdensome alternative if the Administrator publishes with the final rule an explanation why that alternative was not adopted.

Before EPA establishes any regulatory requirements that may significantly or uniquely affect small governments, including tribal governments, it must have developed under section 203 of UMRA a small government agency plan. The plan must provide for notifying potentially affected small governments, enabling officials of affected small governments to have meaningful and timely input in the development of EPA regulatory proposals with significant Federal intergovernmental mandates, and informing, educating, and advising small governments on compliance with the regulatory requirements.

EPA has determined that this final rule does not contain a Federal mandate that may result in expenditures of $100 million or more for State, local, and tribal governments, in the aggregate, or the private sector in any one year. Today's final rule will reduce burden and costs on all facilities.

EPA has determined that this final rule contains no regulatory requirements that might significantly or uniquely affect small governments. As explained above, the effect of the final rule is to reduce burden and costs for regulated facilities, including small governments that are subject to the rule.

E. Executive Order 13132—Federalism

Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999), requires EPA to develop an accountable process to ensure ''meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.'' ''Policies that have federalism implications'' is defined in the Executive Order to include regulations that have ''substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.''

This final rule does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132. Under CWA section 311(o), EPA believes that States are free to impose additional requirements, including more stringent requirements, relating to the prevention of oil discharges to navigable waters. EPA encourages States to supplement the federal SPCC program and recognizes that some States have more stringent requirements. 56 FR 54612 (Oct. 22, 1991). This final rule will not preempt state law or regulations. Thus, Executive Order 13132 does not apply to this final rule.

F. Executive Order 13175—Consultation and Coordination With Indian Tribal Governments

Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000), requires EPA to develop an accountable process to ensure ''meaningful and timely input by tribal officials in the development of regulatory policies that have tribal implications.''

This final rule does not have tribal implications, as specified in Executive Order 13175. It does not impose any new requirements on tribal officials nor does it impose substantial direct compliance costs on them. This rule does not create a mandate for tribal governments, nor does it impose any enforceable duties on these entities. Thus, Executive Order 13175 does not apply to this rule.

G. Executive Order 13045—Protection of Children From Environmental Health & Safety Risks

Executive Order 13045, ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997), applies to any rule that: (1) Is determined to be ''economically significant'' as defined under Executive Order 12866; and, (2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency. EPA interprets Executive Order 13045 as applying only to those regulatory actions that are based on health or safety risks, such that the analysis required under Section 5–501 of the Order has the potential to influence the regulation. This final rule is not subject to Executive Order 13045 because it is not economically significant as defined in Executive Order 12866, and because the Agency does not have reason to believe the environmental health or safety risks addressed by this action present a disproportionate risk to children.

H. Executive Order 13211—Actions That Significantly Affect Energy Supply, Distribution, or Use

This final rule is not a ''significant energy action'' as defined in Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001) because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

I. National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (''NTTAA''), Public Law 104–113, section 12(d) (15 U.S.C. 272 note) directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards such as materials specifications, test methods, sampling procedures, and business practices that are developed or adopted by voluntary consensus standards bodies. The NTTAA directs EPA to provide Congress, through OMB, explanations when the Agency decides not to use available and applicable voluntary consensus standards.

This final rule does not involve technical standards. Therefore, NTTA is inapplicable.

J. Congressional Review Act

The Congressional Review Act (5 U.S.C. 801 *et seq.*), as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA submitted a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 840(2). This rule will be effective August 11, 2004.

List of Subjects in 40 CFR Part 112

Environmental protection, Fire prevention, Flammable and combustible materials, Materials handling and storage, Oil pollution, Oil spill prevention, Oil spill response, Penalties, Petroleum, Piping, Reporting and recordkeeping requirements, Tanks, Transfer operations, Water pollution control, Water resources.

Dated: August 5, 2004.

Michael O. Leavitt,

Administrator.

■ For the reasons set out in the preamble, title 40 CFR, chapter I, part 112 of the Code of Federal Regulations, is amended as follows:

PART 112—OIL POLLUTION PREVENTION

■ 1. The authority for part 112 continues to read as follows:

Authority: 33 U.S.C. 1251 *et seq.*; 33 U.S.C. 2720; E.O. 12777 (October 18, 1991), 3 CFR, 1991 Comp., p. 351.

Subpart A—Applicability, Definitions, and General Requirements for All Facilities and All Types of Oils

■ 2. Section 112.3 is amended by revising paragraphs (a), (b), and (c) to read as follows:

§ 112.3 Requirement to prepare and implement a Spill, Prevention, Control, and Countermeasure Plan.

* * * * *

(a) If your onshore or offshore facility was in operation on or before August 16, 2002, you must maintain your Plan, but must amend it, if necessary to ensure compliance with this part, on or before February 17, 2006, and must implement the amended Plan as soon as possible,

but not later than August 18, 2006. If your onshore or offshore facility becomes operational after August 16, 2002, through August 18, 2006, and could reasonably be expected to have a discharge as described in § 112.1(b), you must prepare a Plan on or before August 18, 2006, and fully implement it as soon as possible, but not later than August 18, 2006.

(b) If you are the owner or operator of an onshore or offshore facility that becomes operational after August 18, 2006, and could reasonably be expected to have a discharge as described in § 112.1(b), you must prepare and implement a Plan before you begin operations.

(c) If you are the owner or operator of an onshore or offshore mobile facility, such as an onshore drilling or workover rig, barge mounted offshore drilling or workover rig, or portable fueling facility, you must prepare, implement, and maintain a facility Plan as required by this section. You must maintain your Plan, but must amend and implement it, if necessary to ensure compliance with this part, on or before August 18, 2006. If your onshore or offshore mobile facility becomes operational after August 18, 2006, and could reasonably be expected to have a discharge as described in § 112.1(b), you must prepare and implement a Plan before you begin operations. This provision does not require that you prepare a new Plan each time you move the facility to a new site. The Plan may be a general Plan. When you move the mobile or portable facility, you must locate and install it using the discharge prevention practices outlined in the Plan for the facility. The Plan is applicable only while the facility is in a fixed (non-transportation) operating mode.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[OPP–2004–0145; FRL–7362–1]

Forchlorfenuron; N-(2-chloro-4-pyridinyl)-N'-phenylurea; Time-LimitedPesticide Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes a time-limited tolerance for residues of forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea in or on almond, apple, blueberry, cranberry, fig, grapes, kiwifruit, olive, pear, and plums (fresh). Siemer and Associates Incorporated, agent for KIM-C1, LLC requested this tolerance under the Federal Food, Drug, and Cosmetic Act (FFDCA), as amended by the Food Quality Protection Act of 1996 (FQPA). The tolerance will expire on May 31, 2006.

DATES: This regulation is effective August 11, 2004. Objections and requests for hearings must be received on or before October 12, 2004.

ADDRESSES: To submit a written objection or hearing request follow the detailed instructions as provided in Unit VIII. of the **SUPPLEMENTARY INFORMATION.** EPA has established a docket for this action under Docket ID number OPP–2004–0145. All documents in the docket are listed in the EDOCKET index at *http://www.epa.gov/edocket.* Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in EDOCKET or in hard copy at the Public Information and Records Integrity Branch (PIRIB), Rm. 119, Crystal Mall #2, 1801 S. Bell St., Arlington, VA. This docket facility is open from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The docket telephone number is (703) 305–5805.

FOR FURTHER INFORMATION CONTACT: Cynthia Giles-Parker, Registration Division, (7505C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; telephone number: (703) 305–7740; e-mail address: *giles-parker.cynthia@epa.gov*.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. Potentially affected entities may include, but are not limited to:

- Crop production (NAICS 111)
- Animal production (NAICS 112)
- Food Manufacturing (NAICS 311)
- Pesticide manufacturing (NAICS 32532)

This listing is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in this unit could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether this action might apply to certain entities. If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. How Can I Access Electronic Copies of this Document and Other RelatedInformation?

In addition to using EDOCKET *(http://www.epa.gov/edocket/)*, you may access this **Federal Register** document electronically through the EPA Internet under the ''**Federal Register**'' listings at *http://www.epa.gov/fedrgstr/*. A frequently updated electronic version of 40 CFR part 180 is available at E-CFR Beta Site Two at *http://www.gpoaccess.gov/ecfr/*. To access the OPPTS Harmonized Guidelines referenced in this document, go directly to the guidelines at *http://www.epa.gpo/opptsfrs/home/guidelin.htm/*.

II. Background and Statutory Findings

In the **Federal Register** of April 7, 2004 (69 FR 18375)(FRL–7349–9), EPA issued a notice pursuant to section 408(d)(3) of the FFDCA, 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP 7G4906) by KIM-C1, LLC, c/o Siemer and Associates, Inc., 4672 West Jennifer Street, Suite 103, Fresno, CA 93722. This notice included a summary of the petition prepared by KIM-C1, the registrant.

The petition requested that 40 CFR 180.569 be amended by establishing an extension of a time-limited tolerance for residues of the fungicide forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea, in or on the raw agricultural commodities almonds, apples, blueberries, figs, grapes, kiwi fruit, pears, and plums at 0.01 parts per million (ppm). The tolerance will expire on May 31, 2006.

Section 408(b)(2)(A)(i) of the FFDCA allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is ''safe.'' Section 408(b)(2)(A)(ii) of the FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in

residential settings, but does not include occupational exposure. Section 408(b)(2)(C) of the FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. . . .''

EPA performs a number of analyses to determine the risks from aggregate exposure to pesticide residues. For further discussion of the regulatory requirements of section 408 of the FFDCA and a complete description of the risk assessment process, see the final rule on Bifenthrin Pesticide Tolerances (62 FR 62961, November 26, 1997) (FRL–5754–7).

III. Aggregate Risk Assessment and Determination of Safety

Consistent with section 408(b)(2)(D) of the FFDCA, EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure, consistent with section 408(b)(2) of the FFDCA, for a tolerance for residues of forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea on the raw agricultural commodities almonds, apples, blueberries, figs, grapes, kiwi fruit, pears, and plums at 0.01 ppm. EPA's assessment of exposures and risks associated with establishing the tolerance follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered its validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. The nature of the toxic effects caused by forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea are discussed in Table 1 of this unit as well as the no observed adverse effect level (NOAEL) and the lowest observed adverse effect level (LOAEL) from the toxicity studies reviewed.

TABLE 1.—SUBCHRONIC, CHRONIC, AND OTHER TOXICITY

Guideline No.	Study Type	Results
870.3100	90–Day oral toxicity rats	NOAEL = M*400; F* = 84milligrams/kilogram/day (mg/kg/day); LOAEL = M* = not determined, F = 428mg/kg/day based on decrease body weight, body weight gainand food efficiency.
870.3150	90–Day oral toxicity in dogs	NOAEL = M = 16.8; F = 19.1 mg/kg/day LOAEL = M = 162.4; F = 188.7 mg/kg/daybased on decreases (10%) in body weight gain, FC andfood efficiency.
870.3700	Prenatal developmental in rodents	Maternal NOAEL = 200 mg/kg/day Maternal LOAEL = 400 mg/kg/day based on increased incidence of alopecia; decrease body weight and body weight gains Developmental NOAEL = 200 mg/kg/day Development LOAEL = 400 mg/kg/day based on decreased mean fetal body weight
870.3700	Prenatal developmental in non-rodents	Maternal NOAEL = 100 mg/kg/day Maternal LOAEL = not determined Developmental NOAEL = 100 mg/kg/day Development LOAEL = not determined
870.3800	Reproduction and fertility effects	Parental/Systemic NOAEL = M 11/13; F13/15 effects mg/kg/day Parental/Systemic LOAEL = 144-202mg/kg/day based on decreased FC F0 and F1;clinical signs of toxicity and lower body weight in F1Mand F and growth retardation in F1 and F2 pups Reproductive NOAEL = M144/168; F = 169/202 mg/kg/day Reproductive LOAEL = 544-926 mg/kg/day based on increased pup mortality (F1a, F1b and F2a), emaciation in F1b, and decrease in F1 pups litter
870.4300	Chronic carcinogenicity rat	NOAEL = M = 7; F = 9 mg/kg/day LOAEL = M = 93; F = 122 mg/kg/day basedon reduced body weight and body weight gain and FC; kidney toxicity(M = suppurative inflammation, F = non-suppurative interstitialnephritis. No evidence of carcinogenicity

*M = Male; F = Female; FC = Food Consumption

B. Toxicological Endpoints

The dose at which no adverse effects are observed (the NOAEL) from the toxicology study identified as appropriate for use in risk assessment is used to estimate the toxicological level of concern (LOC). However, the lowest dose at which adverse effects of concern are identified (the LOAEL) is sometimes used for risk assessment if no NOAEL was achieved in the toxicology study selected. An uncertainty factor (UF) is applied to reflect uncertainties inherent in the extrapolation from laboratory animal data to humans and in the variations in sensitivity among members of the human population as well as other unknowns. An UF of 100 is routinely used, 10X to account for interspecies differences and 10X for intraspecies differences.

For dietary risk assessment (other than cancer) the Agency uses the UF to calculate an acute or chronic reference dose (acute RfD or chronic RfD) where the RfD is equal to the NOAEL divided by the appropriate UF (RfD = NOAEL/UF). Where an additional safety factor is retained due to concerns unique to the FQPA, this additional factor is applied to the RfD by dividing the RfD by such additional factor. The acute or chronic Population Adjusted Dose (aPAD or cPAD) is a modification of the RfD to accommodate this type of FQPA Safety Factor (SF).

For non-dietary risk assessments (other than cancer) the UF is used to determine the LOC. For example, when 100 is the appropriate UF (10X to account for interspecies differences and 10X for intraspecies differences) the LOC is 100. To estimate risk, a ratio of the NOAEL to exposures (margin of exposure (MOE) = NOAEL/exposure) is calculated and compared to the LOC.

The linear default risk methodology (Q*) is the primary method currently used by the Agency to quantify carcinogenic risk. The Q* approach assumes that any amount of exposure will lead to some degree of cancer risk. A Q* is calculated and used to estimate risk which represents a probability of occurrence of additional cancer cases (e.g., risk is expressed as 1×10^{-6} or one in a million). Under certain specific circumstances, MOE calculations will be used for the carcinogenic risk assessment. In this non-linear approach, a ''point of departure'' is identified below which carcinogenic effects are not expected. The point of departure is typically a NOAEL based on an endpoint related to cancer effects though it may be a different value derived from the dose response curve. To estimate risk, a ratio of the point of departure to exposure (MOE_{cancer} = point of departure/exposures) is calculated. A summary of the toxicological endpoints for forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea used for human risk assessment is shown in Table 2 of this unit:

TABLE 2.—SUMMARY OF TOXICOLOGICAL DOSE AND ENDPOINTS FOR FORCHLORFENURON; *N*-(2-CHLORO-4-PYRIDINYL)-*N*'-PHENYLUREA FOR USE IN HUMAN RISK ASSESSMENT

Exposure Scenario	Dose Used in Risk Assessment, UF	FQPA SF* and Level of Concern for Risk Assessment	Study and Toxicological Effects
Acute dietary	.....	None	.....
Chronic dietary (all populations)	NOAEL= 7 mg/kg/day UF = 100 Chronic RfD =0.07 mg/kg/day	FQPA SF = 10X cPAD = 0.007mg/kg/day. Applyto all populationsubgroups	2-Year rat feeding study LOAEL = M = 93; F = 122mg/kg/day based on decreasesin body weight, body weightgain and food consumption aswell as effects on the kidney
Short-term dermal (1 to 7 days)	NOAEL= 200 mg/kg/day (dermal absorption rate= 100%)	LOC is MOE = 1,000 (residentialexposures)	Developmental rat study (oral);decreases in maternal bodyweights and body weight gainsas well as decrease in mean fetalbody weights
Intermediate-term dermal (1 week to several months)	NOAEL = 17 mg/kg/day (dermalabsorption rate = 100%)	LOC is MOE = 1,000 (residentialexposures)	90–Day feeding study in dogs(oral); based on decreases inbody weight gain and food consumption
Long-term dermal (several months tolifetime)	None	None	.....
Short-term inhalation (1 to 7 days)	NOAEL= 200mg/kg/day (inhalationabsorption rate = 100%)	LOC = same asshort term dermal	Developmental rat study (oral);decreases in maternal bodyweights and body weight gainsas well as decrease in mean fetalbody weights
Intermediate-term inhalation (1 week to several months)	NOAEL = 17 mg/kg/day (inhalation absorption rate= 100%)	LOC for MOE = same asintermediate-term dermal	90–Day feeding study in dogs (oral):Based on decreases in body weight gain and foodconsumption
Long-term inhalation (several months to lifetime)	None	None	.....
Cancer	.....	Not yet classified	.....

*The reference to the FQPA SF refers to any additional safety factor retained due to concerns unique to the FQPA.

C. Exposure Assessment

1. *Dietary exposure from food and feed uses.* Temporary tolerances were previously established (40 CFR 180.569) for the residues of forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea, in or on a variety of raw agricultural commodities. Risk assessments were conducted by EPA to assess dietary exposures from forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea in food as follows:

i. *Acute exposure.* Acute dietary risk assessments are performed for a food-use pesticide if a toxicological study has indicated the possibility of an effect of concern occurring as a result of a 1 day or single exposure. An acute exposure assessment is unnecessary because no toxicological endpoint was selected.

ii. *Chronic exposure.* In conducting this chronic dietary risk assessment, the Dietary Exposure Evaluation Model (DEEM™) analysis evaluated the individual food consumption as reported by respondents in the U.S. Department of Agriculture 1989–1992 Nationwide Continuing Surveys of Food Intake by Individuals (CSFII) and accumulated exposure to the chemical for each commodity. The following assumptions were made for the chronic exposure assessments: This chronic dietary DEEM analysis was a Tier 1 (assumptions: Time-limited tolerance level residues of the subject commodities and 100% crop treated). The DEEM default concentration factors were used for the processed commodities of all the subject crops. The resulting dietary food exposures occupy 1.5% of the cPAD for the most highly exposed population subgroup, non-nursing infants. These results should be viewed as conservative (health protective) risk estimates. Refinements such as the use of percent crop-treated information (this is a limited acreage EUP use) and/or anticipated residue values would yield lower estimates of chronic dietary exposure.

iii. *Cancer.* No concerns for cancer risks were identified. Data from available studies do not indicate a treatment-related tumor problem, and cancer risk endpoints have not been identified.

2. *Dietary exposure from drinking water.* The Agency lacks sufficient monitoring exposure data to complete a comprehensive dietary exposure analysis and risk assessment for forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea in drinking water. Because the Agency does not have comprehensive monitoring data, drinking water concentration estimates are made by reliance on simulation or modeling taking into account data on the physical characteristics of forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea.

The Agency uses the Generic Estimated Environmental Concentration (GENEEC) or the Pesticide Root Zone/Exposure Analysis Modeling System (PRZM/EXAMS) to estimate pesticide concentrations in surface water and Screening Concentrations in Groundwater (SCI-GROW), which predicts pesticide concentrations in ground water. In general, EPA will use GENEEC (a Tier 1 model) before using PRZM/EXAMS (a Tier 2 model) for a screening-level assessment for surface water. The GENEEC model is a subset of the PRZM/EXAMS model that uses a specific high-end runoff scenario for pesticides. GENEEC incorporates a farm pond scenario, while PRZM/EXAMS incorporates an index reservoir environment in place of the previous pond scenario. The PRZM/EXAMS model includes a percent crop area factor as an adjustment to account for the maximum percent crop coverage within a watershed or drainage basin.

None of these models include consideration of the impact processing (mixing, dilution, or treatment) of raw water for distribution as drinking water would likely have on the removal of pesticides from the source water. The primary use of these models by the Agency at this stage is to provide a coarse screen for sorting out pesticides for which it is highly unlikely that drinking water concentrations would ever exceed human health levels of concern.

Since the models used are considered to be screening tools in the risk assessment process, the Agency does not use estimated environmental concentrations (EECs) from these models to quantify drinking water exposure and risk as a %RfD or %PAD. Instead drinking water levels of comparison (DWLOCs) are calculated and used as a point of comparison against the model estimates of a pesticide's concentration in water. DWLOCs are theoretical upper limits on a pesticide's concentration in drinking water in light of total aggregate exposure to a pesticide in food, and from residential uses. Since DWLOCs address total aggregate exposure to forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea, they are further discussed in the aggregate risk sections below.

Based on the GENEEC and SCI-GROW models, the estimated EECs of forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea for acute exposures are estimated to be 4.7 parts per billion (ppb) (peak and 56 day average) for surface water and 26 ppb (acute and chronic) for ground water.

3. *From non-dietary exposure.* The term ''residential exposure'' is used in this document to refer to non-occupational, non-dietary exposure (e.g., for lawn and garden pest control, indoor pest control, termiticides, and flea and tick control on pets).

Forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea is not registered for use on any sites that would result in residential exposure.

4. *Cumulative exposure to substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of the FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider ''available information'' concerning the cumulative effects of a particular pesticide's residues and ''other substances that have a common mechanism of toxicity.''

EPA does not have, at this time, available data to determine whether forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea has a common mechanism of toxicity with other substances or how to include this pesticide in a cumulative risk assessment. Unlike other pesticides for which EPA has followed a cumulative risk approach based on a common mechanism of toxicity, forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has not assumed that forclorfenuron: *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea has a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see the final rule for Bifenthrin Pesticide Tolerances (62 FR 62961, November 26, 1997) (FRL–5754–7).

D. Safety Factor for Infants and Children

1. *In general.* Section 408 of the FFDCA provides that EPA shall apply an additional tenfold margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the data bases on toxicity and exposure unless EPA determines that a different margin of safety will be safe for infants and children. Margins of safety are incorporated into EPA risk assessments

either directly through use of a MOE analysis or through using uncertainty (safety) factors in calculating a dose level that poses no appreciable risk to humans.

2. *Conclusion*. There is an adequate toxicity database for forchlorfenuron; *N*-(2-chloro-pyridinyl)-*N*'-phenylurea, 71049–EUP–2, to support the extension of this EUP and time-limited tolerances. The available data suggest there is no increased qualitative or quantitative susceptibility based on the results of developmental and reproduction studies, no evidence of neurotoxicity and therefore no need to require a developmental neurotoxicity study. In addition, data used to evaluate exposure are adequate, and conservative assumptions were used to evaluate aggregate exposure through food and drinking water; therefore, exposure has not been underestimated. However, for the purposes of the experimental use permit only (and associated time-limited tolerances), the FQPA safety factor has been retained (10X) as a default for all population groups, pending final review of data submitted to support permanent tolerances for several crops.

E. Aggregate Risks and Determination of Safety

To estimate total aggregate exposure to a pesticide from food, drinking water, and residential uses, the Agency calculates DWLOCs which are used as a point of comparison against the model estimates of a pesticide's concentration in water (i.e., EECs). DWLOC values are not regulatory standards for drinking water. DWLOCs are theoretical upper limits on a pesticide's concentration in drinking water in light of total aggregate exposure to a pesticide in food and residential uses. In calculating a DWLOC, the Agency determines how much of the acceptable exposure (i.e., the PAD) is available for exposure through drinking water (e.g., allowable chronic water exposure (mg/kg/day) = cPAD - (average food + residential exposure). This allowable exposure through drinking water is used to calculate a DWLOC.

A DWLOC will vary depending on the toxic endpoint, drinking water consumption, and body weights. Default body weights and consumption values as used by the USEPA Office of Water are used to calculate DWLOCs: 2 liter (L)/70 kg (adult male), 2L/60 kg (adult female), and 1L/10 kg (child). Default body weights and drinking water consumption values vary on an individual basis. This variation will be taken into account in more refined screening-level and quantitative drinking water exposure assessments. Different populations will have different DWLOCs. Generally, a DWLOC is calculated for each type of risk assessment used: Acute, short-term, intermediate-term, chronic, and cancer.

When EECs for surface water and ground water are less than the calculated DWLOCs, EPA concludes with reasonable certainty that exposures to the pesticide in drinking water (when considered along with other sources of exposure for which EPA has reliable data) would not result in unacceptable levels of aggregate human health risk at this time. Because EPA considers the aggregate risk resulting from multiple exposure pathways associated with a pesticide's uses, levels of comparison in drinking water may vary as those uses change. If new uses are added in the future, EPA will reassess the potential impacts of residues of the pesticide in drinking water as a part of the aggregate risk assessment process.

1. *Acute risk*. Not applicable; no acute dietary endpoint was identified.

2. *Chronic risk*. Using the exposure assumptions described in this unit for chronic exposure, EPA has concluded that exposure to forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea from food will utilize 0.3% of the cPAD for the U.S. population, 1.5% of the cPAD for non-nursing infants and 1.0% of the cPAD for children (1-6 years). There are no residential uses for forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea that result in chronic residential exposure to forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea. In addition, there is potential for chronic dietary exposure to forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea in drinking water. After calculating DWLOCs and comparing them to the EECs for surface and ground water, EPA does not expect the aggregate exposure to exceed 100% of the cPAD, as shown in the following Table 3:

TABLE 3.—AGGREGATE RISK ASSESSMENT FOR CHRONIC (NON- CANCER) EXPOSURE TO FORCHLORFENURON; N-(2-CHLORO-4-PYRIDINYL)-N'-PHENYLUREA

Population Subgroup	cPAD mg/kg/day	% cPAD (Food)	Surface Water EEC (ppb)	Ground Water EEC (ppb)	Chronic DWLOC (ppb)
U.S. population	0.007	0.3	4.7	26	240
Females (13 to 50 years)	0.007	0.1	4.7	26	210
Non-nursing infants	0.007	1.5	4.7	26	70
Non-hispanic	0.007	0.3	4.7	26	240

3. *Short-term risk*. Short-term aggregate exposure takes into account residential exposure plus chronic exposure to food and water (considered to be a background exposure level). Forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea is not registered for use on any sites that would result in residential exposure. Therefore, the aggregate risks are the sum of the risks from food and water, which do not exceed the Agency's level of concern.

4. *Intermediate-term risk*. Intermediate-term aggregate exposure takes into account residential exposure plus chronic exposure to food and water (considered to be a background exposure level).

Forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea is not registered for use on any sites that would result in residential exposure. Therefore, the aggregate risks are the sum of the risks from food and water, which do not exceed the Agency's level of concern.

5. *Aggregate cancer risk for U.S. population*. No concern for cancer risks were identified. Data from available studies do not indicate a treatment-related tumor problem and cancer risk endpoint has not been identified.

6. *Determination of safety*. Based on these risk assessments, EPA concludes

that there is a reasonable certainty that no harm will result to the general population, and to infants and children from aggregate exposure to forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea residues.

IV. Other Considerations

A. Analytical Enforcement Methodology

1. *Plants.* The proposed enforcement method is a high performance liquid chromatography procedure using ultraviolet detection (HPLC/UV) which measures parent forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea. For the purpose of the Experimental Use Permit, the method has been adequately validated. The limit of quantitation (LOQ) is 0.01 ppm and the limit of detection is 0.003 ppm.

2. *Animals.* Depending on the results of a ruminant metabolism study, an enforcement method for the regulated residue in animal commodities may be required to support a section 3 registration with permanent tolerances.

Adequate enforcement methodology—is available to enforce the tolerance expression. The method may be requested from: Chief, Analytical Chemistry Branch, Environmental Science Center, 701 Mapes Rd., Ft. Meade, MD 20755–5350; telephone number: (410) 305–2905; e-mail address: *residuemethods@epa.gov*.

B. International Residue Limits

There are no Codex, Canadian, or Mexican maximum residue levels for forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea.

C. Conditions

There are no conditions for the registration.

V. Conclusion

Therefore, the time-limited tolerance is established for residues of forchlorfenuron; *N*-(2-chloro-4-pyridinyl)-*N*'-phenylurea in or on almond, apple, blueberry, cranberry, fig, grapes, kiwifruit, olive, pear, and plums (fresh) at 0.01 ppm.

VI. Objections and Hearing Requests

Under section 408(g) of the FFDCA, as amended by the FQPA, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. The EPA procedural regulations which govern the submission of objections and requests for hearings appear in 40 CFR part 178. Although the procedures in those regulations require some modification to reflect the amendments made to the FFDCA by the FQPA, EPA will continue to use those procedures, with appropriate adjustments, until the necessary modifications can be made. The new section 408(g) of the FFDCA provides essentially the same process for persons to ''object'' to a regulation for an exemption from the requirement of a tolerance issued by EPA under new section 408(d), as was provided in the old sections 408 and 409 of the FFDCA. However, the period for filing objections is now 60 days, rather than 30 days.

A. What Do I Need to Do to File an Objection or Request a Hearing?

You must file your objection or request a hearing on this regulation in accordance with the instructions provided in this unit and in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number OPP–2004–0145 in the subject line on the first page of your submission. All requests must be in writing, and must be mailed or delivered to the Hearing Clerk on or before October 12, 2004.

1. *Filing the request.* Your objection must specify the specific provisions in the regulation that you object to, and the grounds for the objections (40 CFR 178.25). If a hearing is requested, the objections must include a statement of the factual issues(s) on which a hearing is requested, the requestor's contentions on such issues, and a summary of any evidence relied upon by the objector (40 CFR 178.27). Information submitted in connection with an objection or hearing request may be claimed confidential by marking any part or all of that information as CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the information that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice.

Mail your written request to: Office of the Hearing Clerk (1900L), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001. You may also deliver your request to the Office of the Hearing Clerk in Suite 350, 1099 14th St., NW., Washington, DC 20005. The Office of the Hearing Clerk is open from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Office of the Hearing Clerk is (202) 564–6255.

2. *Copies for the Docket.* In addition to filing an objection or hearing request with the Hearing Clerk as described in Unit VI.A., you should also send a copy of your request to the PIRIB for its inclusion in the official record that is described in **ADDRESSES**. Mail your copies, identified by docket ID number OPP–2004–0145, to: Public Information and Records Integrity Branch, Information Resources and Services Division (7502C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001. In person or by courier, bring a copy to the location of the PIRIB described in **ADDRESSES**. You may also send an electronic copy of your request via e-mail to: *opp-docket@epa.gov*. Please use an ASCII file format and avoid the use of special characters and any form of encryption. Copies of electronic objections and hearing requests will also be accepted on disks in WordPerfect 6.1/8.0 or ASCII file format. Do not include any CBI in your electronic copy. You may also submit an electronic copy of your request at many Federal Depository Libraries.

B. When Will the Agency Grant a Request for a Hearing?

A request for a hearing will be granted if the Administrator determines that the material submitted shows the following: There is a genuine and substantial issue of fact; there is a reasonable possibility that available evidence identified by the requestor would, if established resolve one or more of such issues in favor of the requestor, taking into account uncontested claims or facts to the contrary; and resolution of the factual issues(s) in the manner sought by the requestor would be adequate to justify the action requested (40 CFR 178.32).

VII. Statutory and Executive Order Reviews

This final rule establishes a tolerance under section 408(d) of the FFDCA in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled *Regulatory Planning and Review* (58 FR 51735, October 4, 1993). Because this rule has been exempted from review under Executive Order 12866 due to its lack of significance, this rule is not subject to Executive Order 13211, *Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use* (66 FR 28355, May 22, 2001). This final rule does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.*, or impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (Public Law 104–4). Nor does it require any special considerations under Executive

Order 12898, entitled *Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations* (59 FR 7629, February 16, 1994); or OMB review or any Agency action under Executive Order 13045, entitled *Protection of Children from Environmental Health Risks and Safety Risks* (62 FR 19885, April 23, 1997). This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104–-113, section 12(d) (15 U.S.C. 272 note). Since tolerances and exemptions that are established on the basis of a petition under section 408(d) of the FFDCA, such as the tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) do not apply. In addition, the Agency has determined that this action will not have a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132, entitled *Federalism*(64 FR 43255, August 10, 1999). Executive Order 13132 requires EPA to develop an accountable process to ensure ''meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.'' ''Policies that have federalism implications'' is defined in the Executive Order to include regulations that have ''substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.'' This final rule directly regulates growers, food processors, food handlers and food retailers, not States. This action does not alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of section 408(n)(4) of the FFDCA. For these same reasons, the Agency has determined that this rule does not have any ''tribal implications'' as described in Executive Order 13175, entitled *Consultation and Coordination with Indian Tribal Governments* (65 FR 67249, November 6, 2000). Executive Order 13175, requires EPA to develop an accountable process to ensure ''meaningful and timely input by tribal officials in the development of regulatory policies that have tribal implications.'' ''Policies that have tribal implications'' is defined in the Executive Order to include regulations that have ''substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and the Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.'' This rule will not have substantial direct effects on tribal governments, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes, as specified in Executive Order 13175. Thus, Executive Order 13175 does not apply to this rule.

VIII. Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801*et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of this final rule in the **Federal Register**. This final rule is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: July 29, 2004.

Betty Shackleford,

Acting Director, Registration Division, Office of Pesticide Programs.

■ Therefore, 40 CFR chapter I is amended as follows:

PART 180—[AMENDED]

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. Section 180.569 is amended by revising the table in paragraph (a) to read as follows:

§ 180.569 Forchlorfenuron; tolerances for residues.

(a) * * *

Commodity	Parts per million	Expiration/revocation date

National Highway Traffic Safety Administration

49 CFR Part 571

[Docket No. NHTSA–2004–18794]

RIN 2127–AF75

Federal Motor Vehicle Safety Standards; Lamps, Reflective Devices and Associated Equipment

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Final rule.

SUMMARY: This document amends the Federal lighting standard for motor vehicle turn signal lamps, stop lamps, taillamps, and parking lamps to increase compatibility with the requirements of the Economic Commission for Europe (ECE) and to improve visibility of these lamps. Manufacturers will be permitted to comply with either the existing requirements or the new requirements for a period of between seven to 10 years, depending on vehicle type, at which time they will be required to comply with the new requirements. This action completes rulemaking that implemented the grant of a petition for rulemaking submitted by the Groupe de Travail Bruxelles 1952.

DATES: *Effective date:* The final rule is effective September 10, 2004. Petitions for reconsideration. Petitions for reconsideration of the final rule must be received not later than September 27, 2004.

ADDRESSES: Any petitions for reconsideration should refer to the docket number of this document and be submitted to: Administrator, National Highway Traffic Safety Administration, 400 Seventh Street, SW., Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: For non-legal issues, contact Rich Van Iderstine, Office of Safety Performance Standards, NHTSA (Phone: 202–366–5275; FAX: 202–366–4329). For legal issues, contact George Feygin, Office of Chief Counsel (Phone: 202–366–2992).

SUPPLEMENTARY INFORMATION:

Executive Summary

Federal Motor Vehicle Safety Standard (FMVSS) No. 108, *Lamps, Reflective Devices and Associated Equipment,* establishes requirements for original and replacement lighting equipment on motor vehicles manufactured for sale in the United States. The purpose of the standard, as set forth in paragraph S2 of FMVSS No. 108, is ''to reduce traffic accidents and deaths and injuries resulting from traffic accidents.'' One of the ways in which this safety purpose is accomplished is through ''enhancing the conspicuity of motor vehicles on the public roads so that their presence is perceived and their signals understood.''

This final rule amends FMVSS No. 108 in order to harmonize and improve the visibility requirements of the motor vehicle turn signal lamps, stop lamps, taillamps, and parking lamps.[1] Specifically, this rulemaking will enhance conspicuity of motor vehicles by improving the ability of other motorists to see these lamps from wider angles to the front, side, and rear of the vehicle. In addition to enhancing conspicuity, this rule will improve compatibility of our lighting requirements with those of the Economic Commission for Europe (ECE), as well as the industry consensus standards of the Society of Automotive Engineers (SAE).[2] Consequently, this rule will reduce lighting variations between motor vehicles produced in various world markets, resulting in lower production costs.

By way of background, in 1994, the Groupe De Travail ''Bruxelles 1952'' (GTB), composed of representatives from European, Japanese, and American motor vehicle and lighting manufacturers, petitioned NHTSA to ''harmonize'' the visibility requirements of FMVSS No. 108 with those in effect for vehicles manufactured for sale in Europe. At the same time, GTB submitted a similar petition to the Meeting of Experts on Lighting and Light Signaling (GRE)[3] and the Working Party on the Construction of Motor Vehicles (WP29),[4] the two groups responsible for amending the Economic Commission for Europe (ECE) Regulation No. 48 *Uniform Provisions Concerning the Approval of Vehicles With Regard to the Installation of Lighting and Light-Signaling Devices* (ECE R48), specifically ECE R48.01.

We granted GTB's petition and published a notice of proposed rulemaking (NPRM)[5] that would adopt much of what GTB had asked. To the extent practicable, we proposed changes that would be alternative to the existing requirements of FMVSS No. 108, and asked for comments for an appropriate date on which we would mandate compliance of all passenger cars with the new, more compatible requirements.

In response to comments to the NPRM, we published a supplementary notice of proposed rulemaking (SNPRM)[6] proposing to adopt either the measurement methods specified by the ECE or the Society of Automotive Engineers (SAE). Additionally, we proposed to apply the new requirements to all vehicles regulated by FMVSS No. 108, as opposed to only passenger cars, as originally contemplated in the NPRM.

The applicable requirements and measurement methods of the ECE and SAE are very similar. However, the ECE performance standards make lamps subject to the ECE requirements slightly more visible than lamps subject to the applicable SAE requirements. As explained below, we have decided to adopt the ECE-derived specifications in preference to those of the SAE because harmonization of the visibility requirements with those in ECE would provide a larger field of visibility, improve conspicuity, and ease compliance burdens on the manufacturers of vehicles for world markets.

Each of the ECE-derived specifications incorporates requirements based on either minimum intensity values or minimum lens areas, and a range of directions for measuring visibility. Each manufacturer will be able to choose either the intensity or the area requirement for the lamps.

The final rule allows vehicle manufacturers to continue to comply with the current visibility specifications of FMVSS No. 108 for some years to come, but they must eventually design their vehicles to comply with one of the two new ECE-derived specifications. Specifically, passenger cars, motorcycles, multipurpose passenger vehicles, trucks, buses, and trailers of less than 2032 mm. (80 in.) in overall width manufactured on and after September 1, 2011, must then comply with one of the two new ECE-derived specifications. Multipurpose passenger vehicles, trucks, buses, and trailers whose overall width is 2032 mm (80 in.) or more must comply with one of these specifications as of September 1, 2014.

We anticipate that this rulemaking will have a positive impact on motor vehicle safety because the new requirements increase the range of angles through which the lighting equipment will be visible to other motorists. Additionally, this rulemaking will ensure conspicuity between this new range of angles. In sum, there is a greater probability that an observer would see the lamp anywhere within the lamp's field of visibility. While we cannot precisely quantify the safety benefit of this increase in conspicuity, previous research of heavy duty trailer conspicuity indicates significant safety benefits associated with conspicuity improvements.[7] Nevertheless, we are providing an extended lead-time in order to ensure that any economic impact upon vehicle redesign is minimal.

How the ECE Visibility Requirements Differ From the Current Requirements of FMVSS No. 108.

The ECE R48 requirements for visibility of lamps and reflective devices differ from the current requirements in FMVSS No. 108 because: (1) ECE R48 contains a definition for ''angles of geometric visibility;'' (2) ECE R48 allows compliance with applicable requirements by measuring luminous intensity, as an alternative to minimum lens area measurement; (3) the ECE luminous intensity compliance method requires larger angles of measurement than the ''area method'' of current FMVSS No. 108; (4) ECE R48 requires that the entire ''solid angle'' complies with applicable requirements as opposed to requiring compliance with only specific test points; and (5) ECE R48 requirements apply to additional lamps and devices not covered by FMVSS No. 108 and vice versa;[8] (6)

[1] ''Visibility'' is not a defined term in FMVSS No. 108 or by the ECE, but in the context of motor vehicle lighting, it refers to the opportunity afforded to an observer to detect a lamp or the light emitted by a signal or a presence lamp.

[2] The SAE is an engineering body that establishes, inter alia, standardized test procedures, design and installation requirements, and guidelines, for motor vehicle lighting equipment.

[3] Since renamed to Working Party on Lighting and Light-Signalling.

[4] Since renamed to World Forum for Harmonization of Vehicle Regulations.

[5] See 60 FR 54833, October 26, 1995.

[6] See 63 FR 68233, December 10, 1998.

[7] See *http://www.nhtsa.dot.gov/cars/rules/regrev/evaluate/809222.html.*

[8] FMVSS No. 108 does not contain visibility requirements for parking lamps. ECE R48 does not contain lens area measurement requirements for a stop lamps.

ECE R48 requires a minimum area of 12.5 square centimeters for all applicable lighting devices where FMVSS No. 108 specifies minimum area depending on the lamp type and application; (7) ECE 48 limits the downward angle performance requirements to 5 degrees for lamps mounted at or below 750 mm.

With respect to the lens area method of compliance, ECE R48 specifies a wider range of angles than those specified in FMVSS No. 108. For instance, turn signals, parking lamps, and taillamps, include vertical angles of −15 degrees to +15 degrees in the lens area method. In addition, the lens area method angular range in the horizontal direction is larger in the inboard direction for turn signals, from 45 degrees (ECE) compared with 0 degrees (FMVSS No. 108).

Both, lens area and luminous intensity compliance methods in the ECE, establish a minimum solid angle in which the apparent surface of the lamp must be visible. By contrast, FMVSS No. 108 requires only that visibility be measured along the horizontal and vertical planes of the lighting device.

Finally, certain ECE requirements apply differently to lamps mounted below 750 mm from the ground. Specifically, lamps mounted below 750 mm above ground need not comply with the 15-degree downward visibility angle. Instead they must comply with a 5-degree downward visibility angle. Low-mounted lamps are treated differently because they cannot be observed at the downward angle of 15 degrees in normal circumstances. A 15-degree downward visibility angle would actually place the potential observer below the surface of the roadway at any distance more than about 3 meters away from the side of the vehicle.

In sum, the visibility requirements of ECE and FMVSS No. 108 currently differ in a variety of ways. This rulemaking seeks to improve compatibility of our lighting requirements with those of the ECE, and enhance the conspicuity of vehicles on U.S. highways.

How the ECE Visibility Requirements Differ From the SAE Visibility Requirements

The ECE visibility requirements have a larger range of angles for the area measurement method in comparison to those specified in the latest SAE standards. For instance, turn signals, parking lamps, and tail lamps, include vertical angles of −15 degrees to +15 degrees for the area method. In addition, the area method includes larger horizontal angles of 45 degrees in the inboard direction for turn signals, compared to 0 degrees (FMVSS No. 108) and 20 degrees (latest SAE). Finally, the ECE area method angular range for a parking lamp has an inboard requirement of 45 degrees horizontal compared to the latest SAE requirement of 20 degrees.

ECE area and intensity methods establish a minimum solid angle in which the apparent surface of the lamp must be visible. The minimum solid angle is similar to the latest SAE intensity method which bounds the area by four corner points established by the angles of visibility. The ECE standards require a slightly smaller minimum area of 12.5 cm^2 for all applicable lamps, where the latest SAE standards require 13 cm^2 for all lamps, and FMVSS No. 108 requires a minimum area of 12.5 to 13 cm^2 depending on the lamp type and application. Nevertheless, the ECE method achieves a greater probability that an observer would be able to see the lamp because of the larger overall visibility field.

Comments Received in Response to the SNPRM

We received seventeen comments in response to the SNPRM, submitted by 12 lamp and vehicle manufacturers, four manufacturer associations, and one employee of a lamp manufacturer. The commenters were: Ichikoh Industries, LTD (Ichikoh), Truck Manufacturers Association (TMA), Nissan North America, Inc. (Nissan), Guide Lamp (Guide), Aprilia USA, Inc. (Aprilia), Peterson Manufacturing Company (Peterson), National Truck Equipment Association (NTEA), Mitsubishi Motors (Mitsubishi), Transportation Safety Equipment Institute (TSEI), Volvo, the Alliance of Automobile Manufacturers (the Alliance), Volkswagen, Paul DeStefano, Navistar International (Navistar), International Truck and Engine Corporation (International), and Paccar. A summary and analysis of each issue is provided below.

a. Proposal To Extend ECE-Derived Passenger Visibility Requirements to Multipurpose Passenger Vehicles, Trucks, Trailers, and Buses of 2032 mm. or More Overall Width

GTB's petition requested harmonization of the visibility requirements only for passenger cars. However, unlike Europe, which has different visibility requirements for different classes of vehicles, FMVSS No. 108 establishes one set of visibility requirements for all vehicle types. Accordingly, the SNPRM proposed to apply the ECE-derived passenger vehicle visibility requirements to all vehicle regulated by FMVSS No. 108, including those whose overall width is 2032 mm or more.

Four comments were received on this issue, from TMA, Navistar, NTEA and TSEI. In general, all supported harmonization.

TSEI concurred with the proposal that the visibility requirements apply to wider vehicles provided that they received an extended lead-time to account for longer design cycles that are typical in the large-vehicle industry. As noted elsewhere, we are providing an extended lead time of approximately 10 years for large vehicles to comply with the new visibility requirements.

NTEA commented that extending the rule's applicability to medium and heavy-duty trucks was not part of the original NPRM and that the agency should further study this issue before proceeding. Although we did not propose inclusion of vehicles other than passenger cars in the NPRM, we subsequently re-examined the issue of applicability proposed to expand the application of the new visibility requirements to all vehicles subject to FMVSS No. 108 in the SNPRM. As stated in the SNPRM, there is neither safety benefits nor costs savings associated with different visibility requirements based on the vehicle's overall width. In our view, vehicles other than passenger cars should be afforded the same safety and harmonization benefits afforded to passenger vehicles upon completion of this rulemaking. A uniform requirement for the visibility of lighting devices installed on all vehicles should enhance safety and simplify the compliance responsibility for manufacturers.

TMA members include all the major U.S. and Canadian manufacturers of medium and heavy-duty trucks. TMA stated that it had always supported harmonization but that harmonization appeared to be the only basis for the SNPRM. Supported by Navistar, TMA questioned the agency's statement that ''* * * wider vehicles should be afforded the same safety and harmonization benefits that passenger car-like vehicles will have upon completion of this rulemaking.'' TMA asserted that one might intuitively feel that improved visibility results in increased safety, but that neither the agency nor the industry has the crash data necessary to either support or refute this perception.

The final rule adopts the ECE-derived passenger vehicle visibility requirements for all vehicles subject to the requirements of FMVSS No. 108. The new requirements will increase the range of angles over which visibility is

measured for turn signal lamps, parking lamps, stop lamps and taillamps. We believe that increasing the angles of visibility in these lamps will increase conspicuity, which will in turn reduce crashes on U.S. highways. A NHTSA-sponsored test program (*The Effectiveness of Retroreflective Tape on Heavy Trailers,* March 2001) which studied the use of conspicuity tape on trailers 2032 mm. or more in overall width indicates that side and rear crashes involving these trailers decreased by 29% compared with trailers not equipped with such tape.[9] These results indicate that increased conspicuity of motor vehicles results in increased safety.

Although we do not anticipate a 29% percent decrease in crashes, the agency expects that the ECE-derived visibility requirements will contribute to the reduction of crashes involving vehicles subject to the new requirements. However, unlike the trailer conspicuity requirements, which mandated reflective tape where none was previously required, this change in visibility requirements is incremental, and it is impossible to accurately calculate benefits resulting from this final rule. Nevertheless, we believe that the new visibility requirements will reduce crashes at negligible cost.

b. Proposal To Adopt Either the ECE or Revised SAE Requirements for Visibility

The SNPRM proposed to update current visibility requirements of FMVSS No. 108 by adopting one of two alternative specifications for visibility. We proposed to adopt either the ECE specifications based on lens area or luminous intensity, or the SAE specifications based on lens area or luminous intensity. As previously stated, the applicable requirements of the ECE and SAE are virtually identical. The equipment covered by the SNPRM included front and rear turn signal lamps (collectively referred to as ''turn signal lamps''), stop lamps, taillamps, parking lamps, rear fog lamps, side marker lamps, daytime running lamps (DRLs), the center highmounted stop lamp (CHMSL), and reflex reflectors.

Eleven commenters supported the ECE specifications while four were in favor of the SAE requirements (these commenters were a motorcycle manufacturer and vehicle and lamp manufacturers that predominantly develop products for the domestic trucking industry). After considering the comments, we are adopting the ECE-derived lens area and luminous intensity requirements for visibility.

The Alliance members consist of BMW, DaimlerChrysler, Ford, General Motors, Mazda, Nissan, Toyota, Volkswagen and Volvo. The Alliance recommended that the ECE-derived requirements be adopted to more closely align the requirements of Europe and the United States. However, the Alliance also recommended that the amendments clarify that reflex reflectors and side markers lamps have no minimum area requirements, and that they only need to be visible from any point in the indicated field of view. Ichikoh's comments were similar to that of the Alliance.

Under the proposed ECE-derived requirements for visibility, ''some portion of'' a front side marker lamp ''shall be visible'' for compliance with the minimum area, or have a minimum luminous intensity of 0.6 candela. Given a choice of compliance methods for any particular lamp function, a vehicle manufacturer would likely certify to the less stringent and less costly one which, in this case, would appear to be the one for minimum lens area rather than minimum luminous intensity. Similarly, in addition to having ''some portion of'' a front side marker lamp being ''visible,'' under the SAE-derived visibility requirements for either the area or intensity methods, the lamps must comply with the photometric requirements as installed. Thus, a side marker lamp could be certified to ''be visible'' and meet the photometry requirements (SAE) or simply ''be visible'' (ECE) depending on whether it was certified to either the SAE or ECE-derived specification. Thus, the inclusion of side marker lamps in final rule appears redundant, and therefore side markers will not be subject to the ECE-derived visibility specifications. In addition, the visibility requirements for CHMSLs will remain unchanged except for its location within the standard, as discussed below. This is necessary to avoid the elimination of an existing visibility requirement (considering that a CHMSL does not have a luminous intensity requirement other than to meet photometry), and to account for a CHMSL that uses more than one lamp.

In sum, the visibility requirements for side marker lamps, reflex reflectors, DRLs, and CHMSLs remain unchanged by the final rule, and their requirements remain the same.

As discussed above, the new visibility requirements of this final rule apply only to stop, turn, parking, and tail lamps. In addition to the visibility requirements, the SNPRM proposed to adopt an ECE 5-degree downward visibility provision for lamps mounted less than 750 mm above ground.[10] This ECE provision allows stop, turn, parking, tail and other lamps mounted below 750 mm above ground to comply with a 5-degree downward visibility angle instead of the 15-degree downward visibility angle. The downward visibility requirement can be reduced because low-mounted lamps usually cannot be observed at the downward angle of 15 degrees. A 15-degree downward visibility angle would actually place a potential observer below the surface of the roadway at any distance more than about 3 meters away from the side of the vehicle.

Since we are not adopting the ECE visibility requirements for all lamps listed in the NPRM, some lamps, *e.g.* side-marker lamps, would not be subject to the 5-degree provision described above. Because this provision will reduce a restriction on vehicle manufacturers without reducing motor vehicle safety, we decided to adopt this 5-degree provision and extend it to other lamps not subject to the visibility requirements of this final rule. Because we are reducing a restriction on vehicle manufacturers, this provision will become effective 30 days after the publication of this final rule. Accordingly, stop, turn, parking, tail and all other lamps and reflective devices subject to FMVSS No. 108 mounted less than 750 mm above the ground, as measured to the lamp axis of reference, must meet the 5-degree or greater downward angle visibility or photometric performance requirements at 5 degrees downward. For example, a reflective device, clearance lamp, side marker lamp, low mounted stop lamp, tail lamp, turn signal lamp or identification lamp may meet the 10-degree downward visibility requirements at 5 degrees downward angle.

Because lighting devices other than stop, turn, parking, and tail lamps are not subject to the visibility requirements of this final rule, the regulatory text contains a separate paragraph pertaining to lighting mounted less than 750 mm above the ground. The requirements for stop, turn, parking, and tail lamps subject to this final rule are listed in Table 19 and Table 20.

Ichikoh, an automotive lamp manufacturer, commented that ECE regulations do not have area requirements for signal lamps and that it hoped that NHTSA will not add an

[9] *See http://www.nhtsa.dot.gov/cars/rules/regrev/evaluate/809222.html.*

[10] See footnote 1 of Table V, and footnote 1 of Table VI of the SNPRM. This is not a separate provision, but an integral part of the ECE visibility requirement.

area requirement for signal lamps in the new visibility requirements. Ichikoh's comment on lens area related to proposed paragraph S5.1.1.30(d)[11] which would require that ''not less than 12.5 square centimeters of [a] lamp's effective projected luminous lens area shall be visible'' under specified conditions. We note that since Ichikoh submitted its comment, ECE has in fact incorporated this area measurement. Thus, our inclusion of the lens-area specification is part of harmonizing FMVSS No. 108 with the ECE requirements.

Ichikoh also commented that small color changes might occur around the visibility boundary that would not have any disadvantage on safety, and requested that NHTSA explicitly permit this. In our view, the color specifications of FMVSS No. 108 apply to the overall color of light emitted by the beam of a lamp and not to the color of the light emitted from any small area of the lens or outside the periphery of a lamp's visibility boundaries.

For continuity and clarity, Guide suggested incorporating all requirements for visibility in one paragraph, including those lamps that were not covered by this rulemaking, in particular, the requirements for a back up lamp (referenced in SAE J593c (February 1968)), the text from paragraph S5.3.1.5, and the requirements of paragraph S5.3.1.1. We agree with the suggestion to consolidate all the visibility requirements, and have done so in new paragraph, S5.3.2. Paragraph S5.3.2(e) incorporates the visibility language from SAE J593c (Feb 68) including the phrase ''center of the lens'' currently defined in paragraph S5.3.1.5 as the optical center. With the incorporation of the phrase into paragraph S5.3.2(e), existing paragraph S5.3.1.5 becomes moot and we are deleting it. We are also moving the visibility requirements for a CHMSL from S5.1.1.27(a)(2) and S5.1.1.27(b)(2) to paragraphs S5.3.2(c) and S5.3.2(d).

Guide also requested that additional or auxiliary devices not used to meet the certification requirements of the vehicle be excluded from the visibility requirements. Further, it argued that it is inappropriate to specify visibility requirements for a rear fog lamp considering that it is an auxiliary lamp that is not otherwise regulated by the standard. Guide's first comment is inapposite. No performance requirements, including visibility, are prescribed for supplemental lighting equipment, and none were proposed, except for rear fog lamps. Supplemental or auxiliary lamps may be used on motor vehicles subject only to the prohibition that they not impair the effectiveness of the lighting equipment that is required by FMVSS No. 108. We agree that it is not appropriate to specify visibility requirements for a rear fog lamp in this rulemaking because it is not a specifically regulated lamp.

Mitsubishi supported adoption of the ECE R48 visibility standard. In its view, this action will allow unified design and testing of lamp equipment for vehicles destined for different markets, a significant merit for manufacturers. We agree that the harmonization of the standard with ECE R48 would ease burdens on manufacturers.

The four comments supporting SAE-derived visibility standards were varied. Aprilia commented that ECE R48 was not intended to cover vehicles with less than four wheels and that the visibility requirements for two-wheeled vehicles is specified in EEC 93/92/EEC. Aprilia asserted that mandating visibility values for motorcycles that are applicable only to four-wheeled vehicles (in Europe) would create confusion and unnecessary and impractical restrictions for motorcycle manufacturers. In its opinion, the proposed SAE-derived amendments include values similar to EEC 93/92/EEC and would allow NHTSA to achieve its goal of harmonizing the signal lamp and reflector standards of the United States with those of Europe. Accordingly, Aprilia supported the adoption of proposed tables based on the SAE requirements for visibility.

We disagree. EEC 93/92/EEC is the European Union's (EU) directive for motorcycle lamp installation, but it differs from the UN's ECE regulation covering the same subject. EU directives are compulsory for members; other countries are not required to meet them. In contrast, many countries outside Europe have adopted the ECE regulations and, from an international harmonization perspective, the ECE regulations are a more widely recognized source for requirements that could be harmonized. Although Aprilia commented that the proposed SAE-derived amendments would harmonize the U.S. and European standards, EEC 93/92/EEC appears to only specify a luminous intensity measurement method for visibility. Otherwise, the EEC luminous intensity levels and angular ranges for turn signals, stop lamps, and taillamps are identical to those contained in both the ECE and SAE-derived tables used in the SNPRM. We believe that adoption of the luminous intensity measurement method derived from the ECE regulations will harmonize with EEC 93/92/EEC for motorcycles. Furthermore, motorcycle manufacturers for the domestic and certain foreign (ECE) markets will also be able to certify compliance using the ECE's lens area measurement method for visibility. However, we must ensure that a motorcycle equipped with a single taillamp satisfies visibility for both sides (left and right). This will be accomplished by adding a footnote to the new luminous intensity method Figure (Figure 20) that specifies that the horizontal angles for motorcycles with a single taillamp shall be -80 degrees to +80 degrees.

Peterson, TSEI, and NAL also supported the adoption of the SAE-derived requirements. Peterson and TSEI appeared to agree with NHTSA's SNPRM comparison of the SAE and ECE methods and the ''advantage'' of the ''SAE area method'' of determining compliance from computer designs or drawings before substantial capital is invested in tooling and equipment. Peterson further commented that prototyped tooling frequently is insufficient to prove photometric and visibility requirements based on intensity (especially lenses). This can result in expensive tooling modifications after production tooling is complete. TSEI stated that the advantage to manufacturers to use computer generated drawings to determine compliance cannot be overemphasized, especially for those that design ''catalog'' items for unknown vehicle types.

We believe that the benefits of the ''area method'' are retained regardless of whether the final rule adopts ECE or SAE derived visibility specifications. Specifically, a manufacturer is also able to rely on computer-generated drawings under the ECE specifications, and adoption of the ECE instead of SAE method will not necessitate additional cost expenditures.

In addition, TSEI argued that the ECE inboard test angles for parking and turn signal lamps are design restrictive and do not appear to provide any demonstrated safety benefit. TSEI asserted that the inboard angles for parking and turn signal lamp visibility requirements should be limited to 20 degrees (SAE) instead of the proposed 45 degrees (ECE), in order to better facilitate the design of aerodynamic vehicles to improve fuel mileage.

The 45-degree inboard visibility requirement for parking lamps and front and rear turn signal lamps has existed in the ECE regulations for many years with the test of compliance being 0.05 (parking lamp) and 0.3 candela per lamp

[11] See 63 FR 68233 (December 10, 1998).

(turn signal lamps) respectively. Because the vehicles sold in Europe and Asia have been meeting the ECE 45-degree requirement, we believe that this requirement is not unnecessarily design restrictive.

We further note that the adoption of the ECE-derived luminous intensity specification may be a significant advantage to manufacturers of aerodynamic vehicles. This method allows the installation of lamps with considerably smaller area in the direction of wider angles. This substantially reduces the constraint on styling for aerodynamic purposes.

Peterson and TSEI also asserted that the ECE visibility requirements for reflex reflectors are outside the useful range of operation of a reflector, and that the reflected output beyond 20 degrees falls off dramatically. As noted above, we are not including reflex reflectors in the final rule.

c. Irrevocable Choice of Compliance Method

In the SNPRM, we proposed a new paragraph S5.1.1.30(f) for ECE-derived requirements (and the alternative paragraph S5.1.1.31(f) for the current SAE-derived requirements) that ''The manufacturer of a vehicle shall certify to only one of the compliance options * * * and it may not thereafter choose a different option for that vehicle.'' Were we to test a lamp for compliance to the manufacturer's selected option and find a failure, the manufacturer would be precluded from contesting the test failure on the basis that the lamp nevertheless complied with the alternative visibility requirements specified in the standard.

Five comments were received concerning this issue, one from a vehicle manufacturer and the remainder from lamp manufacturers. In general, lamp manufacturers such as Guide and Peterson argued that the proposed irrevocability requirement would be overly restrictive given the fact that the options proposed in the SNPRM were, in their opinion, safety neutral. TSEI indicated that many of its members use catalog devices and may choose different methods for certification depending on application. In its view, it would be frustrating for a vehicle manufacturer to use the same method forever for a particular vehicle model. Mr. DeStefano requested clarification on whether each function of a multi-function lamp would be allowed to utilize different methods for compliance with the visibility requirements.

We continue to believe that when a vehicle manufacturer has certified that the vehicle will meet a visibility requirement with a lamp installed and tested according to a chosen compliance method, the method chosen should be used to determine compliance of that vehicle with the visibility requirements applicable to that lamp. This provision is needed for the agency to efficiently carry out its enforcement responsibilities. The agency wants to avoid the situation of a manufacturer confronted with an apparent noncompliance (based on a compliance test) with the option it has selected responding to that noncompliance by maintaining that its products comply with a different option for which the agency has not conducted a compliance test. To ensure that the agency will not be asked to conduct multiple compliance tests, first for one compliance option, then for another, this rule requires the vehicle manufacturer to select the option by the time it certifies the vehicle and prohibits it from thereafter selecting a different option.

In response to Mr. DeStefano, we wish to clarify that a manufacturer need not certify a vehicle to any one of the new visibility requirements. Instead, a vehicle manufacturer may choose one of the compliance options listed in S5.3.2(b) for each particular type of lamp. This means that, on a hypothetical passenger car, the final rule allows the parking lamps to meet the ECE-derived luminous intensity requirements, the front turn signal lamps the ECE-derived lens area requirements, and the rear turn signal lamps to meet the present SAE-based standard (until that alternative is phased out). This is consistent with the practice of both the latest SAE standards and ECE requirements, and the regulatory text clarifies this. However, each lamp in a multiple-lamp system as discussed above must be certified to the same visibility option (*e.g.*, a left and right stop lamps would need to be certified to the same option, but a left stop lamp and left taillamp would not). Further, a manufacturer can elect to certify all the lamps on the vehicle to the existing visibility requirements referenced in the applicable SAE Standards until such time as this alternative is phased out (*see* S5.3.2.4.)

d. Lead-Time

In response to comments to the NPRM, which proposed a mandatory compliance date of two years after issuance of the final rule, agency proposed a longer time in the SNPRM, *i.e.*, the fifth September 1 following issuance of the final rule.

Twelve comments were received concerning this issue. Primarily, the passenger car manufacturers recommended lead-times between five and nine years, and manufacturers in the trucking industry requested lead-times of 10 to 20 years due to the longer design cycles for this type of vehicle. Many commenters also requested that manufacturers be allowed to comply with the new or old requirements during the phase-in of the new rule.

Specifically, TMA, Peterson, NTEA, TSEI, and Navistar requested that the lead-time for large vehicles of 2032 mm. or more overall width be 15 years. All appeared to agree that the typical life cycles of medium and heavy-duty truck designs were in the 15–20 year range. Furthermore, TMA also suggested that this industry is principally domestic, and that only 10 percent, or less, of production is exported, and that the economic impact on the truck manufacturers/suppliers would not be justifiable on a harmonization basis if the lead-time is less than 15 years. International and Paccar had similar arguments; however, they requested lead-times of only 10 years. NAL commented that the proposed 5-year lead-time would be difficult to meet by manufacturers of vehicles larger than 2032 mm. in overall width.

We agree that life cycles for medium and heavy-duty trucks are typically longer than that for passenger cars; however, a lead-time of 15 years is excessive. There appear to be three primary differences between the ECE lens area method and the current regulations for visibility: (1) The field of view in the vertical direction for turn signals and taillamps is increased from 0 degrees to +/-15 degrees; (2) the inboard field of view is increased from 0 degrees to 45 degrees for turn signals; and (3) the minimum required area for turn signals is reduced from 13cm^2 to 12.5cm^2. Due to the aerodynamic design of current large trucks, we believe that the increase in the front turn signal inboard field of view is industry's primary concern. Even with current trucks an existing lamp that cannot comply as installed can be redesigned with a different lens in order to resolve the visibility issue without changing the vehicle's design. Nevertheless, in an effort to ease the perceived difficulty in incorporating front turn signal lamps that comply with the new requirements on multipurpose passenger vehicles, trucks, trailers, and buses, of 2032 mm. or more overall width, we have decided that only one front turn signal lamp area on each side need comply when more than one lamp or optical area is lighted on each side of the vehicle. Though this exclusion does not exist in the ECE visibility requirements, it is consistent

with the current FMVSS No. 108 requirements. This will allow the use of a second turn signal lamp to be mounted further inboard to accommodate the increased visibility angles in this direction. Considering this, we believe that such exclusion would enable large truck manufacturers to incorporate inexpensive solutions if compliance with the recommended amendments is required prior to a major redesign cycle. We believe that most large vehicles will be redesigned within the next ten years, and we are establishing a mandatory compliance date for vehicles 2032 mm. or more in overall width of approximately ten years, September 1, 2014.

As for passenger cars, motorcycles, and other vehicles with an overall width of less than 2032 mm, the Alliance requested a lead-time of seven to nine years. In addition, it supported the proposal that manufacturers be allowed to comply with the proposed or existing requirements during the transition period. Nissan, Volvo, VW, and NAL concurred with the SNPRM's proposed five-year lead-time. After consideration of these comments, we are requiring these vehicles to comply with the new requirements on a mandatory basis no later than September 1, 2011, a lead time of approximately seven years. By adopting an effective date for these amendments of 30 days following publication of the final rule, a manufacturer will be able to avail itself at the earliest opportunity of compliance with an ECE-derived specification if it wishes to do so.

e. Costs

Eight comments were received on our request to address potential compliance costs, primarily from the large vehicle industry. The commenters were unanimous in their opinion that the cost to the trucking industry would be high to conform to the ECE-derived visibility requirements. Though all commenters supported harmonization, they reported that long lead-times would be required in order to amortize the costs, and to coordinate design changes into the normal design cycle of the vehicles. Some believed that the economic impact on the trucking industry would not be justifiable based on harmonization.

We recognize that vehicle design changes implemented outside the normal design cycle of a vehicle result in higher costs. We note, however, that vehicle designs need not be changed for compliance. Lamps may be redesigned at a fraction of the costs claimed. However, in an effort to minimize the impact on the large vehicle industry, an extended lead-time of approximately 10 years has been adopted for vehicles of 2032 mm. or more overall width. In addition, we have provided an alternative for front turn signals on wider vehicles: if more than one lamp or optical area is lighted on each side of the vehicle, only one lamp or area need comply with the visibility requirements. This, for example, would enable a truck manufacturer to add a second turn signal to the front of a truck tractor that complies with the visibility requirements until such time that a single lamp can be incorporated during the normal design cycle of the vehicle. Finally, manufacturers will not have to meet new visibility requirements for reflex reflectors and side marker lamps; they are not included in the final rule.

f. Definitions

The SNPRM proposed definitions for ''effective light emitting surface'' and ''effective projected luminous lens area.'' Four comments were received on this issue.

Under the SNPRM, ''effective light-emitting surface'' would be defined as follows:

> Effective light-emitting surface means that portion of the light-emitting surface of a lamp that directs light to the photometric test pattern, and does not include mounting hole bosses, reflex reflector area, beads or rims that may glow or produce small areas of increased intensity as a result of uncontrolled light from an area of ½ degree radius around a test point.

Ichikoh commented that the definition would not cover signal lamps using LED or miniature bulb light sources. We do not agree; the proposed definition covers every lamp regardless of light source. However, a manufacturer of these lamp types could encounter difficulty if it chooses to utilize LED light sources behind a transparent lens. In order for a single stop lamp to comply with the current FMVSS No. 108 visibility requirements, the stop lamp must have 12.5 square centimeters of effective projected luminous lens area throughout a horizontal field of view from −45 degrees to +45 degrees. If the stop lamp incorporated LED light sources and a *transparent* outer lens, the lamp manufacturer would need to ensure that the total cumulative area of all the individual LED ''lenses'' satisfied these requirements. Other lamp designs (such as the stop lamps used on certain models of Cadillac) incorporate what appear to be *translucent* outer lenses (Cadillac appears to use some type of optics in the outer lens), in combination with LED light sources. In this case, the translucent lens can be included in the calculations of effective projected luminous lens area. However, with the adoption of a luminous intensity method for measuring visibility, this issue relating to LEDs and visibility appears to be moot.

We are adopting the definition as we proposed it. However, we note that transparent lenses cannot be included in the determination of the effective light-emitting surface. The agency has previously addressed this issue in an interpretation letter to Shigeyoshi Aihara on June 14, 2000.

TSEI submitted the following comment:

> The SNPRM contains a modification for the definition of ''effective projected luminous lens area.'' It appears that there is no substantive change in the method of determining ''effective'' or ''useful'' lens area. We do note that most lenses have area(s) that contribute light toward the recording photoreceptor, even if it is ''uncontrolled.'' Some lenses do not have fresnels or optics for such control as a matter of design. In addition, lenses often employ deliberate methods to scatter the light such as frosting or stipple. The new definition appears to confirm that any illuminated lens area that *contributes light toward satisfying the photometric* requirements qualifies as effective lens surface area.

We concur that there does not appear to be any substantive change in determining the effective projected luminous lens area. However, the proposed definition clearly stated that only the portion of the lamp that directs light to the photometric test pattern may be included in the determination of the effective light-emitting surface. Similar to our discussion above, we believe that *transparent* lenses do not direct light to the photometric test pattern and may not be included in the calculation. However, portions of *translucent* lenses intended to deliberately scatter the beam pattern within the allowable photometry (*e.g.*, frosted or stippled lenses), are permissible as part of the effective projected luminous lens area.

Guide suggested that it would be appropriate to add the definition of ''light-emitting surface'' from ECE Regulation 48 since the term is not defined in FMVSS No. 108. Our proposed definition of ''effective light-emitting surface'' was taken directly from the existing definition of ''effective projected luminous lens area.'' It was considered necessary, in combination with the proposed definition of ''effective projected luminous lens area,'' to clarify the parts of a lamp that constitute its measurable surface and how the area of that surface is specified. It is clear from Guide's comment that further clarification of the phrase ''light-emitting surface'' may be required. However, we have concluded that the

term ''light-emitting surface,'' has no significance within the definition. Elimination of the term will enhance clarity and will not result in a substantive change. Thus, we are adopting the definition of ''Effective light-emitting surface'' as proposed but deleting the internal phrase ''light-emitting surface.''

Peterson recommended that the agency review the proposed definition for ''effective projected luminous lens area'' to determine whether it is the same as the previous definition. The proposed definition was:

> Effective projected luminous lens area means the area of the projection of the effective light-emitting surface of a lamp on a plane specified to define the functional lighted lens area or the geometric visibility of the lamp.The ''plane'' is not clearly defined in the SAE standards referenced in FMVSS No. 108.

Peterson also noted that the reference to ''functional lighted lens area'' may be confusing, considering that it is intended to be equivalent to the ''effective projected luminous lens area'' as indicated in paragraph S6.3.

In light of harmonization concerns, we reviewed the ECE regulations to establish compatibilities between the ECE defined ''apparent surface'' and the current FMVSS No. 108 definition of ''effective projected luminous lens area.'' The first difference is that the ECE specifies an ''orthogonal projection'' whereas FMVSS No. 108 simply states ''projection.'' Though we believe that these two phrases have the same meaning in the two regulations, the term ''orthogonal projection'' has greater clarity; it is defined in a common dictionary as ''a two-dimensional graphic representation of an object in which the projecting lines are at right angles to the plane of projection.'' The use of the simpler term ''projection'' may actually increase the opportunity for misinterpretation as there is no definition that clearly defines ''projection'' in the context of motor vehicle visibility. Therefore, we are adopting the phrase ''orthogonal projection'' within the definition in order to achieve greater clarity, to improve harmonization with the ECE regulations, and to reduce the incidence of misinterpretation. We discuss ''orthogonal projection'' in more detail below.

Another difference is that ECE R48 specifies the projection plane as ''a plane perpendicular to the direction of observation and tangential to the most exterior point of the lens * * *.'' This phrase is very similar to the current FMVSS No. 108 definition which includes the phrase ''a plane perpendicular to the lamp axis.'' The term ''lamp axis'' is not defined in FMVSS No. 108, nor is it defined in SAE J387–Nov 87, *Terminology—Motor Vehicle Lighting.* However, in the September 1995 revision of SAE J387, the definition of ''effective projected luminous area'' contains the statement that ''the axis of the lamp corresponds to the H–V axis used for photometric requirements.'' We believe that this is the understood meaning of ''lamp axis'' in industry; however, clarification of this term should be beneficial to preventing misinterpretations and confusion. We are therefore adding the following definition of ''axis of reference'' which is nearly identical to that of the ECE regulations:

> Axis of reference means the characteristic axis of the lamp for use as the direction of reference (H=0 º, V=0 º) for angles of field for photometric measurements and for installing the lamp on the vehicle.

We are also more fully defining the projection plane in the definition of ''effective projected luminous lens area.'' Incorporating all of the above changes, the definition that we have adopted in the final rule reads as follows:

> Effective projected luminous lens area means the area of the orthogonal projection of the effective light-emitting surface of a lamp on a plane perpendicular to a defined direction relative to the axis of reference. Unless otherwise specified, the direction is coincident with the axis of reference.

The area of the orthogonal projection is formed by projecting the effective light-emitting surface along parallel lines that are perpendicular to the projection plane and in a defined direction that is either parallel to the axis of reference or, for measuring visibility, in any direction throughout the pattern defined by the corner points specified in new Figure 19, which represents the ECE-derived visibility specifications. This definition should achieve greater clarity, improve harmonization with the ECE regulations, and reduce the incidence of misinterpretation, when compared to the definition proposed in the SNPRM. There is no substantive change from the meaning of the phrase as defined in the current FMVSS No. 108.

Paragraph S6.3 is amended without substantive change to reflect the fact that the term ''effective projected luminous lens area'' is now utilized in FMVSS No. 108.

For consistency, we are amending paragraphs S5.1.1.12, S5.1.1.25, S5.1.1.26(a) and (b), S5.1.1.27(a)(1) and (b)(1), and S5.8.3(a) to substitute the term ''effective projected luminous lens area'' in place of terms that have the same meaning: ''effective projected lens area'' and ''functional lighted lens area.''

As indicated above, we are centralizing both the existing and new visibility requirements in the new paragraph, S5.3.2. We are also simplifying the regulatory language that we have previously used. Currently, the visibility of lighting devices is addressed in paragraph S5.3.1.1.

The first sentence of paragraph S5.3.1.1 states that:

> * * * each lamp and reflective device shall be located so that it meets the visibility requirements specified in any applicable SAE Standard or Recommended Practice.

The SAE materials for many lamps and reflective devices include a section called ''Installation requirements.'' This section specifies that visibility of lamps and reflective devices is determined throughout a range of directions, defined by angles, from left to right (horizontal), and from up to down (vertical), with reference to the lens' centerpoint (*e.g.*, from 45 degrees left to 45 degrees right and from 15 degrees up to 15 degrees down). To be considered ''visible,'' each lamp or reflective device must provide an unobstructed view of a specified minimum area of the outer lens surface determined, generally, by geometric means. The CHMSL is an exception to compliance with SAE materials; paragraph S5.1.1.27 requires CHMSLs to have a ''signal visible to the rear'' throughout defined angles (In addition, the SAE requirements for stop lamps, taillamps, and turn signal lamps for vehicles over 2032mm in overall width contain an exception: when more than one lamp or optical area is lighted on each side of the vehicle, only one such area on each side need comply).

We are retaining this SAE-based requirements previously listed in S5.3.1.1 as an alternative to the new, ECE-derived visibility requirements until the end of the phase-in period. However, for clarification purposes, S5.3.1.1 is eliminated, and the requirements in S5.3.1.1 are now contained in several paragraphs. S5.3.2.4 contains the first sentence of previous S5.3.1.1 and reads as follows:

> S5.3.2.4 As an alternative to S5.3.2(b), each passenger car and motorcycle, and each multipurpose passenger vehicle, truck, trailer and bus that is of less than 2032 mm overall width, that are manufactured on or before September 1, 2011, and each multipurpose passenger vehicle, truck, trailer and bus of 2032 mm or more overall width that is manufactured on or before September 1, 2014, must have each lamp located so that it meets the visibility requirements specified in any applicable SAE Standard or Recommended Practice.

The second sentence of previous paragraph S5.3.1.1 provides that:

* * * no part of the vehicle shall prevent a parking lamp, taillamp, stop lamp, turn signal lamp, or backup lamp from meeting its photometric output at any applicable group of test points specified in Figures 1c and 2, or prevent any other lamp from meeting the photometric output at any test point specified in any applicable SAE Standard or Recommended Practice.

We have clarified and moved this sentence to S5.3.2(a), without making any substantive changes:

Each lamp and reflective device must be installed in a location where it complies with all applicable photometric requirements and visibility requirements, with all obstructions (*e.g.*, mirrors, snow plows, wrecker booms, backhoes, and winches) installed on the vehicle.

This revised sentence is a permanent requirement and is not affected by the phase in.

The third sentence of the previous S5.3.1.1 establishes an exception to the second sentence. It reads:

However, if motor vehicle equipment (*e.g.*, mirrors, snow plows, wrecker booms, backhoes, and winches) prevents compliance with this paragraph by any required lamp or reflective devices, an auxiliary lamp or device meeting the requirements of this paragraph shall be provided.

This sentence expresses the exception referred to in new S5.3.2(a), and we have rewritten it as new S5.3.2.2, to read as follows:

If any required lamp or reflective device is obstructed by motor vehicle equipment (*e.g.*, mirrors, snow plows, wrecker booms, backhoes, winches, etc.) and cannot meet requirements of S5.3.2, the vehicle must be equipped with an additional lamp or device of the same type which meet all applicable requirements of this standard, including S5.3.2.

We are retaining the basic lamp location specifications in S5.3. However, the reference to S5.3.2 is substituted for reference to S5.3.1 because S5.3.1 is removed. Paragraph S5.3 now reads:

Location of required equipment. Except as provided in paragraphs S5.3.2, S5.7, and S7, each lamp, reflective device, and item of associated equipment shall be securely mounted on a rigid part of the vehicle other than glazing that is not designed to be removed except for repair, in accordance with the requirements of Table I and Table III, as applicable, and in the location specified in Table II (multipurpose passenger vehicles, trucks, trailers, and buses 80 or more inches in overall width) or Table IV (all passenger cars, and motorcycles, and multipurpose passenger vehicles, truck, trailers and buses less than 80 inches in overall width), as applicable.

Finally, in S5.1.1.12, we eliminated two commas to clarify the meaning of the paragraph. This clarification makes no substantive changes to the requirements contained in that paragraph.

Effective Date

Because the final rule affords an option to existing requirements, it is hereby determined for good cause shown that an effective date earlier than 180 days after publication of the final rule is in the public interest, and the overall effective date is 30 days after publication.

Passenger cars and motorcycles, and multipurpose passenger vehicles, trucks, buses, and trailers with an overall width less than 2032mm, manufactured on and after September 1, 2011, must comply with the harmonized requirements. Multipurpose passenger vehicles, trucks, buses, and trailers with an overall width of 2032mm or more, manufactured on or after September 1, 2014, must comply with the harmonized requirements. It is likely that many of the harmonized specifications are already being met by manufacturers selling in world markets.

Regulatory Analyses and Notices

A. Executive Order 12866 and DOT Regulatory Policies and Procedures

This rulemaking action was not reviewed under Executive Order 12866. Further, it has been determined that the rulemaking action is not significant under Department of Transportation regulatory policies and procedures. The purpose of the rulemaking action is to clarify existing requirements and to harmonize Federal regulations with those of the ECE. The costs of the final rule are so minimal as not to warrant preparation of a full regulatory evaluation. We believe that vehicles presently selling in world markets already comply with this final rule. However, the agency provided a 7 to 10 year leadtime to ensure that all vehicles that currently do not comply with the new requirements are brought to compliance within the normal design cycles.

B. National Environmental Policy Act

NHTSA has analyzed this rulemaking action for the purposes of the National Environmental Policy Act. It is not anticipated that the final rule will have a significant effect upon the environment. The composition of lighting equipment will not change from those presently in production.

C. Regulatory Flexibility Act

The agency has also considered the impacts of this rulemaking action in relation to the Regulatory Flexibility Act (5 U.S.C. 601 *et seq*). I certify that this rulemaking action will not have a significant economic impact upon a substantial number of small entities.

The following is NHTSA's statement providing the factual basis for the certification (5 U.S.C. 605(b)). The final rule primarily affects manufacturers of motor vehicles. Based on production volume, manufacturers of motor vehicles are generally not small businesses within the meaning of the Regulatory Flexibility Act.

The Small Business Administration's regulations define a small business in part as a business entity which operates primarily within the United States (13 CFR 121.105(a)). SBA's size standards are organized according to Standard Industrial Classification Codes (SIC), SIC Code 3711, ''Motor Vehicles and Passenger Car Bodies'' has a small business size standard of 1,000 employees or fewer. Truck trailer and travel trailer manufacturers are considered small businesses with 500 employees or fewer.

This Final Rule will not have any significant economic impact on a small business because it makes no significant substantive change to the requirements specified in FMVSS No. 108. Instead, this rulemaking clarifies and harmonizes visibility requirements with those of ECE. Small organizations and governmental jurisdictions that purchase motor vehicles will not be significantly affected because this rulemaking will not cause price increases. Accordingly, we have not prepared a Regulatory Flexibility Analysis.

D. Federalism

E.O. 13132 requires NHTSA to develop an accountable process to ensure ''meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.'' E.O. 13132 defines the term ''Policies that have federalism implications'' to include regulations that have ''substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.'' Under E.O. 13132, NHTSA may not issue a regulation that has federalism implication, that imposes substantial direct compliance costs, and that is not required by statute, unless the Federal

government provides the funds necessary to pay the direct compliance costs incurred by State and local governments, or NHTSA consults with State and local officials early in the process of developing the proposed regulation.

This final rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government as specified in E.O. 13132. Thus, the requirements of section 6 of the Executive Order do not apply to this rule.

E. Executive Order 12778 (Civil Justice Reform)

The final rule does not have any retroactive effect. Under 49 U.S.C. 30103, whenever a Federal motor vehicle safety standard is in effect, a state may not adopt or maintain a safety standard applicable to the same aspect of performance which is not identical to the Federal standard. 49 U.S.C. 30161 sets forth a procedure for judicial review of final rules establishing, amending or revoking Federal motor vehicle safety standards. That section does not require submission of a petition for reconsideration or other administrative proceedings before parties may file suit in court.

F. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires agencies to prepare a written assessment of the cost, benefits, and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of more than $100 million annually. Because this final rule will not have a $100 million effect, no Unfunded Mandates assessment has been prepared.

G. National Technology Transfer and Advancement Act of 1995

Section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (Pub. L. 104–113, 15 U.S.C. 272) directs us to use voluntary consensus standards in our regulatory activities unless doing so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.*, materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies, such as the Society of Automotive Engineers (SAE). The NTTAA directs us to provide Congress, through OMB, explanations when we decide not to use available and applicable voluntary consensus standards.

This agency considered adopting an SAE voluntary consensus standard. However, it was decided that adopting the SAE standard instead of the ECE R48 would be inconsistent with harmonization.

H. Paperwork Reduction Act

There are no information collection requirements in this rule.

I. Regulation Identifier Number (RIN)

The Department of Transportation assigns a regulation identifier number (RIN) to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. You may use the RIN contained in the heading at the beginning of this document to find this action in the Unified Agenda.

J. Privacy Act

Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78) or you may visit *http://dms.dot.gov*.

List of Subjects in 49 CFR Part 571

Imports, Motor vehicle safety, Motor vehicles.

■ In consideration of the foregoing, 49 CFR Part 571 is amended as follows:

PART 571—FEDERAL MOTOR VEHICLE SAFETY STANDARDS

■ 1. The authority citation for Part 571 continues to read as follows:

Authority: 49 U.S.C. 322, 30111, 30115, 30117 and 30166; delegation of authority at 49 CFR 1.50.

■ 2. Section 571.108 is amended by:
■ a. adding to paragraph S4, in alphabetical order, new definitions of ''Axis of reference,'' and ''Effective light-emitting surface,'' and revising the definition of ''Effective projected luminous lens area'' to read as follows;
■ b. revising paragraphs S5.1.1.12, S5.1.1.25, S5.1.1.26(a), S5.1.1.26(b), S5.1.1.27 (a)(1) and (a)(2), and S5.1.1.27(b)(1) and (b)(2) to read as follows;
■ c. removing and reserving paragraph S5.1.1.28;
■ d. revising paragraph S5.3 to read as follows;
■ e. removing and reserving paragraphs S5.3.1, S5.3.1.1, S5.3.1.1.1, and S5.3.1.5;
■ f. adding new paragraph S5.3.2 to read as follows;
■ g. adding new paragraphs S5.3.2.1 through S5.3.2.4 to read as follows;
■ h. revising the third and fourth sentences of paragraph S5.8.3(a) to read as follows;
■ i. revising paragraph S6.3 to read as follows; and
■ j. adding new Figures 19 and 20 following the text of the standard.

The additions and revisions read as follows.

§ 571.108 Standard No. 108; Lamps, reflective devices, and associated equipment.

* * * * *

S4. Definitions.

* * * * *

Axis of reference means the characteristic axis of the lamp for use as the direction of reference (H = 0°, V = 0°) for angles of field for photometric measurements and for installing the lamp on the vehicle.

* * * * *

Effective light-emitting surface means that portion of a lamp that directs light to the photometric test pattern, and does not include transparent lenses, mounting hole bosses, reflex reflector area, beads or rims that may glow or produce small areas of increased intensity as a result of uncontrolled light from an area of 1/2 degree radius around a test point.

Effective projected luminous lens area means the area of the orthogonal projection of the effective light-emitting surface of a lamp on a plane perpendicular to a defined direction relative to the axis of reference. Unless otherwise specified, the direction is coincident with the axis of reference.

* * * * *

S5.1.1.12 On a motor vehicle, except a passenger car, whose overall width is 2032 mm. (80 inches) or more, measurements of the effective projected luminous lens area, and of the photometrics of a multiple compartment stop lamp and a multiple compartment turn signal lamp, shall be made for the entire lamp and not for the individual compartments.

* * * * *

S5.1.1.25 Each turn signal lamp on a motorcycle shall have an effective projected luminous lens area of not less

than 2258 square mm. (3½ square inches).

* * * * *

S5.1.1.26 * * *

(a) The effective projected luminous lens area of a single compartment stop lamp, and a single compartment rear turn signal lamp, shall be not less than 50 square centimeters (7¾ square inches).

(b) If a multiple compartment lamp or multiple lamps are used to meet the photometric requirements for stop lamps and rear turn signal lamps, the effective projected luminous lens area of each compartment or lamp shall be at least 22 square centimeters, provided the combined area is at least 50 square centimeters (7¾ square inches).

S5.1.1.27(a) * * *

(1) Shall have an effective projected luminous lens area not less than 2903 square mm. (4½ square inches).

(2) Shall meet the visibility requirements specified in S5.3.2(c).

* * * * *

(b) * * *

(1) Are identical in size and shape and have an effective projected luminous lens area not less than 1452 square mm. (2¼ square inches) each.

(2) Shall meet the visibility requirements specified in S5.3.2(d).

* * * * *

S5.1.1.28 [Reserved].

* * * * *

S5.3 *Location of required equipment.* Except as provided in paragraphs S5.3.2, S5.7, and S7, each lamp, reflective device, and item of associated equipment shall be securely mounted on a rigid part of the vehicle other than glazing that is not designed to be removed except for repair, in accordance with the requirements of Table I and Table III, as applicable, and in the location specified in Table II (multipurpose passenger vehicles, trucks, trailers, and buses 80 or more inches in overall width) or Table IV (all passenger cars, and motorcycles, and multipurpose passenger vehicles, truck, trailers and buses less than 80 inches in overall width), as applicable.

S5.3.1 [Reserved].

S5.3.1.1 [Reserved].

S5.3.1.1.1 [Reserved].

* * * * *

S5.3.1.5 [Reserved].

* * * * *

S5.3.2 Except as provided in S5.3.2.1 through S5.3.2.4 and in paragraphs S5.7 and S7, each vehicle must conform to the following requirements:

(a) Each lamp and reflective device must be installed in a location where it complies with all applicable photometric requirements and visibility requirements, with all obstructions (*e.g.*, mirrors, snow plows, wrecker booms, backhoes, and winches) installed on the vehicle.

(b) A manufacturer must certify compliance of each lamp to one of the following visibility requirement options, and it may not thereafter choose a different option for that vehicle:

(1) When a vehicle is equipped with any lamp listed in Figure 19 of this standard, each such lamp must provide not less than 12.5 square centimeters of unobstructed effective projected luminous lens area in any direction throughout the pattern defined by the corner points specified in Figure 19 for each such lamp; or

(2) When a vehicle is equipped with any lamp listed in Figure 20 of this standard, each such lamp must provide a luminous intensity not less than that specified in Figure 20 in any direction throughout the pattern defined by the corner points specified in Figure 20 for each such lamp. The luminous intensity must be measured in accordance with the photometry test requirements of the applicable SAE Standards and Recommended Practices incorporated by reference or subreference in this standard.

(c) A high mounted stop lamp must have a signal visible to the rear through a horizontal angle from 45 degrees to the left to 45 degrees to the right of the longitudinal axis of the vehicle.

(d) High mounted stop lamps required to comply with S5.1.1.27(b) must together have a signal to the rear as specified in S5.3.2(c).

(e) Backup lamps must be mounted on the rear so that the optical center of at least one lamp is visible from any eye point elevation from at least 1828 mm (6 ft) to 610 mm (2 ft) above the horizontal plane on which the vehicle is standing; and from any position in the area, rearward of a vertical plane perpendicular to the longitudinal axis of the vehicle, 914 mm (3 ft) to the rear of the vehicle and extending 914 mm (3 ft) beyond each side of the vehicle.

S5.3.2.1 Clearance lamps may be located at a location other than on the front and rear if necessary to indicate the overall width of a vehicle, or for protection from damage during normal operation of the vehicle, and at such a location they need not meet the photometric output at any test point that is 45 degrees inboard.

S5.3.2.2 If any required lamp or reflective device is obstructed by motor vehicle equipment (*e.g.*, mirrors, snow plows, wrecker booms, backhoes, winches, etc.), and cannot meet requirements of S5.3.2, the vehicle must be equipped with an additional lamp or device of the same type which meet all applicable requirements of this standard, including S5.3.2.

S5.3.2.3 For signal lamps and reflective devices mounted less than 750 mm above the road surface as measured to the lamp axis of reference, the vertical test point angles located below the horizontal plane subject to photometric and visibility requirements of this standard may be reduced to 5 degrees.

S5.3.2.4 As an alternative to S5.3.2(b), each passenger car and motorcycle, and each multipurpose passenger vehicle, truck, trailer and bus that is of less than 2032 mm overall width, that are manufactured on or before September 1, 2011, and each multipurpose passenger vehicle, truck, trailer and bus of 2032 mm or more overall width that is manufactured on or before September 1, 2014, must have each lamp located so that it meets the visibility requirements specified in any applicable SAE Standard or Recommended Practice.

* * * * *

S5.8.3(a) * * * Each such lamp manufactured for use on a passenger car and on a multipurpose passenger vehicle, truck, trailer or bus less than 2032 mm. (80 inches) in overall width shall have an effective projected luminous lens area not less than 2258 square mm. (3½ square inches). If multiple compartment lamps or multiple lamps are used, the effective projected luminous lens area of each compartment or lamp shall be not less than 2258 square mm. (3½ square inches); however, the photometric requirements may be met by a combination of compartments or lamps.

* * * * *

S6.3 The term ''functional lighted lens area'' in any SAE Standard or Recommended Practice incorporated by reference or by subreference in this standard, has the same meaning as the term ''effective projected luminous lens area.''

BILLING CODE 4910–59–C

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

49 CFR Part 571

[Docket No. NHTSA–2004–18793]

RIN 2127–AJ39; 2127–AH85

Federal Motor Vehicle Safety Standards; Child Restraint Anchorage Systems

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation.

ACTION: Final rule, response to petitions for reconsideration; corrections.

SUMMARY: In June 2003, NHTSA published a response to petitions for reconsideration of earlier final rules amending Federal Motor Vehicle Safety Standard No. 225, *Child Restraint Anchorage Systems*. Subsequently, the agency received several petitions asking us to reconsider, correct or clarify some aspects of the June 2003 final rule. This document responds to those petitions. In addition, this document denies a request made in a petition for reconsideration to allow stowable (or ''fold-away'') lower anchors past September 1, 2004.

DATES: The amendments made in this rule are effective September 1, 2004. If you wish to petition for reconsideration of this rule, your petition must be received by September 27, 2004.

ADDRESSES: If you wish to petition for reconsideration of this rule, you should refer in your petition to the docket number of this document and submit your petition to: Administrator, Room 5220, National Highway Traffic Safety Administration, 400 Seventh Street SW., Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: For nonlegal issues: Michael Huntley, Office of Crashworthiness Standards, NHTSA (telephone (202) 366–0029).

For legal issues: Deirdre R. Fujita, Office of the Chief Counsel, NHTSA (telephone (202) 366–2992).

You can reach both of these officials at the National Highway Traffic Safety Administration, 400 Seventh St., SW., Washington, DC, 20590.

SUPPLEMENTARY INFORMATION:

Table Of Contents

I. Introduction

On June 27, 2003, NHTSA published a final rule (68 FR 38208, Docket No. 03–15438; corrected 68 FR 54861, September 19, 2003) that provided the last of the agency's responses to petitions for reconsideration that the agency received regarding a final rule establishing Federal Motor Vehicle Safety Standard (FMVSS) No. 225, ''Child restraint anchorage systems'' (FMVSS No. 225, 49 CFR 571.225). Several parties petitioned for reconsideration of some of the decisions announced by that June 2003 final rule. Today's document responds to those petitions. In addition, today's document denies a request in a petition for reconsideration from Keiper GmbH & Co. (Keiper) to allow the use of stowable (or ''foldaway'') lower anchors past September 1, 2004.

II. Background

March 1999 Final Rule

On March 5, 1999, NHTSA published a final rule establishing FMVSS No. 225 (64 FR 10786, docket 98–3390, notice 2). The rule required vehicle manufacturers to equip vehicles with new child restraint anchorage systems that are standardized and independent of the vehicle seat belts. Each new system has two lower anchorages and one tether anchorage. Each lower anchorage includes a rigid round rod or bar of a specified length, onto which the connector of a child restraint system can be attached. The bars are located at the intersection of the vehicle seat cushion and seat back. The upper anchorage is a fixture to which the top tether strap of a child restraint system is to be hooked. (For convenience, this document refers to the child restraint anchorage system as the ''LATCH'' system. LATCH, an acronym for ''Lower Anchors and Tethers for Children,'' was a term developed by manufacturers and retailers in educating the public on the availability and use of the new system.)

The LATCH system must meet specified strength requirements and must be either positioned in the vehicle such that the lower anchorage bars are visible to consumers, or at least marked such that their presence and location are made conspicuous. Such marking is required to be accomplished by placing a circle on the vehicle seat back or seat cushion above or below the bar.

A number of parties petitioned for reconsideration of various aspects of the March 1999 final rule, including the standard's strength requirements for the LATCH system, the test procedures used by NHTSA to test for compliance with the requirements, and the configuration and marking of the LATCH lower anchorage bars. The agency responded to the petitions in documents published on August 31, 1999 (64 FR 47566; Docket No. 99–6160), July 31, 2000 (65 FR 46628; Docket No. 7648), and June 27, 2003, *supra*.

III. Reconsideration of the June 27, 2003 Rule

NHTSA received petitions for reconsideration of the June 27, 2003 final rule from the Alliance of Automobile Manufacturers,[1] Johnson Controls, Mitsubishi, and the Ford Motor Company. The issues raised by the petitioners relate to the length of the LATCH system lower bars, to the marking of the seat back, and to the need for clarification of or minor corrections to various provisions of the final rule.

a. Length of the LATCH Lower Bars

FMVSS No. 225 specifies the length of the lower anchorage bars of a LATCH system. Section 9.1.1(c) states that each bar must be not less than 25 millimeters (mm) long and not more than 50 mm in length. The minimum and maximum limits were adopted in part to standardize the design of the lower bars. The maximum length limit was also adopted to reduce the likelihood that the bars may bend in a crash, and to limit the ability of a child restraint to move laterally and/or rotate in a side impact crash.

In the original final rule, the maximum permissible length was 40 mm. That length referred to the straight portion of the bar to which the lower anchorage hardware of a child restraint is connected. To provide more design and manufacturing flexibility to manufacturers, the June 2003 final rule increased the maximum bar length from 40 mm to 50 mm. In addition, the June 2003 final rule included a Figure 21 that depicted the portion of the bar that is measured for compliance with the 50 mm limit. The portion shown depicted measuring the inside opening of the bar (68 FR at 38213), including the inside radii of the lower anchorage bars, and not just the straight portion of the bar as had been specified before. NHTSA believed that showing where the bar is measured would help to assure that the

[1] The Alliance consists of members BMW, DaimlerChrysler, Ford, General Motors, Mazda, Mitsubishi, Porsche, Toyota and Volkswagen. The Alliance supplemented its petition for reconsideration with a letter dated March 24, 2004 (Docket No. NHTSA–03–15438–11).

measurement is objective and repeatable.

The Alliance and Johnson Controls petitioned for reconsideration of the change made by the June 2003 final rule. The petitioners stated that Figure 21 is incorrect because, they believed, measuring the inside portion of the bar would include the inside radii of the lower anchorage bars in the measurement of bar length. Because curved portions of the bar could be included in what was supposed to be a measurement of the ''straight'' portion of the bar (the straight portion of the bar to which the child restraint hardware connects), petitioners said that the effect of Figure 21 could limit the straight portion of the bar to less than 50 mm. The Alliance stated that some anchorages that had met S9.1.1(c) with a maximum length of 40 mm may now fail the 50 mm limit when measured according to Figure 21.

In a March 24, 2004 supplement to its petition for reconsideration, the Alliance expressed further concern about Figure 21 because, petitioner stated, it does not show how to measure the length of anchorages that do not have straight and parallel sides. (The bar depicted in the figure had straight and parallel sides.) At the same time, the petitioner recognized that the agency believed that measuring the inside opening of the bar at specified points on the bar improved the objectivity of the test. To address the agency's concern and the alleged problems with Figure 21, the petitioner suggested that S9.1.1(d) be amended to specify: (1) That the bar is measured in a vertical plane 13 mm rearward of the vertical plane that is tangent to the forward face of the anchor bar; and (2) that the bar must not be more than 60 mm in length between the anchor bar supports or other structural members that restrict lateral movement of a child restraint attachment. The petitioner believed that the 13 mm provides enough clearance to enable child restraints to attach to the bar.

NHTSA's Response: The agency has decided that Figure 21 is useful in showing where the LATCH bar is to be measured and should generally be retained. Yet, the agency also agrees that revisions to the figure and to the corresponding regulatory text (S9.1.1(c)) are needed, as discussed by the petitioners. As explained below, this final rule makes the amendments to the figure and regulatory text suggested by the Alliance, with one difference.

To provide the design and manufacturing flexibility intended by the agency in the June 27, 2003 final rule in increasing the maximum allowable bar length to 50 mm, this final rule increases the maximum allowable bar length to 60 mm. Increasing the maximum bar length to 60 mm, measured as shown in Figure 21 (as revised today), will allow for the straight portion of the bar to be increased to 50 mm. This final rule also clarifies that the bar must not be more than 60 mm in length between the anchor bar supports or other structural members of the vehicle that restrict lateral movement of the components of a child restraint that are designed to attach to the bars. In other words, the LATCH anchorage bars are not required to have the ''U'' shape shown in Figure 21. (The Figure will also bear wording that the depiction of the U shape is for illustration purposes only.)

Another amendment relates to the Alliance's suggestion that S9.1.1(d) be amended to specify that the bar is measured in a vertical plane 13 mm rearward of the vertical plane that is tangent to the forward face of the anchor bar. The agency agrees that defining with more specificity where the bar is measured improves the objectivity of the requirement. However, NHTSA believes that the bar should be measured with reference to the vertical plane that is tangent to the rearward face of the anchor bar (rather than the vertical plane that is tangent to the forward face of the bar), taking into account the 6 mm thickness of the bar. Thus, the bar would be measured in a vertical plane that is 7 mm rearward of the vertical plane that is tangent to the rearward face of the anchor bar.

The agency prefers to reference the rearward face of the bar because that dimension directly defines the inside opening of the bar that interfaces with the component on the child restraint that attaches to the LATCH anchor. There would be no need to take into account the ±0.1 mm tolerance allowed for the 6 mm diameter bar.

b. Marking the Location of Lower LATCH Anchorage Bars

FMVSS No. 225 specifies marking requirements for lower LATCH anchorage bars that can not be viewed from a forward angle of 30 degrees above a horizontal plane tangent to the seat cushion (S9.5). Vehicles in which the bars are not visible from that angle must have a permanent mark on the vehicle seat back or seat cushion at each bar's location. The permanent mark must be a circle that is not less than 13 mm (½inch) in diameter and that is located a specified distance above or below the center of each individual bar, within a specified tolerance. The purposes of marking the location of the bars are to provide a visual reminder to consumers that the LATCH system is present and to help users locate and use the bars. 64 FR at 10802.

Lateral Position of the Circle. Prior to the June 27, 2003 final rule, the standard specified that the center of the circle must be in the vertical longitudinal plane that passes through the center of the bar. The June 2003 final rule amended the standard to provide a ±12 mm lateral tolerance for centering the circle over the anchorage bar, to account for production variation and seat cover configuration. The agency declined to provide a 25 mm tolerance because NHTSA was concerned that with such a tolerance, the centerline of the circle might not be over the bar if the bar were only 25 mm long, and thus the circle may not adequately denote the location of the anchorage.

The Alliance and Ford Motor Company petitioned for reconsideration of the agency's decision not to adopt a lateral tolerance of ±25 mm for the placement of the circle. The petitioners strongly believe that it is impracticable to meet the 12 mm tolerance for some types of vehicles, such as passenger cars that have the LATCH anchors mounted directly to the floor pan with the seat back and cushion independently mounted to the body structure at the assembly plant. The Alliance stated that—

> the markings are applied to the seat back trim material before the trim cover is assembled onto the seat back, and there is considerable variation in the location of the marking after the seat trim cover is assembled onto the seat back. Variation in position of the seat back in the vehicle introduces further variation in position of the markings on a seat relative to the anchors on the floor. Reducing this variation would require a costly change in design and different final line vehicle assembly methods with no commensurate increase in safety.

The Alliance stated also that it may not be practicable to locate some types of markings directly over the center of the anchor bar because of seat back design features such as seams, seams with piping, vertical slits to allow easier access to LATCH anchor bars, or junctions between side bolsters and seat inserts. In addition, the petitioner said that a 25 mm tolerance would harmonize with a comparable requirement of Transport Canada.

Johnson Controls, a seat supplier, submitted a May 13, 2004 letter to the docket to support the adoption of a 25 mm tolerance. Johnson Controls believed that a portion of the circle would always be over the anchor area even if a 25 mm tolerance were

specified. Further, Johnson Controls stated that established design tolerances used in seat and vehicle assembly processes currently exceed the 12 mm lateral tolerance, and that there is no existing process that allows for the seat back to be marked to meet a 12 mm tolerance.

NHTSA's Response: The agency has decided to grant the request to increase the lateral tolerance to 25 mm. Vehicle manufacturers have provided convincing information that for many vehicles, it would be difficult to align the center of the LATCH lower anchorage bars and a 13 mm circle with less than a 25 mm tolerance due to manufacturing processes and seat back design features. Moreover, the agency believes that increasing the tolerance to 25 mm will not significantly affect the consumers' ability to find the LATCH anchorages. While anchor bars are permitted to be as short as 25 mm in the straight portion of the bar (*see* revised Figure 21), most are considerably longer. Even if a 25 mm bar were used, with a 25 mm tolerance from the center of the bar, the circle will be, at farthest, tangent to a longitudinal vertical plane tangent to the side of the anchorage bar. If a person were to probe the seat bight in the area directly under the marking circle, his or her finger would easily contact the bar. For bars that are greater than 25 mm in length, with a 25 mm tolerance a portion of the marking circle will always be over some part of the bar. In either situation, marking the circle with a 25 mm tolerance will adequately provide a visual reminder to consumers that the LATCH system is present and will help users locate and use the bars. Adopting the 25 mm tolerance will also harmonize FMVSS No. 225 with the comparable Transport Canada requirement.

Vertical Position of the Circle. Prior to the June 27, 2003 final rule, the standard specified that the center of the circle must be not less than 50 mm and not more than 75 mm above the bar. The June 27, 2003 final rule denied a request from the Alliance that the vertical position of the marking should be located not more than 100 mm from the horizontal centerline of the anchorage bar in the vertical longitudinal plane. NHTSA did not increase the 75 mm upper limit to 100 mm because, the agency believed, it might be difficult for some consumers to align the child restraint attachments with the circles when the circles are 100 mm from the bars.

Ford Motor Company petitioned for reconsideration of this decision, stating that the 75 mm upper limit causes problems for vehicles that have large vertical slits along the bottom of the seat back. The petitioner stated that on these vehicles, to meet the 75 mm upper limit, the access slit would have to be shortened.

> The access slit cannot be long enough to readily access the anchors and provide room for hook-type attachments to be tightened while still keeping the markings within the 50 to 75 mm tolerance (and within ±25 mm of the lateral center of the anchor bar). * * * Child restraint manufacturers are reporting damage, particularly to leather seats, from hook-type attachments, which are pulled sharply upward when the child seat attachments are tightened.

Ford stated that increasing the permitted vertical range to 50 to 100 mm would allow longer vertical access slits.

NHTSA's Response: Ford has submitted new information on the need for a longer vertical slit that has convinced NHTSA that the permitted vertical range of the circle should be increased to 100 mm from the LATCH bar. An increase to 100 mm balances the need for a longer slit (to decrease the wear-and-tear on the fabric, leather or other material out of which the seat cover is fabricated) with the need for reasonable proximity of the circle to the anchorage bar. This final rule amends S9.5(a)(3) and Figure 22 to permit the circle to be 50 to 100 mm above the bar.

Permanency. The June 27, 2003 final rule included a discussion in the preamble that explained that the agency was not allowing the use of tags to meet the marking requirement, *i.e.*, the circle could not be placed on a tag that stuck out from the vehicle seat back like a flag. NHTSA was concerned that, if only one side of a tag were sewn into a seam, it was foreseeable that a consumer would snip it off. The final rule included a provision that a tag could be used only if it is sewn on at least half of its border (so as to not invite snipping).

The Alliance petitioned for reconsideration of the requirement that a tag had to be sewn on at least half its border. The petitioner said that sewing half of the border of a tag forms a loop that can catch on the clothing of occupants (particularly pocket rivets), and may be susceptible to damage. (Some of the members of the Alliance misunderstood NHTSA's requirement that a tag must be sewn on at least half its border. By this requirement, the agency meant to ensure that fabric tags lay flat on the seat back or cushion, and will not stick out from a seam. Some members envisioned folding a fabric tag in half and sewing the two matching edges into a seam. The resulting tag protrudes from the seam even though half of its border was sewn, which was contrary to NHTSA's intent.)

NHTSA's Response: The agency has reconsidered its position that the standard should prohibit tags from protruding from the vehicle seat back or seat cushion. The agency originally adopted the provision against sewing only one side of a tag out of a concern that consumers could find the tag bothersome and may be tempted to snip it off. This concern was discussed in a letter interpreting a provision in FMVSS No. 213, ''Child restraint systems'' (49 CFR 571.213), that requires rear-facing child restraints to be permanently labeled with a crucial safety warning not to place a rear-facing child restraint in the front seat of a vehicle equipped with a passenger-side air bag. *http://www.nhtsa.dot.gov/cars/rules/interps/files/13960sew.lab.html*. The label is required to be fairly large (it averages about 54 square cm) and conspicuous, and located on the child restraint where the child's head would rest. The agency decided that by virtue of its location and ease of detachment by cutting, tearing or pulling off the single row of stitching attaching the label, the label invited removal and was not likely to stay attached during the course the restraint would be used. These considerations are not present for a tag having a 13 mm circle, located near the vehicle seat bight. Such a tag is not nearly so likely to be removed as a large warning label protruding from the padding of the child restraint in the area where a child's head would rest.

Vehicle manufacturers have indicated that tags can facilitate the marking of the LATCH lower anchorages, possibly reducing costs and increasing design flexibility. Because of this, and because the need to prohibit protruding tags is small in the FMVSS No. 225 situation as compared to that of the FMVSS No. 213 air bag warning label, NHTSA is amending S9.5(a)(4) of FMVSS No. 225 to specify that the circle may be on a tag, and to remove any specification as to how much of the tag's border must be sewn.

c. Corrections

This final rule makes the following corrections to and clarifications of the June 27, 2003 final rule.

Effective Date

In its petition for reconsideration, Mitsubishi stated that it was unclear when the amendments made by the June 27, 2003 final rule to S9 were to take effect. The June 2003 final rule stated that the effective date for the document was 30 days from publication (August 26, 2003), but Mitsubishi believed that

NHTSA intended to have the amendments come into force September 1, 2004. Mitsubishi is correct that the agency intended the mandatory compliance date for the amendments to be September 1, 2004. Vehicles manufactured on or after that date would have to meet the amended requirements.

NHTSA notes that the June 27, 2003 should also have specified that voluntary early compliance would be permitted. Manufacturers were allowed to certify their vehicles as meeting FMVSS No. 225, as amended, prior to September 1, 2004.

Simultaneous Testing

The Alliance raised an issue in a September 13, 2000 submission to a previous docket on FMVSS No. 225 (Docket No. 00–7648–5) that the agency inadvertently did not address. FMVSS No. 225 specifies test conditions and procedures for testing tether anchorages. The standard originally specified that in the case of a row of designated seating positions that has more than one tether anchorage, at the agency's option, each tether anchorage could be tested simultaneously (S6.3.3, 64 FR at 10825). The agency later amended this provision, at the request of the Alliance, to specify that adjacent seating positions should only be subject to simultaneous testing if two child restraints, 400 mm wide, can be properly installed side-by-side (65 FR 46628). (Based on the width of typical child restraints, a center-to-center distance between adjacent seating positions of at least 400 mm is needed to install child restraints in adjacent seating positions properly.) That is, if there is a row of seats in which three adjacent seating positions are equipped with lower anchorages, but it is physically impossible to install three child restraints properly in these seating positions, there is no need to test all three LATCH systems (or tether anchorages) simultaneously. (65 FR at 46637.)

The agency implemented the amendment applying to the simultaneous testing of tether anchorages by amending S6.3.3 and S6.3.4 and adding a Figure 20. In S6.3.3, S6.3.4 and Figure 20, reference is made to measuring a distance between ''the two lower anchorages'' at the seating position. The Alliance noted that the reference does not provide for determining whether to test simultaneously tether anchorages at seating positions that do not have ''lower anchorages'' (child restraints would be attached at such seating positions by use of the vehicle's belt system and top tether anchorage). The Alliance suggested that NHTSA correct S6.3.3, S6.3.4 and Figure 20 by specifying that the midpoint of such seating positions ''lies in the vertical longitudinal plane that passes through the SgRP [seating reference point] of the seating position.'' NHTSA agrees and has made the correction in this document.

Displacement Limit for Lateral Pull Test

In its petition for reconsideration, Johnson Controls and the Alliance stated that it was unclear whether NHTSA intended the displacement limit for lower LATCH anchorages in the lateral pull test specified in S9.4.1(b) to be the same for lower anchorages that are in outboard and non-outboard designated seating positions. Johnson Controls said that regulatory text specifies 150 mm for anchorages in both seating positions but that the preamble discussing the change implied that the 150 mm requirement applied only to non-outboard seating positions.

The 150 mm requirement applies to anchorages in both the outboard and non-outboard seating positions. The agency has amended the text of S9.4.1(b) to make this clearer.

Phase-In Dates

The Alliance noted that some of the dates in section S16 were in error. S16 specifies a one-year phase-in schedule for vehicles manufactured on or after September 1, 2004 and before September 1, 2005. The introductory paragraph of S16 states that, ''At anytime during the production year ending August 31, 2004,'' manufacturers must provide information to NHTSA upon request. The Alliance correctly noted that the date should be August 31, 2005, to make reference to the one-year period during which the requirements are phased in. Today's document makes this correction.

The petitioner also referred to S16.1(b), which specifies that the number of vehicles that must meet certain requirements must not be less than 90 percent of the manufacturer's production in a specified one-year period. The final rule stated that that period is from September 1, 2003 to September 1, 2004. The petitioner stated that the period should be September 1, 2004 to September 1, 2005, to match the production year of interest. The agency agrees and has made the correction.

S9.3

The agency has noted that the electronic Code of Federal Regulations shows that S9.3 of FMVSS No. 225 is no longer included in the standard. There was no intent by NHTSA that the section be removed. Today's document replaces the paragraph in FMVSS No. 225.

IV. Stowable Lower Anchors

Final rules of August 31, 1999 and July 31, 2000, *supra*, that responded to various issues raised in petitions for reconsideration of the rulemaking that established FMVSS No. 225 permitted vehicle manufacturers to meet a then-draft standard developed by the International Organization for Standardization (ISO) during an interim period. (That interim period originally was set to expire September 1, 2002 but was extended to September 1, 2004.) NHTSA permitted compliance with the draft ISO standard because manufacturers were able to produce vehicles in the short-term that could meet the anchorage strength levels in the ISO requirements.

Keiper requested in a petition for reconsideration that NHTSA retain one aspect of the draft ISO standard on a permanent basis. The draft ISO standard allowed the use of stowable or fold-away lower anchorages of a LATCH system. The petitioner believes that stowable/foldaway anchorages address difficulties in mounting lower LATCH anchorages in seating positions that have a limited area in which to locate the anchorages and in those positions that have deeply contoured seats. The petitioner also believes that the stowable or fold-away anchorages could be placed farther to the rear than rigidly-mounted LATCH lower anchorages. The petitioner said that that placement would increase the potential safety and comfort for adult seat occupants. Petitioner stated that it offers a ''standard'' and ''economy'' models of a stowable anchorage system.

> In the ''park'' position, these components are out of sight in the gap between the backrest and the seat cushion. * * * On the Standard module * * *, they can be released with a pull tab. Integrated springs then bring the brackets into the ''ready'' position. The eccentric mounting, combined with the active force of the springs prevent the brackets from swinging out of position while the child seat is being installed. In the basic Economy version * * *, each bracket is manually folded out of the gap between the seat cushion and back rest and placed into the ''ready'' position * * *. The Economy version anchorages are fixed in the ''ready'' position by a bolt element which has to be released before the anchorage can be pivoted back in its ''park'' position.

NHTSA is denying this request to allow stowable anchorages after August 31, 2004. Although stowable anchorages are currently used by only one vehicle manufacturer (DaimerChrysler) on limited models, the agency is concerned

that if these anchorage systems were used more generally, they might impede efforts to achieve maximum compatibility between child restraint systems and vehicle LATCH systems. While FMVSS No. 225 has made child restraints easier to use, it is still difficult to install some LATCH-equipped child restraints in some vehicles.[2] NHTSA is monitoring how the LATCH system is being implemented in vehicles and on child restraints and how effectively consumers are using the system, to identify any areas that need to be addressed to improve compatibility between vehicles and child restraints further (Docket NHTSA 2003–15998). Consumers are just beginning to become familiar with standardized LATCH systems. Compatibility is unlikely to be fostered by a variation in the usability of LATCH at this time.

Stowable anchorages, which are not standardized in form or function by FMVSS No. 225 in their stowed position, are new to the vast majority of consumers. Because FMVSS No. 225 does not specify how stowable anchorages are stowed, deployed, or re-stowed, stowable systems could be designed to operate in disparate ways and to be stowed in the seat bight (or elsewhere) at varied locations. The lack of standardization could increase consumer uncertainty about using the system, and possibly cause misuse or nonuse of the anchorages.

The agency does not believe that stowable anchorages meet a safety need that warrants using limited agency resources to standardize them. A search of the NHTSA Hotline database shows only one consumer complaint about discomfort from feeling a non-stowable lower LATCH anchorages. IIHS has also told NHTSA that it has not heard of any complaints about non-stowable anchorages.

V. Effective Date

The agency is making today's amendments effective September 1, 2004. This final rule amends requirements that will come into effect on that date. For that reason, NHTSA finds for good cause to make this final rule effective in less than 180 days. Voluntary early compliance with the amendments made in today's final rule is permitted.

[2] June 11, 2003 joint press event; NHTSA, Consumers Union, and the Insurance Institute for Highway Safety (IIHS).

VI. Rulemaking Analyses and Notices

a. Executive Order 12866 (Regulatory Planning and Review) and DOT Regulatory Policies and Procedures

This rulemaking document was not reviewed under E.O. 12866, ''Regulatory Planning and Review.'' We have considered the impacts of this rulemaking action and have determined that this action is not ''significant'' within the meaning of the Department of Transportation's regulatory policies and procedures. We have further determined that the effects of this rulemaking do not warrant preparation of a full final regulatory evaluation. This document resolves relatively minor issues raised by petitions for reconsideration of a June 2003 final rule. Manufacturers will be minimally affected by this rulemaking because generally it does not change the manufacturers' responsibilities to install tether anchorages and LATCH systems previously established by the issuance of FMVSS No. 225. This rule provides slightly more flexibility in how vehicle seat backs must be marked to identify the presence and location of the lower LATCH anchorages that are hidden from view. It also provides for greater leeway in the length of the lower bars. This rule corrects and clarifies some requirements and test procedures, but overall does not impose new test burdens.

b. Regulatory Flexibility Act

NHTSA has considered the effects of this rulemaking action under the Regulatory Flexibility Act. I hereby certify that it will not have a significant economic impact on a substantial number of small entities. This rule affects motor vehicle manufacturers, almost all of which are not small businesses. Even if there are motor vehicle manufacturers that qualify as small entities, this rule will not have a significant economic impact on them because it generally does not change the manufacturers' responsibilities to install LATCH systems pursuant to FMVSS No. 225. Accordingly, the agency has not prepared a regulatory flexibility analysis.

c. Executive Order 13132 (Federalism)

This rulemaking action has been analyzed in accordance with the principles and criteria contained in Executive Order 13132. This rule will not have a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132. Accordingly, NHTSA has determined that this final rule does not contain provisions that have federalism implications or that preempt State law.

d. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires agencies to prepare a written assessment of the costs, benefits and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local or tribal governments, in the aggregate, or by the private sector, of more than $100 million annually. This rule does not impose any unfunded mandates as defined by that Act.

e. National Technology Transfer and Advancement Act

Under the National Technology Transfer and Advancement Act of 1995 (NTTAA) (Pub. L. 104–113), ''all Federal agencies and departments shall use technical standards that are developed or adopted by voluntary consensus standards bodies, using such technical standards as a means to carry out policy objectives or activities determined by the agencies and departments.''

In developing today's document, we considered a standard issued by the ISO on child restraint anchorage systems. ISO is a worldwide voluntary federation of ISO member bodies. In responding to petitioners for reconsideration, we considered the ISO standard to guide our decisionmaking to the extent consistent with the Safety Act. The ISO standard permits stowable anchorages. NHTSA has decided not to permit these anchorages because consumers in this country are only now becoming familiar with the non-stowable LATCH system. We are concerned that the lack of standardization of stowable anchorages could increase consumer uncertainty about using the system, and possibly cause misuse or nonuse of the anchorages. We also considered the regulations developed by Transport Canada in making decisions about the standard's marking requirements.

f. National Environmental Policy Act

NHTSA has analyzed this rulemaking action for the purposes of the National Environmental Policy Act. The agency has determined that implementation of this action will not have any significant impact on the quality of the human environment.

g. Executive Order 12778 (Civil Justice Reform)

This rule does not have any retroactive effect. Under section 49 U.S.C. 30103, whenever a Federal motor

vehicle safety standard is in effect, a State may not adopt or maintain a safety standard applicable to the same aspect of performance which is not identical to the Federal standard, except to the extent that the State requirement imposes a higher level of performance and applies only to vehicles procured for the State's use. 49 U.S.C. 30161 sets forth a procedure for judicial review of final rules establishing, amending or revoking Federal motor vehicle safety standards. That section does not require submission of a petition for reconsideration or other administrative proceedings before parties may file suit in court.

h. Paperwork Reduction Act

This rule does not contain any collection of information requirements requiring review under the Paperwork Reduction Act of 1995 (Pub. L. 104–13).

i. Viewing Docket Submissions

You may read the comments received by Docket Management at Room PL–401, 400 Seventh Street, SW., Washington DC 20590 (telephone (202) 366–9324). You may visit the Docket from 10 a.m. to 5 p.m., Monday through Friday.

You may also see the comments on the Internet. Go to the Docket Management System (DMS) Web page of the Department of Transportation (*http://dms.dot.gov/*).

Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78) or you may visit *http://dms.dot.gov*.

List of Subjects in 49 CFR Part 571

Imports, Incorporation by reference, Motor vehicle safety, Reporting and recordkeeping requirements, Tires.

■ In consideration of the foregoing, NHTSA amends 49 CFR chapter V as set forth below.

PART 571—FEDERAL MOTOR VEHICLE SAFETY STANDARDS

■ 1. The authority citation for part 571 continues to read as follows:

Authority: 49 U.S.C. 322, 30111, 30115, 30117 and 30166; delegation of authority at 49 CFR 1.50.

■ 2. Section 571.225 is amended by:

■ a. Revising S6.3.3(a)(1) and S6.3.4.3(a)(1);
■ b. Revising S9.1.1(c);
■ c. Adding S9.3;
■ d. Revising S9.4.1(b), S9.5(a)(3) and S9.5(a)(4);
■ e. Revising the introductory paragraph of S16, and revising S16.1(b); and
■ f. Revising Figures 20, 21 and 22.

The revised and added figures and paragraphs read as follows:

§ 571.225 Standard No. 225; Child restraint anchorage systems.

* * * * *

S6.3.3 *Provisions for simultaneous and sequential testing.*

(a) * * *

(1) The midpoint of the seating position lies in the vertical longitudinal plane that is equidistant from vertical longitudinal planes through the geometric center of each of the two lower anchorages at the seating position. For those seating positions that do not provide lower anchorages, the midpoint of the seating position lies in the vertical longitudinal plane that passes through the SgRP of the seating position.

* * * * *

S6.3.4.3 *Provisions for simultaneous and sequential testing.*

(a) * * *

(1) The midpoint of the seating position lies in the vertical longitudinal plane that is equidistant from vertical longitudinal planes through the geometric center of each of the two lower anchorages at the seating position. For those seating positions that do not provide lower anchorages, the midpoint of the seating position lies in the vertical longitudinal plane that passes through the SgRP of the seating position.

(c) As shown in Figure 21, are:

(i) Not less than 25 mm in length, and

(ii) Are not more than 60 mm in length between the anchor bar supports or other structural members of the vehicle that restrict lateral movement of the components of a child restraint that are designed to attach to the bars, measured in a vertical plane 7 mm rearward of the vertical plane that is tangent of the rearward face of the anchor bar.

* * * * *

S9.3 *Adequate fit of the lower anchorages.* Each vehicle and each child restraint anchorage system in that vehicle shall be designed such that the CRF can be placed inside the vehicle and attached to the lower anchorages of each child restraint anchorage system, with adjustable seats adjusted as described in S9.3(a) and (b).

(a) Place adjustable seat backs in the manufacturer's nominal design riding position in the manner specified by the manufacturer; and

(b) Place adjustable seats in the full rearward and full downward position.

(c) To facilitate installation of the CRF in a vehicle seat, the side, back and top frames of the CRF may be removed for installation in the vehicle, as indicated in Figure 1A of this standard. If necessary, the height of the CRF may be 560 mm.

S9.4 *Strength of the lower anchorages.*

S9.4.1 * * *

(b) 150 mm, for lower anchorages when a force of 5,000 N is applied in a lateral direction in a vertical longitudinal plane that is 75 ± 5 degrees to either side of a vertical longitudinal plane.

* * * * *

S9.5 * * *

(a) * * *

(3) That is located such that its center is on each seat back between 50 and 100 mm above or on the seat cushion 100 ± 25 mm forward of the intersection of the vertical transverse and horizontal longitudinal planes intersecting at the horizontal centerline of each lower anchorage, as illustrated in Figure 22. The center of the circle must be in the vertical longitudinal plane that passes through the center of the bar (±25 mm).

(4) The circle may be on a tag.

* * * * *

S16. *Phase-in of strength requirements for vehicles manufactured on or after September 1, 2004 and before September 1, 2005.* At anytime during the production year ending August 31, 2005, each manufacturer shall, upon request from the Office of Vehicle Safety Compliance, provide information identifying the vehicles (by make, model and vehicle identification number) that have been certified as complying with S6.3.1 or S6.3.4, and with S9.4 or S15.2 and S15.3. The manufacturer's designation of a vehicle as meeting the particular requirement is irrevocable.

S16.1 * * *

(b) The manufacturer's production on or after September 1, 2004 and before September 1, 2005.

Proposed Rules

Federal Register
Vol. 69, No. 154
Wednesday, August 11, 2004

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2004–18736; Airspace Docket No. 04–AEA–10]

Proposed Establishment of Class E Airspace; Jonesville, VA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice proposes to establish Class E airspace area at Jonesville, VA. The development of a Standard Instrument Approach Procedure (SIAP) based on area navigation (RNAV) to serve flights into Lee County Airport, Jonesville, VA under Instrument Flight Rules (IFR) has made this proposal necessary. Controlled airspace extending upward from 700 feet Above Ground Level (AGL) is needed to contain aircraft executing the approach. The area would be depicted on aeronautical charts for pilot reference.

DATES: Comments must be received on or before September 10, 2004.

ADDRESSES: Send comments on the proposal to the Docket Management System, U.S. Department of Transportation, Room Plaza 401, 400 Seventh Street, SW., Washington, DC 20590–0001. You must identify the docket number FAA–2004–18736/ Airspace Docket No. 04–AEA–10 at the beginning of your comments. You may also submit comments on the Internet at *http://dms.dot.gov.*

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The Docket Office (telephone 1–800–647–5527) is on the plaza level of the Department of Transportation NASSIF Building at the above address.

An informal docket may also be examined during normal business hours at the office of the Regional Air Traffic Division, Federal Aviation Administration, Eastern Region, 1 Aviation Plaza, Jamaica, NY 11434–4809.

FOR FURTHER INFORMATION CONTACT: Mr. Francis T. Jordan, Jr., Airspace Specialist, Airspace Branch, AEA–520, Eastern Region, 1 Aviation Plaza, Jamaica, NY 11434–4809, telephone: (718) 553–4521.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: ''Comments to Docket No. FAA–2004–18736/Airspace Docket No. 04–AEA–10.'' The postcard will be date/time stamped and returned to the commenter.

Availability of NPRMs

An electronic copy of this document may be downloaded through the Internet at *http://dms.dot.gov.* Recently published rulemaking documents can also be accessed through the FAA's Web page at *http://www.faa.gov* or the Superintendent of Documents Web page at *http://www.access.gpo.gov./nara.*

Additionally, any person may obtain a copy of this notice by submitting a request to the Federal Aviation Administration, Office of Air Traffic Airspace Management, ATA–400, 800 Independence Avenue, SW., Washington, DC 20591, or by calling (202) 267–8783. Communications must identify both docket numbers for this notice. Persons interested in being placed on a mailing list for future NPRMs should contact the FAA's Office of Rulemaking, (202) 267–9677, to request a copy of Advisory Circular No. 11–2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedure.

The Proposal

The FAA is considering an amendment to part 71 of the Federal Aviation Regulations (14 CFR part 71) to establish Class E airspace area at Jonesville, VA. The development of a SIAP to serve flights operating IFR into Lee County Airport makes this action necessary. Controlled airspace extending upward from 700 feet AGL is needed to accommodate aircraft using the SIAP. Class E airspace designations for airspace areas extending upward from 700 feet or more above the surface are published in Paragraph 6005 of FAA Order 7400.9L, dated September 2, 2003, and effective September 16, 2003, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document would be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this proposed regulation—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that would only affect air traffic procedures and air navigation, it is certified that this proposed rule would not have significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—[AMENDED]

1. The authority citation for 14 CFR Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854; 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9L, dated September 2, 2003, and effective September 16, 2003, is proposed to be amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

AEA VA E5 Jonesville, VA (NEW)

Lee County Airport, Jonesville, VA
(Lat. 36°39′15″ N., long. 83°13′04″ W.)

That airspace extending upward from 700 feet above the surface within a 8-mile radius of Lee County Airport.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 80

[OAR–2003–0217; FRL–7800–3]

RIN 2060–AK04

Regulation of Fuel and Fuel Additives: Extension of California Enforcement Exemptions for Reformulated Gasoline to California Phase 3 Gasoline

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of proposed rulemaking.

SUMMARY: We are proposing to exempt refiners, importers, and blenders of gasoline subject to the State of California's Phase 3 reformulated gasoline (CaRFG3) regulations from certain enforcement provisions in the Federal reformulated gasoline (RFG) regulations. We are proposing this action because we believe that gasoline complying with the CaRFG3 regulations will provide emissions benefits equivalent to Federal Phase II RFG and because California's compliance and enforcement program will in practice be sufficiently rigorous to assure that the standards are met. Since the Federal RFG program began in 1995, California refiners, importers and blenders have been continuously exempted from certain enforcement-related requirements such as recordkeeping and reporting, and certain sampling and testing requirements. This proposal would extend those exemptions, which are applicable to California Phase 2 gasoline, to CaRFG3. This proposal also restores the definition of ''California gasoline'' which was erroneously deleted.

DATES: Comments or a request for a public hearing must be received by October 12, 2004.

ADDRESSES: Submit your comments, identified by Docket ID No. OAR–2003–0217, by one of the following methods:

- Federal eRulemaking Portal: *http://www.regulations.gov*. Follow the on-line instructions for submitting comments.
- Agency Web site: *http://www.epa.gov/edocket*. EDOCKET, EPA's electronic public docket and comment system, is EPA's preferred method for receiving comments. Follow the on-line instructions for submitting comments.
- E-mail: *a-and-r-Docket@epa.gov*.
- Fax: (202) 566–1741.
- Mail: OAR–2003–0217, Environmental Protection Agency, Mailcode:6102T, 1200 Pennsylvania Ave., NW., Washington, DC 20460.
- Hand Delivery: EPA/DC, EPA West, Room B102, 1301 Constitution Ave., NW., Washington, DC. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. OAR–2003–0217. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.epa.gov/edocket*, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through EDOCKET, regulations.gov, or e-mail. The EPA EDOCKET and the Federal regulations.gov Web sites are ''anonymous access'' systems, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through EDOCKET or regulations.gov, your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit EDOCKET on-line or *see* the **Federal Register** of May 31, 2002 (67 FR 38102).

Docket: All documents in the docket are listed in the EDOCKET index at *http://www.epa.gov/edocket*. Although listed in the index, some information is not publicly available, *i.e.*, CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in EDOCKET or in hard copy at the Air Docket, EPA/DC, EPA West, Room B102, 1301 Constitution Ave., NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the Air Docket is (202) 566–1742.

FOR FURTHER INFORMATION CONTACT: Anne Pastorkovich, Attorney/Advisor, Transportation and Regional Programs Division, Office of Transportation and Air Quality (6406J), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone number: (202) 343–9623; fax number: (202) 343–2801; e-mail address: *pastorkovich.anne-marie@epa.gov*.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does This Action Apply to Me?

Regulated categories and entities potentially affected by this proposed action include:

Category	NAICSs codes [a]	SIC codes [b]	Examples of potentially regulated parties
Industry	324110	2911	Petroleum refiners.
Industry	422710 422720	5171 5172	Gasoline Marketers and Distributors.

[a] North American Industry Classification System (NAICS).
[b] Standard Industrial Classification (SIC) system code.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be regulated by this proposed action. This table lists the types of entities that EPA is now aware could be potentially regulated by this action. Other types of entities not listed in the table could also be regulated. To determine whether an entity is regulated by this proposed action, one should carefully examine the RFG provisions at 40 CFR part 80, particularly § 80.81 dealing specifically with California gasoline. If you have questions regarding the applicability of this proposed action to a particular entity, consult the person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

B. What Should I Consider as I Prepare My Comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through EDOCKET, regulations.gov or e-mail. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD ROM the specific information that is claimed as CBI). In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for Preparing Your Comments.* When submitting comments, remember to:

i. Identify the rulemaking by docket number and other identifying information (subject heading, **Federal Register** date and page number).

ii. Follow directions—The agency may ask you to respond to specific questions or organize comments by referencing a Code of Federal Regulations (CFR) part or section number.

iii. Explain why you agree or disagree; suggest alternatives and substitute language for your requested changes.

iv. Describe any assumptions and provide any technical information and/or data that you used.

v. If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.

vi. Provide specific examples to illustrate your concerns, and suggest alternatives.

vii. Explain your views as clearly as possible, avoiding the use of profanity or personal threats.

viii. Make sure to submit your comments by the comment period deadline identified.

II. Current Status and Basis for California Enforcement Exemptions

Section 211(k) of the Federal Clean Air Act (the Act) directs the EPA to establish requirements for reformulated gasoline (RFG) to be used in specified ozone nonattainment areas, as well as ''anti-dumping'' requirements for conventional gasoline used in the rest of the country. The areas covered by the Federal RFG program in California are San Joaquin Valley, Los Angeles, San Diego, and Sacramento.[1] The RFG provisions of the Act require EPA to promulgate regulations to reduce the emissions of ozone forming volatile organic compounds (VOCs) and toxic air pollutants from gasoline-fueled motor vehicles. Such regulations must also require that there be no increase in the emission of oxides of nitrogen (NO_X) over baseline levels. Finally, gasoline subject to the RFG requirements must meet certain content standards for oxygen, benzene and heavy metals.

The RFG program was designed to be implemented in two phases. The Phase I program was in effect from January 1, 1995, through December 31, 1999. The Phase II program, which began on January 1, 2000, and is currently in effect, is similar to the Phase I program, but requires even greater reductions in emissions of VOC, toxics and NO_X. The regulations for RFG and conventional gasoline may be found at 40 CFR part 80, subparts D, E, and F.

On September 18, 1992, the California Air Resources Board (CARB) adopted regulations establishing California's state Phase 2 reformulated gasoline program (''California Phase 2 RFG''), which became effective March 1, 1996. These regulations established a comprehensive set of gasoline specifications designed to achieve reductions in emissions of VOCs, NO_X, carbon monoxide (CO), sulfur dioxide, and toxic air pollutants from gasoline-fueled motor vehicles.[2] The California Phase 2 RFG regulations set standards for eight gasoline parameters—sulfur, benzene, olefins, aromatic hydrocarbons, oxygen, Reid vapor pressure (RVP), and distillation temperatures for the 50 percent and 90 percent evaporation points (T–50 and T–90, respectively). These regulations also provide for the production and sale of alternative gasoline formulations, with certification under the CARB program based on a predictive model or on vehicle emission testing.

EPA previously adopted enforcement exemptions for California Phase 2 gasoline under the Federal Phase I RFG program.[3] In doing so, we concluded: (1) That the emission reductions resulting from the California Phase 2 standards would be equal to or greater than the Federal Phase I RFG standards (*i.e.*, the standards that were applicable from January 1, 1995, through December 31, 1999),

(2) That the content standard for benzene under California Phase 2 would be equivalent in practice to the Federal Phase I content standard and that the oxygen content standard of 2.0 weight percent would be achieved in Federal RFG areas, and

(3) That the CARB's compliance and enforcement program was designed to be sufficiently rigorous to ensure that Federal Phase I requirements would be met in practice.

Consequently, while the Federal Phase I RFG standards continued to apply in California, EPA exempted

[1] *See http://www.epa.gov/otaq/rfgmap.jpg* for a map and listing of RFG covered areas and 40 CFR 80.70 for a listing of covered areas by state. A copy of the map has been placed in the docket for this rulemaking.

[2] California's reformulated gasoline regulations, including California Phase 2 and Phase 3, are at Title 13, California Code of Regulations (CCR), section 2250 *et seq.* (May 1, 2003). A copy of these regulations have been placed in the docket.

[3] *See* 59 FR 7758 (February 16, 1994) and 63 FR 34818 (June 26, 1998).

refiners, importers, and blenders of gasoline sold in California from many of the enforcement-related provisions of the Federal Phase I RFG regulations.

The exemptions applied to the gasoline they sold for use in California and included the following provisions in 40 CFR part 80:

Requirement exempted	Citation at 40 CFR 80.xx
Compliance Surveys [4]	80.68
Independent Sampling & Testing	80.65(f)
Designation of Gasoline	80.65(d)
Marking of Conventional Gasoline	80.65(g) and 80.82
Downstream Oxygenate Blending	80.69
Recordkeeping	80.74 and 80.104
Reporting	80.75 and 80.105
Product Transfer Documents	80.77
Parameter Value Reconciliation Requirements	80.65(e)(2)
Reformulated Gasoline and Reformulated Gasoline Blendstock for Oygenate Blending (RBOB) Compliance Requirements	80.65(c)
Annual Compliance Audit Requirements	80.65(h)
Compliance Attest Engagement Requirements	Subpart F

[4] 40 CFR 80.81(e)(2) was amended to include a limited oxygen survey provision to ensure that the 2.0 weight percent standard would be achieved in Federal RFG areas. This is because some California Phase 2 gasoline sold outside of Federal RFG areas might not contain the 2.0 weight percent oxygen content. *See* 63 FR 34818, 34820–34822 (June 26, 1998). Under this NPRM, the oxygen survey provisions would remain appropriately applied to CaRFG3.

California refiners, importers, and blenders were not granted exemption from these Federal enforcement requirements with regard to gasoline delivered for use outside California, because the California Phase 2 standards and the CARB enforcement program do not apply to gasoline exported from California.

The original California enforcement exemptions expired on December 31, 1999 when the Federal Phase II RFG started. The exemptions expired because they were based on a comparison of California Phase 2 gasoline and Federal Phase I RFG. An appropriate equivalency determination comparing California Phase 2 and Federal Phase II gasolines would have been premature in 1994, when the final RFG regulations were issued. However, on September 15, 1999, we published a direct final rule continuing the California enforcement exemptions beyond December 31, 1999.[5] We took this action after comparing California Phase 2 gasoline and Federal Phase II RFG. In brief, we concluded:

(1) That the emissions reductions resulting from the California Phase 2 RFG standards would be equal to or greater than the reductions from the Federal Phase II RFG standards;

(2) That the content standards for benzene under California Phase 2 would be equivalent in practice to the Federal Phase II content standard and that the oxygen content standard of 2.0 weight percent would be achieved in Federal RFG areas, and

(3) That the CARB's compliance and enforcement program was designed to be sufficiently rigorous to ensure that Federal Phase II requirements would be met in practice.

III. Description of Today's Proposed Action

A. California's Phase 3 Gasoline Rulemaking Activities

On August 3, 2000, California first promulgated the new California Phase 3 RFG (''CaRFG3'') regulations, which included a prohibition on the use of methyl tertiary-butyl ether (MTBE) by December 31, 2002. On March 21, 2001, we received a written request from the California Air Resources Board (CARB) requesting extension of the California enforcement exemptions of 40 CFR 80.81 to CaRFG3. In that letter, CARB explains that its CaRFG3 regulations were adopted in response to Governor Gray Davis's issuance of Executive Order D–5–99, directing the phase-out of methyl tertiary-butyl ether (MTBE) as an additive in California gasoline by December 31, 2002.

Since March 21, 2001, CARB has completed a series of rulemakings that amended their CaRFG3 regulations. Many of these amendments were made necessary by a postponement of the MTBE phase-out and to accommodate the use of ethanol. The MTBE phase-out was delayed until December 31, 2003 by Governor Gray Davis's issuance of a second Executive Order D–52–02.[6] The CaRFG3 regulations and all standards discussed in this notice represent the May 1, 2003, version of the California Reformulated Gasoline Regulations, title 13, California Code of Regulations, section 2250 *et seq.*

B. EPA's Analysis and Conclusions Regarding California's Phase 3 Gasoline Regulations

In order to determine whether to apply the Federal enforcement exemptions of 40 CFR 80.81 should be applied to CaRFG3, we considered:

(1) Whether the emissions reductions resulting from CaRFG3 would be equal to or greater than the reductions from Federal Phase II RFG standards;

(2) Whether the content standard for benzene under CaRFG3 would be equivalent in practice to the Federal Phase II content standard and whether the oxygen content standard of 2.0 weight percent would be met in Federal RFG areas; and

(3) Whether CARB's compliance and enforcement program is designed to be sufficiently rigorous to ensure that the Federal Phase II requirements would be met in practice.

Considering these factors is appropriate and consistent with the analyses we used when we previously granted enforcement exemptions to refiners, importers, and blenders of California Phase 2 gasoline under both the Federal Phase I and Phase II RFG programs.[7]

To determine whether CaRFG3 emissions reductions that are equivalent to or greater than Federal Phase II RFG, we have evaluated the CaRFG3 standards and the Federal Phase II complex model standards and considered whether possible CaRFG3 formulations to the Federal Phase II RFG

[5] 64 FR 49992 (September 15, 1999).

[6] A copy of the Executive Order has been placed in the docket.

[7] *See* 59 FR 7813 (February 16, 1994) as amended at 59 FR 36965 (July 20, 1994), 59 FR 39289 (August 2, 1994), 59 FR 60715 (November 28, 1994), 63 FR 34825 (June 26, 1998), 64 FR 49997 (September 15, 1999), and 66 FR 17263 (March 29, 2001).

emissions reduction standards. Compliance with performance standards under the Federal RFG program is determined by using the Phase II Complex Model. The Complex Model predicts VOC, toxics and NO_X emissions reductions in gasoline relative to the emissions of 1990 baseline gasoline.[8] These reduction percentages are compared to RFG performance standards. The Federal performance standards applicable to VOC-controlled RFG designated for VOC control region 1 apply to California areas covered by the Federal RFG program.[9]

California's Phase 2 RFG regulations established specifications for eight gasoline parameters: sulfur, benzene, olefins, aromatic hydrocarbons, oxygen, RVP, T50 and T90. These parameters are expressed as flat limits and, for some parameters, as averaging limits and caps. The CaRFG3 regulations revised certain of these specifications and incorporated an updated version of the California predictive model.[10] Refiners may produce complying California gasoline using a ''recipe'' that meets these parameter specifications. Alternative specifications for complying gasoline can be established by using the California predictive model to demonstrate that emissions are equivalent to those of a gasoline meeting the established specifications. Six of the parameters are also input parameters for the EPA Complex Model. The remaining two, T50 and T90, are closely related to E200 and E300, the remaining two Complex Model inputs.[11]

If CaRFG3 provides emission benefits equivalent to Federal Phase II RFG, then a gasoline formulation meeting the CaRFG3 flat limit specifications should provide emission reductions, as calculated by the complex model, which meet Federal Phase II performance standards. The following table compares the emissions performance of the CaRFG3 ''recipe,'' evaluated using the Federal Complex Model, to the Federal Phase II RFG performance standards:[12]

TABLE 1.—COMPARISON OF CARFG3 FLAT LIMIT RECIPE COMPLEX MODEL PERFORMANCE WITH FEDERAL PHASE II RFG STANDARDS

	VOC (% reduction)	Toxics (% reduction)	NO_X (% reduction)
CaRFG3 Flat Limits with ethanol	27.7	30.0	14.5
CaRFG3 Flat Limits with MTBE	27.7	32.2	14.5
Federal per gallon standards	≥27.5	≥20.0	≥5.5
Federal averaged standards	≥29.0	≥21.5	≥6.8

Table 1 shows two sets of results; one where the oxygenate was assumed to be MTBE and the other where the oxygenate was assumed to be ethanol. The specific oxygenate affects the toxics performance estimate. Two sets of Federal standards are shown, the per gallon standards and the averaged standards. (These numerically more stringent averaged standards are applicable if a refiner chooses to comply on average, rather than on a per gallon basis.) The emissions performance of the flat limit recipe gasoline is better than the Federal RFG per gallon standards for VOC, toxics and NO_X reductions, and better than the Federal RFG averaged standards for toxics and NO_X reduction. Thus, gasoline produced in compliance with the CaRFG3 flat limits (which are somewhat analogous to Federal per-gallon standards) would achieve performance limits at least as stringent as the Federal Phase II RFG per-gallon standards for VOCs and at least as stringent as the averaged standards for toxics and NO_X. Thus, CaRFG3 would meet Federal standards if every gallon were produced according to this recipe.

However, we anticipate that most refiners will use the CaRFG3 predictive model to certify alternative specifications with emissions equivalent to or better than the flat limit recipe. While there are similarities between the California Phase 3 predictive model and the Federal Phase II Complex Model, there are also substantial differences. Consequently, two recipes found to have equal emissions with the California predictive model may not have equal emissions when evaluated by the Federal Complex Model. In other words, a finding that the Complex Model emissions performance of the flat limit recipe is equal to or better than the Federal standards does not guarantee that the Complex Model emissions performance of all gasoline blends that may be produced in compliance with CaRFG3 will meet or surpass the Federal standards.

For purposes of determining whether or not CaRFG3 produced and certified under the predictive model would be equivalent to Federal Phase II RFG, we considered several reasonably likely ''real world'' CaRFG3 formulations. These formulations were developed in connection with California's recent request for a waiver from the Federal oxygen content requirement for reformulated gasoline.[13] The CaRFG3 formulations depicted in Tables 2 and 3 do not represent each and every possible gasoline formulation under the California's regulations, but we believe that they provide a representative sample of that universe of gasoline formulations that are likely to be produced under the CaRFG3 program. This analysis is discussed in more detail in the following paragraphs.

In April of 1999, California applied for a waiver of the Federal oxygen content requirement for reformulated gasoline. In order to complete an evaluation of the technical basis for this waiver request, we determined that

[8] ''Baseline gasoline'' refers to a general set of properties representative of a refiner's fuel in 1990. The purpose of establishing a baseline is to prevent any degradation in the quality of gasoline in areas in which reformulated gasoline is not required. For a discussion of baselines, please refer to the RFG and anti-dumping final rule, 59 FR 7798 (February 16, 1994).

[9] *See* 40 CFR 80.41 and 80.71.

[10] The California predictive model, like the Complex Model, is used to predict emissions performance of gasoline.

[11] There is a strong correlation between T50 (the 50% distillation temperature) and E200 (the percent distilled at 200F). Likewise, there is a strong correlation between T90 (the 90% distillation temperature) and E300 (the percent distilled at 300F). For the analysis in table 1, E200 and E300 were estimated from the flat limit T50 and T90 specifications using conversions found in EPA's complex model spreadsheet.

[12] Oxygen was assumed to be 2.0 wt%, the midpoint of the 1.8–2.2 wt% specification and RVP was 6.90, the RVP used with the evaporative compliance option in the predictive model.

[13] The California waiver analysis considered the effect of changes in gasoline composition on the entire on-road and off-road gasoline-power fleet. The analysis for this proposed rule considers only Complex Model performance, which considers a portion of the on-road gasoline-powered fleet.

additional refinery modeling was needed to forecast the likely composition of CaRFG3, after California's phase-out of methyl-tertiary-butyl-ether (MTBE), with and without an oxygen waiver.[14] Consequently, EPA commissioned MathPro to conduct this modeling, which estimated the composition of ethanol-oxygenated and non-oxygenated CaRFG3 under various scenarios.[15] These scenarios varied in terms of the continued or reduced use of MTBE outside of California, whether or not refiners avoid the patent held by Unocal on certain reformulated blends, and whether ethanol is used at 2.0 or 2.7 weight percent oxygen. Although these modeling results were intended for use in the waiver evaluation, they are also helpful when considering the appropriateness of extending the existing enforcement exemptions to CaRFG3. EPA believes that these modeling results are likely to be the most accurate and comprehensive forecasts of the likely properties of the CaRFG3 that will be sold in Federal RFG areas in California. For the purpose of this proposal, we have considered both oxygenated and non-oxygenated CaRFG3 blends.

Table 2, below, shows that oxygenated CaRFG3 produced under each of the scenarios that EPA evaluated meets Federal RFG performance standards. All of these fuels had better performance than the Federal RFG per gallon standards. With one exception (underlined in Table 2), these fuels also met or surpassed the Federal RFG averaged standards. The one exception is a fuel that was estimated to provide a VOC reduction of 28.9%. Since the Federal per gallon standard is ≥27.5% and the averaged standard is ≥29.0%, this fuel would meet the Federal per gallon but not the averaged standard. However, we believe for purposes of today's analysis, that the Federal per gallon standard is a more appropriate reference point.

MathPro's modeling assumed that essentially all CaRFG3 is certified with the flat limit variant of the Predictive Model. Therefore, the formulations which they forecast have California predictive model emissions performance equivalent to, or better than, the flat limit recipe, but do not necessarily meet California predictive model averaged limit requirements. As previously noted, California's flat limit option requires refiners to meet parameter standards on an every-gallon, rather than averaged basis. The California flat limits are analogous to the Federal RFG per-gallon standards. In both cases, refiners elect to meet less stringent standards on an every-gallon basis, rather than more stringent standards, on average. Consequently, it is appropriate to expect the complex model performance of these CaRFG3 formulations to meet the Federal Phase II per-gallon performance standards, but not necessarily to meet the Federal Phase II averaged standards.

TABLE 2.—COMPLEX MODEL PERFORMANCE OF OXYGENATED CARFG3 USING MATHPRO GASOLINE PROPERTY ESTIMATES

Ethanol (wt%) oxygen	Sulfur (ppm)	RVP (psi)	E200 (%)	E300 (%)	Aromatics (vol%)	Olefins (vol%)	Benzene (vol%)	VOC (%)	Toxics (%)	NO_X (%)
2.0	15	6.66	47.20	87.60	24.10	4.40	0.64	30.2	32.9	14.8
2.0	10	6.74	46.40	88.70	23.30	3.90	0.57	29.6	34.1	15.4
2.7	10	6.85	46.90	88.10	23.20	3.80	0.70	29.0	32.8	15.4
2.7	9	6.84	46.60	88.00	23.30	3.80	0.68	29.0	32.9	15.4
2.0	17	6.60	46.80	88.30	26.50	3.40	0.62	30.1	32.0	14.3
2.0	17	6.60	45.20	90.60	19.10	4.60	0.77	30.8	33.8	16.4
2.0	13	6.62	46.20	87.70	24.30	3.70	0.60	30.1	33.2	15.0
2.0	12	6.60	46.10	88.20	28.60	2.90	0.51	29.6	32.1	14.2
2.7	10	6.76	46.20	88.60	25.70	2.80	0.66	29.1	32.1	14.9
2.7	12	6.60	44.90	87.70	22.40	2.80	0.71	30.2	32.9	15.7
2.7	8	6.73	45.40	89.00	26.30	1.90	0.63	*28.9*	32.1	15.0
2.7	10	6.69	45.40	88.30	25.30	2.80	0.65	29.4	32.3	15.1

Table 3 below, shows that non-oxygenated CaRFG3 produced under each of the scenarios that EPA evaluated meets Federal RFG performance standards. These fuels are not currently permissible, because they do not contain the equivalent of 2.0 weight % oxygen. All of the fuels shown in Table 3, which EPA believes to be reasonably representative of the fuel formulations that refiners would produce in California without an oxygen content requirement are predicted to perform better than the Federal RFG per gallon and averaged standards.

TABLE 3.—COMPLEX MODEL PERFORMANCE OF NON-OXYGENATED CARFG3 USING MATHPRO GASOLINE PROPERTY ESTIMATES

Ethanol (wt%) oxygen	Sulfur (ppm)	RVP (psi)	E200 (%)	E300 (%)	Aromatics (vol%)	Olefins (vol%)	Benzene (vol%)	VOC (%)	Toxics (%)	NO_X (%)
0.0	8	6.60	47.7	87.4	23.0	5.9	0.57	30.7	32.5	15.1
0.0	7	6.60	48.7	87.6	28.6	4.7	0.51	30.0	30.4	14.0
0.0	8	6.60	48.1	87.2	26.9	2.4	0.46	29.7	32.0	14.3
0.0	10	6.60	47.7	88.0	24.3	3.9	0.49	30.3	32.9	14.8

[14] One of the reasons for this determination was that earlier modeling was done before the CaRFG3 predictive model was finalized. This may have affected the estimates of CaRFG3 properties developed from these earlier studies. EPA's Technical Support Document for the waiver decision ''Analysis of California's Reformulated Gasoline Oxygen Content Requirement for California Covered Areas'' discusses this in greater depth. A copy of this document has been placed in the docket.

[15] *See* ''Analysis of the Production of California Phase 3 Reformulated Gasoline With and Without an Oxygen Waiver'', MathPro, Inc. (January 19, 2001). A copy of this document has been placed in the docket.

TABLE 3.—COMPLEX MODEL PERFORMANCE OF NON-OXYGENATED CARFG3 USING MATHPRO GASOLINE PROPERTY ESTIMATES—Continued

Ethanol (wt%) oxygen	Sulfur (ppm)	RVP (psi)	E200 (%)	E300 (%)	Aromatics (vol%)	Olefins (vol%)	Benzene (vol%)	VOC (%)	Toxics (%)	NO_X (%)
0.0	12	6.60	49.0	85.8	24.8	6.0	0.52	30.5	32.2	14.3
0.0	10	6.60	49.2	87.4	28.6	4.1	0.53	30.0	30.2	13.8
0.0	12	6.60	47.6	86.8	21.2	6.3	0.52	31.0	33.8	15.3
0.0	9	6.60	47.9	87.6	25.7	3.9	0.49	30.1	32.2	14.5

Based upon a comparison of the CaRFG3 flat limit ''recipe'' and Federal Phase II Complex model standards, as well as a consideration of possible California fuel formulations certified using the California Phase 3 predictive model, we have concluded that the NO_X, VOC and toxics emissions reductions resulting from the CaRFG3 standards would be equal to or greater than the Federal Phase II RFG standards.

The content standard for benzene for CaRFG3 is equivalent to the Federal Phase II standards. The California flat limit benzene standard is 0.80 volume percent and the averaged standard is 0.70 volume percent with a 1.10 volume percent cap. By comparison, the Federal per gallon benzene standard is 1.00 volume percent and the averaged standard is 0.95 volume percent with a 1.30 volume percent cap.

The enforcement exemptions do not excuse California refiners from meeting the 2.0 weight % oxygen requirement or any other Federal standard in RFG covered areas. The limited oxygen compliance surveys in § 80.81 would continue to apply to CaRFG3, since they are designed to ensure that gasoline in Federal RFG areas meets the Federal oxygen content standards. EPA retains its authority to sample and test California gasoline to make sure that it meets all applicable Federal standards, including the oxygen content standard.

We have also considered the design and implementation of CARB's enforcement program, which includes enforcement at refineries, import facilities, terminals, and service stations. CARB's enforcement program is generally outlined in its regulations and includes requirements that refiners submit annual compliance plans,[16] which outline how they will meet CaRFG3 requirements, and that refiners and importers conduct testing and maintain records of testing performed on batches of gasoline.[17] CARB staff summarized information on its actual enforcement activities in fiscal years 1999–2000 and 2000–2001, indicating that 6.6% and 6.5% of gasoline sold in California was inspected, during each respective period. In 1999–2000, the violation rate was 1.9% (based on volumes sampled) and 0.5% (based on the number of samples). In 2000–2001, the violation rate was 0.16% (based on volumes sampled) and 1.06% (based on the number of samples). We believe that, considering the presence of adequate enforcement provisions in its regulations and CARB's actual enforcement activities, that the CARB enforcement program is sufficiently stringent to ensure that the California standards will be met. For all these reasons, we believe it is appropriate to apply the enforcement exemptions at 40 CFR 80.81 to refiners, importers, and blenders of CaRFG3.

C. Definition of California Gasoline

This proposed rule also restores the definition of ''California gasoline,'' which was previously included in § 80.81, but which was erroneously removed from the Code of Federal Regulations. Today's proposed rule would restore this definition, which describes the gasoline to which the enforcement exemptions may apply.

IV. Administrative Requirements

A. Executive Order 12866: Regulatory Planning and Review

Under Executive Order 12866, 58 FR 51735 (October 4, 1993), the Agency must determine whether the regulatory action is ''significant'' and therefore subject to OMB review and the requirements of the Executive Order. The Order defines ''significant regulatory action'' as one that is likely to result in a rule that may:

(1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

It has been determined that this rule is not a ''significant regulatory action'' under the terms of Executive Order 12866 and is therefore not subject to OMB review.

B. Paperwork Reduction Act

This proposed rule does not impose any new information collection burden. Today's proposed rule would extend enforcement exemptions to refiners of CaRFG3 and would reduce burdens associated with overlapping Federal and State requirements, including recordkeeping and reporting requirements. However, the Office of Management and Budget (OMB), under the provisions of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.,* has previously approved the information collection requirements contained in the final reformulated gasoline (RFG) and anti-dumping rulemaking and gasoline sulfur control rulemaking, and has assigned OMB control number 2060–0277, EPA ICR number 1591.14. A copy of the OMB approved Information Collection Request (ICR) may be obtained from Susan Auby, Collection Strategies Division, U.S. Environmental Protection Agency (2822T), 1200 Pennsylvania Ave., NW., Washington, DC 20460 or by calling (202) 566–1672.

Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and

[16] Title 13, CCR section 2269.

[17] Title 13, CCR section 2270.

requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

An Agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15.

C. Regulatory Flexibility Act

The RFA generally requires an agency to prepare a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements under the Administrative Procedure Act or any other statute unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small organizations, and small governmental jurisdictions.

For purposes of assessing the impacts of today's proposed rule on small entities, small entity is defined as: (1) A small business that has not more than 1,500 employees (13 CFR 121.201); (2) a small governmental jurisdiction that is a government of a city, county, town, school district or special district with a population of less than 50,000; and (3) a small organization that is any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.

After considering the economic impacts of today's proposed rule on small entities, I certify that this action would not have a significant economic impact on a substantial number of small entities. In determining whether a rule has a significant economic impact on a substantial number of small entities, the impact of concern is any significant adverse economic impact on small entities, since the primary purpose of the regulatory flexibility analyses is to identify and address regulatory alternatives ''which minimize any significant economic impact of the proposed rule on small entities.'' 5 U.S.C. 603 and 604. Thus, an agency may certify that a rule will not have a significant economic impact on a substantial number of small entities if the rule relieves regulatory burden, or otherwise has a positive economic effect on all of the small entities subject to the rule.

We have therefore concluded that today's proposed rule will relieve regulatory burden for all small entities. Today's proposed rule would extend enforcement exemptions to refiners of CaRFG3 and would reduce burdens associated with overlapping Federal and State requirements, including recordkeeping and reporting requirements. We continue to be interested in the potential impacts of the proposed rule on small entities and welcome comments on issues related to such impacts.

D. Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under section 202 of the UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with ''Federal mandates'' that may result in expenditures to State, local, and tribal governments, in the aggregate, or to the private sector, of $100 million or more in any one year. Before promulgating an EPA rule for which a written statement is needed, section 205 of the UMRA generally requires EPA to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows EPA to adopt an alternative other than the least costly, most cost-effective or least burdensome alternative if the Administrator publishes with the final rule an explanation why that alternative was not adopted. Before EPA establishes any regulatory requirements that may significantly or uniquely affect small governments, including tribal governments, it must have developed under section 203 of the UMRA a small government agency plan. The plan must provide for notifying potentially affected small governments, enabling officials of affected small governments to have meaningful and timely input in the development of EPA regulatory proposals with significant Federal intergovernmental mandates, and informing, educating, and advising small governments on compliance with the regulatory requirements.

Today's proposed rule contains no Federal mandates (under the regulatory provisions of title II of the UMRA) for State, local or tribal governments or the private sector. The proposed rule would impose no enforceable duty on any State, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999), requires EPA to develop an accountable process to ensure ''meaningful and timely input by state and local officials in the development of regulatory policies that have federalism implications.'' ''Policies that have federalism implications'' are defined in the Executive Order to include regulations that have ''substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.''

This proposed rule does not have federalism implications. It would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132. Today's proposed rule would extend enforcement exemptions to refiners of CaRFG3 and would reduce burdens associated with overlapping Federal and State requirements, including recordkeeping and reporting requirements. Thus, Executive Order 13132 does not apply to this proposed rule.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 6, 2000), requires EPA to develop an accountable process to ensure ''meaningful and timely input by tribal officials in the development of regulatory policies that have tribal implications.'' ''Policies that have tribal implications'' are defined in the Executive Order to include regulations that have ''substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and the Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes.''

This proposed rule does not have tribal implications. It will not have substantial direct effects on tribal governments, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes, as specified in Executive Order 13175. This proposed rule would apply to refiners, importers and blenders of

CaRFG3 and does not impose any enforceable duties on communities of Indian tribal governments. Thus, Executive Order 13175 does not apply to this rule.

G. Executive Order 13045: Protection of Children From Environmental Health & Safety Risks

Executive Order 13045: Protection of Children from Environmental Health Risks and Safety Risks (62 FR 19885, April 23, 1997) applies to any rule that: (1) Is determined to be economically significant as defined under Executive Order 12866, and (2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

EPA interprets Executive Order 13045 as applying only to those regulatory actions that are based on health or safety risks, such that the analysis required under section 5–501 of the Order has the potential to influence the regulation. This proposed rule is not subject to Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997), because it does not involve decisions on environmental health risks or safety risks that may disproportionately affect children.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This proposed rule is not an economically ''significant energy action'' as defined in Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355 (May 22, 2001)) because it does not have a significant adverse effect on the supply, distribution, or use of energy.

I. National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law No. 104–113, 12(d) (15 U.S.C. 272 note) directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies. The NTTAA directs EPA to provide Congress, through OMB, explanations when the Agency decides not to use available and applicable voluntary consensus standards. Today's rule does not affect technical standards and raises no issues under the NTTAA.

J. Statutory Provisions and Legal Authority

Statutory authority for today's proposed rule comes from sections 211(c), 211(i) and 211(k) of the CAA (42 U.S.C. 7545(c) and (k)). Section 211(c) and 211(i) allows EPA to regulate fuels that contribute to air pollution which endangers public health or welfare, or which impairs emission control equipment. Section 211(k) prescribes requirements for RFG and conventional gasoline and requires EPA to promulgate regulations establishing these requirements. Additional support for the fuels controls in today's proposed rule comes from sections 114(a) and 301(a) of the CAA.

List of Subjects in 40 CFR Part 80

Environmental protection, Air pollution control, Fuel additives, Gasoline, Imports, Motor vehicle pollution, Reporting and recordkeeping requirements.

Dated: August 5, 2004.

Michael O. Leavitt,

Administrator.

For the reasons set forth in the preamble, part 80 of title 40 chapter I of the Code of Federal Regulations is proposed to be amended as follows:

PART 80—REGULATION OF FUELS AND FUEL ADDITIVES

1. The authority citation for part 80 continues to read as follows:

Authority: 42 U.S.C. 7414, 7545 and 7601(a).

2. Section 80.81 is amended as follows:

a. Revising paragraph (a).

b. Revising paragraph (c) introductory text.

c. Revising paragraph (e)(2) introductory text.

d. Revising paragraphs (h)(1) introductory text, (h)(1)(ii)(C) and (h)(2)(i).

§ 80.81 Enforcement exemptions for California gasoline.

(a)(1) The requirements of subparts D, E, F, and J of this part are modified in accordance with the provisions contained in this section in the case of California gasoline.

(2) For purposes of this section, ''California gasoline'' means any gasoline that is sold, intended for sale, or made available for sale as a motor vehicle fuel in the State of California and that:

(i) Is manufactured within the State of California;

(ii) Is imported in the State of California from outside the United States; or

(iii) Is imported into the State of California from inside the United States and that is manufactured at a refinery that does not produce reformulated gasoline for sale in any covered area outside the State of California.

* * * * *

(c) Any refiner, importer, or oxygenate blender of California gasoline that is manufactured or imported subsequent to March 1, 1996 and that meets the requirements of the California Phase 2 or Phase 3 reformulated gasoline regulations, as set forth in Title 13, California Code of Regulations, section 2250 *et seq.* (May 1, 2003), is with regard to such gasoline, exempt from the following requirements (in addition to the requirements specified in paragraph (b) of this section:

* * * * *

(e) * * *

(2) Such exemption provisions shall not apply to any refiner, importer, or oxygenate blender of California gasoline with regard to any gasoline formulation that it produces or imports and that is certified under Title 13, California Code of Regulations, section 2250 *et seq.* (May 1, 2003), unless:

* * * * *

(h)(1) For the purposes of the batch sampling and analysis requirements contained in § 80.65(e)(1) and § 80.101(i)(1)(i)(A), any refiner, importer, or oxygenate blender of California gasoline may use a sampling and/or analysis methodology prescribed in Title 13, California Code of Regulations, section 2250 *et seq.* (May 1, 2003), in lieu of any applicable methodology specified in § 80.46, with regard to:

* * * * *

(ii) * * *

(C) The refiner or importer must correlate the results from the applicable sampling and/or analysis methodology prescribed in Title 13, California Code of Regulations, section 2250 *et seq.* (May 1, 2003) with the method specified in § 80.46, and such correlation must be adequately demonstrated to EPA upon request.

(2) * * *

(i) The samples are properly collected under the terms of a current and valid

protocol agreement between the refiner and the California Air Resources Board with regard to sampling at the off site tankage and consistent with the requirements prescribed in Title 13, California Code of Regulations, section 2250 *et seq.* (May 1, 2003); and

* * * * *

[FR Doc. 04–18380 Filed 8–10–04; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 81

[CA119–FFA; FRL–7800–4]

Finding of Failure To Attain; Imperial Valley Planning Area; California; Particulate Matter of 10 Microns or Less

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: EPA is today proposing to find under the Clean Air Act (CAA) that the Imperial Valley Planning Area (Imperial Valley) failed to attain the National Ambient Air Quality Standards (NAAQS) for particulate matter of 10 microns or less (PM–10) by the serious area statutory deadline of December 31, 2001.

Separately in today's **Federal Register**, EPA is publishing its final action in response to a recent Ninth Circuit Court order compelling EPA to reclassify the Imperial Valley PM–10 nonattainment area from moderate to serious because the area failed to meet the moderate area attainment date of December 31, 1994.

The proposed finding of failure to attain the serious area attainment date of December 31, 2001, is based on monitored air quality data for the PM–10 NAAQS from January 1999 through December 2001. If EPA takes final action finding that Imperial Valley failed to attain, the State of California must submit within one year of publication of the final action, a plan that provides for attainment of the PM–10 NAAQS and that achieves at least 5 percent annual reductions in PM–10 or PM–10 precursor emissions as required by CAA section 189(d).

DATES: Comments on this proposed action must be received by September 10, 2004.

ADDRESSES: Send comments to David Wampler, Planning Office (AIR–2), U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105–3901 or e-mail to *wampler.david@epa.gov,* or submit comments at *http://www.regulations.gov.*

You can inspect and copy the docket for this action at our Region IX office during normal business hours (*see* address below). Due to increased security, we suggest that you call at least 24 hours prior to visiting the Regional Office so that we can make arrangements to have someone meet you. The **Federal Register** notice is also available as an electronic file on EPA's Region 9 Web page at *http://www.epa.gov/region09/air.*

SUPPLEMENTARY INFORMATION: Throughout this document, the words ''we,'' ''us,'' or ''our'' mean U.S. EPA.

I. Background

Imperial County is located in the southeastern corner of California. It has borders with Mexico to the south, Arizona to the east, and San Diego County to the west. Most of Imperial County falls within the Imperial Valley Planning Area (Imperial Valley). 40 CFR part 81. The local jurisdiction that is responsible for air pollution control is the Imperial County Air Pollution Control District (ICAPCD).

Upon enactment of the Clean Air Act Amendments of 1990, Imperial Valley was classified as a moderate PM–10 nonattainment area. The CAA requires that moderate areas attain the PM–10 NAAQS by December 31, 1994. CAA section 188(c)(1). Moderate areas failing to attain the NAAQS by the prescribed attainment date must be reclassified as serious under CAA section 188(b)(2). However, CAA section 179(B)(d) provides that any area that establishes to the satisfaction of EPA that it would have attained the PM–10 NAAQS by the applicable attainment date but for emissions emanating from outside the United States, is not subject to the provisions of CAA section 182(b)(2), *i.e.,* reclassification to serious nonattainment.

In July 2001, ICAPCD and the California Air Resources Board (CARB) submitted evidence that the Imperial Valley would have attained the PM–10 NAAQS by the 1994 attainment date, but for transport from Mexico. On October 19, 2001, EPA made a final finding that Imperial Valley would have attained the PM–10 NAAQS by December 1994 but for PM–10 emissions emanating from Mexico. 66 FR 53106.

The Sierra Club petitioned for review of our October 2001 final action in the U.S. Court of Appeals for the Ninth Circuit. On October 9, 2003, the Court issued its opinion. *Sierra Club* v. *United States Environmental Protection Agency,* et al., 352 F.3d 1186. The Court rejected EPA's factual determination with respect to two days, January 19 and 25, 1993, on which PM–10 exceedances of the 24-Hour PM–10 NAAQS occurred, finding that ''[b]ased on the data and the reports in the record, there simply is no possibility that Mexican transport could have caused the observed PM–10 exceedances * * *.'' The effect of this conclusion is that Imperial Valley had exceedances of the PM–10 NAAQS that preclude a finding that the area would have attained the NAAQS by 1994. The Court, concluding that further administrative proceedings with respect to the 1994 exceedances would serve no useful purpose, instructed EPA to reclassify Imperial Valley as a serious PM–10 nonattainment area.

On December 18, 2003, the Ninth Circuit denied a petition for rehearing by ICAPCD, an intervener in the case, slightly revised its October 9, 2003, opinion, and granted ICAPCD's motion to stay the mandate until March 17, 2004, to permit ICAPCD to file a petition for a writ of certiorari in the U.S. Supreme Court. Imperial County did so on March 17, 2004. On June 21, 2004, the Supreme Court declined to hear the case. *Imperial County Air Pollution Control District* v. *Sierra Club,* et al., 72 U.S.L.W. 3757. Thereafter the stay was lifted and the mandate issued.

Accordingly, elsewhere in today's **Federal Register**, EPA is publishing its final action in response to the Ninth Circuit's October 9, 2003, opinion, finding that Imperial Valley failed to attain the PM–10 NAAQS by the moderate area statutory deadline of December 31, 1994, and reclassifying the area from moderate to serious. All serious PM–10 nonattainment areas were required to attain the standards by no later than December 31, 2001, unless granted a one-time extension of up to five years. CAA section 188(c)(2) and (e).

II. Proposed Finding of Failure To Attain by December 31, 2001

A. Clean Air Act Requirements

EPA has the responsibility, pursuant to CAA sections 179(c) and 188(b)(2), of determining within 6 months of the applicable attainment date (*i.e.,* by June 30, 2002) whether Imperial Valley attained the annual and 24-hour NAAQS. Because June 30, 2002, has passed, EPA must make that determination as soon as practicable. *Delaney* v. *EPA,* 898 F.2d 687 (9th Cir. 1990).

Section 179(c)(1) of the Act provides that determinations of failure to attain are to be based upon an area's ''air quality as of the attainment date,'' and section 188(b)(2) is consistent with this requirement. EPA determines whether an area's air quality is meeting the PM–10 NAAQS based upon air quality data gathered at monitoring sites in the nonattainment area and entered into EPA's Air Quality System Database (AQS Database). These data are reviewed to determine the area's air quality status in accordance with EPA regulations at 40 CFR part 50, appendix K.

Pursuant to appendix K, attainment of the annual PM–10 NAAQS is achieved when the expected annual arithmetic mean PM–10 concentration at each monitoring site in the area is less than or equal to the level of the standard (50 $\mu g/m^3$). Attainment of the 24-hour PM–10 NAAQS is achieved when the expected number of exceedances of the 24-hour NAAQS (150 $\mu g/m^3$) per year at each monitoring site is less than or equal to one. A total of three consecutive years of clean air quality data is generally necessary to show attainment of the annual and 24-hour standards for PM–10. A complete year of air quality data, as referred to in 40 CFR part 50, appendix K, is comprised of all four calendar quarters with each quarter containing data from at least 75 percent of the scheduled sampling days.

B. Ambient Air Monitoring Data

The ambient air quality network in Imperial Valley consists of PM–10 monitoring stations throughout the Valley. For a map with locations of the current monitors please see: *http://www.arb.ca.gov/aqd/namslams/ss.pdf.* In general, PM–10 data from these monitoring stations are collected on a regular basis and reported to our AQS Database.

1. Annual PM–10 Standard

According to data in the AQS database, three monitoring sites in the Imperial Valley were in violation of the annual PM–10 NAAQS for the time period leading up to the serious area attainment date—January 1, 1999, through December 31, 2001. Data for these monitors during the three-year period are listed in Table 1 below. 40 CFR part 50 states that the annual PM–10 standard is met when the annual arithmetic mean concentration is less than or equal to 50 micrograms per cubic meter ($\mu g/m^3$). The expected annual arithmetic mean is determined by averaging the annual arithmetic mean PM–10 concentration for the three years preceding the attainment date (in this case 1999 through 2001). The procedure for calculating arithmetic mean is discussed in 40 CFR part 50 appendix K, section 4.0.

TABLE 1.—IMPERIAL VALLEY MONITORING SITES THAT VIOLATE THE ANNUAL PM–10 NAAQS (1999–2001)

Site name	3-year annual average ($\mu g/m^3$)
Calexico, Ethel Street	81
Calexico, Grant Street	85
Westmorland	52

2. 24-Hour PM–10 Standard

In addition to violations of the annual PM–10 NAAQS, data from six monitors located in Imperial Valley show violations of the 24-hour PM–10 NAAQS. According to 40 CFR part 50, the 24-hour PM–10 NAAQS is attained when the expected number of days per calendar year with a 24-hour average above 150 $\mu g/m^3$ is equal to or less than one. In the simplest case, the number of expected exceedances at a site is determined by recording the number exceedances in each calendar year and then averaging them over the past three calendar years. This means that if a monitoring site has four or more observed or estimated exceedances in a three-year period then it is in violation of the 24-hour PM–10 NAAQS. Generally, if PM–10 sampling is scheduled less than every day, EPA requires the adjustment of observed exceedances to account for days for which a sample was not collected. The method for adjusting the observed exceedances to determine the estimated exceedances for a year is described in 40 CFR part 50, appendix K, section 3.1.

The six monitoring sites in Imperial Valley that were in violation of the 24-hour PM–10 NAAQS during the calendar years 1999 through 2001 are listed below in Table 2 along with the number of estimated 24-hour exceedances at each site for each year and the average number of expected exceedance days per year during the three-year period. All of the sites listed in Table 2 operate on a one-in-six day schedule. For each of these sites, the average number of expected exceedance days per year over the three-year period 1999–2001 exceeds one.

TABLE 2.—24-HOUR PM–10 ESTIMATED EXCEEDANCES IN THE IMPERIAL VALLEY NONATTAINMENT AREA (1999 THROUGH 2001)

Monitoring station	Estimated exceedance days 1999	Estimated exceedance days 2000	Estimated exceedance days 2001	Average number of expected exceedance days per year 1999–2001
Calexico, Grant Street	31.7	37.9	12	27.2
Calexico, Ethel St.	12.9	30	18	20.3
Niland	0	12.9	6.4	6.4
Brawley	0	6.9	0	2.3
Westmorland	0	12.8	6	6.3
El Centro	0	6	6.4	4.1

III. Proposed Action

EPA is proposing to find that Imperial Valley did not attain the annual or 24-hour PM–10 NAAQS by the December 31, 2001 attainment date as discussed in section II above.

Pursuant to CAA section 189(d), serious PM–10 nonattainment areas that fail to attain are required to submit ''plan revisions which provide for attainment of the PM–10 air quality standards [1] and, from the date of such submission until attainment, for an annual reduction in PM–10 or PM–10 precursor emissions within the area of not less than 5 percent of the amount of such emissions as reported in the most recent inventory prepared for such area.'' Among other things, the plan revision must also provide for the expeditious implementation of best available control measures (BACM) pursuant to CAA section 189(b)(1)(B). Under section 189(d) the applicable submittal deadline for the plan revision is within 12 months of the applicable attainment date. Since that date, December 31, 2002, has passed, the plan revision is due within one year of publication of a final finding of nonattainment pursuant to CAA section 179(d).

IV. Administrative Requirements

Under Executive Order 12866 (58 FR 51735, October 4, 1993), this proposed action is not a ''significant regulatory action'' and therefore is not subject to review by the Office of Management and Budget. For this reason, this proposed action is also not subject to Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001). This proposed action in and of itself establishes no new requirements, it merely notes that the air quality in Imperial Valley did not meet the Federal health standards for PM–10 by the CAA deadline. Accordingly, the Administrator certifies that this proposed rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). Because this proposed rule does not in and of itself establish new requirements, EPA believes that it is questionable whether a requirement to submit a SIP revision constitutes a Federal mandate. The obligation for a State to revise its SIP arises out of sections 110(a), 179(d), and 189(d) of the CAA and is not legally enforceable by a court of law, and at most is a condition for continued receipt of highway funds. Therefore, it is possible to view an action requiring such a submittal as not creating any enforceable duty within the meaning of section 421(5)(9a)(I) of the Unfunded Mandates Reform Act (UMRA) of 1995 (2 U.S.C. 658(a)(I)). Even if it did, the duty could be viewed as falling within the exception for the condition of Federal assistance under section 421(5)(a)(i)(I) of UMRA (2 U.S.C. 658(5)(a)(i)(I)). Therefore, today's proposed action does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

This rule also does not have tribal implications because it will not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes, as specified by Executive Order 13175 (65 FR 67249, November 9, 2000). This proposed action also does not have Federalism implications because it does not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999). This proposed action does not in and of itself create any new requirements and does not alter the relationship or the distribution of power and responsibilities established in the Clean Air Act. This proposed rule also is not subject to Executive Order 13045, ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997), because it is not economically significant. Because this proposed finding of failure to attain is a factual determination based on air quality considerations, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply. This proposed rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

List of Subjects in 40 CFR Part 81

Environmental protection, Air pollution control, National Parks, Wilderness areas.

Authority: 42 U.S.C. 7401–7671q.

Dated: August 3, 2004.

Wayne Nastri,

Regional Administrator, Region IX.

[FR Doc. 04–18379 Filed 8–10–04; 8:45 am]

BILLING CODE 6560–50–P

[1] Under section 179B(a), the attainment demonstration in any future PM–10 plan submitted by the State for Imperial Valley may be based on a showing of attainment but for emissions emanating from Mexico. EPA's prior action under section 179(B)(d) and the Ninth Circuit's recent decision were based on evaluation of 1992–1994 data and do not preclude the State from pursuing a future 179B(a) demonstration, if applicable.

Notices

Federal Register

Vol. 69, No. 154

Wednesday, August 11, 2004

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Agricultural Research Service

Notice of Federal Invention Available for Licensing and Intent to Grant Exclusive License

AGENCY: Agricultural Research Service, USDA.

ACTION: Notice of availability and intent.

SUMMARY: Notice is hereby given that the U.S. Department of Agriculture, Agricultural Research Service, intends to grant to Nutrition 21, Inc. of Purchase, New York, an exclusive license to U.S. Patent No. 6,689,383, ''Chromium-Histidine Complexes as Nutrient Supplements,'' issued on February 10, 2003. Notice of Availability of this invention for licensing was published in the **Federal Register** on March 13, 2001.

DATES: Comments must be received within thirty (30) calendar days of the date of publication of this Notice in the **Federal Register**.

ADDRESSES: Send comments to: USDA, ARS, Office of Technology Transfer, 5601 Sunnyside Avenue, Room 4–1174, Beltsville, Maryland 20705–5131.

FOR FURTHER INFORMATION CONTACT: June Blalock of the Office of Technology Transfer at the Beltsville address given above; telephone: 301–504–5989.

SUPPLEMENTARY INFORMATION: The Federal Government's patent rights to this invention are assigned to the United States of America, as represented by the Secretary of Agriculture. It is in the public interest to so license this invention as Nutrition 21, Inc. of Purchase, New York, has submitted a complete and sufficient application for a license. The prospective exclusive license will be royalty-bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7. The prospective exclusive license may be granted unless, within thirty (30) days from the date of this published Notice, the Agricultural Research Service receives written evidence and argument which establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.7.

Michael D. Ruff,

Assistant Administrator.

DEPARTMENT OF AGRICULTURE

Forest Service

Umatilla National Forest, Garfield County, Washington; Upper Charley Subwatershed Ecosystem Restoration Projects

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare a supplemental environmental impact statement.

SUMMARY: This notice of intent initiates a Umatilla National Forest Land and Resource Management Plan amendment to incorporate the Lynx Conservation Assessment and Strategy (LCAS, August 2000) in support of the site-specific project called Upper Charley Subwatershed Ecosystem Restoration Projects (**Federal Register**, vol. 67, no. 91, page 31801).

DATES: Comments concerning this proposed action must be received by September 20, 2004. The draft environmental impact statement is expected November 2004 and the final environmental impact statement is expected spring 2005.

ADDRESSES: Send written comments to the Responsible Official, Jeff Blackwood, Forest Supervisor, Umatilla National Forest, 2517 S.W. Hailey Avenue, Pendleton, OR 97801. Send electronic comments to: *comments-pacificnorthwest.umatilla@fs.fed.us.* For further information, mail correspondence to Monte Fujishin, District Ranger, Pomeroy Ranger District, 71 West Main Street, Pomeroy, WA 99347.

FOR FURTHER INFORMATION CONTACT: See above address.

SUPPLEMENTARY INFORMATION:

Background

Canada lynx (*Lynx Canadensis*) was listed by U.S. Fish and Wildlife Service as a threatened species under the Endangered Species Act on March 24, 2000 (**Federal Register**, vol. 65, no. 58). In the final rule, U.S. Fish and Wildlife Service concluded National Forest Land and Resource Management Plans lack guidance for the conservation of lynx. In August 2000 the USDA Forest Service, USDI Bureau of Land Management, and USDI Fish and Wildlife Service issued ''The Lynx Conservation Assessment and Strategy'' (LCAS) to provide a consistent and effective approach to conserve lynx on federal lands.

The notice of intent to prepare an Environmental Impact Statement for Upper Charley Subwatershed Ecosystem Restoration Projects appeared in the **Federal Register** on August 25, 1998 (vol. 63, no. 164, pages 45220–45222). Notification of the Draft Environmental Impact Statement was printed in the **Federal Register** on April 21, 2000 (vol. 65, no. 78, page 21418). On May 10, 2002, Pomeroy District Ranger Monte Fujishin issued a Final Environmental Impact Statement and Record of Decision for Upper Charley Subwatershed Ecosystem Restoration Projects (**Federal Register**, vol. 67, no. 91, page 31801). On May 21, 2003 Oregon Natural Resources Council Fund (ONRC) filed a complaint in U.S. District Court against Linda Goodman, Regional Forester, Pacific Northwest Region; and United States Forest Service. The complaint stated the Umatilla Land and Resource Management Plan (Forest Plan) lacks guidance for the conservation of Canada lynx. Forest Supervisor, Jeff Blackwood decided to amend the Forest Plan and begin the amendment process with this Notice of Intent to prepare a Draft Supplemental Environmental Impact Statement. The supplemental statement will provide additional analysis and documentation in support of the May 2002 Upper Charley Subwatershed Ecosystem Restoration Projects Final Environmental Impact Statement.

Purpose and Need for Action

The Forest Plan amendment will provide management direction (objectives, standards, and guidelines) to guide the conservation of Canada lynx consistent with new science and the Endangered Species Act. Specific management direction needs to be added to fulfill our obligations under the Endangered Species Act as applied

to the site-specific project called Upper Charley Subwatershed Ecosystem Restoration Projects.

Proposed Action

Forest Service proposes to amend the Umatilla Forest Plan to incorporate applicable conservation measures (objectives, standards, and guidelines) from the Lynx Conservation Assessment and Strategy only for the site-specific projected called Upper Charley Subwatershed Ecosystem Restoration Projects located in Umatilla National Forest.

Possible Alternatives

All alternatives described in Chapter 2 of the May 2002 FEIS remain unchanged except for an amendment to incorporate applicable conservation measures from the Lynx Conservation Assessment and Strategy. Alternatives are described in detail on pages II–2 through II–30 in the May 2002 Upper Charles FEIS.

Responsible Official

Jeff Blackwood, Forest Supervisor, Umatilla National Forest, 2517 S.W. Hailey Avenue, Pendleton, OR 97801.

Nature of Decision To Be Made

Whether or not Forest Supervisor, Jeff Blackwood, should amend the Umatilla Forest Plan and incorporate applicable conservation measures (objectives, standards, and guidelines) from ''The Lynx Conservation Assessment and Strategy, 2nd Edition, August 2000''.

Issues

Key issues are described in detail on pages I–12 through I–16 in the May 2002 Upper Charley FEIS and include: Effects of the proposed activities on (1) ecosystem sustainability, (2) big game habitat, (3) water quality and fish habitat, and (4) how should roads be managed in the Upper Charley analysis area.

Comments Requested

This notice of intent initiates the 30-day scoping process that will guide development of a supplement to Upper Charley Subwatershed Ecosystem Restoration Projects FEIS. We are seeking comments on a forest plan amendment to incorporate LCAS conservation measures, and revalidate comments previously received for Upper Charley DEIS.

Early Notice of Importance of Public Participation in Subsequent Environmental Review

A draft environmental impact statement will be prepared for comment. The comment period on the draft environmental impact statement will be 45 days from the date the Environmental Protection Agency publishes the notice of availability in the **Federal Register**.

The Forest Service believes, at this early stage, it is important to give reviewers notice of several court rulings related to public participation in the environmental review process. First, reviewers of draft environmental impact statements must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewer's position and contentions. *Vermont Yankee Nuclear Power Corp.* v. *NRDC,* 435 U.S. 519, 553 (1978). Also, environmental objections that could be raised at the draft environmental impact statement stage but that are not raised until after completion of the final environmental impact statement may be waived or dismissed by the courts. *City of Angoon* v. *Hodel,* 803 F.2d 1016, 1022 (9th Cir. 1986) and *Wisconsin Heritages, Inc.* v. *Harris,* 490 F.Supp. 1334, 1338 (E.D. Wis. 1980). Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the 45-day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the final environmental impact statement.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the draft environmental impact statement should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the draft environmental impact statement of the merits of the alternatives formulated and discussed in the statement. Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.

Comments received, including the names and addresses of those who comment, will be considered part of the public record on this proposal and will be available for public inspection.

(Authority: 40 CFR 1501.7 and 1508.22; Forest Service Handbook 1909.15, Section 21)

Dated: August 5, 2004.

Jeff D. Blackwood,

Forest Supervisor.

BILLING CODE 3410–11–M

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce (DOC) has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: Bureau of Industry and Security (BIS).

Title: Approval of Triangular Involving Commodities Covered By A U.S. Import Certificate

Agency Form Number: None.

OMB Approval Number: 0694–0009.

Type of Request: Extension of a currently approved collection of information.

Burden: 1 hour.

Average Time Per Response: 30 minutes per response.

Number of Respondents: 1 respondent.

Needs and Uses: The triangular symbol will be stamped on the certificate as notification that the importer does not intend to import or retain the items in the country issuing the certificate, but that, in any case, the items will not be delivered to any other destination except in accordance with the EAR. If this procedure were not followed, strategic commodities could be delivered to unauthorized destinations.

Affected Public: Individuals, businesses or other for-profit institutions.

Respondent's Obligation: Required to obtain or retain a benefit.

OMB Desk Officer: Dave Rostker.

Copies of the above information collection proposal can be obtained by calling or writing Diana Hynek, DOC Paperwork Clearance Officer, (202) 482–0266, Department of Commerce, Room 6625, 14th and Constitution Avenue, NW., Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to Dave Rostker, OMB Desk Officer, Room 10202, New Executive Office Building, Washington, D.C. 20230.

Dated: August 6, 2004.

Madeleine Clayton,

Management Analyst, Office of the Chief Information Officer.

[FR Doc. 04–18388 Filed 8–10–04; 8:45 am]

BILLING CODE 3510–33–P

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce (DOC) has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: Bureau of Industry and Security (BIS).

Title: Five Year Records Retention Period.

Agency Form Number: None.

OMB Approval Number: 0694–0096.

Type of Request: Extension of a currently approved collection of information.

Burden: 253 hours.

Average Time Per Response: 0.01 second to 1.01 minute per response.

Number of Respondents: 201,437 respondents.

Needs and Uses: The five year records retention requirement enables BIS to detect violations from records up to five years old to correspond with the five year statute of limitations and prove that a violation did or did not take place. The documents can also provide exculpatory evidence for firms who have been accused of export control violations and are innocent.

Affected Public: Individuals, businesses or other for-profit institutions.

Respondent's Obligation: Required to obtain or retain benefits.

OMB Desk Officer: David Rostker.

Copies of the above information collection proposal can be obtained by calling or writing Diana Hynek, DOC Paperwork Clearance Officer, (202) 482–3129, Department of Commerce, Room 6625, 14th and Constitution Avenue, NW., Washington, DC 20230 or via internet at *dHynek@doc.gov.*

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to David Rostker, OMB Desk Officer, Room 10202, New Executive Office Building, Washington, DC 20230.

Dated: August 6, 2004.

DEPARTMENT OF COMMERCE

Census Bureau

Annual Capital Expenditures Survey

ACTION: Proposed collection; comment request.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506 (c)(2)(A)).

DATES: Written comments must be submitted on or before October 12, 2004.

ADDRESSES: Direct all written comments to Diana Hynek, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6625, 14th and Constitution Avenue, NW., Washington, DC 20230 (or via the Internet at *Dhynek@doc.gov*).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Charles Funk, U.S. Census Bureau, Room 1285–3, Washington, DC 20233–6400, (301) 763–3331 or via the Internet at *charles.allen.funk@census.gov*.

SUPPLEMENTARY INFORMATION:

I. Abstract

The U.S. Census Bureau plans the continuing information collection for the 2004 through 2006 Annual Capital Expenditures Survey (ACES). The annual survey collects data on fixed assets and depreciation, sales and receipts, capitalized computer software, and capital expenditures for new and used structures and equipment. The ACES is the sole source of detailed comprehensive statistics on actual business spending by domestic, private, nonfarm businesses operating in the United States. Both employer and nonemployer companies are included in the survey. The Bureau of Economic Analysis, the primary Federal user of our annual program statistics, uses the information in refining and evaluating annual estimates of investment in structures and equipment in the national income and product accounts, compiling annual input-output tables, and computing gross domestic product by industry. The Federal Reserve Board uses the data to improve estimates of investment indicators for monetary policy. The Bureau of Labor Statistics uses the data to improve estimates of capital stocks for productivity analysis.

Industry analysts use these data for market analysis, economic forecasting, identifying business opportunities, product development, and business planning.

Changes from the previous ACES are the elimination of the collection of detailed capital expenditures by type of structure and type of equipment, and the incorporation of the 2002 North American Industry Classification System (NAICS) into the ACES.

Detailed capital expenditures by type of structure and type of equipment data were collected in the 2003 ACES. These data, collected together once every five years, will not be requested again until the 2008 ACES.

Previous year's estimates of capital expenditures were published on the 1997 NAICS basis. Beginning with the 2004 ACES, we will collect and publish data on the 2002 NAICS. Industries in the survey will be comprised of 3-digit and selected 4-digit 2002 NAICS codes.

II. Method of Collection

The Census Bureau will use mail out/mail back survey forms to collect data. Employer companies will be mailed one of three forms based on their diversity of operations and number of industries with payroll. Companies that operate in only one industry will receive an ACE–1 (S) form. Companies operating in more than one, but less than nine industries will receive an ACE–1 (M) form. And, companies that operate in nine or more industries will receive an ACE–1 (L). All nonemployer companies will receive ACE–2 forms. Respondent companies are permitted to respond via facsimile machine using our toll-free number. Companies will be asked to respond to the survey within 30 days of the initial mailing. Letters and/or telephone calls encouraging participation will be directed to companies that have not responded by the designated time.

III. Data

OMB Number: 0607–0782.

Form Number: ACE–1(S), ACE–1(M), ACE–1(L), and ACE–2.

Type of Review: Regular Review.

Affected Public: Business or other for-profit organizations, non-profit institutions, small businesses or

organizations, and self-employed individuals.

Estimated Number of Respondents: Approximately 61,000 (46,000 employer companies, and 15,000 nonemployer businesses).

Estimated Time Per Response: The average for all respondents is 2.18 hours. For employer companies completing form ACE–1, the range is from 2 to 16 hours, averaging 2.56 hours. For nonemployer companies completing form ACE–2, the range is less than 1 hour to 2 hours, averaging 1 hour.

Estimated Total Annual Burden Hours: 132,980 hours.

Estimated Total Annual Cost to Respondents: $3 million.

Respondents' Obligation: Mandatory.

Legal Authority: Title 13 United States Code, Sections 182, 224, and 225.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: August 6, 2004.

Madeleine Clayton,

Management Analyst, Office of the Chief Information Officer.

DEPARTMENT OF COMMERCE

Census Bureau

Information and Communication Technology Survey

ACTION: Proposed collection; comment request.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506 (c)(2)(A)).

DATES: Written comments must be submitted on or before October 12, 2004.

ADDRESSES: Direct all written comments to Diana Hynek, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6625, 14th and Constitution Avenue, NW, Washington, DC 20230 (or via the Internet at *Dhynek@doc.gov*).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Charles Funk, U.S. Census Bureau, Room 1285–3, Washington, DC 20233–6400, (301) 763–3331 or via the Internet at *charles.allen.funk@census.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

The U.S. Census Bureau plans the continuing information collection for the 2004 through 2006 Information and Communication Technology Survey (ICTS). The annual survey collects industry-level data for two categories of non-capitalized expenses (purchases; and, operating leases and rental payments) for four types of ICT equipment and software (computers and peripheral equipment; ICT equipment, excluding computers and peripherals; electromedical and electrotherapeutic apparatus; and, computer software, including payroll associated with software development). Only domestic, private, non-farm employer companies are included in the survey.

The Bureau of Economic Analysis (BEA), Federal Reserve Board, Bureau of Labor Statistics and industry analysts need these data to evaluate productivity and economic growth prospects. In addition, the ICTS provides improved source data significant to the BEA's investment component of Gross Domestic Product, capital stock estimates, and capital flow tables. Changes from the previous ICTS are the collection of capital expenditures data for the four types of ICT equipment and software cited above, and the incorporation of the 2002 North American Industry Classification System (NAICS) into the ICTS.

Capital expenditures data will only be collected for computers and peripheral equipment; ICT equipment, excluding computers and peripherals; electromedical and electrotherapeutic apparatus; and, computer software, including payroll associated with software development.

Last year's ICTS data were collected on the 1997 NAICS basis. Beginning with the 2004 ICTS, we will collect and publish data based on the 2002 NAICS. Industries in the survey will be comprised of 3-digit and selected 4-digit 2002 NAICS codes.

II. Method of Collection

The Census Bureau will use mail out/mail back survey forms to collect data. Employer companies will be mailed one of three forms based on their diversity of operations and number of industries with payroll. Companies that operate in only one industry will receive an ICT–1 (S) form. Companies that operate in more than one but less than nine industries will receive an ICT–1 (M) form. And, companies that operate in nine or more industries will receive an ICT–1 (L). Respondent companies are permitted to respond via facsimile machine to our toll-free number. Companies will be asked to respond to the survey within 30 days of the initial mailing. Letters and/or telephone calls encouraging participation will be directed to companies that have not responded by the designated time.

III. Data

OMB Number: 0607–0909.

Form Number: ICT–1 (S), ICT–1 (M), ICT–1 (L).

Type of Review: Regular Review.

Affected Public: Business or other for-profit organizations, non-profit institutions, small businesses and organizations.

Estimated Number of Respondents: Approximately 46,000 employer companies.

Estimated Time Per Response: The average for all respondents is 1.74 hours with the range from less than 1 hour to 21 hours.

Estimated Total Annual Burden Hours: 80,040 hours.

Estimated Total Annual Cost to Respondents: $1.7 million.

Respondents' Obligation: Mandatory.

Legal Authority: Title 13 United States Code, Sections 182, 224, and 225.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c)

ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: August 6, 2004.

BILLING CODE 3510–07–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Docket 32–2004]

Foreign-Trade Zone 22—Chicago, IL, Area; Application for Expansion

An application has been submitted to the Foreign-Trade Zones (FTZ) Board (the Board), by the Illinois International Port District, grantee of FTZ 22, requesting authority to expand its zone in the Chicago, Illinois, area, adjacent to the Chicago Customs port of entry. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the Board (15 CFR Part 400). It was formally filed on August 5, 2004.

FTZ 22 was approved on October 29, 1975 (Board Order 108, 40 FR 51242, 11/4/75) and expanded on April 9, 1987 (Board Order 353, 52 FR 12217, 4/15/87); on December 11, 1992 (Board Order 614, 57 FR 61044, 12/23/92); on November 21, 2000 (Board Order 1127, 65 FR 76218, 12/6/00); and, on December 19, 2003 (Board Order 1313, 69 FR 49, 1/2/04).

The general-purpose zone project currently consists of five sites (2,642 acres) in the Chicago area: *Site 1* (19 acres)—within the Port's 2,250-acre Lake Calumet Harbor terminal facility; *Site 2* (578 acres)—industrial park at One Diversatech Drive, Manteno; *Site 3* (8 acres)—Gotoh Distribution Services, Inc., warehouse facility located at 703 Foster Avenue, Bensonville; *Site 4* (8 acres)—Meiko America Inc. warehouse facility located at Gerry Drive and Hansen Court, Wood Dale; and, *Site 5* (2,029 acres)—CenterPoint Intermodal Center, located east of Interstate 55 and south of Arsenal Road, Village of Elwood.

The applicant is now requesting authority to expand the general purpose zone to include a site in Joliet (Will County): *Proposed Site 6* (317 acres) within the 371-acre Rock Run Business Park located in the northwest quadrant of Houbolt Road and Interstate 80. The site is currently partially developed and occupied by a variety of tenants engaged in warehousing, distribution and light manufacturing activities. Additional lots are available for build-to-suit and general warehouse facilities. The majority of the site is owned by Industrial Developments International, Inc., or its affiliates. No specific manufacturing requests are being made at this time. Such requests would be made to the board on a case-by-case basis.

In accordance with the Board's regulations, a member of the FTZ Staff has been designated examiner to investigate the application and report to the Board.

Public comment on the application is invited from interested parties. Submissions (original and 3 copies) shall be addressed to the Board's Executive Secretary at one of the following addresses:

1. *Submissions via Express/Package Delivery Services:* Foreign-Trade Zones Board, U.S. Department of Commerce, Franklin Court Building–Suite 4100W, 1099 14th Street, NW., Washington, DC 20005; or,

2. *Submissions via the U.S. Postal Service:* Foreign-Trade Zones Board, U.S. Department of Commerce, FCB-Suite 4100W, 1401 Constitution Avenue, NW., Washington, DC 20230.

The closing period for their receipt is October 12, 2004. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period (to October 25, 2004).

A copy of the application and accompanying exhibits will be available during this time for public inspection at the address Number 1 listed above, and at the U.S. Department of Commerce Export Assistance Center, 55 West Monroe Street, Suite 2400, Chicago, IL 60603.

Dated: August 5, 2004.

Dennis Puccinelli,

Executive Secretary.

[A–533–841, A–560–817, A–583–840, A–549–823]

Notice of Postponement of Preliminary Antidumping Duty Determinations: Bottle-Grade Polyethylene Terephthalate (PET) Resin From India, Indonesia, Taiwan, and Thailand

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce is postponing preliminary determinations in the antidumping duty investigations on bottle-grade polyethylene terephthalate (PET) resin from India, Indonesia, Taiwan, and Thailand from August 31, 2004, until no later than October 20, 2004. This extension is made pursuant to section 733(c)(1)(A) of the Tariff Act of 1930, as amended by the Uruguay Round Agreements Act (''the Act'').

DATES: Effective August 11, 2004.

FOR FURTHER INFORMATION CONTACT: Daniel O'Brien (India & Taiwan) at (202) 482–1376, Andrew McAllister (Indonesia) at (202) 482–1174, or Stephen Cho (Thailand) at (202) 482–3798, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230.

Postponement of Preliminary Determinations: On April 20, 2004, the Department of Commerce (''the Department'') published the initiation of the antidumping duty investigations of imports of PET resin from India, Indonesia, Taiwan, and Thailand. *See Notice of Initiation of Antidumping Investigations: Bottle-Grade Polyethylene Terephthalate (PET) Resin from India, Indonesia, Taiwan, and Thailand*, 69 FR 21082 (April 20, 2004) (''*Initiation Notice*''). The *Initiation Notice* stated that we would make our preliminary determination for these antidumping duty investigations no later than August 31, 2004, 140 days after the date on which the Department initiated these investigations.

On July 30, 2004, the United States PET Resin Producers Coalition (''the petitioner'') made a timely request pursuant to 19 CFR 351.205(e) for a postponement of the preliminary determinations. The petitioner requested postponement of the preliminary determinations because of the need for additional time for the Department to conduct a full and complete antidumping analysis for all

four countries, including analysis of sales below cost, prior to the issuance of the preliminary determinations.

For the reasons identified by the petitioner, and because there are no compelling reasons to deny the request, we are postponing these preliminary determinations under section 733(c)(1)(A) of the Act. We will make our preliminary determinations no later than October 20, 2004.

This notice is published pursuant to section 733(c)(2) of the Act.

Dated: August 5, 2004.

Jeffrey A. May,

Deputy Assistant Secretary for Import Administration, Group 1.

Honey From Argentina: Extension of Time Limit for Preliminary Results of Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) is extending the time limit for the preliminary results of the 2002–2003 administrative review of the antidumping duty order on honey from Argentina. This review covers seven exporters of the subject merchandise to the United States and the period December 1, 2002, through November 30, 2003.

EFFECTIVE DATE: August 11, 2004.

FOR FURTHER INFORMATION CONTACT: David Cordell at (202) 482–0408 or Robert James at (202) 482–0649, Antidumping and Countervailing Duty Enforcement, Office 6, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230.

SUPPLEMENTARY INFORMATION:

Background

On December 31, 2003, the American Honey Producers Association and the Sioux Honey Association (collectively petitioners) requested an administrative review of the antidumping duty order on honey from Argentina in response to the Department's notice of opportunity to request a review published in the **Federal Register**. *See Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation: Opportunity to Request Administrative Review*, 68 FR 67401 (December 2, 2003). The petitioners requested that the Department conduct an administrative review of entries of subject merchandise made by thirteen Argentine producers/exporters. In addition, the Department received requests for reviews from six of the Argentine exporters included in the petitioners' request. Prior to the Department's initiation of review, on January 15, 2004, the petitioners filed a withdrawal of request for review of the following four companies: ConAgra Argentina S.A., Establecimiento Don Angel S.r.L., Food Way S.A., and Mielar, S.A. The Department initiated the review on the remaining nine exporters. *See Initiation of Antidumping and Countervailing Duty Administrative Reviews and Request for Revocation in Part*, 69 FR 3117 (January 22, 2004).

On February 18, 2004, petitioners submitted a withdrawal of request for review of Compania Europea Americana, S.A. and Radix S.r.L. Because the petitioners were the only party to request the administrative review of the above listed companies, the Department accepted the withdrawal request and rescinded the review with respect to these two companies. *See Honey from Argentina: Notice of Partial Rescission of Antidumping Duty Administrative Review*, 69 FR 12121 (March 15, 2004).

Notice of Extension

Pursuant to the time limits for administrative reviews set forth in section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act), the current deadlines are September 1, 2004, for the preliminary results and December 30, 2004, for the final results of this administrative review. The Department, however, may extend the deadline for completion of the preliminary results of a review if it determines it is not practicable to complete the preliminary results within the statutory time limit. *See* 751(a)(3)(A) of the Act and § 351.213(h)(2) of the Department's regulations. In this case the Department has determined it is not practicable to complete this review within the statutory time limit because of significant issues which require additional time to evaluate. These include potential sales below cost, the collection of cost data, and questions concerning the particular market situation which required one of the companies to provide an additional Section B questionnaire response.

Therefore, the Department is extending the time limit for completion of the preliminary results until December 20, 2004, in accordance with section 751(a)(3)(A) of the Act. The deadline for the final results of this review will continue to be 120 days after publication of the preliminary results.

Dated: August 5, 2004.

Jeffrey May,

Deputy Assistant Secretary for Import Administration, Group I.

[A–489–501]

Antidumping Administrative Review: Certain Welded Carbon Steel Pipe and Tube From Turkey

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of final results of antidumping duty administrative review: certain welded carbon steel pipe and tube from Turkey.

SUMMARY: On April 6, 2004, the Department of Commerce (the Department) published the preliminary results of its administrative review of the antidumping duty order on certain welded carbon steel pipe and tube (welded pipe) from Turkey. This review covers one producer/exporter of the subject merchandise. The period of review (POR) is May 1, 2002, through April 30, 2003. Based on our analysis of the comments received, these final results differ from the preliminary results. The final results are listed below in the Final Results of Review section.

DATES: Effective August 11, 2004.

FOR FURTHER INFORMATION CONTACT: Martin Claessens or Jim Terpstra, Office 3, AD/CVD Enforcement, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone: (202) 482–5451 and (202) 482–3965, respectively.

SUPPLEMENTARY INFORMATION:

Background

This review covers the Borusan Group (Borusan), a producer/exporter of the subject merchandise. On April 6, 2004, the Department published the preliminary results of this review and invited interested parties to comment on those results. *See Notice of Preliminary Results of Antidumping Administrative Review: Certain Welded Carbon Steel Pipe and Tube from Turkey*, 69 FR 18049 (*Preliminary Results*). On May 6,

2004, we received case briefs from Borusan and domestic interested parties.[1] On May 13, 2004, we received rebuttal briefs from the same parties. No public hearing was requested.

Scope of the Order

The products covered by this order include circular welded non-alloy steel pipes and tubes, of circular cross-section, not more than 406.4 millimeters (16 inches) in outside diameter, regardless of wall thickness, surface finish (black, or galvanized, painted), or end finish (plain end, beveled end, threaded and coupled). Those pipes and tubes are generally known as standard pipe, though they may also be called structural or mechanical tubing in certain applications. Standard pipes and tubes are intended for the low pressure conveyance of water, steam, natural gas, air, and other liquids and gases in plumbing and heating systems, air conditioner units, automatic sprinkler systems, and other related uses. Standard pipe may also be used for light load-bearing and mechanical applications, such as for fence tubing, and for protection of electrical wiring, such as conduit shells.

The scope is not limited to standard pipe and fence tubing, or those types of mechanical and structural pipe that are used in standard pipe application. All carbon steel pipes and tubes within the physical description outlined above are included in the scope of this review, except for line pipe, oil country tubular goods, boiler tubing, cold-drawn or cold-rolled mechanical tubing, pipe and tube hollows for redraws, finished scaffolding, and finished rigid conduit.

Imports of these products are currently classifiable under the following Harmonized Tariff Schedule of the United States (HTSUS) subheadings: 7306.30.10.00, 7306.30.50.25, 7306.30.50.32, 7306.30.50.40, 7306.30.50.55, 7306.30.50.85, and 7306.30.50.90. Although the HTSUS subheadings are provided for convenience and customs purposes, our written description of the scope of this proceeding is dispositive.

Analysis of Comments Received

All issues raised in the case and rebuttal briefs by parties to this review are addressed in the ''Issues and Decision Memorandum for the Final Results of the Administrative Review of the Antidumping Duty Order on Certain Welded Carbon Steel Pipe and Tube from Turkey'' from Jeffrey May, Deputy Assistant Secretary for Operations, Import Administration, to James J. Jochum, Assistant Secretary for Import Administration, dated August 4, 2004 (*Decision Memorandum*), which is hereby adopted by this notice.

A list of the issues which parties have raised and to which we have responded, all of which are addressed in the *Decision Memorandum*, is attached to this notice as an Appendix. Parties can find a complete discussion of all issues raised in this review and the corresponding recommendations in this public memorandum, which is on file in the Central Records Unit, room B–099 of the main Commerce building.

In addition, a complete version of the *Decision Memorandum* can be accessed directly on the Internet at *http://ia.ita.doc.gov/frn*. The paper copy and electronic version of the *Decision Memorandum* are identical in content.

Fair Value Comparisons

We calculated export price (EP) and normal value (NV) based on the same methodology used in the preliminary results, except for minor clerical error changes, which are detailed in the *Decision Memorandum*.

Cost of Production

We calculated the cost of production (COP) for the merchandise based on the same methodology used in the preliminary results, except for the calculation of Borusan's financial expense ratio. We have now included foreign exchange gains and losses on accounts receivable in Borusan's financial expense ratio. *See Decision Memorandum*.

Final Results of Review

As a result of our review, we determine that the following weighted-average percentage margin exists for the period May 1, 2002, through April 30, 2003:

Manufacturer/Exporter	Margin (percent)
Borusan	1.48

The Department shall determine, and the U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries. In accordance with section 351.212(b)(1) of the Department's regulations, we have calculated importer-specific assessment rates by dividing the dumping margin found on the subject merchandise examined by the entered value of such merchandise. Where the importer-specific assessment rate is above *de minimis* we will instruct CBP to assess antidumping duties on that importer's entries of subject merchandise. The Department will issue appropriate assessment instructions directly to CBP within 15 days of publication of these final results of review.

Furthermore, the following deposit requirements will be effective for all shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of these final results of administrative review, as provided by section 751(a) of the Tariff Act of 1930, as amended (the Act): (1) For the company named above, the cash deposit rate will be the rate listed above, except where the margin is zero or *de minimis* no cash deposit will be required; (2) for merchandise exported by manufacturers or exporters not covered in this review but covered in a previous segment of this proceeding, the cash deposit rate will continue to be the company-specific rate published in the most recent final results in which that manufacturer or exporter participated; (3) if the exporter is not a firm covered in this review or in any previous segment of this proceeding, but the manufacturer is, the cash deposit rate will be that established for the manufacturer of the merchandise in these final results of review or in the most recent segment of the proceeding in which that manufacturer participated; and (4) if neither the exporter nor the manufacturer is a firm covered in this review or in any previous segment of this proceeding, the cash deposit rate will be 14.74 percent, the all-others rate established in the less-than-fair-value investigation. These deposit requirements shall remain in effect until publication of the final results of the next administrative review.

This notice also serves as a final reminder to importers of their responsibility under § 351.402(f) of the Department's regulations to file a certificate regarding the reimbursement of antidumping and countervailing duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping and countervailing duties occurred, and in the subsequent assessment of antidumping duties increased by the amount of antidumping and/or countervailing duties reimbursed.

This notice also is the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return/destruction or conversion to judicial protective order of proprietary

[1] Domestic Interested Parties are Allied Tube & Conduit Corporation, IPSCO Tubulars, Inc., and Wheatland Tube Company.

information disclosed under APO in accordance with § 351.305(a)(3) of the Department's regulations. Failure to comply is a violation of the APO.

This determination is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: August 4, 2004.

Joseph A. Spetrini,

Acting Assistant Secretary for Import Administration.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 080504A]

Magnuson-Stevens Act Provisions; General Provisions for Domestic Fisheries; Application for Exempted Fishing Permits (EFPs)

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notification of a proposal for EFPs to conduct experimental fishing; request for comments.

SUMMARY: NMFS announces that the Assistant Regional Administrator for Sustainable Fisheries, Northeast Region, NMFS (Assistant Regional Administrator) has made a preliminary determination that an application to issue EFPs for up to 100 commercial lobster vessels, submitted by the Maine Department of Marine Resources (MEDMR), contains all the information required by the regulations governing exempted experimental fishing under the provisions of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) and, therefore, warrants further consideration. The Assistant Regional Administrator has also made a preliminary determination that the activities authorized under these EFPs would be consistent with the goals and objectives of the American lobster (lobster) fishery under the Atlantic Coastal Fisheries Cooperative Management Act (ACFCMA) and is within the scope of earlier analyses of the impacts. However, further review and consultation may be necessary before a final determination is made to issue the EFPs. Therefore, NMFS announces that the Assistant Regional Administrator proposes to recommend that EFPs be issued that would allow commercial fishing vessels to conduct fishing operations that are otherwise restricted by the regulations governing the fisheries of the Northeastern United States.

Regulations under the Magnuson-Stevens Act require publication of this notification to provide interested parties the opportunity to comment on applications for proposed EFPs.

DATES: Comments on this document must be received on or before August 26, 2004.

ADDRESSES: Comments on this notice may be submitted by e-mail. The mailbox address for providing e-mail comments is *DA643@noaa.gov*. Include in the subject line of the e-mail comment the following document identifier: ''Comments on MEDMR Jonah Crab Experimental Fishery.'' Written comments should be sent to Patricia A. Kurkul, Regional Administrator, NMFS, Northeast Regional Office, 1 Blackburn Drive, Gloucester, MA 01930. Mark the outside of the envelope ''Comments on MEDMR Jonah Crab Experimental Fishery.'' Comments may also be sent via fax to (978) 281–9135. Copies of the Draft Year 3 Supplemented Environmental Assessment (EA) prepared for the 2004/2005 Experimental Jonah Crab Fishery in Exclusive Economic Zone (EEZ) Nearshore Lobster Management Area 1 (NLMA1), as well as the May 2002 EA that it supplements, are available from the Northeast Regional Office at the same address.

FOR FURTHER INFORMATION CONTACT: Brian Hooker, Policy Analyst, phone 978–281–9220.

SUPPLEMENTARY INFORMATION: MEDMR initially submitted an application to conduct a Jonah crab experimental fishery on December 6, 2000. An EA was prepared that resulted in a Finding of No Significant Impact (FONSI), which was signed on June 20, 2002. The initial application anticipated the need for two additional years of the experimental fishery beyond Year 1 (2002/2003) in order to gauge the effectiveness of the gear modifications and collect the data necessary to support a potential permanent exemption to the lobster gear regulations. The EFP application for Year 2 (2003/2004) of the study was received, along with a Supplemented EA, on March 10, 2003, and was issued on August 19, 2003. MEDMR submitted an EFP application and Supplemented EA for Year 3 (2004/2005) of the Jonah Crab Experimental Fishery in NLMA1 on July 26, 2004. Along with the bycatch reduction objective, complementary goals of the EFP have been, and would continue to be to: (1) Contribute to the development of year-round Jonah crab markets; (2) provide additional economic opportunities for lobster and crab fishermen who are currently being held to a maximum trap limit; and (3) provide important biological and demographic data on the Jonah crab resource, thus contributing to baseline information on the Jonah crab life cycle and population structure.

The proposed experimental fishery would take place from September 15, 2004, to September 15, 2005, in the EEZ portion of the NLMA1 described at 50 CFR 697.18(a)(1). To date, over 30 EFP harvesters have reported on 12,484 trap hauls of experimental gear. The proposed EFP would require that the experimental gear employ escape vents that are larger (and in greater numbers) than those in standard lobster traps. The side- and top-entry trap dimensions would be the same as that which was authorized for the original EFP. As all additional EFP gear would be fixed, additional habitat impacts are expected to be negligible.

Total participation levels for the experiment have not exceeded 32 percent of the authorized maximum of 100 vessels for the 19-month period ending in March 2004. Comparing the top-entry, side-entry, and standard lobster trap designs, the MEDMR logbook data thus far suggest that a modified side-entry trap may be the best design for targeting Jonah crabs with negligible lobster bycatch. There were 159 sublegal and 35 legal lobsters caught in 11,944 side-entry trap hauls and 540 top-entry trap hauls. All bycatch was returned to the sea. The catch of Jonah crabs under the EFP has been small when contrasted with Maine's reported 2002 landings in the crab fishery as a whole (approximately 140,449 lb (63,706 kg) of Jonah crabs caught under the EFP for 2002/2003 with 9.5 million lb (4.3 million kg) caught overall—approximately 1.5 percent of the total landings). However, results from both Year 1 and Year 2 indicate that landings in a directed Jonah Crab fishery could attain 300,000 lb (136,077 kg) from 100 participants.

All lobsters caught incidentally to the catch of Jonah crabs, all female crabs and crabs smaller than the MEDMR minimum size of 5-inch (12.7-cm) carapace width, and all other bycatch,

would be returned to the sea promptly after data collection. The MEDMR remains committed to providing the same level of observer coverage as in the previous year's experiment (two trips per month). Observer data would continue to complement the information collected by participants through the MEDMR-supplied logbooks, along with detailed fisheries information (*e.g.,* bycatch information, molt condition, etc.).

An August 13, 2002, Biological Opinion on the Jonah crab EFP evaluated impacts on protected resources over the anticipated time frame of the experiment (one year initially and renewal for two additional years). Based on this consultation, a Reasonable and Prudent Alternative (RPA) was implemented to avoid the likelihood that the Jonah crab EFP would jeopardize the continued existence of the North Atlantic right whale. This RPA recommended that participants in the Jonah crab experiment use neutrally buoyant lines on all modified lobster traps during June–October.

As was the case previously, 2004/2005 EFP participants would be required to comply with the RPA and the Atlantic Large Whale Take Reduction Plan (ALWTRP) requirements in effect at the time of the experiment. To date, approximately 40 percent of the EFP participants have received Level I training for whale and sea turtle entanglement. There have been no observed or reported interactions with whales or sea turtles during the operations of this project. The proposed EFP would not represent a change or redistribution of effort, therefore further Endangered Species Act consultation is not necessary.

In 2003, a supplement to the EA for the Jonah crab EFP was prepared to meet revised guidelines regarding cumulative effects and comparative impacts of the preferred alternative (status quo) and other EFP alternatives. The 2004 Supplemented EA determined that the proposed experimental fishery, including cumulative effects, would not significantly affect the quality of the human environment.

The EFP would allow up to 100 vessels to fish 200 of the modified traps above their 800–trap allocation and exempt them from the lobster fishery regulations at 50 CFR part 697 as follows: permit, tagging, and trap limit requirements under § 697.4(a) and (d), and § 697.19(a)(2) and (c); temporary possession of lobster less than the minimum carapace size specified at § 697.20(b)(1) and (2) for data collection purposes; trap tag identification requirements at § 697.21(a)(2); and deployment and gear configuration requirements at § 697.21(b)(2).

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 5, 2004.

Alan D. Risenhoover,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–08–S

DEPARTMENT OF COMMERCE

Patent and Trademark Office

Submission for OMB Review; Comment Request

The United States Patent and Trademark Office (USPTO) has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: United States Patent and Trademark Office (USPTO).

Title: Patent Term Extension.

Form Number(s): None.

Agency Approval Number: 0651–0020.

Type of Request: Extension of a currently approved collection.

Burden: 30,905 hours annually.

Number of Respondents: 26,859 responses per year.

Avg. Hours Per Response: The USPTO estimates that it will take the public between 1 to 25 hours, depending on the complexity of the situation, to gather the necessary information, prepare the appropriate documents, and submit the applications, petitions, and requests associated with patent term extensions and patent term adjustments to the USPTO.

Needs and Uses: The Federal Food, Drug and Cosmetic Act at 35 U.S.C. 156 permits the USPTO to restore the patent term lost due to certain types of regulatory review by the Federal Food and Drug Administration or the Department of Agriculture. Only patents for drug products, medical devices, food additives, and color additives are eligible for an extension, which may be a maximum of five years. In some cases the USPTO may also extend the term of an original patent due to delays in the prosecution of the patent application. The provisions of 35 U.S.C. 154(b) require the USPTO to notify the applicant of the patent term adjustment in the notice of allowance and give the applicant an opportunity to request reconsideration of the USPTO's patent term adjustment determination. The USPTO administers 35 U.S.C. 154 and 156 through 37 CFR subpart F (1.701–1.791).

The public uses this information collection to file requests related to patent term extensions and petitions for reconsideration or reinstatement of patent term adjustments. This information is used by the USPTO to consider whether an applicant is eligible for a patent term extension or reconsideration of a patent term adjustment and, if so, to determine the length of the patent term extension or adjustment. There are no forms associated with this collection.

Affected Public: Individuals or households, businesses or other for-profits, not-for-profit institutions, farms, the Federal government, and State, local or tribal governments.

Frequency: On occasion.

Respondent's Obligation: Required to obtain or retain benefits.

OMB Desk Officer: David Rostker, (202) 395–3897.

Copies of the above information collection proposal can be obtained by any of the following methods:

- *E-mail: Susan.Brown@uspto.gov.* Include ''0651–0020 copy request'' in the subject line of the message.
- *Fax:* 703–308–7407, marked to the attention of Susan Brown.
- *Mail:* Susan K. Brown, Records Officer, Office of the Chief Information Officer, Office of Data Architecture and Services, Data Administration Division, U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450.

Written comments and recommendations for the proposed information collection should be sent on or before September 10, 2004, to David Rostker, OMB Desk Officer, Room 10202, New Executive Office Building, 725 17th Street, NW., Washington, DC 20503.

Dated: August 5, 2004.

Susan K. Brown,

Records Officer, USPTO, Office of the Chief Information Officer, Office of Data Architecture and Services, Data Administration Division.

BILLING CODE 3510–16–P

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Adjustment of Import Limits for Certain Cotton and Man-Made Fiber Textile Products Produced or Manufactured in Bangladesh

August 5, 2004.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner, Bureau of Customs and Border Protection adjusting limits.

EFFECTIVE DATE: August 11, 2004.

FOR FURTHER INFORMATION CONTACT: Ross Arnold, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port, call (202) 927–5850, or refer to the Bureau of Customs and Border Protection website at http://www.cbp.gov. For information on embargoes and quota re-openings, refer to the Office of Textiles and Apparel website at http://otexa.ita.doc.gov.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The current limits for certain categories are being adjusted for swing.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 69 FR 4926, published on February 2, 2004). Also see 68 FR 59915, published on October 20, 2003.

James C. Leonard III,

Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

August 5, 2004.

Commissioner,
Bureau of Customs and Border Protection, Washington, DC 20229.

Dear Commissioner: This directive amends, but does not cancel, the directive issued to you on October 14, 2003, by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports of certain cotton and man-made fiber textile products, produced or manufactured in Bangladesh and exported during the twelve-month period which began on January 1, 2004 and extends through December 31, 2004.

Effective on August 11, 2004, you are directed to adjust the limits for the following categories, as provided for under the Uruguay Round Agreement on Textiles and Clothing:

Category	Adjusted twelve-month limit [1]
237	338,445 dozen.
331pt. [2]	25,308 dozen pairs.
335	518,499 dozen.
341	4,315,167 dozen.
363	52,864,835 numbers.
369–S [3]	3,533,399 kilograms.

[1] The limits have not been adjusted to account for any imports exported after December 31, 2003.

[2] Category 331pt.: all HTS numbers except 6116.10.1720, 6116.10.4810, 6116.10.5510, 6116.10.7510, 6116.92.6410, 6116.92.6420, 6116.92.6430, 6116.92.6440, 6116.92.7450, 6116.92.7460, 6116.92.7470, 6116.92.8800, 6116.92.9400 and 6116.99.9510.

[3] Category 369–S: only HTS number 6307.10.2005.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,
James C. Leonard III,
Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–S

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Adjustment of Import Limits for Certain Cotton, Wool, Man-Made Fiber, Silk Blend and Other Vegetable Fiber Textiles and Textile Products Produced or Manufactured in Taiwan

August 5, 2004.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner, Bureau of Customs and Border Protection adjusting limits.

EFFECTIVE DATE: August 11, 2004.

FOR FURTHER INFORMATION CONTACT: Ross Arnold, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port, call (202) 927–5850, or refer to the Bureau of Customs and Border Protection website at http://www.cbp.gov. For information on embargoes and quota re-openings, refer to the Office of Textiles and Apparel website at http://otexa.ita.doc.gov.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The current limits for certain categories are being adjusted for carryover, swing, and special shift.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 69 FR 4926, published on February 2, 2004). Also see 68 FR 59927, published on October 20, 2003.

James C. Leonard III,

Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

August 5, 2004.

Commissioner,
Bureau of Customs and Border Protection, Washington, DC 20229.

Dear Commissioner: This directive amends, but does not cancel, the directive issued to you on October 14, 2003, by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports of certain cotton, wool, man-made fiber, silk blend and other vegetable fiber textiles and textile products, produced or manufactured in Taiwan and exported during the twelve-month period which began on January 1, 2004 and extends through December 31, 2004.

Effective on August 11, 2004, you are directed to adjust the current limits for the following categories, as provided for under the Uruguay Round Agreement on Textiles and Clothing:

Category	Twelve-month limit [1]
Group I 200–220, 224, 225/317/326, 226, 227, 300/301, 313–315, 360–363, 369–S [2], 369–O [3], 400–414, 469pt [4], 603, 604, 611, 613/614/615/617, 618, 619/620, 624, 625/626/627/628/629 and 666pt [5], as a group.	239,417,293 square meters equivalent.

Category	Twelve-month limit [1]
Sublevel in Group I	
225/317/326	47,914,333 square meters.
Group I subgroup	
200, 219, 313, 314, 315, 361, 369–S and 604, as a group	163,377,022 square meters equivalent.
Within Group I subgroup	
604	266,988 kilograms.
Group II	
237, 239pt [6], 331pt. [7], 332, 333/334/335, 336, 338/339, 340–345, 347/348, 351, 352/652, 359–C/659–C [8], 659–H [9], 359pt. [10], 433-438, 440, 442, 443, 444, 445/446, 447/448, 459pt. [11], 631pt. [12], 633/634/635, 636, 638/639, 640, 641–644, 645/646, 647/648, 651, 659–S [13], 659pt. [14], 846 and 852, as a group.	618,027,564 square meters equivalent.
Sublevels in Group II	
336	163,111 dozen.
340	1,214,146 dozen.
345	141,872 dozen.
352/652	3,851,960 dozen.
435	28,486 dozen.
438	31,713 dozen.
445/446	148,503 dozen.
640	1,038,909 dozen of which not more than 281,710 dozen shall be in Category 640–Y [15].
642	795,585 dozen.
647/648	5,404,466 dozen of which not more than 5,141,289 dozen shall be in Categories 647–W/648–W [16].
659–H	2,527,546 kilograms.
659–S	1,729,838 kilograms.
Group II Subgroup	
333/334/335, 341, 342, 351, 447/448, 636, 641 and 651, as a group	75,225,778 square meters equivalent.
Within Group II Subgroup	
341	370,905 dozen.
342	279,795 dozen.
351	253,285 dozen.
636	420,902 dozen.
651	601,995 dozen.

[1] The limits have not been adjusted to account for any imports exported after December 31, 2003.

[2] Category 369–S: only HTS number 6307.10.2005.

[3] Category 369–O: all HTS numbers except 6307.10.2005 (Category 369–S); and 4202.12.4000, 4202.12.8020, 4202.12.8060, 4202.22.4020, 4202.22.4500, 4202.22.8030, 4202.32.4000, 4202.32.9530, 4202.92.0805, 4202.92.1500, 4202.92.3016, 4202.92.6091, 5601.10.1000, 5601.21.0090, 5701.90.1020, 5701.90.2020, 5702.10.9020, 5702.39.2010, 5702.49.1020, 5702.49.1080, 5702.59.1000, 5702.99.1010, 5702.99.1090, 5705.00.2020, 5805.00.3000, 5807.10.0510, 5807.90.0510, 6301.30.0010, 6301.30.0020, 6302,51.1000, 6302.51.2000, 6302.51.3000, 6302.51.4000, 6302.60.0010, 6302.60.0030, 6302.91.0005, 6302.91.0025, 6302.91.0045, 6302.91.0050, 6302.91.0060, 6303.11.0000, 6303.91.0010, 6303.91.0020, 6304.91.0020, 6304.92.0000, 6305.20.0000, 6306.11.0000, 6307.10.1020, 6307.10.1090, 6307.90.3010, 6307.90.4010, 6307.90.5010, 6307.90.8910, 6307.90.8945, 6307.90.9882, 6406.10.7700, 9404.90.1000, 9404.90.8040 and 9404.90.9505 (Category 369pt.).

[4] Category 469pt.: all HTS numbers except 5601.29.0020, 5603.94.1010, 6304.19.3040, 6304.91.0050, 6304.99.1500, 6304.99.6010, 6308.00.0010 and 6406.10.9020.

[5] Category 666pt.: all HTS numbers except 5805.00.4010, 6301.10.0000, 6301.40.0010, 6301.40.0020, 6301.90.0010, 6302.53.0010, 6302.53.0020, 6302.53.0030, 6302.93.1000, 6302.93.2000, 6303.12.0000, 6303.19.0010, 6303.92.1000, 6303.92.2010, 6303.92.2020, 6303.99.0010, 6304.11.2000, 6304.19.1500, 6304.19.2000, 6304.91.0040, 6304.93.0000, 6304.99.6020, 6307.90.9884, 9404.90.8522 and 9404.90.9522.

[6] Category 239pt.: only HTS number 6209.20.5040 (diapers).

[7] Category 331pt.: all HTS numbers except 6116.10.1720, 6116.10.4810, 6116.10.5510, 6116.10.7510, 6116.92.6410, 6116.92.6420, 6116.92.6430, 6116.92.6440, 6116.92.7450, 6116.92.7460, 6116.92.7470, 6116.92.8800, 6116.92.9400 and 6116.99.9510.

[8] Category 359–C: only HTS numbers 6103.42.2025, 6103.49.8034, 6104.62.1020, 6104.69.8010, 6114.20.0048, 6114.20.0052, 6203.42.2010, 6203.42.2090, 6204.62.2010, 6211.32.0010, 6211.32.0025 and 6211.42.0010; Category 659–C: only HTS numbers 6103.23.0055, 6103.43.2020, 6103.43.2025, 6103.49.2000, 6103.49.8038, 6104.63.1020, 6104.63.1030, 6104.69.1000, 6104.69.8014, 6114.30.3044, 6114.30.3054, 6203.43.2010, 6203.43.2090, 6203.49.1010, 6203.49.1090, 6204.63.1510, 6204.69.1010, 6210.10.9010, 6211.33.0010, 6211.33.0017 and 6211.43.0010.

[9] Category 659–H: only HTS numbers 6502.00.9030, 6504.00.9015, 6504.00.9060, 6505.90.5090, 6505.90.6090, 6505.90.7090 and 6505.90.8090.

[10] Category 359pt.: all HTS numbers except 6103.42.2025, 6103.49.8034, 6104.62.1020, 6104.69.8010, 6114.20.0048, 6114.20.0052, 6203.42.2010, 6203.42.2090, 6204.62.2010, 6211.32.0010, 6211.32.0025 and 6211.42.0010 (Category 359–C); 6115.19.8010, 6117.10.6010, 6117.20.9010, 6203.22.1000, 6204.22.1000, 6212.90.0010, 6214.90.0010, 6406.99.1550, 6505.90.1525, 6505.90.1540, 6505.90.2060 and 6505.90.2545.

[11] Category 459pt.: all HTS numbers except 6115.19.8020, 6117.10.1000, 6117.10.2010, 6117.20.9020, 6212.90.0020, 6214.20.0000, 6405.20.6030, 6405.20.6060, 6405.20.6090, 6406.99.1505 and 6406.99.1560.

[15] Category 640–Y: only HTS numbers 6205.30.2010, 6205.30.2020, 6205.30.2050 and 6205.30.2060.

[16] Category 647–W: only HTS numbers 6203.23.0060, 6203.23.0070, 6203.29.2030, 6203.29.2035, 6203.43.2500, 6203.43.3500, 6203.43.4010, 6203.43.4020, 6203.43.4030, 6203.43.4040, 6203.49.1500, 6203.49.2015, 6203.49.2030, 6203.49.2045, 6203.49.2060, 6203.49.8030, 6210.40.5030, 6211.20.1525, 6211.20.3820 and 6211.33.0030; Category 648–W: only HTS numbers 6204.23.0040, 6204.23.0045, 6204.29.2020, 6204.29.2025, 6204.29.4038, 6204.63.2000, 6204.63.3000, 6204.63.3510, 6204.63.3530, 6204.63.3532, 6204.63.3540, 6204.69.2510, 6204.69.2530, 6204.69.2540, 6204.69.2560, 6204.69.6030, 6204.69.9030, 6210.50.5035, 6211.20.1555, 6211.20.6820, 6211.43.0040 and 6217.90.9060.

The limits set forth above are subject to adjustment pursuant to the provisions of the ATC and administrative arrangements notified to the Textiles Monitoring Body.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

James C. Leonard III,

Chairman, Committee for the Implementation of Textile Agreements.

DEPARTMENT OF DEFENSE

Department of the Navy

Notice of Availability of Government-Owned Inventions; Available for Licensing

AGENCY: Department of the Navy, DOD.

ACTION: Notice.

SUMMARY: The inventions listed below are assigned to the United States Government as represented by the Secretary of the Navy and are made available for licensing by the Department of the Navy. U.S. Patent No. 6,397,200: DATA REDUCTION SYSTEM FOR IMPROVING CLASSIFIER PERFORMANCE, issued May 28, 2002. //U.S. Patent No. 6,013,192: SODIUM HYDROXIDE COMPOSITIONS FOR USE IN BATTERY SYSTEMS, issued Jan 11, 2000.//U.S. Patent No. 6,609,428: NONRESONANT TECHNIQUE FOR ESTIMATION OF THE MECHANICAL PROPERTIES OF VISCOELASTIC MATERIALS, issued Aug 26, 2003.// U.S. Patent No. 6,043,921: FADING FREE OPTICAL PHASE RATE RECEIVER, issued Mar 28, 2000.//U.S. Patent No. 5,733,679: IMPROVED METHOD FOR PRODUCING ALKALINE ELECTROLYTES, issued Mar 31, 1998. //U.S. Patent No. 6,697,302: HIGHLY DIRECTIVE UNDERWATER ACOUSTIC RECEIVER, issued Feb 24, 2004.//U.S. Patent No. 6,737,185: SODIUM GALLIUM OXIDE ELECTROLYTE ADDITIVE FOR ALUMINUM ANODE ACTIVATION, issued May 18, 2004.// U.S. Patent No. 6,736,685: STOWABLE INTEGRATED MOTOR PROPULSOR FINS, issued May 18, 2004.//U.S. Patent No. 6,737,185: SODIUM GALLIUM OXIDE ELECTROLYTE ADDITIVE FOR ALUMINUM ANODE ACTIVATION, issued May 18, 2004.//U.S. Patent No. 6,711,096: SHAPED PIEZOELECTRIC COMPOSITE ARRAY, issued Mar 23, 2004.//U.S. Patent No. 6,671,230: PIEZOELECTRIC VOLUMETRIC ARRAY, issued Dec 30, 2003.//U.S. Patent No. 6,661,739: FILIGREE ELECTRODE PATTERN APPARATUS FOR STEERING PARAMETRIC MODE ACOUSTIC BEAMS, issued Dec 9, 2003.//U.S. Patent No. 6,634,071: METHOD OF MAKING SHAPED PIEZOELECTRIC COMPOSITE TRANSDUCER, issued Oct 21, 2003.// U.S. Patent No. 6,561,034: ULTRASONIC SPARSE IMAGING ARRAY, issued May 13, 2003.//U.S. Patent No. 6,511,433: ACTIVE ACOUSTIC ARRAY FOR ULTRASONIC BIOMEDICAL APPLICATIONS, issued Jan 28, 2003.//U.S. Patent No. 6,255,761: SHAPED PIEZOELECTRIC COMPOSITE TRANSDUCER, issued Jul 3, 2001.// Navy Case Number 76472: DIFFERENTIAL HETERODYNE OTR FOR MULTIPLEXED OPTICAL PHASE SIGNALS.//Navy Case Number 76644: IMPROVED METHOD FOR THE HYDRAULIC AND ELECTRICAL CONTROL OF A PILE CONFIGURED BATTERY.//Navy Case Number 76473: HETERODYNE OPTICAL TRANSMITTER/RECEIVER FOR CORRELATION-MULTIPLEXED OPTICAL SIGNALS.//Navy Case Number 79790: SOLID STORAGE AND METHOD OF DISSOLUTION FOR ELECTROLYTE AND CATHOLYTE FOR USE IN A SEMI FUEL CELL POWER SOURCE.//Navy Case Number 76474: HETERODYNE OPTICAL TRANSMITTER/RECEIVER FOR MULTIPLEXED OPTICAL PHASE SIGNALS.//Navy Case Number 96505: PERIMETER SECURITY SENSOR ARRAY.//Navy Case Number 82744: AIR INTERFACE SYSTEM.//Navy Case Number 82831: AIR-INTERFACE SYSTEM FOR CAPTURING ELECTROMAGNETIC RADIATION.// Navy Case Number 75526: POLARIZATION AND PHASE FADING FREE OPTICAL RECEIVER.//U.S. Patent No. 6,706,207: NON-CHROMATE METAL SURFACE ETCHING SOLUTIONS, issued Mar 16, 2004.// U.S. Patent No. 6,638,369: NON CHROMATE CONVERSION COATINGS, issued Oct 28, 2003.//U.S. Patent No. 6,740,220: ELECTROCATALYTIC CATHODE DEVICE OF PALLADIUM AND IRIDIUM ON A HIGH DENSITY OR POROUS CARBON SUPPORT AND A METHOD FOR MAKING SUCH A CATHODE, issued May 25, 2004.//Navy Case Number 84567: NONPARAMETRIC METHOD FOR DETECTION AND IDENTIFICATION OF REGIONS OF CONCERN IN MULTIDIMENSIONAL INTENSITY IMAGES.

ADDRESSES: Copies of patents cited are available from the U.S. Patent and Trademark Office, USPTO Contact Center (UCC), Crystal Plaza 3, Room 2C02, P.O. Box 1450, Alexandria, VA 22313–1450. Requests for copies of patents must include the patent number.

FOR FURTHER INFORMATION CONTACT: Dr. Theresa A. Baus, Technology Transfer Manager, Naval Undersea Warfare Center Division, Newport, 1176 Howell St., Newport, RI 02841–1703, telephone (401) 832–8728.

BILLING CODE 3810–FF–P

DEPARTMENT OF EDUCATION

Notice of Proposed Information Collection Requests

AGENCY: Department of Education.

SUMMARY: The Leader, Regulatory Information Management Group, Office of the Chief Information Officer, invites comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before October 12, 2004.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or

Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Leader, Regulatory Information Management Group, Office of the Chief Information Officer, publishes that notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, *e.g.* new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment.

The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology.

Dated: August 6, 2004.

Angela C. Arrington,

Leader, Regulatory Information Management Group, Office of the Chief Information Officer.

Federal Student Aid

Type of Review: Revision.

Title: Student Aid Internet Gateway (SAIG) Enrollment Document.

Frequency: On Occasion.

Affected Public: Not-for-profit institutions; businesses or other for-profit; State, Local, or Tribal Gov't, SEAs or LEAs.

Reporting and Recordkeeping Hour Burden:

Responses: 9,332.

Burden Hours: 6,221.

Abstract: Enrollment in SAIG allows eligible entities to exchange Title IV information electronically with the Department of Education. Users are able to receive, transmit, view and update student financial aid data via SAIG. Eligible respondents include postsecondary schools that participate in federal student financial aid programs, financial aid servicers, state and guaranty agencies, lenders, and need analysis servicers.

Requests for copies of the proposed information collection request may be accessed from *http://edicsweb.ed.gov,* by selecting the ''Browse Pending Collections'' link and by clicking on link number 2553. When you access the information collection, click on ''Download Attachments'' to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue, SW., Potomac Center, 9th Floor, Washington, DC 20202–4700. Requests may also be electronically mailed to the Internet address *OCIO_RIMG@ed.gov* or faxed to 202–245–6621. Please specify the complete title of the information collection when making your request.

Comments regarding burden and/or the collection activity requirements should be directed to Joseph Schubart at *Joe.Schubart@ed.gov.* Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339.

[FR Doc. 04–18363 Filed 8–10–04; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Recognition of Accrediting Agencies, State Agencies for the Approval of Public Postsecondary Vocational Education, and State Agencies for the Approval of Nurse Education

AGENCY: National Advisory Committee on Institutional Quality and Integrity, Department of Education (The Advisory Committee).

What Is the Purpose of This Notice?

On July 16, 2004, we published a notice in the **Federal Register** to invite written comments on accrediting agencies that had submitted petitions for review by the Advisory Committee at its December 13–15, 2004 meeting. Although the Distance Education and Training Council was included in the list of accrediting agencies for the Advisory Committee's review of the Council's progress report, the July 16, 2004 notice omitted the Council's request for an expansion of scope. This notice invites written comments on the petition for expansion of scope submitted by the Distance Education and Training Council that will be reviewed at the Advisory Committee meeting to be held on December 13–15, 2004.

Petition for an Expansion of Scope

1. Distance Education and Training Council (Current scope of recognition: The accreditation of postsecondary institutions in the United States offering programs primarily by the distance education method up through the first professional degree. *Title IV Note: Accreditation by this agency does not enable the entities it accredits to establish eligibility to participate in Title IV programs.)* (Requested scope of recognition: the accreditation of postsecondary institutions in the United States offering programs primarily by the distance education method up through the first professional degree. *Title IV Note: Under current law, distance education entities accredited by this agency are not eligible to participate in Title IV programs, other than the Distance Education Demonstration Project.)*

Where Should I Submit My Comments?

Please submit your written comments by September 27, 2004 to Carol Griffiths, Accrediting Agency Evaluation, Accreditation and State Liaison. You may contact her at the U.S. Department of Education, 1990 K Street, NW., 7th Floor, Room 7105, Washington, DC 20006–8509, telephone: (202) 219–7011. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service at 1–800–877–8339.

What Is the Authority for the Advisory Committee?

The National Advisory Committee on Institutional Quality and Integrity is established under Section 114 of the Higher Education Act (HEA), as amended, 20 U.S.C. § 1011c. One of the purposes of the Advisory Committee is to advise the Secretary of Education on the recognition of accrediting agencies and State approval agencies.

Will This Be My Only Opportunity To Submit Written Comments?

Yes, this notice announces the only opportunity you will have to submit written comments. However, another **Federal Register** notice will announce the meeting and invite individuals and/or groups to submit requests to make oral presentations before the Advisory Committee on the agencies that the Committee will review. That notice, however, does not offer an opportunity to submit written comment.

What Happens to the Comments That I Submit?

We will review your comments, in response to this notice, as part of our evaluation of the Distance Education and Training Council's compliance with the Secretary's Criteria for Recognition of Accrediting Agencies. The Criteria are regulations found in 34 CFR Part 602 (for accrediting agencies).

We will also respond to your comments, as appropriate, in the staff

analysis we present to the Advisory Committee at its December 2004 meeting. Therefore, in order for us to give full consideration to your comments, it is important that we receive them by September 27, 2004. In all instances, your comments regarding the Distance Education and Training Council must relate to the Criteria for Recognition.

What Happens to Comments Received After the Deadline?

We will review any comments received after the deadline. If such comments, upon investigation, reveal that the accrediting agency is not acting in accordance with the Criteria for Recognition, we will take action either before or after the meeting, as appropriate.

Where Can I Inspect Petitions and Third-Party Comments Before and After the Meeting?

Subject to the provisions of 5 U.S.C. 522, petitions, interim reports, and those third-party comments received in advance of the meeting, will, upon written request, be made available, by appointment, for inspection and copying at the U.S. Department of Education, 1990 K Street, NW., 7th Floor, Room 7105, Washington, DC 20006–8509, telephone (202) 219–7011 until November 17, 2004. They will be available again after the December 13–15 Advisory Committee meeting.

How May I Obtain Electronic Access to This Document?

You may view this document, as well as all other Department of Education documents published in the **Federal Register**, in text or Adobe Portable Document Format (PDF) on the Internet at the following site: *http://www.ed.gov/legislation/FedRegister.* To use PDF you must have Adobe Acrobat Reader, which is available free at this site. If you have questions about using PDF, call the U.S. Government Printing Office (GPO), toll free, at 1–888–293–6498; or in the Washington, DC, area at (202) 512–1530.

Note: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: *http://www.gpoaccess.gpo/nara/index.html.*

Authority: 5 U.S.C. Appendix 2.

Dated: August 5, 2004.

Sally L. Stroup,

Assistant Secretary for Postsecondary Education.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Office of Nonproliferation Policy; Proposed Subsequent Arrangement

AGENCY: Department of Energy.

ACTION: Subsequent arrangement.

SUMMARY: This notice has been issued under the authority of Section 131 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2160). The Department is providing notice of a proposed ''subsequent arrangement'' under the Agreement for Cooperation Concerning Civil Uses of Atomic Energy between the United States and Canada and Agreement for Cooperation in the Peaceful Uses of Nuclear Energy between the United States and the European Atomic Energy Community (EURATOM).

This subsequent arrangement concerns the retransfer of 147,929 kg of U.S.-origin natural uranium hexafluoride, 100,000 kg of which is uranium, from Cameco Corporation, Port Hope, Ontario, Canada, to Eurodif SA, Velizy France. The material, which is now located at Cameco Corp., Port Hope, Ontario, will be transferred to Eurodif for enrichment. Upon completion of the enrichment, the material will be used at Electricite de France, Delegation aux Combustibles as reactor fuel. Cameco Corp. originally obtained the uranium hexafluoride under Export License Number XSOU–8744.

In accordance with Section 131 of the Atomic Energy Act of 1954, as amended, we have determined that this subsequent arrangement is not inimical to the common defense and security.

This subsequent arrangement will take effect no sooner than August 26, 2004.

Dated: August 5, 2004.

For the Department of Energy.

Kurt Siemon,

Acting Director, Office of Nonproliferation Policy.

[Docket No. RP04–435–000]

ANR Pipeline Company; Notice of Proposed Changes in FERC Gas Tariff

August 4, 2004.

Take notice that on August 2, 2004, ANR Pipeline Company, (ANR) tendered for filing as part of its FERC Gas Tariff, Second Revised Volume No. 1, the revised tariff sheets listed on Appendix A to the filing, to be made effective October 1, 2004.

ANR states that the revised tariff sheets are being submitted to address gas quality standards on its pipeline system.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed in accordance with the provisions of section 154.210 of the Commission's regulations (18 CFR 154.210). Anyone filing an intervention or protest must serve a copy of that document on the Applicant. Anyone filing an intervention or protest on or before the intervention or protest date need not serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov*. Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov,* using the ''eLibrary'' link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an ''eSubscription'' link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov*, or call

(866) 208–3676 (toll free). For TTY, call (202) 502–8659.

[Docket No. RP04–119–003]

Dominion Transmission, Inc.; Notice of Annual Report on Operational Sales of Gas

August 4, 2004.

Take notice that on June 30, 2004, Dominion Transmission, Inc. (Dominion) tendered for filing an annual report on operational sales of gas for the 12 month period from April 1, 2003 to March 31, 2004.

Dominion states that the annual report is in compliance with section 42.D of the General Terms and Conditions (GT&C) of its tariff, which requires Dominion on June 30 of each year to submit its annual report on the sale of gas that is incidental to its operations covering the 12 month period from April 1 to March 31. Dominion alleges that section 42.D of the GT&C also requires that the annual report indicate the source of all gas sold, the date of sale, the volumes, sales price, revenues from the sale, and the disposition of the revenues. Dominion reports that it sold 3,000,000 dt of gas, with total dollars billed of $18,857,537.09.

Dominion states that copies of its filing have been served on all affected customers of Dominion and interested State commissions, as well as to all parties appearing on the Commission's official service list in this docket.

Any person desiring to protest this filing must file in accordance with Rule 211 of the Commission's Rules of Practice and Procedure (18 CFR 385.211). Protests to this filing will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Such protests must be filed on or before the date as indicated below. Anyone filing a protest must serve a copy of that document on all the parties to the proceeding.

The Commission encourages electronic submission of protests in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 14 copies of the protest to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.This filing is accessible on-line at *http://www.ferc.gov,* using the ''eLibrary'' link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an ''eSubscription'' link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). Dominion Transmission, Inc.; Notice of Proposed Changes in FERC Gas Tariff

August 4, 2004.

Take notice that on August 2, 2004, Dominion Transmission, Inc. (DTI) tendered for filing as part of its FERC Gas Tariff, Third Revised Volume No. 1, the following tariff sheets, to become effective September 1, 2004:

First Revised Sheet No. 304
First Revised Sheet No. 307
First Revised Sheet No. 353
First Revised Sheet No. 357
First Revised Sheet No. 604
Second Revised Sheet No. 680
First Revised Sheet No. 684
Fifth Revised Sheet No. 1000
First Revised Sheet No. 1048
First Revised Sheet No. 1065
First Revised Sheet No. 1074
Third Revised Sheet No. 1076
First Revised Sheet No. 1078
First Revised Sheet No. 1081
Second Revised Sheet No. 1092
Third Revised Sheet No. 1093
Second Revised Sheet No. 1097
First Revised Sheet No. 1108
First Revised Sheet No. 1127
First Revised Sheet No. 1131
First Revised Sheet No. 1155A
Second Revised Sheet No. 1162
Third Revised Sheet No. 1419
Second Revised Sheet No. 1502
Third Revised Sheet No. 2003
Second Revised Sheet No. 2052
Second Revised Sheet No. 2102
Second Revised Sheet No. 2153
Third Revised Sheet No. 2203
Second Revised Sheet No. 2252
Fourth Revised Sheet No. 2304
Second Revised Sheet No. 2352
Second Revised Sheet No. 2403
Second Revised Sheet No. 2453
Third Revised Sheet No. 2506

DTI states that the purpose of this filing is to revise the tariff to correct typographical errors, update addresses and phone numbers, remove language that is no longer applicable, update language pertaining to the standards of conduct, and other miscellaneous changes which are detailed in Appendix A of the filing.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed in accordance with the provisions of section 154.210 of the Commission's regulations (18 CFR 154.210). Anyone filing an intervention or protest must serve a copy of that document on the Applicant. Anyone filing an intervention or protest on or before the intervention or protest date need not serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov,* using the ''eLibrary'' link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an ''eSubscription'' link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov,* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Equitrans, L.P.; Notice of Proposed Changes In FERC Gas Tariff

August 4, 2004.

Take notice that on July 30, 2004, Equitrans, L.P. (Equitrans) tendered for filing, to become part of its FERC Gas Tariff, Original Volume No. 1, the following pro forma tariff sheet:

Pro Forma Sheet No. 310

Equitrans states that the revised *pro forma* tariff sheet is being submitted in compliance with the FERC's June 30, 2004, Order in Docket No. RP04–97–000, and comprises a proposed tariff provision regarding segmentation in compliance with Order No. 637 and prior Commission orders.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed in accordance with the provisions of section 154.210 of the Commission's regulations (18 CFR 154.210). Anyone filing an intervention or protest must serve a copy of that document on the Applicant. Anyone filing an intervention or protest on or before the intervention or protest date need not serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov*. Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

Guardian Pipeline, L.L.C.; Notice of Proposed Changes in FERC Gas Tariff

August 4, 2004.

Take notice that on August 2, 2004, Guardian Pipeline, L.L.C. (Guardian) tendered for filing to become part of Guardian's FERC Gas Tariff, Original Volume No. 1, the tariff sheets listed in Appendix A of the filing to become effective September 1, 2004.

Guardian notes that on July 1, 2004, Northern Plains Natural Gas Company (NPNG) became the operator of Guardian. The purpose of this filing is to update Guardian's tariff to make housekeeping changes associated with such change in the operation of Guardian and other ministerial changes.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed in accordance with the provisions of Section 154.210 of the Commission's regulations (18 CFR 154.210). Anyone filing an intervention or protest must serve a copy of that document on the Applicant. Anyone filing an intervention or protest on or before the intervention or protest date need not serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

Northwest Pipeline Corporation; Notice of Proposed Changes in Ferc Gas Tariff and Filing of Non-Conforming Service Agreement

August 4, 2004.

Take notice that on August 2, 2004, Northwest Pipeline Corporation (Northwest) tendered for filing as part of its FERC Gas Tariff, Third Revised Volume No. 1, Sixth Revised Sheet No. 373, to become effective September 1, 2004. Northwest also tendered for filing a Rate Schedule TF–1 non-conforming service agreement.

Northwest states that the purpose of this filing is to: (1) Submit a Rate Schedule TF–1 service agreement containing contract-specific operational flow order provisions that do not conform to the Rate Schedule TF–1 form of service agreement contained in Northwest's tariff; (2) add this agreement to the list of non-conforming service agreements in Northwest's tariff; and (3) remove a service agreement due to termination from the list of non-conforming service agreements in Northwest's tariff.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed in accordance with the provisions of section 154.210 of the Commission's regulations (18 CFR 154.210). Anyone filing an intervention or protest must serve a copy of that document on the Applicant. Anyone filing an intervention or protest on or before the intervention or protest date need not serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov*. Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

Texas Gas Transmission, LLC; Notice of Proposed Changes in FERC Gas Tariff

August 4, 2004.

Take notice that on July 30, 2004, Texas Gas Transmission, LLC (Texas Gas) tendered for filing as part of its FERC Gas Tariff, Second Revised Volume No. 1, Second Revised Sheet No. 56, to become effective August 1, 2004.

Texas Gas states that the purpose of this filing is to submit to the Commission a copy of a fully executed non-conforming Firm Transportation Agreement (Agreement) between Texas Gas and AK Steel Corporation (AK Steel), dated April 27, 2004. Texas further states that they want to add this agreement to the list of non-conforming service agreements in Texas Gas' tariff, and to remove from that list the non-conforming service agreement with AK Steel under Rate Schedule STF that expires July 31, 2004.

Texas Gas proposes on the same tariff sheet to delete the reference to Marathon Oil Company, whose non-conforming service agreement, dated November 21, 2002, under Rate Schedule FT is amended effective August 1, 2004, to delete the non-conforming language contained in Article V, Section 5.2.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed in accordance with the provisions of section 154.210 of the Commission's regulations (18 CFR 154.210). Anyone filing an intervention or protest must serve a copy of that document on the Applicant. Anyone filing an intervention or protest on or before the intervention or protest date need not serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov*. Williston Basin Interstate Pipeline Company; Notice of Tariff Filing

August 4, 2004.

Take notice that on July 30, 2004, Williston Basin Interstate Pipeline Company (Williston Basin) tendered for filing to become a part of its FERC Gas Tariff, Second Revised Volume No. 1, the following tariff sheets to become effective August 1, 2004:

Sub Fifty-Fifth Revised Sheet No. 15
Sub Thirty-First Revised Sheet No. 15A
Sub Fifty-Third Revised Sheet No. 18
Sub Thirty-First Revised Sheet No. 18A
Sub Thirty-First Revised Sheet No. 19
Sub Forty-First Revised Sheet No. 21

Williston Basin states that it has come to their attention that some of the tariff sheets that were included in its July 1, 2004, filing contained incorrect rates. Williston Basin notes that it is refiling certain tariff sheets approved by the Commission on July 28 to reflect the currently effective base tariff rates as of August 1, 2004.

Any person desiring to protest this filing must file in accordance with Rule 211 of the Commission's Rules of Practice and Procedure (18 CFR 385.211). Protests to this filing will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Such protests must be filed in accordance with the provisions of section 154.210 of the Commission's regulations (18 CFR 154.210). Anyone filing a protest must serve a copy of that document on all the parties to the proceeding.

The Commission encourages electronic submission of protests in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov*. Persons unable to file electronically should submit an original and 14 copies of the protest to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP04-366-000]

Gulf South Pipeline Company, LP; Notice of Intent To Prepare an Environmental Assessment for the Proposed Jackson Gas Storage Expansion Project

August 4, 2004.

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental assessment (EA) that will discuss the environmental impacts of Gulf South Pipeline Company, LP's (Gulf South) Jackson Gas Storage Expansion Project in Rankin County, Mississippi. Gulf South proposes to directionally drill five new storage injection/withdrawal wells and to construct and operate about 2.34 miles of 16-inch-diameter pipeline to facilitate injection and withdrawal in the existing Jackson Gas Storage Field. The Jackson Gas Storage Expansion Project would result in an increase in the total storage capacity of about 2.4 billion cubic feet of gas. This EA will be used by the Commission in its decisionmaking process to determine whether the project is in the public convenience and necessity.

If you are a landowner receiving this notice, you may be contacted by a pipeline company representative about the acquisition of an easement to construct, operate, and maintain the proposed facilities. The company would seek to negotiate a mutually acceptable agreement. However, if the project is approved by the Commission, that approval conveys with it the right of eminent domain. Therefore, if easement negotiations fail to produce an agreement, the pipeline company could initiate condemnation proceedings in accordance with State law.

A fact sheet prepared by the FERC entitled ''An Interstate Natural Gas Facility on My Land? What Do I Need To Know?'' was attached to the project notice Gulf South provided to the landowners. This fact sheet addresses a number of typically asked questions, including the use of eminent domain and how to participate in the Commission's proceedings. It is available for viewing on the FERC Internet Web site (*http://www.ferc.gov*).

Summary of the Proposed Project

Gulf South proposes to:

- Directionally drill 5 injection/withdrawal wells and install aboveground well head, measurement and appurtenant auxiliary facilities inside a well pad site;
- Construct five 8-inch-diameter well head lines connecting to a new 16-inch-diameter storage pipeline that would originate at Gulf South's existing 9-acre fee property well pad; and
- Construct 2.34 miles of 16-inch-diameter pipeline.

The location of the projects' facilities is shown in appendix 1.[1]

Nonjurisdictional Facilities

No nonjurisdictional facilities would be built as a result of the proposed project.

Land Requirements for Construction

Drilling the five wells would disturb approximately 5.19 acres of land at the

[1] The appendices referenced in this notice are not being printed in the **Federal Register**. Copies of all appendices, other than appendix 1 (maps), are available on the Commission's Web site at the ''eLibrary'' link or from the Commission(s Public Reference Room, 888 First Street, NE., Washington, DC 20426, or call (202) 502–8371. For instructions on connecting to eLibrary refer to the last page of this notice. Copies of the appendices were sent to all those receiving this notice in the mail.

proposed well pad. After completing the installation of all of the well facilities, about 4.94 acres of land would be permanently maintained. The 16-inch-diameter pipeline construction would affect about 17.6 acres of land. Of the 17.6 acres, 5.60 acres would be permanently maintained right-of-way and the remaining 12.0 acres of land would consist of temporary workspace that would be allowed to revegetate after construction.

The EA Process

The National Environmental Policy Act (NEPA) requires the Commission to take into account the environmental impacts that could result from an action whenever it considers the issuance of a Certificate of Public Convenience and Necessity. NEPA also requires us [2] to discover and address concerns the public may have about proposals. This process is referred to as ''scoping.'' The main goal of the scoping process is to focus the analysis in the EA on the important environmental issues. By this Notice of Intent, the Commission requests public comments on the scope of the issues it will address in the EA. All comments received are considered during the preparation of the EA. State and local government representatives are encouraged to notify their constituents of this proposed action and encourage them to comment on their areas of concern.

The EA will discuss impacts that could occur as a result of the construction and operation of the proposed project under these general headings:

- Geology and soils.
- Land use.
- Water resources, fisheries, and wetlands.
- Cultural resources.
- Vegetation and wildlife.
- Air quality and noise.
- Endangered and threatened species.
- Hazardous waste.
- Public safety.

We will also evaluate possible alternatives to the proposed projects or portions of the projects, and make recommendations on how to lessen or avoid impacts on the various resource areas.

Our independent analysis of the issues will be in the EA. Depending on the comments received during the scoping process, the EA may be published and mailed to Federal, State, and local agencies, public interest groups, interested individuals, affected landowners, newspapers, libraries, and the Commission(s official service list for this proceeding. A comment period will be allotted for review if the EA is published. We will consider all comments on the EA before we make our recommendations to the Commission.

To ensure your comments are considered, please carefully follow the instructions in the public participation section beginning below.

Currently Identified Environmental Issues

We have already identified several issues that we think deserve attention based on a preliminary review of the proposed facilities and the environmental information provided for the project. This preliminary list of issues may be changed based on your comments and our analysis.

- Nearby residences may be temporarily affected by well drilling noise.
- Two private water wells near the project area could potentially be affected.
- The pipeline route would cross 3 perennial water bodies and about 10,368 feet of forested wetlands.
- Cultural resources may be affected in the project area.

Public Participation

You can make a difference by providing us with your specific comments or concerns about the projects. By becoming a commentor, your concerns will be addressed in the EA and considered by the Commission. You should focus on the potential environmental effects of the proposal, alternatives to the proposal (including alternative locations/routes), and measures to avoid or lessen environmental impact. The more specific your comments, the more useful they will be. Please carefully follow these instructions to ensure that your comments are received in time and properly recorded:

- Send an original and two copies of your letter to: Magalie R. Salas, Secretary, Federal Energy Regulatory Commission, 888 First St., NE., Room 1A, Washington, DC 20426.
- Label one copy of the comments for the attention of Gas Branch 2.
- Reference Docket No. CP04–366–000.
- Mail your comments so that they will be received in Washington, DC on or before September 2, 2004.

Please note that we are continuing to experience delays in mail deliveries from the U.S. Postal Service. As a result, we will include all comments that we receive within a reasonable time frame in our environmental analysis of this project. However, the Commission strongly encourages electronic filing of any comments or interventions or protests to this proceeding. *See* 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site at *http://www.ferc.gov* under the ''e-Filing'' link and the link to the User's Guide. Before you can file comments you will need to create a free account which can be created on-line.''

If you do not want to send comments at this time but still want to remain on our mailing list, please return the Information Request (Appendix 4). If you do not return the Information Request, you will be taken off the mailing list.

Becoming an Intervenor

In addition to involvement in the EA scoping process, you may want to become an official party to the proceeding known as an ''intervenor.'' Intervenors play a more formal role in the process. Among other things, intervenors have the right to receive copies of case-related Commission documents and filings by other intervenors. Likewise, each intervenor must provide 14 copies of its filings to the Secretary of the Commission and must send a copy of its filings to all other parties on the Commission's service list for this proceeding. If you want to become an intervenor you must file a motion to intervene according to Rule 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.214) (*see* appendix 2). [3] Only intervenors have the right to seek rehearing of the Commission's decision.

Affected landowners and parties with environmental concerns may be granted intervenor status upon showing good cause by stating that they have a clear and direct interest in this proceeding which would not be adequately represented by any other parties. You do not need intervenor status to have your environmental comments considered.

Environmental Mailing List

This notice is being sent to individuals, organizations, and government entities interested in and/or potentially affected by the proposed project. It is also being sent to all identified potential right-of-way grantors.

Additional Information

In addition, the Commission staff will conduct a field trip on portions of the

[2] ''We'', ''us'', and ''our'' refer to the environmental staff of the Office of Energy Projects (OEP).

[3] Interventions may also be filed electronically via the Internet in lieu of paper. *See* the previous discussion on filing comments electronically.

pipeline facilities on August 17, 2004. Anyone interested in participating in the field trip may attend, but they must provide their own transportation. The Commission staff will start the field trip on Tuesday, August 17, 2004, at approximately 1:30 p.m. (c.s.t.) in the parking lot of the following hotel. The field trip will continue on Wednesday, August 18 at about 8 a.m. (c.s.t.) at the same location.

Quality Inn, 401 Gilchrist Drive, Pearl, MS 399208. Telephone: (601) 932–4025.

Additional information about the project is available from the Commission's Office of External Affairs, at 1–866–208–FERC or on the FERC Internet Web site (*http://www.ferc.gov*) using the eLibrary link. Click on the eLibrary link, click on ''General Search'' and enter the docket number excluding the last three digits in the Docket Number field. Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll free at 1–866–208–3676, or for TTY, contact (202) 502–8659.

In addition, the Commission now offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries and direct links to the documents. Go to *http://www.ferc.gov/esubscribenow.htm*.

Finally, public meetings or site visits will be posted on the Commission's calendar located at *http://www.ferc.gov/EventCalendar/EventsList.aspx* along with other related information.

Magalie R. Salas,

Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application for Surrender of Exemption and Soliciting Comments, Motions To Intervene, and Protests

August 4, 2004.

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Surrender of exemption.

b. *Project No.:* 11576–003.

c. *Date Filed:* July 6, 2004.

d. *Applicant:* Mohave Water Agency.

e. *Name of Proposed Project:* Rock Springs Hydroelectric Project.

f. *Location:* On the Mohave River, in San Bernardino County, California. The project does not utilize Federal or tribal lands.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791a–825r.

h. *Applicant Contact:* Mr. Michael Limbaugh, Engineering Controller, 22450 Headquarters Drive, Post Office Box 1089, Apple Valley, CA 92307–0019, (760) 240–9201.

i. *FERC Contact:* Tom Papsidero, (202) 502–6002.

j. *Deadline for filing comments, protests, and motions to intervene:* September 7, 2004.

All documents (original and eight copies) should be filed with: Ms. Magalie R. Salas, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. Please include the project number on any comments or motions filed.

Comments, protests and interventions may be filed electronically via the Internet in lieu of paper. *See* 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site under the ''e-Filing'' link. The Commission strongly encourages electronic filings.

k. *Description of Filing:* The exemptee states that its unconstructed 2.6–MW Rock Springs Hydroelectric Project will not be developed and is voluntarily surrendering its exemption.

l. *Locations of Application:* A copy of the filing is available for inspection and reproduction at the Commission in the Public Reference Room, located at 888 First Street, NE., Room 2A, Washington, DC 20426. This filing may also be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number in the docket number field to access the document. For assistance contact FERC online support at *FERCOnlineSupport@ferc.gov*. or call toll-free 1–866–208–3676. For TTY call (202) 502–8659. A copy is also available for inspection and reproduction at the address in item h. above.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene*—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Responsive Documents*—Any filings must bear in all capital letters the title ''COMMENTS'', ''PROTEST'', or ''MOTION TO INTERVENE'', as applicable, and the Project Number of the particular application to which the filing refers. A copy of any motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

p. *Agency Comments*—Federal, State, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

Magalie R. Salas,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application Accepted for Filing and Soliciting Motions To Intervene, Protests, and Comments

August 4, 2004.

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Type of Application:* Preliminary permit.

b. *Project No.:* 12509–000.

c. *Date Filed:* June 1, 2004.

d. *Applicant:* Eagle Crest Energy Company.

e. *Name of Project:* Eagle Mountain Pumped Storage Project.

f. *Location:* In Riverside County, California. The project would utilize Federal land managed by the Bureau of Land Management.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Mr. Arthur W. Lowe, Eagle Crest Energy Corporation, P.O. Box 2155, Palm Desert, CA 92261, (760) 779–0040.

i. *FERC Contact:* Mr. Lynn R. Miles, Sr., (202) 502–8763.

j. *Deadline for filing motions to intervene, protests and comments:* 60 days from the issuance date of this notice.

All documents (original and eight copies) should be filed with Magalie R. Salas, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. Please include the project number (P–12509–000) on any comments, protest, or motions filed.

The Commission's Rules of Practice and Procedure require all interveners filing documents with the Commission to serve a copy of that document on each person in the official service list for the project. Further, if an intervener files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Project:* The proposed pumped storage project would consist of: (1) A proposed 1,150-foot-long, 77-foot-high upper reservoir dam, (2) a proposed 450-foot-long, 27-foot-high upper reservoir dam, (3) a proposed upper reservoir having a surface area of 210 acres, with a storage capacity of 23,600 acre-feet and a normal water surface elevation of 2,472 feet mean sea level (msl), (4) a proposed lower reservoir having a surface area of 150 acres, with storage capacity of 26,000 acre-feet and normal water surface elevation of 1,100 feet msl located within the East Pit of the inactive Eagle Mountain Mine, (5) two proposed intake and outlet structures at both reservoirs incorporating trash racks and closure and control gates, (6) a proposed 4,400-foot-long, 29-foot-diameter tunnel from the upper reservoir intake structure, joining a 29-foot diameter vertical shaft 1,300 deep, which joins a 33-foot diameter 1,500-foot-long horizontal pressure tunnel, (7) a proposed powerhouse containing three generating units having a total installed capacity of 1,000 megawatts, (8) a proposed 8,500-foot-long, 29-foot-diameter tailrace tunnel, (9) a proposed 83-mile-long, 500 kilovolt transmission line, and (10) appurtenant facilities.

The project would have an annual generation of 6,000 gigawatt-hours that would be sold to a local utility.

l. *Locations of Applications:* A copy of the application is available for inspection and reproduction at the Commission in the Public Reference Room, located at 888 First Street, NE., Room 2A, Washington, DC 20426, or by calling (202) 502–8371. This filing may also be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, call toll-free 1–866–208–3676 or e-mail *FERCOnlineSupport@ferc.gov*. For TTY, call (202) 502–8659. A copy is also available for inspection and reproduction at the address in item h. above.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Competing Preliminary Permit*—Anyone desiring to file a competing application for preliminary permit for a proposed project must submit the competing application itself, or a notice of intent to file such an application, to the Commission on or before the specified comment date for the particular application (*see* 18 CFR 4.36). Submission of a timely notice of intent allows an interested person to file the competing preliminary permit application no later than 30 days after the specified comment date for the particular application. A competing preliminary permit application must conform with 18 CFR 4.30(b) and 4.36.

o. *Competing Development Application*—Any qualified development applicant desiring to file a competing development application must submit to the Commission, on or before a specified comment date for the particular application, either a competing development application or a notice of intent to file such an application. Submission of a timely notice of intent to file a development application allows an interested person to file the competing application no later than 120 days after the specified comment date for the particular application. A competing license application must conform with 18 CFR 4.30(b) and 4.36.

p. *Notice of Intent*—A notice of intent must specify the exact name, business address, and telephone number of the prospective applicant, and must include an unequivocal statement of intent to submit, if such an application may be filed, either a preliminary permit application or a development application (specify which type of application). A notice of intent must be served on the applicant(s) named in this public notice.

q. *Proposed Scope of Studies under Permit*—A preliminary permit, if issued, does not authorize construction. The term of the proposed preliminary permit would be 36 months. The work proposed under the preliminary permit would include economic analysis, preparation of preliminary engineering plans, and a study of environmental impacts. Based on the results of these studies, the Applicant would decide whether to proceed with the preparation of a development application to construct and operate the project.

r. *Comments, Protests, or Motions to Intervene*—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

Comments, protests and interventions may be filed electronically via the Internet in lieu of paper; *see* 18 CFR 385.2001 (a)(1)(iii) and the instructions on the Commission's Web site under ''e-filing'' link. The Commission strongly encourages electronic filing.

s. *Filing and Service of Responsive Documents*—Any filings must bear in all capital letters the title ''COMMENTS'', ''RECOMMENDATIONS FOR TERMS AND CONDITIONS'', ''PROTEST'', or ''MOTION TO INTERVENE'', as applicable, and the Project Number of the particular application to which the filing refers. Any of the above-named documents must be filed by providing the original and the number of copies provided by the Commission's regulations to: The Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. A copy of any motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

t. *Agency Comments*—Federal, State, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

Magalie R. Salas,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application Accepted for Filing and Soliciting Motions To Intervene, Protests, and Comments

August 4, 2004.

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Type of Application:* Preliminary permit.

b. *Project No.:* 12513–000.

c. *Date Filed:* June 23, 2004.

d. *Applicant:* Upland Wings, Inc.

e. *Name of Project:* Wings Lake Project.

f. *Location:* On Mary's Creek, in Washington County, Missouri. No Federal land or facilities would be used.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Mr. James C. Kennedy, President, Upland Wings, Inc., 1185 Ross Avenue, St. Louis, MO 63146, (314) 503–4986.

i. *FERC Contact:* Robert Bell, (202) 502–6062.

j. *Deadline for filing comments, protests, and motions to intervene:* 60 days from the issuance date of this notice.

The Commission's Rules of Practice and Procedure require all interveners filing documents with the Commission to serve a copy of that document on each person in the official service list for the project. Further, if an intervener files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Project:* The proposed pumped storage project would consist of: (1) A proposed 700-foot-long, 100-foot-high compacted concrete and rock dam, (2) a proposed upper reservoir having a surface area of 160 acres with a storage capacity of 5,600 acre-feet and a maximum water surface elevation of 730 feet mean sea level, (3) a lower underground reservoir using old abandon mine caves having a surface area of 40 acres with a storage capacity of 1,320 acre-feet and a maximum water surface elevation of 1290 feet mean sea level, (4) a proposed 100-foot-long, 20-foot-diameter concrete power conduit, (5) a proposed powerhouse containing one generator having an installed capacity of 500 megawatts, (6) a proposed 2,500-foot-long, 138 kilovolt transmission line, and (7) appurtenant facilities. The project would have an annual generation of 1,000 gigawatt-hours that would be sold to a local utility.

l. *Locations of Applications:* A copy of the application is available for inspection and reproduction at the Commission in the Public Reference Room, located at 888 First Street, NE., Room 2A, Washington, DC 20426, or by calling (202) 502–8371. This filing may also be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, call toll-free 1–866–208–3676 or e-mail *FERCOnlineSupport@ferc.gov*. For TTY, call (202) 502–8659. A copy is also available for inspection and reproduction at the address in item h. above.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Competing Preliminary Permit*—Anyone desiring to file a competing application for preliminary permit for a proposed project must submit the competing application itself, or a notice of intent to file such an application, to the Commission on or before the specified comment date for the particular application (*see* 18 CFR 4.36). Submission of a timely notice of intent allows an interested person to file the competing preliminary permit application no later than 30 days after the specified comment date for the particular application. A competing preliminary permit application must conform with 18 CFR 4.30(b) and 4.36.

o. *Competing Development Application*—Any qualified development applicant desiring to file a competing development application must submit to the Commission, on or before a specified comment date for the particular application, either a competing development application or a notice of intent to file such an application. Submission of a timely notice of intent to file a development application allows an interested person to file the competing application no later than 120 days after the specified comment date for the particular application. A competing license application must conform with18 CFR 4.30(b) and 4.36.

p. *Notice of Intent*—A notice of intent must specify the exact name, business address, and telephone number of the prospective applicant, and must include an unequivocal statement of intent to submit, if such an application may be filed, either a preliminary permit application or a development application (specify which type of application). A notice of intent must be served on the applicant(s) named in this public notice.

q. *Proposed Scope of Studies under Permit*—A preliminary permit, if issued, does not authorize construction. The term of the proposed preliminary permit would be 36 months. The work proposed under the preliminary permit would include economic analysis, preparation of preliminary engineering plans, and a study of environmental impacts. Based on the results of these studies, the Applicant would decide whether to proceed with the preparation of a development application to construct and operate the project.

r. *Comments, Protests, or Motions to Intervene*—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, and .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

Comments, protests and interventions may be filed electronically via the Internet in lieu of paper; *see* 18 CFR 385.2001 (a)(1)(iii) and the instructions on the Commission's Web site under ''e-filing'' link. The Commission strongly encourages electronic filing.

s. *Filing and Service of Responsive Documents*—Any filings must bear in all capital letters the title ''COMMENTS'', ''RECOMMENDATIONS FOR TERMS AND CONDITIONS'', ''PROTEST'', or ''MOTION TO INTERVENE'', as applicable, and the Project Number of the particular application to which the filing refers. Any of the above-named documents must be filed by providing the original and the number of copies provided by the Commission's regulations to: The Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. A copy of any motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

t. *Agency Comments*—Federal, State, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file

comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Settlement Agreement and Soliciting Comments

August 4, 2004.

Take notice that the following settlement agreement has been filed with the Commission and is available for public inspection.

a. *Type of Application:* Settlement agreement on new license.

b. *Project No.:* P–2030–036.

c. *Date Filed:* July 30, 2004.

d. *Applicants:* Portland General Electric Company and the Confederated Tribes of the Warm Springs Reservation of Oregon.

e. *Name of Project:* Pelton Round Butte Hydroelectric Project.

f. *Location:* On the Deschutes River, near the City of Madras, Jefferson County, Oregon.

g. *Filed Pursuant to:* Rule 602 of the Commission's Rules of Practice and Procedure, 18 CFR 385.602.

h. *Applicant Contacts:* Julie A. Keil, Director, Hydro Licensing, Portland General Electric Company, 121 SW Salmon Street, Portland, Oregon 97204, (503) 464–8864; James Manion, General Manager, Warm Springs Power Enterprises, P.O. Box 960, Warm Springs, Oregon 97761, (541) 553–1046.

i. *FERC Contact:* Nick Jayjack, (202) 502–6073, *nicholas.jayjack@ferc.gov*.

j. *Deadline for filing comments:* August 24, 2004. *Reply comments:* September 3, 2004.

All documents (original and eight copies) should be filed with: Magalie R. Salas, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

The Commission's Rules of Practice require all interveners filing documents with the Commission to serve a copy of that document on each person on the official service list for the project. Further, if an intervener files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

Comments may be filed electronically via the Internet in lieu of paper. The Commission strongly encourages electronic filings. *See* 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site (*http://www.ferc.gov*) under the ''e-Filing'' link.

k. Portland General Electric Company (PGE) and the Confederated Tribes of the Warm Springs Reservation of Oregon (CTWS) filed the Settlement Agreement on behalf of themselves and the U.S. Fish and Wildlife Service; Bureau of Indian Affairs; Bureau of Land Management; NOAA Fisheries; USDA Forest Service; Oregon Department of Environmental Quality; Oregon Department of Fish and Wildlife; Oregon Water Resources Department; Oregon Parks and Recreation Department; Deschutes County, Oregon; Jefferson County, Oregon; City of Bend, Oregon; City of Madras, Oregon; City of Redmond, Oregon; Avion Water Company; American Rivers; Oregon Trout; The Native Fish Society; and Trout Unlimited and WaterWatch of Oregon. The purpose of the settlement agreement is to resolve among the signatories issues regarding the relicensing of the Pelton Round Butte Hydroelectric Project. The signatories have agreed that the settlement agreement is fair and reasonable and in the public interest. On behalf of the signatories, PGE and CTWS request that the Commission approve the settlement agreement and adopt it as part of a new license without material modification.

l. A copy of the settlement agreement is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll-free at 1–866–208–3676, or for TTY, (202) 502–8659. A copy is also available for inspection and reproduction at the address in item h above.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via e-mail of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

Magalie R. Salas,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application Ready for Environmental Analysis and Soliciting Comments, Recommendations, Terms and Conditions, and Prescriptions

August 4, 2004.

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* New minor license.

b. *Project No.:* 620–009.

c. *Date Filed:* October 3, 2003.

d. *Applicant:* NorQuest Seafoods Inc.

e. *Name of Project:* Chignik Hydroelectric Project.

f. *Location:* The Chignik Project is located on Indian Creek in Lake and Peninsula Borough, Alaska. The project affects approximately 58 acres of Federal lands managed by the U.S. Bureau of Land Management.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Daniel Hertrich, Polarconsult Alaska Inc., 1503 W 33rd Ave. 310, Anchorage, Alaska 99503, (907) 258–2420, e-mail: *dan@polarconsult.net*.

i. *FERC Contact:* Kenneth Hogan at (202) 502–8434 or *kenneth.hogan@ferc.gov*.

j. Deadline for filing comments, recommendations, terms and conditions, and prescriptions is 60 days from the issuance of this notice; reply comments are due 105 days from the issuance date of this notice.

All documents (original and eight copies) should be filed with: Magalie R. Salas, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

The Commission's Rules of Practice require all intervenors filing documents with the Commission to serve a copy of that document on each person on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

Comments, recommendations, terms and conditions, and prescriptions may be filed electronically via the Internet in lieu of paper. The Commission strongly encourages electronic filings. *See* 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site (*http://www.ferc.gov*) under the ''e-Filing'' link.

k. This application has been accepted, and is ready for environmental analysis at this time.

l. The existing Chignik Hydroelectric Project operates continuously at 2.7 cubic-feet-per-second (cfs), and serves as the domestic water supply for the City of Chignik. The project consists of the following features: (1) A timber crib dam, spill way and overflow channel; (2) a 20.4 surface acre reservoir; (3) a 7,700 foot-long wood stave and steel pipeline; (4) a turbine and 60 kW generator; and (5) other appurtenant facilities.

NorQuest estimates that the average annual generation is 219,000 kilowatt hours (kWh). NorQuest uses the Chignik Hydroelectric Project facilities to augment the consumption of diesel fuel in their diesel generators used to supply electricity to NorQuest's cannery operations.

m. A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll-free at 1–866–208–3676, or for TTY, (202) 502–8659. A copy is also available for inspection and reproduction at the address in item h above.

All filings must (1) bear in all capital letters the title ''COMMENTS'', ''REPLY COMMENTS'', ''RECOMMENDATIONS,'' ''TERMS AND CONDITIONS,'' or ''PRESCRIPTIONS;'' (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person submitting the filing; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, recommendations, terms and conditions or prescriptions must set forth their evidentiary basis and otherwise comply with the requirements of 18 CFR 4.34(b). Agencies may obtain copies of the application directly from the applicant. Each filing must be accompanied by proof of service on all persons listed on the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 4.34(b), and 385.2010.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via e-mail of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

n. The tentative schedule for processing the application follows:

Milestone	Date
Response to REA due	October 4, 2004.
Reply Comments due	November 17, 2004.
Issuance of EA	November 2004.
Ready for Commission Decision on the Application	February 2005.

[Docket No. ER02–2001–000]

Electric Quarterly Reports; Notice of Electric Quarterly Reports Regional Outreach Meetings

August 4, 2004.

The FERC Electric Quarterly Reports (EQR) staff has scheduled regional outreach meetings in Indiana and New York to be held in conjunction with ISO EQR data mapping sessions. On Wednesday, August 18, 2004, FERC EQR staff will hold an EQR Outreach Session for Midwest filers in conjunction with a meeting hosted by the Midwest ISO (MISO) the next day. Both meetings will be held at the Lakeside Conference Center across the street from the MISO's headquarters in Carmel, IN. The FERC EQR Outreach Session will run from 2 p.m. to 5 p.m. (c.s.t.), on Wednesday. Barbara Bourque (EQR Program Manager) and Mark Blazejowski will discuss general ISO data mapping issues and address any other EQR questions or problems that filers have. The Thursday, August 19, 2004, meeting on FERC EQR MISO Reporting will address the details of mapping MISO settlement items to EQR product names. Interested individuals should bring someone from their company who is familiar with the MISO operations and settlement statements.

On Wednesday, August 25, 2004, FERC EQR staff will hold an EQR Outreach Session for New York area filers in conjunction with an EQR Data Mapping meeting hosted by the New York ISO (NY–ISO) the next day. Both meetings will be held at the New York State Nurses Association, located at 11 Cornell Road in Latham, NY. The FERC EQR Outreach Session will run from 3 p.m. to 5 p.m. (e.s.t.), on Wednesday. Barbara Bourque and Mark Blazejowski will discuss general ISO data mapping issues and address any other EQR questions or problems that filers have. The Thursday, August 26, 2004, meeting on EQR Data Mapping will address the details of mapping NY–ISO settlement items to EQR product names. Interested individuals should bring someone from their company who is familiar with the NY–ISO operations and settlement statements.

Those who would like to participate in the August 18th Midwest EQR Outreach Session are asked to register online at FERC by Monday, August 16, 2004, at *http://www.ferc.gov/whats-new/registration/eqr-0818-form.asp*. Information about the August 19th MISO FERC EQR Reporting meeting, which will be teleconferenced, can be found at *http://www.midwestiso.org/calendar/detail.php?meetingID=301*. There is no registration required for the MISO mapping meeting on August 19, 2004.

Those who would like to participate in the August 25th NY–ISO EQR Outreach Session are asked to register online at FERC by Monday, August 23, 2004, at *http://www.ferc.gov/whats-new/registration/eqr-0825-form.asp*. Registration information about the August 26, 2004, EQR Data Mapping Session hosted by NY–ISO will be forthcoming.

Interested persons wishing to file comments may do so under the above-captioned Docket Number. Those filings will be available for review at the

Commission or may be viewed on the Commission's Web site at *http://www.ferc.gov,* using the ''eLibrary'' link. For assistance, contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or via phone at (866) 208–3676 (toll-free). For TTY, contact (202) 502–8659.

For additional information, please contact Mark Blazejowski of FERC's Office of Market Oversight and Investigations at (202) 502–6055 or by e-mail, *mark.blazejowski@ferc.gov*.

Magalie R. Salas,

Secretary.

[Docket Nos. ER04–688–000, ER04–689–000, ER04–690–000, ER04–693–000]

Pacific Gas and Electric Company; Notice of Technical Conference

August 4, 2004.

Parties are invited to attend a technical conference in the above-referenced Pacific Gas and Electric Company (PG&E) proceedings on August 9–11, 2004, at Pacific Gas and Electric Company Headquarters, San Francisco, California 94105. The technical conference will be held in Conference Room A in 245 Market Street, first floor, on August 9th and 10th and Room 2595 in 77 Beale Street on August 11th. The technical conference will be held from 9 a.m. until 5 p.m. (P.s.t.) on each day. Arrangements have been made for parties to listen to the technical conference by telephone.

The purpose of the conference is to identify the issues raised in these proceedings, develop information for use by Commission staff in preparing an order on the merits, and to facilitate any possible settlements in these proceedings. Specifically, the parties will discuss, among other things, the following unexecuted replacement agreements filed by PG&E in the above-referenced dockets: (1) The interconnection agreement between PG&E and Western Area Power Administration (WAPA), (2) the parallel operations agreement between PG&E and WAPA (PG&E Original Rate Schedule FERC No. 228), and (3) PG&E's wholesale distribution tariff service agreement for wholesale distribution service to WAPA.

Parties planning to attend this three-day technical conference must contact Joe Migocki at PG&E by 12 noon (Pacific time), Friday, August 6, 2004, at *J3M9@pge.com* or at (415) 973–6625, to develop a list of attendees for admission into PG&E's offices.

Questions about the conference and the telephone conference call arrangements should be directed to Julia A. Lake at (202) 502–8370 or *Julia.lake@ferc.gov*.

Magalie R. Salas,

Secretary.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–7799–9]

Clean Air Act Operating Permit Program; Petitions for Objection to State Operating Permits for Los Medanos Energy Center and Dow Chemical Company

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of final orders on petitions to object to two state operating permits.

SUMMARY: This notice announces that the EPA Administrator has responded to two citizen petitions requesting EPA to object to operating permits issued to two facilities by the Bay Area Air Quality Management District (''BAAQMD''). Specifically, the Administrator has partially granted and partially denied a petition submitted by Our Children's Earth Foundation (''OCE'') and Californians for Renewable Energy, Inc. (''CARE'') requesting that the Administrator object to the state operating permit issued to Los Medanos Energy Center (''Los Medanos'') in Pittsburgh, California; and denied in full a petition submitted by Communities for a Better Environment (''CBE'') requesting that the Administrator object to the state operating permit issued to Dow Chemical (''Dow''), also located in Pittsburgh. This notice also corrects a non-substantive factual finding in the final order for the Los Medanos petition that OCE submitted late its comments on the draft permit to BAAQMD

Pursuant to section 505(b)(2) of the Clean Air Act (ACT), a petitioner may seek judicial review of any portion of the petition which EPA denied in the United States Court of Appeals for the appropriate circuit. Any petition for review shall be filed within 60 days from the date this notice appears in the **Federal Register,** pursuant to section 307 of the Act.

DATES: Copies of the final orders, petitions, and other supporting information are available at the Environmental Protection Agency, Region IX, Air Division, 75 Hawthorne Street, San Francisco, CA 94105. The final orders are also available electronically at: *http://www.epa.gov/region07/programs/artd/air/title5/petitiondb/petitions.*

FOR FURTHER INFORMATION CONTACT: Gerardo Rios, Chief, Air Permits Office, EPA Region IX, telephone (415) 972–3974, e-mail *r9airpermits@epa.gov.*

SUPPLEMENTARY INFORMATION: EPA approves state and local permitting authorities to administer the operating permit program set forth in title V of the Clean Air Act, 42 U.S.C. 7661–7661f. BAAQMD administers a fully approved title V operating permit program. The Clean Air Act affords EPA the opportunity for a 45-day period to review, and object to as appropriate, operating permits proposed by permitting authorities. Section 505(b)(2) of the Act authorizes any person to petition the EPA Administrator within 60 days after the expiration of this review period to object to a state operating permit if EPA has not done so. Petitions must be based on objections to the permit that were raised with reasonable specificity during the public comment period provided by the state, unless the petitioner demonstrates that it was impracticable to raise these issues during the comment period or the grounds for the issues arose after this period.

I. Los Medanos Energy Center

On September 6, 2001, BAAQMD issued a final title V operating permit to Los Medanos. OCE and CARE (''Petitioners'') submitted a petition to the Administrator on October 12, 2001, seeking EPA's objection to BAAQMD's issuance of the Los Medanos permit. The Petitioners alleged in their petition that the Los Medanos permit (1) improperly included an emergency breakdown exemption condition that incorporates a broader definition of ''emergency'' than allowed by 40 CFR 70.6(g); (2) improperly included a variance relief condition which is not federally enforceable; (3) failed to include a statement of basis as required by 40 CFR 70.7(a)(5); (4) contained permit conditions that are inadequate under 40 CFR part 70, namely that certain provisions are unenforceable; and (5) failed to incorporate certain changes OCE requested during the

public comment period and agreed to BAAQMD.

On May 25, 2004, the Administrator issued an order partially granting and partially denying the petition. The order explains the reasons behind EPA's conclusion that BAAQMD must reopen the permit to make available for public and EPA comment an adequate statement of basis. The order also explains the reasons for denying the Petitioners' remaining claims.

Through this notice, EPA is also correcting a non-substantive factual finding in the final Los Medanos order. Footnote 6 of the order found that OCE had submitted its comments on the draft Los Medanos permit to BAAQMD after the close of the 30-day public comment period. After further review, EPA has determined that OCE actually submitted those comments on time, as OCE submitted its comments on August 1, 2001 and the public comment period ended August 2, 2001.

II. Dow Chemical

On December 1, 2003, BAAQMD issued a final title V operating permit to Dow. CBE (''Petitioner'') submitted a petition to the Administrator on January 12, 2004, seeking EPA's objection to BAAQMD's issuance of the Dow permit. The Petitioner alleged in the petition that EPA must object to the permit because BAAQMD improperly denied Petitioner's request for a public hearing.

The Administrator issued an order denying the petition on July 2, 2004. The order explains the reasons behind EPA's finding that the petitioner failed to demonstrate that the permit was not issued in compliance with the requirements of the Clean Air Act.

Dated: July 26, 2004.

Wayne Nastri,

Regional Administrator, Region 9.

BILLING CODE 6560–50–M

ENVIRONMENTAL PROTECTION AGENCY

[ER–FRL–6654–5]

Notice of Intent To Prepare an Environmental Impact Statement (EIS) for the Oxnard Plain Groundwater Recharge Project, Santa Clara River, Ventura County, CA

AGENCY: Environmental Protection Agency (EPA).

Purpose: To comply with the National Environmental Policy Act (NEPA) of 1969.

SUMMARY: The primary goal of the project is to increase the amount of water recharged into the Oxnard Plain aquifers to achieve a long-term balance between recharge and extractions. The benefits of additional recharge are a continued reduction in seawater intrusion, development of local water supplies to reduce the need for imported water, and increased flexibility and reliability in meeting future water demands through the conjunctive use of surface and groundwater supplies. United Water Conservation District (UWCD) manages groundwater and delivers water to cities and agricultural users in the Oxnard Plain region of Ventura County. One of UWCD's many responsibilities is recharge of the Oxnard Plain groundwater basins. To accomplish this recharge, the Freeman Diversion and related facilities were constructed in 1991 and are now used to divert 375 cfs from the Santa Clara River. The river water supply diverted by UWCD through these facilities is used for groundwater recharge and agricultural irrigation. Groundwater recharge is accomplished through the use of various UWCD-owned and operated facilities that include: the Freeman Diversion, lined and unlined canals, pipelines, desilting basins, and storage/recharge ponds and basins. The project will involve the purchase and use of abandoned aggregate mining pits and construction of water conveyance facilities for groundwater recharge using water diverted from the river in order to maximize recharge potential under current diversions. In addition, the project may include an increase in the maximum diversion rate, alternatives range from 375 to 1000 cfs, at the Freeman Diversion located along the Santa Clara River. An increase in diversion will require a modification of UWCD's water rights permits from the State of California. This Notice of Intent (NOI) to prepare a Draft EIS is being published because EPA has determined that the proposed action may result in a significant impact to the environment.

Alternatives: The alternatives include different configurations of new recharge basins using the mining pits, and varying peak diversion rates. All alternatives include the following facility improvements: (1) Modification of the fish screen at the Freeman Diversion to increase its effectiveness, improve flow capacity, and improve operations and maintenance of the screen; and (2) modification of the culvert at the outlet of the desilting basin to improve hydraulic capacity. EPA may approve or deny the proposed diversion, or approve with modifications to mitigate or reduce adverse impacts to acceptable levels. Other reasonable alternatives, including those outside EPA's authority, may also be evaluated in the EIS. Depending on the final alternative, the project could affect the federally endangered southern steelhead trout (South Coast Evolutionarily Significant Unit), which occurs along the Santa Clara River and passes through the Freeman Diversion through fish passage facilities. EPA will be consulting with National Marine Fisheries Service (NMFS) regarding impacts of the project pursuant to Section 7 of the Endangered Species Act. Similarly, EPA will consult with U.S. Fish and Wildlife Service regarding potential effects on a downstream listed species, the tidewater goby.

Scoping: The public scoping period begins with the publication of this Notice and concludes September 15, 2004. EPA invites Federal agencies, Native American tribes, State and local governments, and members of the public to comment on the scope of this EIS. EPA will consider fully all comments received by the close of the scoping period and will consider comments received after that date to the extent practicable.

Contact Information: EPA invites public comment on the proposed scope of this EIS. Comments may be submitted by mail, electronic mail, or fax, and addressed as follows: Jared Vollmer, Project Officer, Water 10, U.S. EPA Region 9, 75 Hawthorne St., San Francisco, CA, 94105. Electronic mail: *vollmer.jared@epa.gov*, Fax: (415) 947–3537, Telephone: (415) 972–3447. A project summary is available upon request.

Estimated Date of Release for Draft EIS: October 2004.

Responsible Official: Wayne Nastri, Regional Administrator.

Dated: August 5, 2004.

Anne Norton Miller,

Director, Office of Federal Activities.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[OPP–2004–0248; FRL–7372–5]

Tribal Pesticide Program Council; Notice of Public Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Tribal Pesticide Program Council (TPPC) will hold a 2–day meeting, beginning on September 8 and

ending on September 9, 2004, concerning the TPPC's information exchange in relationship with EPA regarding important issues related to human health, environmental exposure to pesticides, and insight into EPA's decision making process. This notice announces the location and times for the meeting, and sets forth the tentative agenda topics. One Tribal Caucus is scheduled each day.

DATES: The meeting will be held on Wednesday, September 8, 2004, from 9 a.m. to 5 p.m., and Thursday, September 9, 2004, from 9 a.m. to 5 p.m.

ADDRESSES: The meeting will be held at the Tradewinds on the Bay, 4305 Pomeroy Lane, Tokeland, WA. The telephone number is (360) 267–7500.

FOR FURTHER INFORMATION CONTACT: Georgia McDuffie, Field and External Affairs Division (7506C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; telephone number: (703) 605–0195; fax number: (703) 308–1850; e-mail address: *mcduffie.georgia@epa.gov* or Lillian Wilmore, TPPC Facilitator, P.O. Box 470829 Brookline Village, MA 02447–0829; telephone number: (617) 232–5742; fax (617)277–1656; e-mail address: *naecology@aol.com.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

You may be potentially affected by this action if you are interested in TPPC's information exchange relationship with EPA regarding important issues related to human health, environmental exposure to pesticides, and insight into EPA's decisionmaking process.

This listing is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in this unit could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether this action might apply to certain entities. If you have any questions regarding the applicability of this action to a particular entity, consult the persons listed under **FOR FURTHER INFORMATION CONTACT.**

B. How Can I Get Copies of this Document and Other Related Information?

1. *Docket.* EPA has established an official public docket for this action under docketidentification (ID) number OPP–2004–0248. The official public docket consists of thedocuments specifically referenced in this action, any public comments received, and otherinformation related to this action. Although a part of the official docket, the public docket doesnot include Confidential Business Information (CBI) or other information whose disclosure isrestricted by statute. The official public docket is the collection of materials that is available forpublic viewing at the Public Information and Records Integrity Branch (PIRIB), Rm. 119, CrystalMall #2, 1801 S. Bell St., Arlington, VA. This docket facility is open from 8:30 a.m.to 4 p.m., Monday through Friday, excluding legal holidays. The docket telephone number is(703) 305–5805.

2. *Electronic access.* You may access this **Federal Register** document electronicallythrough the EPA Internet under the ''**Federal Register**'' listings at *http://www.epa.gov/fedrgstr/.*

An electronic version of the public docket is available through EPA's electronic publicdocket and comment system, EPA Dockets. You may use EPA Dockets at*http://www.epa.gov/edocket/* to view public comments, access the index listing of the contents ofthe official public docket, and to access those documents in the public docket that are availableelectronically. Although not all docket materials may be available electronically, you may stillaccess any of the publicly available docket materials through the docket facility identified in UnitI.B.1. Once in the system, select ''search,'' then key in the appropriate docket ID number.

II. Tentative Agenda

1. TPPC State of the Council Report
2. Presentation and Questions and Answers by EPA's Office of Pesticide Programs and Field and External Affairs Division
3. Reports from Working Groups and TPPC Participation in Other Meetings:
   - Subsistence, Environmental Indicators, FOSTTA, Pesticide Program Dialogue Committee, Tribal Pesticide Program Training, Worker Projection
4. Tribal Caucus (two)
5. Reports from Other Organizations:
   - State FIFRA Issues Research & Evaluation Group
   - American Indian Environmental Office
   - Tribal Operations Committee
   - Regional Tribal Operations Committee
   - Intertribal Agriculture Council
   - National Tribal Environmental Council
   - Intertribal Agriculture Council
   - Tribal Air Group
6. Endangered Species Protection Program—Update
7. Report on Funding of Special Projects and Water Quality Projects to Tribes
8. Government Performance Results Act (GPRA) and Measurable Results
9. Office of Enforcement and Compliance Assurance (OECA) Enforcement Priorities
10. National Pesticide Field Data Base
11. TPPC Database: Building and Maintaining the Database
12. Updates from the Regional Offices: Sub-Lead, Region 9, and Region 10
13. OECA updates: EPA Federal Inspector Credentials Guidance; Reporting Issues
14. Certification and Training: Tribal Issues: Navajo Federal Certification Plan
15. Tribal and State Memorandum of Understanding: Aerial Applicators
16. Tribal Pesticide Codes—Panel Presentation
17. Building the TPPC Invasive Species Working Group

List of Subjects

Environmental protection.

Dated: August 4, 2004.

Jay S. Ellenberger,

ENVIRONMENTAL PROTECTION AGENCY

[OPP–2004–0129; FRL–7367–5]

Diazinon; Product Registrations Cancellation Order

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces EPA's cancellation order for the cancellations, as requested by registrants, of all outdoor non-agricultural end-use products containing diazinon [*O,O*-Diethyl *O*-(2-isopropyl-6-methyl-4-pyrimidinyl) phosphorothioate] and accepted by EPA, pursuant to section 6(f) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). This order follows up a December 10, 2003 Notice of Receipt of Requests from diazinon registrants for cancellations of all of their diazinon outdoor non-agricultural end-use product registrations. In the December 10, 2003 Notice, EPA indicated that it would issue an order granting the voluntary product registration cancellations, unless the Agency received substantive comments within

the 180 day comment period that would merit its further review of these requests. The Agency did not receive any comments on the Notice. Accordingly, EPA hereby issues in this notice a cancellation order granting the requested cancellations. Any distribution, sale, or use of the products subject to this cancellation order is only permitted in accordance with the terms of the existing stocks provisions of this cancellation order.

DATES: The cancellations are effective immediately.

FOR FURTHER INFORMATION CONTACT: Stephanie Plummer, Special Review and Reregistration Division (7508C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; telephone number: (703) 305–0076; e-mail address: *plummer.stephanie@epa.gov*.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

This action is directed to the public in general. Although this action may be of particular interest to persons who produce or use pesticides, the Agency has not attempted to describe all the specific entities that may be affected by this action. If you have any questions regarding the information in this notice, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. How Can I Get Copies of this Document and Other Related Information?

1. *Docket*. EPA has established an official public docket for this action under docket identification (ID) number OPP–2004–0129. The official public docket consists of the documents specifically referenced in this action, any public comments received, and other information related to this action. Although a part of the official docket, the public docket does not include Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. EPA also established two dockets containing documents in support of the diazinon IRED. They are dockets OPP–34225 and OPP–2002–0251. The official public docket is the collection of materials that is available for public viewing at the Public Information and Records Integrity Branch (PIRIB), Rm. 119, Crystal Mall #2, 1801 S. St., Arlington, VA. This docket facility is open from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The docket telephone number is (703) 305–5805.

2. *Electronic access*. You may access this **Federal Register** document electronically through the EPA Internet under the ''**Federal Register**'' listings at *http://www.epa.gov/fedrgstr/*.

An electronic version of the public docket is available through EPA's electronic public docket and comment system, EPA Dockets. You may use EPA Dockets at *http://www.epa.gov/edocket/* to submit or view public comments, access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Although not all docket materials may be available electronically, you may still access any of the publicly available docket materials through the docket facility identified in Unit I.B.1. Once in the system, select ''search,'' then key in the appropriate docket ID number.

II. What Action is the Agency Taking?

This notice announces cancellation, as requested by registrants, of all outdoor non-agricultural end-use diazinon products registered under section 3 of FIFRA. These registrations are listed in sequence by registration number in Table 1 of this unit.

TABLE 1.—DIAZINON REGISTRATION CANCELLATION REQUESTS

Registration No.	Product Name
16–118	Dragon Granular Lawn Insect Control
16–119	Dragon 5% Diazinon Granules

III. Cancellation Order

Pursuant to section 6(f) of FIFRA, EPA hereby approves the requested cancellations of diazinon product registrations identified in Table 1 in Unit II. Accordingly, the Agency orders that the diazinon products identified in Table 1 in Unit II are hereby canceled. Any distribution, sale, or use of existing stocks of the products identified in Table 1 in Unit II in a manner inconsistent with any of the Provisions for Disposition of Existing Stocks set forth below in Unit V will be considered a violation of FIFRA.

IV. What is the Agency's Authority for Taking this Action?

Section 6(f)(1) of FIFRA provides that a registrant of a pesticide product may at any time request that any of its pesticide registrations be canceled. FIFRA further provides that, before acting on the request, EPA must publish a notice of receipt of any such request in the **Federal Register**. Thereafter, the Administrator may approve such a request.

V. Provisions for Disposition of Existing Stocks

Existing stocks are those stocks of registered pesticide products which are currently in the United States and which have been packaged, labeled, and released for shipment prior to the effective date of the cancellation action. The cancellation order issued in this Notice includes the following existing stocks provisions:

1. Sale and distribution of these outdoor non-agricultural end-use products containing diazinon will not be permitted after December 31, 2004, except for purposes of product recovery pursuant to the December 5, 2000, Memorandum of Agreement between EPA and diazinon registrants, shipping such stocks for export consistent with the requirements of FIFRA section 17, or proper disposal in accordance with applicable law.

2. Use of existing stocks may continue until stocks are exhausted. Any such use must be in accordance with the label.

List of Subjects

Environmental protection, Pesticides and pests.

Dated: July 26, 2004.

Debra Edwards,

Director, Special Review and Reregistration Division, Office of Pesticide Programs.

BILLING CODE 6560–50–S

ENVIRONMENTAL PROTECTION AGENCY

[OPP–2004–0198; FRL–7365–9]

Pesticide Product; Registration Applications

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces receipt of applications to register pesticide products containing new active ingredients not included in any previously registered products pursuant to the provisions of section 3(c)(4) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended.

DATES: Written comments, identified by the docket identification (ID) number OPP–2004–0198, must be received on or before September 10, 2004.

ADDRESSES: Comments may be submitted electronically, by mail, or through hand delivery/courier. Follow the detailed instructions as provided in Unit I. of the **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: The Regulatory Action Leader listed in the table in this unit.

SUPPLEMENTARY INFORMATION:

I. General Information

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. Potentially affected entities may include, but are not limited to:

- Crop production (NAICS 111)
- Animal production (NAICS 112)
- Food manufacturing (NAICS 311)
- Pesticide manufacturing (NAICS 32532)

This listing is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in this unit could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether this action might apply to certain entities. If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. How Can I Get Copies of this Document and Other Related Information?

1. *Docket*. EPA has established an official public docket for this action under docket ID number OPP–2004–0198. The official public docket consists of the documents specifically referenced in this action, any public comments received, and other information related to this action. Although a part of the official docket, the public docket does not include Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. The official public docket is the collection of materials that is available for public viewing at the Public Information and Records Integrity Branch (PIRIB), Rm. 119, Crystal Mall #2, 1801 S. Bell St., Arlington, VA. This docket facility is open from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The docket telephone number is (703) 305–5805.

2. *Electronic access*. You may access this **Federal Register** document electronically through the EPA Internet under the ''**Federal Register**'' listings at *http://www.epa.gov/fedrgstr/*.

An electronic version of the public docket is available through EPA's electronic public docket and comment system, EPA Dockets. You may use EPA Dockets at *http://www.epa.gov/edocket/* to submit or view public comments, access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Once in the system, select ''search,'' then key in the appropriate docket ID number.

Certain types of information will not be placed in EPA's Dockets. Information claimed as CBI and other information whose disclosure is restricted by statute, which is not included in the official public docket, will not be available for public viewing in EPA's electronic public docket. EPA's policy is that copyrighted material will not be placed in EPA's electronic public docket but will be available only in printed, paper form in the official public docket. To the extent feasible, publicly available docket materials will be made available in EPA's electronic public docket. When a document is selected from the index list in EPA Dockets, the system will identify whether the document is available for viewing in EPA's electronic public docket. Although not all docket materials may be available electronically, you may still access any of the publicly available docket materials through the docket facility identified in Unit I.B.1. EPA intends to work towards providing electronic access to all of the publicly available docket materials through EPA's electronic public docket.

For public commenters, it is important to note that EPA's policy is that public comments, whether submitted electronically or in paper, will be made available for public viewing in EPA's electronic public docket as EPA receives them and without change, unless the comment contains copyrighted material, CBI, or other information whose disclosure is restricted by statute. When EPA identifies a comment containing copyrighted material, EPA will provide a reference to that material in the version of the comment that is placed in EPA's electronic public docket. The entire printed comment, including the copyrighted material, will be available in the public docket.

Public comments submitted on computer disks that are mailed or delivered to the docket will be transferred to EPA's electronic public docket. Public comments that are mailed or delivered to the Docket will be scanned and placed in EPA's electronic public docket. Where practical, physical objects will be photographed, and the photograph will be placed in EPA's electronic public docket along with a brief description written by the docket staff.

C. How and to Whom Do I Submit Comments?

You may submit comments electronically, by mail, or through hand delivery/courier. To ensure proper receipt by EPA, identify the appropriate docket ID number in the subject line on the first page of your comment. Please ensure that your comments are submitted within the specified comment period. Comments received after the close of the comment period will be marked ''late.'' EPA is not required to consider these late comments. If you wish to submit CBI or information that is otherwise protected by statute, please follow the instructions in Unit I.D. Do not use EPA Dockets or e-mail to submit CBI or information protected by statute.

1. *Electronically*. If you submit an electronic comment as prescribed in this unit, EPA recommends that you include your name, mailing address, and an e-mail address or other contact information in the body of your comment. Also include this contact information on the outside of any disk or CD ROM you submit, and in any cover letter accompanying the disk or CD ROM. This ensures that you can be identified as the submitter of the comment and allows EPA to contact you in case EPA cannot read your comment due to technical difficulties or needs further information on the substance of your comment. EPA's policy is that EPA will not edit your comment, and any identifying or contact information provided in the body of a comment will be included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment.

i. *EPA Dockets*. Your use of EPA's electronic public docket to submit comments to EPA electronically is EPA's preferred method for receiving comments. Go directly to EPA Dockets at *http://www.epa.gov/edocket/*, and follow the online instructions for submitting comments. Once in the system, select ''search,'' and then key in docket ID number OPP–2004–0198. The system is an ''anonymous access'' system, which means EPA will not know your identity, e-mail address, or other contact information unless you provide it in the body of your comment.

ii. *E-mail*. Comments may be sent by e-mail to *opp-docket@epa.gov*, Attention: Docket ID Number OPP–2004–0198. In contrast to EPA's electronic public docket, EPA's e-mail system is not an ''anonymous access'' system. If you send an e-mail comment directly to the docket without going through EPA's electronic public docket, EPA's e-mail system automatically captures your e-mail address. E-mail addresses that are automatically captured by EPA's e-mail system are included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket.

iii. *Disk or CD ROM*. You may submit comments on a disk or CD ROM that you mail to the mailing address identified in Unit I.C.2. These electronic submissions will be accepted in WordPerfect or ASCII file format. Avoid the use of special characters and any form of encryption.

2. *By mail*. Send your comments to: Public Information and Records Integrity Branch (PIRIB), Office of Pesticide Programs (OPP), Environmental Protection Agency (7502C), 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001, Attention: Docket ID Number OPP–2004–0198.

3. *By hand delivery or courier*. Deliver your comments to: Public Information and Records Integrity Branch (PIRIB), Office of Pesticide Programs (OPP), Environmental Protection Agency, Rm. 119, Crystal Mall #2, 1801 S. Bell St., Arlington, VA, Attention: Docket ID Number OPP–2004–0198. Such deliveries are only accepted during the docket's normal hours of operation as identified in Unit I.B.1.

D. How Should I Submit CBI to the Agency?

Do not submit information that you consider to be CBI electronically through EPA's electronic public docket or by e-mail. You may claim information that you submit to EPA as CBI by marking any part or all of that information as CBI (if you submit CBI on disk or CD ROM, mark the outside of the disk or CD ROM as CBI and then identify electronically within the disk or CD ROM the specific information that is CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

In addition to one complete version of the comment that includes any information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket and EPA's electronic public docket. If you submit the copy that does not contain CBI on disk or CD ROM, mark the outside of the disk or CD ROM clearly that it does not contain CBI. Information not marked as CBI will be included in the public docket and EPA's electronic public docket without prior notice. If you have any questions about CBI or the procedures for claiming CBI, please consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

E. What Should I Consider as I Prepare My Comments for EPA?

You may find the following suggestions helpful for preparing your comments:

1. Explain your views as clearly as possible.

2. Describe any assumptions that you used.

3. Provide copies of any technical information and/or data you used that support your views.

4. If you estimate potential burden or costs, explain how you arrived at the estimate that you provide.

5. Provide specific examples to illustrate your concerns.

6. Offer alternative ways to improve the registration activity.

7. Make sure to submit your comments by the deadline in this notice.

8. To ensure proper receipt by EPA, be sure to identify the docket ID number assigned to this action in the subject line on the first page of your response. You may also provide the name, date, and **Federal Register** citation.

II. Registration Applications

EPA received applications as follows to register pesticide products containing active ingredients not included in any previously registered products pursuant to the provision of section 3(c)(4) of FIFRA. Notice of receipt of these applications does not imply a decision by the Agency on the applications.

1. *File Symbol*: 69834–L. *Applicant*:EDEN Bioscience Corporation, 3830 Monte Villa Parkway, Ste. 100, Bothell, WA 98021–7266. *Product name*: EBC–351. *Product type*: Biochemical pesticide. *Active ingredients*: Harpin αβ protein at 1%. *Proposed classification/Use*: Aids in the management of plant diseases, improves overall plant health and enhances crop yield and quality.

2. *File symbol*: 75108–E. *Applicant*: HBB Partnership, 5151 N. Palm Ave., Ste. 820, Fresno, CA 93704–2221. *Product name*: California Red Scale Technical Pheromone.*Product type*: Manufacturing product for the formulation of a mating disruption pheromone end-use product. *Active ingredients*: (3S, 6R)-3-methyl-6-isopropenyl-9-decen-1-yl-acetate and (3S, 6S)-3-methyl-6-isopropenyl-9-decen-1-yl-acetate at 36% and 22%, respectively. *Proposed classification/Use*: None.

3. *File Symbol*: 75108–R. *Applicant*: HBB Partnership, 5151 N. Palm Ave.,

Ste. 820, Fresno, CA 93704–2221. *Product name*: Red Scale Down. *Product type*: Mating disruption pheromone end-use product. *Active ingredients*: (3S, 6R)-3-methyl-6-isopropenyl-9-decen-1-yl-acetate and (3S, 6S)-3-methyl-6-isopropenyl-9-decen-1-yl-acetate at 0.041% and 0.025%, respectively. *Proposed classification/Use*: None.

4. *File symbol*: 75618–R. *Applicant*: Nematrol Inc., 15 Prince Andrew Court, St. Catharines, Ontario L2N 3Y2, Canada. *Product name*: CA–1 for Turf and Ornamentals. *Product type*: Nematicide. *Active ingredient*: Oriental Mustard Seed (*Brassica juncea*) at 98%. *Proposed classification/Use*: None.

List of Subjects

Environmental protection, Pesticides and pest.

Dated: July 16, 2004.

Janet L. Andersen,

Director, Biopesticides and Pollution Prevention Division, Office of Pesticide Programs.

Bacillus thuringiensis var. aizawai strain PS811 Cry1F insecticidal protein; Notice of Filing a Pesticide Petition to Establish an Exemption from the Requirement of a Tolerance for a Certain Pesticide Chemical in or on Food

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces the initial filing of a pesticide petition proposing the establishment of regulations for residues of a certain pesticide chemical in or on various food commodities.

DATES: Comments, identified by docket identification (ID) number OPP–2004–0251, must be received on or before September 10, 2004.

ADDRESSES: Comments may be submitted electronically, by mail, or through hand delivery/courier. Follow the detailed instructions as provided in Unit I. of the **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Leonard Cole, Biopesticides and Pollution Prevention Division (7511C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; telephone number: (703) 305–5412; e-mail address: *cole.leonard@epa.gov*.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

You may be potentially affected by this action if you are interested in agricultural biotechnology or may be required to conduct testing of chemical substances under the Federal Food, Drug, and Cosmetic Act (FFDCA), or the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Potentially affected entities may include, but are not limited to:

- Crop production (NAICS 111)
- Animal production (NAICS 112)
- Food manufacturing (NAICS 311)
- Pesticide manufacturing (NAICS 32532)

This listing is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in this unit could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether this action might apply to certain entities. If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. How Can I Get Copies of this Document and Other Related Information?

1. *Docket*. EPA has established an official public docket for this action under docket ID number OPP–2004–0251. The official public docket consists of the documents specifically referenced in this action, any public comments received, and other information related to this action. Although a part of the official docket, the public docket does not include Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. The official public docket is the collection of materials that is available for public viewing at the Public Information and Records Integrity Branch (PIRIB), Rm. 119, Crystal Mall #2, 1801 S. Bell St., Arlington, VA. This docket facility is open from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The docket telephone number is (703) 305–5805.

2. *Electronic access*. You may access this **Federal Register** document electronically through the EPA Internet under the ''**Federal Register**'' listings at *http://www.epa.gov/fedrgstr/*.

An electronic version of the public docket is available through EPA's electronic public docket and comment system, EPA Dockets. You may use EPA Dockets at *http://www.epa.gov/edocket/* to submit or view public comments, access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Although not all docket materials may be available electronically, you may still access any of the publicly available docket materials through the docket facility identified in Unit I.B.1. Once in the system, select ''search,'' then key in the appropriate docket ID number.

Certain types of information will not be placed in the EPA Dockets. Information claimed as CBI and other information whose disclosure is restricted by statute, which is not included in the official public docket, will not be available for public viewing in EPA's electronic public docket. EPA's policy is that copyrighted material will not be placed in EPA's electronic public docket but will be available only in printed, paper form in the official public docket. To the extent feasible, publicly available docket materials will be made available in EPA's electronic public docket. When a document is selected from the index list in EPA Dockets, the system will identify whether the document is available for viewing in EPA's electronic public docket. Although not all docket materials may be available electronically, you may still access any of the publicly available docket materials through the docket facility identified in Unit I.B.1. EPA intends to work towards providing electronic access to all of the publicly available docket materials through EPA's electronic public docket.

For public commenters, it is important to note that EPA's policy is that public comments, whether submitted electronically or in paper, will be made available for public viewing in EPA's electronic public docket as EPA receives them and without change, unless the comment contains copyrighted material, CBI, or other information whose disclosure is restricted by statute. When EPA identifies a comment containing copyrighted material, EPA will provide a reference to that material in the version of the comment that is placed in EPA's electronic public docket. The entire printed comment, including the copyrighted material, will be available in the public docket.

Public comments submitted on computer disks that are mailed or

delivered to the docket will be transferred to EPA's electronic public docket. Public comments that are mailed or delivered to the docket will be scanned and placed in EPA's electronic public docket. Where practical, physical objects will be photographed, and the photograph will be placed in EPA's electronic public docket along with a brief description written by the docket staff.

C. How and To Whom Do I Submit Comments?

You may submit comments electronically, by mail, or through hand delivery/courier. To ensure proper receipt by EPA, identify the appropriate docket ID number in the subject line on the first page of your comment. Please ensure that your comments are submitted within the specified comment period. Comments received after the close of the comment period will be marked ''late.'' EPA is not required to consider these late comments. If you wish to submit CBI or information that is otherwise protected by statute, please follow the instructions in Unit I.D. Do not use EPA Dockets or e-mail to submit CBI or information protected by statute.

1. *Electronically*. If you submit an electronic comment as prescribed in this unit, EPA recommends that you include your name, mailing address, and an e-mail address or other contact information in the body of your comment. Also include this contact information on the outside of any disk or CD ROM you submit, and in any cover letter accompanying the disk or CD ROM. This ensures that you can be identified as the submitter of the comment and allows EPA to contact you in case EPA cannot read your comment due to technical difficulties or needs further information on the substance of your comment. EPA's policy is that EPA will not edit your comment, and any identifying or contact information provided in the body of a comment will be included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment.

i. *EPA Dockets*. Your use of EPA's electronic public docket to submit comments to EPA electronically is EPA's preferred method for receiving comments. Go directly to EPA Dockets at *http://www.epa.gov/edocket/*, and follow the online instructions for submitting comments. Once in the system, select ''search,'' and then key in docket ID number OPP–2004–0251. The system is an ''anonymous access'' system, which means EPA will not know your identity, e-mail address, or other contact information unless you provide it in the body of your comment.

ii. *E-mail*. Comments may be sent by e-mail to *opp-docket@epa.gov*, Attention: Docket ID number OPP–2004–0251. In contrast to EPA's electronic public docket, EPA's e-mail system is not an ''anonymous access'' system. If you send an e-mail comment directly to the docket without going through EPA's electronic public docket, EPA's e-mail system automatically captures your e-mail address. E-mail addresses that are automatically captured by EPA's e-mail system are included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket.

iii. *Disk or CD ROM*. You may submit comments on a disk or CD ROM that you mail to the mailing address identified in Unit I.C.2. These electronic submissions will be accepted in WordPerfect or ASCII file format. Avoid the use of special characters and any form of encryption.

2. *By mail*. Send your comments to: Public Information and Records Integrity Branch (PIRIB) (7502C), Office of Pesticide Programs (OPP), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001, Attention: Docket ID number OPP–2004–0251.

3. *By hand delivery or courier*. Deliver your comments to: Public Information and Records Integrity Branch (PIRIB), Office of Pesticide Programs (OPP), Environmental Protection Agency, Rm. 119, Crystal Mall #2, 1801 S. Bell St., Arlington, VA, Attention: Docket ID number OPP–2004–0251. Such deliveries are only accepted during the docket's normal hours of operation as identified in Unit I.B.1.

D. How Should I Submit CBI to the Agency?

Do not submit information that you consider to be CBI electronically through EPA's electronic public docket or by e-mail. You may claim information that you submit to EPA as CBI by marking any part or all of that information as CBI (if you submit CBI on disk or CD ROM, mark the outside of the disk or CD ROM as CBI and then identify electronically within the disk or CD ROM the specific information that is CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

In addition to one complete version of the comment that includes any information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket and EPA's electronic public docket. If you submit the copy that does not contain CBI on disk or CD ROM, mark the outside of the disk or CD ROM clearly that it does not contain CBI. Information not marked as CBI will be included in the public docket and EPA's electronic public docket without prior notice. If you have any questions about CBI or the procedures for claiming CBI, please consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

E. What Should I Consider as I Prepare My Comments for EPA?

You may find the following suggestions helpful for preparing your comments:

1. Explain your views as clearly as possible.

2. Describe any assumptions that you used.

3. Provide copies of any technical information and/or data you used that support your views.

4. If you estimate potential burden or costs, explain how you arrived at the estimate that you provide.

5. Provide specific examples to illustrate your concerns.

6. Make sure to submit your comments by the deadline in this notice.

7. To ensure proper receipt by EPA, be sure to identify the docket ID number assigned to this action in the subject line on the first page of your response. You may also provide the name, date, and **Federal Register** citation.

II. What Action is the Agency Taking?

EPA has received a pesticide petition as follows proposing the establishment and/or amendment of regulations for residues of a certain pesticide chemical in or on various food commodities under section 408 of the FFDCA, 21 U.S.C. 346a. EPA has determined that this petition contains data or information regarding the elements set forth in FFDCA section 408(d)(2); however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data support granting of the petition. Additional data may be needed before EPA rules on the petition.

List of Subjects

Environmental protection, Agricultural commodities, Feed additives, Food additives, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: July 30, 2004.

Janet L. Andersen,

Director, Biopesticides and Pollution Prevention Division, Office of Pesticide Programs.

Summary of Petition

The petitioner summary of the pesticide petition is printed below as required by FFDCA section 408(d)(3). The summary of the petition was prepared by the petitioner and represents the view of the petitioner. The petition summary announces the availability of a description of the analytical methods available to EPA for the detection and measurement of the pesticide chemical residues or an explanation of why no such method is needed.

Mycogen Seeds c/o Dow AgroScience LLC

PP 3F6785

EPA has received a pesticide petition 3F6785 from Mycogen Seeds c/o Dow AgroSciences LLC, 9330 Zionsville Road, Indianapolis, IN 46268–1054, proposing pursuant to section 408(d) of the FFDCA, 21 U.S.C. 346a(d), to amend 40 CFR part 174 to establish an exemption from the requirement of a temporary tolerance for the plant-incorporated protectant *Bacillus thuringiensis* subspecies aizawai Cry1F (synpro) insect control protein and the genetic material responsible for the production of this protein in or on cotton.

Pursuant to section 408(d)(2)(A)(i) of the FFDCA, as amended, Mycogen Seeds c/o Dow AgroSciences LLC has submitted the following summary of information, data, and arguments in support of their pesticide petition. This summary was prepared by Mycogen Seeds c/o Dow AgroSciences LLC and EPA has not fully evaluated the merits of the pesticide petition. The summary may have been edited by EPA if the terminology used was unclear, the summary contained extraneous material, or the summary unintentionally made the reader conclude that the findings reflected EPA's position and not the position of the petitioner.

A. Product Name and Proposed Use Practices

This notice of filing summarizes information submitted and cited by Mycogen Seeds c/o Dow AgroSciences LLC in support of a request for a temporary exemption from tolerance residues of the plant incorporated-protectant *Bacillus thuringiensis* subspecies aizawai Cry1F (synpro) insect control protein and the genetic material responsible for the production of this protein in cotton.

B. Product Identity/Chemistry

1. *Identity of the pesticide and corresponding residues. Bacillus thuringiensis* subspecies aizawai Cry1F (synpro) insect control protein is expressed in cotton plants to provide protection from key lepidopteran insect pests such as the tobacco budworm and pink bollworm. Cry1F (synpro) transgenic plants are derived from transformation events that contain the insecticidal gene via a plasmid insert. The Cry1F (synpro) protein poses no foreseeable risks to non- target organisms including mammals, birds, fish, beneficial insects, and earthworms. Cry1F (synpro)-protected cotton provides growers with a highly efficacious tool for controlling important insect pests in cotton in a manner that is fully compatible with integrated pest management practices.

2. *Analytical method.* Data submitted demonstrate the high quantitative performance of the enzyme linked immunosorbent assay for the detection of the Cry1F truncated protein. The assay had a reproducible sensitivity of 0.4 nanogram/milliliter (ng/mL) with an assay range of 0.4 to 6 ng/mL Cry1F (truncated) protein. The absorbance variability of this assay is less than 10% and the resulting percent error and accuracy are within ± 10%. The assay demonstrated no cross-reactivity to Cry1Ab, Cry1Ac, Cry2Ab, Cry9C, Cry34Ab1 (or PS149B1 14kD), Cry35Ab1 (or PS149B1 44kD), PAT and BAR, agriculturally relevant *Bacillus thuringiensis* proteins. The Cry1F assay kit was projected to be stable for approximately 1 year at 4 °C based on extrapolations from the accelerated stability testing.

C. Mammalian Toxicological Profile

Cry proteins have been deployed as safe and effective pest control agents in microbial formulations for almost 40 years. There are currently 180 registered microbial *Bacillus thuringiensis* products in the United States for use in agriculture, forestry, and vector control. The numerous toxicology studies conducted with these microbial products show no significant adverse effects, and demonstrate that the products are practically non-toxic to mammals. An exemption from the requirement of a tolerance has been in place for these products since at least 1971 (40 CFR 174).

Toxicology studies conducted to determine the toxicity of Cry1F (synpro) insect control protein demonstrated that the protein has very low toxicity. In an acute oral toxicity study in the mouse (male and female), the estimated acute lethal dose $(LD)_{50}$ was determined to be >2,000 milligrams/kilogram of the microbially produced test substance. In an *in vitro* study, Cry1F protein was rapidly and extensively degraded in simulated gastric conditions in the presence of pepsin at pH 1.2. Cry1F (synpro) was completely proteolyzed to amino acids and small peptide fragments in <1 minute. This indicates that the protein is highly susceptible to digestion in the human digestive tract and that the potential for adverse health effects from chronic exposure is virtually nonexistent. Moreover, proteins in general are not known to be carcinogenic. A search of relevant data bases indicated that the amino acid sequence of the Cry1F (synpro) protein exhibits no significant homology to the sequences of known allergens or protein toxins. Thus, Cry1F (synpro) is highly unlikely to exhibit an allergic response.

The results of a study to determine the lability of the Cry1F (synpro) protein to heat demonstrated that the protein was deactivated after exposure to 75 °C or 90 °C for 30 minutes, according to bioassay results on tobacco budworm.

The genetic material necessary for the production of the Cry1F (synpro) insect control protein are nucleic acids (DNA) which are common to all forms of plant and animal life. There are no known instances of where nucleic acids have caused toxic effects as a result of dietary exposure.

Collectively, the available data on Cry1F (synpro) protein along with the safe use history of microbial *Bacillus thuringiensis* products establishes the safety of the plant pesticide *Bacillus thuringiensis* subspecies aizawai Cry1F (synpro) insect control protein and the genetic material necessary for its production in all raw agricultural commodities.

D. Aggregate Exposure

Insecticidal crystal proteins of *Bacillus thuringiensis* are known to have a high degree of insect specificity via binding to specific receptors in the insect gut, and do not harm people, wildlife or many beneficial insects (Ballester et al., 1999; Aronson and Shai, 2001). The level of protein that is expressed in corn plants is very low. The small amount of Cry1F (synpro) in plant tissue is deep in the plant matrix, which greatly reduces availability for dermal or respiratory exposure. Significant dietary exposure to Cry1F (synpro) protein is unlikely to occur. Dietary exposures at very low levels, via ingestion of processed commodities, although they may occur, are unlikely to

be problematic because of the low toxicity and the high degree of digestibility of the protein. In addition, the protein is not likely to be present in drinking water because the protein is deployed in minute quantities within the plant, and studies demonstrate that Cry1F (synpro) protein is rapidly degraded in soil. In summary, the potential for significant aggregate exposure to Cry1F (synpro) protein is highly unlikely.

E. Cumulative Exposure

Common modes of toxicity are not relevant to consideration of the cumulative exposure to *Bacillus thuringiensis* Cry1F (synpro) insect control protein. The product has demonstrated low mammalian toxicity and *Bacillus thuringiensis* insecticidal crystal proteins are known to bind to specific receptors in the insect gut, such that biological effects do not appear to be cumulative with any other known compounds.

F. Safety Determination

1. *U.S. population.* The deployment of the product in minute quantities within the plant, the very low toxicity of the product, the lack of allergenic potential, and the high degree of digestibility of the protein, are all factors in support of Mycogen's assertion that no significant risk is posed by exposure of the U.S. population to *Bacillus thuringiensis* subspecies aizawai Cry1F (synpro) insect control protein.

2. *Infants and children.* Non-dietary exposure to infants and children is not anticipated, due to the proposed use pattern of the product. Due to the very low toxicity of the product, the lack of allergenic potential, and the high degree of digestibility of the protein, dietary exposure is anticipated to be at very low levels and is not anticipated to pose any harm to infants and children.

G. Effects on the Immune and Endocrine Systems

Given the rapid digestibility of Cry1F (synpro) insecticidal crystal protein, no chronic effects are expected. Cry1F (synpro) insecticidal crystal protein, or metabolites of the insecticidal crystal protein are not known to, or are expected to have any effect on the immune or endocrine systems. Proteins in general are not carcinogenic, therefore, no carcinogenic risk is associated with the Cry1F (synpro) protein.

BILLING CODE 6560–50–S

ENVIRONMENTAL PROTECTION AGENCY

[FRL–7800–1]

Notice of Tentative Approval and Solicitation of Request for a Public Hearing for Public Water System Supervision Program Revision for the State of West Virginia

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of tentative approval and solicitation of requests for a public hearing.

SUMMARY: Notice is hereby given in accordance with the provision of section 1413 of the Safe Drinking Water Act as amended, and the National Primary Drinking Water Regulations Implementation that the State of West Virginia is revising its approved Public Water System Supervision Program. West Virginia has adopted the Long Term 1 Enhanced Surface Water Treatment Rule to improve control of microbial pathogens in drinking water, including specifically the protozoan Cryptosporidium.

EPA has determined that these revisions are no less stringent than the corresponding Federal regulations. Therefore, EPA has decided to tentatively approve these program revisions. All interested parties are invited to submit written comments on this determination and may request a public hearing.

DATES: Comments or a request for a public hearing must be submitted by September 10, 2004. This determination shall become effective on September 10, 2004 if no timely and appropriate request for a hearing is received and the Regional Administrator does not elect on his own to hold a hearing, and if no comments are received which cause EPA to modify its tentative approval.

ADDRESSES: Comments or a request for a public hearing must be submitted to the U.S. Environmental Protection Agency Region III, 1650 Arch Street, Philadelphia, PA 19103–2029. Comments may also be submitted electronically to *gambatese.jason@epa.gov*. All documents relating to this determination are available for inspection between the hours of 8 a.m. and 4:30 p.m., Monday through Friday, at the following offices:

- Drinking Water Branch, Water Protection Division, U.S. Environmental Protection Agency Region III, 1650 Arch Street, Philadelphia, PA 19103–2029.
- West Virginia Department of Health and Human Resources, Environmental Engineering Division, 815 Quarrier Street, Suite 418, Charleston, WV 25301.

FOR FURTHER INFORMATION CONTACT: Jason Gambatese, Drinking Water Branch at the Philadelphia address given above; telephone (215) 814–5759 or fax (215) 814–2318.

SUPPLEMENTARY INFORMATION: All interested parties are invited to submit written comments on this determination and may request a public hearing. All comments will be considered, and, if necessary, EPA will issue a response. Frivolous or insubstantial requests for a hearing may be denied by the Regional Administrator. However, if a substantial request for a public hearing is made by September 10, 2004, a public hearing will be held. A request for public hearing shall include the following: (1) the name, address, and telephone number of the individual, organization, or other entity requesting a hearing; (2) a brief statement of the requesting person's interest in the Regional Administrator's determination and of information that the requesting person intends to submit at such a hearing; and (3) the signature of the individual making the request; or, if the request is made on behalf of an organization or other entity, the signature of a responsible official of the organization or other entity.

Dated: August 3, 2004.

Donald S. Welsh,

Regional Administrator, Region III.

BILLING CODE 6560–50–P

FEDERAL MARITIME COMMISSION

Notice of Agreements Filed

The Commission hereby gives notice of the filing of the following agreements under the Shipping Act of 1984. Interested parties may obtain copies of agreements by contacting the Commission's Office of Agreements at 202–523–5793 or via e-mail at *tradeanalysis@fmc.gov*. Interested parties may submit comments on an agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days of the date this notice appears in the **Federal Register**.

Agreement No.: 011692–004.

Title: Indamex Agreement.

Parties: CMA CGM, S.A.; Contship Containerlines; Lykes Lines Limited, LLC; MacAndrews & Company Limited; and The Shipping Corporation of India, Ltd.

Filing Party: Wayne R. Rohde, Esq.; Sher & Blackwell; 1850 M Street, NW., Suite 900; Washington, DC 20036.

Synopsis: The amendment adds Lykes and MacAndrews as parties to the agreement.

Agreement No.: 011701–007.

Title: Pacific East Coast Express Agreement.

Parties: China Shipping Container Lines Co., Ltd.; CMA CGM, S.A.; P&O Nedlloyd B.V.; and P&O Nedlloyd Limited;

Filing Party: Paul M. Keane, Esq., Cichanowicz, Callan, Keane, Vengrow & Textor, LLP; 61 Broadway, Suite 3000; New York, NY 10006–2802.

Synopsis: The modification reflects that one of the vessels contributed by CMA under the agreement will now be provided by CMA's wholly-owned subsidiary ANL Singapore Pte Ltd. The parties request expedited review.

Agreement No.: 011733–012.

Title: Common Ocean Carrier Platform Agreement

Parties: A.P. Moller-Maersk A/S, P&O Nedlloyd Limited, Hamburg-Süd, Mediterranean Shipping Company S.A., CMA CGM S.A., Hapag Lloyd Container Linie GmbH, and United Arab Shipping Company (SAG), as shareholder parties, and Alianca Navegacao e Logistica Ltda., Safmarine Container Lines N.V., Nippon Yusen Kaisha, CP Ship Limited, Tasman Orient Line C.V., Mitsui O.S.K. lines Ltd., Lykes Lines Limited LLC, Kawasaki Kisen Kaisha Ltd., and FESCO Ocean Management Ltd. as non-shareholder parties.

Filing Party: Wayne R. Rohde, Esq.; Sher & Blackwell; 1850 M Street, NW., Suite 900; Washington, DC 20036.

Synopsis: The amendment adds FESCO Ocean Management Ltd. as a non-shareholder party to the agreement.

Dated: August 6, 2004.

By Order of the Federal Maritime Commission.

Bryant L. VanBrakle,

Secretary.

BILLING CODE 6730–01–P

FEDERAL MARITIME COMMISSION

[Docket No. 04–08]

Qin's, Incorporated v. Superior Link International, Inc.; Notice of Filing of Complaint and Assignment

Notice is given that a complaint has been filed by Qin's, Incorporated (''Complainant'') against Superior Link International, Inc. (''Respondent''). Complainant contends that Respondent has unreasonably refused to deal or negotiate the proper release of Complainant's two containers in violation of section 10(b)(10)[1] of the Shipping Act of 1984, 46 U.S.C. app. section 1709(b)(10). As a direct result of these allegations, Complainant claims that it has suffered substantial economic damages and injury valued at $23,626.40. Complainant seeks an order directing Respondent to pay reparations, court costs, attorneys fees, and any further relief as the Commission may determine to be warranted.

This proceeding has been assigned to the Office of Administrative Law Judges. A hearing in this matter, if any is held, shall commence within the time limitations prescribed in 46 CFR 502.61, and only after consideration has been given by the parties and the presiding officer to the use of alternative forms of dispute resolution. The hearing shall include oral testimony and cross-examination in the discretion of the presiding officer only upon showing that there are genuine issues of material fact that cannot be resolved on the basis of sworn statements, affidavits, depositions, or other documents or that the nature of the matter in issue is such that an oral hearing and cross-examination are necessary for the development of an adequate record. Pursuant to the further terms of 46 CFR 502.61, the initial decision of the presiding officer in this proceeding shall be issued by August 4, 2005 and a final decision of the Commission shall be issued by December 2, 2005.

Bryant L. VanBrakle,

Secretary.

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call the CDC Reports Clearance Officer on (404) 498–1210 or send an e-mail to *omb@cdc.gov*.

CDC is requesting an emergency clearance for this data collection with a two week public comment period. CDC is requesting OMB approval of this

[1] Complainant cites section 10(b)(7) of the Shipping Act of 1984, 46 U.S.C. app. section 1709(b)(7), however, Complainant's narrative statement refers to a 10(b)(10) violation.

package 7 days after the end of the public comment period. While there is currently no SARS outbreak, expedited clearance is needed because the season when SARS outbreaks are most likely to occur is quickly approaching.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Send comments to Seleda M. Perryman, CDC Assistant Reports Clearance Officer, 1600 Clifton Road, MS–E11, Atlanta, GA 30333. Written comments should be received within 14 days of this notice.

Proposed Project

SARS Laboratory Safety Survey—New—National Center for Infectious Diseases (NCID), Centers for Disease Control and Prevention (CDC).

During the past year, incidents of lab-acquired SARS–CoV infection have occurred at research institutions in China, Singapore, and Taiwan. As part of measures taken by CDC to prevent lab-acquired SARS infections in the United States, the Respiratory and Enteric Virus Branch (REVB) would like to collect information on current biosafety practices and use of live SARS–CoV from U.S. institutions that have obtained the virus, either from CDC or from other sources.

Response data will be used to determine to what extent research involving live SARS–CoV and other biosafety level 3 pathogens is being conducted, the safety of the research environment, information about biosafety training, and the level of lab worker experience with BSL–3 pathogens. Expedited collection of this information is necessary to ascertain the safety of environments where live SARS–CoV research may be taking place and to potentially address any deficiencies that may exist. There is no cost to the respondents.

Form	Respondent	No. of respondents	No. of responses/respondent	Avg. burden/response (in hrs.)	Total burden hours
Safety Survey for Laboratories Conducting Research with live SARS–CoV and Other BSL–3 Pathogens.	Laboratorians	120	1	10/60	20
Total	.....	.....	.....	.....	20

Dated: August 4, 2004.

Proposed Project

Evaluating CDC Funded Health Department HIV Prevention Programs, Partner Counseling and Referral Services, OMB No. 0920–0497—Extension—National Center for HIV, STD, and TB Prevention (NCHSTP), Centers for Disease Control and Prevention (CDC).

Background

CDC is requesting approval for the continued use of two currently approved forms under OMB No. 0920–0497, for collecting HIV partner counseling and referral services (PCRS) program data. The current forms expire October 31, 2004. This request is for a 12-month clearance past this date. The extension of the current forms will allow grantees to continue to collect PCRS data as they transition to the new Program Evaluation and Monitoring System (PEMS) over the next year.

CDC funds HIV prevention projects in 65 public health agencies (50 states, 6 cities, 7 territories, Washington, DC, and Puerto Rico) through cooperative agreements. PCRS is one of a number of public health strategies supported by CDC that is designed to control and prevent the spread of HIV.

A fundamental feature of PCRS is informing current and past partners of an HIV-infected person that they have been identified as a sex or injection-drug-paraphernalia-sharing partner, and advising them to be tested for HIV. Informing partners of their exposure to HIV is confidential, and partners are not told who reported their name, or when the reported exposure occurred. Notified partners, who may not have suspected their risk, can choose whether to have HIV counseling and testing. Those who choose to be tested and are found to be HIV positive can receive a medical evaluation, treatment, and prevention services designed to modify their high risk behavior, thereby possibly reducing the number of new HIV infections.

HIV prevention programs that conduct PCRS interventions can reach significant numbers of persons at very high risk of contracting HIV. The CDC requires aggregate PCRS program data to determine if interventions are being

delivered as intended, gauge the degree to which program performance indicator targets are being achieved, and help agencies improve their programs to better deliver effective PCRS. Until grantees transition to PEMS, it is essential that they be allowed to continue to collect aggregate PCRS data using the existing forms.

Each health department funded to conduct PCRS will prepare and submit aggregate PCRS data to the CDC annually. Completion of two data collection forms is necessary for evaluation of aggregate PCRS data, and it is estimated that one hour is needed to complete each form; therefore, 65 health departments × 2 responses × 1 hour = 130 hours. There is no cost to respondents.

ESTIMATES OF ANNUAL BURDEN

Respondents	No. of respondents	No. of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
Health Departments	65	2	1	130
Total				130

Dated: August 4, 2004.

Alvin Hall,

Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Submission for OMB review; comment request.

Title: Financial Institution Data Match.

OMB No.: 0970–0196.

Description: Section 466(a)(17) of the Social Security Act (the Act), requires States to establish procedures under which the state child support enforcement (IV–D) agency shall enter into agreements with financial institutions doing business in the State to develop and operate a data match system for the purpose of securing information leading to the enforcement of child support orders. Under sections 452(1) and 466(a)(17)(A)(i) of the Act, the Secretary may aid State agencies conducting data matches with financial institutions doing business in multiple States by centrally matching through the Federal Parent Locator Service.

Respondents: Financial institutions doing business in two or more States.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
Financial Data Match Tape	4501	4	.5	9002
Election Form	333	1	.5	166.5

Estimated Total Annual Burden Hours: 9168.5.

Additional Information: Copies of the proposed collection may be obtained by writing to the Administration for Children and Families, Office of Information Services, 370 L'Enfant Promenade, SW., Washington, DC 20447, Attn: ACF Reports Clearance Officer. E-mail address: *grjohnson@acf.hhs.gov.*

OMB Comment: OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication. Written comments and recommendations for the proposed information collection should be sent directly to the following: Office of Management and Budget, Paperwork Reduction Project, Attn: Desk Officer for ACF, e-mail address: *katherine_t._astrich@eop.gov.*

Dated: August 5, 2004.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 2003D–0497]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Draft Guidance for Industry on Pharmacogenomic Data Submissions

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget

(OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Fax written comments on the collection of information by September 10, 2004.

ADDRESSES: OMB is still experiencing significant delays in the regular mail, including first class and express mail, and messenger deliveries are not being accepted. To ensure that comments on the information collection are received, OMB recommends that written comments be faxed to the Office of Information and Regulatory Affairs, OMB, Attn: Fumie Yokota, Desk Officer for FDA, FAX: 202–395–6974.

FOR FURTHER INFORMATION CONTACT: Karen L. Nelson, Office of Management Programs (HFA–250), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–827–1482.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Draft Guidance for Industry on Pharmacogenomic Data Submissions (OMB Control Numbers 0910–0014, 0910–0001, and 0910–0338)—Extension

The guidance provides recommendations to sponsors submitting or holding investigational new drugs (INDs), new drug applications (NDAs), or biologic liscensing applications (BLAs) on what pharmacogenomic data should be submitted to the agency during the drug development process. Sponsors holding and applicants submitting INDs, NDAs, or BLAs are subject to FDA requirements in parts 312, 314, and 601 (21 CFR 312, 314, and 601) for submitting to the agency data relevant to drug safety and efficacy (§§ 312.22, 312.23, 312.31, 312.33, 314.50, 314.81, 601.2, and 601.12).

Description of Respondents: Sponsors submitting or holding INDs, NDAs, or BLAs for human drugs and biologics.

Burden Estimate: The guidance interprets FDA regulations for IND, NDA, or BLA submissions, clarifying when the regulations require pharmacogenomics data to be submitted and when the submission of such data is voluntary. The pharmacogenomic data submissions described in the guidance that are required to be submitted to an IND, NDA, BLA, or annual report are covered by the information collection requirements under parts 312, 314, and 601 and are approved by OMB under control numbers 0910–0014 (part 312—INDs; approved until January 1, 2006); 0910–0001 (part 314—NDAs and annual reports; approved until March 31, 2005); and 0910–0338 (approved until August 31, 2005).

The guidance distinguishes between pharmacogenomic tests that may be considered valid biomarkers appropriate for regulatory decisionmaking, and other, less well developed exploratory tests. The submission of exploratory pharmacogenomic data is not required under the regulations, although the agency encourages the voluntary submission of such data.

The guidance describes the voluntary genomic data submission (VGDS) that can be used for such a voluntary submission. The guidance does not recommend a specific format for the VGDS, except that such a voluntary submission be designated as a VGDS. The data submitted in a VGDS and the level of detail should be sufficient for FDA to be able to interpret the information and independently analyze the data, verify results, and explore possible genotype-phenotype correlations across studies. FDA does not want the VGDS to be overly burdensome and time-consuming for the sponsor.

FDA has estimated the burden of preparing a voluntary submission described in the guidance that should be designated as a VGDS. Based on FDA's familiarity with sponsors' interest in submitting pharmacogenomic data during the drug development process, FDA estimates that approximately 20 sponsors will submit approximately 80 VGDSs and that, on average, each VGDS will take approximately 10 hours to prepare and submit to FDA.

In the **Federal Register** of November 4, 2003 (68 FR 62461), FDA published a 60-day notice requesting public comment on the information collection provisions. No comments were received on the information collection estimates.

TABLE 1.—ESTIMATED ANNUAL REPORTING BURDEN[1]

	Number of Respondents	Number of Responses per Respondent	Total Annual Responses	Hours per Response	Total Hours
Voluntary genomic data submissions	20	4	80	10	800

[1] There are no capital costs or operating and maintenance costs associated with this collection.

Dated: August 5, 2004.

Jeffrey Shuren,

Assistant Commissioner for Policy.

BILLING CODE 4160–01–S

DEPARTMENT OF HOMELAND SECURITY

Bureau of Customs and Border Protection

Designating Aliens For Expedited Removal

AGENCY: Bureau of Customs and Border Protection, DHS.

ACTION: Notice.

SUMMARY: This notice authorizes the Department of Homeland Security to place in expedited removal proceedings any or all members of the following class of aliens: Aliens determined to be inadmissible under sections 212(a)(6)(C) or (7) of the Immigration and Nationality Act who are present in the U.S. without having been admitted or paroled following inspection by an immigration officer at a designated port-of-entry, who are encountered by an immigration officer within 100 air miles of the U.S. international land border, and who have not established to the satisfaction of an immigration officer that they have been physically present in the U.S. continuously for the fourteen-day (14-day) period immediately prior to the date of encounter. DHS believes that exercising its statutory authority to place these individuals in expedited removal proceedings will enhance national security and public safety by facilitating prompt immigration determinations, enabling DHS to deal more effectively with the large volume of persons seeking illegal entry, and ensure removal from the country of those not granted relief, while at the same time protecting the rights of the individuals affected.

DATES: This notice is effective on August 11, 2004.

ADDRESSES: Please submit written comments to: Regulations Branch, Office of Regulations and Rulings, Bureau of Customs and Border Protection, 1300 Pennsylvania Avenue, NW., Washington, DC 20229. *See* **SUPPLEMENTARY INFORMATION** section for more details on submission of comments.

FOR FURTHER INFORMATION CONTACT: Dana E. Graydon, Acting Associate Chief, Office of Border Patrol, U.S. Customs and Border Protection,1300 Pennsylvania Ave., NW., Suite 6.5–E, Washington, DC 20229, *dana.graydon@dhs.gov,* 202–344–3153.

SUPPLEMENTARY INFORMATION: Please submit written comments, original and two copies, to the address listed above on or before after October 12, 2004. Submitted comments may be inspected at the Office of Regulations and Rulings, Bureau of Customs and Border Protection, 799 9th Street, NW., Washington, DC, during regular business hours. Arrangements to inspect submitted comments should be made in advance by calling Mr. Joseph Clark at (202) 572–8768.

Section 302 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA), Public Law 104–208, Div. C, 110 Stat. 3009–546, amended section 235(b) of the Immigration and Nationality Act (''Act''), 8 U.S.C. 1225(b), to authorize the Attorney General (now the Secretary of Homeland Security as designated under the Homeland Security Act of 2002) to remove, without a hearing before an immigration judge, aliens arriving in the U.S. who are inadmissible under sections 212(a)(6)(C) or 212(a)(7) of the Act, 8 U.S.C. 1182(a)(6)(C) and 1182(a)(7). Under section 235(b)(1) of the Act, 8 U.S.C. 1225(b)(1), expedited removal proceedings may be applied to two categories of aliens. First, section 235(b)(1)(A)(i) of the Act, 8 U.S.C. 1225(b)(1)(A)(i), permits expedited removal proceedings for aliens who are ''arriving in the United States.'' ''Arriving aliens'' are defined by regulation to mean ''an applicant for admission coming or attempting to come into the United States at a port-of-entry, or an alien seeking transit through the United States at a port-of-entry, or an alien interdicted in international waters and brought into the United States by any means whether or not to a designated port-of-entry.'' (8 CFR 1.1(q)). Cuban citizens who arrive at U.S. ports-of-entry by aircraft are exempted from this first category of aliens subject to expedited removal under section 235(b)(1)(F) of the Act, 8 U.S.C. 1225(b)(1)(F). Second, section 235(b)(1)(A)(iii) of the Act, 8 U.S.C. 1225(b)(1)(A)(iii), permits the Attorney General (now the Secretary of Homeland Security), in his or her sole and unreviewable discretion, to designate certain other aliens to whom the expedited removal provisions may be applied. Section 235(b)(1)(A)(iii), 8 U.S.C. 1225(b)(1)(A)(iii), authorizes the Secretary to apply (by designation) expedited removal proceedings to aliens who arrive in, attempt to enter, or have entered the U.S. without having been admitted or paroled following inspection by an immigration officer at a designated port-of-entry, and who have not established to the satisfaction of the immigration officer that they have been physically present in the U.S. continuously for the two-year period immediately prior to the date of determination of inadmissibility.

By statute, an alien present in the U.S. who has not been admitted shall be deemed for purposes of the Act to be an applicant for admission. 8 U.S.C. 1225(a), section 235(a)(1) of the Act. Once alienage has been established, an alien applicant for admission has the burden of establishing that he or she is clearly and beyond doubt entitled to be admitted and is not inadmissible under section 212 of this Act. Aliens who have not been admitted or paroled and who are subject to expedited removal under this designation have the burden of proof to show affirmatively that they are not inadmissible and have maintained the required continuous physical presence in the U.S. Any absence from the U.S. shall serve to break the period of continuous physical presence. 8 CFR 235.3(b)(1)(ii).

Pursuant to 8 CFR 235.3(b)(1)(ii) (62 FR 10312, 10355, March 6, 1997), the Attorney General provided that her designation authority would be exercised by the Commissioner of the former Immigration and Naturalization Service (INS). Pursuant to sections 102(a), 441, 1512(d) and 1517 of the Homeland Security Act of 2002, Public Law 107–296, 116 Stat. 2310, 6 U.S.C. 112, 251, 552(d), 557, and 8 CFR 2.1, the authority of the Attorney General and the Commissioner of the INS in accordance with 8 U.S.C. 235(b)(1)(A)(iii) and 8 CFR 235.3(b)(1)(ii), respectively, was transferred to the Secretary of Homeland Security, and references to the Attorney General or the Commissioner in the statute and regulations are deemed to refer to the Secretary.

DHS has a pressing need to improve the security and safety of the nation's land borders, and expanding expedited removal between ports of entry will provide DHS officers with a valuable tool to meet that objective. Presently DHS officers cannot apply expedited removal procedures to the nearly 1 million aliens who are apprehended each year in close proximity to the borders after illegal entry. It is not logistically possible for DHS to initiate formal removal proceedings against all such aliens. This is primarily a problem along the southern border, and thus the majority of such aliens are Mexican nationals, who are ''voluntarily'' returned to Mexico without any formal removal order. Based upon anecdotal evidence, many of those who are returned to Mexico seek to reenter the U.S. illegally, often within 24 hours of being voluntarily returned (it is not uncommon for DHS officers to apprehend the same individual many times over a span of several months). On the southern land border with Mexico, those aliens who are apprehended who are not Mexican nationals cannot be returned to Mexico. Currently, non-Mexican nationals who are inadmissible may be voluntarily returned to their country of citizenship or nationality via aircraft, or placed in formal removal proceedings under section 240 of the Act. Because DHS lacks the resources to detain all third-country nationals (aliens who are neither nationals of Mexico nor Canada) who have been apprehended after illegally crossing into the U.S. from both the northern and southern land borders, many of these aliens are released in the U.S. each year with a notice to appear for removal proceedings. Many of these aliens subsequently fail to appear for their removal proceedings, and then disappear in the U.S.

Without limiting its ability to exercise its discretion in the event of a national emergency, other unforeseen events, or a change in circumstances, DHS plans under this designation as a matter of prosecutorial discretion to apply expedited removal only to (1) third-country nationals and (2) to Mexican and Canadian nationals with histories of criminal or immigration violations, such as smugglers or aliens who have made numerous illegal entries. We recognize that certain aliens, including unaccompanied minors, members of the Class Action Settlement in *American Baptist Churches* v. *Thornburgh,* 760 F. Supp. 796 (N.D. Cal. 1991) (which settled the claims of a class of Salvadorans and Guatemalans regarding handling of asylum claims), and aliens who may be eligible for cancellation of removal under section 240A of the Act,

for example, may possess equities that weigh against the use of expedited removal proceedings. Accordingly, in appropriate circumstances and as an exercise of prosecutorial discretion, officers will be able to permit certain aliens described in this notice to return voluntarily, withdraw their application for admission, or to be placed into regular removal proceedings under section 240 of the Act in lieu of expedited removal proceedings.

In the interests of focusing enforcement resources upon unlawful entries that have a close spatial and temporal nexus to the border, this notice does not implement the full nationwide expedited removal authority available to DHS pursuant to section 235 of the Act, 8 U.S.C. 1225. Nor does this notice limit DHS from implementing the full nationwide enforcement authority of the statute through publication of a subsequent **Federal Register** notice. The statute provides DHS with the authority to apply expedited removal to aliens who cannot establish that they have maintained a physical presence in the U.S. continuously for the two-year period immediately prior to the date of determination of inadmissibility. The statute also does not limit geographically the application of expedited removal. At this time, DHS has elected to assert and implement only that portion of the authority granted by the statute that bears close temporal and spatial proximity to illegal entries at or near the border. Accordingly, this notice applies only to aliens encountered within 14 days of entry without inspection and within 100 air miles of any U.S. international land border.

It is anticipated under this designation that expedited removal will be employed against those aliens who are apprehended immediately proximate to the land border and have negligible ties or equities in the U.S. Nevertheless, this designation extends to a 100-mile operational range because many aliens will arrive in vehicles that speedily depart the border area, and because other recent arrivals will find their way to near-border locales seeking transportation to other locations within the interior of the U.S. The 100-mile range already has been established by regulation as a reasonable distance from the external boundary of the U.S. for the purpose of preventing the illegal entry of aliens into the U.S. *See* section 287(a)(3) of the Act; 8 CFR 287.1(a)(2) and (c).

The use of expedited removal orders, which prohibit reentry for a period of 5 years, will deter unlawful entry, and make it possible to pursue future criminal prosecution against those aliens who continue to enter the U.S. in violation of law. It will also accelerate the processing of inadmissible aliens because it generally does not require an appearance before an immigration judge, except in certain circumstances. Deterring future entries and accelerating removals will enhance DHS's ability to oversee the border, and to focus its resources on threats to public safety and to national security. DHS also believes that the use of expedited removal will likely interfere with human trafficking and alien smuggling operations, which are growing in sophistication, and which induce aliens from all over the world to cross the country's borders. Alien smuggling organizations have been responsible for numerous violent crimes, including homicide, hostage-taking, and crimes involving sexual exploitation. DHS expects that the expansion of expedited removal under this notice will ultimately reduce the number of aliens who risk injury or death attempting to enter the U.S. through difficult mountainous and desert terrain, as well as decrease property crimes in border areas.

All aliens placed into expedited removal as a result of this designation will have the same rights to a credible fear screening by an asylum officer, and the right to review of an adverse credible fear determination by an immigration judge, that are provided to arriving aliens who are currently placed into expedited removal after being denied admission at a port of entry. Any alien who falls within this designation, who is placed in expedited removal proceedings, and who indicates an intention to apply for asylum or who asserts a fear of persecution or torture will be interviewed by an asylum officer who will determine whether the alien has a credible fear as defined in section 235(b)(1)(B)(v) of the Act, 8 U.S.C. 1225(b)(1)(B)(v). If that standard is met, the alien will be referred to an immigration judge for a removal proceeding under section 240 of the Act, sections 235(b)(1)(A)(ii) and (B) of the Act, 8 U.S.C. 1225(b)(1)(A)(ii) and (B); 8 CFR 235.3(b)(4). The Forms I–867A and I–867B currently used by officers who process aliens under the expedited removal program provide to all aliens in expedited removal proceedings information concerning the credible fear interview, in accordance with the statutory requirement at section 235(b)(1)(B)(iv) of the Act, 8 U.S.C. 1225(b)(1)(B)(iv). The forms require that the officer inquire whether the alien has any reason to fear harm if returned to his or her country. Officers authorized to administer the expedited removal program will be trained to be alert for any verbal or non-verbal indications that the alien may be afraid to return to his or her homeland.

Similarly, all aliens placed into expedited removal as a result of this designation, who claim lawful permanent resident, refugee, asylee status, or U.S. citizenship will receive the same procedures, including the right to review of any adverse expedited removal order by an immigration judge, that are provided to arriving aliens making similar status claims who are currently placed in expedited removal at ports of entry under 8 CFR 235.3(b). DHS, with limited exceptions, plans to detain aliens who are placed in expedited removal under this designation. Section 235(b)(1)(B)(iii)(IV) of the Act, 8 U.S.C. 1225(b)(1)(B)(iii)(IV), and 8 CFR 235.3(b)(2)(iii) direct that any alien who is placed in expedited removal proceedings shall be detained pending a final determination of credible fear and, if found not to have such a fear, such alien shall be detained until removed. Parole of such alien under 8 CFR 235.3(b)(2)(iii) may be permitted only when the Secretary determines, in the exercise of discretion, that parole is required to meet a medical emergency or is necessary for a legitimate law enforcement objective. Section 235(b)(1)(B)(ii) of the Act, 8 U.S.C. 1225(b)(1)(B)(ii), directs that if a credible fear has been established, the alien shall be detained for further consideration of the protection claim or claims. Under Department of Justice regulations, immigration judge review of custody determinations is permitted only for bond and custody determinations pursuant to section 236 of the Act, 8 U.S.C. 1226, 8 CFR 1236, and 8 CFR 1003.19(a). Aliens subject to expedited removal procedures under section 235 of the Act (including those aliens who are referred after a positive credible fear determination to an immigration judge for proceedings under section 240 of the Act) are not eligible for bond, and therefore are not eligible for a bond redetermination before an immigration judge. Parole of aliens determined to have a credible fear may be considered in accordance with section 212(d)(5) of the Act, 8 U.S.C. 1182(d)(5), and 8 CFR 212.5.

The expedited removal authority implemented in this Notice will not be employed against Cuban citizens because removals to Cuba cannot presently be assured and for other U.S. policy reasons.

The Department has determined that good cause exists under the

Administrative Procedure Act (APA), 5 U.S.C. 553(b)(3)(B) and (d)(3), to exempt this notice from the notice and comment requirements under the APA. Delaying the implementation of this notice to allow public notice and comment would be impracticable, unnecessary and contrary to the public interest.

Congress explicitly authorized the Secretary of Homeland Security to designate categories of aliens to whom expedited removal proceedings may be applied, and made clear that ''[s]uch designation shall be in the sole and unreviewable discretion of the Secretary and may be modified at any time.'' Section 235(b)(1)(A)(iii)(1) of the Act, 8 U.S.C. 1225(b)(1)(A)(iii)(I). The large volume of illegal entries, and attempted illegal entries, and the attendant risks to national security presented by these illegal entries, necessitates that DHS expand the expedited removal program as provided in this designation. DHS is confident that the experience gained through implementation of the expedited removal program at ports of entry will enable DHS to expand the program in a manner that is both effective and humane.

There is an urgent need to enhance DHS's ability to improve the safety and security of the nation's land borders, as well as the need to deter foreign nationals from undertaking dangerous border crossings, and thereby prevent the needless deaths and crimes associated with human trafficking and alien smuggling operations. The expansion of expedited removal will increase the deterrence of illegal entries by ensuring that apprehension quickly leads to removal. This is especially critical because of the environmental dangers faced by aliens illegally entering the U.S. across desert or mountainous areas. In the Arizona desert alone, since the initiation of the Arizona Border Control Initiative (ABC) in March of 2004, the Border Patrol has rescued hundreds of aliens in distress and has unfortunately discovered over 40 aliens who have died in the attempt to enter the U.S.

This designation is necessary to remove quickly from the U.S. aliens who are encountered shortly after illegally entering the U.S. across the land borders. The ability to detain aliens while admissibility and identity is determined and protection claims are adjudicated, as well as to quickly remove aliens without protection claims or claims to lawful status, is a necessity for national security and public safety. As a critical element of a number of DHS initiatives to enhance security along the border, the expansion of expedited removal will increase national security, diminish the number of illegal entries, and impair the ability of smuggling organizations to operate. Accordingly, for the foregoing reasons, the Department has determined that public notice and comment prior to promulgation of this notice would be impracticable, unnecessary and contrary to the public interest as those terms are used under the APA.

Although the Department believes for the foregoing reasons that pre-promulgation notice and comment procedures are not statutorily mandated in this case, DHS is interested in receiving comments from the public on all aspects of the expedited removal program, but especially on the effectiveness of the program, problems envisioned by the commenters, and suggestions on how to address those problems. DHS believes that by maintaining a dialogue with interested parties, DHS can ensure that the program is even more effective in combating and deterring illegal entry, while at the same time protecting the rights of the individuals affected.

The expansion of expedited removal under this notice will also support the Arizona Border Control Initiative (ABC), a program designed to secure and protect the Arizona border. Working with other Federal, State, local and tribal entities, DHS has placed significant personnel and technical assets on the border to decrease the deaths of illegal immigrants in the desert; and to lower the rate of violent crime related to illegal border traffic in Southern Arizona. The ABC began operations in March 2004. For the reasons stated above, the ABC's success will rely in part upon the ability of DHS officers to place inadmissible aliens apprehended shortly after illegal entry into expedited removal.

Every year, illegal aliens from many different countries continue to enter the U.S. illegally across the nation's land borders. It is critical for public safety and national security that these aliens are not released into the U.S. without adequate verification of their identities and backgrounds.

Notice of Designation of Aliens Subject to Expedited Removal Proceedings

Pursuant to section 235(b)(1)(A)(iii) of the Immigration and Nationality Act (''Act'') and 8 CFR 235.3(b)(1)(ii), I order as follows:

(1) Except as provided in paragraph (5), the Department of Homeland Security, through its component bureaus, may place in expedited removal proceedings any or all members of the following class of aliens: Aliens who are inadmissible under sections 212(a)(6)(C) or (7) of the Act, who are physically present in the U.S. without having been admitted or paroled following inspection by an immigration officer at a designated port-of-entry, who are encountered by an immigration officer within 100 air miles of any U.S. international land border, and who have not established to the satisfaction of an immigration officer that they have been physically present in the U.S. continuously for the 14-day period immediately prior to the date of encounter. Each alien subject to this notice bears the affirmative burden to show to the satisfaction of an immigration officer that the alien has been present in the U.S. continuously for the relevant 14-day period. This notice does not apply to aliens who arrive at U.S. ports-of-entry, as these aliens are already subject to expedited removal. This notice will be given effect only with respect to apprehensions made within the CBP Border Patrol sectors of (Laredo, McAllen, Del Rio, Marfa, El Paso, Tucson, Yuma, El Centro, San Diego, Blaine, Spokane, Havre, Grand Forks, Detroit, Buffalo, Swanton, and Houlton).

(2) Any alien who falls within this designation who indicates an intention to apply for asylum or who asserts a fear of persecution or torture will be interviewed by an asylum officer to determine whether the alien has a credible fear as defined in section 235(b)(1)(B)(v) of the Act, 8 U.S.C. 1225(b)(1)(B)(v). If that standard is met, the alien will be referred to an immigration judge for proceedings under section 240 of the Act, 8 U.S.C. 1229a.

(3) Any alien who is placed in expedited removal proceedings under this designation who claims lawful permanent resident, refugee, asylee status, or U.S. citizenship will be processed in accordance with the procedures provided in 8 CFR 235.3(b) and 8 CFR 1235.3(b).

(4) Any alien who is placed in expedited removal proceedings under this designation will be detained pursuant to section 235(b) of the Act, 8 U.S.C. 1225(b), with certain exceptions, until removed. However, aliens determined to have a credible fear may be considered by DHS for parole in accordance with section 212(d)(5) of the Act and 8 CFR 212.5. Aliens detained pursuant to the expedited removal provisions under section 235 of the Act (including those aliens who are referred after a positive credible fear determination to an immigration judge for proceedings under section 240 of the Act) are not eligible for bond, and therefore are not eligible for a bond

redetermination before an immigration judge.

(5) This notice applies to aliens described in paragraph (1) who are encountered within the U.S. beginning August 11, 2004.

(6) The expedited removal proceedings contemplated by this notice will not be initiated against Cuban citizens or nationals.

Dated: August 3, 2004.

Tom Ridge,

Secretary of Homeland Security.

[FR Doc. 04–18469 Filed 8–10–04; 8:45 am]

BILLING CODE 4820–02–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–4903–N–63]

Notice of Proposed Information Collection: Comment Request; Contract and Subcontract Activity

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

This is a request for approval of a revision to the currently approved information collection, which enables HUD to monitor and evaluate Minority Business Enterprise (MBE) activities against the total program activity and the designated MBE goals. Reports are submitted annually to Congress. This information collection combines two previously approved collections, OMB control numbers 2577–0088 and 2502–0355. OMB control number 2535–pending will now be used for this collection.

DATES: *Comments due:* October 12, 2004.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Wayne Eddins, Reports Management Officer, AYO, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410; e-mail *Wayne_Eddins@HUD.gov*; telephone (202) 708–2374. This is not a toll-free number. Copies of available documents may be obtained from Mr. Eddins and at HUD's Web site at *http://www5.hud.gov:63001/po/i/icbts/collectionsearch.cfm.*

FOR FURTHER INFORMATION CONTACT: Lillian Deitzer, Information Technology Specialist, AYO, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410; e-mail *Lillian_L_Deitzer@HUD.gov*; telephone (202) 708–2374. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: The Department will submit the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended).

This Notice is soliciting comments from members of the public and affecting agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

This Notice also lists the following information:

Title of Proposal: Contract and Subcontract Activity.

OMB Control Number, if applicable: 2535–pending.

Description of the need for the information and proposed use: Information will enable HUD to monitor and evaluate Minority Business Enterprise (MBE) activities against the total program activity and the designated MBE goals. Reports are submitted annually to Congress. This information collection combines two previously approved collections, OMB control numbers 2577–0088 and 2502–0355. OMB control number 2535–pending will now be used for this collection.

Agency form numbers, if applicable: HUD 2516.

Estimation of the total number of hours needed to prepare the information collection including number of respondents, frequency of response, and hours of response: An estimation of the total numbers of hours needed to prepare the information collection is 5,000, number of respondents is 5,000, frequency of response is ''annually,'' and the hours per response is 1 hour.

Status of the proposed information collection: Revision of a currently approved collection.

Authority: Section 3506 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35, as amended.

Dated: August 4, 2004.

Wayne Eddins,

Departmental Reports Management Officer, Office of the Chief Information Officer.

BILLING CODE 4210–72–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–4907–N–26]

Notice of Proposed Information Collection: Comment Request; Automated Clearing House (ACH) Program Application—Title I Insurance Charge Payments System

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comments Due Date:* October 12, 2004.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Wayne Eddins, Reports Management Officer, Department of Housing and Urban Development, 451 7th Street, SW., L'Enfant Plaza Building, Room 8001, Washington, DC 20410 or *Wayne Eddins@hud.gov.*

FOR FURTHER INFORMATION CONTACT: Lester J. West, Director, Financial Operations Center, Department of Housing and Urban Development, 52 Corporate Circle, Albany, NY 12203, telephone (518) 464–4200 x4206 (this is not a toll free number) for copies of the proposed forms and other available information.

SUPPLEMENTARY INFORMATION: The Department is submitting the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended).

This Notice is soliciting comments from members of the public and affected agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

This Notice also lists the following information:

Title of Proposal: Automated Clearing House (ACH) Program Application—Title I Insurance Charge Payments System.

OMB Control Number, if applicable: 2502–0512.

Description of the need for the information and proposed use:

This information collection is used to collect data to establish an electronic premium payment method for the Title I Program. This information collection is designed to process the collection of Title I insurance charges electronically in lieu of sending checks and other payment instruments by mail.

Agency form numbers, if applicable: HUD–56150.

Estimation of the total numbers of hours needed to prepare the information collection including number of respondents, frequency of response, and hours of response: The annual number of respondents is 750 for the Automated Clearing House Program Application. The estimated time required for each response is 15 minutes. The total estimated burden hours are 188.

Status of the proposed information collection: Extension of a currently approved collection.

Authority: Section 201.31 of the Title I Regulations, relating to payments of insurance charges, has been amended by the final rule that was established in the **Federal Register** at 60 FR 13854. This rule permits the Secretary to require Title I lenders to pay insurance charges through the ACH program.

Dated: August 4, 2004.

Sean G. Cassidy,

General Deputy Assistant Secretary for Housing, Deputy Federal Housing Commissioner.

Title of Proposal: Mortgagee's Certificate.

OMB Control Number, if applicable: 2502–0468.

Description of the need for the information and proposed use: HUD requires the mortgagee to submit Form HUD 2434, Mortgagee's Certificate, to assure that fees are within acceptable limits and the required escros will be collected. HUD determines the reasonableness of the fees and uses the information in calculating the financial requirement for closing. The information is also used to determine allowable fees that will be collected from the mortgagor at closing.

Agency form numbers, if applicable: HUD–2434.

Estimation of the total numbers of hours needed to prepare the information collection based on the number of respondents, frequency of response, and hours of response: The estimated total number of burden hours needed to prepare the information collection is 825; the number of respondents is 1,100 generating approximately 1,100 annual responses; the frequency of response is on occasion; and the estimated time needed to prepare the response is 45 minutes.

Status of the proposed information collection: Reinstatement, without change, of a previously approved collection for which approval has expired.

Authority: The Paperwork Reduction Act of 1995, 44 U.S.C., Chapter 35, as amended.

Dated: August 4, 2004.

Sean G. Cassidy,

General Deputy Assistant Secretary for Housing Deputy Federal Housing Commissioner.

BILLING CODE 4210–27–M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–4907–N–24]

Notice of Proposed Information Collection: Comment Request; Owner's Certification of Compliance with HUD Tenant Eligibility and Rent Procedures

AGENCY: Office of the Assistant Secretary for Housing-Federal Housing Commissioner, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below

will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comments Due Date:* October 12, 2004.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Wayne Eddins, Reports Management Officer, Department of Housing and Urban Development, 451 7th Street, SW., L'Enfant Plaza Building, Room 8003, Washington, DC 20410 or *Wayne__Eddins@hud.gov.*

FOR FURTHER INFORMATION CONTACT: Lanier M. Hylton, Director, Officer of Housing Assistance Contract Administration Oversight, Department of Housing and Urban Development, 4561 7th Street, SW., Washington, DC 20410, telephone (202) 708–2866 (this is not a toll free number) for copies of the proposed forms and other available information.

SUPPLEMENTARY INFORMATION: The Department is submitting the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended).

This Notice is soliciting comments from members of the public and affected agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

This Notice also lists the following information:

Title of Proposal: Owner's Certification of Compliance with HUD Tenant Eligibility and Rent Procedures.

OMB Control Number, if applicable: 2502–0204.

Description of the need for the information and proposed use: These data elements are needed to comply with Federal statutes and regulations that: (1) Establish policies to who may be admitted to subsidized housing; (2) specify which eligible applicants may be given priority over others; (3) prohibit discrimination in conjunction with selection of tenants and unit (4) specify how tenants' incomes and rents must be compiled; and (5) require Annual Reports to Congress and the public on the race/ethnicity and gender composition of HUD program beneficiaries.

Agency form numbers, if applicable: Automated printouts 27061, 9887, 9887–A.

Estimation of the total numbers of hours needed to prepare the information collection including number of respondents, frequency of response, and hours of response: The estimated number of burden hours needed to prepare the information collection is 2,108,052 the number of respondents is 2,210,139 generating approximately 2,210,139 annual responses; the frequency of response is on occasion; and the estimated time needed to prepare the response 0.9 hours.

Status of the proposed information collection: Extension of a currently approved collection

Authority: The Paperwork Reduction Act of 1995, 44 U.S.C., Chapter 35, as amended.

Dated: July 30, 2004.

Sean G. Cassidy,

General Deputy Assistant Secretary for Housing Deputy Federal Housing Commissioner.

BILLING CODE 4210–27–M

DEPARTMENT OF THE INTERIOR

Office of the Secretary

Sunshine Act; Meetings

TIME AND DATE: 8:30 a.m. to 5:30 p.m. EST, September 14 and 15, 2004.

PLACE: Eden Roc Hotel, Miami Beach, Florida.

STATUS: The Department of the Interior, as co-chair with the Department of Commerce, on behalf of the U.S. Coral Reef Task Force, announces a public meeting of the Task Force.

MATTERS TO BE CONSIDERED: Updates on implementation of Local Action Strategies, pending items from the last meeting, and public comments on coral reef issues generally. The agenda will be available from the contact person below and published on the Task Force web site at *http://www.coralreef.gov* when finalized.

REGISTRATION AND EXHIBITS: There is no charge to attend this meeting. Space is also available for those desiring to have exhibits. Registration information for attendance and for exhibits, along with information on rooms, parking and related items, is available on the Task Force web site noted above. Exhibits must be registered well in advance of the meeting.

CONTACT PERSON FOR MORE INFORMATION: Those desiring to obtain additional information should contact DaJuana Blackmon at the office of the Assistant Secretary for Fish and Wildlife Parks, Department of the Interior, 1849 C Street NW., MS–MIB–3156, Attn: CRTF, Washington, DC 20240, telephone 202–208–3928, e-mail *DaJuana_Blackmon@ios.doi.gov.*

PUBLIC COMMENTS: Written statements of any length may be submitted to the Task Force through the above address, or delivered to the Task Force staff at the meeting. Those desiring to testify before the Task Force should register to do so through the above contact person, or upon arrival at the meeting September 14, and should plan on summarizing their actual statements in 3 or 4 minutes due to the large number of anticipated witnesses. All written statements will be considered in their entirety. Wherever possible, those with similar viewpoints or messages are encouraged to make joint statements. Testimony will be received on the afternoon of September 14.

Dated: August 6, 2004.

Paul Hoffman,

Acting Assistant Secretary for Fish and Wildlife and Parks.

BILLING CODE 4312–52–P

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

Notice of Proposed Information Collection for 1029–0024 and 1029–0113

AGENCY: Office of Surface Mining Reclamation and Enforcement.

ACTION: Notice and request for comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the Office of Surface Mining Reclamation and Enforcement (OSM) is announcing that the information collection requests for the Procedures and Criteria for Approval or Disapproval of State Program Submissions, 30 CFR Part 732; and General Reclamation Requirements, 30 CFR Part 874, have been forwarded to the Office of Management and Budget (OMB) for review and comment. The

information collection requests describe the nature of the information collections and their expected burden and cost.

DATES: OMB has up to 60 days to approve or disapprove the information collection but may respond after 30 days. Therefore, public comments should be submitted to OMB by September 10, 2004, in order to be assured of consideration.

FOR FURTHER INFORMATION CONTACT: To request a copy of either information collection request, explanatory information and related form, contact John A. Trelease at (202) 208–2783. You may also contact Mr. Trelease at *jtreleas@osmre.gov*.

SUPPLEMENTARY INFORMATION: OMB regulations at 5 CFR 1320, which implement provisions of the Paperwork Reduction Act of 1995 (Pub. L. 104–13), require that interested members of the public and affected agencies have an opportunity to comment on information collection and recordkeeping activities [see 5 CFR 1320.8(d)]. OSM has submitted two requests to OMB to renew its approval for the collections of information found at 30 CFR Parts 732 and 874. OSM is requesting a 3-year term of approval for these information collection activities.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for these collections of information are 1029–0024 for Part 732 and 1029–0113 for Part 874, and may be found in OSM's regulations at 732.10 and 874.10.

As required under 5 CFR 1320.8(d), a **Federal Register** notice soliciting comments on the collections of information for Parts 732 ad 874 was published on March 31, 2004 (69 FR 16954). No comments were received from that notice. This notice provides the public with an additional 30 days in which to comment on the following information collection activities:

Title: Procedures and Criteria for Approval or Disapproval of State Program Submissions, 30 CFR Part 732.

OMB Control Number: 1029–0024.

Summary: Part 732 establishes the procedures and criteria for approval and disapproval of State program submissions. The information submitted is used to evaluate whether State regulatory authorities are meeting the provisions of their approved programs.

Bureau Form Number: None.

Frequency of Collection: Once, quarterly and annually.

Description of Respondents: 24 State regulatory authorities.

Total Annual Responses: 51.

Total Annual Burden Hours: 6,453.

Title: General Reclamation Requirements, 30 CFR Part 874.

OMB Control Number: 1029–0113.

Summary: Part 874 establishes land and water eligibility requirements, reclamation objectives and priorities and reclamation contractor responsibility. 30 CFR 874.17 requires consultation between the AML agency and the appropriate Title V regulatory authority on the likelihood of removing the coal under a Title V permit and concurrences between the AML agency and the appropriate Title V regulatory authority on the AML project boundary and the amount of coal that would be extracted under the AML reclamation project.

Bureau Form Number: None.

Frequency of Collection: Once.

Description of Respondents: 16 State regulatory authorities and Indian tribes.

Total Annual Responses: 16.

Total Annual Burden Hours: 1,168.

Send comments on the need for the collections of information for the performance of the functions of the agency; the accuracy of the agency's burden estimates; ways to enhance the quality, utility and clarity of the information collections; and ways to minimize the information collection burden on respondents, such as use of automated means of collection of the information, to the following address. Please refer to the appropriate OMB control number in all correspondence.

ADDRESSES: Submit comments to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Department of Interior Desk Officer, by telefax at (202) 395–6566 or via e-mail to *OIRA_Docket@omb.eop.gov.* Also, please send a copy of your comments to John A. Trelease, Office of Surface Mining Reclamation and Enforcement, 1951 Constitution Ave, NW, Room 210—SIB, Washington, DC 20240, or electronically to *jtreleas@osmre.gov.*

Dated: June 15, 2004.

Sarah E. Donnelly,

Acting Chief, Division of Regulatory Support.

[FR Doc. 04–18348 Filed 8–10–04; 8:45 am]

BILLING CODE 4310–05–M

INTERNATIONAL TRADE COMMISSION

[Investigation No. 332–461]

Air and Noise Pollution Abatement Services: An Examination of U.S. and Foreign Markets

AGENCY: International Trade Commission.

ACTION: Institution of investigation and scheduling of public hearing.

DATES: Effective August 4, 2004.

SUMMARY: Following receipt of a request on July 12, 2004 from the United States Trade Representative (USTR), the Commission instituted investigation No. 332–461, Air and Noise Pollution Abatement Services: An Examination of U.S. and Foreign Markets, under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)).

FOR FURTHER INFORMATION CONTACT: Information specific to this investigation may be obtained from Jennifer Baumert, Project Leader (202–204–3450; *jennifer.baumert@usitc.gov*), Eric Forden, Deputy Project Leader, (202–205–3235; *eric.forden@usitc.gov*), or Richard Brown, Chief, Services and Investment Division (202–205–3438; *richard.brown@usitc.gov*), Office of Industries, U.S. International Trade Commission, Washington, DC, 20436. For information on the legal aspects of this investigation, contact William Gearhart of the Office of the General Counsel (202–205–3091; *willam.gearhart@usitc.gov*). Hearing impaired individuals are advised that information on this matter can be obtained by contacting the TDD terminal on (202)–205–1810.

Background: As requested by the USTR, the Commission's report will, to the extent possible, (1) provide an overview of foreign and domestic markets for air and noise pollution abatement services; (2) examine trade and investment in air and noise pollution abatement services markets, including barriers affecting such trade and investment, if any; and (3) if possible, discuss existing regulatory practices that generate demand for the subject services. USTR has requested that the Commission's study include examples from both developed- and developing-country markets. In addition, the USTR has asked the Commission to include examples—as appropriate—from those economies with which the United States has established, or is in the process of negotiating, a free trade arrangement. To the extent possible, the Commission is also requested to present information on

trade and market conditions for those goods related to the subject environmental services. For the purpose of this study, air and noise pollution abatement services are defined to include control services of indoor or outdoor air pollution originating from stationary or mobile sources; services related to the trade of air pollution emission rights; services related to the monitoring, assessment, or control of acid rain; services related to the study of the relationship between air pollution and climate; noise pollution abatement and control services; testing and monitoring of air or noise pollution; and other services incidental to air and noise pollution abatement.

The USTR asked that the Commission furnish its report by April 1, 2005, and that the Commission make the report available to the public in its entirety.

The USTR letter also requests an investigation on renewable energy services. In response, the Commission has instituted Investigation No. 332–462, Renewable Energy Services: An Examination of U.S. and Foreign Markets, which is due to the USTR on October 1, 2005.

Public Hearing: A public hearing in connection with the investigation will be held at the U.S. International Trade Commission Building, 500 E Street SW., Washington, DC, beginning at 9:30 a.m. on October 20, 2004. All persons shall have the right to appear, by counsel or in person, to present information and to be heard. Requests to appear at the public hearing should be filed with the Secretary, United States International Trade Commission, 500 E Street SW., Washington, DC 20436, no later than 5:15 p.m., October 5, 2004. Any prehearing briefs (original and 14 copies) should be filed not later than 5:15 p.m., October 7, 2004; the deadline for filing post-hearing briefs or statements is 5:15 p.m., November 4, 2004. In the event that, as of the close of business on October 5, 2004, no witnesses are scheduled to appear at the hearing, the hearing will be canceled. Any persons interested in attending the hearing as an observer or non-participant may call the Secretary of the Commission (202–205–1806) after October 5, 2004, for information concerning whether the hearing will be held.

Written Submissions: In lieu of or in addition to participating in the hearing, interested parties are invited to submit written statements (original and 14 copies) concerning the matters to be addressed by the Commission in its report on this investigation. Commercial or financial information that a submitter desires the Commission to treat as confidential must be submitted on separate sheets of paper, each clearly marked ''Confidential Business Information'' at the top. All submissions requesting confidential treatment must conform with the requirements of section § 201.6 of the Commission's Rules of Practice and Procedure (19 CFR 201.6). All written submissions, except for confidential business information, will be made available in the Office of the Secretary to the Commission for inspection by interested parties. The Commission will not include any confidential business information in the report it sends to the USTR. To be assured of consideration by the Commission, written statements relating to the Commission's report should be submitted to the Commission at the earliest practical date and should be received no later than the close of business on November 4, 2004. All submissions should be addressed to the Secretary, United States International Trade Commission, 500 E Street SW., Washington, DC 20436. The Commission's rules do not authorize filing submissions with the Secretary by facsimile or electronic means, except to the extent permitted by section 201.8 of the Commission's Rules of Practice and Procedure (19 CFR 201.8) (see Handbook for Electronic Filing Procedures, *ftp://ftp.usitc.gov/pub/reports/electronic_filing_handbook.pdf*). Persons with questions regarding electronic filing should contact the Secretary (202–205–2000 *edis@usitc.gov*).

Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its Internet server (*http://www.usitc.gov*).

List of Subjects

WTO, GATS, air and noise pollution abatement services.

Issued: August 5, 2004.

By order of the Commission.

Marilyn R. Abbott,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 332–462]

Renewable Energy Services: An Examination of U.S. and Foreign Markets

AGENCY: International Trade Commission.

ACTION: Institution of investigation and scheduling of public hearing.

DATES: Effective August 3, 2004.

SUMMARY: Following receipt of a request on July 12, 2004 from the United States Trade Representative (USTR), the Commission instituted investigation No. 332–462, Renewable Energy Services: An Examination of U.S. and Foreign Markets, under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)).

FOR FURTHER INFORMATION CONTACT: Information specific to this investigation may be obtained from Lisa Ferens, Project Leader (202–205–3486; *lisa.ferens@usitc.gov*), Jennifer Baumert, Deputy Project Leader, (202–205–3450; *jennifer.baumert@usitc.gov*), or Richard Brown, Chief, Services and Investment Division (202–205–3438; *richard.brown@usitc.gov*), Office of Industries, U.S. International Trade Commission, Washington, DC, 20436. For information on the legal aspects of this investigation, contact William Gearhart of the Office of the General Counsel (202–205–3091; *willam.gearhart@usitc.gov*). Hearing impaired individuals are advised that information on this matter can be obtained by contacting the TDD terminal on (202) 205–1810.

Background: As requested by the USTR, the Commission's report will, to the extent possible, (1) provide an overview of foreign and domestic markets for renewable energy services; (2) examine trade and investment in renewable energy services markets, including barriers affecting such trade and investment, if any; and (3) if possible, discuss existing regulatory practices that generate demand for the subject services. USTR has requested that the Commission's study include examples from both developed- and developing-country markets. In addition, the USTR has asked the Commission to include examples—as appropriate—from those economies with which the United States has established, or is in the process of negotiating, free trade arrangements. To the extent possible, the Commission is also requested to present information on trade and market conditions for those goods related to the subject renewable

energy services. For the purpose of this study, renewable energy services are defined to include: the use of renewable power sources—including wind, solar energy, biomass fuels, tidal energy, and geothermal energy—in heating or electricity generation; the sale of renewable energy; geological analysis, resource assessment, and other services incidental to the evaluation, planning, or siting of a renewable energy project or facility; design, construction, and installation services for renewable energy equipment and facilities; the operation, management, and monitoring of renewable energy projects or facilities; decommissioning services; services incidental to the issuance of renewable energy certificates; research and development services related to renewable energy; and other services incidental to the development and use of renewable power sources.

The USTR asked that the Commission furnish its report by October 1, 2005, and that the Commission make the report available to the public in its entirety.

Public Hearing: A public hearing in connection with the investigation will be held at the U.S. International Trade Commission Building, 500 E Street SW., Washington, DC, beginning at 9:30 a.m. on April 19, 2005. All persons shall have the right to appear, by counsel or in person, to present information and to be heard. Requests to appear at the public hearing should be filed with the Secretary, United States International Trade Commission, 500 E Street SW., Washington, DC 20436, no later than 5:15 p.m., April 5, 2005. Any prehearing briefs (original and 14 copies) should be filed not later than 5:15 p.m., April 7, 2005; the deadline for filing post-hearing briefs or statements is 5:15 p.m., May 5, 2005. In the event that, as of the close of business on April 5, 2005, no witnesses are scheduled to appear at the hearing, the hearing will be canceled. Any persons interested in attending the hearing as an observer or non-participant may call the Secretary of the Commission (202–205–1806) after April 5, 2005, for information concerning whether the hearing will be held.

Written Submissions: In lieu of or in addition to participating in the hearing, interested parties are invited to submit written statements (original and 14 copies) concerning the matters to be addressed by the Commission in its report on this investigation. Commercial or financial information that a submitter desires the Commission to treat as confidential must be submitted on separate sheets of paper, each clearly marked ''Confidential Business Information'' at the top. All submissions requesting confidential treatment must conform with the requirements of section § 201.6 of the Commission's Rules of Practice and Procedure (19 CFR 201.6). All written submissions, except for confidential business information, will be made available in the Office of the Secretary to the Commission for inspection by interested parties. The Commission will not include any confidential business information in the report it sends to the USTR. To be assured of consideration by the Commission, written statements relating to the Commission's report should be submitted to the Commission at the earliest practical date and should be received no later than the close of business on May 5, 2005. All submissions should be addressed to the Secretary, United States International Trade Commission, 500 E Street SW., Washington, DC 20436. The Commission's rules do not authorize filing submissions with the Secretary by facsimile or electronic means, except to the extent permitted by section 201.8 of the Commission's Rules of Practice and Procedure (19 CFR 201.8) (see Handbook for Electronic Filing Procedures, *ftp://ftp.usitc.gov/pub/reports/electronic_filing_handbook.pdf*). Persons with questions regarding electronic filing should contact the Secretary (202–205–2000 *edis@usitc.gov*).

Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its Internet server (*http://www.usitc.gov*).

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Under the Comprehensive Environmental Response, Compensation and Liability Act

In accordance with 28 U.S.C. 50.7 and Section 122 of the Comprehensive Environmental Response, Compensation and Liability Act (''CERCLA''), 42 U.S.C. 9622, notice is hereby given that on July 14, 2004, a proposed consent decree in the action of *United States* v. *3M Company, et al.,* C.A. No. 2:04-cv-3331 (HAA), was lodged with the United States District Court for the District of New Jersey. The Consent Decree resolves the claims of the United States against the defendants in this action for implementation of the fill area remedy (''Operable Unit Two'') at the Scientific Chemical Processing (''SCP'')—Carlstadt Superfund Site located in Carlstadt, New Jersey (''Site'') and for reimbursement of past response costs relating to the Site.

The Complaint in this action alleges that the defendants are liable to the United States under Sections 106 and 107 of the Comprehensive Environmental Response, Compensation and Liability Act (''CERCLA''), 42 U.S.C. 9606, 9607, as generators and/or transporters of materials containing hazardous substances that were disposed of at the Site. The defendants in this action are:

3M Company; Air Products and Chemicals, Inc.; Akzo Nobel Coatings, Inc.; Altje, Inc.; American Cyanamid—Lederle Labs—Shulton, Inc.; American Standard Companies; Ashland Inc.; ATOFINA Chemicals, Inc.; BASF Corporation; Bayer Chemicals Corporation; Bee Chemical Company; Benjamin Moore & Co.; Ber Mar Manufacturing Corp.; Borden Chemical, Inc.; Bristol-Myers Squibb Company; Browning-Ferris Industries of New Jersey; Chemcoat Inc.; Chemical Pollution Control, Inc. of NY; Ciba Specialty Chemicals Corporation; CNA Holdings, Inc.; Congoleum Corporation; Crown Beverage Packaging Company, Inc.; Cycle Chem, Inc.; Dri Print Foils, Inc.; DuPont Company; Exxon Mobil Corporation; ExxonMobile Oil Corporation; General Electric Company; General Motors Corporation; Hoffmann-La Roche, Inc.; Honeywell International Inc.; ISP Environmental Services Inc.; John L. Armitage & Co.; Johnson & Johnson; Kirker Enterprises, Inc.; L.E. Carpenter & Company; Lucent Technologies Inc.; Mack Trucks, Inc.; Magid Corp.; Mallinckrodt Baker, Inc.; manor Care of American, Inc.; Manor Care Health Services, Inc.; Marisol, Inc.; Merck & Co., Inc.; Monroe Chemical, Inc.; Nepera, Inc.; New England Laminates Co.; Inc.; Northrop Grumman Systems Corporation; Occidental Chemical Corporation; PAXAR Corporation; Permacel, Inc.; Pfizer Inc.; Pharmacia Corporation; Portfolio One, Inc.; Revlon Consumer Products Corporation; Roche Vitamins Inc.; Rohm and Haas Company; Schenectady International, Inc.; Seagrave Coatings Corp. (NJ); Siegfried (USA), Inc.; Simon Wrecking Company, Inc.; SmithKline Beecham Corporation; Technical Coatings Co.; The Continental Group Inc.; The Dow Chemical Company; The Warner Lambert Co., LLC; Union Carbide Corporation; United Technologies Corporation; and VIACOM Inc.

Under the proposed Consent Decree, the settling defendants will reimburse to

EPA $1,149,902 of its past costs at this Site, plus interest from January 7, 2003, and will perform the Operable Unit Two remedial action. The Operable Unit Two remedial action includes the treatment and stabilization of a hot spot area, the installation of a landfill cap over the fill area, improvement of the existing groundwater recovery system, and institutional controls. The cost of the performance of the Operable Unit Two remedial action will be financed in part from proceeds of a previous settlement with *de minimis* potentially responsible parties relating to the Site and in part by the defendants participating in this Consent Decree.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, written comments relating to the proposed Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, P.O. Box 7611, U.S. Department of Justice, Washington, DC 20044–7611, and should refer to *United States* v. *3M Company, et al.,* DOJ Ref. #09–11–12–495/1. In addition, because the Consent Decree includes a covenant not to sue the settling defendants under Section 7003 of the Resource Conservation and Recovery Act, 42 U.S.C. 6973, the United States will provide an opportunity for a public meeting in the affected area, if requested within the thirty (30) day public comment period. *See* 42 U.S.C. 6973(d).

The proposed Consent Decree may be examined at the Office of the United States Attorney for the District of New Jersey, 970 Broad Street, Room 400, Newark, New Jersey 07102, and at the U.S. Environmental Protection Agency, Region II, office, 290 Broadway, New York, New York 10007. During the public comment period, the Consent Decree may also be examined on the following Department of Justice Web site: *http://www.usdoj.gov/enrd/open.html.* A copy of the Consent Decree, with or without appendices, may also be obtained by mail from the Consent Decree Library, PO Box 7611, Washington, DC 20044–7611, or by faxing or e-mailing a request to Tonia Fleetwood (*tonia.fleetwood@usdoj.gov*), fax no. (202) 514–0097, phone confirmation number (202) 514–1547. In requesting a copy from the Consent Decree Library, please enclose a check in the amount of $29.75 (25 cents per page reproduction costs) for the Consent Decree, without appendices, or $107.00 (25 cents per page reproduction costs) for the Consent Decree, with appendices, payable to the U.S. Treasury.

Ronald G. Gluck,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–15–M

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Pursuant to the Clean Water Act

In accordance with Departmental Policy, 28 CFR 50.7, notice is hereby given that a consent decree resolving the liability of Hyponex Corporation in *United States of America* v. *Hyponex Corp.,* Civil Action No. 92–1940 (D.N.J.), was lodged with the United States District Court for the District of New Jersey on July 6, 2004.

The proposed consent decree concerns alleged violations of the Clean Water Act, 33 U.S.C. 1311, resulting from the unauthorized discharge of dredged or fill materials into waters of the United States at a location in Hampton Township, Sussex County, New Jersey (the ''Site''). The consent decree enjoins Hyponex Corporation from discharging dredged or fill material into waters of the United States at the Site. The consent decree further requires that Hyponex Corporation: (a) Implement a restoration plan to restore wetlands damaged by the unauthorized discharges at the Site and to enhance other wetlands at the Site; (b) pay a civil penalty of $50,000; (c) place a conservation easement on over 1,000 acres of land at the Site, which includes all wetlands at the Site, and transfer that property to an organization approved by the Corps of Engineers for the purpose of permanently protecting and managing the transferred property in an undeveloped state, consistent with the function and values of the wetlands at the Site; and (d) pay $125,000 to establish a fund to be used by the holder of the conservation easement for the purpose of overseeing the preservation and maintenance of the 1,000-plus acre period. The consent decree also requires that Hyponex Corporation dismiss with prejudice all claims and counterclaims which have been or could have been asserted against the United States with regard to the Site.

The Department of Justice will receive written comments relating to the proposed consent decree for a period of thirty (30) days from the date of publication of this notice. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, United States Department of Justice, Attention: Michael J. Zevenbergen, Attorney, Environmental Defense Section, Seattle Field Office, c/o NOAA/Damage Assessment, 7600 Sand Point Way NE, Seattle, WA 98115, and should refer to *United States of America* v. *Hyponex Corp.,* DJ Reference No. 90–5–1–1–3685.

The proposed consent decree may be examined at the Clerk's Office, United States District Court, Martin Luther King Federal Building and Courthouse, 50 Walnut Street, Newark, NJ 07102.

Letitia J. Grishaw,

Chief, Environmental Defense Section, Environment and Natural Resources Division, Department of Justice.

BILLING CODE 4410–15–M

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Pursuant to the Comprehensive Environmental Response Compensation and Liability Act (''CERCLA'')

Pursuant to section 122(d) of CERCLA, 42 U.S.C. 9622(d), and 28 CFR 50.7 notice is hereby given that on August 2, 2004, a proposed Consent Decree in *United States* v. *Izzo Group, Inc., and Pasco Izzo, Sr.,* Civ. No. 1:04–CV–11689 (GAO), was lodged with the United States District Court for the District of Massachusetts.[1]

In this action the United States, on behalf of the United States Environmental Protection Agency (''EPA''), seeks cost recovery with respect to the Cohen Property Superfund Site (''Site''), located in the City of Taunton, Massachusetts, pursuant to the Comprehensive Environmental Response, Compensation and Liability Act against Izzo Group, Inc., and Pasco Izzo, Sr. (the ''Settling Parties''). Under the terms of the proposed settlement, the Settling Parties will pay $100,000, plus interest, to reimburse the United States for costs incurred by EPA at the site. This settlement amount is based on the Settling Parties' limited ability to pay the full amount of EPA's unreimbursed response costs. The proposed settlement also provides for payment of approximately $2 million by the United States, on behalf of the United States Department of Defense, in reimbursement of EPA's response costs incurred at the Site.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, written comments relating to the

proposed Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, P.O. Box 7611, U.S. Department of Justice, Washington, DC 20044–7611, and should refer to *United States* v. *Izzo Group, Inc.,* et al., DOJ Ref. #90–11–21245/1.

The proposed Consent Decree may be examined at the Office of the United States Attorney for the District of Massachusetts, Office of the United States Attorney, 1 Courthouse Way, Suite 9200, Boston, MA, 02210, and at the U.S. Environmental Protection Agency, Region I, 1 Congress Street, Suite 1100, Boston, MA 02114. During the public comment period, the Consent Decree may also be examined on the following Department of Justice Web site: *http://www.usdoj.gov/enrd/open.html.* A copy of the Consent Decree may be also be obtained by mail from the Consent Decree Library, P.O. Box 7611, Washington, DC 20044–7611, or by faxing or e-mailing a request to Tonia Fleetwood (*tonia.fleetwood@usdoj.gov)*, fax no. (202) 514–0097, phone confirmation number (202) 514–1547. In requesting a copy from the Consent Decree Library, please enclose a check in the amount of $5.25 (25 cents per page reproduction costs) for the Consent Decree payable to the U.S. Treasury.

Ronald G. Gluck,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–15–M

DEPARTMENT OF JUSTICE

Notice of Lodging of a Consent Decree Under the Comprehensive Environmental Response, Compensation and Liability Act

Under 28 CFR 50.7, notice is hereby given that on July 29, 2004, a proposed Consent Decree in *United States* v. *Mallinckrodt, Inc. et al.*, Civil Action No. 4:02CV1488 was lodged with the United States District Court for the Eastern District of Missouri.

In this action the United States sought response costs relating to response actions by the Environmental Protection Agency (''EPA'') at the Great Lakes Container Corporation Superfund Site in St. Louis, Missouri. The Site is a former drum reclamation facility contaminated primarily with lead and polychlorinated biphenyls (''PCBs''). The settling defendant, Indopco, Inc., f/k/a National Starch and Chemical Corporation (''National Starch''), sent drums to the facility and thereby contributed small or unknown amounts of lead to the Site. In the proposed consent decree, the settling defendant has agreed to reimburse EPA $45,713.12 in past response costs. In return, the United States covenants not to sue National Starch for its liability related to lead contamination at the Site.

The Department of Justice will receive for a period of thirty (30) days from the date of this publication comments relating to the Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, P.O. Box 7611, U.S. Department of Justice, Washington, DC 20044–7611, and should refer to *United States* v. *Mallinckrodt, Inc. et al.* Consent Decree D.J. Ref. 90–11–3–07280.

The Consent Decree may be examined at the Office of the United States Attorney, Eastern District of Missouri, 111 10th Street, St. Louis, MO 63102 and at U.S. EPA Region VII, U.S. EPA, Region VII, 901 N. 5th Street, Kansas City, KS 66101. (913) 551–7559. During the public comment period, the Consent Decree may also be examined on the following Department of Justice website, *http://www.usdoj.gov/enrd/open.html.* A copy of the Consent Decree may also be obtained by mail from the Consent Decree Library, P.O. Box 7611, U.S. Department of Justice, Washington, DC 20044–7611 or by faxing or e-mailing a request to Tonia Fleetwood (*tonia.fleetwood@usdoj.gov*), fax number (202) 514–0097, phone confirmation number (202) 514–1547. In requesting a copy from the Consent Decree Library, please enclose a check in the amount of $4.75 (25 cents per page reproduction cost) payable to the U.S. Treasury.

Catherine R. McCabe,

Deputy Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–15–M

DEPARTMENT OF JUSTICE

Office of Justice Programs

Agency Information Collection Activities: Proposed Collection; Comments Requested

ACTION: 60-Day Notice of Information Collection Under Review: National Survey of Supervised Visitation and Safe Exchange Programs.

The Department of Justice (DOJ), Office of Justice Programs, Office on Violence Against Women, has submitted the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for ''sixty days'' until October 12, 2004. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Cynthia J. Schwimer, Comptroller, (202) 307–0623, Office of Justice Programs, U.S. Department of Justice, 810 Seventh Street NW., Washington, DC 20531.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility, and clarity of the information to be collected; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* New collection.

(2) *Title of the Form/Collection:* National Survey of Supervised Visitation and Safe Exchange Programs.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: None. U.S. Department of Justice, Office of Justice,

Programs, Office on Violence Against Women.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: The affected public includes the approximately 500 supervised visitation and safe exchange programs who include units of state, Indian tribal and local governments, state or local courts, non-profit organizations and business or other for profit institutions. These programs provide an opportunity for communities to support the supervised visitation and safe exchange of children, by and between parents, in situations involving domestic violence, child abuse, sexual assault, or stalking.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply:* It is estimated that it will take the 500 respondents approximately one hour to complete the survey.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total annual hour burden to complete the survey is 500 hours.

If additional information is required contact: Brenda E. Dyer, Clearance Office, Policy and Planning Staff, Justice Management Division, Department of Justice, Patrick Henry Building, Suite 1600, 601 D Street NW., Washington, DC 20530.

Dated: August 5, 2004.

Brenda E. Dyer,

Clearance Officer, Department of Justice.

DEPARTMENT OF JUSTICE

Office of Justice Programs

Agency Information Collection Activities: Existing Collection; Comment Requested

ACTION: 60–Day Notice of Information Collection Under Review: National Prisoner Statistics-Prison Population Reports, NPS–1A, Midyear Population Counts, NPS–1B: Advance Endyear Population Counts.

The Department of Justice (DOJ), Office of Justice Programs, has submitted the following information collection to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for ''sixty days'' until October 12, 2004. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments especially regarding the estimated public burden and associated response time, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Paige Harrison by e-mail at *paige.harrison@usdoj.gov.*

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility and clarity of the information to be collected; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.* permitting electronic submission of responses.

Overview of this information collection:

(1) Type of Information Collection: Extension of a currently approved collection

(2) Title of the Form/Collection: National Prisoner Statistics-Prison Population Reports, NPS–1A, Midyear Population Counts, NPS–1B: Advance Endyear Population Counts.

(3) Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection: Form number: NPS–1A; and NPS–1B. Office of Justice Programs, U.S. Department of Justice.

(4) Affected public who will be asked to respond, as well as a brief abstract: Primary: State Departments of Corrections. Others: The Federal Bureau of Prisons. For the NPS–1A form, 51 central reporters (one from each State and the Federal Bureau of Prisons) responsible for keeping records on inmates will be asked to provide information for the following categories:

(a) As of June 30, the number of male and female inmates under their jurisdiction with maximum sentences of more than one year, one year or less; and unsentenced inmates; and

(b) As of June 30, the number of male and female inmates in their custody with maximum sentences of more than one year, one year or less; and unsentenced inmates; and

(c) As of June 30, the number of male and female inmates under their jurisdiction housed in a privately-operated facility, either in state or out of state; and

(d) As of June 30, the number of male and females inmates in their custody by race and Hispanic origin.

For the NPS–1B form, 51 central reporters (one from each and the Federal Bureau of Prisons) responsible for keeping records on inmates will be asked to provide information for the following categories:

(a) As of December 31, the number of male and female inmates under their jurisdiction with maximum sentences of more than one year, one year or less; and unsentenced inmates; and

(b) The number of inmates housed in county or other local authority correctional facilities, or in other state or Federal facilities on December 31, solely to ease prison crowding; and

(c) As of the direct result of state prison crowding during 2001, the number of inmates released via court order, administrative procedure or statute, accelerated release, sentence reduction, emergency release, or other expedited release; and

(d) The aggregate rated, operational, and design capacities, by sex, of each State's correctional facilities at year-end.

The Bureau of Justice Statistics uses this information in published reports and for the U.S. Congress, Executive Office of the President, practitioners, researchers, students, the media, and others interested in criminal justice statistics.

(5) An estimate of the total number of respondents and the amount of time needed for an average respondent to respond: There are approximately 51 respondents each taking an average of 3.0 hours to respond.

(6) An estimate of the total public burden (in hours) associated with the collection: There are approximately153 annual burden hours associated with this collection.

If additional information is required, contact: Mrs. Brenda E. Dyer, Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning staff, Patrick Henry Building, Suite 1600, 601 D Street, NW., Washington, DC 20530.

Dated: August 5, 2004.

Brenda E. Dyer,

Clearance Officer, Department of Justice.

Investigations Regarding Certifications of Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under Section 221(a) of the Trade Act of 1974 (''the Act'') and are identified in the Appendix to this notice. Upon receipt of these petitions, the Director of the Division of Trade Adjustment Assistance, Employment and Training Administration, has instituted investigations pursuant to Section 221(a) of the Act.

The purpose of each of the investigations is to determine whether the workers are eligible to apply for adjustment assistance under Title II, Chapter 2, of the Act. The investigations will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

The petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Division of Trade Adjustment Assistance, at the address shown below, not later than August 23, 2004.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Division of Trade Adjustment Assistance, at the address shown below, not later than August 23, 2004.

The petitions filed in this case are available for inspection at the Office of the Director, Division of Trade Adjustment Assistance, Employment and Training Administration, U.S. Department of Labor, Room C–5311, 200 Constitution Avenue, NW., Washington, DC 20210.

Signed at Washington, DC this 29th day of July, 2004.

Timothy Sullivan,

Director, Division of Trade Adjustment Assistance.

P & R Sewing, Moosic, PA; Notice of Termination of Investigation

Pursuant to section 221 of the Trade Act of 1974, as amended, an investigation was initiated on July 19, 2004, in response to a worker petition filed by a company official on behalf of workers at P & R Sewing, Moosic, Pennsylvania.

The petition regarding the investigation has been deemed invalid. In order to establish a valid worker group, there must be at least three full-time workers employed at some point during the period under investigation. Workers of the group subject to this investigation did not meet the threshold of employment. Consequently the investigation has been terminated.

Signed in Washington, DC this 29th day of July, 2004.

Elliott S. Kushner,

Certifying Officer, Division of Trade Adjustment Assistance.

[TA–W–55,073]

R/D Tech, Madison, PA; Notice of Revised Determination on Reconsideration

By letter dated July 23, 2004, a petitioner requested administrative reconsideration regarding Alternative Trade Adjustment Assistance (ATAA). The negative determination was signed on June 28, 2004. The notice will soon be published in the **Federal Register**.

The workers of Badger R/D Tech, Madison, Pennsylvania were certified for Trade Adjustment Assistance (TAA) on June 28, 2004.

The initial ATAA investigation determined that the skills of the subject worker group are easily transferable to other positions in the local area.

The petitioner alleges in the request for reconsideration that the skills of the workers at the subject firm are not easily transferable.

Additional investigation has determined that the workers possess skills that are not easily transferable. A significant number or proportion of the worker group are age fifty years or over. Competitive conditions within the industry are adverse.

Conclusion

After careful review of the additional facts obtained on reconsideration, I conclude that the requirements of section 246 of the Trade Act of 1974, as amended, have been met for workers at the subject firm.

In accordance with the provisions of the Act, I make the following certification:

• All workers of R/D Tech, Madison, Pennsylvania, who became totally or partially separated from employment on or after June 2, 2003 through June 28, 2006, are eligible to apply for adjustment assistance under section 223 of the Trade Act of 1974, and are also eligible to apply for alternative trade adjustment assistance under section 246 of the Trade Act of 1974.

Signed in Washington, DC this 30th day of July, 2004.

Elliott S. Kushner,

Certifying Officer, Division of Trade Adjustment Assistance.

Sanford Pattern Works, Inc. Taylor, MI; Notice of Negative Determination Regarding Application for Reconsideration

By application of June 28, 2004, a petitioner requested administrative reconsideration of the Department's negative determination regarding eligibility for workers and former workers of the subject firm to apply for Trade Adjustment Assistance (TAA). The denial notice applicable to workers of Sanford Pattern Works, Inc., Taylor, Michigan was signed on April 21, 2004, and published in the **Federal Register** on June 2, 2004 (69 FR 31134).

Pursuant to 29 CFR 90.18(c) reconsideration may be granted under the following circumstances:

(1) If it appears on the basis of facts not previously considered that the determination complained of was erroneous;

(2) if it appears that the determination complained of was based on a mistake in the determination of facts not previously considered; or

(3) if in the opinion of the Certifying Officer, a misinterpretation of facts or of the law justified reconsideration of the decision.

The TAA petition was filed on behalf of workers at Sanford Pattern Works, Inc., Taylor, Michigan engaged in production of polystyrene patterns for the tool & die industry. The petition was denied because the ''contributed importantly'' group eligibility requirement of Section 222 of the Trade Act of 1974, as amended, was not met. The ''contributed importantly'' test is generally demonstrated through a survey of customers of the workers' firm. The survey revealed that the major declining customer did not import polystyrene patterns during the relevant time period.

In the request for reconsideration, the petitioner requests to extend the investigation and includes Blue Print products which are allegedly being imported from China.

A company official was contacted to confirm whether blue prints are produced by the subject firm. The company official stated that Sanford Pattern Works, Inc., does not produce blue prints for sales to customers. Any blue prints produced by the workers of the subject firm are used internally for the production of polystyrene patterns. The official further stated that the subject firm did not shift any production nor did it import any products during the relevant period.

The petitioner further states that even though polystyrene patters manufactured by the subject firm are not being imported by its customers, customers use these patterns in the production of dies, which are now being built and imported by customers from China. The petitioner concludes that, because the production of dies occurs abroad, the subject firm workers producing polystyrene patterns are import impacted.

In order to establish import impact, the Department must consider imports that are like or directly competitive with those produced at the subject firm. The Department conducted a survey of the subject firm's major declining customer. The survey revealed that the customer did not import polystyrene patterns during the relevant period.

Conclusion

After review of the application and investigative findings, I conclude that there has been no error or misinterpretation of the law or of the facts which would justify reconsideration of the Department of Labor's prior decision. Accordingly, the application is denied.

Signed at Washington, DC, this 30th day of July, 2004.

Elliott S. Kushner,

Certifying Officer, Division of Trade Adjustment Assistance, Assistance.

Seagate Technology, Inc., Bloomington, MN; Notice of Termination of Investigation

Pursuant to Section 221 of the Trade Act of 1974, as amended, an investigation was initiated on July 23, 2004 in response to a petition filed by a state representative on behalf of workers at Seagate Technology, Inc., Bloomington, Minnesota.

The petitioning group of workers is covered by an earlier petition instituted on July 21, 2004 (TA–W–55,285) that is the subject of an ongoing investigation for which a determination has not yet been issued. Further investigation in this case would duplicate efforts and serve no purpose; therefore the investigation under this petition has been terminated.

Signed at Washington, DC this 26th day of July 2004.

Investigations Regarding Certifications of Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under Section 221(a) of the Trade Act of 1974 (''the Act'') and are identified in the Appendix to this notice. Upon receipt of these petitions, the Director of the Division of Trade Adjustment Assistance, Employment and Training Administration, has instituted investigations pursuant to Section 221(a) of the Act.

The purpose of each of the investigations is to determine whether the workers are eligible to apply for adjustment assistance under Title II, Chapter 2, of the Act. The investigations will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

The petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Division of Trade Adjustment Assistance, at the address shown below, not later than August 23, 2004.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Division of Trade Adjustment Assistance, at the address shown below, not later than August, 23, 2004.

The petitions filed in this case are available for inspection at the Office of the Director, Division of Trade Adjustment Assistance, Employment and Training Administration, U.S. Department of Labor, Room C–5311, 200 Constitution Avenue, NW., Washington, DC 20210.

Timothy Sullivan,

Director, Division of Trade Adjustment Assistance.

Westside Stitching, Inc., West Wyoming, PA; Notice of Negative Determination Regarding Application for Reconsideration

By application of July 12, 2004, a company official requested administrative reconsideration of the Department's negative determination regarding eligibility to apply for Trade Adjustment Assistance (TAA), applicable to workers and former workers of the subject firm. The denial notice was signed on June 16, 2004, and published in the **Federal Register** on July 7, 2004 (69 FR 40983).

Pursuant to 29 CFR 90.18(c) reconsideration may be granted under the following circumstances:

(1) If it appears on the basis of facts not previously considered that the determination complained of was erroneous;

(2) if it appears that the determination complained of was based on a mistake in the determination of facts not previously considered; or

(3) if in the opinion of the Certifying Officer, a misinterpretation of facts or of the law justified reconsideration of the decision.

The petition for the workers of Westside Stitching, Inc., West Wyoming, Pennsylvania engaged in production of motion furniture was denied because the ''contributed importantly'' group eligibility requirement of Section 222 of the Trade Act of 1974, as amended, was not met. The ''contributed importantly'' test is generally demonstrated through a survey of the workers' firm's customers. The survey revealed no increase of imports of motion furniture during the relevant period. The subject firm did not import motion furniture in the relevant period nor did it shift production to a foreign country.

The petitioner alleges that the subject firm lost its business due to its major customer importing products from China.

This customer was surveyed by the Department during the original investigation. A review of the survey confirmed no import purchases of motion furniture during the relevant period.

The petitioner further states that the subject firm manufactures only motion furniture, excluding any lift mechanisms, and that the subject firm's customers started importing a lift mechanism, a component to the motion furniture. The petitioner concludes that, because the production of lift mechanisms occurs abroad, the subject firm workers producing motion furniture are import impacted.

In order to establish import impact, the Department must consider imports that are like or directly competitive with those produced at the subject firm. The Department conducted a survey of the subject firm's major declining customer regarding their purchases of motion furniture. The survey revealed that the declining customers did not import motion furniture during the relevant period.

Conclusion

After review of the application and investigative findings, I conclude that there has been no error or misinterpretation of the law or of the facts which would justify reconsideration of the Department of Labor's prior decision. Accordingly, the application is denied.

Signed at Washington, DC this 3rd day of August, 2004.

Elliott S. Kushner,

Certifying Officer, Division of Trade Adjustment Assistance.

Proposed Information Collection Request; Submitted for Public Comment and Recommendations; Job Corps Placement Verification and Follow-up of Job Corps Participants

ACTION: Notice.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) [44 U.S.C. 3506(c)(2)(A)]. This program helps to ensure that requested

data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. The national office of Job Corps is soliciting comments concerning the extension of the Job Corps' Graduate and Former Enrollee Placement Re-Verification and Follow-up Surveys.

DATES: Submit comments on or before October 12, 2004.

ADDRESSES: Send comments to Chris Conboy, U.S. Department of Labor, Office of Job Corps, 200 Constitution Ave., NW., N–4463, Washington, DC 20210. E-Mail Internet Address: *conboy.chris@dol.gov.* Telephone number: (202) 693–3000. Fax number: (202) 693–2767.

FOR FURTHER INFORMATION CONTACT: Chris Conboy, U.S. Department of Labor, Office of Job Corps, 200 Constitution Ave., NW., N–4463, Washington, DC 20210. E-Mail Internet Address: *conboy.chris@dol.gov*. Telephone number: (202) 693–3000. Fax number: (202) 693–2767.

SUPPLEMENTARY INFORMATION:

I. Background

Job Corps is the nation's largest and most comprehensive residential education and job training program for at-risk youth, ages 16 through 24. Program participants are typically high school dropouts in need of further education and vocational training. Authorized by the Workforce Investment Act (WIA) of 1998, Job Corps is operated by the Department of Labor through a nationwide network of 118 Job Corps centers. The program is primarily residential, operating 24 hours per day, 7 days per week, with non-resident students limited by legislation to 20 percent of national enrollment. These centers presently accommodate more than 42,000 students. While students may stay in Job Corps up to two years to complete their programs, the average length of stay is eight months. Thus, more than 68,000 young people receive training in Job Corps in a year.

When they separate from Job Corps, youth are prepared to pursue employment opportunities related to their Job Corps training, post-secondary educational and training experiences, or enter the Armed Forces. The purpose of this data collection effort is to provide the national office of Job Corps with information on the status of Job Corps students after they separate from the program. Information will be collected on the status of placed graduates 13 weeks, 6 months, and 12 months after their initial placement in a job or school/training program. Similar information will also be collected on the status of former enrollees (non-graduates who stayed at least 60 days) 13 weeks after they separate from Job Corps. This data collection effort also includes re-verification of reported initial employment and/or school placements of graduates and former enrollees. These data will be used to:

- Provide information to Congress and the Secretary of Labor on the employment and education outcomes of Job Corps graduates and former enrollees per WIA reporting requirements.
- Assess graduates' and former enrollees' satisfaction with their Job Corps experience in order to identify useful program aspects and those factors that contributed to decisions to withdraw from the program prior to graduation, where applicable.

Information to fulfill these objectives will be collected using telephone surveys. These telephone surveys will be conducted with graduates and former enrollees at the aforementioned times.

The Secretary of Labor will use the data collected to assess Job Corps' effectiveness in meeting its objectives according to WIA. In addition, the national director of Job Corps will incorporate the data into its Outcome Measurement System to evaluate the short-term post-center outcomes of graduates and former enrollees, as well as the long-term post-center outcomes of graduates. The director will also use this information on student outcomes and customer feedback to develop and/or refine policies in order to improve its delivery of educational and job training services to at-risk youth.

II. Desired Focus of Comments

Currently, the Office of Job Corps is soliciting comments concerning the proposed extension of the Job Corps Placement Verification and Follow-up of Job Corps Participants:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the agency's burden estimates for the proposed data collection, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses.

A copy of the proposed information collection request (ICR) can be obtained by contacting the office listed below in the addressee section of this notice.

III. Current Actions

This submission requests approval of three surveys that will be used to collect follow-up data on individuals who are no longer actively participating in Job Corps. The surveys are composed of modules that include questions designed to obtain the following information: re-verification of initial job and/or school placements; employment and educational experiences; job search activities of those who are neither working nor in school; and information about former participants' satisfaction with the services provided by Job Corps.

Additionally, this submission requests approval of two brief surveys (one for employers and one for schools or training institutions) that will be used to collect initial placement re-verification data for the subset of placed graduates and former enrollees that cannot be contacted directly.

Type of Review: Extension.

Agency: Office of Job Corps.

Title: Job Corps' Graduate and Former Enrollee Placement Re-Verification and Follow-up Surveys.

OMB Number: 1205–0426.

Recordkeeping: The respondent is not required to retain records; Career Transition Service providers and center staff are required to retain records of graduates and former enrollees, who are placed in a job, further education or military service, for three years.

Affected Public: Individuals who separate from Job Corps; business or other for-profit/not-for-profit institutions.

Cite/Reference/Form/etc: 20 CFR, Subpart A, Section 670.100.

See Burden Summary Below:

Respondent category	Number of responses	Estimated hours per response	Estimated hours total burden
Placed Former Enrollees at 90 days	1,815	.25	454
Placed Graduates at 90–120 days	22,720	.25	5,680
Placed Graduates at 6 Months	23,360	.20	4,672
Placed Graduates at 12 Months	21,440	.20	4,288
Employer/Institution Re-verification	8,172	.17	1,389
Total	77,507		16,483

Total Burden Hours: 16,483.

Total Burden Cost (capital/startup): 0.

Total Burden Cost (operating/maintaining): $2,908,443.

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

Dated: August 4, 2004.

Grace Kilbane,

Office of Job Corps, Administrator.

BILLING CODE 4510–30–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

Proposed Information Collection Request Submitted for Public Comment and Recommendations; Health Standards for Diesel Particulates (Underground Metal and Nonmetal Mines)

ACTION: Notice.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) [44 U.S.C. 3506(c)(2)(A)]. This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed.

Currently, the Mine Safety and Health Administration (MSHA) is soliciting comments concerning the extension of the information collection related to the 30 CFR 57.5060, 57.5066, 57.5070, 57.5071, and 57.5075—Health Standards for Diesel Particulates (Underground Metal and Nonmetal Mines).

DATES: Submit comments on or before October 12, 2004.

ADDRESSES: Send comments to Melissa Stoehr, Acting Chief, Records Management Branch, 1100 Wilson Boulevard, Room 2134, Arlington, VA 22209–3939. Commenters are encouraged to send their comments on computer disk, or via E-mail to *stoehr.melissa@dol.gov.* Ms. Stoehr can be reached at (202) 693–9827 (voice), or (202) 693–9801 (facsimile).

FOR FURTHER INFORMATION CONTACT: Contact the employee listed in the **ADDRESSES** section of this notice.

SUPPLEMENTARY INFORMATION:

I. Background

These sections require mine operators to take certain actions to limit the concentration of diesel particulate matter (DPM) to which metal and nonmetal miners are exposed in underground areas of a mine where miners normally work or travel. If a mine has technological constraints in meeting this time requirement, then the mine operator can file a special extension application after January 19, 2006, under § 57.5060(c). Section 57.5071 requires mine operators to sample the air as often as necessary to determine that DPM concentrations do not exceed the limit. Also under this section, if a mine environment is above the DPM concentration limit, mine operators will have to take corrective actions and post the corrective actions taken. Mine operators must also provide adequate respiratory protection to overexposed miners and enroll them in a respiratory protection program until engineering and administrative controls are shown to be effective in limiting the DPM levels to the concentration limit.

Mine operators must also take certain actions to ensure that diesel-powered equipment is maintained and operated in a manner that will limit DPM exposures. Section 57.5066(b) requires mine operators to tag diesel-powered equipment at any time there is any apparent emission-related defect in the equipment. Each time that there is an emission related problem on a diesel-powered machine and the machine is tagged, there also must be a record made of the equipment tagged. For each diesel machine that has been tagged, an examination must be conducted concerning the tagged equipment and a record must be made of the examination. Section 57.5066(c) requires operators to assure that miners performing emissions-related maintenance have adequate training or experience concerning the maintenance of diesel powered equipment.

And, all miners at a mine who reasonably can expect to be exposed to diesel emissions on mine property must receive annual training in accordance with § 57.5070(a)(1) through (a)(4).

II. Desired Focus of Comments

MSHA is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submissions of responses.

A copy of the proposed information collection request can be obtained by contacting the employee listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice, or viewed on the Internet by accessing the MSHA home page (*http://www.msha.gov*) and then choosing ''Statutory and Regulatory Information'' and ''Federal Register Documents.''

III. Current Actions

Under 30 CFR 57.5060, 57.5066, 57.5070, 57.5071, and 57.5075.

Type of Review: Extension.

Agency: Mine Safety and Health Administration.

Title: Health Standards for Diesel Particulates (Underground Metal and Nonmetal Mines).

OMB Number: 1219–0135.

Affected Public: Business or other for-profit.

Frequency: On occasion, semi-annually and quarterly.

Affected Public: Business or other for-profit.

Respondents: 196.

Total Burden Hours: 2,738.

Total Burden Cost (capital/startup): $0.

Total Burden Cost (operating/maintaining): $562,791.

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

BILLING CODE 4510–43–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

Summary of Decisions Granting in Whole or in Part Petitions for Modification

AGENCY: Mine Safety and Health Administration (MSHA), Labor.

ACTION: Notice of affirmative decisions issued by the Administrators for Coal Mine Safety and Health and Metal and Nonmetal Mine Safety and Health on petitions for modification of the application of mandatory safety standards.

SUMMARY: Under section 101 of the Federal Mine Safety and Health Act of 1977, the Secretary of Labor (Secretary) may allow the modification of the application of a mandatory safety standard to a mine if the Secretary determines either that an alternate method exists at a specific mine that will guarantee no less protection for the miners affected than that provided by the standard, or that the application of the standard at a specific mine will result in a diminution of safety to the affected miners.

Final decisions on these petitions are based on the Petitioner's statements, comments and information submitted by interested persons, and a field investigation of the conditions at the mine. MSHA, as designee of the Secretary, has granted or partially granted the requests for modification listed below. In some instances, the decisions are conditioned upon compliance with stipulations stated in the decision. The term FR Notice appears in the list of affirmative decisions below. The term refers to the **Federal Register** volume and page where MSHA published a notice of the filing of the petition for modification.

FOR FURTHER INFORMATION CONTACT: Petitions and copies of the final decisions are available for examination by the public in the Office of Standards, Regulations, and Variances, MSHA, 1100 Wilson Boulevard, Room 2350, Arlington, Virginia 22209. For further information contact Barbara Barron at 202–693–9447.

Dated in Arlington, Virginia this 4th day of August, 2004.

Marvin W. Nichols, Jr.,

Director, Office of Standards, Regulations, and Variances.

Affirmative Decisions on Petitions for Modification

Docket No.: M–2001–122-C.

FR Notice: 67 FR 6754.

Petitioner: Pine Ridge Coal Company.

Regulation Affected: 30 CFR 75.503 (30 CFR 18.35).

Summary of Findings: Petitioner's proposal is to use trailing cables not to exceed 900 feet to supply its shuttle cars, roof bolters, and mobile roof supports. On July 30, 2002, the petitioner filed an amended petition requesting that shuttle cars be deleted from this petition. The trailing cable(s) would not be smaller than No. 2 AWG for roof bolter(s), and not smaller than No. 4 AWG for mobile roof support(s), and other safeguards would be in place, as outlined in the amended petition. This is considered an acceptable alternative method for trailing cables that supply 480-volt, three-phase, alternating current to roof bolters and mobile roof supports at the Big Mountain No. 16 Mine. MSHA grants the petition for modification for the Big Mountain No. 16 Mine with conditions.

Docket No.: M–2002–074–C.

FR Notice: 67 FR 63166.

Petitioner: Monterey Coal Company.

Regulation Affected: 30 CFR 75.503 (30 CFR 18.35).

Summary of Findings: Petitioner's proposal is to install a Hubbel/Ensign Electric Division Class 1401 Permissible Distribution Box so that two Fletcher Model CDR–15 slim line roof bolters can be used near the end of the longwall panel for additional support of the face when transferring equipment to the next panel. The distribution box will have a maximum of 750 feet of No. 4/0 AWG G–GC trailing cable extending from the power center located outby; and roof bolters will be equipped with No. 2 AWG G–GC portable cables with 1,000 feet of the cable extended across the face from the distribution box. The petitioner's previous petition for modification, docket number M–94–131–C, was granted to extend the trailing cables to the Fletcher roof bolters to 1,200 feet with short circuit protection set at 800 Amps Maximum and a longwall panel width of 750 feet Maximum. The petitioner assert that since the granting of its previous petition, the longwall panel has been increased to 1,100 feet Maximum, and is approved and accepted by the MSHA Approval and Certification Center under 2G–3955A–0. This is considered an acceptable alternative method at the Monterey Coal Company No.1 Mine for trailing cables that apply only to 600-volts to Hubble/Ensign Electric Division Class 1401 permissible distribution boxes, X/P–1733–3, and trailing cables supplying 600-volts to the Fletcher roof bolters, Model CDR–15, located on the longwall recovery. MSHA grants the petition for modification for the No. 1 Mine with conditions.

Docket No.: M–2002–077–C.

FR Notice: 67 FR 63166.

Petitioner: Lone Mountain Processing, Inc.

Regulation Affected: 30 CFR 75.1002.

Summary of Findings: Petitioner's proposal is to use a 2,400-volt power center to power a continuous miner with high-voltage trailing cable inby the last open crosscut and within 150 feet of pillar workings. This is considered an acceptable alternative method for the Huff Creek Mine No. 1. MSHA grants the petition for modification for the use of the 2,400 high-voltage continuous miner(s) at the Huff Creek Mine No. 1 with conditions.

Docket No.: M–2002–078–C.

FR Notice: 67 FR 63166.

Petitioner: Lone Mountain Processing, Inc.

Regulation Affected: 30 CFR 75.1002.

Summary of Findings: Petitioner's proposal is to use a 2,400-volt power center to power a continuous miner with high-voltage trailing cable inby the last open crosscut and within 150 feet of pillar workings. This is considered an acceptable alternative method for the Darby Fork Mine No. 1. MSHA grants the petition for modification for the use of the 2,400 high-voltage continuous miner(s) at the Darby Fork Mine No. 1 with conditions.

Docket No.: M–2003–044–C.

FR Notice: 68 FR 38393.

Petitioner: Nowacki Coal Company.
Regulation Affected: 30 CFR 75.360.
Summary of Findings: Petitioner's proposal is to conduct a visual examination of each seal for physical damage from the slope gunboat during the pre-shift examination after an air quantity reading is taken just inby the intake portal. The petitioner further proposes to take an additional reading for methane, carbon dioxide, and oxygen deficiency at intake air split locations just off the slope in the gangway portion of the working section and record the results of these reading in a book that will be maintained on the surface of the mine and made available to all interested parties. This is considered an acceptable alternative method for the Nowacki Coal Company Slope Mine. MSHA grants the petition for modification to allow evaluation of the seals off the shaft, from the gunboat in the intake air haulage slope of the Nowacki Coal Company Slope Mine with conditions.
Docket No.: M–2003–045–C.
FR Notice: 68 FR 38393.
Petitioner: Nowacki Coal Company.
Regulation Affected: 30 CFR 75.364(b)(1), (b)(4), and (b)(5).
Summary of Findings: Petitioner's proposal is to (i) Preshift examine the intake haulage slope and primary escapeway areas from the gunboat/slope car with an alternative air quality evaluation at the section's intake gangway level; (ii) travel and thoroughly examine these areas for hazardous conditions once a month; and (iii) have the examiner place the dates, times, and his/her initials at appropriate locations and maintain records of the examinations on the surface of the mine. MSHA grants the petition for modification of 30 CFR 75.364(b)(4) for the petitioner to conduct examinations of the seals along the return and bleeder air courses from the ladder on a weekly basis instead of on a monthly basis as requested for the Nowacki Slope Mine with conditions.
Docket No.: M–2003–049–C.
FR Notice: 68 FR 40701.
Petitioner: Drummond Company, Inc.
Regulation Affected: 30 CFR 75.507.
Summary of Findings: Petitioner's proposal is to use 4,160-volt, three-phase, alternating current deepwell submersible pumps in boreholes in the Shoal Creek Mine. This is considered an acceptable alternative method for the Mine. MSHA grants the petition for modification for use at the Shoal Creek Mine with conditions.
Docket No.: M–2003–054–C.
FR Notice: 68 FR 47945.
Petitioner: Jim Walter Resources, Inc.
Regulation Affected: 30 CFR 75.503 (Schedule 2G, 30 CFR 18.35).
Summary of Findings: Petitioner's proposal is to use extended length cables to power 2,400-volt continuous mining machines. This is considered an acceptable alternative method to apply only to trailing cables that supply 2,400-volt, three-phase, alternating current to continuous mining machines at the Jim Walter Resources, Inc., No. 4 Mine. The trailing cables will have a 90-degree insulation rating. MSHA grants the petition for modification for the Jim Walter Resources, Inc., No. 4 Mine with conditions.
Docket No.: M–2003–055–C.
FR Notice: 68 FR 47945.
Petitioner: Jim Walter Resources, Inc.
Regulation Affected: 30 CFR 75.1002.
Summary of Findings: Petitioner's proposal is to use 2,400-volt trailing cable to power a continuous miner in by the last open crosscut and within 150 feet of pillar workings. This is considered an acceptable alternative method for the Jim Walter Resources, Inc., No. 4 Mine. MSHA grants the petition for modification for the Jim Walter Resources, Inc., No. 4 Mine with conditions.
Docket No.: M–2003–073–C.
FR Notice: 68 FR 61701.
Petitioner: Bowie Resources, Ltd.
Regulation Affected: 30 CFR 75.1909(b)(6).
Summary of Findings: Petitioner's proposal is to use an alternative method in lieu of using front wheel brakes on the Caterpillar 120 G Diesel Roadbuilder Serial No. 4HDO1844 used at the Bowie #3 Mine, and limit the speed of the grader to 10 to 12 miles per hour (mph) by permanently blocking higher gear ratios, and train the grader operators to drop the grader blade to provide additional stopping capability in emergency situations. This is considered an acceptable alternative method for the Bowie #3 Mine. MSHA grants the petition for modification for use of the Caterpillar 120 G (Serial No. 4HDO1844), Six-wheel diesel graders (Roadbuilder) at the Bowie #3 Mine with conditions.
Docket No.: M–2003–074–C.
FR Notice: 68 FR 61701.
Petitioner: Newtown Energy Incorporated.
Regulation Affected: 30 CFR 75.1002.
Summary of Findings: Petitioner's proposal is to operate a 2,400-volt Joy 12CM27 continuous mining machine at the Coalburg #1 Mine. This is considered an acceptable alternative method for the Coalburg #1 Mine. MSHA grants the petition for modification for the Coalburg #1 Mine with conditions.
Docket No.: M–2003–004–M.
FR Notice: 68 FR 57933.
Petitioner: Dynatec Mining Corporation.
Regulation Affected: 30 CFR 57.22606(a) and (c).
Summary of Findings: Petitioner's proposal is to use electric detonators to initiate blasts but requests modification of the existing standard to allow the use of nonel detonators to detonate the explosives in the blast holes. This is considered an acceptable alternative method for the FMC No. 9 Ventilation Shaft Project. MSHA grants the petition for modification for the FMC No. 9 Ventilation Shaft Project Mine with conditions.

NUCLEAR REGULATORY COMMISSION

[Docket No. 030–05004]

Notice of Consideration of Amendment Request to Decommission Northern States Power Company D.B.A. Xcel Energy Pathfinder Site at Sioux Falls, SD, and Opportunity To Provide Comments and Request a Hearing; Correction

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of a license amendment request and opportunity to provide public comments and request a hearing. Notice of public meeting; correction.

SUMMARY: This document corrects a notice appearing in the **Federal Register** on August 4, 2004 (69 FR 47185), to request the decommission of Northern States Power Company D.B.A. Xcel Energy Pathfinder Site at Sioux Falls, South Dakota, and opportunity to provide comments and request a hearing. This action is necessary to add contact information that was previously omitted.

EFFECTIVE DATE: August 11, 2004.

FOR FURTHER INFORMATION CONTACT: Chad Glenn, Project Manager, Decommissioning Directorate, Division of Waste Management and Environmental Protection, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone (301) 415–6722; fax (301) 415–5398; or e-mail at *cjg1@nrc.gov.*

SUPPLEMENTARY INFORMATION: On page 47186, center column, the fourth complete paragraph, remove ''[Insert Contact and Contact Information]'' and insert ''Bruce Colt, Xcel Energy, Suite 2900, 800 Nicollet Mall, Minneapolis, NM 55402''.

Dated at Rockville, Maryland, this 5th day of August 2004.

For the Nuclear Regulatory Commission.

Chad Glenn,

Project Manager, Office of Nuclear Material Safety and Safeguards.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–220 and 50–410]

Constellation Energy Group; Nine Mile Point Nuclear Station, Units 1 and 2; Notice of Intent To Prepare an Environmental Impact Statement and Conduct Scoping Process

Constellation Energy Group, Inc., (Constellation) has submitted applications for renewal of Facility Operating Licenses, DPR–63 and NPF–69 for an additional 20 years of operation at the Nine Mile Point Nuclear Station, Units 1 and 2 (NMP). NMP is located on the southeastern shore of Lake Ontario in the town of Scriba, Oswego County, New York. The operating licenses for NMP, Units 1 and 2, expire on August 22, 2009, and October 31, 2026, respectively. The applications for renewal were received on May 26, 2004, pursuant to Title 10 of the Code of Federal Regulations Part 54 (10 CFR). A notice of receipt and availability of the applications, which included the environmental report (ER), was published in the **Federal Register** on June 8, 2004 (69 FR 32069). A notice of acceptance for docketing of the applications for renewal of the facility operating license was published in the **Federal Register** on July 21, 2004, (69 FR 43631). The purpose of this notice is to inform the public that the U.S. Nuclear Regulatory Commission (NRC) will be preparing an environmental impact statement (EIS) in support of the review of the license renewal applications and to provide the public an opportunity to participate in the environmental scoping process, as defined in 10 CFR 51.29. In addition, as outlined in 36 CFR 800.8, ''Coordination with the National Environmental Policy Act,'' the NRC plans to coordinate compliance with Section 106 of the National Historic Preservation Act in meeting the requirements of the National Environmental Policy Act of 1969 (NEPA).

In accordance with 10 CFR 51.53(c) and 10 CFR 54.23, Constellation submitted the ER as part of the applications. The ER was prepared pursuant to 10 CFR Part 51 and is available for public inspection at the NRC Public Document Room (PDR), located at One White Flint North, 11555 Rockville Pike (first floor), Rockville, Maryland 20852, or from the Publicly Available Records component of NRC's Agencywide Documents Access and Management System (ADAMS). ADAMS is accessible at *http://www.nrc.gov/reading-rm/adams.html*, which provides access through the NRC's Electronic Reading Room link. Persons who do not have access to ADAMS, or who encounter problems in accessing the documents located in ADAMS, should contact the NRC's PDR Reference staff at 1–800–397–4209, or 301–415–4737, or by e-mail to *pdr@nrc.gov*. The applications may also be viewed on the Internet at *http://www.nrc.gov/reactors/operating/licensing/renewal/applications.html*. In addition, the Penfield Library, located at State University of New York, Oswego, NY 13126, has agreed to make the ER available for public inspection.

This notice advises the public that the NRC intends to gather the information necessary to prepare a plant-specific supplement to the Commission's ''Generic Environmental Impact Statement (GEIS) for License Renewal of Nuclear Plants,'' (NUREG–1437) in support of the review of the applications for renewal of the NMP operating licenses for an additional 20 years. Possible alternatives to the proposed action (license renewal) include no action and reasonable alternative energy sources. The NRC is required by 10 CFR 51.95 to prepare a supplement to the GEIS in connection with the renewal of an operating license. This notice is being published in accordance with the National Environmental Policy Act of 1969 (NEPA) and the NRC's regulations found in 10 CFR Part 51.

The NRC will first conduct a scoping process for the supplement to the GEIS and, as soon as practicable thereafter, will prepare a draft supplement to the GEIS for public comment. Participation in the scoping process by members of the public and local, State, Tribal, and Federal government agencies is encouraged. The scoping process for the supplement to the GEIS will be used to accomplish the following:

a. Define the proposed action which is to be the subject of the supplement to the GEIS.

b. Determine the scope of the supplement to the GEIS and identify the significant issues to be analyzed in depth.

c. Identify and eliminate from detailed study those issues that are peripheral or that are not significant.

d. Identify any environmental assessments and other EISs that are being or will be prepared that are related to, but are not part of the scope of the supplement to the GEIS being considered.

e. Identify other environmental review and consultation requirements related to the proposed action.

f. Indicate the relationship between the timing of the preparation of the environmental analyses and the Commission's tentative planning and decision-making schedule.

g. Identify any cooperating agencies and, as appropriate, allocate assignments for preparation and schedules for completing the supplement to the GEIS to the NRC and any cooperating agencies.

h. Describe how the supplement to the GEIS will be prepared, and include any contractor assistance to be used.

The NRC invites the following entities to participate in scoping:

a. The applicant, Constellation Energy Group.

b. Any Federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved, or that is authorized to develop and enforce relevant environmental standards.

c. Affected State and local government agencies, including those authorized to develop and enforce relevant environmental standards.

d. Any affected Indian tribe.

e. Any person who requests or has requested an opportunity to participate in the scoping process.

f. Any person who has petitioned or intends to petition for leave to intervene.

In accordance with 10 CFR 51.26, the scoping process for an EIS may include a public scoping meeting to help identify significant issues related to a proposed activity and to determine the scope of issues to be addressed in an EIS. The NRC has decided to hold public meetings for the NMP license renewal supplement to the GEIS. The scoping meetings will be held at the Town of Scriba Conference Room, 42 Creamery Road, Oswego, New York 13126, on Tuesday, September 21, 2004. There will be two sessions to accommodate interested parties. The first session will convene at 1:30 p.m. and will continue until 4:30 p.m., as necessary. The second session will convene at 7 p.m. with a repeat of the overview portions of the meeting and will continue until 10 p.m., as necessary. Both meetings will be transcribed and will include: (1) An overview by the NRC staff of the NEPA environmental review process, the proposed scope of the supplement to the GEIS, and the proposed review

schedule; and (2) the opportunity for interested government agencies, organizations, and individuals to submit comments or suggestions on the environmental issues or the proposed scope of the supplement to the GEIS. Additionally, the NRC staff will host informal discussions one hour before the start of each session at the Town of Scriba Conference Room. No formal comments on the proposed scope of the supplement to the GEIS will be accepted during the informal discussions. To be considered, comments must be provided either at the transcribed public meetings or in writing, as discussed below. Persons may register to attend or present oral comments at the meetings on the scope of the NEPA review by contacting Ms. Leslie Fields, by telephone at 1–800–368–5642, extension 1186, or by Internet to the NRC at *NineMilePointEIS@nrc.gov* no later than September 17, 2004. Members of the public may also register to speak at the meeting within 15 minutes of the start of each session. Individual oral comments may be limited by the time available, depending on the number of persons who register. Members of the public who have not registered may also have an opportunity to speak, if time permits. Public comments will be considered in the scoping process for the supplement to the GEIS. Ms. Fields will need to be contacted no later than September 17, 2004, if special equipment or accommodations are needed to attend or present information at the public meeting, so that the NRC staff can determine whether the request can be accommodated.

Members of the public may send written comments on the environmental scope of the NMP license renewal review to: Chief, Rules and Directives Branch, Division of Administrative Services, Office of Administration, Mailstop T–6D59, U.S. Nuclear Regulatory Commission, Washington, DC, 20555–0001, and should cite the publication date and page number of this **Federal Register** notice. Comments may also be delivered to the U.S. Nuclear Regulatory Commission, Room T–6D59, Two White Flint North, 11545 Rockville Pike, Rockville, Maryland, 20852–2738 from 7:30 a.m. to 4:15 p.m. during Federal workdays. To be considered in the scoping process, written comments should be postmarked by October 11, 2004. Electronic comments may be sent by the Internet to the NRC at *NineMilePointEIS@nrc.gov* and should be sent no later than October 11, 2004, to be considered in the scoping process. Comments will be available electronically and accessible through ADAMS at *http://www.nrc.gov/reading-rm/adams.html*.

Participation in the scoping process for the supplement to the GEIS does not entitle participants to become parties to the proceeding to which the supplement to the GEIS relates. Notice of opportunity for a hearing regarding the renewal applications was the subject of the aforementioned **Federal Register** notice (69 FR 43631). Matters related to participation in any hearing are outside the scope of matters to be discussed at this public meeting.

At the conclusion of the scoping process, the NRC will prepare a concise summary of the determination and conclusions reached, including the significant issues identified, and will send a copy of the summary to each participant in the scoping process. The summary will also be available for inspection in ADAMS at *http://www.nrc.gov/reading-rm/adams.html*. The staff will then prepare and issue for comment the draft supplement to the GEIS, which will be the subject of separate notices and separate public meetings. Copies will be available for public inspection at the above-mentioned addresses, and one copy per request will be provided free of charge. After receipt and consideration of the comments, the NRC will prepare a final supplement to the GEIS, which will also be available for public inspection.

Information about the proposed action, the supplement to the GEIS, and the scoping process may be obtained from Ms. Fields at the aforementioned telephone number or e-mail address.

Dated at Rockville, Maryland, this 2nd day of August 2004.

For the Nuclear Regulatory Commission.

Pao-Tsin Kuo,

Program Director, License Renewal and Environmental Impacts Program, Division of Regulatory Improvement Programs, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–P

SECURITIES AND EXCHANGE COMMISSION

[File No. 22–28742]

Application and Opportunity for Hearing: NationsRent Companies, Inc.

August 5, 2004.

The Securities and Exchange Commission gives notice that NationsRent Companies, Inc. has filed an application under section 304(d) of the Trust Indenture Act of 1939. NationsRent Companies asks the Commission to exempt from the certificate or opinion delivery requirements of section 314(d) of the 1939 Act certain provisions of an indenture dated October 23, 2003, as supplemented by the first supplement, dated as of July 27, 2004, to the indenture dated as of October 23, 2003, between NationsRent Companies certain guarantors, and Wilmington Trust Company, as trustee. The indenture relates to 9½% Senior Secured Notes due 2010.

Section 304(d) of the 1939 Act, in part, authorizes the Commission to exempt conditionally or unconditionally any indenture from one or more provisions of the 1939 Act. The Commission may provide an exemption under section 304(d) if it finds that the exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the 1939 Act.

Section 314(d) requires the obligor to furnish to the indenture trustee certificates or opinions of fair value from an engineer, appraiser or other expert upon any release of collateral from the lien of the indenture. The engineer, appraiser or other expert must opine that the proposed release will not impair the security under the indenture in contravention of the provisions of the indenture. The application requests an exemption from section 314(d) for specified dispositions of collateral that are made in NationsRent Companies' and the guarantors' ordinary course of business.

In its application, NationsRent Companies alleges that:

1. The indenture permits NationsRent Companies and the guarantors to dispose of collateral in the ordinary course of their business;

2. NationsRent Companies and the guarantors will deliver to the trustee annual consolidated financial statements audited by certified independent accountants; and

3. NationsRent Companies and the guarantors will deliver to the trustee a semi-annual certificate stating that all dispositions of collateral during the relevant six-month period occurred in NationsRent Companies' and the guarantors' ordinary course of business and that all of the proceeds were used as permitted by the indenture.

Any interested persons should look to the application for a more detailed statement of the asserted matters of fact and law. The application is on file in the Commission's Public Reference Section, File Number 22–28742, 450 Fifth Street, NW., Washington, DC 20549.

The Commission also gives notice that any interested persons may request, in writing, that a hearing be held on this matter. Interested persons must submit those requests to the Commission no later than September 3, 2004. Interested persons must include the following in their request for a hearing on this matter:

- The nature of that person's interest;
- The reasons for the request; and
- The issues of law or fact raised by the application that the interested person desires to refute or request a hearing on.

The interested person should address this request for a hearing to: Jonathan G. Katz, Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609. At any time after September 3, 2004, the Commission may issue an order granting the application, unless the Commission orders a hearing.

For the Commission, by the Division of Corporation Finance, pursuant to delegated authority.

J. Lynn Taylor,

Assistant Secretary.

SMALL BUSINESS ADMINISTRATION

[Declaration of Economic Injury Disaster #9ZN2]

State of Alaska (Amendment #1) Corrected Copy

The above numbered declaration is hereby amended to include the Matanuska-Susitna Borough in the State of Alaska as an economic injury disaster area due to damages caused by wildfires that began on June 7, 2004, and continue to burn.

In addition, applications for economic injury loans from small businesses located in the contiguous political areas of Kenai Peninsula Borough, Municipality of Anchorage, Iditarod Area Regional Education Attendance Area (REAA), and Chugach REAA in the State of Alaska may be filed until the specified date at the previously designated location. All other political areas contiguous to the above named primary borough have previously been declared.

All other information remains the same, *i.e.,* the deadline for filing applications for economic injury is April 22, 2005.

SMALL BUSINESS ADMINISTRATION

[Declaration of Disaster #P045]

Territory of Guam

As a result of the President's major disaster declaration for Public Assistance on July 29, 2004, the U.S. Small Business Administration is activating its disaster loan program only for private non-profit organizations that provide essential services of a governmental nature. I find that the Territory of Guam constitutes a disaster area due to damages caused by high winds, flooding, and mudslides as a result of Tropical Storm Tingting occurring on June 26–29, 2004. Applications for loans for physical damage as a result of this disaster may be filed until the close of business on September 27, 2004 at the address listed below or other locally announced locations:

U.S. Small Business Administration, Disaster Area 4 Office, P.O. Box 419004, Sacramento, CA 95841–9004.

The interest rates are:

	Percent
For physical damage:	
Non-profit organizations without credit available elsewhere	2.750
Non-profit organizations with credit available elsewhere	4.875

The number assigned to this disaster for physical damage is P04506.

(Catalog of Federal Domestic Assistance Program Nos. 59008)

Dated: August 4, 2004.

Herbert L. Mitchell,

Associate Administrator for Disaster Assistance.

SMALL BUSINESS ADMINISTRATION

[Declaration of Disaster #P044]

Commonwealth of the Northern Mariana Islands

As a result of the President's major disaster declaration for Public Assistance on July 29, 2004, the U.S. Small Business Administration is activating its disaster loan program only for private non-profit organizations that provide essential services of a governmental nature. I find that the Islands of Rota, Saipan, and Tinian located within the Commonwealth of Northern Mariana Islands constitute a disaster area due to damages caused by flooding, high surf, high winds, and wind driven rain associated with Typhoon Tingting occurring on June 27–29, 2004. Applications for loans for physical damage as a result of this disaster may be filed until the close of business on September 27, 2004 at the address listed below or other locally announced locations:

U.S. Small Business Administration, Disaster Area 4 Office, P.O. Box 419004, Sacramento, CA 95841–9004.

The interest rates are:

	Percent
For physical damage:	
Non-profit organizations without credit available elsewhere	2.750
Non-profit organizations with credit available elsewhere	4.875

The number assigned to this disaster for physical damage is P04406.

BILLING CODE 8025–01–P

SMALL BUSINESS ADMINISTRATION

Small Business Size Standards: Waiver of the Nonmanufacturer Rule

AGENCY: U.S. Small Business Administration.

ACTION: Notice of waiver of the Nonmanufacturer Rule for ice making machinery manufacturing.

SUMMARY: The U.S. Small Business Administration (SBA) is granting a waiver of the Nonmanufacturer Rule for Ice Making Machinery Manufacturing. The basis for waivers is that no small business manufacturers are supplying these classes of products to the Federal government. The effect of a waiver would be to allow otherwise qualified regular dealers to supply the products of any domestic manufacturer on a Federal contract set aside for small businesses or awarded through the SBA's 8(a) Business Development Program.

DATES: This waiver is effective August 26, 2004.

FOR FURTHER INFORMATI0N CONTACT: Edith Butler, Program Analyst, by

telephone at (202) 619–0422; by fax at (202) 205–7280; or by e-mail at *edith.butler@sba.gov.*

SUPPLEMENTARY INFORMATION: Section 8(a)(17) of the Small Business Act (Act), 15 U.S.C. 637(a)(17), requires that recipients of Federal contracts set aside for small businesses or SBA's 8(a) Business Development Program provide the product of a small business manufacturer or processor, if the recipient is other than the actual manufacturer or processor of the product.

This requirement is commonly referred to as the Nonmanufacturer Rule. The SBA regulations imposing this requirement are found at 13 CFR 121.406(b). Section 8(a)(17)(b)(iv) of the Act authorizes SBA to waive the Nonmanufacturer Rule for any ''class of products'' for which there are no small business manufacturers or processors available to participate in the Federal market.

As implemented in SBA's regulations at 13 CFR 121.1204, in order to be considered available to participate in the Federal market for a class of products, a small business manufacturer must have submitted a proposal for a contract solicitation or received a contract from the Federal government within the last 24 months. The SBA defines ''class of products'' based on six digit coding systems. The first coding system is the Office of Management and Budget North American Industry Classification System (NAICS). The second is the Product and Service Code established by the Federal Procurement Data System.

The SBA received a request on June 14, 2004 to waive the Nonmanufacturer Rule for Ice Making Machinery Manufacturing. In response, on June 22, 2004, SBA published in the **Federal Register** a notice of intent to waive the Nonmanufacturer Rule for Ice Making Machinery Manufacturing.

SBA explained in the notice that it was soliciting comments and sources of small business manufacturers of this class of products. In response to this notice, comments were received from interested parties. SBA has determined from these sources that there are no small business manufacturers of this class of products, and is therefore granting the waiver of the Nonmanufacturer Rule for Ice Making Machinery Manufacturing, NAICS 333415.

Authority: 15 U.S.C. 637(a)(17).

Dated: July 30, 2004.

Emily Murphy,

Acting Associate Administrator for Government Contracting.

Federal Aviation Administration

Premium War Risk Insurance

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of extension of aviation insurance.

SUMMARY: This notice contains the text of a memorandum from the Secretary of Transportation to the President regarding the extension of the provision of aviation insurance coverage for U.S. flag commercial air carrier service in domestic and international operations.

DATES: Dates of extension from August 31, 2004, through December 31, 2004.

FOR FURTHER INFORMATION CONTACT: Helen Kish, Program Analyst, APO–3, or Eric Nelson, Program Analyst, APO–3, Federal Aviation Administration, 800 Independence Ave., SW., Washington, DC 20591, telephone 202–267–9943 or 202–267–3090. Or online at FAA Insurance Web site: *http://insurance.faa.gov.*

SUPPLEMENTARY INFORMATION: On July 30, 2004, the Secretary of Transportation authorized a 60-day extension of aviation insurance provided by the Federal Aviation Administration as follows:

MEMORANDUM FOR THE PRESIDENT

Pursuant to the authority delegated to me by the President in paragraph (3) of Presidential Order 2004–13 of December 11, 2003, I have extended the determination to allow for the provision of aviation insurance and reinsurance coverage for U.S. Flag commercial air carrier service in domestic and international operations through December 31, 2004.

Pursuant to section 44306(c) of Chapter 443 of 49 U.S.C., Aviation Insurance, the period for provision of insurance shall be extended from August 31, 2004, through December 31, 2004.

Norman Y. Mineta

Affected Public: Air Carriers who currently have premium war risk insurance with the Federal Aviation Administration.

Issued in Washington, DC on August 4, 2004.

John M. Rodgers,

Director, Aviation Insurance Program Office.

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Petition for Waiver of Compliance

In accordance with Part 211 of Title 49 Code of Federal Regulations (CFR), notice is hereby given that the Federal Railroad Administration (FRA) received a request for a waiver of compliance with certain requirements of its safety standards. The individual petition is described below, including the party seeking relief, the regulatory provisions involved, the nature of the relief being requested, and the petitioner's arguments in favor of relief.

New Jersey Transit

[Docket Number FRA–2004–18577]

New Jersey Transit (NJ Transit) seeks a waiver of compliance from the provisions of the Federal Track Safety Standards, 49 CFR Section 213.345, Subpart G, regarding certain high speed vehicle qualification testing requirements. The waiver would provide relief from having to use instrumented wheel set (IWS) tests in order to qualify its new COMET V coach equipment for speeds up to 100 mph.

The petitioner recently placed in service 230 of its new COMET V coach cars on AMTRAK's Northeast Corridor (NEC) at speeds up to 90 mph. The petitioner claims that the equipment has been designed and tested in accordance with the Federal Passenger Equipment Safety Standards (CFR Part 238) and that its suspension system specifically meets the requirements for Tier I equipment described in CFR Part 238.227(a). The petitioner also claims that the truck and suspension systems on the COMET V are virtually identical to the COMET IV cars that have operated at up to 100 mph on the NEC since 1996 [and are grandfathered under CFR Part 213.345(a)]. Because of the similarity between the COMET V and COMET IV, NJ Transit considered the COMET V to be qualified to run at 100 mph and requested permission from the FRA in July of 2002.

The FRA's analysis determined that there are enough physical differences between the COMET V and COMET IV which, when considered cumulatively, prevent the FRA from considering these vehicles as equivalent for the purposes of ''grandfathering'' under CFR Part 213.345(a), Subpart G. In its April 9, 2003 letter, FRA approved the petitioner's plan to conduct an equivalency test for the purpose of gathering data necessary to document a Request for Waiver under CFR Section 213.317 Waivers. During the week of August 11–15, 2003, the petitioner, in cooperation with AMTRAK and under the observation of the FRA, conducted equivalency testing of the COMET V and COMET IV on the NEC between Newark, NJ and Philadelphia, PA at speeds up to 110 mph in non-revenue service. The petitioner submitted favorable test results to the FRA on March 8, 2004 which confirm that the COMET V and COMET IV are equivalent. The petitioner feels that the equivalency testing is sufficient to warrant the operation of the COMET V on the NEC at up to 100 mph in lieu of the IWS tests required in CFR Part 213.345.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communication concerning these proceedings should identify the appropriate docket number (*e.g.*, Waiver Petition Docket Number FRA–2004–18577) and must be submitted to the Docket Clerk, DOT Docket Management Facility, Room PL–401 (Plaza Level), 400 7th Street, SW., Washington, DC 20590. Communications received within 30 days of the date of this notice will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable. All written communications concerning these proceedings are available for examination during regular business hours (9 a.m.—5 p.m.) at the above facility. All documents in the public docket are also available for inspection and copying on the Internet at the docket facility's Web site at *http://dms.dot.gov.*

Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78). The Statement may also be found at *http://dms.dot.gov.*

Issued in Washington, DC on August 5, 2004.

Michael J. Logue,

Deputy Associate Administrator for Safety Compliance and Program Implementation.

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Notice of Safety Advisory 2004–03

AGENCY: Federal Railroad Administration (FRA), DOT.

ACTION: Notice of safety advisory.

SUMMARY: FRA is issuing Safety Advisory 2004–3 addressing the importance of restoring failed or malfunctioning highway-rail grade crossing warning systems to proper operation ''without undue delay.'' This safety advisory supplements Safety Advisory 2002–01 issued on January 16, 2002, which addressed the importance of clear, precise, unambiguous railroad safety procedures to ensure the safety of highway-rail grade crossing warning systems or wayside signal systems that are temporarily removed from service.

FOR FURTHER INFORMATION CONTACT: Mark Jones, Signal and Train Control Division, Office of Safety Assurance and Compliance, FRA, 1120 Vermont Avenue, NW., Washington, DC, 20590 (telephone 202–493–6232), e-mail *mark.jones@fra.dot.gov,* or Kathy Shelton, Office of Chief Counsel, FRA, 1120 Vermont Avenue, NW., Washington, DC 20590 (telephone 202–493–6063), e-mail *kathryn.shelton@fra.dot.gov.*

SUPPLEMENTARY INFORMATION:

Background

Highway-rail grade crossing active warning systems serve a critical role in providing for the safety of highway users at highway-rail grade crossings. Highway users rely on the proper functioning and integrity of these systems to provide accurate and credible warning of the approach of a train. The failure or malfunction of even one of these systems has the potential for catastrophic consequences, including injury or death.

In the interest of public safety, FRA regulations at 49 CFR Part 234 (''Grade Crossing Signal System Safety'') provide minimum standards for the maintenance, inspection, and testing of highway-rail grade crossing warning systems. Today's highway-rail grade crossing warning systems have proven to be extremely reliable. Despite this

high degree of reliability, there are instances when these systems may fail or malfunction. Therefore, FRA regulations also contain provisions governing the actions that railroads are required to take in response to credible reports of highway-rail grade crossing warning system malfunction.

This safety advisory specifically addresses the requirements of 49 CFR 234.207(a), which states that ''when any essential component of a highway-rail grade crossing warning system fails to perform its intended function, the cause shall be determined and the faulty component adjusted, repaired, or replaced without undue delay.'' While there is no specific time limit associated with this requirement, FRA expects that railroads will make every effort to restore the system to proper operation in as timely a manner as possible.

FRA recognizes that there may be circumstances in which a malfunctioning warning system cannot be repaired immediately. However, when issuing 49 CFR Part 234, FRA intended to ensure that remedial action would begin as soon as possible. As explained in the preamble discussion of 49 CFR 234.207,

> [i]t is of paramount importance that remedial action begin as soon as possible after a credible report of a malfunction is received by a railroad. In general, adjustment, repair, or replacement without undue delay will require that remedial action be taken in as timely a manner as possible. Successful, practical application of these general principles may be the objective of this regulatory proceeding that is most crucial to the safety of the motoring public; and the safety of employees and rail operations is also implicated. Because of the great variety of factors involved with malfunctioning warning systems, including the location of the crossing, frequency of train movements, type of corrective action needed, availability of personnel, and other competing emergency situations we are unwilling at this time to establish specific time limits for actions.

59 Fed. Reg. 50086, 50096 (1994).

Although FRA did not establish specific time limits for warning system repair or replacement, the rule prohibits any delay that is undue (*i.e.*, unjustifiable or excessive). While 49 CFR 234.207(b) provides alternative methods for warning highway users until the malfunctioning warning system is repaired, it is not intended to provide a permanent alternative to the warning provided by a fully functioning active warning system. The only situation in which an active warning system may remain permanently out of service is addressed by 49 CFR 234.103(c), which states that ''repair of a warning system [is not required], if, acting in accordance with applicable State law, the railroad proceeds to discontinue or dismantle the warning system. However, until repair, correction, discontinuance, or dismantling of the warning system is completed, the railroad shall comply with this subpart to ensure the safety of the traveling public and railroad employees.''

Notwithstanding situations in which a railroad has proceeded to discontinue or dismantle a malfunctioning active warning system in accordance with applicable State law, FRA expects that railroads will make every effort to return a malfunctioning active warning system to proper operation in as timely a manner as possible. FRA will take firm enforcement action, which could include civil penalties against the companies and/or individuals responsible, in those situations in which a warning system is not in service for an extended period of time due to the failure of a railroad to make necessary repairs to the system.

Recommendation

In recognition of the need to assure safety, FRA strongly recommends the following:

(1) Each railroad with maintenance responsibility for one or more highway-rail grade crossing active warning systems should conduct system wide surveys for the purpose of locating and repairing any active warning systems that are malfunctioning and/or temporarily removed from service.

(2) Each railroad with maintenance responsibility for one or more highway-rail grade crossing active warning systems should have specific policies or procedures in place requiring the restoration of highway-rail grade crossing active warning systems to proper operation in a timely manner.

Issued in Washington, DC on August 5, 2004.

Grady C. Cothen Jr.

Acting Associate Administrator for Safety.

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket No.: MARAD 2004—17114]

Availability of a Draft Environmental Assessment

AGENCY: Department of Transportation, Maritime Administration.

ACTION: Notice of the availability of a Draft Environmental Assessment.

SUMMARY: The purpose of this notice is to make available for public review and comment the Draft Environmental Assessment (DEA) for the Port of Anchorage, Marine Terminal Redevelopment Project. The DEA analyzes the potential impacts on the natural and manmade environment associated with the proposed Marine Terminal Redevelopment Project. This environmental documentation supports the proposed expansion of the Port of Anchorage (POA), which includes a variety of activities to enhance the transportation of goods and people within the State of Alaska.

DATES: Comments on the DEA must be received by September 10, 2004.

FOR FURTHER INFORMATION CONTACT: Daniel E. Yuska, Jr., Environmental Protection Specialist, Office of Environmental Activities, U.S. Maritime Administration, 400 Seventh Street, SW., Washington, DC 20590; telephone (202) 366–0714, fax (202) 366–6988.

SUPPLEMENTARY INFORMATION: Comments should refer to the docket number that appears on the top of this document. Written comments may be submitted to the Docket Clerk, U.S. DOT Dockets, Room PL–401, 400 Seventh Street, SW., Washington, DC 20590. Comments may also be submitted by electronic means via the Internet at *http://dmses.dot.gov/submit*. Note that all comments received will be posted without change including any personal information provided in the comment. All comments received will be available for examination at the above address between 10 a.m. and 5 p.m. e.t., Monday through Friday, except Federal holidays. An electronic version of this document is available on the World Wide Web at *http://dms.dot.gov*. No comments will be accepted after September 10, 2004. In addition, copies of the DEA are available for public viewing on the Port of Anchorage Web site (*http://www.portofanchorage.org*) or at the Loussac Library in Anchorage.

(Authority: 49 CFR 1.66.)

Dated: August 6, 2004.

By Order of the Maritime Administrator.

Joel C. Richard,

Secretary, Maritime Administration.

BILLING CODE 4910–81–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[U.S. DOT Docket Number NHTSA–2004–18842]

Reports, Forms, and Record Keeping Requirements

AGENCY: National Highway Traffic Safety Administration (NHTSA), U.S. Department of Transportation.

ACTION: Request for public comment on proposed collection of information.

SUMMARY: Before a Federal agency can collect certain information from the public, it must receive approval from the Office of Management and Budget (OMB). Under procedures established by the Paperwork Reduction Act of 1995, before seeking OMB approval, Federal agencies must solicit public comment on proposed collections of information, including extensions and reinstatement of previously approved collections.

This document describes two collections of information for which NHTSA intends to seek OMB approval.

DATES: Comments must be received on or before October 12, 2004.

ADDRESSES: Comments must refer to the docket notice numbers cited at the beginning of this notice and be submitted to Docket Management, National Highway Traffic Safety Administration, Room PL–401, 400 Seventh Street, SW., Washington, DC 20590. Please identify the proposed collection of information for which a comment is provided, by referencing its OMB Clearance Number. It is requested, but not required, that 2 copies of the comment be provided. The Docket Section is open on weekdays from 10 a.m. to 5 p.m.

FOR FURTHER INFORMATION CONTACT: Complete copies of each request for the collection of information may be obtained at no charge from Mr. Michael J. Jordan, National Highway Traffic Safety Administration (NVS–216), 400 Seventh Street, SW., (Room 2318), Washington, DC 20590. Mr. Jordan's telephone number is (202) 493–0576. Please identify the relevant collection of information by referring to its OMB Control Number.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995, before an agency submits a proposed collection of information to OMB for approval, it must first publish a document in the **Federal Register** providing a 60-day comment period and otherwise consult with members of the public and affected agencies concerning each proposed collection of information. The OMB has promulgated regulations describing what must be included in such a document. Under OMB's regulation (at 5 CFR 1320.8(d)), an agency must ask for public comment on the following:

(i) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(ii) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(iii) How to enhance the quality, utility, and clarity of the information to be collected;

(iv) How to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

In compliance with these requirements, NHTSA asks for public comments on the following proposed collections of information:

(1) Title: Consumer Complaint Information.

OMB Control Number: 2127–0008.

Affected Public: Individuals and households.

Abstract: Under chapter 301 of title 49 of the United States Code, manufacturers of motor vehicles and items of motor vehicle equipment must notify owners and provide a free remedy (*i.e.,* a recall) when it has been determined that a safety-related defect exists in the manufacturer's product. NHTSA investigates possible safety defects and may order recalls. NHTSA solicits information from vehicle owners, which is used to identify and evaluate possible safety-related defects and provide evidence of the existence of such defects.

Consumer complaint information takes the form of a Vehicle Owner's Questionnaire (VOQ), which is a paper, self-addressed mailer that consumers complete. This mailer contains owner information, product information, failed component information, and incident information. It may also take the form of an electronic VOQ containing the same information as identified above, which can be submitted via NHTSA's Internet Web site or by calling the Department of Transportation's Auto Safety Hotline. Or, it may take the form of a consumer letter. All consumer complaint information, in addition to other sources of available information, is reviewed by NHTSA staff to determine whether a safety-related defect trend or catastrophic failure is developing that would warrant the opening of a safety defect investigation.

Estimated Annual Burden: 16,268 hours.

Number of Respondents: 49,296.

(2) Title: Voluntary Child Safety Seat Registration Form.

OMB Control Number: 2127–0576.

Affected Public: Individuals and households.

Abstract: Chapter 301 of title 49 of the United States provides that if either NHTSA or a manufacturer determines that motor vehicles or items of motor vehicle equipment contain a defect that relates to motor vehicle safety or fail to comply with an applicable Federal Motor Vehicle Safety Standard, the manufacturer must notify owners and purchasers of the defect or noncompliance and must provide a remedy without charge. Pursuant to 49 CFR part 577, defect and noncompliance notification for equipment items, including child restraint systems (CRS), must be sent by first class mail to the most recent purchaser known to the manufacturer. To increase the likelihood that CRS manufacturers will be aware of the identity of purchasers, NHTSA adopted S5.8 of Federal Motor Vehicle Safety Standard No. 213, to require manufacturers to include a postage-paid form with each CRS so the purchaser can register with the manufacturer. In addition to the registration form supplied by the manufacturer, NHTSA has implemented a CRS registration system to assist those individuals who have either lost the registration form that came with the CRS or purchased a previously owned CRS. In the absence of a registration system, many owners of child passenger safety seats would not be notified of safety defects and noncompliances, and would not have the defects and noncompliances remedied, because the manufacturer would not be aware of their identities.

Estimated Annual Burden: 283 hours.

Number of Respondents: 5,665.

Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; the accuracy of the Department's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of

automated collection techniques or other forms of information technology.

Issued on: August 5, 2004.

Kenneth N. Weinstein,

Associate Administrator for Enforcement.

[FR Doc. 04–18356 Filed 8–10–04; 8:45 am]

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2004–18714; Notice 1]

Volkswagen of America, Inc., Receipt of Petition for Decision of Inconsequential Noncompliance

Volkswagen of America, Inc. (Volkswagen) has determined that label information on certain vehicles that it produced in 2003 and 2004 does not comply with S5.3 of 49 CFR 571.120, Federal Motor Vehicle Safety Standard (FMVSS) No. 120, ''Tire selection and rims for motor vehicles other than passenger cars.'' Volkswagen has filed an appropriate report pursuant to 49 CFR Part 573, ''Defect and Noncompliance Reports.''

Pursuant to 49 U.S.C. 30118(d) and 30120(h), Volkswagen has petitioned for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

This notice of receipt of Volkswagen's petition is published under 49 U.S.C. 30118 and 30120 and does not represent any agency decision or other exercise of judgment concerning the merits of the petition.

A total of approximately 23,017 Volkswagen Touareg MPV vehicles produced between November 3, 2003 and July 2, 2004 are affected. S5.3 of FMVSS No. 120, ''Label information,'' requires that the certification label or a separate tire information label shall show certain information about the tires and rims, as specified in S5.3.1 and S5.3.2. S5.3.1, ''Tires,'' refers to ''The size designation * * * and the recommended cold inflation pressure for those tires. * * *'' S5.3.2, ''Rims,'' refers to ''The size designation * * * of Rims * * * appropriate for those tires.'' Volkswagen chose to use a separate label on the affected vehicles that does not contain the rim size markings required by S5.3.2.

Volkswagen believes that the noncompliance is inconsequential to motor vehicle safety and that no corrective action is warranted. Volkswagen states the following:

Volkswagen believes that the lack of rim size information on any of the labels does not create a risk to motor vehicle safety because any replacement tires of equivalent size to the factory installed tires or to any factory option tire would be compatible with the factory installed wheel rims. If an owner purchases wheel rims to replace those installed by Volkswagen, the selling dealer would be responsible for advising the owner on the compatible tire and wheel rim combination.

Volkswagen states that no customer complaints have been received regarding the lack of wheel rim size information on the tire pressure information label. Volkswagen has fixed the problem.

Interested persons are invited to submit written data, views, and arguments on the petition described above. Comments must refer to the docket and notice number cited at the beginning of this notice and be submitted by any of the following methods. Mail: Docket Management Facility, U.S. Department of Transportation, Nassif Building, Room PL–401, 400 Seventh Street, SW., Washington, DC, 20590–0001. Hand Delivery: Room PL–401 on the plaza level of the Nassif Building, 400 Seventh Street, SW., Washington, DC. It is requested, but not required, that two copies of the comments be provided. The Docket Section is open on weekdays from 10 a.m. to 5 p.m. except Federal Holidays. Comments may be submitted electronically by logging onto the Docket Management System Web site at *http://dms.dot.gov.* Click on ''Help'' to obtain instructions for filing the document electronically. Comments may be faxed to 1–202–493–2251, or may be submitted to the Federal eRulemaking Portal: go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.

The petition, supporting materials, and all comments received before the close of business on the closing date indicated below will be filed and will be considered. All comments and supporting materials received after the closing date will also be filed and will be considered to the extent possible. When the petition is granted or denied, notice of the decision will be published in the **Federal Register** pursuant to the authority indicated below.

Comment closing date: September 10, 2004.

Authority: (49 U.S.C. 30118, 30120: delegations of authority at CFR 1.50 and 501.8)

Issued on: August 5, 2004.

Kenneth N. Weinstein,

Associate Administrator for Enforcement.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2004–18848]

Electronic Submission of Conformity Information Regarding Certain Imported Nonconforming Motor Vehicles

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Notice of proposed action.

SUMMARY: This document announces that NHTSA is considering a proposal to permit registered importers (RIs) to submit to the agency, in an electronic format, certain information regarding imported vehicles that are certified by their manufacturer as complying with Canadian motor vehicle safety standards (CMVSS), but not with all applicable Federal motor vehicle safety standards (FMVSS). Currently, RIs submit this information to the agency in a hard copy format. The proposal should result in a savings, for both the agency and the RI community, of the costs that are currently associated with the assemblage, mailing, and storage of these records in hard copy form.

DATES: The closing date for comments on the petition is September 10, 2004.

ADDRESSES: Comments should refer to the docket number and notice number, and be submitted to: Docket Management, Room PL–401, 400 Seventh St., SW., Washington, DC 20590. (Docket hours are from 9 a.m. to 5 p.m.) Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (volume 65, number 70; pages 19477–78), or you may visit *http://dms.dot.gov.*

FOR FURTHER INFORMATION CONTACT: Coleman Sachs, Office of Vehicle Safety Compliance, NHTSA (202–366–3151).

SUPPLEMENTARY INFORMATION: One of NHTSA's responsibilities is to monitor the importation into the United States of motor vehicles that were not originally manufactured to comply with all

applicable Federal motor vehicle safety and bumper standards. Such vehicles cannot be permanently imported into the United States unless (1) they are determined eligible for importation by NHTSA, based on their capability of being modified to conform to all applicable FMVSS and bumper standards and (2) they are imported by an importer specially registered with the agency (a ''registered importer'' or ''RI''), or by a person who has a contract with an RI to bring the vehicle into compliance with all applicable FMVSS and bumper standards. *See* 49 U.S.C. §§ 30112(a) and 30141. At the time that a nonconforming vehicle is imported, the importer furnishes to Customs a bond, in an amount equivalent to 150 percent of the dutiable value of the vehicle, to ensure that the vehicle is brought into compliance with all applicable FMVSS and bumper standards within 120 days of entry, or is exported from, or abandoned to, the United States. To obtain release of the bond, the importer must submit to NHTSA a statement certifying that the vehicle has been brought into conformity with all applicable standards, supported by documentary and photographic evidence of the vehicle's conformity, and evidence that there are no unremedied safety-related defects or noncompliances with FMVSS. We refer to this statement and its supporting material as a ''conformity package.'' We currently require these conformity packages to be submitted to us in hard copy format. A separate conformity package is submitted to the agency for each nonconforming vehicle imported under the RI program. If the conformity package is adequate, NHTSA notifies the RI that the DOT Conformance bond is released, which authorizes the RI to release the vehicle so that it can be licensed or registered for use on public roads.

In calendar years 2002 and 2003, more than 309,000 vehicles were imported under this program, 307,000 (over 99%) of which were imported from Canada and were originally certified as complying with the CMVSS. The remaining non-conforming vehicles, commonly referred to as gray-market vehicles, were imported from countries other than Canada. Because the CMVSS, with limited exceptions, are substantially identical to the FMVSS, few modifications ordinarily need to be performed to conform a Canadian-certified motor vehicle to U.S. standards. As a consequence, the conformity packages that are submitted to NHTSA for Canadian-certified vehicles contain relatively little information. That is not the case for vehicles that were originally manufactured for sale in Europe and other foreign markets, which generally have standards that differ significantly from the FMVSS. Owing to those differences, the conformity packages for those vehicles ordinarily contain considerably more documentary and photographic evidence on the modifications that were necessary to conform the vehicles to U.S. standards than is the case for Canadian-certified motor vehicles. Consequently, we are not proposing to allow conformity packages for non-Canadian vehicles to be submitted electronically at this time.

Conformity packages are normally sent to the agency by parcel delivery service, such as Federal Express, United Parcel Service, or DHL. Following review of the packages by NHTSA, they are warehoused for a period of two years, at considerable expense to the agency. To relieve the paperwork burdens and costs the current procedures have imposed on both the affected RI community and the agency, we are considering permitting RIs to submit conformity packages to us electronically for Canadian-certified motor vehicles.

We are considering the establishment of a secure, web-based interface through which RIs could transmit electronically to NHTSA documentary and photographic evidence that the vehicle had been brought into conformity with the FMVSS, as well as evidence that remedies for all safety-related defects and noncompliances with safety standards that are the subject of outstanding safety recall campaigns have been performed on the vehicles.

By using a web-based interface, the time and effort needed to prepare, send, process, and store conformity packages should be significantly reduced. We also anticipate that NHTSA will be able to issue an electronic bond release letter promptly following the successful submission of the electronic conformity package. This should benefit RIs and their customers by permitting imported Canadian-certified vehicles to be released for registration and licensing for use on U.S. roads more quickly after their importation. However, those RIs that wish to continue to submit hard copy conformity packages could continue to do so.

Pursuant to 49 CFR 592.6(f), RIs must submit ''* * * photographic and documentary evidence of conformance with each applicable Federal motor vehicle safety and bumper standard and * * * such information, if any, as the Administrator may request.'' Over the years, the agency has advised RIs of the information that is required. For an electronically submitted conformity package, we would accept documents created in an electronic format, digital photographs (images) from a digital camera, and documents converted to electronic format by a scanner. The following items, at a minimum, must be included in each conformity package transmitted to the agency for a Canadian vehicle:

(1) A statement from the RI certifying that the vehicle complies with all applicable Federal motor vehicle safety and bumper standards, and specifying whether the vehicle was originally manufactured to conform, or was modified to conform, to each applicable standard.

(2) A statement describing the specific conformance modifications made.

(3) Photographs of the original manufacturer's certification label; the RI certification label affixed to vehicle; the instrument cluster showing the speedometer scale graduated in miles per hour (MPH); the steering wheel hub and dashboard facing the outboard front passenger seat on vehicles equipped with an air bags; the automatic seat belts on vehicles that are so equipped; and a ¾ front overall photo showing the vehicle's exterior.

(4) The DOT conformance bond number, the amount, and the name of the surety.

(5) The name of the company issuing the mandatory service insurance policy covering recall work that may have to be performed on the vehicle and the effective date of the policy.

(6) Evidence that all safety-related defects and noncompliances with safety standards that have been determined to exist in the vehicle have been remedied.

Although this policy would not amend any NHTSA regulation, we are interested in the public's views on the issues addressed in this notice. If you are an RI or are affiliated with such an entity and elect to respond to this notice, your response should describe:

(1) The extent to which your company believes it could easily transition to a web-based approach for submitting conformity packages electronically to NHTSA, and if it does not believe that this could be easily achieved, the factors that may complicate your company's transition.

(2) Whether your company currently uses electronic equipment of the type that would be needed for a web-based submission, including personal computers, scanners, and digital cameras.

(3) Whether your company currently uses the Internet, including e-mail, and

whether it has high-speed or dial-up Internet access.

(4) Whether your company is currently transmitting vehicle importation information in electronic format (*e.g.*, to a Customs broker). If so, state whether your company is using ''off the shelf'' software or software specifically designed for this purpose.

(5) The extent to which you believe the electronic submission of conformity packages would be beneficial or detrimental to your company (*e.g.*, increases or decreases in errors and anticipated costs).

Interested persons are invited to submit comments on this proposal. Comments should refer to the docket number and be submitted to: Docket Management, Room PL–401, 400 Seventh St., SW., Washington, DC 20590. (Docket hours are from 9 a.m. to 5 p.m.) It is requested but not required that 10 copies be submitted.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above address both before and after that date. To the extent possible, comments filed after the closing date will also be considered.

Authority: 49 U.S.C. 30141(d)(1)(A) and 30146(a)(1), (c), and (e); 49 CFR 591.8(d)(2), (d)(3), and (d)(5); delegations of authority at 49 CFR 1.50 and 501.8.

Claude H. Harris,

Director, Office of Vehicle Safety Compliance.

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

August 2, 2004.

The Department of Treasury has submitted the following public information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Copies of the submission(s) may be obtained by calling the Treasury Bureau Clearance Officer listed. Comments regarding this information collection should be addressed to the OMB reviewer listed and to the Treasury Department Clearance Officer, Department of the Treasury, Room 11000, 1750 Pennsylvania Avenue, NW., Washington, DC 20220.

Dates: Written comments should be received on or before September 10, 2004, to be assured of consideration.

Internal Revenue Service (IRS)

OMB Number: 1545–0074.

Form Number: IRS Form 1040 and Schedules A, B, C, C–EZ, D, D–1, E, EIC, F, H, J, R, and SE.

Type of Review: Revision.

Title: U.S. Individual Income Tax Return.

Description: Form 1040 and schedules are used by individuals to report their income tax liability. The data is used to verify that the items reported on the forms are correct, and also for general statistical use.

Respondents: Individuals or households.

Estimated Number of Respondents/ Recordkeepers: 78,863,011.

Estimated Burden Hours Respondent/ Recordkeeper:

Form/schedule	Recordkeeping	Learning about the law or the form	Preparing the form	Copying, assembling, and sending the form to the IRS	Totals
Form 1040	2 hr., 46 min.	3 hr., 57 min.	6 hr., 15 min.	34 min.	13 hr., 32 min.

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

August 4, 2004.

The Department of Treasury has submitted the following public information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Copies of the submission(s) may be obtained by calling the Treasury Bureau Clearance Officer listed. Comments regarding this information collection should be addressed to the OMB reviewer listed and to the Treasury Department Clearance Officer, Department of the Treasury, Room 11000, 1750 Pennsylvania Avenue, NW., Washington, DC 20220.

DATES: Written comments should be received on or before September 10, 2004, to be assured of consideration.

Internal Revenue Service (IRS)

OMB Number: 1545–0023.

Form Number: IRS Form 720.

Type of Review: Extension.

Title: Quarterly Federal Excise Tax Return.

Description: The information supplied on Form 720 is used by the IRS to determine the correct tax liability. Additionally, the data is reported by the IRS to Treasury so that funds may be transferred from the general revenue funds to the appropriate trust funds.

Respondents: Business or other for-profit, individuals or households, not-for-profit institutions, farms, Federal government, State, local or tribal government.

Estimated Number of Respondents/ Recordkeepers: 50,000.

Estimated Burden Hours Respondent/ Recordkeeper:

Form	Recordkeeping	Learning about the law or the form	Preparing and sending the form to the IRS
720	25 hr., 6 min.	2 hr., 17 min.	6 hr., 23 min.
720–V	1 hr., 11 min.		1 min.
Schedule A	1 hr., 54 min.		1 min.
Schedule C	23 hr., 55 min.	30 min.	54 min.
720X	6 hr., 13 min.	18 min.	24 min.
6197	4 hr., 18 min.	12 min.	16 min.
6627	5 hr., 1 min.	6 min.	10 min.

Frequency of response: Quarterly.

Estimated Total Reporting/ Recordkeeping Burden: 3,893,888 hours.

OMB Number: 1545–0203.

Form Number: IRS Form 5329.

Type of Review: Revision.

Title: Additional Tax on Qualified Plans (Including IRAs) and Other Tax-Favored Accounts.

Description: This form is used to compute and collect taxes related to early distributions from individual retirement arrangements (IRAs) and other qualified retirement plans; distributions from education accounts not used for educational expenses; excess contributions to traditional IRAs, education accounts, Archer MSAs, health savings accounts; and excess accumulations in qualified retirement plans.

Respondents: Individuals or households.

Estimated Number of Respondents/ Recordkeepers: 1,100,000.

Estimated Burden Hours Respondent/ Recordkeeper:

Recordkeeping	2 hr., 2 min.
Learning about the law or the form.	32 min.
Preparing the form	2 hr., 17 min.
Copying, assembling, and sending the form to the IRS.	13 min.

Frequency of response: On occasion.

Estimated Total Reporting/ Recordkeeping Burden: 1,028,370 hours.

OMB Number: 1545–1304.

Regulation Project Numbers: INTL–941–86; INTL–656–87; and INTL–704–87 NPRM.

Type of Review: Extension.

Title: Treatment of Shareholders of Certain Passive Foreign Investment Companies.

Description: The reporting requirements affect U.S. persons that are direct and indirect shareholders of passive foreign investment companies (PFICs). The IRS uses Form 8621 to identify PFICs, U.S. persons that are shareholders, and transactions subject to PFIC taxation and verify income inclusions, excess distributions and deferred tax amounts.

Respondents: Business of other for-profit, individuals or households.

Estimated Number of Respondents: 2,500.

Estimated Burden Hours Respondent: 1 hour.

Frequency of response: Annually.

Estimated Total Reporting Burden: 2,500 hours.

OMB Number: 1545–1468.

Form Number: IRS Form 1040NR–EZ.

Type of Review: Extension.

Title: U.S. Income Tax Return for Certain Nonresident Aliens with No Dependents.

Description: This form is used by certain nonresident aliens with no dependents to report their income

subject to tax and compute the correct tax liability. The information on the return is used to determine whether income, deductions, credits, payments, *etc.,* are correctly figured.

Respondents: Individuals or households.

Estimated Number of Respondents/ Recordkeepers: 100,000.

Estimated Burden Hours Respondent/ Recordkeeper:

Recordkeeping	1 hr., 18 min.
Learning about the law or the form.	49 min.
Preparing the form	1 hr., 52 min.
Copying, assembling, and sending the form to the IRS.	34 min.

Frequency of response: Annually.

Estimated Total Reporting/ Recordkeeping Burden: 459,000 hours.

OMB Number: 1545–1552.

Form Number: IRS Form 8839.

Type of Review: Extension.

Title: Qualified Adoption Expenses.

Description: Section 23 of the Internal Revenue Code allows taxpayers to claim a nonrefundable tax credit for qualified adoption expenses paid or incurred by the taxpayer. Code section 137 allows taxpayers to exclude amounts paid or expenses incurred by an employer for the qualified adoption expenses of the employee which are paid under an adoption assistance program. Form 8839 is used to figure the credit and/or exclusion.

Respondents: Individuals or households.

Estimated Number of Respondents/ Recordkeepers: 22,271.

Estimated Burden Hours Respondent/ Recordkeeper:

Recordkeeping	39 min.
Learning about the law or the form.	17 min.
Preparing the form	2 hr., 25 min.
Copying, assembling, and sending the form to the IRS.	34 min.

Frequency of response: Annually.

Estimated Total Reporting/ Recordkeeping Burden: 101,042 hours.

OMB Number: 1545–1621.

Form Number: IRS Forms W–8BEN, W–8ECI, W–8EXP and W–8IMY.

Type of Review: Extension.

Title: W–8BEN: Certificate of Foreign Status of Beneficial Owner for United States Tax Withholding; *W–8ECI:* Certificate of Foreign Person's Claim for Exemption from Withholding on Income Effectively Connected with the Conduct of a Trade or Business in the United States; *W–8EXP:* Certificate of Foreign Government or Other Foreign Organization for United States Tax Withholding; and *W–8IMY:* Certificate of Foreign Intermediary, Foreign Flow-Through Entity, or Certain U.S. Branches for United States Tax Withholding

Description: Form W–8BEN is used for certain types of income to establish that the person, is the beneficial owner of the income for which Form W–8BEN is being provided and, if applicable, to claim a reduced rate of, or exemption from, withholding as a resident of a foreign country with which the United States has an income tax treaty. Form W–8ECI is used to establish that the person is a foreign person, is the beneficial owner of the income for which Form W–8ECI is being provided, and to claim that the income is effectively connected with the conduct of a trade or business within the United States. Form W–8EXP is used by a foreign government, international organization, foreign central bank of issue, foreign tax-exempt organization, or foreign private foundation. The form is used by such persons to establish foreign status, to claim that the person is the beneficial owner of the income for which Form W–8EXP is given and, if applicable, to claim a reduced rate of, or exemption from, withholding. Form W–8IMY is provided to a withholding agent or payer by a foreign intermediary, foreign partnership, and certain U.S. branches to make representations regarding the status of beneficial owners or to transmit appropriate documentation to the withholding agent.

Respondents: Business or other for-profit, individuals or households, not-for-profit institutions.

Estimated Number of Respondents/ Recordkeepers: 3,180,640.

Estimated Burden Hours Respondent/ Recordkeeper:

Form	Recordkeeping	Learning about the law or the form	Preparing and sending the form to the IRS
W–8BEN	5 hr., 58 min.	3 hr., 46 min.	4 hr., 2 min.
W–8ECI	3 hr., 35 min.	3 hr., 22 min.	3 hr., 35 min.
W–8EXP	7 hr., 10 min.	5 hr., 28 min.	5 hr., 49 min.
W–8IMY	5 hr., 58 min.	4 hr., 38 min.	6 hr., 8 min.

Frequency of response: Annually.

Estimated Total Reporting/ Recordkeeping Burden: 43,280,135 hours.

Clearance Officer: Glenn P. Kirkland, (202) 622–3428, Internal Revenue Service, Room 6411–03, 1111 Constitution Avenue, NW., Washington, DC 20224.

OMB Reviewer: Joseph F. Lackey, Jr., (202) 395–7316, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

Proposed Extension of Information Collection; Comment Request

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury.

ACTION: Notice and request for comment.

SUMMARY: The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on a continuing information collection, as required by the Paperwork Reduction Act of 1995. The OCC is soliciting comment concerning its information collection titled, ''Assessment of Fees—12 CFR Part 8.''

DATES: You should submit written comments by October 12, 2004.

ADDRESSES: You should direct written comments to the Communications Division, Office of the Comptroller of the Currency, Public Information Room, Mailstop 1–5, Attention: 1557–0223, 250 E Street, SW., Washington, DC 20219. In addition, comments may be sent by facsimile transmission to (202) 874–4448, or by electronic mail to *regs.comments@occ.treas.gov.* You can inspect and photocopy the comments at the OCC's Public Information Room, 250 E Street, SW., Washington, DC 20219. You can make an appointment to

inspect the comments by calling (202) 874–5043.

FOR FURTHER INFORMATION CONTACT: You can request additional information or a copy of the collection from John Ference or Camille Dixon, (202) 874–5090, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 250 E Street, SW., Washington, DC 20219.

SUPPLEMENTARY INFORMATION: The OCC is proposing to extend OMB approval of the following information collection:

Title: Assessment of Fees—12 CFR part 8.

OMB Number: 1557–0223.

Description: The OCC is requesting comment on its proposed extension, without change, of the information collection titled, ''Assessment of Fees—12 CFR part 8.'' The National Bank Act authorizes the OCC to collect assessments, fees, and other charges as necessary or appropriate to carry out the responsibilities of the OCC. The OCC will require national banks to provide the OCC with ''receivables attributable'' data from independent credit card banks, that is, national banks that primarily engage in credit card operations and are not affiliated with a full service national bank. ''Receivables attributable'' are the total amount of outstanding balances due on credit card accounts owned by an independent credit card bank (the receivables attributable to those accounts) on the last day of an assessment period, minus receivables retained on the bank's balance sheet as of that day. The OCC will use the information to verify the accuracy of each bank's assessment computation and to adjust the assessment rate for independent credit card banks over time.

Type of Review: Extension of OMB approval.

Affected Public: Businesses or other for-profit (national banks).

Estimated Number of Respondents: 35.

Estimated Total Annual Responses: 70.

Frequency of Response: Semiannually.

Estimated Time per Respondent: 1 hour.

Estimated Total Annual Burden: 70 hours.

An agency may not conduct or sponsor, and a respondent is not required to respond to, an information collection unless the information collection displays a currently valid OMB control number.

Comments submitted in response to this notice will be summarized and included in the request for OMB approval. All comments will become a matter of public record.

Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;

(b) The accuracy of the agency's estimate of the burden of the collection of information;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or startup costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: August 4, 2004.

Stuart Feldstein,

Assistant Director, Legislative and Regulatory Activities Division.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Announcement 2004–46

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Announcement 2004–4, Son of Boss Settlement Initiative.

DATES: Written comments should be received on or before October 12, 2004 to be assured of consideration.

ADDRESSES: Direct all written comments to Glenn P. Kirkland, Internal Revenue Service, room 6411, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the announcement should be directed to Carol Savage at Internal Revenue Service, room 6407, 1111 Constitution Avenue NW., Washington, DC 20224, or at (202) 622–3945, or through the internet at *CAROL.A.SAVAGE@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Son of Boss Settlement Initiative.

OMB Number: 1545–1885.

Announcement Number: Announcement 2004–46.

Abstract: Announcement 2004–46 offers settlement to certain taxpayers that participated in the transaction for efficient tax administration reasons and to avoid prolonged litigation

Current Actions: There are no changes being made to the announcement at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, and individuals.

Estimated Number of Respondents: 1,000.

Estimated Time Per Respondent: 5 hours.

Estimated Total Annual Burden Hours: 5,000.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record.

Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: August 4, 2004.

Medicare Program; Changes to the Hospital Inpatient Prospective Payment Systems and Fiscal Year 2005 Rates

AGENCY: Centers for Medicare and Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: We are revising the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs to implement changes arising from our continuing experience with these systems; and to implement a number of changes made by the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 that was enacted on December 8, 2003. In addition, in the Addendum to this final rule, we describe the changes to the amounts and factors used to determine the rates for Medicare hospital inpatient services for operating costs and capital-related costs. These changes are applicable to discharges occurring on or after October 1, 2004. We also are setting forth rate-of-increase limits as well as policy changes for hospitals and hospital units excluded from the IPPS that are paid in full or in part on a reasonable cost basis subject to these limits.

Among the policy changes that we are making are: Changes to the classification of cases to the diagnosis-related groups (DRGs); changes to the long-term care (LTC)–DRGs and relative weights; changes in the wage data, labor-related share of the wage index, and the geographic area designations used to compute the wage index; changes in the qualifying threshold criteria for and the approval of new technologies and medical services for add-on payments; changes to the policies governing postacute care transfers; changes to payments to hospitals for the direct and indirect costs of graduate medical education; changes to the payment adjustment for disproportionate share rural hospitals; changes in requirements and payments to critical access hospitals (CAHs); changes to the disclosure of information requirements for Quality Improvement Organization (QIOs); and changes in the hospital conditions of participation for discharge planning and fire safety requirements for certain health care facilities.

DATES: The provisions of this final rule are effective on October 1, 2004.

I. Background

A. Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Social Security Act (the Act) sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of hospital inpatient stays under a prospective payment system (PPS). Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located; and if the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment may vary based on the outcome of the statutory calculations.

If the hospital is an approved teaching hospital, it receives a percentage add-on payment for each case paid under the IPPS (known as the indirect medical education (IME) adjustment). This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. To qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any outlier payment due is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid the higher of a hospital-specific rate based on their costs in a base year (the higher of FY 1982, FY 1987, or FY 1996) or the IPPS rate based on the standardized amount. For example, sole community hospitals (SCHs) are the sole source of care in their areas, and Medicare-dependent, small rural hospitals (MDHs) are a major source of care for Medicare beneficiaries in their areas. Both of these categories of hospitals are afforded this special payment protection in order to maintain access to services for beneficiaries (although MDHs receive only 50 percent of the difference between the IPPS rate and their hospital-specific rates if the hospital-specific rate is higher than the IPPS rate).

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services ''in accordance with a prospective payment system established by the Secretary.'' The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital PPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Similar adjustments are also made for IME and DSH as under the operating IPPS. In addition, hospitals may receive an outlier payment for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain specialty hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Psychiatric hospitals and units; rehabilitation hospitals and units; long-term care hospitals (LTCHs); children's hospitals; and cancer hospitals. Various sections of the Balanced Budget Act of 1997 (Pub. L. 105–33), the Medicare, Medicaid and SCHIP (State Children's Health Insurance Program) Balanced Budget Refinement Act of 1999 (Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (Pub. L. 106–554) provide for the implementation of PPSs for rehabilitation hospitals and units (referred to as inpatient rehabilitation facilities (IRFs)), psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)), and LTCHs, as discussed below. Children's hospitals and cancer hospitals continue to be paid under reasonable cost-based reimbursement.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

a. IRFs

Under section 1886(j) of the Act, as amended, rehabilitation hospitals and units (IRFs) have been transitioned from payment based on a blend of reasonable cost reimbursement subject to a hospital-specific annual limit under section 1886(b) of the Act and prospective payments for cost reporting periods beginning January 1, 2002, through September 30, 2002, to payment at 100 percent of the Federal rate effective for cost reporting periods beginning on or after October 1, 2002 (66 FR 41316, August 7, 2001; 67 FR 49982, August 1, 2002; and 68 FR 45674, August 1, 2003). The existing regulations governing payments under the IRF PPS are located in 42 CFR part 412, subpart P.

b. LTCHs

Under the authority of sections 123(a) and (c) of Public Law 106–113 and section 307(b)(1) of Public Law 106–554, LTCHs are being transitioned from being paid for inpatient hospital services based on a blend of reasonable cost-based reimbursement under section 1886(b) of the Act to 100 percent of the Federal rate during a 5-year period, beginning with cost reporting periods that start on or after October 1, 2002. For cost reporting periods beginning on or after October 1, 2006, LTCHs will be paid 100 percent of the Federal rate (May 7, 2004 LTCH PPS final rule (69 FR 25674)). LTCHs may elect to be paid based on 100 percent of the Federal rate instead of a blended payment in any year during the 5-year transition period. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O.

c. IPFs

Sections 124(a) and (c) of Public Law 106–113 provide for the development of a per diem PPS for payment for inpatient hospital services furnished in IPFs under the Medicare program, effective for cost reporting periods beginning on or after October 1, 2002. This system must include an adequate patient classification system that reflects the differences in patient resource use and costs among these hospitals and maintains budget neutrality. We published a proposed rule to implement the PPS for IPFs on November 28, 2003 (68 FR 66920). The November 28, 2003, proposed rule proposed an April 1, 2004, effective date for purposes of ratesetting and calculating impacts. However, the proposed rule was unusually complex because it proposed a completely new payment system for inpatient hospital services furnished by psychiatric hospitals and units and the public requested additional time to comment. As a result, we extended the comment period for the proposed rule. Thus, we are still in the process of analyzing public comments and developing a final rule for publication. Consequently, an April 1, 2004, effective date for the IPF PPS is no longer possible.

3. Critical Access Hospitals (CAHs)

Under sections 1814, 1820, and 1834(g) of the Act, payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services on a reasonable cost basis. Reasonable cost is determined under the provisions of section 1861(v)(1)(A) of the Act and existing regulations under 42 CFR parts 413 and 415.

4. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act; the amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413.

On August 1, 2003, we published a final rule in the **Federal Register** (68 FR 45346) that implemented changes to the Medicare hospital inpatient prospective payment systems for both operating cost and capital-related costs, as well as changes addressing payments for excluded hospitals and payments for GME costs. Generally these changes were effective for discharges occurring on or after October 1, 2003. On October 6, 2003, we published a document in the **Federal Register** (68 FR 57731) that corrected technical errors made in the August 1, 2003, final rule.

B. Provisions of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003

On December 8, 2003, the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA), Public Law 108–173, was enacted. Public Law 108–173 made a number of changes to the Act relating to prospective payments to hospitals for inpatient services, payments to excluded hospitals and units, and payments to CAHs. This final rule implements amendments made by the following sections of Pub. L. 108–173:

- Section 401, which provides that, for discharges occurring in a fiscal year beginning with FY 2004 under the IPPS, Medicare will pay hospitals in rural and small urban areas in the 50 States using the standardized amount (computed for the previous fiscal year) that would be used to pay hospitals in large urban areas (or beginning with FY 2005, for all hospitals in the previous fiscal year), increased by the appropriate market basket percentage increase. One standardized amount for hospitals in Puerto Rico would be established that would equal the amount for hospitals in large urban areas in Puerto Rico.
- Section 402, which provides that for discharges occurring on or after April 1, 2004, the DSH payment adjustment for a hospital that is not a large urban or large rural hospital will be calculated using the current DSH adjustment formula for large urban hospitals, subject to a limit of 12 percent for any of these hospitals that are not rural referral centers. (There is no limit on the DSH payment percentage for rural referral centers.)
- Section 403, which provides that, for discharges occurring on or after October 1, 2004, a hospital's labor-related share to which the wage index is applied will be decreased to 62 percent of the standardized amount when such a change will result in higher total payments to the hospital. This provision also applies to the labor-related share of the standardized amount for hospitals in Puerto Rico.
- Section 405(a), which provides that inpatient, outpatient, and covered SNF services provided by a CAH will be reimbursed at 101 percent of reasonable costs for services furnished to Medicare beneficiaries. This provision is applicable to payments for services furnished during cost reporting periods beginning on or after January 1, 2004.
- Section 405(b), which expands coverage of the costs associated with covered Medicare services furnished by on-call emergency room providers in CAHs to include services furnished by physician assistants, nurse practitioners, and clinical nurse specialists, effective for costs incurred for services furnished on or after January 1, 2005.
- Section 405(c), which provides that eligible CAHs may receive payments for their inpatient services on a periodic interim payment (PIP) basis, effective with payments made on or after July 1, 2004.
- Section 405(d), which allows CAHs to elect to receive payments under the

optional payment method (a payment encompassing both inpatient CAH services and physician and practitioner services to outpatients) even if some practitioners do not reassign to the CAH their rights to bill for professional services to CAH outpatients. This provision applies to cost reporting periods occurring on or after July 1, 2004, except that in the case of a CAH that made an election of the optional payment method before November 1, 2003, the provision applies to cost reporting periods beginning on or after July 1, 2001.

• Section 405(e), which increases the limit on the number of beds that a CAH may have for acute care from 15 to 25 beds. This provision applies to CAH designations made before, on, or after January 1, 2004. Any election made in accordance with the regulations promulgated to implement this provision will only apply prospectively.

• Section 405(g), which provides that a CAH may establish psychiatric and rehabilitation distinct part units and limits the number of beds in each unit to no more than 10. Services in these distinct part units will be paid under the respective payment methodology applicable to these distinct-part units. This provision applies to cost reporting periods beginning on or after October 1, 2004.

• Section 405(h), which terminates a State's authority to waive the location requirement for a CAH by designating the CAH as the necessary provider, effective January 1, 2006. A grandfathering provision is included for CAHs that are certified as necessary providers prior to January 1, 2006, which allows any CAH that is designated as a necessary provider in its State's rural health plan prior to January 1, 2006, to maintain its necessary provider designation.

• Section 406, which provides for a graduated adjustment to the inpatient prospective payment rates to account for the higher costs associated with hospitals described under section 1886(d) of the Act that are located more than 25 road miles from another subsection (d) hospital and that have less than 800 discharges during a fiscal year, effective for discharges occurring on or after October 1, 2004. The increase in these payments must be based on the empirical relationship between the standardized cost per case for such hospitals and the total number of discharges of these hospitals and the amount of the additional incremental costs (if any) associated with that number of discharges, may not be greater than 25 percent, and the determination of the percentage payment increase is not subject to administrative or judicial review.

• Section 410A, which authorizes the Secretary to establish a demonstration program to test the feasibility and advisability of the establishment of rural community hospitals to furnish covered inpatient hospital services to Medicare beneficiaries. The Secretary must select no more than 15 rural community hospitals to participate in the demonstration. The Secretary must implement the demonstration program not later than January 1, 2005, but may not implement the program before October 1, 2004.

• Section 422(a), which provides that a hospital's GME FTE resident cap will be reduced, and the reduction will be redistributed among other hospitals if the hospital's resident count is less than its resident cap (rural hospitals with less than 250 acute care inpatient beds will be exempt) in a particular reference period. This provision is effective for cost reporting periods beginning on or after July 1, 2005.

• Section 422(b), which specifies that the formula multiplier for the IME adjustment is 0.66 for FTE residents attributable to redistributed resident positions, effective for discharges occurring on or after July 1, 2005.

• Section 501, which provides the update factor for payments for hospital inpatient operating costs for FY 2005 and subsequent fiscal years is the market basket percentage increase. For FYs 2005 through 2007, the update factor will be the market basket percentage increase minus 0.4 percentage points for any ''subsection (d) hospital'' that does not submit hospital quality data on 10 measures as specified by the Secretary.

• Section 502, which modifies the IME formula multiplier to be used in the calculation of the IME adjustment for midway through FY 2004 and provides a new schedule of formula multipliers for FYs 2005 and thereafter.

• Section 503(a), which includes a requirement for updating the ICD–9–CM diagnosis and procedure codes in April 1 of each year, in addition to the current process of annual updates on October 1 of each year. This change will not affect Medicare payments or DRG classifications until the fiscal year that begins after that date.

• Section 503(b), which provides for changes to the threshold amount for determining eligibility of new technologies or medical services for add-on payments; provides for public input on applications for new technology or medical service add-on payments prior to the publication of a proposed rule; provides for reconsideration of applications received for FY 2004 that were denied; provides for preference in the use of DRG adjustments; and provides that new technology or medical service payments shall not be budget neutral. This provision is effective for fiscal years beginning in FY 2005.

• Section 504, which increases the national portion of the operating PPS payment rate for hospitals in Puerto Rico from 50 percent of the Federal rate to 75 percent of the Federal rate and decreases the Puerto Rico portion of the operating PPS payment from 50 percent to 25 percent, effective for discharges occurring on or after October 1, 2004. For the period of April 1, 2004, through September 30, 2004, payments for hospitals in Puerto Rico will be based on 62.5 percent Federal rate and 37.5 percent of the Puerto Rico rate.

• Section 505, which provides for an increase in a hospital's wage index value to take into consideration a commuter wage adjustment for hospital employees who reside in a county and work in a different area with a higher wage index.

• Section 508, which provides for the establishment of a one-time process for a hospital to appeal its geographic classification for wage index purposes. By law, any reclassification resulting from this one-time appeal applies for a 3-year period to discharges occurring on or after April 1, 2004.

• Section 711, which freezes the annual CPI–U updates to hospital-specific per resident amount (PRAs) for GME payments for those PRAs that exceed the ceiling, effective for cost reporting periods beginning FY 2004, through FY 2013.

• Section 712, which provides for an exception to the initial residency period for purposes of direct GME payments for geriatric residency or fellowship programs that allows the 2 years spent in an approved geriatric program to be counted as part of the resident's initial training period, but not to count against any limitation on the initial residency period. This provision is effective for cost reporting periods beginning on or after October 1, 2003.

• Section 713, which, during a 1-year moratorium period of January 1, 2004 through December 31, 2004, allows hospitals to count allopathic or osteopathic family practice residents training in nonhospital settings for IME and direct GME purposes, without regard to the financial arrangement between the hospital and the teaching physician practicing in the nonhospital setting to which the resident is assigned.

• Section 733, which provides for Medicare payment of routine costs, as

well as costs relating to the transplantation and appropriate related items and services, for Medicare beneficiaries participating in a clinical trial involving pancreatic islet cell transplantation, beginning no earlier than October 1, 2004.

• Section 926, which requires the Secretary to make information publicly available that enables hospital discharge planners, Medicare beneficiaries, and the public to identify skilled nursing facilities (SNFs) that are participating in the Medicare program, and requires a hospital, as part of its discharge planning, to evaluate a patient's need for SNF care.

• Section 947, which requires that, by July 1, 2004, hospitals not otherwise subject to the Occupational Safety and Health Act (OSHA) (or a State occupational safety and health plan that is approved under section 18(b) of that Act) must comply with the OSHA bloodborne pathogens (BBP) standard as part of their Medicare provider agreements.

C. Summary of the Provisions of the May 18, 2004 Proposed Rule

On May 18, 2004, we published a proposed rule in the **Federal Register** (69 FR 28196) that set forth proposed changes to the Medicare IPPS for operating costs and for capital-related costs in FY 2005 and to implement the provisions of Pub. L. 108–173 specified in section I.B. of this preamble. We also set forth proposed changes relating to payments for GME costs, payments to certain hospitals and units that continue to be excluded from the IPPS and paid on a reasonable cost basis, payments for DSH, requirements and payments for CAHs, conditions of participation for hospitals relating to discharge planning and fire safety requirements, requirements for Medicare provider agreements relating to bloodborne pathogen standards, and QIO disclosure of information requirements. These changes were proposed to be effective for discharges occurring on or after October 1, 2004, unless otherwise noted.

The following is a summary of the major changes that we proposed to make:

1. Changes to the DRG Reclassifications and Recalibrations of Relative Weights

As required by section 1886(d)(4)(C) of the Act, we proposed annual adjustments to the DRG classifications and relative weights. Based on analyses of Medicare claims data, we proposed to establish a number of new DRGs and make changes to the designation of diagnosis and procedure codes under other existing DRGs.

Among the proposed changes discussed were:

• Restructuring and retitling of several DRGs to reflect expanded coverage of heart assist systems such as ventricular assist devices (VAD) or left ventricular assist devices (LVAD) as destination (or permanent) therapy for end-stage heart failure patients who are not candidates for heart transplantation: DRG 103 (Heart Transplant or Implant of Heart Assist System) (proposed title change), DRG 104 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization) and DRG 105 (Cardiac Valve and Other Major Cardiothoracic Procedures Without Cardiac Catheterization), and DRG 525 (Other Heart Assist System Implant) (proposed title change).

• Addition of pacemaker device and lead procedure code combinations that could lead to the assignment of DRG 115 (Permanent Cardiac Pacemaker Implant with Acute Myocardial Infarction, Heart Failure, or Shock or ACID Lead or Generator Procedures) and DRG 116 (Other Permanent Cardiac Pacemaker Implant).

• Movement of the procedure code for 360 spinal fusion from DRG 496 (Combined Anterior/Posterior Spinal Fusion) to DRG 497 (Spinal Fusion Except Cervical With CC) and DRG 498 (Spinal Fusion Except Cervical Without CC).

• Addition of combination codes, which also include heart failure, to the list of major problems under DRG 387 (Prematurity With Major Problems) and DRG 389 (Full-Term Neonate With Major Problems).

• Modification of DRGs 504 through 509 under MDC 22 (Burns) to recognize the impact of long-term mechanical ventilation on burn cases and renaming DRG 504 as proposed title ''Extensive Burns or Full Thickness Burns With Mechanical Ventilation 96+ Hours With Skin Graft'' and DRG 505 as proposed title ''Extensive Burns or Full Thickness Burns With Mechanical Ventilation 96+ Hours Without Skin Graft.''

• Deletion of DRG 483 (Tracheostomy for Face, Mouth, and Neck Diagnoses) and splitting the assignment of cases to two proposed new DRGs on the basis of the performance of a major operating room procedure: proposed new DRGs 541 and 542 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth, and Neck Diagnosis With and Without Major Operating Room Procedure, respectively).

We also presented our reevaluation of FY 2004 applicants for add-on payments for high-cost new medical services and technologies, and our analysis of FY 2005 applicants (including public input, as directed by Public Law 108–173, obtained in a town hall meeting).

We proposed the annual update of the long-term care diagnosis-related group (LTC–DRG) classifications and relative weights for use under the LTCH PPS for FY 2005.

2. Changes to the Hospital Wage Index

We proposed revisions to the wage index and the annual update of the wage data. Specific issues addressed included the following:

• The FY 2005 wage index update, using wage data from cost reporting periods that began during FY 2001.

• Revision of the labor market areas as a result of OMB revised definitions of geographical statistical areas.

• A discussion of the collection of occupational mix data and the occupational mix adjustment to the wage index that we proposed to apply beginning October 1, 2004.

• Revisions to the wage index based on hospital redesignations and reclassifications, including changes that reflect the new OMB standards for assignment of hospitals to geographic areas.

• The adjustment to the wage index based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index, to implement section 505 of Public Law 108–173.

• A discussion of eligible hospitals reclassified under the one-time appeals process under section 508 of Public Law 108–173.

• Changes to the labor-related share to which the wage index is applied in determining the PPS rate for hospitals located in specific geographic areas, to implement section 403 of Public Law 108–173.

• The revised timetable for reviewing and verifying the wage data that will be in effect for the FY 2005 wage index.

3. Other Decisions and Changes to the PPS for Inpatient Operating and GME Costs

In the proposed rule, we discussed a number of provisions of the regulations in 42 CFR parts 412 and 413 and set forth proposed changes concerning the following:

• Expansion of the current postacute care transfer policy.

• Payments for inpatient care in providers that change classification status during a patient stay.

• Changes in the definitions of urban and rural areas for geographic reclassification purposes.

• Equalization of the standardized amount for urban and rural hospitals.

- The reporting of hospital quality data as a condition for receiving the full annual payment update increase.
- Revision of the regulations to reflect the revision of the labor share of the wage index.
- Revision of the regulations to reflect the wage index adjustment for commuting patterns of hospital employees who live in one county and commute to work in other areas with higher level wages.
- Changes in the threshold amount for eligibility for new medical services and technology add-on payments.
- Revision to our policy on additional payments to hospitals with high percentages of ESRD discharges.
- Changes to the IME adjustment formula multipliers, and the formula multiplier applicable to redistribution of unused numbers of FTE resident slots.
- Changes in DSH adjustment payments to rural and small urban hospitals.
- Payment adjustments for low-volume hospitals.
- Changes in policy affecting hospitals that apply as a group for reclassification and a discussion of possible reclassifications for dominant hospitals and hospitals in single-hospital MSAs.
- Changes in policies governing payments for direct GME, including the redistribution of unused FTE resident slots; changes in the GME initial residency period; extension of the update limitation on hospital-specific per resident amounts; and changes in the policies on residents training in nonhospital settings, including written agreements for teaching physician compensation.
- An announcement of the rural community hospital demonstration to be established under section 410A of Public Law 108–173 and the opportunity for eligible hospitals to apply for participation in the demonstration program.
- A solicitation of public comments on the effect of increases in malpractice insurance premiums on hospitals participating in the Medicare program and beneficiary access of services.

4. Changes to the PPS for Capital-Related Costs

In the proposed rule, we discussed the payment requirements for capital-related costs and proposed changes relating to capital payments to hospitals located in Puerto Rico, changes in the policies on exception payments for extraordinary circumstances, treatment of hospitals previously reclassified for the operating standardized amounts, and capital payment adjustments based on the proposed changes in geographic classifications.

5. Changes for Hospitals and Hospital Units Excluded From the IPPS

In the proposed rule, we discussed the following proposed revisions and clarifications concerning excluded hospitals and hospital units and CAHs:

- Changes in the payment rate for new excluded hospitals.
- Changes to the criteria for determining payments to hospitals-within-hospitals.
- Changes to the policies governing payment to CAHs, including a change in the payment percentage for services furnished by CAHs; changes in the rules governing the election by a CAH of the optional method of payment; expansion of the payment to emergency room on-call providers to include physician assistants, nurse practitioners, and clinical nurse specialists; authorization for the making of periodic interim payments (PIPs) for CAHs for inpatient services furnished; revision of the bed count limit for CAHs from 15 to 25 acute care beds; proposed requirements for establishing psychiatric and rehabilitation distinct part units in CAHs; and termination of the location requirement for a CAH by designating the CAH as a necessary provider.

6. Changes to QIO Disclosure of Information Requirements

In the proposed rule, we discussed our proposed clarification of the requirements for disclosure by QIOs of information on institutions and practitioners collected in the course of the QIO's quality improvement activities.

7. Changes Relating to Medicare Provider Agreements, Hospital Conditions of Participation, and Fire Safety Requirements for Certain Health Care Facilities

We proposed to—

- Require hospitals, as part of the discharge planning standard under the Medicare hospital conditions of participation, to furnish a list of Medicare-participating home health agencies to patients who are expected to receive home health services after discharge and to provide information on Medicare-certified SNFs to patients who are likely to need posthospital extended care services.
- Require that Medicare provider agreements include provisions that would ensure that all hospital employees who may come into contact with human blood in the course of their duties are provided proper protection from bloodborne pathogens.
- Correct a technical error relating to the application of the 2000 edition of the Life Safety Code as the fire safety requirements for certain health care facilities; and clarify the effective date for the prohibition on the use of roller latches in these facilities.

8. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits

In the Addendum to the May 18, 2004, proposed rule, we set forth proposed changes to the amounts and factors for determining the FY 2005 prospective payment rates for operating costs and capital-related costs. We also established the proposed threshold amounts for outlier cases. In addition, we addressed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2005 for hospitals and hospital units excluded from the PPS.

9. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact that the proposed changes would have on affected hospitals.

10. Recommendation of Update Factor for Hospital Inpatient Operating Costs

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provided our recommendations of the appropriate percentage changes for FY 2005 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by hospitals and hospital units excluded from the IPPS.

11. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, the Medicare Payment Advisory Commission (MedPAC) is required to submit a report to Congress, no later than March 1 of each year, that reviews and makes recommendations on Medicare payment policies. MedPAC's March 2004 recommendation concerning hospital inpatient payment policies addressed only the update factor for inpatient hospital operating costs and capital-related costs under the IPPS and for hospitals and distinct part hospital units excluded from the IPPS. This recommendation was addressed in Appendix B of the May 18, 2004,

proposed rule. For further information relating specifically to the MedPAC March 1 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's Web site at: *http://www.medpac.gov*.

D. Public Comments Received in Response to the May 18, 2004 Proposed Rule

We received over 30,000 timely items of correspondence containing multiple comments on the May 18, 2004 proposed rule. Summaries of the public comments and our responses to those comments are set forth below under the appropriate heading.

Comment Period: One commenter indicated that, under the Administrative Procedures Act (APA), 5 U.S.C. 553(b), the 60-day comment period should have started from the date the proposed rule was published in the **Federal Register**, not the date the rule was placed on the CMS Web site.

Response: We believe publication of the proposed rule is fully consistent with the law. The APA does not prescribe any specific length for the comment period. In addition, the proposed rule was placed on display at the Office of the Federal Register and a copy of the rule also appeared on our Web site. The substance of the rule was fully available on the Web site, as well as on display at the Office of the Federal Register. Finally, we note that, in accordance with section 1886(d) of the Act, the Secretary is required to ensure that the updated IPPS rates are in place at the beginning of the Federal fiscal year, or by October 1, 2004. Our priority is to ensure that hospitals receive their final updated rates for the new fiscal year.

II. Changes to DRG Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as DRGs) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, we pay for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Congress recognized that it would be necessary to recalculate the DRG relative weights periodically to account for changes in resource consumption. Accordingly, section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. The changes to the DRG classification system and the recalibration of the DRG weights for discharges occurring on or after October 1, 2004, are discussed below.

B. DRG Reclassifications

1. General

Cases are classified into DRGs for payment under the IPPS based on the principal diagnosis, up to eight additional diagnoses, and up to six procedures performed during the stay. In a small number of DRGs, classification is also based on the age, sex, and discharge status of the patient. The diagnosis and procedure information is reported by the hospital using codes from the International Classification of Diseases, Ninth Revision, Clinical Modification (ICD–9–CM).

For FY 2004, cases are assigned to one of 518 DRGs in 25 major diagnostic categories (MDCs). Most MDCs are based on a particular organ system of the body. For example, MDC 6 is Diseases and Disorders of the Digestive System. This approach is used because clinical care is generally organized in accordance with the organ system affected. However, some MDCs are not constructed on this basis because they involve multiple organ systems (for example, MDC 22 (Burns)). The table below lists the 25 MDCs.

	Major Diagnostic Categories (MDCs)
1	Diseases and Disorders of the Nervous System
2	Diseases and Disorders of the Eye
3	Diseases and Disorders of the Ear, Nose, Mouth, and Throat
4	Diseases and Disorders of the Respiratory System
5	Diseases and Disorders of the Circulatory System
6	Diseases and Disorders of the Digestive System
7	Diseases and Disorders of the Hepatobiliary System and Pancreas
8	Diseases and Disorders of the Musculoskeletal System and Connective Tissue
9	Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast
10	Endocrine, Nutritional and Metabolic Diseases and Disorders
11	Diseases and Disorders of the Kidney and Urinary Tract
12	Diseases and Disorders of the Male Reproductive System
13	Diseases and Disorders of the Female Reproductive System
14	Pregnancy, Childbirth, and the Puerperium
15	Newborns and Other Neonates with Conditions Originating in the Perinatal Period
16	Diseases and Disorders of the Blood and Blood Forming Organs and Immunological Disorders
17	Myeloproliferative Diseases and Disorders and Poorly Differentiated Neoplasms
18	Infectious and Parasitic Diseases (Systemic or Unspecified Sites)
19	Mental Diseases and Disorders
20	Alcohol/Drug Use and Alcohol/Drug Induced Organic Mental Disorders
21	Injuries, Poisonings, and Toxic Effects of Drugs
22	Burns
23	Factors Influencing Health Status and Other Contacts with Health Services
24	Multiple Significant Trauma
25	Human Immunodeficiency Virus Infections

In general, cases are assigned to an MDC based on the patient's principal diagnosis before assignment to a DRG. However, for FY 2004, there are eight DRGs to which cases are directly assigned on the basis of ICD–9–CM procedure codes. These DRGs are for heart, liver, bone marrow, lung, simultaneous pancreas/kidney, and pancreas transplants and for tracheostomies. Cases are assigned to these DRGs before they are classified to an MDC. The table below lists the current eight pre-MDCs.

	Pre-Major Diagnostic Categories (Pre-MDCs)
DRG 103	Heart Transplant
DRG 480	Liver Transplant
DRG 481	Bone Marrow Transplant
DRG 482	Tracheostomy for Face, Mouth, and Neck Diagnoses
DRG 483	Tracheostomy with Mechanical Ventilation 96+ Hours or Principal Diagnosis Except for Face, Mouth, and Neck Diagnoses
DRG 495	Lung Transplant
DRG 512	Simultaneous Pancreas/Kidney Transplant
DRG 513	Pancreas Transplant

Within most MDCs, cases are then divided into surgical DRGs and medical DRGs. Surgical DRGs are based on a hierarchy that orders operating room (O.R.) procedures or groups of O.R. procedures by resource intensity.

Medical DRGs generally are differentiated on the basis of diagnosis and age (less than or greater than 17 years of age). Some surgical and medical DRGs are further differentiated based on the presence or absence of a complication or a comorbidity (CC).

Generally, nonsurgical procedures and minor surgical procedures that are not usually performed in an operating room are not treated as O.R. procedures. However, there are a few non-O.R. procedures that do affect DRG assignment for certain principal diagnoses, for example, extracorporeal shock wave lithotripsy for patients with a principal diagnosis of urinary stones.

Patient's diagnosis, procedure, discharge status, and demographic information is fed into the Medicare claims processing systems and subjected to a series of automated screens called the Medicare Code Editor (MCE). The MCE screens are designed to identify cases that require further review before classification into a DRG.

After patient information is screened through the MCE and any further development of the claim is conducted, the cases are classified into the appropriate DRG by the Medicare GROUPER software program. The GROUPER program was developed as a means of classifying each case into a DRG on the basis of the diagnosis and procedure codes and, for a limited number of DRGs, demographic information (that is, sex, age, and discharge status).

After cases are screened through the MCE and assigned to a DRG by the GROUPER, the PRICER software calculates a base DRG payment. The PRICER calculates the payments for each case covered by the IPPS based on the DRG relative weight and additional factors associated with each hospital, such as IME and DSH adjustments. These additional factors increase the payment amount to hospitals above the base DRG payment.

The records for all Medicare hospital inpatient discharges are maintained in the Medicare Provider Analysis and Review (MedPAR) file. The data in this file are used to evaluate possible DRG classification changes and to recalibrate the DRG weights. However, in the July 30, 1999, IPPS final rule (64 FR 41500), we discussed a process for considering non-MedPAR data in the recalibration process. In order for us to consider using particular non-MedPAR data, we must have sufficient time to evaluate and test the data. The time necessary to do so depends upon the nature and quality of the non-MedPAR data submitted. Generally, however, a significant sample of the non-MedPAR data should be submitted by mid-October for consideration in conjunction with the next year's proposed rule. This allows us time to test the data and make a preliminary assessment as to the feasibility of using the data. Subsequently, a complete database should be submitted by early December for consideration in conjunction with the next year's proposed rule.

Many of the changes to the DRG classifications are the result of specific issues brought to our attention by interested parties. We encourage individuals with concerns about DRG classifications to bring those concerns to our attention in a timely manner so they can be carefully considered for possible inclusion in the next proposed rule and so any proposed changes may be subjected to public review and comment. Therefore, similar to the timetable for interested parties to submit non-MedPAR data for consideration in the DRG recalibration process, concerns about DRG classification issues should be brought to our attention no later than early December in order to be considered and possibly included in the next annual proposed rule updating the IPPS.

In the May 18, 2004, proposed rule, we proposed numerous changes to the DRG classification system for FY 2005. The changes we proposed to the DRG classification system for FY 2005, the public comments we received concerning the proposed changes, the final DRG changes, and the methodology used to recalibrate the DRG weights are set forth below. The changes we are implementing in this final rule will be reflected in the revised FY 2005 GROUPER version 22.0 and effective for discharges occurring on or after October 1, 2003. Generally, our DRG analysis in the May 18, 2004, proposed rule was based on data from the December 2003 update of the FY 2003 MedPAR file.

Unless otherwise noted in this final rule, our DRG analysis is based on data from the March 2004 update of the FY 2003 MedPAR file, which contains hospital bills received through March 31, 2004, for discharges in FY 2003.

2. MDC 1 (Diseases and Disorders of the Nervous System): Intracranial Hemorrhage and Stroke With Infarction

In the May 18, 2004, proposed rule, we noted that it had come to our attention that the title of DRG 14 (Intracranial Hemorrhage and Stroke With Infarction) may be misleading because it implies that a combination of conditions exists when the DRG is assigned. When we developed this title, we did not intend to imply that a combination of conditions exists. Therefore, we proposed to change the title of DRG 14 to read ''Intracranial Hemorrhage or Cerebral Infarction''.

We received one comment on this proposal in support of the DRG title change. Therefore, we are adopting as final the proposed change of the title of DRG 14 to ''Intracranial Hemorrhage or Cerebral Infarction''.

3. MDC 5 (Diseases and Disorders of the Circulatory System)

a. Heart Assist System Implant

Circulatory support devices, also known as heart assist systems, ventricular assist devices (VADs) or left ventricular assist devices (LVADs), offer a surgical alternative for end-stage heart failure patients. This type of device is often implanted near a patient's native heart and assumes the pumping function of the weakened heart's left ventricle. In many cases, heart transplantation would be the treatment of choice for this type of patient. However, the low number of donor hearts limits this treatment option.

We have reviewed the payment and DRG assignment for this type of device many times in the past. The reader is referred to the August 1, 2002 IPPS final rule (67 FR 49989) for a complete listing of those discussions.

In the August 1, 2002, final rule (67 FR 49990), we attempted to clinically and financially align VAD procedures by creating new DRG 525 (Heart Assist System Implant). We also noted that cases in which a heart transplant also occurred during the same hospitalization episode would continue to be assigned to DRG 103 (Heart Transplant). At that time, we announced that DRG 525 would consist of any principal diagnosis in MDC 5, plus one of the following surgical procedure codes:

- 37.62, Insertion of nonimplantable heart assist system.
- 37.63, Repair of heart assist system.
- 37.65, Implant of external heart assist system.
- 37.66, Insertion of implantable heart assist system.

(To avoid confusion, we note that the titles of codes 37.62, 37.63, 37.65, and 37.66 have been revised for FY 2005 through the ICD–9–CM Coordination and Maintenance Committee process as reflected in Table 6F, Revised Procedure Code Titles in the Addendum to this final rule.)

Commenters on the May 19, 2003, proposed rule that preceded the August 1, 2003, IPPS (FY 2004) final rule notified us that procedure code 37.66

was neither a clinical nor a financial match to the rest of the procedure codes now assigned to DRG 525. We did not modify DRG 525 for FY 2004. We agreed that we would continue to evaluate whether to make further changes to DRG 525. After publication of the August 1, 2003, final rule, we again reviewed the MedPAR data concerning DRG 525, and came to the conclusion that procedure code 37.62 is different in terms of clinical procedures and resource utilization from the other procedure codes assigned to DRG 525. Therefore, in a correction to the August 1, 2003, IPPS (FY 2004) final rule, published on October 6, 2003 (68 FR 57733), we revised the composition of DRG 525 by correcting the assignment of procedures to DRG 525 in light of the lower charges associated with procedure code 37.62. We moved code 37.62 into DRG 104 (Cardiac Valve and Other Major Cardiothoracic Procedures With Cardiac Catheterization) and DRG 105 (Cardiac Valve and Other Major Cardiothoracic Procedures Without Cardiac Catheterization), and left procedure codes 37.63, 37.65, and 37.66 into DRG 525.

In addition, we have evaluated a request for expanded coverage for VADs and LVADs as destination (or permanent) therapy for end-stage heart failure patients who are not candidates for heart transplantation. VADs and LVADs had been approved for support of blood circulation post-cardiotomy (effective for services performed on or after October 18, 1993) and as a bridge to heart transplant (effective for services performed on or after January 22, 1996) to assist a damaged or weakened heart in pumping blood. The criteria that must be fulfilled in order for Medicare coverage to be provided for these purposes have been previously discussed in the August 1, 2000, final rule (65 FR 47058), and can also be accessed online at: *http://www.cms.gov/manuals/pm_trans/r2ncd1.pdf.*

As a result of that review, effective for services performed on or after October 1, 2003, VADs have been approved as destination therapy for patients requiring permanent mechanical cardiac support. Briefly, VADs used for destination therapy are covered only if they have received approval from the FDA for that purpose, and the device is used according to the FDA-approved labeling instructions. VADs are covered for patients who have chronic end-stage heart failure (New York Heart Association Class IV end-stage left ventricular failure for at least 90 days with a life expectancy of less than 2 years). Implanting facilities as well as patients must also meet all of the additional conditions that are listed in the national coverage determination for artificial hearts and related devices, which is posted on the above CMS website.

In the May 18, 2004, proposed rule, we again reviewed the FY 2003 MedPAR data for all cases in which a VAD had been implanted, using the criterion of any case containing a procedure code of 37.66. We found a total of 65 cases in 3 DRGs: DRG 103 (Heart Transplant); DRG 483 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth, and Neck Diagnoses); and DRG 525 (Heart Assist System Implant). The following table displays our findings:

DRG With Code 37.66 Reported	Count	Average Length of Stay	Average Charges
103	14	77.36	$ 836,011
483	6	100.50	$1,400,706
525	45	38.93	$ 308,725

The remaining 354 cases in DRG 103 that did not report code 37.66 had average charges of $282,578. The remaining 171 cases in DRG 525 that did not contain code 37.66 had an average length of stay of 12.39 days and average charges of $168,388. The 45 cases in DRG 525 with code 37.66 accounted for 26 percent of the cases. However, the average charges for these cases are approximately $140,340 higher than the average charges for cases in DRG 525 that did not report code 37.66.

Commenters on the FY 2004 final rule suggested adding code 37.66 to DRG 103. We were concerned with the timing of that comment, as it was received after publication of the proposed rule. We noted that the commenters' suggestions on the structure of the DRGs involved were significant, and that change of that magnitude should be subject to public review and comment. We also noted that we would evaluate the suggestion further (68 FR 45370). However, as one of the indications for this device has become destination therapy, and as this new indication is more clinically aligned with DRG 103, in the May 18, 2004 proposed rule, we proposed to remove procedure code 37.66 from DRG 525 and assign it to DRG 103. We also proposed to change the title of DRG 103 to ''Heart Transplant or Implant of Heart Assist System''. The proposed restructured DRG 103 included any principal diagnosis in MDC 5, plus one of the following surgical procedure codes:

- 33.6, Combined heart-lung transplantation.
- 37.51, Heart transplantation.
- 37.66, Insertion of implantable heart assist system.

In addition to the proposed changes to DRG 103, we proposed to change the title of DRG 525 to ''Other Heart Assist System Implant.''

Comment: A number of commenters recommended that we continue to examine the MedPAR data for code 37.66 and heart transplants to confirm that the weight is accurate. Some of these commenters noted that the weight might need to be increased in either the short term or next year. One commenter who, we believe, did not have access to the proposed rule, suggested the same proposed changes that were included in the proposed rule.

Response: We will continue to evaluate the assignment of these codes annually for clinical and resource coherence. We point out that the relative weights are determined based on a formula and the formula is based on historic hospital charges. To increase one weight in a manner not consistent with the formula would skew other weights, in addition to distorting our mandated budget neutrality provision.

Comment: Two commenters requested clarification concerning patients who receive the implantable heart assist system as a bridge to transplant and are discharged and subsequently return for a heart transplant. The commenters

wanted to know if DRG 103 would be assigned in both cases.

Response: DRG 103 would be assigned to the case when a VAD is implanted. It would also be assigned when the patient returns to the hospital for a heart transplant. However, we take this opportunity to clarify that only one DRG 103 payment will be made per admission. If a patient has both the VAD and a heart transplant during the same hospital admission, DRG 103 would be paid only once. Depending on the circumstances, the case may qualify for cost outlier status, which is designed to defray some of the additional expenses of the case.

Comment: One commenter suggested that the term ''Insertion'' in the code title for 37.66 be changed to ''Implant'' to more accurately reflect the resource intense nature of the VAD implant.

Response: We regret that we cannot accommodate this request. The cardiac device code titles have been discussed at the two previous ICD–9–CM Coordination and Maintenance Committee meetings (December 2003 and April 2004). At those meetings, we asked for comments about the code titles, and in response to public comment, we removed the term ''Implant'' and substituted ''Insertion'' in the title. As noted elsewhere in this preamble, the codes in Table 6 of the Addendum are not subject to comment. The codes themselves are final at the time the proposed rule is published, which gives our industry partners the opportunity to put them into their printed and electronic programs without the concern that they may be changed later in the rulemaking process.

Comment: One commenter urged CMS to retain a common DRG assignment for procedure codes 37.65 and 37.66. The commenter believed that assigning these two procedure codes to different DRGs would not ensure that payment is adequate to allow hospitals to provide mechanical circulatory support therapies, as clinically indicated, and in a cost-efficient manner. The commenter further believed that payment for implantable VADs (code 37.66) at a higher level than external VADs (code 37.65) would create financial incentives unrelated to, and potentially at odds with, clinical considerations, which would skew device choice and increase Medicare program costs. The commenter stated that the initial use of the least expensive device that can provide the necessary therapeutic benefit leads to the best clinical outcomes and the lowest total system costs. The commenter encouraged CMS to adopt a prudent payment policy and an adequate test of whether a patient's heart will recover before an implantable VAD procedure is undertaken.

Response: We reviewed data on DRG 525 in the FY 2003 MedPAR file and are summarizing the findings below:

Code	Number of Cases	Average Length of Stay	Average Charges
37.62, Insertion of nonimplantable heart assist system	1	66	$273,361
37.63, Repair of heart assist system	62	13.37	$139,758
37.65, Implant of external heart assist system	108	11.32	$183,852
37.66, Insertion of implantable heart assist system	45	38.93	$308,725

We believe that the data on the length of stay and average charges demonstrate considerable differences in the two VAD devices. The implantable VAD (code 37.66) had a length of stay more than three times longer than that of the external VAD (code 37.65), and charges that average over $100,000 per case greater than those of the external VAD. To comply with this commenter's suggestion and leave both codes in the same DRG would result in overpayment of external VAD procedures and underpayment of the implantable VADs. We do not find either alternative acceptable.

We will continue to closely monitor DRGs 103 and 525 on an annual basis, and will review our data using the specific procedure codes that comprise these two DRGs.

Comment: One commenter stated that the MedPAR data on charges for FY 2003 VAD cases used to develop and defend the proposal to assign procedure codes 37.65 and 37.66 to different DRGs are an inadequate basis for the proposal. The commenter stated that the FY 2003 data on code 37.66 used in support of the proposal (to move these cases to DRG 103) must be comprised primarily of bridge-to-transplant cases, as the use of VADs for destination therapy was only recently approved. Therefore, the commenter believes, any destination therapy patients in the data must have been clinical trial patients. The commenter asserted that these clinical trial patients were a sicker group of patients than would normally be found, and that they received more ancillary services during the course of the trial than would be likely in normal clinical practice. As a result, the data for these patients would be skewed to higher average charges and longer lengths of stay.

Response: The data associated with code 37.66 reflect the insertion of an implantable VAD. We do not have a method of capturing the intent of the physician upon insertion of this device. When the chest is opened and the device is inserted, we have no way of determining if this patient requires the device as a bridge-to-transplant as the patient awaits a donor organ, or if this VAD is to be considered destination therapy. Code 37.66 captures only the procedure performed and the device inserted.

The following table represents FY 2002 data in DRG 525.

Code	Number of Cases	Average Length of Stay	Average Charges
37.62, Insertion of non-implantable heart assist system*	182	13.1	$112,747
37.63, Repair of heart assist system*	78	16.7	$190,627
37.65, Implant of external heart assist system*	102	10.9	$162,863
37.66, Insertion of implantable heart assist system*	50	40.1	$342,725

*For ease in comparison of FY 2002 and FY 2003 data, we have kept the same (new) code titles for both years.

When we compare the above table containing FY 2002 data to the previous table containing FY 2003 data, we find similar results in length of stay and average charges for codes 37.63, 37.65, and 37.66. The FY 2003 data show only one case with code 37.62: it is difficult to draw any meaningful conclusions based on one case. These data represent cases before bridge-to-transplant was a covered indication for VAD. As the data in the 2 years are so similar, we believe that we have correctly reassigned code 37.66 to DRG 103.

Comment: One commenter stated that DRG 525, as amended on October 1, 2003, to include every type of mechanical circulatory support device requiring a sternotomy and multiple-day support, constituted a clinically coherent group of surgeries encompassing a range of device types and costs. The commenter stated that, as the device types in that DRG grouping are available in the same hospital mechanical circulatory support programs, blended reimbursement did not constitute a financial impediment to proper clinical choice. The commenter stated that the FY 2003 iteration of DRG 525 should be preserved, which would allow the dynamics of the clinical setting and the market to determine the choice among available VADs.

Response: We are aware that reimbursement dynamics may have an influence on the practice of medicine. However, we are also aware that the placement of cases reporting code 37.66 in DRG 525 may cause a financial hardship for hospitals. The movement of code 37.66 to DRG 103 is appropriate from the perspective of resource utilization, and will also alleviate some of the disincentive to offer this procedure to patients who meet the medical criteria for implantation.

Comment: One commenter noted that coverage of VAD procedures should be limited to Medicare-certified transplant centers. The commenter also noted that VAD implants assigned to DRG 103 are limited to those [hospitals] using devices that are approved by the FDA for use outside the inpatient hospital setting.

Response: Section 60—Durable Medical Equipment in the Medicare Coverage Manual sets forth our requirements concerning the use of VADs. The manual states:

- The VAD must be used in accordance with the FDA approved labeling instructions;
- The patient is approved and listed as a candidate for heart transplantation by a Medicare-approved heart transplant center; and
- The implanting site, if different than the Medicare-approved transplant center, must receive the Medicare-approved heart transplant center under which the patient is listed prior to implantation of the VAD.

In conjunction with the data review of DRGs 103 and 525, we also evaluated DRGs 104 and 105. DRGs 104 and 105 were restructured in FY 2003 by moving code 37.62 into them. We examined the MedPAR data and found that the average charges for DRGs 104 and 105 were $113,667 and $82,899, respectively, for cases not reporting code 37.62, while cases containing code 37.62 had average charges of $124,559 and $166,129, respectively.

The removal of code 37.66 from DRG 525 would have the effect of clinically realigning that DRG to be more coherent. As a result of the proposal to remove code 37.66 from DRG 525 and assign it to DRG 103, we also proposed to remove code 37.62 from DRGs 104 and 105 and assign it back into DRG 525. The average charges for code 37.62 in DRGs 104 and 105 ($124,559 and $166,129) more closely matched the average charges reported for the 171 cases in DRG 525, absent code 37.66 ($168,388).

We indicated that the proposed new DRG 525 would consist of any principal diagnosis in MDC 5, plus the following surgical procedure codes:

- 37.52, Implantation of total replacement heart system*
- 37.53, Replacement or repair of thoracic unit of total replacement heart system*
- 37.54, Replacement or repair of other implantable component of total replacement heart system*
- 37.62, Insertion of nonimplantable heart assist system
- 37.63, Repair of heart assist system
- 37.65, Implant of external heart assist system

We received one comment in support of this portion of our proposal. Based on the rationale described above, we are adopting the proposed changes to DRGs 103, 104, and 105 as final without modification.

b. Cardiac Resynchronization Therapy and Heart Failure

In the May 18, 2004 proposed rule, we addressed a request we had received from a manufacturer of a Cardiac Resynchronization Therapy Defibrillator (CRT–D) device for a modification to DRG 535 (Cardiac Defibrillator Implant With Cardiac Catheterization With Acute Myocardial Infarction/Heart Failure/Shock) and DRG 536 (Cardiac Defibrillator Implant With Cardiac Catheterization Without Acute Myocardial Infarction/Heart Failure/Shock). The commenter pointed out that defibrillator device implantations, including the CRT–D type of defibrillator, are assigned to DRG 535 when the patient also has a cardiac catheterization and has either an acute myocardial infarction, heart failure, or shock as a principal diagnosis. If the

* These codes represent noncovered services for Medicare beneficiaries. However, it is our longstanding practice to assign every code in the ICD–9–CM classification to a DRG. Therefore, they have been assigned to DRG 525.

patient receiving the defibrillator implant and cardiac catheterization does not have a principal diagnosis of acute myocardial infarction, heart failure, or shock, the cases are assigned to DRG 536.

The commenter requested that cases be assigned to DRG 535 when the patient has heart failure as either a principal diagnosis or a secondary diagnosis. The commenter stated that patients receive a CRT–D (as opposed to other types of defibrillators) when they have both heart failure and arrhythmia. The commenter was concerned that some coders may sequence the heart failure as a secondary diagnosis, which would result in the patient being assigned to DRG 536.

As stated earlier, DRGs 535 and 536 are split based on the principal diagnosis of acute myocardial infarction, heart failure, or shock. Cases are not assigned to DRG 535 when heart failure is a secondary diagnosis.

The commenter described a scenario where a patient was admitted with heart failure for an evaluation of the need for a CRT–D implant. The hospitalization studies indicated that the patient had a ventricular tachycardia. The commenter indicated that coders would be confused as to which code should be listed as the principal diagnosis.

CMS' determination based on review of this scenario as described was that the heart failure led to the admission and would be the principal diagnosis. This case would properly be assigned to DRG 535. Furthermore, when two conditions are considered to be equally responsible for the admission, either one of the two conditions may be selected as the principal diagnosis.

The commenter also stated that its own study shows CRT–D patients have significantly higher charges than do other patients in DRGs 535 and 536 who receive an implantable defibrillator. This was the case whether heart failure was used as a principal or secondary diagnosis.

A cardiac catheterization is a diagnostic procedure generally performed to establish the nature of the patient's cardiac problem and determine if implantation of a cardiac defibrillator is appropriate. Generally, the cardiac catheterization can be done on an outpatient basis. Patients who are admitted with acute myocardial infarction, heart failure, or shock and have a cardiac catheterization are generally acute patients who require emergency implantation of the defibrillator. Thus, there are very high costs associated with these patients.

For the analysis in the proposed rule, we examined the MedPAR file for all cases in DRGs 535 and 536 and only cases in DRG 536 in which acute myocardial infarction or heart failure was listed as a secondary diagnosis. The following chart illustrates the results of our findings:

DRGs	Count	Average Length of Stay	Average Charges
535	6,801	9.50	$110,663.57
536 - All cases	17,454	5.47	89,493.85
536 - Cases With Secondary Diagnosis of Cardiac Defibrillator Implant With Cardiac Catheterization Without Acute Myocardial Infarction/Heart Failure/Shock	8,562	6.5	94,832.14

The data show that cases with a secondary diagnosis of acute myocardial infarction or heart failure have average charges ($94,832.14) closer to the overall average charges for DRG 536 ($89,493.85) where they are currently assigned. Overall charges for DRG 535 were $110,663.57. We do not believe these data support modifying DRG 535 and DRG 536 as requested. Many of the CRT–D patients who are admitted for heart failure would be assigned into DRG 535. Furthermore, modifying the DRG logic for one specific type of defibrillator (CRT–D) is not consistent with our overall policy of grouping similar types of patients together in the same DRG. In addition, to modify the DRG logic for the small percentage of cases where there might be confusion concerning the selection of the principal diagnosis does not seem prudent. Therefore, we did not propose a modification to DRG 535 or 536 for CRT–Ds.

Comment: Several commenters supported our proposal not to change the current DRG structure of DRG 535 and DRG 536 for CRT–D devices. Our proposal was in response to a manufacturer that had requested that CRT–D cases be assigned to DRG 535 when the patient has heart failure as either a principal diagnosis or a secondary diagnosis.

Response: After publication of the May 18, 2004 proposed rule, we discussed the issue of coding cases implanted with a CRT–D at the June 2004 meeting of the American Hospital Association's Editorial Advisory Board for Coding Clinical for ICD–9–CM. Discussions between coding representatives from the American Hospital Association, the American Health Information Management Association, the National Centers for Health Statistics, and CMS did not identify diagnosis sequencing problems for patients receiving a CRT–D, as was suggested by the manufacturer. A number of problems in coding the implantation of these devices using the procedure codes were discussed. In addition, we learned that physicians are not clearly and consistently documenting the types of devices being implanted. This is leading to a number of questions from hospitals on how to assign the correct codes for an implantable cardiac defibrillator (ICD) versus the newer CRT–D. As a result of these further discussions, the Editorial Advisory Board for Coding Clinical for ICD–9–CM is developing a series of questions and answers to clearly illustrate to hospitals how the various devices, leads, and generators are to be correctly coded.

We appreciate the support of the commenters for maintaining the current DRG structure for DRGs 535 and 536 and not modifying them in this final rule for one specific type of defibrillator.

Comment: One commenter, a national hospital organization, opposed our recommendation not to alter the logic of DRG 535. The commenter believed that resynchronization is not performed during an acute exacerbation of congestive heart failure. Rather, the

commenter indicated, the patient returns at a later date once the congestive heart failure becomes more stabilized. The commenter added that, at that time, the patient often manifests associated arrhythmias that require the resynchronization. The commenter believed that, as a result, under the current proposal, this case would possibly not group to DRG 535 if the congestive heart failure were not sequenced as the principal diagnosis.

Response: The commenter stated that the hospital might not list congestive heart failure as the principal diagnosis in the case described. However, if this were a planned second admission for the implantation of a CRT–D for congestive heart failure, the hospital would assign congestive heart failure as the principal diagnosis. The associated arrhythmias would be listed as a secondary diagnosis. This case would be assigned to DRG 535. If the admission were equally due to both the congestive heart failure and the arrhythmias, the hospital could choose either one as the principal diagnosis. Once again, the hospital could select congestive heart failure as the principal diagnosis and DRG 535 would be assigned. It would not be appropriate to change the DRG logic for DRG 535 to capture congestive heart failure as either the principal diagnosis or secondary diagnosis for CRT–D patients when appropriate coding would lead to the correct DRG assignment. Therefore, it would not be appropriate to modify the logic for DRGs 535 and 536 for congestive heart failure at this time.

Comment: Commenters who supported our proposal of maintaining the current DRG structure for DRGs 535 and 536 suggested that coders should follow the ICD–9–CM Official guidelines for Coding and Reporting (available on the following Web site: *http://www.cdc.gov/nchs/icd9.htm*) when sequencing the principal diagnosis for admissions involving cardiac resynchronization. The commenters indicated that, if the reason for the admission is heart failure, that condition would be sequenced as the principal diagnosis. The commenter added that when two conditions are equally responsible for the admission, the ICD–9–CM Official Guidelines for Coding and Reporting allow either condition to be sequenced as the principal diagnosis. The commenters further stated that, in that case, the condition resulting in the higher-weighted DRG adjustment would likely be sequenced as the principal diagnosis. The commenter recommended that CMS continue to analyze the data in DRGS 535 and 536 and seek additional clinical input regarding the typical principal diagnosis for patients being admitted to evaluate the need for a CRT–D device. The commenters added that further revisions to these DRGs may be warranted in the future.

Response: We agree with the commenters that coders should follow the ICD–9-CM Official Guidelines for Coding and Reporting. We also agree that although we are currently maintaining the structure of DRGs 535 and 536, we will continue to examine data for these procedures in future years to ensure that assignment of cases to these DRGs remains appropriate.

Comment. One commenter indicated that its hospital was assigning the following codes for heart failure cases where the existing automatic cardioverter/defibrillator pulse generator is replaced and the pocket in which the device is implanted is revised:

- 37.98 Replacement of automatic cardioverter/defibrillator pulse generator only.
- 37.99 Other operations of heart and pericardium.

The commenter stated that when the hospital submits a claim with the code for the replacement of the generator (code 37.98), the case is assigned to DRG 115 (Permanent Cardiac Pacemaker Implant With Acute Myocardial Infarction, Heart Failure, or Shock or ACID Lead or Generator Procedures). When the hospital submits a claim with codes for both the generator replacement (code 37.98) and the pocket revision (code 37.99), the case is assigned to DRG 111 (Major Cardiovascular Procedures Without CC). The commenter was concerned because DRG 111 has a lower relative weight than DRG 115. The commenter believed that DRG 111 does not adequately reimburse the hospital for the replacement of the pulse generator device.

The commenter requested that we consider modifying the DRG logic when both codes are submitted, modify the surgical hierarchy, or develop separate codes for revisions and relocations of defibrillator generators.

Response: We are addressing the issue of the surgical hierarchy surfaced by the commenter in section II.B.11. of this final rule. We have carefully evaluated the other issues raised by the commenter, and we concur that assigning procedures such as the revision or relocation of defibrillator pockets to a vague code such as code 37.99 does not allow these procedures to be clearly identified. We believe that grouping disparate procedures such as repositioning of leads, removal without replacement of pulse generator, and revision or relocation of pockets within one code makes the DRG refinements difficult. We will discuss this topic at the October 7–8, 2004 meeting of the ICD–9–CM Coordination and Maintenance Committee. We will give consideration to creating one or more new codes to more clearly identify these procedures. With these more precise codes, we should be able to modify the DRG logic to resolve this issue.

Comment: Several commenters requested that we restructure DRG 515 (Cardiac Defibrillator Implant without Cardiac Catheterization) by splitting it into two DRGs based on the presence of acute myocardial infarction (AMI), heart failure, or shock. One commenter pointed out that we previously split DRG 514 (Cardiac Defibrillator with Cardiac Catheterization) into two DRGs based on these conditions. In FY 2004, we created DRGs 535 and 536 (Cardiac Defibrillator Implant with Cardiac Catheterization With and Without AMI/Heart Failure/Shock, respectively). The commenter commended us for splitting DRG 514 into these two new DRGs and asked that we now split DRG 515 in a similar manner.

The commenter stated that there was significant difference in hospital charges associated with cases in DRG 515 with and without these principal diagnoses. The commenter stated that it was important to ensure more appropriate payment for all defibrillator cases and better align the DRG payment logic across all pacemaker and defibrillator cases based on important differences in hospital resource requirements.

The commenter pointed out that, in the FY 2004 IPPS rule, we indicated that we did not believe the number of cases within DRG 515, or the differences in charges for cases with and without a principal diagnosis of acute myocardial infarction, heart failure, or shock, were sufficient to merit the creation of two separate DRGs. The commenter stated there was an increase in defibrillator implants assigned to DRG 515 in FY 2003 based on changes in medical science and practice patterns, and speculated that a large number of cases now assigned to DRG 515 are for patients with a principal diagnosis of acute myocardial infarction, heart failure, or shock. The commenter believed that these patients will have significant differences in hospital charges and lengths of stay as compared to those cases in DRG 515 without these principal diagnoses. In addition, the commenter mentioned that other DRGs within MDC 5 are split based on the principal diagnosis or the presence of complications or comorbidities. In

summation, the commenter requested that we split DRG 515 into two separate new DRGs based on the principal diagnoses of acute myocardial infarction, heart failure, or shock. The commenter believed the split is justified based on the large number of cases in DRG 515, the large percentage of cases that include a principal diagnosis of acute myocardial infarction, heart failure, or shock, and the significantly higher charges and length of patient stays associated with these cases.

Another commenter made a similar request to split DRG 515 into two separate new DRGs based on the principal diagnosis of acute myocardial infarction, heart failure, or shock. The commenter stated that we had split DRG 514 into two DRGs (DRGs 535 and 536), and this split has worked well in the facility environment to accurately capture charges and assign appropriate DRGs to cases.

Response: We have performed additional analysis of our FY 2003 MedPAR claims data for DRG 515 using the March 2004 update of the files. We found that 32 percent (4,191) of cases reported for DRG 515 contained a principal diagnosis of acute myocardial infarction, heart failure, or shock. These cases had average charges of $84,688, as compared to average charges of $77,554 for all cases in DRG 515. Therefore, DRG 515 cases with a principal diagnosis of acute myocardial infarction, heart failure, or shock had average charges that were $7,134 (9 percent) higher than those for all cases in DRG 515. The data also show that patients with a principal diagnosis of acute myocardial infarction, heart failure, or shock have average lengths of stay of 6.056 days compared to 4.73 days for all cases in DRG 515. Therefore, cases in DRG 515 with a principal diagnosis of acute myocardial infarction, heart failure, or shock have an average length of stay that is only 1.326 days longer than that for all cases in DRG 515.

The data that we included in the May 18, 2004, proposed rule (69 FR 28208) showed significantly larger differences between DRGs 535 and 536 in average lengths of stay and charges. DRG 535 had an average length of stay of 9.5 days and average charges of $110,663.57. DRG 536 had an average length of stay of 5.47 days and average charges of $89,493.85. The difference in average charges was $21,169.72.

As a result of this analysis, we find that the requested split of DRG 515 would not result in cases with as significantly different lengths of stay or charges as compared to the difference between DRGs 535 and 536. In addition, our current data show only 4,191 cases that would be assigned to a new DRG for Cardiac Defibrillator Implant without Cardiac Catheterization with a principal diagnosis of acute myocardial infarction, heart failure, or shock. Given the limited number of cases in DRG 515 and the relatively small differences between average charges and length of stay for the two DRGs suggested by the commenter, we have decided that a modification of DRG 515 is not warranted at this time. However, we will examine the data in the future to determine if changes are warranted.

In summary, we are not making changes to DRG 535 or DRG 536 for CRT-D cases at this time. In addition, DRG 515 will remain unchanged for FY 2005. However, we will continue to study data on these DRGs to consider whether future DRG refinements are warranted.

c. Combination Cardiac Pacemaker Devices and Lead Codes

In the May 18, 2004, proposed rule, we discussed a comment we had received that recommended that we include additional combination procedure codes representing cardiac pacemaker device and lead codes under DRG 115 (Permanent Cardiac Pacemaker Implant With Acute Myocardial Infarction, Heart Failure, or Shock or ACID Lead or Generator Procedures) and DRG 116 (Other Permanent Cardiac Pacemaker Implant). DRGs 115 and 116 are assigned when a complete pacemaker unit with leads is implanted. Combinations of pacemaker devices and lead codes that would lead to the DRG assignment are listed under DRGs 115 and 116. The commenter recommended that the following pacemaker device and lead procedure code combinations be added to these two DRGs:

- 00.53 & 37.70
- 00.53 & 37.71
- 00.53 & 37.72
- 00.53 & 37.73
- 00.53 & 37.74
- 00.53 & 37.76

These codes are defined as follows:

- 00.53, Implantation or replacement of cardiac resynchronization pacemaker, pulse generator only [CRT–P]
- 37.70, Initial insertion of pacemaker lead [electrode], not otherwise specified
- 37.71, Initial insertion of transvenous lead [electrode] into ventricle
- 37.72, Initial insertion of transvenous lead [electrode] into atrium and ventricle
- 37.73, Initial insertion of transvenous lead [electrode] into atrium
- 37.74, Initial insertion or replacement of epicardial lead [electrode] into epicadium
- 37.76, Replacement of transvenous atrial and/or ventricular lead(s) [electrode]

We consulted our medical advisors and they agreed that these recommended procedure code combinations also describe pacemaker device and lead implantations and should be included under DRGs 115 and 116. Therefore, we proposed to add the recommended procedure code combinations to the list of procedure code combinations under DRGs 115 and 116.

Comment: Several commenters, including those from organizations representing hospitals and coders, supported our proposal to add the pacemaker device and lead procedure code combinations to DRGs 115 and 116 as specified above. The commenters agreed that these combinations indicate that a complete pacemaker unit, including a pacemaker unit and leads, is implanted.

Response: We appreciate the commenters' support for our proposal.

In summary, we are adopting, as final without modification, our proposal to add the procedure code combinations of pacemaker devices and lead procedure codes included above and specified in the proposed rule to the list of procedure code combinations under DRGs 115 and 116.

d. Treatment of Venous Bypass Graft [Conduit] with Pharmaceutical Substance

In the May 18, 2004, proposed rule, we included in Table 6B of the Addendum a new ICD–9–CM procedure code 00.16 (Pressurized treatment of venous bypass graft [conduit] with pharmaceutical substance) that was approved, effective on October 1, 2004. We received a number of comments on this new code.

Comment: A number of comments from physicians applauded our decision to create new procedure code 00.16. The commenters stated that, upon approval by the Food and Drug Administration (FDA) of this procedure, the code will be used to recognize the E2F Decoy (edifoligide) procedure. This procedure will be performed on patients undergoing bypass vein graft procedures if the FDA finds the procedure to be safe and effective. The commenters stated that they are currently performing this procedure on a number of their patients, and asked that Medicare payments that are in addition to that for the cardiac bypass procedure be made to offset resource utilization and costs incurred by hospitals.

Response: We appreciate the commenters' support for the creation of

this procedure code. We proposed to classify this procedure as a non-O.R. procedure in Table 6B of the Addendum to the proposed rule. The ''N'' under the O.R. column in Table 6B means that the code will not be considered an O.R. procedure and therefore, will not affect the DRG assignment. While the commenters suggested that extra payment be made for this procedure in addition to that for the cardiac bypass procedure, they did not suggest a means to do so. Furthermore, because procedure code 00.16 will not begin to be used until October 1, 2004, we have no data for this new procedure. Accordingly, in this final rule, we are retaining as final the proposed classification of procedure code 00.16 as a non-O.R., ICD–9-CM procedure code. Code 00.16 will not affect the DRG assignment.

4. MDC 6 (Diseases and Disorders of the Digestive System): Artificial Anal Sphincter

In the FY 2003 IPPS final rule (67 FR 50242), we created two new codes for procedures involving an artificial anal sphincter, effective for discharges occurring on or after October 1, 2002: code 49.75 (Implantation or revision of artificial anal sphincter) that is used to identify cases involving implantation or revision of an artificial anal sphincter and code 49.76 (Removal of artificial anal sphincter) that is used to identify cases involving the removal of the device. In Table 6B of that final rule, we assigned both codes to one of four MDCs, based on principal diagnosis, and one of six DRGs within those MDCs. In the August 1, 2003, IPPS final rule (68 FR 45372), we discussed the assignment of these codes in response to a request we had received to consider reassignment of these two codes to different MDCs and DRGs. The requester believed that the average charges ($44,000) for these codes warranted reassignment. In the August 1, 2003, IPPS final rule, we stated that we did not have sufficient MedPAR data available on the reporting of codes 49.75 and 49.76 to make a determination on DRG reassignment of these codes. We agreed that, if warranted, we would give further consideration to the DRG assignments of these codes because it is our customary practice to review DRG assignment(s) for newly created codes to determine clinical coherence and similar resource consumption after we have had the opportunity to collect MedPAR data on utilization, average length of stay charges, and distribution throughout the system.

Therefore, we reviewed the FY 2003 MedPAR data for the presence of codes 49.75 and 49.76. We then arrayed the results by DRG, count, average length of stay, charges, and the presence or absence of a secondary diagnosis that could be classified as a CC. We found that there were a total of 13 cases in 5 total DRGs with CCs, and 9 cases in 4 total DRGs without CCs, for a total of 22 cases that reported these procedure codes. We had anticipated that the majority of cases would have been found in DRGs 157 (Anal and Stomal Procedures With CC) and 158 (Anal and Stomal Procedures Without CC), but found only 2 cases grouped to DRG 157 and 4 cases grouped to DRG 158. Our data showed average charges of $22,374 for the cases with CC, and average charges of $20,831 for the cases without CC. Average charges for DRG 157 were $18,196, while average charges for DRG 158 were $9,348.

Our medical advisors also reviewed the contents of DRGs 157 and 158. The consensus was that codes 49.75 and 49.76 are not a clinical match to the other procedure codes found in these two DRGs. The other procedure codes in DRGs 157 and 158 are for simpler and less invasive procedures. In some circumstances, these procedures could potentially be performed in an outpatient setting or in a physician's office. Our medical advisors determined that clinical coherence was not demonstrated and recommended that we move these codes to DRGs 146 (Rectal Resection With CC) and 147 (Rectal Resection Without CC), as these anal sphincter procedures more closely resemble the procedures in these DRGs. In addition, the average charges for paired DRG 146 ($33,853) and DRG 147 ($21,747) more closely resemble the actual average charges found in the MedPAR data for these cases.

Even though there were few reports of codes 49.75 and 49.76 in the MedPAR data and we did not anticipate a significant increase in utilization of these procedures, we proposed that these two codes would only be removed from paired DRGs 157 and 158 and reassigned to paired DRGs 146 and 147 under MDC 6 (Diseases and Disorders of the Digestive System). We also proposed that all other MDC and DRG assignments for codes 49.75 and 49.76 would remain the same.

Comment: Two commenters agreed with our proposal and suggested that the recommendation be adopted as a final change. One commenter recommended that CMS continue to monitor the cost of these cases for future consideration of the creation of a new DRG. This commenter stated that CMS has limited reassignment of codes 49.75 and 49.76 to only one pair of DRGs. Specifically, these procedures were assigned to DRGs 157 and 158 and will be reassigned to DRGs 146 and 147. The commenter took issue with this limited correction and urged CMS to create a new DRG for ''Complex Anal/Rectal Procedure with Implant''.

Response: As noted above, codes 49.75 and 49.76 are arrayed in four MDCs and six DRGs within those MDCs. To clarify the proposed rule, we proposed to move these codes within MDC 6, but we did not propose to change any other DRG assignment. With an appropriate principal diagnosis, and absent any other surgical procedure that would reconfigure the case, these codes will continue to be assigned to the other four DRGs in the other three MDCs.

We point out that this reassignment of cases in MDC 6 will double the payment for cases now classified to DRG 146, and will more than double the payment for cases now classified to DRG 147 based on the increases in the relative weights.

With regard to the suggestion to create a specific DRG for this procedure, we remind the commenter that the DRG structure is a system of averages, and is based on groups of patients with similar characteristics. It has not been our past practice to create a DRG based on one device from one manufacturer. We will continue to monitor these two procedure codes and the DRGs to which they are assigned for the annual IPPS updates. However, for FY 2005, we are adopting the proposal to reassign cases reporting codes 49.75 and 49.76 in MDC 6 to DRGs 146 and 147 as final, without further modification.

5. MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)

a. 360 Degree Spinal Fusions

In the May 18, 2004 proposed rule, we discussed a comment we had received that suggested procedure code 81.61 (360 Spinal fusion) should not be included in DRG 496 (Combined Anterior/Posterior Spinal Fusion). The commenter stated that code 81.61 does not represent the same types of cases as other codes included in DRG 496. The commenter indicated that cases reported with code 81.61 involve making only one incision, and then fusing both the anterior and posterior portion of the spine. All other cases in DRG 496 involve two separate surgical approaches used to reach the site of the spinal fusion. For these other patients, an incision is made into the patient, and a fusion is made in part of the spine. The patient is then turned over and a separate incision is made so that a fusion can be made in another part of

the spine. The commenter added that these two separate incisions and fusions are more time consuming than the single incision used for code 81.61. The commenter also stated that patients receiving the two surgical approaches have a longer recovery period and use more hospital resources.

We examined data in the MedPAR file for cases assigned to DRG 496 and found the following:

DRG	Count	Average Length of Stay	Average Charges
496 - All Cases	2,706	8.0	$74,967.33
496 - Cases with code 81.61	829	4.7	50,659.69
496 - Cases with code 81.61 with CC	451	5.4	55,639.50
496 - Cases with code 81.61 without CC	378	3.8	44,718.16
496 - Cases without 81.61	1877	9.4	85,703.09

We also examined cases in related DRG 497 (Spinal Fusion Except Cervical With CC) and DRG 498 (Spinal Fusion Except Cervical Without CC) in which code 81.61 was not reported. The results of our examination are summarized in the following table.

DRG	Count	Average Length of Stay	Average Charges
497	16,965	6.19	$49,315.27
498	11,598	3.95	$37,450.68

These data clearly showed that cases with code 81.61 have significantly lower average charges than other cases in DRG 496 that have two surgical approaches. Cases with code 81.61 are more closely aligned with cases in DRG 497 and DRG 498. Furthermore, including code 81.61 will have the effect of lowering the relative weights for DRG 496 in future years. Therefore, we proposed to remove code 81.61 from DRG 496 and reassign it to DRGs 497 and 498.

Comment: Several commenters supported our proposal to remove code 81.61 from DRG 496 and reassign it to DRGs 497 and 498. One commenter representing a major hospital organization stated that patients receiving two surgical approaches have a longer recovery period and use more hospital resources. The commenter believed that there is confusion regarding the use of code 81.61 that stems from physicians who do not use the term ''360 degree spinal fusion'' in the medical record, and hospital coders who need to review the operative report to determine which surgeries, in fact, qualify for code 81.61. The commenter agreed that code 81.61 should be moved from DRG 496 to DRGs 497 and 498. However, the commenter recommended that data for code 81.61 be reviewed in the future once coding practices have improved. Another commenter representing a national organization of health information managers also supported our proposal to remove code 81.61 from DRG 496 and reassign it to DRGs 497 and 498. The commenter stated that MedPAR data indicate that this procedure is less expensive than other procedures classified to DRG 496.

Response: We agree with the commenters that code 81.61 should be removed from DRG 496 and reassigned to DRGs 497 and 498. We also agree that the data for code 81.61 should be reviewed in the future to determine if additional DRG revisions are warranted.

Comment: Several commenters opposed our proposal to remove procedure code 81.61 from DRG 496 and to reassign it to DRGs 497 and 498. The commenters believed that CMS' reasoning was flawed in three areas: clinical coherence, accurate coding, and the incentive for more efficient care.

First, the commenters believed that CMS did not fully address the clinical coherence of the cases, electing instead to make its proposal largely on the basis of charge coherence, alone. The commenters further believed that the combination of anterior and posterior fusions in a single surgery is the most appropriate for defining clinical characteristic of all cases currently included in DRG 496. The commenters stated that except for the number of incisions, a 360-degree (anterior and posterior) fusion is clinically comparable to all other anterior and posterior fusions because of the patient and the surgical characteristics.

Second, the commenters expressed concerns that a significant number of 360-degree single-incision spinal fusion cases were inaccurately coded. The commenters pointed out that the data we used to examine the reporting of code 81.61 (which was created on October 1, 2002) represented only the first year of the use of the code. The commenters suggested that a significant number of 360-degree single-incision spinal fusion cases were incorrectly coded as involving a two-incision approach. Thus, these cases should have been correctly assigned to DRG 496, but were mislabeled as involving a two-incision approach. One commenter stated that, as a manufacturer, it provides a coding hotline for hospitals with questions related to spinal cases. For the period January 2003 through April 2004, 20 percent (113 out of 563) of the total calls related to accurate coding of this procedure.

One commenter stated that a high rate of coding errors is not surprising in the first year of use, given that code 81.61 just became effective for FY 2003, that 360-degree spinal fusion is a complex topic, and that misinformation may

have been given. The commenter recommended that consideration of a reclassification be held for at least another year or two to ensure that a sufficient volume of more accurate data can be collected and analyzed.

Third, with regard to the issue of DRGs serving as an incentive for more efficient care, the commenters believed that CMS proposed the reassignment of code 81.61 to avoid lowering the relative weight for DRG 496 in the future. They stated that, by contrast, CMS has often maintained in the past that the DRG weighting process allows changes in the resource intensity of specific types of cases (whether upward or downward) to be reflected over time, as technology evolves. The commenters indicated that the single-incision method may be less time-consuming, use fewer hospital resources, and allow patients to enjoy a shorter recovery period. The commenters stated that collection and analysis of additional and more accurate data may well show this. However, the commenters recommended that we leave code 81.61 in DRG 496 as a financial incentive for providers to perform the lower-resource procedure. The commenters believed this would lead to the reduction of the relative weight for DRG 496 as more providers performed the less expensive procedure (single-incision anterior/posterior fusion). The commenters stated that the weighting process in DRG 496 is ideally designed to accomplish the goal of having hospitals perform a procedure that requires less resources.

Response: We do not agree with the commenters' suggestions that our analysis did not fully address the clinical coherence of the cases or that our analysis was based largely on charge coherence alone. As we stated in the proposed rule, anterior and posterior fusions of the spine using one incision are quite different from those fusions involving two incisions of the spine. The patient endures a more extensive surgery when incisions to the spine are made using approaches from both the front and back of the patient. The surgery and recovery time are longer when two incisions are made into the patient. While we agree that the charge data support our proposal, we disagree that we ignored clinical differences in these two approaches.

We acknowledge that there have been a number of questions concerning the use of code 81.61. This code has been discussed at the Editorial Advisory Board on Coding Clinic for ICD–9-CM. Based on some of the records sent to the Board, it would appear that some hospitals are incorrectly applying this code. The Board is attempting to develop additional educational material to include in future issues of *Coding Clinic for ICD–9–CM.*

However, as we discussed in the proposed rule, cases reported with code 81.61 had average charges that are significantly lower than spinal fusions using two approaches. Approximately 30 percent (829) of the 2,706 DRG 496 cases reported code 81.61. The 360-degree spinal fusion cases had average charges that were only 68 percent of those for all cases in DRG 496. The average charge for all cases in DRG 496 was $74,967.33, while the average charge for DRG 496 cases with code 81.61 was only $50,659.69. There were also significant differences in the length of stay. The average length of stay for all cases in DRG 496 was 8.0 days, while it was only 4.7 days for cases with code 81.61.

While there may be some confusion in the correct coding of 360 degree spinal fusions with a single incision, there are significant differences in the charges of those reported cases with 360 degree spinal fusion, single incision approach. If we were to keep code 81.61 in DRG 496, the result would be a lowering of the weight for DRG 496 in future years. We discussed this issue with our medical advisors who agreed that the data and clinical similarities support our proposal to remove code 81.61 from DRG 496 and reassign it to DRGs 497 and 498. The nature of the surgery and the charges are similar to other cases in DRGs 497 and 498.

We believe that the commenters' argument that leaving code 81.61 in DRG 496 would subsequently lead to a lowering of the relative weight for DRG 496 because it would increasingly consist of cases involving a single incision approach that would have lower charges seems to confirm CMS' suggestion that the single incision-approaches are significantly less resource intensive as well as less surgically invasive than the two-incision approaches. Therefore, we do not believe these cases belong in DRG 496 along with the more extensive surgeries.

Comment: One commenter opposed moving code 81.61 from DRG 496 and into DRGs 497 and 498. The commenter stated that the amount of time it takes to perform a single incision 360-degree spinal fusion is similar to that of performing an anterior and posterior spinal fusion with two approaches. The commenter stated that any extra time in completing the surgery involves turning the patient over so that the separate approach (incision) can be made. The commenter stated that, in his hospital, the length of stay for one incision versus two incision approaches to spinal fusion does not vary significantly.

Response: While the commenter's hospital may have similar length of stays for patients who have single versus two incision approaches to spinal fusion, our national data show a significant difference. As stated earlier, the average length of stay for DRG 496 was 8.0 days, while that for cases with code 81.61 was 4.7 days. We believe the data support this DRG change.

Therefore, we are adopting as final our proposal to remove code 81.61 from DRG 496 and reassign it to DRGs 497 and 498. We will examine data for cases reporting 81.61 in future years to determine if additional DRG modifications are needed.

b. Multiple Level Spinal Fusion

On October 1, 2003 (68 FR 45596), the following new ICD–9–CM procedure codes were created to identify the number of levels of vertebra fused during a spinal fusion procedure:

- 81.62, Fusion or refusion of 2–3 vertebrae.
- 81.63, Fusion or refusion of 4–8 vertebrae.
- 81.64, Fusion or refusion of 9 or more vertebrae.

Prior to the creation of these new codes, we received a comment recommending the establishment of new DRGs that would differentiate between the number of levels of vertebrae involved in a spinal fusion procedure. In the August 1, 2003, final rule, we discussed the creation of these new codes and the lack of sufficient MedPAR data with the new multiple level spinal fusion codes (68 FR 45369). The commenter had conducted an analysis and submitted data to support redefining the spinal fusion DRGs. The analysis found that increasing the levels fused from 1 to 2 levels to 3 levels or more levels increased the mean standardized charges by 38 percent for lumbar/thoracic fusions, and by 47 percent for cervical fusions.

The following current spinal fusion DRGs separate cases based on whether or not a CC is present: DRG 497 (Spinal Fusion Except Cervical With CC) and DRG 498 (Spinal Fusion Except Cervical Without CC); DRG 519 (Cervical Spinal Fusion With CC) and DRG 520 (Cervical Spinal Fusion Without CC). However, the difference in charges associated with the current CC split was only slightly greater than the difference attributable to the number of levels fused as found by the commenter's analysis. In addition, adopting the commenter's recommendation would have necessitated adjusting the DRG relative weights using non-MedPAR data

because Medicare claims data with the new ICD–9–CM codes would not have been available until the FY 2003 MedPAR file. Therefore, at that time, we did not redefine the spinal fusion DRGs to differentiate on the basis of the number of levels of vertebrae involved in a spinal fusion procedure.

We did not yet have any reported cases utilizing the new multilevel spinal fusion codes in our data. We stated that we would wait until sufficient data with the new multilevel spinal fusion codes were available before making a final determination on whether multilevel spinal fusions should be incorporated into the spinal fusion DRG structure. The codes went into effect on October 1, 2003, and we have not received any data using these codes. Spinal surgery is an area of rapid changes. In addition, we have created a series of new procedure codes that describe a new type of spinal surgery, spinal disc replacement. (*See* codes 84.60 through 84.69 in Table 6B in the Addendum to this final rule that will go into effect on October 1, 2004.) Our medical advisors describe this new surgical procedure as a more conservative approach for back pain than the spinal fusion surgical procedure. With only limited data concerning multiple level spinal fusion and the rapid changes in spinal surgery, we believed it was more prudent not to propose the establishment of new DRGs based on the number of levels of vertebrae involved in a spinal fusion procedure in the May 18, 2004, proposed rule.

In addition, no other surgical DRG is split based on the number of procedures performed. For instance, the same DRG is assigned whether one or more angioplasties are performed on a patient's arteries. The insertion of multiple stents within an artery does not result in a different DRG assignment. Similarly, the excision of neoplasms from multiple sites does not lead to a different DRG assignment. To begin splitting DRGs based on the number of procedures performed or devices inserted could set a new and significant precedent for DRG policy. Therefore, in the May 18, 2004, proposed rule, we indicated that while we would continue to study this area, we did not propose to redefine the spinal fusion DRGs based on the number of levels of vertebrae fused.

Comment: Several commenters supported our proposal not to modify the spinal fusion DRGs to differentiate between the number of levels of vertebrae involved in a spinal fusion procedure. The commenters agreed that we should wait until we received sufficient data with the new multilevel spinal fusion codes to propose any new DRG revisions for using these codes.

Response: We agree with the commenters that it would be premature to propose DRG revisions to the spinal fusion DRGs based on the new multiple level spinal fusion codes. Furthermore, as stated in the proposed rule, no other surgical DRG is split based on the number of procedures performed. To so do would have the potential of dramatically increasing the number of DRGs. Therefore, it would be prudent to wait for claims data prior to considering such a departure from the current DRG structure.

Comment: One commenter who supported our recommendation expressed concern that our decision was grounded in part on the expectation that a ''more conservative'' surgical approach for back pain (that is spinal disc replacement) will be available soon. (In the proposed rule, we noted that new codes for spinal disc prosthesis procedures, codes 84.60 through 84.69, will go into effect on October 1, 2004). The commenter stated that FDA has not approved some of the spinal disc prostheses. The commenter believed that this new technology may not become a medically accepted procedure in the clinical community. The commenter believed that we were implying that we would defer a decision on modification of the spinal fusion DRGs until such time as the FDA formally approves spinal disc prosthesis procedures. The commenter recommended that the spinal fusion DRGs should not be modified at this point; that CMS should wait for data using the multiple level spinal fusion codes prior to proposing modifications of the spinal fusion DRGs; and that CMS not wait to make any modifications to these DRGs based upon FDA approval of spinal disc prostheses.

Response: We agree with the commenter that we should wait to evaluate claims data with the new multilevel spinal fusion codes before using these codes to revise the DRG structure. While we mentioned that new codes were created for FY 2005 for other types of spinal procedures, such as spinal disc prostheses, we did not mean to imply that we would defer analysis on multilevel spinal fusion until such time as the FDA reviews and approves other specific types of procedures and devices. We acknowledge that different types of procedures should be considered independently.

In this final rule, we are maintaining the current DRG structure for the spinal fusion DRGs. We will wait for claims data on the new codes to become available before we consider proposing future revisions to the spinal fusion DRGs.

c. Insertion of Spinal Disc Prostheses and Other Spinal Devices

In the May 18, 2004, proposed rule, we included in Table 6B of the Addendum new codes that were created to capture the insertion of spinal disc prostheses and other spinal devices (codes 84.59 through 84.69). We proposed to assign these new codes to DRGs 499 and 500 (Back and Neck Procedures Except Spinal Fusion with and without CC, respectively) within MDC 8. Shortly after publication of the proposed rule, we discovered errors of omission in the assignment of these codes within the MDCs in Table 6B. These codes should have also included DRG assignments within MDC 1, MDC 21, and MDC 24, in addition to the specified assignment to MCD 8. We corrected these errors of omission in a correction notice published on June 25, 2004 (69 FR 35716). The correction notice showed the following additional DRG assignments for these codes:

MDC 1, DRGs 531 and 532 (Spinal Procedures With and Without CC, respectively).

MDC 21, DRGs 442 and 443 (Other Procedure for Injuries With and Without CC, respectively).

MDC 24, DRG 486 (Other Procedures for Multiple Significant Trauma).

The official ICD–9–CM code conversion table showed code 80.51 (Excision of intervertebral disc) as the predecessor code for codes 84.60 through 84.69. There was no predecessor code listed for code 84.59. Code 80.51 was assigned to DRGs 499 and 500 in MDC 8. It was also assigned to DRGs 531 and 532 in MDC 1, DRGs 442 and 443 in MDC 21, and DRG 486 in MDC 24.

By correcting the proposed DRG assignment information for codes 84.59 and 84.60 through 84.69, we clearly indicated our proposal of assigning these codes 84.59 and 84.60 through 84.69 to DRGs 531 and 532 in MDC 1; DRGs 499 and 500 in MDC 8; DRGs 442 and 443 within MDC 21; and DRG 486 in MDC 24.

Comment: Several commenters that are developing spinal disc prosthesis devices described these spinal disc prostheses devices as minimally invasive alternatives to spinal fusion. The commenters indicated that there is controversy among spine surgeons as to the cause, or causes, of back pain. However, they stated that many surgeons believe degeneration of the nucleus and annular destruction is a major source of pain. The commenters stated that if patients fail conservative

treatment, spinal fusion is currently the primary treatment option. The commenters further stated that fusing one or more levels in the spine results in increased stress and strain and the potential breakdown at adjacent disc levels. In addition, the commenters stated that partial and total spinal disc replacement prosthesis devices were designed to replace the degenerated nucleus or disc and restore the normal disc function and anatomy. They believed these devices have the potential of decreasing stress, which is redistributed to adjacent levels of the spine when spinal fusions are performed. The commenters indicated that fusion surgery patients have poor return to work results, that recovery periods are extended, and that the spinal disc prosthesis devices reduce this recovery period.

The commenters objected to the proposed assignment of the new spinal disc prosthesis codes (84.60 through 84.69) to DRGs 499 and 500 in MDC 8. The commenters stated that since total and partial spinal disc prostheses will be used for patients who would very likely be candidates for spinal fusion, the procedures should be assigned to DRGs 497 and 498 for those in the lumbar spine and to DRGs 519 and 520 for those implanted in the cervical spine. One commenter compared the implantation of a total spinal disc prosthesis device in the lumbar spine to that of fusion of the lumbar spine with the use of a BAK cage. The commenter stated that both use an anterior approach to the surgery, and both involve implanting devices in the anterior part of the spine. One procedure involves implanting the spinal disc prosthesis; the other involves implanting a BAK cage while fusing the spine.

The commenters stated that the costs of treating these types of patients with spinal disc prosthesis devices are also similar to the costs for those patients in the spinal fusion DRGs. One commenter stated that the operating room time would be similar, with the total lumbar disc prosthesis devices taking about 111 minutes and the lumbar fusion with a BAK cage taking 114 minutes. The commenter presented information to show a patient stay of 3.7 days for the total lumbar disc prosthesis procedures versus 4.3 days for the lumbar fusion with BAK cages. One commenter stated that the cost of the total disc prosthesis is approximately $10,585, compared to $4,800 for a BAK cage used in a lumbar fusion.

Response: Based on advice from our medical advisors, we disagree with the suggestion that patients having partial and total spinal disc prosthesis procedures are clinically similar to patients assigned to the spinal fusion DRGs. To mix these two distinctly different approaches to the treatment of back pain would violate the principal of clinical cohesiveness of DRGs. DRGs 497, 498, 519, and 520 include only procedures that involve fusion of the spine. DRGs 499 and 500 include a number of other procedures performed on the spine and explicitly exclude spinal fusion procedures. Currently, spinal disc prosthesis procedures are assigned to code 80.51 (Excision of intervertebral disc). The new, more specific codes (84.60 through 84.69) will go into effect on October 1, 2004. As stated earlier, code 80.51 is assigned to DRGs 499 and 500 within MDC 8. Our proposal of assigning the new spinal disc prosthesis codes to DRGs 499 and 500 would maintain current practice based on the assignment of the predecessor code 80.51. Our medical advisors also stated that it would be inappropriate to move the partial and total spinal disc procedures to the spinal fusion DRGs because the implantation of these disc devices do not involve fusion of the spine. We do not yet have any charge data on these new types of spinal procedures because the codes are being implemented on October 1, 2004. Thus, it would also be premature to assign these new procedures to the fusion DRGs.

In this final rule, we are assigning the total and partial spinal disc procedures and other spinal devices (codes 84.59 and codes 84.60 through 84.69) to DRGs 499 and 500 within MDC 8 as proposed. We will continue to monitor data on these procedures as their use increases to determine if future DRG modifications are needed.

d. Kyphoplasty

In the May 18, 2004, proposed rule, in Table 6B of the Addendum, we included new ICD–9–CM codes that go into effect October 1, 2004. Among these new codes are codes 81.65 (Vertebroplasty) and 81.66 (Kyphoplasty). We added these new codes to better differentiate between the surgical procedures of vertebroplasty and kyphoplasty. Both procedures are currently assigned to code 78.49 (Other repair or plastic operation on bone) and are assigned to the DRGs 223 and 234 in MDC 8, DRGs 442 and 443 in MDC 21, and DRG 486 in MDC 24.

In the May 18, 2004, proposed rule, we proposed to assign both new codes 81.65 and 81.66 to the same DRGs to which code 78.49 is assigned.

Comment: Several commenters supported the creation of the new procedure codes for kyphoplasty and vertebroplasty. However, some of the commenters opposed the assignment of code 81.66 to DRGs 233 and 234 in MDC 8. The commenters stated that kyphoplasty is a significantly more resource intensive procedure than vertebroplasty and requires special inflatable bone tamps and bone cement. The commenters further stated that while kyphoplasty involves internal fixation of the spinal fracture and restoration of vertebral height, vertebroplasty involves only fixation. The commenters indicated that kyphoplasty procedures are more akin to spinal fusion and should be assigned to DRGs 497 and 498 (Spinal Fusion Except Cervical With and without CC, respectively) in MDC 8. The commenters did not object to the DRG assignments for MDC 21 or MDC 24 for kyphoplasty, or to the proposed DRG assignments for 81.65.

Response: Commenters supported the creation of the new procedure codes for kyphoplasty and vertebroplasty. The commenters indicated that kyphoplasty is more resource intensive than vertebroplasty and is more similar to resources used in a spinal fusion. However, we do not have data to support this claim because the new codes will not be implemented until October 1, 2004. We believe that it would be premature to consider DRG refinements using these new ICD–9–CM procedure codes at this time.

Therefore, we are adopting, as final, our proposed assignment of new codes 81.65 and 81.66 to DRGs 223 and 234 in MDC 8, DRGs 442 and 443 in MDC 21, and DRG 486 in MDC 24, as indicated in Table 6B of the Addendum to this final rule. We will take the commenters' recommendation into consideration when we conduct our annual reviews of MedPAR data.

6. MDC 15 (Newborns and Other Neonates With Conditions Originating in the Perinatal Period)

In the May 18, 2004, proposed rule, we indicated that we continue to receive comments that MDC 15 (Newborn and Other Neonates With Conditions Originating in the Perinatal Period) does not adequately capture care provided for newborns and neonates by hospitals. The commenters pointed out that we have not updated the DRGs within MDC 15 as we have for other parts of the DRG system.

Our primary focus of updates to the Medicare DRG classification system is on changes relating to the Medicare patient population, not the pediatric or neonatal patient populations. However, we acknowledge the Medicare DRGs are

sometimes used to classify other patient populations. Over the years, we have received comments about aspects of the Medicare newborn DRGs that appear problematic, and we have responded to these on an individual basis. In the May 9, 2002, IPPS proposed rule (67 FR 31413), we proposed extensive changes to multiple DRGs within MDC 15. Because of our limited data and experience with newborn cases under Medicare, we contacted the National Association of Children's Hospitals and Related Institutions (NACHRI) to obtain proposals for possible revisions of the DRG categories within MDC 15. We received extensive comments opposing these revisions. Therefore, we did not implement the proposals.

We advise those non-Medicare systems that need a more up-to-date system to choose from other systems that are currently in use in this country, or to develop their own modifications. As previously stated, we do not have the data or the expertise to develop more extensive newborn and pediatric DRGs. Our mission in maintaining the Medicare DRGs is to serve the Medicare population. Therefore, we will make only minor corrections of obvious errors to the DRGs within MDC 15. In the May 18, 2004, IPPS proposed rule, we indicated that we did not plan to conduct a more extensive analysis involving major revisions to these DRGs.

Comment: Commenters, including several national hospital associations, supported our proposal not to undertake a major revision to MDC 15 at this time, but instead to address specific errors brought to our attention by providers and other commenters. One commenter, a national organization representing health information managers and coders, agreed with our approach to updating MDC 15 without undertaking a major revision. The commenter stated it believed a comprehensive revision of MDC 15 should not be undertaken without broad input from all types of hospitals that provide care for neonates to ensure the appropriateness of these DRG revisions across all institutions treating newborns. The commenter indicated that, given CMS' limited data and experience with newborn cases, it supported CMS' decision not to conduct a major overhaul of the newborn DRGs. However, the commenter agreed that CMS should address specific, individual requests for modifications to the newborn DRGs on a case-by-case basis.

One commenter who supported our proposal indicated that there are challenges to developing DRG classifications systems and applications appropriate to children. The commenter acknowledged the practical difficulties of CMS assuming a larger role in this area, given the difference between the Medicare population and that of newborns and children. The commenter stated that there are evolving alternative DRG classification systems for children. The commenter agreed that a broad-based fundamental restructuring of the neonatal DRGs would be a huge and complex undertaking and indicated that there are other DRG classification systems that are attempting at varying levels of sophistication to do this restructuring for the neonatal and pediatric patient populations. The commenter supported our approach of responding to specific requests for updating MDC 15 on a case-by-case basis.

Response: We appreciate the commenters' support for our decision to perform only limited updates to MDC 15 based on specific requests for modification. We will continue to address specific requests for modification of the newborn DRGs on an individual basis.

In the IPPS final rule for FY 2004 (68 FR 45360), we added heart failure diagnosis codes 428.20 through 428.43 to the list of secondary diagnosis of major problem under DRG 387 (Prematurity With Major Problems) and DRG 389 (Full-Term Neonate With Major Problems). We received a comment after the August 1, 2003 final rule stating that we should add the following list of combination codes, which also include heart failure, to the list of major problems under DRGs 387 and 389:

- 398.91, Rheumatic heart failure (congestive).
- 402.01, Malignant hypertensive heart disease, with heart failure.
- 402.11, Benign hypertensive heart disease, with heart failure.
- 402.91, Unspecified hypertensive heart disease, with heart failure.
- 404.01, Malignant hypertensive heart and renal disease, with heart failure.
- 404.03, Malignant hypertensive heart and renal disease, with heart failure and renal failure.
- 404.11, Benign hypertensive heart and renal disease, with heart failure.
- 404.13, Benign hypertensive heart and renal disease, with heart failure and renal failure.
- 404.91, Unspecified hypertensive heart and renal disease, with heart failure.
- 404.93, Unspecified hypertensive heart and renal disease, with heart failure and renal failure.
- 428.9, Heart failure, unspecified.

We agree that the codes listed above also include heart failure and should also be added to DRGs 387 and 389 as major problems. Therefore, in the May 18, 2004, proposed rule, we proposed to add the heart failure codes listed above to DRGs 387 and 389 as major problems.

Comment: Several commenters supported the addition of the combination codes, including heart failure, to the list of major problems under DRGs 387 and 389 because there are a number of other heart failure codes already listed as major problems under DRGs 387 and 389.

Response: We appreciate the support of the commenters for our proposal.

In this final rule, we are adopting, as final without modification, the proposed revisions to add the specified combination codes to the list of major problems under DRGs 387 and 389.

7. MDC 20 (Alcohol/Drug Use and Alcohol/Drug Induced Organic Mental Disorders): Drug-Induced Dementia

In the May 18, 2004, proposed rule, we discussed a request that we had received from a commenter that we remove the principal diagnosis code 292.82 (Drug-induced dementia) from MDC 20 (Alcohol/Drug Use and Alcohol/Drug Induced Organic Mental Disorders) and the following DRGs under MDC 20:

- DRG 521 (Alcohol/Drug Abuse or Dependence With CC).
- DRG 522 (Alcohol/Drug Abuse or Dependence With Rehabilitation Therapy Without CC).
- DRG 523 (Alcohol/Drug Abuse or Dependence Without Rehabilitation Therapy Without CC).

The commenter indicated that a patient who has a drug-induced dementia should not be classified to an alcohol/drug DRG. However, the commenter did not propose a new DRG assignment for code 292.82.

Our medical advisors evaluated the request and determined that the most appropriate DRG classification for a patient with drug-induced dementia would be within MDC 20. The medical advisors indicated that because this mental condition is drug induced, it is appropriately classified to DRGs 521 through 523 in MDC 20. Therefore, we did not propose a new DRG classification for the principal diagnosis code 292.82.

Comment: Several commenters supported our proposal not to modify DRGs 521 through 523 by removing code 292.82. One commenter representing hospital coders disagreed with our proposal to retain code 292.82 in DRGs 521 through 523. The commenter stated that DRGs 521 through 523 are described as alcohol/drug abuse and dependence DRGs. The

commenter further indicated that drug-induced dementia could be caused by an adverse effect of a prescribed medication or a poisoning. The commenter did not believe that assignment of drug-induced dementia to DRGs 521 through 523 was appropriate if the drug-induced dementia is related to an adverse effect or poisoning due to a prescribed drug. The commenter recommended that admissions for drug-induced dementia be classified to DRGs 521 through 523 only if there is a secondary diagnosis indicating alcohol/drug abuse or dependence.

The commenter further recommended that drug-induced dementia that is due to the adverse effect of drugs be classified to the same DRGs as other types of dementia, such as DRG 429 (Organic Disturbances and Mental Retardation). The commenter stated that when drug-induced dementia is caused by a poisoning, either accidental or intentional, the appropriate poisoning code would be sequenced as the principal diagnosis and, therefore, these cases would likely already be assigned to DRGs 449 and 450 (Poisoning and Toxic Effects of Drugs, Age Greater Than 17, With and Without CC, respectively) and DRG 451 (Poisoning and Toxic Effects of Drugs, Age 0–17). The commenter suggested that these DRG assignments would be the appropriate DRG assignments for drug-induced dementia due to a poisoning.

Response: We have considered the issues raised by the commenters relating to the DRG assignment for code 292.82 and the suggested alternatives for DRG assignment based on sequencing of the principal diagnosis and reporting of additional secondary diagnoses. We acknowledge that patients do develop drug-induced dementia from drugs that are prescribed as well as from drugs that are not prescribed. However, we still believe that dementia developed as a result of use of a drug is appropriately assigned to DRGs 521 through 523, as mentioned by the commenters who supported the current assignment. We also agree that if the drug-induced dementia is caused by a poisoning, either accidental or intentional, the appropriate poisoning code should be sequenced as the principal diagnosis. As the commenter stated, these cases would be assigned to DRGs 449 through 451.

We will continue to evaluate the DRG assignment for this code during the next year and further consider the alternative DRG structures suggested by the commenters, if warranted. We will also further examine the use of secondary diagnoses as a means of better classifying patients with drug-induced dementia and consider alternative DRG assignments such as those mentioned by the commenters. We also encourage hospitals to examine the coding for these types of cases to determine if there are any coding or sequencing errors.

We are adopting as final our proposal to maintain the current structure of DRGs 521 through 523. However, we will continue to examine the issue to determine whether any changes to the structure of these DRGs are warranted.

8. MDC 22 (Burns): Burn Patients on Mechanical Ventilation

In the May 18, 2004, proposed rule (69 FR 28211), we discussed concerns that had been raised by hospitals treating burn patients that the current DRG payment for burn patients on mechanical ventilation is not adequate. The DRG assignment for these cases depends on whether the hospital performed the tracheostomy or the tracheostomy was performed prior to transfer to the hospital. If the hospital does not actually perform the tracheostomy, the case is assigned to one of the burn DRGs in MDC 22 (Burns). If the hospital performs a tracheostomy, the case is assigned to Pre-MDC DRG 482 (Tracheostomy for Face, Mouth, and Neck Diagnoses) or DRG 483 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth and Neck Diagnoses).

In the August 1, 2002, final rule, we modified DRGs 482 and 483 to recognize code 96.72 (Continuous mechanical ventilation for 96+ hours) for the first time in the DRG assignment (67 FR 49996). The modification was partially in response to concerns that hospitals could omit diagnosis codes indicating face, mouth, or neck diagnoses in order to have cases assigned to DRG 483 rather than the much lower paying DRG 482 (the payment for DRG 483 is more than four times greater than the DRG 482 payment weight). In addition, we noted that many patients assigned to DRG 483 did not have code 96.72 recorded. We believed this was due, in part, to the limited number of procedure codes (six) that can be submitted on the current billing form and the fact that code 96.72 did not affect the DRG assignment prior to FY 2003. The modification was the first attempt to refine DRGs 482 and 483 so that patients who receive long-term mechanical ventilation for more than 96 hours are differentiated from those who receive mechanical ventilation for less than 96 hours. The modification was intended to ensure that patients who have a tracheostomy and continuous mechanical ventilation greater than 96 hours (code 96.72) would be assigned to DRG 483. By making the GROUPER recognize long-term mechanical ventilation and assigning those patients to the higher weighted DRG 483, we encouraged hospitals to be more aware of the importance of reporting code 96.72 and to increase reporting of code 96.72 when, in fact, patients had been on the mechanical ventilator for greater than 96 hours. We stated in the August 1, 2002 final rule that, once we received more accurate data, we would give consideration to further modifying DRGs 482 and 483 based on the presence of code 96.72.

As we indicated in the May 18, 2004, proposed rule, to assess the DRG payments for burn patients on mechanical ventilation, we analyzed FY 2003 MedPAR data for burn cases in the following DRGs to determine the frequency for which these burn cases were treated with continuous mechanical ventilation for 96 or more consecutive hours (code 96.72):

- DRG 483 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth, and Neck Diagnoses).
- DRG 504 (Extensive 3rd Degree Burns With Skin Graft).
- DRG 505 (Extensive 3rd Degree Burns Without Skin Graft).
- DRG 506 (Full Thickness Burn With Skin Graft or Inhalation Injury With CC or Significant Trauma)
- DRG 507 (Full Thickness Burn With Skin Graft or Inhalation Injury Without CC or Significant Trauma)
- DRG 508 (Full Thickness Burn Without Skin Graft or Inhalation Injury With CC or Significant Trauma)
- DRG 509 (Full Thickness Burn Without Skin Graft or Inhalation Injury Without CC or Significant Trauma)
- DRG 510 (Nonextensive Burns With CC or Significant Trauma)
- DRG 511 (Nonextensive Burns Without CC or Significant Trauma)

The following chart summarizes those findings:

DRG	Count	Average Length of Stay	Average Charges
483 All cases	31,754	37.68	$210,631.94
483 Cases with code 96.72 reported	19,669	36.54	$195,171.66
483 Cases without code 96.72 reported	12,085	39.52	$235,794.39
504 All cases	98	30.54	$191,645.49
504 Cases with code 97.62 reported	19	25.79	$264,095.16
504 Cases without code 96.72 reported	79	31.68	$174,220.89
505 All cases	119	2.96	$18,619.78
505 Cases with code 96.72 reported	20	7.70	$42,613.00
505 Cases without code 96.72 reported	99	2.00	$13,772.67
506 All cases	754	16.15	$61,370.63
506 Cases with code 96.72 reported	54	20.13	$138,272.46
506 Cases without code 96.72 reported	700	15.85	$55,438.20
507 All cases	236	8.78	$25,891.89
507 Cases with code 96.72 reported	1	38.00	$137,132.00
507 Cases without code 96.72 reported	235	8.66	$25,418.53
508 All cases	448	7.02	$18,332.46
508 Cases with code 96.72 reported	5	10.40	$83,171.80
508 Cases without code 96.72 reported	443	6.98	$17,600.64
509 All cases	117	4.32	$8,994.71
509 Cases with code 96.72 reported	0	0	0
509 Cases without code 96.72 reported	117	4.32	$8,994.71
510 All cases	1,209	6.90	$18,457.21
510 Cases with code 96.72 reported	21	20.52	$93,925.62
510 Cases without code 96.72 reported	1,188	6.66	$17,123.18
511 All cases	413	4.18	$10,046.89
511 Cases with code 96.72 reported	0	0	0
511 Cases without code 96.72 reported	413	4.18	$10,046.89

We found 120 cases that reported code 96.72 within the 3,394 burn DRG cases (DRGs 504 through 511). Cases reporting code 96.72 have significantly longer average lengths of stay and average charges. The majority (54) of these cases that reported code 96.72 were in DRG 506. The cases with code 96.72 reported had average charges approximately 1.5 times higher than other cases in DRG 506 without code 96.72.

We noted that there were 21 cases that reported code 96.72 within DRG 510. Since the 21 patients were on continuous mechanical ventilation for 96 consecutive hours or more, it seems surprising that the principal diagnosis was listed as one of the nonextensive burn codes included in DRG 510. A closer review of these cases shows some questionable coding and reporting of information. It would appear that hospitals did not always correctly select the principal diagnosis (the reason after study that led to the hospital admission). For instance, one admission was for a second-degree burn of the ear. This patient was on a ventilator for over 96 hours. It would appear that the reason for the admission was a diagnosis other than the burn of the ear. Other cases where the patient received long-term mechanical ventilation included those with a principal diagnosis of first degree burn of the face, second degree burn of the nose, second degree burn of the lip, and an unspecified burn of the foot. These four cases reported average charges ranging from $48,551 to $186,824 and had lengths of stay ranging from 8 to 36 days.

The impact of long-term mechanical ventilation is quite clear on burn cases as was shown by the data above. Therefore, in the May 18, 2004, proposed rule, we proposed to modify the burn DRGs 504 through 509 under MDC 22 to recognize this impact. We also proposed to modify DRG 504 and DRG 505 so that code 96.72 will be assigned to these DRGs when there is a principal or secondary diagnosis of extensive third degree burns or full thickness burns (those cases currently assigned to DRGs 504 through 509). In other words, when cases currently in DRGs 506 through 509 also have code 96.72 reported, they would now be assigned to DRGs 504 or 505. We also proposed to modify the titles of DRGs 504 and 505 to reflect the proposed changes in reporting code 96.72 as follows:

• Proposed DRG 504, (Extensive Burns or Full Thickness Burns With Mechanical Ventilation 96+ Hours With Skin Graft)

• Proposed DRG 505, (Extensive Burns or Full Thickness Burns With Mechanical Ventilation 96+ Hours Without Skin Graft)

Cases currently assigned to DRGs 504 and 505 that do not entail 96+ hours of mechanical ventilation will continue to be assigned to DRGs 504 and 505 because they would have extensive burns, as required by the DRG logic.

We did not propose to include DRG 510 and DRG 511 within this revised DRG logic. Cases currently assigned to DRG 510 or DRG 511 that also report code 96.72 would not be reassigned to DRGs 504 and 505. We recommended that hospitals examine cases that are assigned to DRG 510 or DRG 511 and that have code 96.72 to determine if there are possible coding problems or other issues. As stated earlier, in examining reported cases within DRG 510, we noted several cases with code 96.72 that appear to have an incorrect principal diagnosis. It would appear that the principal diagnosis may more appropriately be related to an inhalation injury, if the injury was present at the time of admission.

We solicited comments on our proposal to move cases reporting code 96.72 from DRGs 506 through 509 and assign them to DRGs 504 and 505. We also solicited comments on our proposal not to include DRGs 510 and 511 in this proposed revision.

Comment: Several commenters supported our recommended changes for the burn DRGs 504 through 509 under MDC 22. The commenters agreed that utilizing long-term mechanical ventilation of 96 or more hours (code 96.72) would assist in identifying the more expensive burn patients. One commenter stated that the proposed DRG changes would be greatly beneficial to burn center hospitals and to patients who have suffered burn injuries. The commenters supported the proposal to move cases reporting code 96.72 that are currently assigned to DRGs 506 through 509 into DRGs 504 and 505. The commenter also agreed with our proposal that cases assigned to DRGs 510 and 511 that also report code 96.72 should not be reassigned to DRGs 504 and 505, because the data cited appeared to indicate incorrect principal diagnoses were reported in these cases. The commenters also recommended that consideration be given to further refinements of DRGs 504 and 505. The commenters recommended that in the future CMS consider further DRG splits for cases in DRGs 504 and 505 that have extensive third degree burns with an inhalation injury and 96+ hours of mechanical ventilation or perhaps creating a new DRG specifically for these patients.

Response: We appreciate the commenters' support of our proposal. As we indicated in the May 18, 2004, proposed rule and in our discussion of the reporting of code 96.72 in the August 1, 2002, IPPS final rule (67 FR 49996), we did not have data on cases of reported burns among patients who receive mechanical ventilation until the FY 2003 MedPAR data became available. In the FY 2003 IPPS final rule, we had asked hospitals to examine their coding and reporting practices and to begin reporting code 96.72 when burn patients were on long-term mechanical ventilation. Hospitals have now increased their reporting of code 96.72 among burn cases when patients were on long-term mechanical ventilation. With these improved data, in the proposed rule, we were able to identify the impact that mechanical ventilation had on the treatment of burn patients.

In the proposed rule, we discussed our concern that hospitals may have a sequencing problem for some reported cases of minor burns in which the patient was on long-term mechanical ventilation. We suggested that some of these patients may have been admitted to the hospital for an inhalation injury as opposed to a minor burn. The American Hospital Association (AHA) has reviewed our data and shares our concern. The AHA has informed us that it is drafting instructional material that will appear in *Coding Clinic for ICD–9–CM* to assist hospitals in sequencing the principal diagnosis for burn cases in which the patients have an inhalation injury and a minor skin burn.

We will continue to analyze cases assigned to the burn DRGs to determine if additional DRG refinements, such as the alternative suggestions mentioned by the commenters, are necessary.

Comment: Another commenter representing hospital coders expressed its support of the proposed restructuring of the burn DRGs to account for the use of mechanical ventilation. The commenter shared our concern about possible errors in the sequencing of diagnoses on claims resulting in a nonextensive burn being reported as the principal diagnosis instead of the more serious inhalation or respiratory condition that was the actual reason for the inpatient admission. The commenter asked that we encourage hospitals to review admissions assigned to DRG 510 or 511 that have a code for mechanical ventilation (codes 96.70 through 96.72) assigned in order to identify any coding errors. The commenter recommended that hospitals identify cases in which poor medical record documentation resulted in miscoding of the reason for the inpatient admission or mechanical ventilation for burn patients. The commenter further recommended that hospitals use these cases as the basis for physician education to improve documentation practices.

Response: We appreciate the commenter's support of the proposed DRG changes for burn patients on mechanical ventilation. As we indicated in the proposed rule, we agree with the commenters' suggestion that hospitals should review their medical records for cases assigned to DRG 510 or 511 that had a code for mechanical ventilation to determine if there are coding errors. We agree that it is important for hospitals to have good medical record documentation in order to code accurately.

After analysis of the public comments received, we are adopting, as final, our proposed changes to the burn DRGs. In summary, we are modifying DRGs 504 and 505 so that cases in which there is a principal diagnosis of extensive third degree burns or full thickness burns with code 96.72 reported are assigned to these two DRGs, rather than to DRGs 506 through 509. We are also changing the title of DRG 504 to ''Extensive Burns or Full Thickness Burns With Mechanical Ventilation 96+ Hours With Skin Graft'' and the title of DRG 505 to ''Extensive Burns or Full Thickness Burns With Mechanical Ventilation 96+ Hours Without Skin Graft''. We will continue to follow these DRGs to determine if additional changes are needed.

9. Pre-MDC: Tracheostomy

In the August 1, 2002, IPPS final rule (67 FR 49996), for FY 2003, we modified DRG 482 (Tracheostomy for Face, Mouth, and Neck Diagnoses) and DRG 483 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth, and Neck Diagnoses) to recognize procedure code 96.72 (Continuous mechanical ventilation 96+ hours) in the DRG 483 assignment. As discussed above and in the proposed rule, we were concerned about an underreporting of code 96.72 and wanted to encourage increased reporting of this code.

In the May 18, 2004, proposed rule, we indicated that we had examined cases in the MedPAR file in which code 96.72 was reported within DRGs 482 and 483. The following chart illustrates the average charges and lengths of stays for cases within DRGs 482 and 483 with and without code 96.72 reported:

DRG	Count	Average Length of Stay	Average Charges
482 - All cases	3,557	11.77	$ 45,419.10
482 - Cases with code 96.72	22	31.64	137,880.41
482 - Cases without code 96.72	3,535	11.64	44,843.67
483 - All cases	31,754	37.68	210,631.94
483 - Cases with code 96.72	19,669	36.54	195,171.66
483 - Cases without code 96.72	12,085	39.52	235,794.39

Of the 3,557 cases reported in DRG 482, only 22 cases reported code 96.72. These 22 cases did not have a tracheostomy performed. All 22 cases reported code 30.4 (Laryngectomy), which also leads to an assignment of DRG 482. It would appear that the long-term mechanical ventilation was performed through an endotracheal tube instead of through a tracheostomy. While the average charges for DRG 482 cases with code 96.72 reported were significantly higher than the average charges for other cases in the DRG, we did not believe that the very limited number of cases (22) warranted a proposed DRG modification. Therefore, we did not propose any modification for DRG 482. In the May 18, 2004, IPPS proposed rule, we indicated that we will continue to monitor cases assigned to this DRG.

We did not receive any comments on our proposal not to modify DRG 482 and, therefore, are not making any changes to the DRG in this final rule.

In the proposed rule we stated that in DRG 483, 19,669 cases were reported with code 96.72. However, we noted that the data were counter-intuitive. While one would expect to find higher average charges for cases reported with code 96.72, the opposite is the case. Cases in DRG 483 reported with code 96.72 had average charges that were $40,623 lower than those not reported with code 96.72. Clearly, the presence or absence of code 96.72 does not explain differences in charges for patients within DRG 483.

As stated earlier, we are concerned that hospitals may not always report code 96.72 because of space limitations. The electronic billing system limits the number of procedure codes that can be reported to six codes. We then looked at whether or not another major O.R. procedure was performed in addition to a tracheostomy. The DRG 483 logic requires that all patients assigned to DRG 483 have a tracheostomy. We examined cases in DRG 483 in the MedPAR file and discovered that those patients in DRG 483 who had a major procedure performed in addition to the tracheostomy had higher charges. A major procedure is a procedure whose code is included on the list that would be assigned to DRG 468 (Extensive O.R. Procedure Unrelated to Principal Diagnosis), except for tracheostomy codes 31.21 and 31.29. Currently, this additional O.R. procedure does not affect the DRG assignment for cases assigned to DRG 483. The following chart reflects our findings.

DRG	Count	Average Length of Stay	Average Charges
483 - All Cases	31,754	37.68	$210,631.94
483 - Cases with major O.R. procedure	15,664	42.70	$255,914.00
483 - Cases without major O.R. procedure	12,867	32.7	$168,890.20

We found that cases of patients assigned to DRG 483 who had a major procedure (in addition to the required tracheostomy) had average charges that were $87,023 higher than the average charges for cases without a major O.R. procedure and had an average length of stay of 5 days more than those without a major O.R. procedure. We found that the performance of an additional major O.R. procedure helps to identify the more expensive patients within DRG 483.

Therefore, as a result of our findings, in the May 18, 2004, proposed rule, we proposed to modify DRG 483 by dividing these cases into two new DRGs depending on whether or not there is a major O.R. procedure reported (in addition to the tracheostomy). We proposed to delete DRG 483 and create two new DRGs as follows:

- Proposed new DRG 541 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth, and Neck Diagnoses With Major O.R. Procedure)
- Proposed new DRG 542 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth and Neck Diagnoses Without Major O.R. Procedure)

We solicited comments on our proposal to delete DRG 483 and replace it with two proposed new DRGs by splitting the assignment of cases on the basis of the performance of a major O.R. procedure (in addition to the tracheostomy).

Comment: Some commenters supported our proposed changes to DRG 483. One commenter stated that, based on the data presented by CMS, the proposal appears to be a reasonable approach to distinguish the more expensive cases in DRG 483. The commenter also stated that hospitals are not always reporting code 96.72 due to space limitations (that is, the electronic billing system limits the number of procedures that can be reported to six procedure codes). The commenter stated that patients in this patient population (undergoing procedures with procedure code 96.72) may have several significant

O.R. procedures that may be sequenced before code 96.72, resulting in code 96.72 not appearing on the claim.

Response: We appreciate the commenters' support of our proposed DRG revision as a reasonable approach to distinguish the more expensive cases from the less expensive cases in DRG 483. We continue to encourage hospitals to report code 96.72 for patients on mechanical ventilation for 96+ hours.

Comment: Some commenters opposed our DRG change because of issues surrounding our proposed inclusion of DRG 483 as a DRG that would qualify for payment as a post-acute care transfer case.

Response: We are responding to the specific comments received regarding the proposed inclusion of DRG 483 under the postacute care transfer discussion in section IV.A. of the preamble of this final rule. The commenters did not provide other specific objections to the proposed deletion of DRG 483 and the proposed creation of new DRGs 541 and 542.

Comment: Several commenters requested clarification of what procedures would be classified as major O.R. procedures in relationship to our proposed changes to DRG 483.

Response: As we stated in the May 18, 2004 proposed rule, a major O.R. procedure is a procedure whose code is included on the list that would be assigned to DRG 468, except for tracheostomy codes 31.21 and 31.29. These are the procedure codes listed as O.R. procedures in Appendix E of the Diagnosis Related Groups Definitions Manual. The reporting of a major procedure with a procedure code from Appendix E, along with an unrelated principal diagnosis, results in a case being assigned to DRG 468. Major O.R. procedures do not include prostatic or nonextensive procedures, or both, which are assigned to DRGs 476 and 477.

Currently, the reporting of an additional major O.R. procedure code does not affect the DRG assignment for cases assigned to DRG 483. In the proposed rule, we proposed to modify this logic by deleting DRG 483 and creating two new DRGs 541 and 452 that are split on the basis of the performance of a major O.R. procedure (in addition to tracheostomy codes 31.21 and 31.29).

Comment: Several commenters agreed that the CMS data support the subdivision of DRG 483 based on the presence of an additional major O.R. procedure. They agreed that this approach helps to identify the more expensive patients within DRG 483. One commenter stated that the proposed modifications were valuable. Another commenter stated that the proposed DRG revisions will better reflect the costs of furnishing care to these two categories of patients.

Response: We agree with the commenters that subdividing the cases assigned to DRG 483 based on the presence of an additional major O.R. procedure helps to identify the more expensive patients. We also agree that the proposed new DRGs should lead to more equitable payment for the more expensive tracheostomy cases. Therefore, we are proceeding with finalizing our proposal of deleting DRG 483 and replacing it with DRGs 541 and 542.

Comment: One commenter expressed concern regarding the proposed creation of a new DRG for mechanical ventilation as a pre-MDC for all patients undergoing more than 96 hours of mechanical ventilation. The commenter suggested that we delete DRG 475 (Respiratory System Diagnoses with Ventilator Support) from MDC 4 and move all of these cases reporting code 96.72 to a new DRG for mechanical ventilation in the pre-MDC section.

Response: Patients undergoing more than 96 hours of mechanical ventilation are captured through code 96.72. Currently, patients with a respiratory system diagnosis listed in MDC 4 who receive mechanical ventilation are assigned to DRG 475. Cases are assigned to DRG 475 if one of the following procedure codes is reported:

- 96.70, Continuous mechanical ventilation of unspecified duration.
- 96.71, Continuous mechanical ventilation for less than 96 consecutive hours.
- 96.72, Continuous mechanical ventilation for 96 consecutive hours or more.

In the August 1, 2002, final rule (67 FR 49996), we discussed the reporting of code 96.72. We pointed out the importance of hospitals accurately reporting the use of long-term mechanical ventilation (code 96.72). We stated in the August 1, 2002, final rule that, once we received more accurate data, we would give consideration to further modifying DRGs 482 and 483 based on the presence of code 96.72. As discussed previously, in this final rule, we are modifying DRG 483 to differentiate between patients with and without other major O.R. procedures (in addition to the tracheostomy). We are also modifying the burn DRGs to better classify those patients on long-term mechanical ventilation.

As stated in the May 4, 2001, proposed rule (66 FR 22646): ''Central to the success of the Medicare inpatient hospital prospective payment system is that DRGs have remained a clinical description of why the patient required hospitalization.'' Thus, the central classification criteria for DRG assignment has been the reason the patient was admitted (that is, the principal diagnosis for medical patients and the procedures performed for surgical patients). For a medical patient admitted for respiratory disease, the use of mechanical ventilation was used as a classification criteria because the mechanical ventilation was directly associated with the reason for hospital admission. The one exception to this rule is for patients who received a tracheostomy for long-term mechanical ventilation. These are catastrophic patients who, in general, have serious disease in multiple organ systems. Tracheostomies are performed on patients when it is anticipated that the patients will remain on mechanical ventilation for an extended period. The tracheostomy patients with long-term mechanical ventilation were all assigned to the same DRG regardless of their reason for admission. As we discussed previously, we are subdividing the patients assigned to DRG 483 into two new DRG 541 and 542 based on the presence of an additional major O.R. procedure.

We believe it would not be appropriate to classify mechanical ventilation patients who do not receive a tracheostomy in the same manner as long-term mechanical ventilation patients who receive a tracheostomy. The patients who do not receive a tracheostomy tend to require mechanical ventilation for shorter periods and do not use the level of resources required by tracheostomy patients.

The reason for admission for patients with short-term mechanical ventilation can vary greatly and include degenerative nervous system diseases, short-term acute disease, trauma, and terminal care. Further, the resource requirements for patients on short-term mechanical ventilation vary greatly, depending on the patient's reason for admission. We believe it is more appropriate to classify patients with short-term mechanical ventilation based on their reason for admission and to provide additional payments for patients with extreme resource use through outlier payments. Therefore, we are not accepting the commenter's request that we delete DRG 475 and create a new DRG in the Pre-MDC section for mechanical ventilation. We will maintain DRG 475 as it is currently configured.

In summary, in this final rule, we are deleting DRG 483 and establishing the

following new DRGs 541 and 542 as replacements:

- DRG 541 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth, and Neck Diagnoses With Major O.R. Procedure)
- DRG 542 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth, and Neck Diagnoses Without Major O.R. Procedure)

10. Medicare Code Editor (MCE) Changes

As explained under section II.B.1. of this preamble, the Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. In the May 18, 2004, IPPS proposed rule (69 FR 28213), we proposed to make changes to three of the edits in the MCE.

a. Edit 11 (Noncovered Procedures) in the MCE contains codes that describe procedures for which Medicare does not provide reimbursement. In the proposed rule, we stated that we had received a request to remove procedure codes relating to stem cell transplants from Edit 11 to conform the MCE edit to our published coverage decisions in the Medicare Coverage Issues Manual. Chapter 13.5 of the Program Integrity Manual (PIM) states that contractor discretion exists to cover diagnoses for which coverage is not explicitly precluded by a national coverage decision. Specifically this section states: that ''a local medical review policy (LMRP)'' must be clear, concise, properly formatted and not restrict or conflict with NCDs or coverage provisions in interpretive manuals. If an NCD or coverage provision in an interpretive manual states that a given item is 'covered for diagnoses/conditions A, B, and C,' contractors may not use that as a basis to develop LMRP to cover only ''diagnosis/conditions A, B, C''. When an NCD or coverage provision in an interpretive manual does not exclude coverage for other diagnoses/conditions, contractors must allow for individual consideration unless the LMRP supports automatic denial for some or all of those other diagnoses/conditions.''

The national coverage decision on stem cell transplantation provides for coverage of certain diagnoses and excludes coverage for other diagnoses. However, the vast majority of diagnoses are not mentioned as either covered or noncovered. In accordance with the above-cited provision of the PIM, contractors must allow for individual consideration of these diagnoses. Thus, they are not appropriate for inclusion in the edit for noncovered procedures.

In the proposed rule, we indicated that we agreed that we need to make conforming changes relating to stem cell transplants. Therefore, we proposed the following restructure of Edit 11:

This list contains ICD–9–CM procedure codes identified as ''Noncovered Procedures'' that are always considered noncovered procedures:

- 11.71, Keratomileusis
- 11.72, Keratophakia
- 11.75, Radial keratotomy
- 11.76, Epikeratophakia
- 36.32, Other transmyocardial revascularization
- 37.35, Partial ventriculectomy
- 37.52, Implantation of total replacement heart system
- 37.53, Replacement or repair of thoracic unit of total replacement heart system
- 37.54, Replacement or repair of other implantable component of total replacement heart system
- 39.28, Extracranial-intracranial (EC–IC) vascular bypass
- 44.93, Insertion of gastric bubble (balloon)
- 50.51, Auxiliary liver transplant
- 52.83, Heterotransplant of pancreas
- 57.96, Implantation of electronic bladder stimulator
- 57.97, Replacement of electronic bladder stimulator
- 63.70, Male sterilization procedure, not otherwise specified
- 63.71, Ligation of vas deferens
- 63.72, Ligation of spermatic cord
- 63.73, Vasectomy
- 64.5, Operations for sex transformation, not elsewhere classified
- 66.21, Bilateral endoscopic ligation and crushing of fallopian tubes
- 66.22, Bilateral endoscopic ligation and division of fallopian tubes
- 66.29, Other bilateral endoscopic destruction or occlusion of fallopian tubes
- 66.31, Other bilateral ligation and crushing of fallopian tubes
- 66.32, Other bilateral ligation and division of fallopian tubes
- 66.39, Other bilateral destruction or occlusion of fallopian tubes
- 98.52, Extracorporeal shockwave lithotripsy [ESWL] of the gallbladder and/or bile duct
- 98.59, Extracorporeal shockwave lithotripsy of other sites

The following list contains ICD–9–CM procedure codes identified as ''Noncovered Procedures'' only when any of the following diagnoses are present as either a principal or secondary diagnosis.

Procedure List

- 41.01, Autologous bone marrow transplant without purging
- 41.04, Autologous hematopoietic stem cell transplant without purging
- 41.07, Autologous hematopoietic stem cell transplant with purging
- 41.09, Autologous bone marrow transplant with purging

Principal or Secondary Diagnosis List

- 204.00, Acute lymphoid leukemia, without mention of remission
- 205.00, Acute myeloid leukemia, without mention of remission
- 206.00, Acute monocytic leukemia, without mention of remission
- 207.00, Acute erythremia and erythroleukemia, without mention of remission
- 208.00, Acute leukemia of unspecified cell type, without mention of remission
- 205.10, Acute myeloid leukemia, in remission
- 205.11, Chronic myeloid leukemia, in remission

The following list contains ICD–9–CM procedure codes identified as ''Noncovered Procedures'' only when any of the following diagnoses are present as either a principal or secondary diagnosis.

Procedure List

- 41.02, Allogeneic bone marrow transplant with purging
- 41.03, Allogeneic bone marrow transplant without purging
- 41.05, Allogeneic hematopoietic stem cell transplant without purging
- 41.08, Allogeneic hematopoietic stem cell transplant with purging

Principal or Secondary Diagnosis List

- 203.00, Multiple myeloma, without mention of remission
- 203.01, Multiple myeloma, in remissionThe following list contains ICD–9–CM procedure codes identified as ''Non-Covered Procedures'' except when there is at least one principal or secondary diagnosis code present from both list 1 and list 2.

Procedure List

- 52.80, Pancreatic transplant, not otherwise specified
- 52.82, Homotransplant of pancreas

Diagnosis List 1:

- 250.00, Diabetes mellitus without mention of complication, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, not stated as uncontrolled
- 250.01, Diabetes mellitus without mention of complication, type I [insulin dependent type] [IDDM] [juvenile type], not stated as uncontrolled

• 250.02, Diabetes mellitus without mention of complication, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, uncontrolled

• 250.03, Diabetes mellitus without mention of complication, type I [insulin dependent type] [IDDM type] [juvenile type], uncontrolled

• 250.10, Diabetes with ketoacidosis, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, not stated as uncontrolled

• 250.11, Diabetes with ketoacidosis, type I [insulin dependent type] [IDDM] [juvenile type], not stated as uncontrolled

• 250.12, Diabetes with ketoacidosis, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, uncontrolled

• 250.13, Diabetes with ketoacidosis, type I [insulin dependent type] [IDDM type] [juvenile type], uncontrolled

• 250.20, Diabetes with hyperosmolarity, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, not stated as uncontrolled

• 250.21, Diabetes with hyperosmolarity, type I [insulin dependent type] [IDDM] [juvenile type], not stated as uncontrolled

• 250.22, Diabetes with hyperosmolarity, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, uncontrolled

• 250.23, Diabetes with hyperosmolarity, type I [insulin dependent type] [IDDM] [juvenile type], uncontrolled

• 250.30, Diabetes with other coma, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, not stated as uncontrolled

• 250.31, Diabetes with other coma, type I [insulin dependent type] [IDDM] [juvenile type], not stated as uncontrolled

• 250.32, Diabetes with other coma, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, uncontrolled

• 250.33, Diabetes with other coma, type I [insulin dependent type] [IDDM] [juvenile type], uncontrolled, type I [insulin dependent type] [IDDM type] [juvenile type], uncontrolled

• 250.40, Diabetes with renal manifestation, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, not stated as uncontrolled

• 250.41, Diabetes with renal manifestation, type I [insulin dependent type] [IDDM] [juvenile type], not stated as uncontrolled

• 250.42, Diabetes with renal manifestation, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, uncontrolled

• 250.43, Diabetes with renal manifestation, type I [insulin dependent type] [IDDM type] [juvenile type], uncontrolled

• 250.50, Diabetes with ophthalmic manifestations, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, not stated as uncontrolled

• 250.51, Diabetes with ophthalmic manifestations, type I [insulin dependent type] [IDDM] [juvenile type], not stated as uncontrolled

• 250.52, Diabetes with ophthalmic manifestations, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, uncontrolled

• 250.53, Diabetes with ophthalmic manifestations, type I [insulin dependent type] [IDDM type] [juvenile type], uncontrolled

• 250.60, Diabetes with neurological manifestations, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, not stated as uncontrolled

• 250.61, Diabetes with neurological manifestations, type I [insulin dependent type] [IDDM] [juvenile type], not stated as uncontrolled

• 250.62, Diabetes with neurological manifestations, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, uncontrolled

• 250.63, Diabetes with neurological manifestations, type I [insulin dependent type] [IDDM type] [juvenile type], uncontrolled

• 250.70, Diabetes with peripheral circulatory disorders, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, not stated as uncontrolled

• 250.71, Diabetes with peripheral circulatory disorders type I [insulin dependent type] [IDDM] [juvenile type], not stated as uncontrolled

• 250.72, Diabetes with peripheral circulatory disorders, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, uncontrolled

• 250.73, Diabetes with peripheral circulatory disorders, type I [insulin dependent type] [IDDM type] [juvenile type], uncontrolled

• 250.80, Diabetes with other specified manifestations, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, not stated as uncontrolled

• 250.81, Diabetes with other specified manifestations, type I [insulin dependent type] [IDDM] [juvenile type], not stated as uncontrolled

• 250.82, Diabetes with other specified manifestations, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, uncontrolled

• 250.83, Diabetes with other specified manifestations, type I [insulin dependent type] [IDDM] [juvenile type], uncontrolled

• 250.90, Diabetes with unspecified complication, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, not stated as uncontrolled

• 250.91, Diabetes with unspecified complication, type I [insulin dependent type] [IDDM] [juvenile type], not stated as uncontrolled

• 250.92, Diabetes with unspecified complication, type II [non-insulin dependent type] [NIDDM type] [adult-onset type] or unspecified type, uncontrolled

• 250.93, Diabetes with unspecified complication, type I [insulin dependent type] [IDDM] [juvenile type], uncontrolled

Note: The proposed rule contained inadvertent typographical errors in the above list on four diabetes codes at 250.50 through 250.53. These errors have been corrected in this list in the final rule.

Diagnosis List 2

• 403.01, Malignant hypertensive renal disease, with renal failure

• 403.11, Benign hypertensive renal disease, with renal failure

• 403.91, Unspecified hypertensive renal disease, with renal failure

• 404.02, Malignant hypertensive heart and renal disease, with renal failure

• 404.03, Malignant hypertensive heart and renal disease, with heart failure and renal failure

• 404.12, Benign hypertensive heart and renal disease, with renal failure

• 404.13, Benign hypertensive heart and renal disease, with heart failure and renal failure

• 404.92, Unspecified hypertensive heart and renal disease, with renal failure

• 404.93, Unspecified hypertensive heart and renal disease, with heart failure and renal failure

• 585, Chronic renal failure

• V42.0, Organ or tissue replaced by transplant, kidney

• V43.89, Organ or tissue replaced by other means, other

We received one comment in support of our proposal to restructure Edit 11 in the MCE. Therefore, we are adopting the proposal as final.

In addition, it has come to our attention that two of the new codes created for use for discharges effective October 1, 2004, should also be included on Edit 11 in order to conform to current coverage policy. These changes were not included in the proposed rule. However, the addition of these codes is not a change in CMS policy. Rather, it is simply a procedural change that is necessary to effectuate CMS' existing coverage policy and to facilitate the appropriate payment (or non-payment) of claims reporting these codes. Therefore, we are making the following additional changes to the MCE:

- In the ''Non-Covered Procedures'' section of Edit 11, we are adding code 00.62 (Percutaneous angioplasty or atherectomy of intracranial vessel(s)) to the list of procedure codes that are always considered noncovered procedures.
- ICD–9–CM O.R. procedure code 00.61 (Percutaneous angioplasty or atherectomy of precerebral (extracranial vessel(s)) is identified as a ''Non-Covered Procedure'' except when the following non-O.R. procedure and secondary diagnosis are also present:

Non-O.R. Procedure: 00.63 (Percutaneous insertion of carotid artery stent(s); and

Secondary Diagnosis: V70.7 (Examination of participant in clinical trial).

We are making these changes in Version 22.0 of the MCE software program.

b. Edit 6 (Manifestations Not Allowed As Principal Diagnosis) in the MCE contains codes that describe the manifestation of an underlying disease, not the disease itself, and therefore, should not be used as a principal diagnosis. The following codes describe manifestations of an underlying disease; they should not be used as a principal diagnosis according to ICD–9–CM coding convention. Therefore, in the May 18, 2004, proposed rule, we proposed to add the following diagnosis codes to Edit 6:

- 289.52, Splenic sequestration
- 517.3, Acute chest syndrome (inadvertently erroneously cited as 571.3 in the May 18, 2004 proposed rule)
- 785.52, Septic shock

Coding conventions in the ICD–9–CM Diagnostic Tabular List specify that etiologic conditions be coded first.

We received two comments in support of our proposal to add three diagnosis codes to Edit 6 of the MCE. However, both commenters pointed out a typographical error in one of the citations of the diagnosis codes. Code 571.3 should have read 517.3.

We are adopting, as final, our proposed additions of the diagnosis codes to Edit 6, with the correction of the one code number cited.

c. Edit 9 (Unacceptable Principal Diagnoses) contains codes ''that describe a circumstance which influences an individual's health status but is not a current illness of injury; therefore, these codes are considered unacceptable as a principal diagnosis.'' (This definition can be found on page 1094 of the DRG Definitions Manual, Version 21.0). Last year, we became aware that two codes should be removed from this list, as they can be legitimate causes for inpatient admission. However, we were made aware of this too late in the process to make a change to this edit prior to FY 2004. In the May 18, 2004, IPPS proposed rule (69 FR 28197), we indicated that we will now be able to make the necessary system changes before the start of FY 2005. Therefore, we proposed to remove the following codes from Edit 9:

- V53.01, Adjustment of cerebral ventricular (communicating) shunt
- V53.02, Adjustment of neuropacemaker (brain) (peripheral nerve) (spinal cord)

We received one comment in support of our proposed removal of codes V53.01 and V53.02 from Edit 9 in the MCE. Therefore, we are adopting, as final, our proposed removal of the two codes from Edit 9.

11. Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the DRG associated with the most resource-intensive surgical class.

Because the relative resource intensity of surgical classes can shift as a function of DRG reclassification and recalibrations, we reviewed the surgical hierarchy of each MDC, as we have for previous reclassifications and recalibrations, to determine if the ordering of classes coincides with the intensity of resource utilization.

A surgical class can be composed of one or more DRGs. For example, in MDC 11, the surgical class ''kidney transplant'' consists of a single DRG (DRG 302) and the class ''kidney, ureter and major bladder procedures'' consists of three DRGs (DRGs 303, 304, and 305). Consequently, in many cases, the surgical hierarchy has an impact on more than one DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes DRGs 1 and 2 and surgical class B includes DRGs 3, 4, and 5. Assume also that the average charge of DRG 1 is higher than that of DRG 3, but the average charges of DRGs 4 and 5 are higher than the average charge of DRG 2. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weight the average charge of each DRG in the class by frequency (that is, by the number of cases in the DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of ''other O.R. procedures'' as discussed below.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, this result is unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average charge is ordered above a surgical class with a higher average charge. For example, the ''other O.R. procedures'' surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average charge for the DRG or DRGs in that surgical class may be higher than that for other surgical classes in the MDC. The ''other O.R. procedures'' class is a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients in the MDC with these diagnoses. Therefore, assignment to

these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average charges for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average charges are likely to shift such that the higher-ordered surgical class has a lower average charge than the class ordered below it.

Based on the preliminary recalibration of the DRGs, in the May 18, 2004 proposed rule, we proposed modifications of the surgical hierarchy as set forth below.

We proposed to revise the surgical hierarchy for the pre-MDC DRGs and MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue).

In the pre-MDC DRGs, we proposed to reorder DRG 541 (Tracheostomy With Mechanical Ventilation 96 + Hours or Principal Diagnosis Except Face, Mouth, and Neck Diagnoses With Major O.R. Procedure) and DRG 542 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth, and Neck Diagnoses Without Major O.R. Procedure) above DRG 480 (Liver Transplant).

In MDC 8, we proposed to—

- Reorder DRG 496 (Combined Anterior/Posterior Spinal Fusion), DRG 497 (Spinal Fusion Except Cervical With CC), and DRG 498 (Spinal Fusion Except Cervical Without CC) above DRG 471 (Bilateral or Multiple Major Joint Procedures of the Lower Extremity).
- Reorder DRG 519 (Cervical Spinal Fusion With CC) and DRG 520 (Cervical Spinal Fusion Without CC) above DRG 216 (Biopsies of the Musculoskeletal System and Connective Tissue).
- Reorder DRG 213 (Amputation for the Musculoskeletal System and Connective Tissue Disorders) above DRG 210 (Hip and Femur Procedures Except Major Joint Age> 17 With CC), DRG 211 (Hip and Femur Procedures Except Major Joint Age> 17 Without CC), and DRG 212 (Hip and Femur Procedures Except Major Joint Age 0–17).
- Reorder DRG 499 (Back and Neck Procedures Except Spinal Fusion With CC) and DRG 500 (Back and Neck Procedures Except Spinal Fusion Without CC) above DRG 218 (Lower Extremity and Humerus Procedures Except Hip, Foot, and Femur Age> 17 With CC), DRG 219 (Lower Extremity and Humerus Procedures Except Hip, Foot, and Femor Age> 17 Without CC), and DRG 220 (Lower Extremity and Humerus Procedures Except Hip, Foot, and Femur Age 0–17).

In the proposed rule, we were unable to test the effects of the proposed revisions to the surgical hierarchy and to reflect these changes in the proposed relative weights because the revised GROUPER software was unavailable at the time the proposed rule was completed. Rather, we simulated most major classification changes to approximate the placement of cases under the proposed reclassification, and then determined the average charge for each DRG. These average charges served as our best estimate of relative resource used for each surgical class. We have now tested the proposed surgical hierarchy changes after the revised GROUPER was received and are reflecting the final changes in the DRG relative weights in this final rule. Further, as discussed in section II.C. of this preamble, the final recalibrated weights are somewhat different from the proposed weights because they are based on more complete data.

We have tested the proposed revisions using the March 2004 update of the FY 2003 MedPAR file and the revised GROUPER software and have found that the revisions are supported by the data, and no additional changes are indicated except those discussed below pertaining to the implementation of new DRG 543 (Craniotomy with Implantation of Chemotherapeutic Agent or Acute Complex Central Nervous System Principal Diagnosis). (For a complete description of this change see the discussion under ''Other Issues'' in section II.B.16 of this preamble.) Due to the implementation of DRG 543, we also are reordering the following DRGs in MDC 1 (Disease and Disorders of the Nervous System): DRG 543 above DRGs 1 (Craniotomy Age > 17 With CC) and 2 (Craniotomy Age> 17 Without CC). Therefore, we are adopting these changes as final.

Comment: One commenter requested a change in the surgical hierarchy for a case where procedure code 37.99 (Other operations on heart and pericardium) and code 37.98 (Replacement of an automatic cardioverter/defibrillator pulse generator only) is reported during the same admission. This case is assigned to either DRG 110 (Major Cardiovascular Procedures With CC) or DRG 111 (Major Cardiovascular Procedures Without CC). The commenter requested that this case be reassigned to DRG 115 (Permanent Cardiac Pacemaker Implant with AMI, Heart Failure, or Shock or AICD Lead or Generator Procedure) because it has a higher DRG weight than DRG 110 or DRG 111.

Response: The surgical hierarchy places a patient with multiple procedures in the most resource intensive class of DRGs, but not necessarily in the most resource intensive DRG. In the scenario described by the commenter, there are two surgical classes, one including DRGs 110 and 111 and the other including DRG 115 and DRG 116 (Other Permanent Cardiac Pacemaker Implant). The average charges for the class containing DRGs 110 and 111 are approximately $16,604 more than for the class containing DRGs 115 and 116. As a result, the class containing DRGs 110 and 111 is ordered higher in the surgical group than the class containing DRGs 115 and 116. As a result, the case is assigned to either DRG 110 or DRG 111.

12. Refinement of Complications and Comorbidities (CC) List

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) To preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair. We developed this list of diagnoses, using physician panels, to include those diagnoses that, when present as a secondary condition, would be considered a substantial complication or comorbidity. In previous years, we have made changes to the list of CCs, either by adding new CCs or deleting CCs already on the list. In the May 18, 2004, proposed rule, we did not propose to delete any of the diagnosis codes on the CC list.

Comment: One commenter requested that ICD–9–CM codes 996.64 (Infection due to indwelling urinary catheter) and 599.0 (Urinary tract infection) be removed from the CC List so that hospitals are not rewarded with higher payment when they allow patients to develop urinary tract infections. The commenter pointed out that these conditions are often avoidable complications of hospitalization, and that hospitals allow these infections to occur in order to receive higher payments from Medicare.

Response: We do not agree with the assertion that hospitals allow urinary tract infections to occur in Medicare patients in order to receive higher payment rates. While it is true that some urinary tract infections are preventable through the use of improved sterile technique, reduced indwelling catheter duration, more appropriate use of broad spectrum antibiotics and improved patient mobilization, among others, we do not believe there is a direct causal link between substandard hospital care and the presence of urinary tract infection in general.

Particularly in the elderly Medicare population, urinary tract infections occur in diverse clinical scenarios that lead to colonization and ultimately overt clinical infection within the urinary tract. General debilitation, various acute illnesses, immobility, impaired host defense mechanisms, dehydration and the post-surgical state are but a few of the situations in which urinary tract infections may occur, and which do in fact require higher resource utilization when they occur. Therefore, we are not removing codes 996.64 and 599.0 from the CC List.

In this final rule, as we proposed, we are not deleting any of the diagnosis codes on the CC list for FY 2005.

In the May 19, 1987, proposed notice (52 FR 18877) and the September 1, 1987, final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another.
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another.
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another.
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another.
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC.[1]

In the May 18, 2004, proposed rule, we proposed a limited revision of the CC Exclusions List to take into account the proposed changes that will be made in the ICD–9–CM diagnosis coding system effective October 1, 2004. (*See* section II.B.15. of this preamble for a discussion of ICD–9–CM changes.) We proposed these changes in accordance with the principles established when we created the CC Exclusions List in 1987.

We received no comments on the proposed changes. Therefore, we will adopt the CC Exclusions List as proposed.

Tables 6G and 6H in the Addendum to this final rule contain the revisions to the CC Exclusions List that will be effective for discharges occurring on or after October 1, 2004. Each table shows the principal diagnoses with changes to the excluded CCs. Each of these principal diagnoses is shown with an asterisk, and the additions or deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis.

CCs that are added to the list are in Table 6G—Additions to the CC Exclusions List. Beginning with discharges on or after October 1, 2004, the indented diagnoses will not be recognized by the GROUPER as valid CCs for the asterisked principal diagnosis.

CCs that are deleted from the list are in Table 6H—Deletions from the CC Exclusions List. Beginning with discharges on or after October 1, 2004, the indented diagnoses will be recognized by the GROUPER as valid CCs for the asterisked principal diagnosis.

Copies of the original CC Exclusions List applicable to FY 1988 can be obtained from the National Technical Information Service (NTIS) of the Department of Commerce. It is available in hard copy for $152.50 plus shipping and handling. A request for the FY 1988 CC Exclusions List (which should include the identification accession number (PB) 88–133970) should be made to the following address: National Technical Information Service, United States Department of Commerce, 5285 Port Royal Road, Springfield, VA 22161; or by calling (800) 553–6847.

Users should be aware of the fact that all revisions to the CC Exclusions List (FYs 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2001, 2002, 2003, and 2004) and those in Tables 6G and 6H of this final rule for FY 2005 must be incorporated into the list purchased from NTIS in order to obtain the CC Exclusions List applicable for discharges occurring on or after October 1, 2004. (**Note:** There was no CC Exclusions List in FY 2000 because we did not make changes to the ICD–9–CM codes for FY 2000.)

Alternatively, the complete documentation of the GROUPER logic, including the current CC Exclusions List, is available from 3M/Health Information Systems (HIS), which, under contract with CMS, is responsible for updating and maintaining the GROUPER program. The current DRG Definitions Manual, Version 21.0, is available for $225.00, which includes $15.00 for shipping and handling. Version 22.0 of this manual, which includes the final FY 2005 DRG changes, is available for $225.00. These manuals may be obtained by writing 3M/HIS at the following address: 100 Barnes Road, Wallingford, CT 06492; or by calling (203) 949–0303. Please specify the revision or revisions requested.

13. Review of Procedure Codes in DRGs 468, 476, and 477

Each year, we review cases assigned to DRG 468 (Extensive O.R. Procedure Unrelated to Principal Diagnosis), DRG 476 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis), and DRG 477 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis) to determine whether it would be appropriate to change the procedures assigned among these DRGs.

DRGs 468, 476, and 477 are reserved for those cases in which none of the O.R. procedures performed are related to the principal diagnosis. These DRGs are intended to capture atypical cases, that is, those cases not occurring with sufficient frequency to represent a distinct, recognizable clinical group. DRG 476 is assigned to those discharges in which one or more of the following

[1] *See* the September 30, 1988 final rule (53 FR 38485) for the revision made for the discharges occurring in FY 1989; the September 1, 1989 final rule (54 FR 36552) for the FY 1990 revision; the September 4, 1990 final rule (55 FR 36126) for the FY 1991 revision; the August 30, 1991 final rule (56 FR 43209) for the FY 1992 revision; the September 1, 1992 final rule (57 FR 39753) for the FY 1993 revision; the September 1, 1993 final rule (58 FR 46278) for the FY 1994 revisions; the September 1, 1994 final rule (59 FR 45334) for the FY 1995 revisions; the September 1, 1995 final rule (60 FR 45782) for the FY 1996 revisions; the August 30, 1996 final rule (61 FR 46171) for the FY 1997 revisions; the August 29, 1997 final rule (62 FR 45966) for the FY 1998 revisions; the July 31, 1998 final rule (63 FR 40954) for the FY 1999 revisions, the August 1, 2000 final rule (65 FR 47064) for the FY 2001 revisions; the August 1, 2001 final rule (66 FR 39851) for the FY 2002 revisions; the August 1, 2002 final rule (67 FR 49998) for the FY 2003 revisions; and the August 1, 2003 final rule (68 FR 45364) for the FY 2004 revisions.) In the July 30, 1999 final rule (64 FR 41490), we did not modify the CC Exclusions List for FY 2000 because we did not make any changes to the ICD–9–CM codes for FY 2000.

prostatic procedures are performed and are unrelated to the principal diagnosis:

- 60.0, Incision of prostate
- 60.12, Open biopsy of prostate
- 60.15, Biopsy of periprostatic tissue
- 60.18, Other diagnostic procedures on prostate and periprostatic tissue
- 60.21, Transurethral prostatectomy
- 60.29, Other transurethral prostatectomy
- 60.61, Local excision of lesion of prostate
- 60.69, Prostatectomy, not elsewhere classified
- 60.81, Incision of periprostatic tissue
- 60.82, Excision of periprostatic tissue
- 60.93, Repair of prostate
- 60.94, Control of (postoperative) hemorrhage of prostate
- 60.95, Transurethral balloon dilation of the prostatic urethra
- 60.96, Transurethral destruction of prostate tissue by microwave thermotherapy
- 60.97, Other transurethral destruction of prostate tissue by other thermotherapy
- 60.99, Other operations on prostate

All remaining O.R. procedures are assigned to DRGs 468 and 477, with DRG 477 assigned to those discharges in which the only procedures performed are nonextensive procedures that are unrelated to the principal diagnosis.[2]

a. Moving Procedure Codes from DRG 468 or DRG 477 to MDCs

We annually conduct a review of procedures producing assignment to DRG 468 or DRG 477 on the basis of volume, by procedure, to see if it would be appropriate to move procedure codes out of these DRGs into one of the surgical DRGs for the MDC into which the principal diagnosis falls. The data are arrayed two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical DRGs for the MDC in which the diagnosis falls. Based on this year's review, we did not identify any procedures in DRG 477 that should be removed. Therefore, in the May 18, 2004 proposed rule, we did not propose to move any procedures from DRG 477 to one of the surgical DRGs in this final rule.

We did not receive any comments on our proposal not to move any procedures from DRG 477 to one of the surgical DRGs and, therefore, are adopting our proposal as final.

b. Reassignment of Procedures among DRGs 468, 476, and 477

We also annually review the list of ICD–9–CM procedures that, when in combination with their principal diagnosis code, result in assignment to DRGs 468, 476, and 477, to ascertain if any of those procedures should be reassigned from one of these three DRGs to another of the three DRGs based on average charges and the length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the DRGs clinically similar or to provide payment for the cases in a similar manner. Generally, we move only those procedures for which we have an adequate number of discharges to analyze the data. Based on a comment we received in response to last year's proposed rule (68 FR 45366), in the May 18, 2004 proposed rule, we proposed to move procedure code 51.23 (Laparoscopic cholecystectomy) from DRG 468 (Extensive O.R. Procedure Unrelated to Principal Diagnosis) into DRG 477 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis).

The commenter suggested that a laparoscopic procedure was probably not an extensive O.R. procedure; it was more likely a nonextensive O.R. procedure. We indicated that we agreed and, therefore, proposed this change. In addition, we proposed to add several new procedure codes to DRGs 476 and 477. These procedures are also listed on Table 6B—New Procedure Codes in the Addendum to this final rule. However, DRGs 476 and 477 are not limited to one MDC, so the new codes are also included here for nonextensive cases in which the procedures are unrelated to the principal diagnosis:

- 44.67, Laparoscopic procedures for creation of esophagogastric sphincteric competence
- 44.68, Laparoscopic gastroplasty
- 44.95, Laparoscopic gastric restrictive procedure
- 44.96, Laparoscopic revision of gastric restrictive procedure
- 44.97, Laparoscopic removal of gastric restrictive device(s)
- 44.98, Laparoscopic adjustment of size of adjustable gastric restrictive device

In DRG 476, the above codes are to be added to the section ''With or Without Operating Room Procedures'' in the GROUPER logic.

We did not propose to move any procedure codes from DRG 476 to DRGs 468 or 477, or from DRG 477 to DRGs 468 or 476.

We did not receive any comments on this proposal and, therefore, are adopting it as final.

c. Adding Diagnosis or Procedure Codes to MDCs

Based on our review this year, we did not propose to add any diagnosis codes to MDCs. We did not receive any comments on this proposal. Therefore, we are adopting our proposal as final and are making no changes to MDCs other than those specified in other portions of this section II. of the preamble of this final rule.

14. Pancreatic Islet Cell Transplantation in Clinical Trials

Section 733(a) of Public Law 108–173 directs the Secretary, acting through the National Institute of Diabetes and Digestive and Kidney Disorders (NIDDKD) to conduct a clinical investigation of pancreatic islet cell transplantation that includes Medicare beneficiaries. Section 733(b) of Public Law 108–173 provides for Medicare payments, beginning no earlier than October 1, 2004, for the routine costs as well as the costs of the transplantation and appropriate related items and services for Medicare beneficiaries who are participating in a clinical trial as if such transplantation were covered under Medicare Part A or Part B. Routine costs are defined as reasonable and necessary routine patient care costs (as defined in the CMS Coverage Issues Manual, Section 30–1) including immunosuppressive drugs and other followup care. Section 733(c)(2) of Public Law 108–173 defines transplantation and appropriate related

[2] In the August 1, 2003 final rule (68 FR 45365) we moved several procedures from DRG 468 to DRGs 476 and 477 because the procedures are nonextensive. The original list of the ICD–9–CM procedure codes for the procedures we consider nonextensive procedures, if performed with an unrelated principal diagnosis, was published in Table 6C in section IV. of the Addendum to the September 30, 1988 final rule (53 FR 38591). As part of the final rules published on September 4, 1990 (55 FR 36135), August 30, 1991 (56 FR 43212), September 1, 1992 (57 FR 23625), September 1, 1993 (58 FR 46279), September 1, 1994 (59 FR 45336), September 1, 1995 (60 FR 45783), August 30, 1996 (61 FR 46173), and August 29, 1997 (62 FR 45981), we moved several other procedures from DRG 468 to DRG 477, and some procedures from DRG 477 to DRG 468. No procedures were moved in FY 1999, as noted in the July 31, 1998 final rule (63 FR 40962); in FY 2000, as noted in the July 30, 1999 final rule (64 FR 41496); in FY 2001, as noted in the August 1, 2000 final rule (65 FR 47064); or in FY 2002, as noted in the August 1, 2001 final rule (66 FR 39852). In the August 1, 2002 final rule (67 FR 49999), we did not move any procedures from DRG 477. However, we did move procedures codes from DRG 468 and placed them in more clinically coherent DRGs.

items and services as items and services related to the acquisition and delivery of the pancreatic islet cell transplantation, notwithstanding any national noncoverage determination contained in the CMS Coverage Issues Manual.

As we indicated in the May 18, 2004, proposed rule, while the DRG payment will cover the transplant injection and the subsequent hospital stay, we considered establishing an add-on payment to the DRG payment amount to reimburse the acquisition costs associated with islet cell procurement (69 FR 28218). Historically, organ acquisition costs have been reimbursed as a cost pass-through. However, islet cell transplants are not exactly the same as solid organ transplants. While solid pancreata are procured, islet cells are not transplanted in the solid organ state as are other types of organs. Rather, the pancreata are procured by an organ procurement organization (OPO) and are then sent to an islet cell resource center that extracts the islet cells from the pancreata and sends the cells on to the transplant center. Because the procurement and processing system for islet cell transplants is not the same as for solid organ transplants, we proposed not paying for these costs as a pass-through. With the anticipated small number of beneficiaries in the clinical trial and the Medicare program's unfamiliarity with the isolation process, we believed it would be most appropriate at this time to have a set payment rate for acquisition costs, rather than attempting a case-by-case determination of the reasonableness of these costs in each institution. We note there is precedent to exclude acquisition costs from the pass-through payment process. For example, stem cell transplants and corneal transplants do not have acquisition costs reimbursed as a cost pass-through payment.

We proposed that the add-on payment would be a single amount that includes pre-transplant tests and services, pancreas procurement, and islet isolation services. In addition, we proposed to use an add-on as opposed to increasing the DRG amount because the DRGs at issue are also applied in cases involving a variety of other procedures that do not include the costly islet cell acquisition required for this procedure. Thus, including these costs in the DRGs would have the potential of skewing the weights for all other DRGs. We solicited comments on whether an add-on payment amount is the appropriate way to reimburse islet cell acquisition costs, or whether another methodology may be more appropriate.

In addition, while we had some data available regarding the cost of pancreas procurement, in the proposed rule we specifically asked for any other data that supported the costs of acquisition and the costs of isolation cell resource centers. We stated that, because of insufficient data, we were unable to publish a proposed acquisition amount in the FY 2005 proposed rule. However, we indicated that, after analyzing data submitted during the comment period, other data acquired by CMS, and any suggested changes from the methodology proposed, the final organ acquisition payment amount would be announced in the FY 2005 IPPS final rule.

Pancreatic islet cell transplantation during the clinical trial will be performed to decrease or eliminate the need for insulin in patients with Type I diabetes. Patients with Type II islet diabetes are not included in this trial. Islet cells are acquired from a cadaveric pancreas donor (islet allotransplantation).

As described in II.B.1. of this preamble, ICD–9–CM diagnosis and procedure codes are used to determine DRG assignments. In 1996, CMS (then HCFA) created codes for islet cell transplantation:

- 52.84, Autotransplantation of cells of islets of Langerhans.
- 52.85, Allotransplantation of cells of islets of Langerhans.

The Medicare GROUPER does not consider codes 52.84 and 52.85 as O.R. procedures and, therefore, these codes do not move the case from a medical DRG into a surgical DRG unless another procedure is performed. Based on the circumstances noted above under which pancreatic islet cell transplantation would be performed, we identified the three most logical DRGs to which we believe cases should be assigned. If a patient has Type I diabetes mellitus with ESRD and a pancreatectomy is performed, the case would group to DRG 468 (Extensive O.R. Procedure Unrelated to Principal Diagnosis). If a patient has Type I diabetes mellitus with ESRD and is also receiving a kidney transplant (simultaneous kidney and islet transplantation), the case would group to DRG 302 (Kidney Transplant). If a patient has Type I diabetes mellitus with ESRD and a history of a kidney transplant and then has the islet cells inserted via an open approach, the case would group to DRG 315 (Other Kidney and Urinary Tract O.R. Procedures). We note that this third scenario reflects incorrect coding practice. However, in this final rule we are modifying the structure of DRG 315 so that patients receiving infusions of islet cells without any other surgical intervention will be appropriately assigned to this DRG.

As each case is assigned to a DRG based on all of the ICD–9–CM codes reported, cases could also be assigned to DRGs other than those mentioned above. In fact, as indicated in the proposed rule, our review of FY 2003 MedPAR data revealed that codes 52.84 and 52.85 were present in only four cases, and that each case was assigned to a different DRG. We found one case each in DRG 18 (Cranial and Peripheral Nerve Disorders With CC), DRG 192 (Pancreas, Liver, and Shunt Procedures Without CC), DRG 207 (Disorders of the Biliary Tract With CC), and DRG 302 (Kidney Transplant). As the GROUPER software program does not recognize codes for islet cell transplantation as O.R. procedure codes, the presence of these codes did not modify the DRG assignment in these four cases.

We were reluctant to propose assigning the islet cell codes to one specific DRG, as the islet cell infusion will have different indications depending on the merits of each case, as is shown from the MedPAR data mentioned above. In addition, we do not currently have accurate cost data or charges for patients in this type of clinical trial, which makes it difficult to determine an appropriate DRG weight. As a result, assignment of cases to a specific DRG might have the consequence of either overpaying or underpaying the cases. We believe that both of these consequences are unacceptable. Therefore, we did not propose that cases involved in the clinical trial be assigned to one specific DRG for payment purposes. As we believe that these cases will have been assigned to DRGs 302, 315, and 468, we proposed to establish an add-on payment for cases in these three DRGs containing procedure codes 52.84 or 52.85. As stated earlier, we were not able to establish the amount of this add-on until we had determined procurement costs for the islet cells. We solicited information from transplant centers and organ procurement organizations on costs for these types of transplantations.

Comment: Several commenters noted that the assignment of DRG 315, as currently constructed, to patients participating in the clinical trial does not reflect appropriate coding practice, as a laparotomy code for hepatic vessel catheterization should not be recorded.

Response: The commenters are correct in their assessment. Therefore, we are modifying the structure of DRG 315 so that patients receiving infusions of islet cells without any other surgical

intervention will appropriately be assigned to DRG 315. We are aware that patients will often require more than one admission for islet cell transplantation. We are making this modification in order to recognize the surgical aspects of islet cell transplantation in the absence of any other surgical procedure.

The logic for DRG 315 is modified as follows:

O.R. Procedures

This list remains the same as V21.0 of the GROUPER.

or

Non-O.R. Procedures

52.84, Autotransplantation of cells of islets of Langerhans

52.85, Allotransplantation of cells of islets of Langerhans

or

Principal Diagnosis

This list remains the same as V21.0 of GROUPER.

and

Non-O.R. Procedure

This list remains the same as V21.0 of GROUPER.

Comment: One commenter stated that it was not clinically appropriate to categorize islet cell transplants into DRG 315, as these transplants do not involve either the kidney or the urinary tract directly. Rather, the islet cells are transplanted into the patient's liver. The commenter indicated that islet transplants have no relevance to the genito-urinary system, but rather to the hepatopancreaticobiliary system. Therefore, the commenter believed that the proposed classification to DRG 315 is clinically inappropriate.

Response: DRGs are diagnosis related groups. Each surgical DRG is comprised of procedure codes in combination with a principal diagnosis that causes the case to be assigned to a particular major diagnostic category (MDC). Because there are so many procedures in most DRGs, it is impossible to capture the purpose of all procedures in the title.

Comment: Some commenters suggested that the most appropriate resolution is to create a new DRG for islet transplants performed alone. The commenters mentioned that solid organ transplants are classified into their own DRGs, and that this precedent should be continued.

Response: DRGs are created based on the need of the program to identify clinical coherence and resource consumption. Ideally, both components will be part of the decision making process in DRG creation. In this case, we have no substantial data upon which to determine an appropriate relative weight for the resources that will be utilized in all islet cell transplant cases. In addition, there may be different scenarios in which patients are transfused with islet cells. These cases could include patients receiving a kidney transplant during the same admission, or cases in which the islet cells comprise the only procedure during the admission. As cases will be varied in this clinical trial, we prefer to have MedPAR data and case histories prior to creating specific new DRGs for these cases.

Comment: Some commenters believed that the most closely related DRG from a clinical as well as resource perspective is DRG 513 (Pancreas Transplant). The commenters noted that the diagnoses are the same for islet and pancreas transplants, and that the patient populations involved in these two procedures are virtually identical in terms of comorbidities and the nature of their primary disease. In addition, the technical aspects of islet transplants are of a surgical nature, whether performed in an operating room or in the interventional radiology suite. One commenter noted that pancreas transplants are in reality just another method of transplanting the insulin producing islet cells since the other functions of the pancreas are superfluous.

Response: While the patient populations requiring intervention are similar, we do not believe that one can equate an operation of the magnitude of a pancreas transplant with a less intensive islet cell transplantation in which the portal vein is accessed and islet cells infused through a catheter. It is only because the technical aspects of islet transplants are of a surgical nature that we have modified surgical DRG 315 to reflect the transfusion of islet cells.

Comment: One commenter suggested that the most appropriate DRG for simultaneous kidney and islet cell transplantation would be DRG 512 (Simultaneous Pancreas/Kidney Transplant), as the resource allocation and patient population involved in both types of admissions are comparable. The commenter noted that so few of these combination procedures have been performed that no assumption can be projected based on the experience to date.

Response: We do not agree that an islet cell transplantation is the equivalent of a pancreas transplantation. Cases involving simultaneous kidney and islet cell transplantation will group to DRG 302, and will receive an add-on payment for the infusion of the islet cells.

Comment: Some commenters believed CMS should pay for islet acquisition services as a cost pass-through. Several of these commenters stated that they found insufficient justification to pay for islet cell transplants through an add-on when pancreata used for solid organ transplantation are paid as a cost pass-through. These commenters stated that the costs of procuring a pancreas used for solid organ transplantation are the same as procuring a pancreas for islet cell transplantation. One commenter agreed that payment through an add-on is the best approach.

Response: We continue to believe that reimbursing acquisition costs as an add-on to the DRG is an appropriate reimbursement mechanism. However, we have decided that reimbursing pancreata procured for islet cells as an add-on while the acquisition of all other organs are reimbursed as a cost pass-through may be premature at this time. Accordingly, we will pay for organ acquisition costs as a cost pass-through. Costs associated with the procurement of the pancreata will be included in the islet acquisition costs center of the transplant center cost report. We will continue to study the appropriateness of paying for pancreata used for islets as an add-on in the future. Islet isolation will be paid as an add-on as proposed. We discuss this add-on below.

Comment: Some commenters were concerned that pre-transplant costs would not be appropriately reflected in the proposed add-on methodology. These commenters recommended that the pre-transplant costs be paid as a cost-pass through.

Response: After additional analysis, we agree that it may be difficult to ensure an appropriate payment amount for pre-transplant costs in an add-on methodology. Therefore, pre-transplant costs will be handled in the same manner as they are for all other solid organ transplantation and will be included in the islet acquisition cost center of the cost report. Pre-transplant costs will not be included as an add-on to the DRG payment.

Comment: Some commenters believed that islet isolation services should be paid on a cost pass-through rather than as an add-on. One commenter mentioned that islet centers have differing arrangements with transplant centers on how the isolation is performed. The commenters added that these same centers have differing processes in isolating the islet cells. Some commenters also indicated that there are inconsistencies in the isolation center data provided to CMS for use in

developing the add-on payment and expressed concerns about the validity of these data.

Response: We continue to believe that paying for islet isolation services as an add-on amount to the DRG is appropriate in the context of this clinical trial. We derived the isolation add-on amount through analysis of direct costs data submitted by 10 of the prominent isolation centers in the country. These centers may well have differing arrangements and differing processes, but despite these differences, the costs and components of costs showed reasonable similarities. The differences were also notable, but we were able to adjust for these differences. In addition to including direct costs, we added actuarially-derived overhead amounts that are used in the hospital payment methodology and provided a 20-percent capital adjustment for building and equipment and a market basket adjustment to take the payment amount to a FY 2005 funding level. Historically, capital costs are approximately 10 percent of the total hospital costs. However, we recognize that the isolation centers are equipment intensive, and to account for that equipment, we are doubling that rate so that capital costs are 20 percent of the total isolation payment. We believe that 20 percent is sufficient to account for capital at the isolation centers. In future years, we would like to obtain capital costs amortized on a per isolation basis. The varying processes and arrangements are all included in our computation, and $18,848 will be paid as the islet isolation add-on to the DRG payment.

Comment: One commenter wanted to be sure that costs of transporting islet cells to and from the islet isolation center are included in the add-on payment.

Response: Shipping costs from the OPO to the islet isolation center are included in procurement costs. The islet isolation centers did not provide data on shipping to the transplant centers; however, we have included an actuarially based overhead amount that we believe is sufficient to cover these costs.

Comment: Some commenters noted that more than one infusion of islet cells is typically required to establish insulin independence and believed that this argued in favor of payment on a cost pass-through basis rather than as an add-on amount.

Response: We recognize that normally two or more infusions are required for islet transplants. We also understand that it is extremely rare for two infusions to be performed at the same time. Accordingly, we have constructed our payment mechanism to pay one DRG for the infusion and one islet isolation add-on amount per discharge under most circumstances for allograft islet cell transplants. However, in those rare instances in which two infusions occur during the same hospital stay, two add-on payments for isolation of the islet cells can be made along with the single DRG payment. The cost associated with the procurement of two pancreata will be paid as an acquisition cost on a reasonable cost basis. We will issue billing instructions on this issue

Comment: Some commenters asked for guidance on the appropriate methodology for OPOs to use in identifying costs incurred in procuring pancreata for islet cell transplantation. Some OPOs have indicated that they currently are providing pancreata for islet cell transplantation but do not receive their full standard acquisition charge (SAC) for the organ.

Response: In some cases, OPOs have been billing pancreata for islet cell transplant at a lower tissue rate. This is an improper billing method. The quality and resources required to procure the organ are identical, and a full charge should be made. Organs that are determined to be nonviable can be billed at a lesser research rate .

Comment: One commenter indicated that the costs included in pancreas acquisition at OPOs vary, making an add-on payment impractical.

Response: As mentioned above, we will continue paying acquisition costs as a cost pass-through. However, all OPOs should have included in their costs direct donor hospital charges, surgeon retrieval fee, registry fees, donor testing, and transportation. These costs should not be shifted to another organization.

Comment: One commenter noted that it was unclear how physicians' services involved in the oversight of the isolation process would to be paid since it does not appear that there is an existing CPT code for these services.

Response: The commenter is correct that there is no CPT code for the physician's oversight services at the isolation center. CPT codes are for direct patient care services; the services at the isolation center do not meet that level of patient participation. In a similar vein, the medical directors at OPOs do not bill for their services using a CPT code. Rather, they are paid by the OPO both for organ retrieval and medical director services. We have included physician costs in the salary portion of the isolation portion of the add-on amount.

Comment: One commenter believed that the costs associated with the isolation portion of the add-on amount should be between $30,000 and $40,000. This commenter further explained that isolation centers incur cost and time to develop improvements to the islet isolation technology and pointed out the startup costs associated with an FDA approved isolation center.

Response: As noted earlier, we have calculated the islet isolation portion of the add-on amount as $18,848. We suspect that the $30,000 to $40,000 estimate referenced by the commenter included costs attributable to research and other services, which are not considered to be routine and reasonably necessary for patient care.

Comment: One commenter suggested two levels of add-on payments to account for the difference in expenses for autograft versus allograft islet cells transplants. While the proposed add-on methodology included the cost of pre-transplant tests and services, organ procurement and islet isolation services, autograft transplants have no associated organ procurement costs, as the islet cells are taken from the patient's own pancreas. Autograft transplants still require pre-transplant services and the actual islet isolation procedure itself.

Response: Our original understanding was that autograft transplants would not be included in the NIH study. After review of the legislation and accompanying Conference Report and consultation with NIH, we believe that an autograft should not occur in this trial. However, in the unlikely event that an autograft islet cell transplant is performed as part of the study on a Medicare beneficiary, we will provide an autograft add-on amount that includes payment for isolation but not for organ procurement. No acquisition cost of the pancreas will be provided because the cost of removal of the organ is included in the DRG payment for the native pancreatectomy procedure itself. The isolation add-on amount will be $18,848 for an autograft islet cell transplant.

In this rule we are finalizing our proposed payment methodology for acquisition costs associated with procuring pancreata for islet cells with modification. We will pay for the organ acquisition costs as a cost pass-through rather than as an add-on payment to the DRG as proposed. In addition, we are finalizing our proposal to pay for islet isolation services as an add-on.

15. Changes to the ICD–9–CM Coding System

As described in section II.B.1. of this preamble, the ICD–9–CM is a coding system used for the reporting of diagnoses and procedures performed on

a patient. In September 1985, the ICD–9–CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the National Center for Health Statistics (NCHS) and CMS, charged with maintaining and updating the ICD–9–CM system. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the ICD–9–CM to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The Official Version of the ICD–9–CM contains the list of valid diagnosis and procedure codes. (The Official Version of the ICD–9–CM is available from the Government Printing Office on CD–ROM for $25.00 by calling (202) 512–1800.) The Official Version of the ICD–9–CM is no longer available in printed manual form from the Federal Government; it is only available on CD–ROM. Users who need a paper version are referred to one of the many products available from publishing houses.

The NCHS has lead responsibility for the ICD–9–CM diagnosis codes included in the *Tabular List* and *Alphabetic Index for Diseases,* while CMS has lead responsibility for the ICD–9–CM procedure codes included in the *Tabular List* and *Alphabetic Index for Procedures.*

The Committee encourages participation in the above process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, medical record administrators, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed at the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2005 at public meetings held on April 3, 2003, December 4–5, 2003, and April 1–2, 2004, and finalized the coding changes after consideration of comments received at the meetings and in writing by January 12, 2004. Those coding changes are announced in Tables 6A through 6F of the Addendum to this rule. Copies of the minutes of the procedure codes discussions at the Committee's 2003 meetings can be obtained from the CMS Web site: *http://www.cms.gov/paymentsystems/icd9/.* The minutes of the diagnoses codes discussions at the 2003 meetings are found at: *http://www.cdc.gov/nchs/icd9.htm.* Paper copies of these minutes are no longer available and the mailing list has been discontinued.

For a report of procedure topics discussed at the April 1–2, 2004, meeting, see the Summary Report at: *http://www.cms.hhs.gov/paymentsystems/icd9/.* For a report of the diagnosis topics discussed at the April 1–2, 2004 meeting, see the Summary Report at: *http://www.cdc.gov/nchs/icd9.htm.*

We encourage commenters to address suggestions on coding issues involving diagnosis codes to: Donna Pickett, Co-Chairperson, ICD–9–CM Coordination and Maintenance Committee, NCHS, Room 2404, 3311 Toledo Road, Hyattsville, MD 20782. Comments may be sent by e-mail to: *dfp4@cdc.gov.*

Questions and comments concerning the procedure codes should be addressed to: Patricia E. Brooks, Co-Chairperson, ICD–9–CM Coordination and Maintenance Committee, CMS, Center for Medicare Management, Hospital and Ambulatory Policy Group, Division of Acute Care, C4–08–06, 7500 Security Boulevard, Baltimore, MD 21244–1850. Comments may be sent by e-mail to: *Patricia.Brooks1@cms.hhs.gov.*

The ICD–9–CM code changes that have been approved will become effective October 1, 2004. The new ICD–9–CM codes are listed, along with their DRG classifications, in Tables 6A and 6B (New Diagnosis Codes and New Procedure Codes, respectively) in the Addendum to this final rule. As we stated above, the code numbers and their titles were presented for public comment at the ICD–9–CM Coordination and Maintenance Committee meetings. Both oral and written comments were considered before the codes were approved. In the May 18, 2004, proposed rule, we only solicited comments on the proposed classification of these new codes.

For codes that have been replaced by new or expanded codes, the corresponding new or expanded diagnosis codes are included in Table 6A. New procedure codes are shown in Table 6B. Diagnosis codes that have been replaced by expanded codes or other codes or have been deleted are in Table 6C (Invalid Diagnosis Codes). These invalid diagnosis codes will not be recognized by the GROUPER beginning with discharges occurring on or after October 1, 2004. Table 6D usually contains invalid procedure codes, however, for FY 2005, there are no invalid procedure codes. Revisions to diagnosis code titles are in Table 6E (Revised Diagnosis Code Titles), which also includes the DRG assignments for these revised codes. Table 6F includes revised procedure code titles for FY 2005.

The first of the 2004 public meetings was held on April 1–2, 2004. In the September 7, 2001, final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the April meeting as part of the code revisions effective the following October.

Section 503(a) of Public Law 108–173 includes a requirement for updating ICD–9–CM codes twice a year instead of the current process of annual updates on October 1 of each year. This requirement is included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) amended section 1886(d)(5)(K) of the Act by adding a new clause (vii) which states that the ''Secretary shall provide for the addition of new diagnosis and procedure codes in April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) * * * until the fiscal year that begins after such date.'' Because this new statutory requirement will have a significant impact on health care providers, coding staff, publishers, system maintainers, software systems, among others, in the May 18, 2004, proposed rule, we solicited comments on our proposals described below to implement this requirement. This new requirement will improve the recognition of new technologies under the IPPS system by providing information on these new technologies at an earlier date. Under the proposal, data would be available 6 months earlier than would be possible with updates occurring only once a year on October 1. Many coding changes apply to longstanding medical issues.

While the new requirement states that the Secretary shall not adjust the payment of the DRG classification for the April 1 new codes, the Department

will have to update its DRG software and other systems in order to recognize and accept the new codes. We will also have to publicize the code changes and the need for a mid-year systems update by providers to capture the new codes. Hospitals will have to obtain the new code books and encoder updates, and make other system changes in order to capture and report the new codes. We indicated that we are aware of the additional burden this will have on health care providers.

The ICD–9–CM Coordination and Maintenance Committee has held its meetings in April and December of each year in order to update the codes and the applicable payment and reporting systems by October 1 of each year. Items are placed on the agenda for the ICD–9–CM Coordination and Maintenance Committee meeting if the request is received at least 2 months prior to the meeting. This requirement allows time for staff to review and research the coding issues and prepare material for discussion at the meeting. It also allows time for the topic to be publicized in meeting announcements in the **Federal Register** as well as on the CMS website. The public decides whether or not to attend the meeting based on the topics listed on the agenda. In order to provide an update on April 1, it became clear that a December Committee meeting would not provide time to finalize and publicize these code revisions. Final decisions on code title revisions are currently made by March 1 so that these titles can be included in the IPPS proposed rule. A complete addendum describing details of all changes to ICD–9–CM, both tabular and index, are publicized on CMS and NCHS web pages in May of each year. Publishers of coding books and software use this information to modify their products that are used by health care providers. This 5-month time period has proved to be necessary for hospitals and other providers to update their systems.

A discussion of this timeline and the need for changes are included in the December 4–5, 2003 ICD–9–CM Coordination and Maintenance Committee minutes. The public provided comment that additional time would be needed to update hospital systems and obtain new code books and coding software. There was considerable concern expressed about the impact this new update would have on providers. Therefore, we have rescheduled the second Committee meeting for 2004 for October 7–8, 2004. Those who wish to have a coding issue discussed at the October Committee meeting will be required to submit their request by August 7, 2004. The Department will continue this process to accommodate all requesters who submit appropriate requests in a timely manner.

In the May 18, 2004 proposed rule, we proposed to implement section 503(a) by developing a mechanism for approving, in time for the April update, diagnoses and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also proposed the following process for making these determinations. Topics considered during the October ICD–9–CM Coordination and Maintenance Committee meeting would be considered for an April 1 update if a strong and convincing case is made by the requester at the Committee's public meeting. The request must identify the reason why a new code is needed in April for purposes of the new technology process. The participants at the meeting and those reviewing the Committee meeting summary report would be provided the opportunity to comment on this expedited request. All other topics would be considered for the October 1 update. Participants at the Committee meeting would be encouraged to comment on all such requests.

We stated that we believe that this proposal captures the intent of section 503(a). This requirement was included in the provision revising the standards and process for recognizing new technology under the IPPS. In addition, the need for approval of new codes outside the existing cycle (October 1) arises most frequently and most acutely where the new codes will capture new technologies that are (or will be) under consideration for new technology add-on payments. Thus, we believe this provision was intended to expedite data collection through the assignment of new ICD–9–CM codes for new technologies seeking higher payments. We indicated that our proposal was designed to carry out that intention, while minimizing the additional administrative costs associated with mid-year changes to the ICD–9–CM codes.

Comment: Several comments expressed concerns about the impact the April 1 ICD–9–CM coding update will have on providers. While the commenters acknowledged the requirement was mandated by section 503(a) of Public Law 108–173, the commenters urged CMS to carefully consider the number of these mid-year coding updates. The commenters stated that these changes will have a significant impact on providers' systems. One commenter representing a large hospital organization recommended that codes being considered for the April 1 update be limited only to new technologies that present a strong and convincing case for new technology add-on payment. The commenter recommended that the annual April 1 update be limited to as few codes as possible for the following reasons:

- The addition of a significant number of new codes outside the traditional October 1 implementation will result in doubling the costs associated with the purchase of new code books and updating encoder software programs, requiring hospitals to purchase new code books twice a year. The commenter stated that at least one publisher has already announced that two editions of the code books will be published every year.
- Many health plans, including Medicare, require a significant lead-time to incorporate new codes into their systems. The commenter expressed concern that some payers will not be able to support a large number of codes being implemented outside the traditional October 1 update.
- A considerable amount of education and coder training takes place every year with the introduction of new and updated codes. Introducing a large number of new codes on a twice-yearly basis, rather than annually, will increase this burden.

The commenter urged that the new codes be released with a 5-month lead-time as is the case now for ICD–9–CM updates. Currently the public is notified in May of the same year for ICD–9–CM codes being implemented on October 1. The commenter requested that the public be notified by November of codes that will be implemented on April 1.

The commenter pointed out that, by tradition, new ICD–9–CM codes have been published in the **Federal Register**, as part of the annual IPPS proposed rule. The commenter urged CMS to develop a process for the wide dissemination of new and modified ICD–9–CM codes for April 1 implementation. The commenter requested that this process be published in the IPPS final rule to inform users of the process.

These comments were supported by organizations representing State hospitals and coding specialists. The commenters agreed with CMS' proposal to use the public meetings of the ICD–9–CM Coordination and Maintenance Committee to consider requests for an April 1 implementation date for a new ICD–9–CM code. The commenters agreed that these updates should primarily focus on new technology

issues. When an individual or organization requests implementation of an ICD–9–CM code on April 1, the commenters agreed that the requestor should make a strong and convincing case as to why a new code is needed in April for purposes of the new technology process.

Response: We agree that section 503(a) of Public Law 108–173 requires that ICD–9–CM codes needed to capture new technology must be implemented on April 1 and October 1 of each year. We also agree that the April updates will be disruptive to current provider systems. Any April updates must be carefully considered and evaluated in order to capture new technology in an expedited manner. Those commenters who request an April implementation of a new ICD–9–CM code must make a strong and convincing case at the ICD–9–CM Coordination and Maintenance Committee as to why a new code is needed in April for purposes of the new technology process. The public will be provided an opportunity to discuss this request. Comments regarding the publication and dissemination of codes to be implemented on April 1 are discussed below.

Comment: One commenter called the twice a year updates of ICD–9–CM an important step forward in allowing new products to enter the market more quickly and receive adequate payment sooner. The commenter expressed some concerns about CMS' proposed approach to these updates. The commenter stated that, by using the April updates for new technology, we would not have a true twice yearly coding update, but rather an opportunity for only a small group of services or technologies to receive more prompt coding updates. The commenter stated that the April update should be an open opportunity for any coding updates to be considered.

Response: We agree with the commenter that the process for discussing updates to ICD–9–CM should be an open process. This has been the practice of the ICD–9–CM Coordination and Maintenance Committee since it was established in 1985. As previously stated, we will provide the opportunity for a requestor to make a clear and convincing case for the need to update specific ICD–9–CM codes in April. The public will be provided an opportunity to discuss the merits of any codes under consideration for the April updates.

Comment: Several commenters requested details on how the public will be notified of the April ICD–9–CM code updates. They requested clarification as to whether the current publication processes will be used. One commenter representing a national organization of codes and health information managers urged CMS to provide information on April 1 code updates at least 4 months prior to implementation. Other commenters representing hospital organizations urged CMS to provide updates 5 months ahead of implementation, or by November of the prior year.

Response: Current addendum and code title information is published on the CMS Web page at: *http://www.cms.hhs.gov/paymentsystems/icd9.* Summary tables showing new, revised, and deleted code titles are also posted on the following CMS Web page: *http://www.cms.hhs.gov/medlearn/icd9code.asp.* Information on ICD–9–CM diagnosis codes can be found at: *http://www.cdc.gov/nchs/icd9.htm.* Information on new, revised, and deleted ICD–9–CM codes is also provided to the AHA for publication in the *Coding Clinic for ICD–9–CM.* AHA also distributes information to publishers and software vendors.

CMS also sends copies of all ICD–9–CM coding changes to its contractors for use in updating their systems and providing education to providers.

We agree that these same means of disseminating information on new, revised, and deleted ICD–9–CM codes should be used to notify providers, publishers, software vendors, contractors, and others of changes to the ICD–9–CM codes that will be implemented in April. We will continue to provide the information in this manner.

Currently, code titles are also published in the IPPS proposed and final rules. The code titles are adopted as part of the ICD–9–CM Coordination and Maintenance Committee process. The code titles are not subject to comment in the proposed or final rules. We will continue to publish the October code updates in this manner within the IPPS proposed and final rules. However, we do not publish a mid-year IPPS rule, so the April 1 code updates will not be published in a mid-year IPPS rule. We will assign the new procedure code to the same DRG in which its predecessor code was assigned so there will be no DRG impact as far as DRG assignment. This mapping was specified by Public Law 108–173. Any proposed coding updates will be available through the websites indicated above and through the *Coding Clinic for ICD–9–CM.* Publishers and software vendors currently obtain code changes through these sources in order to update their code books and software systems. We will strive to have the April 1 updates available through these websites 5 months prior to implementation (that is, early November of the previous year), as is the case for the October 1 updates. Code book publishers are evaluating how they will provide any code updates to their subscribers. Some publishers may decide to publish mid-year book updates. Others may decide to sell an addendum that lists the changes to the October 1 code book. Coding personnel should contact publishers to determine how they will update their books. CMS and its contractors will also consider developing provider education articles concerning this change to the effective date of certain ICD–9–CM codes.

Comment: Commenters requested clarification as to whether the April 1 updates would be limited to procedure codes. The commenters supported our proposed approach for implementing the new legislative requirement to update ICD–9–CM codes twice a year. Specifically, they agreed that limiting the implementation of new codes on April 1 to those for which a strong and convincing case is made for an expedited implementation is the best approach and will reduce the additional administrative costs associated with twice-yearly updates to the coding system. The commenters acknowledged that the section of 503(a) of Public Law 108–173 that includes the requirement for updating ICD–9–CM codes twice a year is primarily related to the recognition of new technology under the IPPS, but the language in the legislation does not limit the requirement to procedure codes. The commenters stated that CMS' proposed approach requires the requestor of a code proposal to identify the reason why a new code is needed on April 1 for purposes of the new technology process. One commenter stated that this requirement seems to preclude diagnosis code updates. Another commenter requested clarification in the final rule as to whether new diagnosis codes are intended to be included in the April 1 update.

Response: We agree that section 503(a) of Pub. L. 108–173 did not limit ICD–9–CM code updates to procedure codes. The legislation covered all of ICD–9–CM, which includes both diagnoses and procedures codes. Therefore, consideration will be given to updates to both the diagnosis and procedure parts of ICD–9–CM on April 1 if a strong and convincing case can be made that either a diagnosis or procedure code is necessary to capture a new technology. We acknowledge that it may be necessary to recognize a new disease, such as SARS, on April 1 so that a new technology directed toward the disease can be more easily

identified. We anticipate that most, if not all, requests for April 1 ICD–9–CM code updates will apply to procedure codes, as the commenters have stated. While it is unlikely that there will be many such disease code requests for an April 1 update, we will not restrict any such requests for consideration.

Comment: Commenters representing national and state hospital associations as well as other organizations suggested that providing twice-yearly updates to the ICD–9–CM is only a temporary solution to meeting the coding needs of providers who may need to report new technology. The organizations stated that a more permanent and long-term-solution would be the implementation of ICD–10–CM and ICD–10–PCS as quickly as possible. Several other commenters recommended moving forward with the implementation of ICD–10 as quickly as possible. One commenter urged DHHS to adopt and implement ICD–10–CM and ICD–10–PCS as quickly as possible in the United States. The commenter further stated that the sooner the health care industry and CMS begin to use and collect data more closely representing actual diagnosis and procedures, the better the picture of our health services and healthcare services will be; reimbursement will be more accurate; and there will be less administrative burden on health care providers and on CMS. One commenter asked that the regulatory process for implementing ICD–10 be started by the end of 2004. Another commenter stated that ICD–9–CM is becoming increasingly difficult to update and progress should be made on implementing ICD–10.

Response: We acknowledge that there are some concerns with the ICD–9–CM code set. The National Committee on Vital and Health Statistics (NCVHS) has recommended that DHHS, under its HIPAA responsibilities, prepare a notice of proposed rulemaking regarding the proposed adoption of ICD–10 as a HIPAA standard to replace ICD–9–CM. We are assessing the NCVHS recommendations.

DHHS has been actively working on the development of new coding systems to replace the ICD–9–CM. In December 1990, the NCVHS issued a report noting that, while the ICD–9–CM classification system had been responsive to changing technologies and identifying new diseases, there was concern that the ICD classification might be stressed to a point where the quality of the system would soon be compromised. The ICD–10–CM (for diagnoses) and the ICD–10–PCS (for procedures) were developed in response to these concerns. These efforts have become increasingly important because of the growing number of problems with the ICD–9–CM, which was implemented 25 years ago.

16. Other Issues

a. Craniotomy Procedures

As discussed in the August 1, 2003, IPPS final rule (68 FR 45353), for FY 2004 we conducted an analysis of the charges for various procedures and diagnoses within DRG 1 (Craniotomy Age > 17 With CC) and DRG 2 (Craniotomy Age > 17 Without CC) to determine whether further changes to these DRGs were warranted. Based on our analysis and consideration of public comments received on our May 19, 2003, IPPS proposed rule (68 FR 27161), in the August 1, 2003, IPPS final rule, we created three new DRGs: DRG 528 (Intracranial Vascular Procedures With a Principal Diagnosis of Hemorrhage) for patients with an intracranial vascular procedure and an intracranial hemorrhage; and DRGs 529 (Ventricular Shunt Procedures With CC) and 530 (Ventricular Shunt Procedures Without CC) for patients with only a vascular shunt procedure.

In the May 18, 2004, proposed rule, we indicated that we had received further comments (discussed below) regarding the composition of DRGs 1 and 2 that relate to the appropriate DRG assignment of unruptured cerebral aneurysm cases and cases involving implantation of GLIADEL® chemotherapy wafers. We had also received comments on possible revisions to DRG 3 (Craniotomy Age 0–17).

(1) Unruptured Cerebral Aneurysms

In the August 1, 2003, final rule (68 FR 45354), in response to a comment that suggested we create a companion DRG to DRG 528 for intracranial vascular procedures for unruptured cerebral aneurysms, we evaluated cases in the MedPAR file involving unruptured cerebral aneurysm and determined that the average charges for unruptured cerebral aneurysm cases were consistent with the variation of charges found in DRGs 1 and 2. Therefore, we did not propose a change in the DRG classification. We indicated that we would continue to monitor cases involving unruptured cerebral aneurysms.

In the May 18, 2004, proposed rule, we discussed our examination of cases in the FY 2003 MedPAR file that reported unruptured cerebral aneurysms. We found 657 unruptured aneurysm cases assigned to DRG 1 and 481 unruptured cerebral aneurysm cases assigned to DRG 2. The average charges for these unruptured cerebral aneurysm cases in DRG 1 ($50,879) are slightly lower than the overall charges for all cases in that DRG ($51,300). For unruptured cerebral aneurysm cases assigned to DRG 2, we found the average charges of approximately $29,524 are consistent with the overall average charges of that DRG of approximately $28,416.

Based on the results of our analysis, we indicated that we still do not believe a proposal to modify the DRG assignment of unruptured cerebral aneurysm cases is warranted.

We received one comment on this issue from an organization representing hospitals. The commenter agreed that no change is warranted for the DRG assignment of unruptured aneurysm cases at this time.

(2) GLIADEL® Chemotherapy Wafers

In the August 1, 2003 final rule (68 FR 45354), we stated that we had received comments requesting a change to the DRG assignment of cases involving implantation of GLIADEL® chemotherapy wafers to treat brain tumors. One of the commenters had offered two options: (1) create a new DRG for cases involving implantation of GLIADEL® chemotherapy wafers; and (2) reassign these cases to DRG 484 (Craniotomy for Multiple Significant Trauma).

At that time, we had analyzed data in the March 2003 update of the FY 2003 MedPAR file and found a total of 61 cases in which procedure code 00.10 (Implantation of a chemotherapy agent) was reported for cases assigned to DRGs 1 and 2. There were 38 cases assigned to DRG 1 and 23 cases assigned to DRG 2. The GROUPER logic for these DRGs assigns cases with CCs to DRG 1 and those without CCs to DRG 2. Consistent with the GROUPER logic for these DRGs, we had found that the average standardized charges in DRGs 1 and 2 were approximately $64,864 and $42,624, respectively. However, while the estimated average charges for GLIADEL® wafer cases of $50,394 may have been higher than the average standardized charges for DRG 2, they were within the normal variation of overall charges within each DRG. In addition, the volume of cases in these two DRGs was too small to warrant the establishment of a separate new DRG for this technology. Therefore, we stated that we wanted to review a full year of data and take the time to consider alternative options that might appear warranted before proposing a change.

In the May 18, 2004, proposed rule, we discussed our examination of more

complete MedPAR data (December 2003 update for FY 2003) on cases reporting GLIADEL® chemotherapy wafers. We found a total of 127 cases in which procedure code 00.10 was reported for cases assigned to DRGs 1 and 2. There were 80 cases assigned to DRG 1 and 47 cases assigned to DRG 2. The average charges for these cases in DRGs 1 and 2 were approximately $61,866 and $47,189, respectively. The average charges for these cases were higher than the overall charges of DRGs 1 and 2 of approximately $51,300 and $28,416, respectively. Although the average charges for the GLIADEL® wafer cases within these DRGs are higher than the average charges of all cases in these DRGs, they remain within the range of average charges for other procedures included in these DRGs. The majority of the GLIADEL® wafer cases are assigned to the second highest weighted DRG in MDC 1 behind DRG 528 (Intracranial Vascular Procedure With a Principal Diagnosis of Hemorrhage) in which the weights were derived from average charges of approximately $113,884. In DRG 1, there are 10 procedures that have higher average charges than the GLIADEL® wafer cases. However, in DRG 2, the charges associated with GLIADEL® wafer cases are the highest of the procedures included within the DRG.

DRGs are based on the principal diagnosis, secondary diagnosis, and procedures performed on the patient. DRGs are not generally created to recognize the presence or absence of specific technologies for each patient. In the past, we have made one exception to this rule. The exception was the creation of two new DRGs for drug-eluting stents: DRG 526 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent With Acute Myocardial Infarction) and DRG 527 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent Without Acute Myocardial Infarction) (67 FR 50003). We took this unprecedented approach in response to the unique circumstances surrounding the potential breakthrough nature of this technology. We currently have 59,613 drug-eluting stent cases annually, far more cases than the volume for GLIADEL® wafers. We believe that the volume of GLIADEL® wafer cases remains too small to warrant the taking of the exceptional step of establishing a separate new DRG for this technology.

Commenters also have proposed the reassignment of GLIADEL® wafer cases to other existing DRGs, such as DRG 484 (Craniotomy for Multiple Significant Trauma), DRG 528 (Intracranial Vascular Procedures With Principal Diagnosis of Hemorrhage), DRG 492 (Chemotherapy With Acute Leukemia as a Secondary Diagnosis or With Use of a High Dose Chemotherapeutic Agent), or DRG 481 (Bone Marrow Transplant). In the proposed rule, we stated that we had examined these alternatives, and had come to the conclusion that none of these alternatives meets the standard of clinical coherence under the DRG system. For example, reconfiguring DRG 484 to include GLIADEL® wafer cases would not produce a clinically coherent DRG because DRG 484 contains cases where craniotomy is performed in the setting of multiple significant trauma. Similarly, assigning GLIADEL® wafer cases to DRG 528 would not produce a clinically coherent DRG because DRG 528 contains cases where craniotomy is performed as part of a vascular procedure with a primary diagnosis of hemorrhage, as in the case of a ruptured aneurysm. DRG 492 is clinically inappropriate because it contains cases of acute leukemia treated with chemotherapy, and DRG 481 is clinically inappropriate because it contains cases involving bone marrow transplant. None of these DRGs contains cases of glioblastoma multiforme or other primary brain tumors. Therefore, in the May 18, 2004 proposed rule, we did not propose to adopt any of these changes.

As discussed in the May 18, 2004 proposed rule, we also considered several other approaches to reassigning GLIADEL® wafer cases in a manner that is appropriate both in terms of clinical coherence and resource use. For example, we considered the creation of a new DRG that includes GLIADEL® wafer cases along with other types of local therapy for intracerebral malignant disease. Specifically, we considered the creation of a new DRG that includes GLIADEL® wafers and a Gliasite Radiation Therapy System, a relatively new form of intracavitary brachytherapy. Such a DRG would be clinically coherent because it would contain cases of malignant brain tumors treated with local therapy. However, our analysis of existing FY 2003 MedPAR data suggested that such a DRG would probably not provide enhanced reimbursement for the GLIADEL® wafer cases, and that, in fact, decreased reimbursement for GLIADEL® wafer cases is a more likely result. Therefore, we did not propose a specific change. However, we stated that we would continue to monitor our data to determine whether a change is warranted in the future.

We recognize that the implantation of chemotherapeutically active wafers for local therapy of malignant brain tumors represents a significant medical technology that currently offers clinical benefits to patients and holds out the promise of future innovation in the treatment of these brain tumors.

In our proposed rule (69 FR 28221), we invited comments and suggestions regarding the appropriate DRG assignment for this technology.

Comment: One comment agreed with the current DRG assignment of DRG 1 or 2 for GLIADEL® cases.

Response: We appreciate the commenter's support for the current DRG assignment for these cases.

Comment: Four commenters supported the reassignment of Gliadel® cases to DRG 528 (Intracranial Vascular Procedure With a Principal Diagnosis of Hemorrhage). The commenters stated that the average cost of a patient receiving Gliadel® chemotherapy wafer treatment is consistent with the average DRG 528 payments to providers. The commenters also believed that treatment using the Gliadel® wafer is clinically consistent with the treatment under procedures currently assigned to DRG 528.

Response: As we stated in the May 18, 2004 proposed rule (69 FR 28222), we do not believe that the GLIADEL® cases meet the clinical coherence criteria for inclusion in DRG 528. DRG 528 includes hemorrhage or ruptured cerebral aneursym cases. While the surgical approach may be similar to GLIADEL®, cases assigned to DRG 528 involve patients who have an acute condition with a high severity of illness and a significantly higher rate of mortality during surgery than GLIADEL® cases (20.6 percent for DRG 528 cases compared to 3.15 for GLIADEL® cases). In addition, the average charges for cases in DRG 528, approximately $97,540, are significantly higher than the average charges for GLIADEL® cases in DRG 1, approximately $61,866. Thus, we do not believe that GLIADEL® cases and those assigned to DRG 528 are clinically coherent and similar in resource use. We continue to believe that reassigning GLIADEL® cases to DRG 528 is inappropriate and would result in overpayment for GLIADEL® cases.

Comment: One commenter suggested that we reassign GLIADEL® cases to DRG 528 for FY 2005 and eventually create a DRG for intracerebral therapies. The commenter proposed a new DRG that would include implantation of a chemotherapeutic agent and seven new drugs that are currently in FDA Phase II and III clinical trials and are expected to receive FDA approval in 2 to 5 years. According to the commenter, the new drugs are also indicated for glioblastoma multiforme and the mode of therapy is

chemotherapy, radiotherapy, or brachytherapy.

Response: As we discussed above, we do not believe assignment to DRG 528 is appropriate. We review DRG assignments every year and will determine the appropriate assignment of the new technologies when it is appropriate to do so.

Comment: Many commenters encouraged CMS to reassign Gliadel® chemotherapy wafer treatment to a new or higher paying DRG. The commenters believed that higher payment would ensure access to life-extending treatment for patients suffering from malignant brain tumors. These commenters offered no specific recommendations on reassignment of these cases to other DRGs.

Response: In this final rule, we are creating a new DRG that would include implantation of chemotherapeutic agent (procedure code 00.10) cases or cases in which an acute complex central nervous system diagnosis was reported as the principal diagnosis. An example of an acute complex diagnosis is an intracranial abscess. GLIADEL® chemotherapy wafer cases would be reassigned to this new DRG.

Although we did not propose this specific solution to the issue of payment for GLIADEL® in the proposed rule, we indicated that we would continue to consider appropriate changes to the DRG assignment of cases involving GLIADEL®. Furthermore, we believe that the creation of a new DRG for cases involving implantation of a chemotherapeutic agent or cases with an acute complex central nervous system diagnosis as the principal diagnosis ensures that GLIADEL® cases are assigned to a DRG that is clinically coherent and reflects the resources used to treat these cases and appropriately addresses the concerns of those commenters who raised questions regarding the DRG assignment for these cases.

The new DRG 543 (Craniotomy with Implantation of Chemotherapeutic Agent or Acute Complex Central Nervous System Principal Diagnosis) is being placed in MDC 1. It was created from existing DRGs 1 and 2 (Craniotomy Age >17 With and Without CC, respectively) by removing three types of patients based on their principal diagnosis. Therefore, new DRG 543 will contain patients who undergo a craniotomy procedure with a principal diagnosis belonging to one of the following three categories:

1. Patients with a major central nervous system infection, such as bacterial meningitis, encephalitis, or an intracranial abscess.

2. Patients with a subarachnoid hemorrhage, intracranial hemorrhage, or an acute stroke.

3. Patients with central nervous system trauma resulting in brain laceration or brain injury associated with an open head wound.

In addition, new DRG 543 will include cases involving treatment using chemotherapeutic agents and devices implanted in the brain, such as implantable chemotherapeutic wafers.

The cases remaining in DRGs 1 and 2 will be the following types of patients:

1. Patients with chronic central nervous system conditions such as malignancies, degenerative conditions, and cerebrovascular disease without acute infarct.

2. Patients with subdural hematoma not associated with an open head wound.

3. Patients with lesser degrees of central nervous system trauma, such as skull fracture or other injury but without brain laceration.

Patients in new DRG 543 would, on average, consume more resources because they require greater pre-operative and post-operative care, and in many cases require more complicated operative procedures. The FY 2003 MedPAR data for the new DRG includes 5,413 cases with overall average charges of approximately $63,409. These charges are similar to the current average charges for Gliadel® cases in DRG 1 of approximately $61,866.

For FY 2005, we will be implementing new DRG 543 with the following logic:

- Craniotomy procedure from DRGs 1 and 2 and procedure code 00.10, Implantation of chemotherapeutic agent; or
- Craniotomy procedure from DRGs 1 and 2 and principal diagnosis of acute complex central nervous system listed below.

Principal Diagnosis (PDX) of Acute Complex CNS Diagnosis

Diagnosis Code	Description
003.21	Salmonella meningitis
006.5	Amebic brain abscess
013.00	Tuberculous meningitis,unspecified
013.01	Tuberculous meningitis,bacteriological or histological examination not done
013.02	Tuberculous meningitis,bacteriological or histological examination unknown(at present)
013.03	Tuberculous meningitis,tubercle bacilli found in sputum) by microscopy
013.04	Tuberculous meningitis,tubercle bacilli not found(in sputum)by microscopy,but found by bacterial culture
013.05	Tuberculous meningitis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
013.06	Tuberculous meningitis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods [inoculation of animals]
013.10	Tuberculoma of meninges,unspecified
013.11	Tuberculoma of meninges, bacteriological or histological examination not done
013.12	Tuberculoma of meninges, bacteriological or histological examination unknown(at present)
013.13	Tuberculoma of meninges, tubercle bacilli found in sputum) by microscopy
013.14	Tuberculoma of meninges, tubercle bacilli not found(in sputum)by microscopy, but found by bacterial culture
013.15	Tuberculoma of meninges, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
013.16	Tuberculoma of meninges, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods [inoculation of animals]
013.20	Tuberculoma of brain, unspecified
013.21	Tuberculoma of brain, bacteriological or histological examination not done
013.22	Tuberculoma of brain, bacteriological or histological examination unknown(at present)
013.23	Tuberculoma of brain, tubercle bacilli found in sputum) by microscopy

Diagnosis Code	Description
013.24	Tuberculoma of brain, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
013.25	Tuberculoma of brain, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
013.26	Tuberculoma of brain, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods [inoculation of animals]
013.30	Tuberculous abscess of brain, unspecified
013.31	Tuberculous abscess of brain, bacteriological or histological examination not done
013.32	Tuberculous abscess of brain, bacteriological or histological examination unknown (at present)
013.33	Tuberculous abscess of brain, tubercle bacilli found in sputum) by microscopy
013.34	Tuberculous abscess of brain, tubercle bacilli not found (in sputum)by microscopy, but found by bacterial culture
013.35	Tuberculous abscess of brain, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
013.36	Tuberculous abscess of brain, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods [inoculation of animals]
013.40	Tuberculoma of spinal cord,unspecified
013.41	Tuberculoma of spinal cord, bacteriological or histological examination not done
013.42	Tuberculoma of spinal cord, bacteriological or histological examination unknown(at present)
013.43	Tuberculoma of spinal cord, tubercle bacilli found in sputum) by microscopy
013.44	Tuberculoma of spinal cord,tubercle bacilli not found(in sputum)by microscopy, but found by bacterial culture
013.45	Tuberculoma of spinal cord, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
013.46	Tuberculoma of spinal cord, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods [inoculation of animals]
013.50	Tuberculous abscess of spinal cord,unspecified
013.51	Tuberculous abscess of spinal cord, bacteriological or histological examination not done
013.52	Tuberculous abscess of spinal cord, bacteriological or histological examination unknown(at present)
013.53	Tuberculous abscess of spinal cord, tubercle bacilli found in sputum) by microscopy
013.54	Tuberculous abscess of spinal cord, tubercle bacilli not found (in sputum)by microscopy, but found by bacterial culture
013.55	Tuberculous abscess of spinal cord, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically

Diagnosis Code	Description
013.56	Tuberculous abscess of spinal cord, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods [inoculation of animals]
013.60	Tuberculous encephalitis or myelitis, unspecified
013.61	Tuberculous encephalitis or myelitis, bacteriological or histological examination not done
013.62	Tuberculous encephalitis or myelitis, bacteriological or histological examination unknown(at present)
013.63	Tuberculous encephalitis or myelitis, tubercle bacilli found in sputum) by microscopy
013.64	Tuberculous encephalitis or myelitis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
013.65	Tuberculous encephalitis or myelitis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
013.66	Tuberculous encephalitis or myelitis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods [inoculation of animals]
013.80	Other specified tuberculosis of central nervous system, unspecified
013.81	Other specified tuberculosis of central nervous system, bacteriological or histological examination not done
013.82	Other specified tuberculosis of central nervous system, bacteriological or histological examination unknown (at present)
013.83	Other specified tuberculosis of central nervous system, tubercle bacilli found in sputum) by microscopy
013.84	Other specified tuberculosis of central nervous system, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
013.85	Other specified tuberculosis of central nervous system, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
013.86	Other specified tuberculosis of central nervous system, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods [inoculation of animals]
013.90	Unspecified tuberculosis of central nervous system, unspecified
013.91	Unspecified tuberculosis of central nervous system, bacteriological or histological examination not done
013.92	Unspecified tuberculosis of central nervous system, bacteriological or histological examination unknown (at present)
013.93	Unspecified tuberculosis of central nervous system, tubercle bacilli found in sputum) by microscopy
013.94	Unspecified tuberculosis of central nervous system, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture

Diagnosis Code	Description
013.95	Unspecified tuberculosis of central nervous system, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
013.96	Unspecified tuberculosis of central nervous system, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods [inoculation of animals]
036.0	Meningococcal meningitis
036.1	Meningococcal encephalitis
045.00	Acute paralytic poliomyelitis specified as bulbar, poliovirus, unspecified type
045.01	Acute paralytic poliomyelitis specified as bulbar, poliovirus type I
045.02	Acute paralytic poliomyelitis specified as bulbar, poliovirus type II
045.03	Acute paralytic poliomyelitis specified as bulbar, poliovirus type III
045.10	Acute poliomyelitis with other paralysis, poliovirus, unspecified type
045.11	Acute poliomyelitis with other paralysis, poliovirus type I
045.12	Acute poliomyelitis with other paralysis, poliovirus type II
045.13	Acute poliomyelitis with other paralysis, poliovirus type III
045.90	Acute poliomyelitis, unspecified, poliovirus, unspecified type
045.91	Acute poliomyelitis, unspecified, poliovirus type I
045.92	Acute poliomyelitis, unspecified, poliovirus type II
045.93	Acute poliomyelitis, unspecified, poliovirus type III
054.3	Herpetic Meningoencephalitis
054.72	Herpes simplex meningitis
055.0	Postmeasles encephalitis
062.0	Japanese encephalitis
062.1	Western equine encephalitis
062.2	Eastern equine encephalitis
062.3	St Louis encephalitis
062.4	Australian encephalitis
062.5	California virus encephalitis
062.8	Other specified mosquito-borne viral encephalitis
062.9	Mosquito-borne viral encephalitis, unspecified
063.0	Russia spring-summer [Taiga]encephalitis
063.1	Louping ill
063.2	Central European encephalitis
063.8	Other specified tick-borne viral encephalitis
063.9	Tick-borne viral encephalitis, unspecified
064	Viral encephalitis transmitted by other and unspecified arthropods
066.2	Venezuelan equine fever
071	Rabies
072.1	Mumps meningitis

Diagnosis Code	Description
072.2	Mumps encephalitis
091.81	Acute syphilitic meningitis (secondary)
094.2	Syphilitic meningitis
094.81	Syphilitic encephalitis
098.82	Gonococcal meningitis
100.81	Leptospiral meningitis (aseptic)
100.89	Other specified leptospiral infections
112.83	Candidal meningitis

851.85	Other and unspecified cerebral laceration and contusion, without mention of open intracranial wound, with prolonged [more than 24 hours] loss of consciousness without return to pre-existing conscious level
851.86	Other and unspecified cerebral laceration and contusion, without mention of open intracranial wound, with loss of consciousness of unspecified duration
851.89	Other and unspecified cerebral laceration and contusion, without mention of open intracranial wound, with concussion, unspecified
851.90	Other and unspecified cerebral laceration and contusion, with open intracranial wound, unspecified state of consciousness
851.91	Other and unspecified cerebral laceration and contusion, with open intracranial wound, with no loss of consciousness
851.92	Other and unspecified cerebral laceration and contusion, with open intracranial wound, with brief [less than one hour] loss of consciousness
851.93	Other and unspecified cerebral laceration and contusion, with open intracranial wound, with moderate [1-24 hours]loss of consciousness
851.94	Other and unspecified cerebral laceration and contusion, with open intracranial wound, with prolonged [more than 24 hours] loss of consciousness and return to pre-existing conscious level
851.95	Other and unspecified cerebral laceration and contusion, with open intracranial wound, with prolonged [more than 24 hours] loss of consciousness without return to pre-existing conscious level
851.96	Other and unspecified cerebral laceration and contusion, with open intracranial wound, with loss of consciousness of unspecified duration
851.99	Other and unspecified cerebral laceration and contusion, with open intracranial wound, with concussion, unspecified
852.00	Subarachnoid hemorrhage following injury without mention of open intracranial wound, unspecified state of consciousness
852.01	Subarachnoid hemorrhage following injury without mention of open intracranial wound, with no loss of consciousness
852.02	Subarachnoid hemorrhage following injury without mention of open intracranial wound, with brief [less than one hour] loss of consciousness
852.03	Subarachnoid hemorrhage following injury without mention of open intracranial wound, with moderate [1-24 hours]loss of consciousness
852.04	Subarachnoid hemorrhage following injury without mention of open intracranial wound, with prolonged [more than 24 hours] loss of consciousness and return to pre-existing conscious level

Diagnosis Code	Description
852.05	Subarachnoid hemorrhage following injury without mention of open intracranial wound, with prolonged [more than 24 hours] loss of consciousness without return to pre-existing conscious level
852.06	Subarachnoid hemorrhage following injury without mention of open intracranial wound, with loss of consciousness of unspecified duration
852.09	Subarachnoid hemorrhage following injury without mention of open intracranial wound, with concussion, unspecified
852.10	Subarachnoid hemorrhage following injury with open intracranial wound, unspecified state of consciousness
852.11	Subarachnoid hemorrhage following injury with open intracranial wound, with no loss of consciousness
852.12	Subarachnoid hemorrhage following injury with open intracranial wound, with brief [less than one hour] loss of consciousness
852.13	Subarachnoid hemorrhage following injury with open intracranial wound, with moderate [1-24 hours]loss of consciousness
852.14	Subarachnoid hemorrhage following injury with open intracranial wound, with prolonged [more than 24 hours] loss of consciousness and return to pre-existing conscious level
852.15	Subarachnoid hemorrhage following injury with open intracranial wound, with prolonged [more than 24 hours] loss of consciousness without return to pre-existing conscious level
852.16	Subarachnoid hemorrhage following injury with open intracranial wound, with loss of consciousness of unspecified duration
852.19	Subarachnoid hemorrhage following injury with open intracranial wound, with concussion, unspecified
852.30	Subdural hemorrhage following injury with open intracranial wound, unspecified state of consciousness
852.31	Subdural hemorrhage following injury with open intracranial wound, with no loss of consciousness
852.32	Subdural hemorrhage following injury with open intracranial wound, with brief [less than one hour] loss of consciousness
852.33	Subdural hemorrhage following injury with open intracranial wound, with moderate [1-24 hours]loss of consciousness
852.34	Subdural hemorrhage following injury with open intracranial wound, with prolonged [more than 24 hours] loss of consciousness and return to pre-existing conscious level
852.35	Subdural hemorrhage following injury with open intracranial wound, with prolonged [more than 24 hours] loss of consciousness without return to pre-existing conscious level
852.36	Subdural hemorrhage following injury with open intracranial wound, with loss of consciousness of unspecified duration

Diagnosis Code	Description
852.39	Subdural hemorrhage following injury with open intracranial wound, with concussion, unspecified
853.00	Other and unspecified intracranial hemorrhage following injury, Without mention of open intracranial wound, unspecified state of consciousness
853.01	Other and unspecified intracranial hemorrhage following injury, Without mention of open intracranial wound, with no loss of consciousness
853.02	Other and unspecified intracranial hemorrhage following injury, Without mention of open intracranial wound, with brief [less than one hour] loss of consciousness
853.03	Other and unspecified intracranial hemorrhage following injury, Without mention of open intracranial wound, with moderate [1-24 hours]loss of consciousness
853.04	Other and unspecified intracranial hemorrhage following injury, Without mention of open intracranial wound, with prolonged [more than 24 hours] loss of consciousness and return to pre-existing conscious level
853.05	Other and unspecified intracranial hemorrhage following injury, Without mention of open intracranial wound, with prolonged [more than 24 hours] loss of consciousness without return to pre-existing conscious level
853.06	Other and unspecified intracranial hemorrhage following injury, Without mention of open intracranial wound, with loss of consciousness of unspecified duration
853.09	Other and unspecified intracranial hemorrhage following injury, Without mention of open intracranial wound, with concussion, unspecified
853.10	Other and unspecified intracranial hemorrhage following injury, With open intracranial wound, unspecified state of consciousness
853.11	Other and unspecified intracranial hemorrhage following injury, With open intracranial wound, with no loss of consciousness
853.12	Other and unspecified intracranial hemorrhage following injury, With open intracranial wound, with brief [less than one hour] loss of consciousness
853.13	Other and unspecified intracranial hemorrhage following injury, With open intracranial wound, with moderate [1-24 hours]loss of consciousness
853.14	Other and unspecified intracranial hemorrhage following injury, With open intracranial wound, with prolonged [more than 24 hours] loss of consciousness and return to pre-existing conscious level
853.15	Other and unspecified intracranial hemorrhage following injury, With open intracranial wound, with prolonged [more than 24 hours] loss of consciousness without return to pre-existing conscious level
853.16	Other and unspecified intracranial hemorrhage following injury, With open intracranial wound, with loss of consciousness of unspecified duration
853.19	Other and unspecified intracranial hemorrhage following injury, With open intracranial wound, with concussion, unspecified
854.10	Intracranial injury of other and unspecified nature, With open intracranial wound, unspecified state of consciousness

Diagnosis Code	Description
854.11	Intracranial injury of other and unspecified nature, With open intracranial wound, with no loss of consciousness
854.12	Intracranial injury of other and unspecified nature, With open intracranial wound, with brief [less than one hour] loss of consciousness
854.13	Intracranial injury of other and unspecified nature, With open intracranial wound, with moderate [1-24 hours]loss of consciousness
854.14	Intracranial injury of other and unspecified nature, With open intracranial wound, with prolonged [more than 24 hours] loss of consciousness and return to pre-existing conscious level
854.15	Intracranial injury of other and unspecified nature, With open intracranial wound, with prolonged [more than 24 hours] loss of consciousness without return to pre-existing conscious level
854.16	Intracranial injury of other and unspecified nature, With open intracranial wound, with loss of consciousness of unspecified duration
854.19	Intracranial injury of other and unspecified nature, With open intracranial wound, with concussion, unspecified

BILLING CODE 4121–01–C

(3) DRG 3 (Craniotomy Age 0–17)

In the May 18, 2004, proposed rule, we addressed a comment we had received stating concern that DRG 3 has not been reviewed, while DRGs 1 and 2 have had some revisions. The commenter believed that, particularly with the removal of major trauma cases, age distinctions may no longer be significant for craniotomies and the other intracranial procedures classified in DRGs 1 through 3. The commenter stated that it may be more consistent, from both a clinical and resource perspective, to simply eliminate DRG 3 and redistribute the pediatric and juvenile cases to DRGs 1 and 2 based on the procedures performed and the complications or comorbidities present, instead. We stated that this analysis would require supplemental data from non-MedPAR sources.

We noted in the proposed rule that the primary focus of updates to the Medicare DRG classification system is on changes relating to the Medicare patient population, not the pediatric patient population. In the FY 2003 data, there were only two cases assigned to DRG 3. Therefore, we did not believe a proposal to address the commenter's request was warranted. We indicated that we are aware that the Medicare DRGs are sometimes used to classify other patient populations. We advised those non-Medicare systems that need a more up-to-date system to consider choosing from other systems that are currently in use in this country, or developing their own modifications.

Comment: One commenter agreed that there does not appear to be a need to address DRG 3 at this time. However, the commenter noted that other payers, such as many Medicaid payers, reimburse based on DRG groupings and requested that we consider those payers when addressing proposed changes to the DRG system in the future.

Response: For this final rule, we will not be making any changes to DRG 3. Decisions about the use of DRGs in Medicaid are made by the states. As we stated previously, the primary focus of our updates to the Medicare DRG classification system is on changes relating to the Medicare patient population.

b. Coronary Stent Procedures

In the May 18, 2004, proposed rule, we addressed recommendations that we had received from several industry representatives about the DRG assignments for coronary artery stents. These representatives expressed concern about whether the reimbursement for stents is adequate, especially for insertion of multiple stents. They also expressed concern about whether the current DRG structure represents the most clinically coherent classification of stent cases.

We received two comprehensive recommendations for refinement and restructuring of the current coronary stent DRGs. The current DRG structure incorporates stent cases into the following two pairs of DRGs, depending on whether bare metal or drug-eluting stents are used and whether acute myocardial infarction (AMI) is present:

- DRG 516 (Percutaneous Cardiovascular Procedures With AMI)
- DRG 517 (Percutaneous Cardiovascular Procedures With Nondrug-Eluting Stent Without AMI)
- DRG 526 (Percutaneous Cardiovascular Procedures With Drug-Eluting Stent With AMI)
- DRG 527 (Percutaneous Cardiovascular Procedures With Drug-Eluting Stent Without AMI)

One of the recommendations involved restructuring these DRGs to create two additional stent DRGs that are closely patterned after these existing pairs and that would reflect insertion of multiple stents with and without AMI. The manufacturer recommended incorporating either stenting code 36.06 (Insertion of nondrug-eluting coronary artery stent(s)) or code 36.07 (Insertion of drug-eluting coronary artery stent(s)) when they are reported along with code 36.05 (Multiple vessel percutaneous transluminal coronary angioplasty [PTCA] or coronary atherectomy performed during the same operation, with or without mention of thrombolytic agent). The manufacturer expressed concern that hospitals are steering patients toward coronary artery bypass graft surgery in place of stenting in order to avoid significant financial losses due to what it considered the inadequate reimbursement for inserting multiple stents.

We appreciated receiving the manufacturer's recommendation, and agree that the DRG classification of cases involving coronary stents must be clinically coherent and provide for adequate reimbursement, including

adequate reimbursement of cases requiring multiple stents. We also agree that the recommendation has some merits and deserves further study. However, as stated in the proposed rule, we believed that it was premature to act on this recommendation for two reasons. One reason is that the current coding structure for coronary artery stents cannot distinguish cases in which multiple stents are inserted from cases in which only a single stent is inserted. Current codes are able to identify performance of PTCA in more than one vessel by use of code 36.05. However, while this code indicates that PTCA was performed in more than one vessel, its use does not reflect the exact number of procedures performed or the exact number of vessels treated. Similarly, when codes 36.06 and 36.07 are used, they document the insertion of at least one stent. However, these stenting codes do not identify how many stents were inserted in a procedure, nor distinguish insertion of a single stent from insertion of multiple stents. Even the use of one of the stenting codes in conjunction with multiple-PTCA code 36.05 does not distinguish insertion of a single stent from insertion of multiple stents. The use of code 36.05 in conjunction with code 36.06 or code 36.07 indicates only performance of PTCA in more than one vessel, along with insertion of at least one stent. The precise numbers of PTCA-treated vessels, the number of vessels into which stents were inserted, and the total number of stents inserted in all treated vessels cannot be determined. Therefore, the capabilities of the current coding structure do not permit the distinction between single vessel stenting and multiple vessel stenting that would be required under the recommended restructuring of the stenting DRGs.

In addition, because the FDA approved drug-eluting stents for use in April 2003, the distinct DRGs for drug-eluting stents have only been effective for payment for a little over a year. The MedPAR file thus does not contain a full year of data with which to conduct the requisite analysis to evaluate the adequacy of the current structure of four stenting DRGs. In the proposed rule, we indicated that we would consider this recommendation as we evaluate the current DRG structure once adequate data on the current stenting DRGs become available. We also stated in the proposed rule that we believe it is still premature to undertake such a thorough restructuring of the stent DRGs.

The second recommendation was that we transform the current structure of stenting DRGs into two new pairs of DRGs, reclassifying stenting cases according to whether bare metal or drug-eluting stents are used (as with the present DRGs) and whether the cases are ''complex'' or ''noncomplex.'' The manufacturer indicated that complex cases are those that include certain comorbid conditions or procedural factors such as hypertensive renal failure, diabetes, AMI, and multivessel PCI. The manufacturer further indicated that this structure would provide an improvement in both clinical and resource coherence over the current structure that classifies cases according to the type of stent inserted and the presence or absence of AMI alone, without considering other complicating conditions. Specifically, the manufacturer recommended replacing the current structure with the following four DRGs:

- Recommended restructured DRG 516 (Complex percutaneous cardiovascular procedures with nondrug-eluting stents)
- Recommended restructured DRG 517 (Noncomplex percutaneous cardiovascular procedures with nondrug-eluting stents)
- Recommended restructured DRG 526 (Complex percutaneous cardiovascular procedures with drug-eluting stents)
- Recommended restructured DRG 527 (Noncomplex percutaneous cardiovascular procedures with drug-eluting stents)

The manufacturer presented an analysis based on FY 2002 MedPAR data, in which it evaluated charges and lengths of stay for cases with expected high resource use, and reclassified cases into the recommended new structure of paired ''complex'' and ''noncomplex'' DRGs. The analysis shows some evidence of clinical and resource coherence in the recommended DRG structure. However, as we stated in the proposed rule, the analysis does not yet provide a convincing case for adopting the recommended restructure. First, the analysis does not reveal significant gains in resource coherence compared to existing DRGs for stenting cases. Second, the analysis is limited in assessing the feasibility of using the recommended DRG restructure versus the current DRG structure for classification of stent cases. Because the manufacturer used FY 2002 MedPAR data in its analysis, it was not able to compare the resource coherence of the recommended structure with the current structure of four DRGs, but only with the two DRGs that preceded the approval of drug-eluting stents. While the manufacturer asserted that ''similar results would be expected'' from a comparison between its recommended DRG restructure and the current DRG structure, we do not believe that it is advisable to undertake a critical DRG restructuring without examining the recommendation against actual experience under the current structure. As we stated in the proposed rule, we believe that this recommendation may have merit, and we will conduct a full analysis of the recommendation in comparison to the other recommendation for DRG revision and to the current DRG structure once adequate data become available.

The drug-eluting stents had not yet been FDA approved when we calculated the relative weights for DRGs 526 and 527 for the FY 2003 IPPS final rule. Therefore, in the absence of MedPAR data, we based our FY 2003 relative weight calculations on prices in countries where drug-eluting stents were already being used. A full discussion of this process can be found in the FY 2004 IPPS final rule (68 FR 45370). For computation of the proposed relative weights for FY 2005 in the May 18, 2004 proposed rule, we used the December update of FY 2003 MedPAR data. (As stated in the June 25, 2004 correction notice (69 FR 35921), there have been a total of approximately 11,084 cases in DRG 526, and 48,097 cases in DRG 527, with adjustments made for transfers to other facilities.) For computation of the final FY 2005 relative weights, we are using the March FY 2004 update of the FY 2003 MedPAR data file for cases in these two DRGs. No foreign data have been used to compute the relative weights for DRGs 526 and 527 in FY 2005.

We received a number of comments concerning coronary stents, both bare and drug-eluting in response to the May 18, 2004, proposed rule. As noted above, we had discussed two external recommendations for refinement or restructuring of the current coronary stent DRGs (69 FR 28222). At that time, we indicated that we believed that arguments for change might have merit. However, as there was not an adequate database upon which to structure a DRG revision, and because the two proposals were so dissimilar, we indicated that we would continue to monitor the coronary stent DRGs and would review the DRG structure once adequate data became available. We will continue to review the data carefully and will assess whether a revised DRG structure is appropriate when we have more than 11 months of data experience. The FDA approved the drug-eluting stent for use in April 2003. Therefore, our MedPAR payment data collection began at that time.

Comment: Two commenters supported the complex vs. noncomplex case-mix DRG pairs option. The commenters suggested that the complexities be based on diagnoses of congestive heart failure, cerebral vascular disease, renal failure, AMI, and the presence of a multiple vessel procedure. (We believe that the commenter intended the latter complexity to be the presence of code 36.05 (Multiple vessel percutaneous transluminal coronary angioplasty [PTCA] or coronary atherectomy performed during the same operation, with or without mention of thrombolytic agent) in the same inpatient episode.)

Response: We take this opportunity to clarify that we did not offer a choice between two options in the proposed rule. We discussed the two options that had been suggested to us. However, we determined that it was premature to undertake a thorough restructuring of the four current stent DRGs, both because the recommendations differed so completely from each other and because we lacked data of adequate historical duration with which to make a comprehensive analysis.

We note that FDA is in the process of determining the efficacy of drug-eluting stents in high-risk patient clinical trials, and acute myocardial infarction (AMI) has been identified as one of the high-risk triggers. We do not believe it is appropriate to further use high-risk triggers such as AMI to structure the stent DRGs until FDA's work is complete.

Comment: One commenter recommended restructuring of the four existing stent DRGs (DRG 516, 517, 526, and 527) by complex and noncomplex components. Specifically, the commenter suggested replacing the existing DRG structure that distinguishes between ''with and without AMI'' and the presence of bare or drug-eluting stents with a structure distinguishing between ''with and without complexity.'' In performing its analysis, the commenter reviewed charges within each of the four stent DRGs and then stratified the cases into groups with and without the following comorbidities or procedural characteristics: a principal diagnosis of AMI, or any secondary diagnosis of congestive heart failure, renal failure, cerebrovascular disease, or cases including code 36.05, reflecting multiple vessel procedure. The commenter classified cases with the above characteristics as ''complex'' and cases without these characteristics as ''noncomplex.''

The commenter included the following table for comparison purposes:

Group	Number	Mean Charge
Current DRG 516	10,520	$41,788
Current DRG 517	21,472	34,616
"Complex" DRG 516 - proposed by commenter	17,413	41,762
"Noncomplex" DRG 517 - proposed by commenter	14,579	31,256
Current DRG 526	3,337	51,746
Current DRG 527	12,645	41,849
"Complex" Complex DRG 526 - proposed by commenter	7,437	51,054
"Noncomplex" DRG 527 - proposed by commenter	8,585	37,767

The commenter's conclusion was that a diagnosis of AMI, by itself, was not an accurate reflection of the most resource-intensive procedures associated with coronary stenting.

Response: We appreciate the considerable thought and study that went into the analysis that was submitted. However, in reviewing the comparison, we identified the similarities of the mean charges between the current DRGs and the proposed complex DRGs, and the fact that in every single comparison, the mean charges go down in the complex DRGs. For example, according to the table, current DRG 516 has mean charges of $41,788, while the proposed complex revision of DRG 516 has mean charges of $41,762. This is a decrease of $26. Also, current DRG 526 has mean charges of $51,746, while the proposed complex revision of DRG 526 has mean charges of $51,054. This is a decrease of $692. These results indicate to us that the current DRG structure is accurate in terms of resource consumption.

In addition, we note that under the commenter's proposal, the number of cases in the complex DRG categories, while the number of noncomplex cases decreases. There would be a shift in the number of cases per DRG, but each case would have lower average charges per case, which would reduce the relative weight of all four DRGs. We are hesitant to adopt this approach, given the comments and concerns that reimbursement for stenting procedures is already under funded.

Comment: One commenter supported our proposal to maintain temporary DRGS 526 and 527.

Response: We appreciate the commenter's support of these temporary DRGs. In the FY 2003 IPPS final rule (67 FR 50004), we stated that we expect that when claims data are available that reflect the use of drug-eluting stents, we would combine drug-eluting stents cases with other stent cases in DRGs 516 and 517. A change of that nature would be subject to an analysis of the claims data to determine whether these data reflect a significant reduction in the use of bare stents, due to the overwhelming industry acceptance of the more efficacious drug-eluting stent. At this time, with only 11 months of claims data, we believe that changes to these DRG pairs would be premature. We will continue our analysis and monitor the data for these cases.

Comment: One commenter expressed concern that the relative weights

published in Table 5 of the Addendum to the proposed rule (69 FR 28642) were inadequate to cover the costs of procedures involving this technology and might provide financial incentives for hospitals to use less effective technologies (such as bare metal stents) or more invasive coronary artery bypass graft (CABG) procedures for Medicare beneficiaries.

Response: We note that the relative weights listed in Table 5 of the proposed rule are based on MedPAR hospital charge data as of the December 2003 update of the files, which were not as complete for FY 2003 as the data are now. The relative weights in this final rule are based on the March FY 2004 update of the FY 2003 MedPAR file, and reflect a more comprehensive picture of hospital charges. The final weight for DRG 516 is 2.6457, for DRG 517 is 2.1106, for DRG 526 is 2.9741, and for DRG 527 is 2.3282.

We also point out that the DRG base rate computed using relative weights is only part of the formula used to determine what each hospital is paid for each case. Additional payment is made to each hospital based on its unique structure, including indirect medical education, area wage levels, disproportionate share adjustment, and any applicable cost-of-living adjustments in Alaska and Hawaii. Hospitals may also receive outlier payments for certain cases involving extraordinary high costs.

We are concerned by the comment regarding the provision of CABG procedures when less appropriate to the patient than drug-eluting therapy. One commenter believed the conversion from CABG to drug-eluting stent therapy has already begun and cited MedPAR data to prove its point. These data show that during the first quarter of full drug-eluting stent availability (July, August, and September 2003), Medicare CABG discharges declined 9.3 percent from the same quarter in the previous year. The commenter also noted a corresponding increase in stenting procedures.

In addition, it has come to our attention that there may be some coding errors that are contributing to an erroneous data and reimbursement case-mix profile for hospitals. Specifically, it has been suggested that some hospitals may be reluctant to include a code for vessel angioplasty in conjunction with stent placement. Apparently some hospital staff have expressed concerns that a ''true'' angioplasty is not being performed, and that they will therefore be censured by regulatory agencies for erroneous coding. Therefore, these hospitals have instructed their coding staff not to include a code describing angioplasty of a vessel and only to include a code for insertion of a stent or stents.

This action is not proper. The AHA publication, *Coding Clinic for ICD–9–CM,* Fourth Quarter, 1996, specifically instructs that a code for angioplasty, by any technique, be used when an angioplasty is performed in the placement of a stent or stents (page 63). Therefore, the correct coding for insertion of coronary stent(s) requires two codes. One code describes the angioplasty: 36.01 (Single vessel percutaneous transluminal coronary angioplasty [PTCA] or coronary atherectomy without mention of thrombolytic agent); 36.02 (Single vessel percutaneous transluminal coronary angioplasty [PTCA] or coronary atherectomy with mention of thrombolytic agent); or 36.03 (Open chest coronary artery angioplasty, or 36.05. The second code describes which stent was inserted: either 36.06 (Insertion of non drug-eluting coronary artery stent(s)) or 36.07 (Insertion of drug-eluting coronary artery stent(s)). Failure to record the angioplasty procedure will result in assignment of the case to the medical DRG instead of the correct surgical DRG. This erroneous coding action will have an impact on many levels. It will result in incorrect data in the database, which in turn will result in an erroneous base upon which future DRG relative weights are calculated. In addition, in the short term, it will result in reduced revenue to the hospitals because of the incorrect DRG assignment for all cases in which incorrect coding occurs.

Comment: One commenter indicated that there is a disincentive for the insertion of multiple drug-eluting stents placed during the same inpatient admission. This commenter indicated that there might be pressures on physicians to bring patients back for an additional stent procedure on a subsequent admission. Another commenter suggested that, as an interim approach, code 36.05 be used as a trigger for DRG assignment to a newly created DRG, or act as a trigger for an add-on payment for each stent. The commenter's justification for this suggestion was that, because current medical practice indicates that over 85 percent of balloon angioplasties currently involve a concurrent insertion of a stent, code 36.05 could serve as a good surrogate code until such time as new codes are created and available for use.

Response: One of the suggestions received that we discussed in the proposed rule recommended that two new DRGs be created based on multiple-vessel procedures with drug-eluting stent(s) and the presence or absence of an AMI. The suggester's argument was that the presence of code 36.05, which shows treatment of multiple vessels, also indicates that more than one stent was inserted. We considered this assertion in the proposed rule because we recognize that current ICD–9–CM codes do not adequately describe the insertion of more than one stent. However, as we discussed in the proposed rule, we believe that the presence of code 36.05 only indicates that more than one vessel was surgically treated. It does not indicate that more than one stent was placed in all cases. We reiterate that no conclusions can be drawn regarding the number of stents inserted based upon the number of vessels treated. Therefore, we are not prepared to make DRG adjustments based on the commenter's assertion. In addition, we are not prepared to assume that the presence of code 36.05 is solely responsible for any higher charges associated with these cases.

We do believe that there is a need to further identify the insertion of multiple stents and will work with industry representatives to conceptualize the most appropriate ICD–9–CM procedure code or codes to capture this data. The topic of a new code or codes for multiple stent insertion will be addressed at the October 7, 2004 ICD–9–CM Coordination and Maintenance Committee meeting at CMS' headquarters in Baltimore, MD.

Comment: One commenter expressed concern about the implication of maintaining separate and distinct DRGs for drug-eluting stents and encouraged CMS to consider fully the impact on less expensive technologies, such as intravascular brachytherapy (IVBT). IVBT is the use of vascular radiation delivered inside an artery to reduce the incidence of restenosis. The commenter noted that the DRG system should not create financial incentives to use drug-eluting stents when the clinical outcomes and costs of other treatments are similar or better in the appropriate patient populations.

Response: As we have stated above in response to other comments, in the absence of more complete data and without thorough evaluation, we are reluctant to undertake any restructuring of these four DRGs (516, 517, 526, and 527) for FY 2005. Therefore, these DRGs will continue to be structured as they currently are. In the upcoming fiscal year, as in the past, we will be closely monitoring our own data, outside data, and any FDA decision on the efficacy of stent placement in a high-risk AMI population. We will also consider

alternative therapies, such as IVBT, as part of that process.

c. Severe Sepsis

In the May 18, 2004, proposed rule, we addressed a comment we had received that recommended a separate DRG be assigned to the diagnosis of severe sepsis. Patients admitted with sepsis currently are assigned to DRG 416 (Septicemia Age > 17) and DRG 417 (Septicemia Age 0–17) in MDC 18 (Infectious and Parasitic Diseases, Systemic or Unspecified Sites). The commenter contended that the costs of caring for patients with severe sepsis exceed those costs associated with other types of sepsis. Therefore, the commenter indicated, severe sepsis should be given a separate, unique DRG. Furthermore, the commenter requested that all cases in which severe sepsis is present on admission, as well as those cases in which it develops after admission (which are currently classified elsewhere) be included in this new DRG. The commenter suggested using various coexisting conditions and their corresponding ICD–9–CM codes (for example, respiratory failure or hypotension and renal failure) to identify patients with severe sepsis. The conditions suggested do not describe a clinically coherent set of patients that have severe sepsis. Using this list of conditions would erroneously identify patients as having severe sepsis.

We acknowledge the high costs of caring for seriously ill patients with sepsis. However, we do not find, from a clinical perspective, that a subset of patients with severe sepsis exists to the degree that a separate DRG classification is justified. Sepsis in all forms is quite common across many DRGs in the Medicare population. In addition, we do not believe that the commenter's suggested defining criteria for severe sepsis are specific, accurate, or unique enough to warrant a new DRG classification. Therefore, in the May 18, 2004, proposed rule, we did not propose any change to the current DRG structure for sepsis.

Comment: Several commenters agreed with our proposal not to create a new DRG for severe sepsis. Some of the commenters mentioned coding problems that exist with new codes 995.90 through 995.94 that were created to capture Systemic Inflammatory Response Syndrome (SIRS). The commenters acknowledged that the codes were specifically created to capture severe sepsis. However, they indicated that there has been much confusion among coders in their use. The commenters mentioned coding notes included in the ICD–9–CM book that appear to be contradictory. The commenters agreed that it was not appropriate to modify the DRGs at this time, given the uncertainty about the use of the SIRS codes and the accuracy of the reported data.

One commenter recommended continued monitoring of the population with severe sepsis in the future. Another commenter supported our proposal not to create a new DRG for severe sepsis, given the data and information provided.

Response: We agree with the commenters that there has been confusion in the correct use of the SIRS codes based on use of the ICD–9–CM code book. The related section of the ICD–9–CM code book is being revised on October 1, 2004, to help resolve this confusion. Additional coding instructions are also being developed on the correct use of these codes. These instructions will be published in the American Hospital Association's *Coding Clinic for ICD–9–CM.* These actions should lead to more consistency in identifying and reporting cases of severe sepsis. Once this information is available, CMS will review the data to determine any needed modifications to the DRG to better capture severe sepsis. We agree with the commenters that we should not create a new DRG for severe sepsis based on the currently available data, and that we should continue to monitor the population with severe sepsis in order to better characterize resource utilization in these patients.

Comment: One commenter expressed disagreement with our decision not to modify the DRGs to capture severe sepsis. The commenter asserted that using the accepted definition of severe sepsis—''a systemic inflammatory response to infection associated with acute organ dysfunction''—was adequate to identify patients for the purpose of creating new DRGs. The commenter also asserted that severe sepsis is common, deadly, and costly; that it involves extensive use of intensive care unit resources; and that it is inadequately represented by the use of ICD–9–CM procedure code 00.11(Infusion of diotrecogin alfa (activated)).

Response: We agree with the commenter that severe sepsis is a common, deadly, and costly clinical entity. We also acknowledge that the current coding for all forms of sepsis is problematic. We believe that the creation of code 00.17 (Infusion of vasopressor agent), which goes into effect on October 1, 2004, in combination with code 00.11 and the SIRS codes 995.90 through 995.94, will help to better identify patients with severe sepsis. We also note, as mentioned above, that improved and modified coding instructions and guidelines will be available in October 2004. However, we continue to believe that a separate DRG for severe sepsis is not appropriate at this time based on the available data. We believe that the defining criteria for severe sepsis, using the currently available ICD–9–CM codes, are not specific, accurate, or unique enough to warrant a new DRG classification. However, we anticipate receiving data using the new and modified codes and instructions and will consider this issue again in the future.

Comment: One commenter disagreed with our decision not to create a new DRG for severe sepsis. The commenter urged CMS to ''recognize severe sepsis as a clinically coherent condition associated with high mortality and a patient population displaying similar characteristics in terms of outcome and costs incurred for treatment, which thereby deserves its own DRG.'' The commenter asserted that the current DRG for sepsis uses the clinically obsolete term ''septicemia.'' The commenter also stated that severe sepsis cases now classify to 339 different DRGs; however, these DRGs do not distinguish between cases with and without severe sepsis. The commenter believed that payment for cases in which severe sepsis occurs is inadequate and urged us to work closely with the Critical Care Work Group in the development of a new DRG.

Response: We agree with the commenter that severe sepsis cases fall into a wide spectrum of DRGs, and therein lies the problem. The ICD–9–CM coding system has lacked the requisite specificity and accuracy needed to identify patients with severe sepsis. While new codes were created specifically for this purpose (codes 995.90 through 995.94), coders have had difficulty in consistently using the codes. We have worked closely with the Centers for Disease Control and Prevention to make refinements to the coding notes and instructions so that these codes can be more consistently applied. These revised notes and instructions will go into effect on October 1, 2004. We believe that when more consistent data are submitted, we will have the necessary information to propose further refinements in the DRGs to better capture severe sepsis. As mentioned before, CMS will closely monitor the classification of patients with severe sepsis in the near future, particularly with regard to the use of other codes commonly reported for patients with severe sepsis such as new

code 00.17 (Infusion of vasopressor agent) and code 00.11 (Infusion of diotrecogin alfa (activated)). We will also work closely with the American Hospital Association and the American Health Information Management Association on their efforts to provide education to coders in the correct use of the severe sepsis codes (SIRS codes 995.90 through 995.94).

Comment: One commenter believed that CMS was shortsighted in its failure to create a new DRG for severe sepsis. The commenter also noted that severe sepsis is a widespread and deadly disease that has been defined since 1992, and that severe sepsis cases currently classify into 339 DRGs. The commenter asserted that grouping these cases together in at least one DRG would enhance hospitals and practitioners' ability to understand the disease and its treatment as well as to evaluate the costs of care. This commenter further asserted that only a small proportion of patients with severe sepsis and organ dysfunction are assigned to DRG 416 (Septicemia Age >17) and DRG 417 (Septicemia Age 0–17), and that a large number of surgical cases with severe sepsis are ignored. The commenter also noted that cases of severe sepsis that develop after admission typically are classified in other DRGs.

This commenter mentioned the set of proposed criteria put forth by another commenter to define severe sepsis (''a systemic inflammatory response syndrome associated with organ dysfunction, hypoperfusion, or hypotension'') and asserted that this definition has been widely accepted within the international clinical community, that it is encompassed by code 995.92 (Systemic inflammatory response syndrome due to infectious process with organ dysfunction), and that it should be used to identify patients for classification to a new DRG.

Response: As mentioned earlier, we recognize that severe sepsis is a widespread and deadly disease that accompanies a wide spectrum of other diagnoses. We also recognize that it frequently develops after admission, and that it is a frequent complication of surgical cases. In addition, we recognize that current coding practices are problematic, and we look forward to better refining our ability to identify patients with severe sepsis by using codes 00.11 and 00.17 and the SIRS series of codes. We look forward to working with groups represented by the commenters in the future to optimize the DRG system to best serve this important Medicare patient population.

d. Implantable Cardiac Defibrillators

There is a range of implantable cardiac defibrillators (ICDs) available on the market from extremely complex devices with multiple leads, settings, and functions to simpler models with a single lead and simpler functions. ICDs deliver electrical shocks to the heart to eliminate the life-threatening abnormal rhythms such as ventricular fibrillation or ventricular tachycardia.

As indicated in the May 18, 2004, proposed rule, we received a coverage request to expand the indications for implantable defibrillators to include the population studied in the Sudden Cardiac Death in Heart Failure Trial (SCD–HeFT) sponsored by the National Institutes of Health. SCD–HeFT treated heart failure patients with conventional therapy and randomized them to one of three additional treatment strategies: (1) Placebo; (2) amiodarone (drug therapy); or (3) single lead implantable defibrillator. The SCD–HeFT investigators presented results at the American College of Cardiology annual meeting that the basic single-lead implantable defibrillator is effective for saving lives in a population at low-moderate risk for sudden cardiac death. As part of CMS' coverage decisions, we are considering whether to restrict the use of complex defibrillators to patients for whom they are medically necessary, that is, the population at low-moderate risk for sudden cardiac death.

Given the potential increase of implantable defibrillator use in our population, in the May 18, 2004, proposed rule, we solicited input on how to encourage physicians to use the simpler, less costly device when advanced devices are not medically preferred. We also solicited input on the appropriate measures within the payment systems to accommodate payment for classes of defibrillators with very different costs. Ideally, we would like not only to align payments with relative costs, but also to align the incentives within the payment system with medically appropriate uses of different technologies.

We believe that, within the PPS for inpatient hospital operating costs, there are several ways to deal with the expanding use of simpler, lower cost defibrillators. One possibility is to maintain the current DRG configuration, under which complex, expensive devices and simpler, less costly devices would remain within the same DRGs and receive the same payment rates. This approach would encourage use of the simpler devices, which would receive relatively higher reimbursement because their lower charges would be averaged in with the higher charges for the more complex devices in setting the DRG weights. However, it could lead to complaints that the program is underpaying for the more complex, expensive devices as the lower charges for simpler, less expensive devices begin to affect (lower) the DRG weights.

Another approach would be to recognize the cost differences between various classes of defibrillators by establishing separate DRGs for basic single-lead implantable defibrillators as opposed to more complex, expensive models. This approach would prevent payments for the use of more expensive defibrillators (where medically necessary) from being diluted by the effect of the lower charges for basic single-lead implantable defibrillators on the weights within common DRGs. However, this policy would arguably provide less incentive for use of the lower cost devices: the weights for the DRGs containing the less expensive devices would be driven solely by their relatively lower charges, without being lifted by the higher charges for the more expensive models. This approach might also be criticized for departing from the averaging principle within the DRG system by basing too much on the cost differential alone in reconfiguring these DRGs.

We solicited comments on these and other approaches to paying for defibrillators under the IPPS. We discuss an application for new technology add-on payments for a Cardiac Resynchronization Therapy with Defibrillator (CRT–D) in section II.E.4.c. of this final rule. We discuss comments regarding payments for these devices in that section.

e. Intestinal Transplantation

Even though we did not address the issue of DRG payment for intestinal transplantation in the May 18, 2004, proposed rule, we received a comment from an institution that performs intestinal transplantation.

Comment: The commenter expressed concern that the current payment policy utilizes a relatively low weight DRG that imposes a significant financial burden on health care providers. The commenter requested a new DRG for each of three main types of intestinal transplantation: isolated intestine, liver plus intestine, and multivisceral (liver, stomach, duodenum, pancreas, and small bowel).

Due to the small patient population associated with these transplantations, the commenter suggested that CMS lower the number of cases required to create a new DRG. In addition, the commenter suggested that CMS utilize

data on non-Medicare patients and the pediatric population to supplement current MedPAR data.

Response: We have been monitoring intestinal transplantation cases since October 2000, when Medicare issued a national coverage decision for this transplant, to determine whether it may be appropriate to establish a new DRG. An ICD–9-CM procedure code 46.97 (Transplant of intestine) was created in October 1, 2000, to uniquely capture isolated intestinal transplantation. Acquisition cost centers were established for intestines and multivisceral organs to be paid on a reasonable cost basis. Based on our past annual reviews, we did not find a sufficient number of cases to warrant the creation of a new DRG. The commenter provided some rationale for the absence of cases, including the time lag between the actual transplant date and the submission of the bill and the limited patient population involved.

If an intestinal transplantation alone is performed on a patient with a principal diagnosis in MDC 6 (Diseases and Disorders of the Digestive System), the case would be assigned to either DRG 148 (Major Small & Large Bowel Procedures With CC) or DRG 149 (Major Small & Large Bowel Procedures Without CC). If an intestinal transplantation was performed and the patient required a tracheostomy, the case would be assigned to DRG 483 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth & Neck Diagnosis). In cases where multiple surgical procedures are performed, the case is assigned to the DRG associated with the most resource-intensive surgical class. If an intestinal and liver transplantation were performed simultaneously, the case would be assigned to DRG 480 (Liver Transplant). It is not uncommon that a liver transplant would be performed with an intestinal transplant. If a multivisceral transplantation is performed, the case is also assigned to DRG 480.

Based on our review of the FY 2003 MedPAR data, we identified six cases with procedure code 46.97 all performed at one facility. We are concerned that only one facility's data is contained in the MedPAR file when there are five Medicare-approved intestinal transplant centers. Of the six cases, three cases were assigned to DRG 148, with total charges ranging from $839,802 to $903,518 and an average length of stay of 36 days. Two cases were assigned to DRG 483. One case was assigned to DRG 154 (Stomach, Esophageal, & Duodenal Procedures Age >17 With CC) because, in addition to the intestinal transplantation, there was another operation on the stomach. The total charge for the one case in DRG 154 was $1,105,627, with a length of stay of 32 days.

We are open to receiving non-MedPAR data but would limit the data to Medicare patients, rather than using non-Medicare data as suggested by the commenter. We believe that, if we received data from the five approved intestinal transplant centers regarding all Medicare patients receiving intestinal transplantations during the fiscal year, the minimum requirement of cases may be met. When we receive sufficient data, we will again consider a separate intestinal transplant DRG.

We agree that payment for isolated intestinal transplant is too low in DRGs 148 and 149. The average payments for DRGs 148 and 149 are approximately $15,314 and $6,567, respectively. As mentioned earlier, it is not uncommon for an intestinal transplant to be performed in conjunction with transplants of other organs, such as the liver. As a matter of fact, intestinal transplants are assigned to DRG 480 now since these patients frequently have both an intestinal transplant and a liver transplant. Therefore, DRG 480 already contains cases with intestinal transplants. Therefore, we would not be disrupting the clinical cohesiveness of DRG 480 by adding intestinal transplant.

Furthermore, intestinal transplantation has become a definitive treatment for patients with short gut syndrome and intestinal diseases who no longer can be maintained on total parenteral nutrition (TPN). Liver failure may be induced by TPN. The average charges for DRG 480 are approximately $157,129. While the total charges for intestinal transplantation are higher than the average charges for DRG 480, we believe that DRG 480 is a better assignment of these cases.

Given this practice, we are moving intestinal transplantation cases out of DRGs 148 and 149 and into DRG 480 (Liver Transplant), effective FY 2005. ICD–9-CM procedure code 46.97 will be assigned to pre-MDC, DRG 480. The title for DRG 480 will change to ''Liver Transplant and/or Intestinal Transplant''. The result of this reassignment would move intestinal transplant cases from a weight of 3.3871 in DRG 148 and 1.4352 in DRG 149 to a weight of 9.8696. We are aware that, with this change, the three main types of intestinal transplantation; isolated intestine, liver plus intestine, and multivisceral, will be assigned to DRG 480. We will continue to monitor intestinal transplantation to determine appropriate assignment of these cases.

f. Cochlear Implants

Even though we did not specifically address issues relating to the DRG payment for cochlear implants in the May 18, 2004, proposed rule, we received public comments on this area.

Comment: One commenter expressed concern about the low reimbursement for cochlear implants. Cochlear implants are currently assigned to DRG 49 (Major Head and Neck Procedures). The commenter stated that cochlear implants represent the only procedure in DRG 49 involving implantation of a high cost medical device. It was stated that the acquisition cost alone represent 85 percent of the total cost of the procedure. The commenter noted that although CMS has acknowledged the disparity between payment and cost and vowed to further evaluate possible reclassification options for cochlear implants, nothing has been done to mitigate this payment shortfall.

Response: Although cochlear implants was not addressed in our May 18, 2004 proposed rule, we have continued to monitor these cases. In our analysis of the FY 2003 MedPAR file, we found 120 cochlear implant cases with average charges of approximately $44,366. There were a total of 1,602 cases assigned to DRG 49 with average charges of approximately $24,971. Cochlear implant cases represent more than 7 percent of the total cases in DRG 49.

We have been unable to identify an alternative DRG assignment for these cases. As we discussed in the August 1, 2003, final rule (68 FR 45367), we continue to believe that assignment of cochlear implant cases to DRG 482 (Tracheostomy for Face, Mouth and Neck Diagnoses) is inappropriate. A tracheostomy must be performed in order for the case to be assigned to this DRG. We remain reluctant to create a new DRG for specific, low-volume procedures. Doing so would create a proliferation of DRGs and a loss of some of the efficiency incentives inherent in the current system.

g. Artificial Hearts

Comment: One commenter requested that newly created procedure codes 37.52 (Implantation of total replacement heart system), 37.53 (Replacement or repair of thoracic unit of total replacement heart system), and 37.54 (Replacement or repair of other implantable component of total replacement heart system) be assigned to DRG 103 instead of DRG 525.

Response: Codes 37.52, 37.53, and 37.54 are not new codes. They were created for the October 1, 2003 ICD–9-CM update. In the proposed rule, CMS discussed the restructuring of DRG 525 (69 FR 28208) and further listed the codes that were included in that DRG. Codes 37.52, 37.53, and 37.54 are part of that list. We did not propose the addition of codes 37.52, 37.53, or 37.54 to DRG 525 for FY 2005. These codes were assigned to DRG 525 upon their formation, as it is our practice to assign all codes to DRGs when they are created. We take this opportunity to note that Medicare does not cover the use of an artificial heart as a permanent replacement for a human heart or as a temporary life-support system until a human heart becomes available for transplant. Therefore, we believe that a DRG reassignment would be inappropriate at this time. No DRG assignment changes will be made to codes 37.52, 37.53, or 37.54 for FY 2005.

h. Left Atrial Appendage Devices: DRG Assignment for New Code 37.90

The issue of the DRG assignment of new code 37.90 (Insertion of left atrial appendage device) was not presented as a topic in the May 18, 2004, proposed rule. At the April 1, 2004, ICD–9–CM Coordination and Maintenance Committee meeting, we discussed these devices. A new code was created for use in upcoming clinical trials and was fast-tracked so that the code could be used beginning October 1, 2004, for discharges for FY 2005. The new code is listed in Table 6B of the Addendum (69 FR 28672 in the proposed rule). Table 6B represents a listing of approved final new codes. The codes themselves are not subject to comment but their assignment regarding placement as an O.R. procedure and the MDC and DRG placement are open to comment. As discussed elsewhere in this preamble, the announcement of the adoption of the codes as final in the IPPS proposed rule is included in the ICD–9–CM Coordination and Maintenance Committee meeting process.

Background: Atrial fibrillation is a common heart rhythm disorder that can lead to cardiovascular blood clot formation leading to increased risk of stroke. According to product literature, nearly all strokes are from embolic clots arising in the left atrial appendage of the heart; an appendage for which there is no useful function. Standard therapy uses anticoagulation drugs. However, these drugs may be contraindicated in certain patients and may cause complications such as bleeding. The underlying concept behind the left atrial appendage device is to block off the left atrial appendage so that blood clots formed therein cannot travel to other sites in the vascular system. The device is implanted using a percutaneous catheter procedure under fluoroscopy through the femoral vein. Implantation is performed in a hospital catheterization laboratory using standard transseptal technique, with the patient generally under local anesthesia. The procedure takes approximately one hour, and most patients stay overnight in the hospital.

We received several comments concerning the proposal to assign new code 37.90 to DRG 518 (Percutaneous Cardiovascular Procedure Without Coronary Artery Stent or AMI).

Comment: All of the commenters discussed the surgical technique required for insertion of the device and cited the risk and complexity of the procedure, especially due to the transseptal catheterization required. The commenters noted that because comparatively simple procedures are already grouped to DRG 518, DRG 518 does not reflect the resources used in this procedure. The commenters suggested that insertion of a left atrial appendage device more closely resembles the insertion of an atrial septal defect occluder.

Response: Insertion of an atrial septal defect occluder would be coded to the 35.xx series of ICD–9–CM procedure codes. DRG 108 includes code 35.52 (Repair of atrial septal defect with prosthesis, closed technique) which may be similar to insertion of the left atrial appendage device. Codes in the 35.xx series are assigned to DRG 108 (Other Cardiothoracic Procedures). We reviewed the MedPAR data and found the following:

	Number of Cases	Average Length of Stay	Average Standardized Charges
Code 35.52	423	2.69	$29,231
DRG 108 Total	5,293	10.1	76,274
DRG 518 Total	39,553	4.3	31,955

Because code 37.90 was created for use beginning on October 1, 2004, we have no data history regarding its utilization. However, given that the atrial appendage device is percutaneously inserted, and that most of the procedures in DRG 108 are open chest procedures, we do not believe that DRG 108 is the most appropriate clinical placement for new code 37.90. In addition, review of the data in the table above shows a large variance between the hospital charges and length of stay between DRG 518 and DRG 108. According to one manufacturer, the projected length of stay for insertion of an atrial appendage is overnight for observation purposes. The many open chest procedures in DRG 108, some requiring the use of cardiopulmonary bypass, would also seem to indicate that DRG 108 is not the best choice for clinical coherence. We are disinclined to assign this new code to such a resource intensive DRG without appropriate data to reinforce and justify such a decision. Therefore, we are maintaining the assignment of code 37.90 to DRG 518 in this final rule.

Review of code 35.52 (Repair of atrial septal defect with prosthesis, closed technique) in the table above shows a decided similarity to the cases found in DRG 518. We will analyze the placement of code 35.52 as part of next year's proposed rule. We will analyze these cases for both clinical coherence and charge data as part of the process of identifying the most appropriate DRG assignment for code 35.52.

i. Carotid Artery Stents

DRG Assignment for New Codes

At the April 1, 2004, ICD–9–CM Coordination and Maintenance Committee meeting, we discussed creation of a new code or codes to identify carotid artery stenting, along with a concomitant percutaneous angioplasty or atherectomy (PTA) code for delivery of the stent(s). This subject was addressed in response to the need to identify carotid artery stenting for use

in clinical trials in the upcoming fiscal year. Public comment confirmed the need for specific codes for this procedure. Implementation of the code was fast-tracked so that the code could be used beginning October 1, 2004, for discharges in FY 2005 for patients who are enrolled in an FDA-approved clinical trial and are using on-label FDA approved stents and embolic protection devices.

The newly created codes 00.61 (Percutaneous angioplasty or atherectomy of precerebral (extracranial vessel(s)) and 00.63 (Percutaneous insertion of carotid artery stent(s)) were published in Table 6B, New Procedure Codes in the proposed rule (69 FR 28671). Table 6B in the proposed rule represents final codes and the codes themselves were not subject to comment, as the notice and comments are part of the ICD–9–CM Coordination and Maintenance Committee process. However, their assignment regarding placement as an OR procedure, as well as MDC and DRG placement, were open to public comment.

New code 00.61 was assigned to four MDCs and seven DRGs. The most likely scenario will have cases being assigned to MDC 1 (Diseases and Disorders of the Nervous System in DRGs 533 (Extracranial Procedures With CC) and 534 (Extracranial Procedures Without CC). Cases could also be assigned to MDC 5 (Diseases and Disorders of the Circulatory System), MDC 21 (Injuries, Poisoning, and Toxic Effects of Drugs), and MDC 24 (Multiple Significant Trauma). The less likely DRG assignments can be reviewed in Table 6B in the Addendum to this final rule.

Background: Stroke is the third leading cause of death in the United States and the leading cause of serious, long-term disability. Approximately 70 percent of all strokes occur in people age 65 and older. The carotid artery is located in the neck and is the principal artery supplying the head and neck with blood. Accumulation of plaque in the carotid artery can lead to stroke either by decreasing the blood flow to the brain or by having plaque break free and lodge in the brain or in other arteries to the head. The PTA procedure involves inflating a balloon-like device in the narrowed section of the carotid artery to reopen the vessel. A carotid stent is then placed in the artery to prevent the vessel from closing and to prevent pieces of plaque from entering the bloodstream.

Effective July 1, 2001, Medicare covers PTA of the carotid artery concurrent with carotid stent placement when furnished in accordance with the FDA-approved protocols governing Category B Investigational Device Exemption (IDE) clinical trials. PTA of the carotid artery, when provided solely for the purpose of carotid artery dilation concurrent with carotid stent placement, is considered to be a reasonable and necessary service only when provided in the context of such clinical trials, and therefore is considered a covered service for the purposes of these trials. Performance of PTA in the carotid artery when used to treat obstructive lesions outside of approved protocols governing Category B IDE clinical trials remains a noncovered service.

We received several comments concerning the proposed assignment of new code 00.61 to MDC 1, DRG 533 and DRG 534.

Comment: All commenters suggested that instead of code 00.61 grouping to both DRGs 533 and 534, the cases should only be assigned to DRG 533. Commenters have suggested that the patients in Category B IDE clinical trials will not have the kinds of CCs that would assure assignment to DRG 533. Commenters cited other complications such as bilateral occlusion, certain anatomical conditions such as a ''surgically hostile neck,'' and complex diseases, as complications in their cases. However, most of the CCs cited by the commenters are not able to be captured using current ICD–9–CM codes, and therefore would not contribute to the assignment of these cases to DRG 533.

All of the commenters stated that the payment for DRG 534 is inadequate, but did not furnish data regarding the cost of the stent(s) and the embolic protection devices, possibly because these devices are still in the trial stage and no hospital costs have yet been established. Two commenters stated that they knew of reports that a number of sites in one of the clinical trials have indicated a reluctance to enroll patients due to the low level of payment under DRG 534. One commenter reviewed cases in the FY 2002 MedPAR data file and noted that the cases are primarily clinical trial cases that do not include a charge for the carotid stent and embolic protection device. Therefore, the commenter added, the reported hospital charges significantly understate the charges that would be associated with the carotid stenting procedure in a nonclinical trial setting.

Response: As we have created code 00.61 for use beginning October 1, 2004, we have no data history regarding its utilization.

In FY 2003, any carotid stenting procedures performed would have been assigned to DRG 5. Insertion of a carotid stent or stents was a procedure for which there was no specific coverage decision. In addition, the ICD–9–CM codes describing insertion of a stent were nonspecific, and the codes used to describe that procedure also applied to many other procedures for which there was a coverage decision. The commenter is correct that any cases in our data may have been performed within the setting of a clinical trial. In FY 2004, we restructured DRG 5, splitting all those cases into DRGs 533 and 534, and ordered the DRGs based on the presence or absence of CCs. When we reviewed the available MedPAR data, we used the following proxy: Principal diagnosis code 433.10 (Occlusion and stenosis of carotid artery, without mention of cerebral infarction), and procedure codes 39.50 (Angioplasty or atherectomy of noncoronary vessel), plus code 39.90 (Insertion of nondrug-eluting, noncoronary artery stent(s)). The following table shows the results of our review:

Data Year	DRG	Total Discharges by DRG	Arithmetic. Mean Length of Stay	Number of Stent Cases	Length of Stay for Stent Cases	Average Charges for Stents	Relative Weights
2001 (FY 2003)	5	93,559	3.07	1,321	2.6	$25,029	1,3837
2002 (FY 2004)	533	new	4.10**	890	3.28	$27,328	1.6678
2002 (FY 2004)	534	new	2.0**	934	1.59	$19,514	1.0748
2003 (FY 2005)	533	43,418***	4.0***	1,444	3.20	$32,617	1.6498**
2003 (FY 2005)	534	50,974***	1.9***	1,453	1.56	$23,042	1.0515***

*Table 7A, MedPAR update March 2002 (67 FR 50249)
**Table 5, MedPAR update March 2003 (68 FR 45594)
***Final rule Table 5 and Table7A, MedPAR update March 2004

When we evaluated the data in the above table, we found relative weights have increased for DRG 533 over the past two reporting periods compared to the cases in DRG 5. In addition, we found that, although the hospital charges had increased between reporting years 2002 and 2003, the charges were within the mean and .75 standard deviation. As the DRG system is one of averages, we are reassured that this payment structure is appropriate.

The FDA has not given final approval to the safety and efficacy of carotid PTA with stenting as clinical trials are still ongoing. CMS has not yet approved this procedure and device under Medicare, outside of the clinical trial setting. To reiterate, specific codes were recently created and have not yet been put into use in hospitals. We believe that the data that we have reviewed in DRGs 5, 533, and 534 are reasonably correct regarding hospital charges for this procedure. We believe that adjusting the IPPS system for a specific device that has not been used outside the clinical trial setting, without substantiating data, obviates the intent of the diagnosis-related *groups.* Therefore, we believe the assignment of code 00.61 to DRGs 533 and 534 as proposed is appropriate at this time. We will continue to monitor DRGs 533 and 534 and procedure codes 00.61 in combination with 00.63 in upcoming annual DRG reviews.

At the April 1, 2004, ICD–9–CM Coordination and Maintenance Committee Meeting, we also created procedure codes 00.62 (Percutaneous angioplasty or atherectomy of intracranial vessel(s), 00.64 (Percutaneous insertion of other precerebral (extracranial) artery stent(s), and 00.65 (Percutaneous insertion of intracranial vascular stent(s). We assigned procedure code 00.62 to the same MDCs and DRGs as code 00.61, mimicking the DRG assignment for predecessor codes.

Comment: One commenter encouraged CMS to assign intracranial angioplasty cases containing procedure code 00.62 to DRGs 1 and 2 instead of DRGs 533 and 534. The commenter believed that DRGs 1 and 2 better reflect the grouping logic for clinical homogeneity and resource utilization.

Response: When new ICD–9–CM codes are created, they are automatically assigned to an MDC and a DRG(s). We generally assign new codes to the predecessor DRGs until we have compelling MedPAR data that indicate otherwise. In the case of code 00.62, the point is moot. Medicare does not cover PTA of intracranial vessels, and we are not aware of any clinical trials during the upcoming fiscal year. We refer readers to the discussion of changes to Edit 11 (Non-Covered Procedures) of the Medicare Code Editor under section II.B.10. of this preamble. Therefore, in the absence of compelling evidence, we are not making any changes to the MDC or DRG assignments of code 00.62.

In addition, it has come to our attention that there may be some coding errors that are contributing to an erroneous reimbursement case-mix profile for hospitals. Specifically, it has been suggested that some hospitals may be reluctant to include a code for vessel angioplasty in conjunction with stent placement. Apparently, some hospital staff have expressed concerns that a ''true'' angioplasty is not being performed, and that, therefore, they will be censured by regulatory agencies for erroneous coding. As a result, these hospitals have instructed their coding staff not to include a code describing angioplasty of a vessel, and to only include a code for insertion of a stent or stents.

This is incorrect. The AHA publication *Coding Clinic for ICD–9–CM* specifically instructs that a code for angioplasty, by any technique, is performed in the placement of a stent or stents (Fourth Quarter, 1996, page 63). Therefore, the correct coding for insertion of coronary stent(s) requires two codes. One code describes the angioplasty with 00.61, and the second code describes the stent insertion with code 00.63. To fail to record the angioplasty procedure will result in assignment of the case to the medical DRG instead of the correct surgical DRG. This erroneous coding action will have an impact on many levels. It will result in incorrect data in the database, which in turn will result in an erroneous base upon which future DRG relative weights are calculated. In addition, in the short term, it will result in reduced revenue to the hospital because of the incorrect DRG assignment for all cases in which this occurs. To reiterate, the correct procedure coding for insertion of a carotid stent combines codes 00.61 and 00.63.

j. Acute Intermittent Porphyria

In the May 18, 2004 IPPS proposed rule, we did not present as an issue the DRG assignment of the code used for acute intermittent porphyria. However, we did receive one comment concerning this condition.

Comment: One commenter requested that we give consideration to assignment of a DRG to an orphan biologic intended to treat acute intermittent porphyria. This condition is a rare metabolic disorder affecting fewer than 1,000 persons in the United States. The drug manufacturer was concerned that Medicare hospitalization payments do not accurately reflect the cost of the treatment. The condition is coded to Code 277.1 (Disorders of porphyrin metabolism) and is assigned to DRG 299 (Inborn Errors of Metabolism).

Response: The DRG assignment of code 277.1 was not an issue that was addressed in the May 18, 2004 proposed rule. We will take this comment into consideration in the future as we conduct analysis of the MedPAR data for next year's proposed rule.

C. Recalibration of DRG Weights

As we proposed, in this final rule, we used the same basic methodology for the FY 2005 recalibration as we did for FY 2004 (August 1, 2003 IPPS final rule (68 FR 45373)). That is, we have recalibrated the DRG weights based on charge data for Medicare discharges using the most current charge information available (the FY 2003 MedPAR file).

The MedPAR file is based on fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2003 MedPAR data used in this final rule include discharges occurring between October 1, 2002, and September 30, 2003, based on bills received by CMS through March 31, 2004, from all hospitals subject to the IPPS and short-term acute care hospitals in Maryland (which are under a waiver from the IPPS under section 1814(b)(3) of the Act). The FY 2003 MedPAR file includes data for approximately 11,740,557 Medicare discharges. Discharges for Medicare beneficiaries enrolled in a Medicare+Choice managed care plan are excluded from this analysis. The data excludes CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken.

The methodology used to calculate the DRG relative weights from the FY 2003 MedPAR file is as follows:

- To the extent possible, all the claims were regrouped using the DRG classification revisions discussed in section II.B. of this preamble.
- The transplant cases that were used to establish the relative weight for heart and heart-lung, liver, and lung transplants (DRGs 103, 480, and 495) were limited to those Medicare-approved transplant centers that have cases in the FY 2001 MedPAR file. (Medicare coverage for heart, heart-lung, liver, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)
- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis. Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average charge for the DRG and before eliminating statistical outliers.
- Charges were standardized to remove the effects of differences in area wage levels, indirect medical education and disproportionate share payments, and, for hospitals in Alaska and Hawaii, the applicable cost-of-living adjustment.
- The average standardized charge per DRG was calculated by summing the standardized charges for all cases in the DRG and dividing that amount by the number of cases classified in the DRG. A transfer case is counted as a fraction of a case based on the ratio of its transfer payment under the per diem payment methodology to the full DRG payment for nontransfer cases. That is, a transfer case receiving payment under the transfer methodology equal to half of what the case would receive as a nontransfer would be counted as 0.5 of a total case.
- Statistical outliers were eliminated by removing all cases that are beyond 3.0 standard deviations from the mean of the log distribution of both the charges per case and the charges per day for each DRG.
- The average charge for each DRG was then recomputed (excluding the statistical outliers) and divided by the national average standardized charge per case to determine the relative weight.

The new weights are normalized by an adjustment factor of 1.46795 so that the average case weight after recalibration is equal to the average case weight before recalibration. This adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. We used that same case threshold in recalibrating the final DRG weights for FY 2005. Using the FY 2003 MedPAR data set, there are 41 DRGs that contain fewer than 10 cases. We computed the weights for these low-volume DRGs by adjusting the FY 2004 weights of these DRGs by the percentage change in the average weight of the cases in the other DRGs.

Section 1886(d)(4)(C)(iii) of the Act requires that, beginning with FY 1991, reclassification and recalibration changes be made in a manner that assures that the aggregate payments are neither greater than nor less than the aggregate payments that would have been made without the changes. Although normalization is intended to achieve this effect, equating the average case weight after recalibration to the average case weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case weight. Therefore, as we have done in past years and as discussed in section II.A.4.a. of the Addendum to this final rule, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

Comment: Two commenters addressed the proposed DRG weights for three DRGs. One commenter was appreciative of the increased proposed DRG weight for DRG 36 (Retinal Procedures). The current DRG weight is 0.6298 and the proposed weight was 0.6766. Another commenter expressed concern that the proposed weights for DRGs 535 (Cardiac Defibrillator Implant With Cardiac Catheterization With AMI, Heart Failure, or Shock) and DRG 536 (Cardiac Defibrillator Implant With Cardiac Catheterization Without AMI, Heart Failure or Shock) believes this would not cover the cost of the Cardiac Resynchronization Therapy Defibrillator (CRT–D), much less the procedure and nursing care costs associated with these procedures. The commenter believed that the DRG weight data are problematic because they are based on hospital charges. The commenter stated that hospitals do not like to mark up the cost of an item at $34,000. The commenter inquired whether CMS has evaluated the cost of the CRT–Ds from the claims which was calculated using the cost-to-charge ratio compared to outside data on the cost of the CRT–Ds.

Response: In the process of recalibration of the DRG weights, we

consider the most recent charge data available. Both high and low cost technologies are absorbed gradually into the data that are used to determine the DRG weight.

D. LTC–DRG Reclassifications and Relative Weights for LTCHs for FY 2005

1. Background

In the June 6, 2003, LTCH PPS final rule (68 FR 34122), we changed the LTCH PPS annual payment rate update cycle to be effective July 1 through June 30 instead of October 1 through September 30. In addition, because the patient classification system utilized under the LTCH PPS is based directly on the DRGs used under the IPPS for acute care hospitals, in that same final rule, we explained that the annual update of the long-term care diagnosis-related group (LTC–DRG) classifications and relative weights will continue to remain linked to the annual reclassification and recalibration of the CMS–DRGs used under the IPPS.

The annual update to the IPPS DRGs is based on the annual revisions to the ICD–9–CM codes and is effective each October 1. In the health care industry, annual changes to the ICD–9–CM codes are effective for discharges occurring on or after October 1 each year. The use of the ICD–9–CM coding system is also compliant with the requirements of the Health Insurance Portability and Accountability Act (HIPAA), Public Law 104–191, under 45 CFR parts 160 and 162. Therefore, the manual and electronic versions of the GROUPER software, which are based on the ICD–9–CM codes, are also revised annually and effective for discharges occurring on or after October 1 each year. Because the LTC–DRGs are based on the patient classification system used under the IPPS (CMS–DRGs), which is updated annually and effective for discharges occurring on or after October 1 through September 30 each year, in the May 7, 2004, LTCH PPS final rule (69 FR 25674), we specified that we will continue to update the LTC–DRG classifications and relative weights to be effective for discharges occurring on or after October 1 through September 30 each year. Furthermore, we stated that we will publish the annual update of the LTC–DRGs in the proposed and final rules for the IPPS.

In the May 18, 2004, IPPS proposed rule (69 FR 28225), we proposed revisions to the LTC–DRG classifications and relative weights. We are finalizing them in this IPPS final rule, to be effective October 1, 2004, through September 30, 2005, using the latest available data. The final LTC–DRGs and relative weights for FY 2005 in this final rule are based on the IPPS DRGs (GROUPER Version 22.0) discussed in section II. of this final rule.

Comment: One commenter questioned whether the rate update cycle for the LTCH PPS will revert from a July 1 through June 30 cycle to the Federal fiscal year cycle (October 1 through September 30) since we proposed to update the LTC–DRGs effective for discharges on or after October 1, 2004.

Response: In the June 6, 2003 LTCH PPS final rule (68 FR 34122), we changed the LTCH PPS annual payment rate update cycle to be effective July 1 through June 30 instead of October 1 through September 30. As we discussed in that same LTCH PPS final rule and as we discussed in the May 18, 2004, IPPS proposed rule (69 FR 28225), because the patient classification system utilized under the LTCH PPS is based directly on the DRGs used under the IPPS for acute care hospitals, the annual update of the LTC–DRG classifications and relative weights will continue to remain linked to the annual reclassification and recalibration of the CMS–DRGs used under the IPPS.

The most recent annual LTCH PPS payment rate update and policy changes for the 2005 LTCH PPS rate year (July 1, 2004 through June 30, 2004) was published in the **Federal Register** on May 7, 2004 (69 FR 25674 through 25749). In that same LTCH PPS final rule, we established rate updates and policy changes that were effective for discharges occurring on or after July 1, 2004, including an update to the standard Federal LTCH PPS rate, the LTCH PPS wage index and the LTCH PPS outlier threshold. However, because the LTC–DRGS are linked to the IPPS DRGs, the LTC–DRG classifications and relative weights established in the August 1, 2003, final rule (68 FR 45374), which were effective beginning in Federal FY 2004, remain in effect through September 30, 2004. The updated LTC–DRG classifications and relative weights established for FY 2005 shown in Table 11 of this final rule will be effective for LTCH discharges on or after October 1, 2004 and before September 30, 2005. As we stated in the June 6, 2003 LTCH PPS final rule, the rate update cycle for the LTCH PPS will continue to remain on a July 1 through June 30 cycle while the annual update to the LTC–DRG classifications and relative weights will remain on a Federal fiscal year cycle (October 1 through September 30). Accordingly, the updated LTCH PPS Federal rate ($36,833.69) and other payment factors (such as the outlier threshold and wage index values) effective July 1, 2004 (*see* May 7, 2004, (69 FR 25674)), are applied in conjunction with the LTC–DRGs and relative weights established in the August 1, 2003, IPPS final rule (68 FR 45374) that are in effect through September 30, 2004, for LTCH discharges occurring from July 1, 2004 through September 30, 2004. However, beginning with discharges occurring on or after October 1, 2004, the LTC–DRGs and relative weights established in this final rule will be applied in conjunction with the LTCH PPS Federal rate ($36,833.69) and other payment factors (such as the outlier threshold and wage index values) effective July 1, 2004, as established in the May 7, 2004 LTCH PPS final rule (69 FR 25674), for discharges occurring through June 30, 2005.

2. Changes in the LTC–DRG Classifications

a. Background

Section 123 of Public Law 106–113 specifically requires that the PPS for LTCHs be a per discharge system with a DRG-based patient classification system reflecting the differences in patient resources and costs in LTCHs while maintaining budget neutrality. Section 307(b)(1) of Public Law 106–554 modified the requirements of section 123 of Public Law 106–113 by specifically requiring that the Secretary examine ''the feasibility and the impact of basing payment under such a system [the LTCH PPS] on the use of existing (or refined) hospital diagnosis-related groups (DRGs) that have been modified to account for different resource use of long-term care hospital patients as well as the use of the most recently available hospital discharge data.''

In accordance with section 307(b)(1) of Public Law 106–554 and § 412.515 of our existing regulations, the LTCH PPS uses information from LTCH patient records to classify patient cases into distinct LTC–DRGs based on clinical characteristics and expected resource needs. The LTC–DRGs used as the patient classification component of the LTCH PPS correspond to the DRGs under the IPPS for acute care hospitals. Thus, as we proposed in the May 18, 2004, IPPS proposed rule, we will use the IPPS GROUPER Version 22.0 for FY 2005 to process LTCH PPS claims in this final rule. The changes to the IPPS DRG classification system for FY 2005 (GROUPER Version 22.0) are discussed in section II.B. of this preamble.

Under the LTCH PPS, we determine relative weights for each of the CMS DRGs to account for the difference in resource use by patients exhibiting the case complexity and multiple medical

problems characteristic of LTCH patients. In a departure from the IPPS, as we discussed in the August 30, 2002, final rule (67 FR 55985), which implemented the LTCH PPS, and the August 1, 2003, IPPS final rule (68 FR 45374), we use low-volume quintiles in determining the LTC–DRG weights for LTC–DRGs with less than 25 LTCH cases, since LTCHs do not typically treat the full range of diagnoses as do acute care hospitals. Specifically, we group those low-volume LTC–DRGs (LTC–DRGs with fewer than 25 cases) into 5 quintiles based on average charge per discharge. (A listing of the composition of low-volume quintiles for the FY 2004 LTC–DRGs (based on FY 2002 MedPAR data) appears in section II.D.3. of the August 1, 2003 IPPS final rule (68 FR 45377 through 45380).) We also adjust for cases in which the stay at the LTCH is less than or equal to five-sixths of the geometric average length of stay; that is, short-stay outlier cases (§ 412.529), as discussed below in section II.D.4. of this preamble.

b. Patient Classifications Into DRGs

Generally, under the LTCH PPS, Medicare payment is made at a predetermined specific rate for each discharge; that is, payment varies by the LTC–DRG to which a beneficiary's stay is assigned. Similar to case classification for acute care hospitals under the IPPS (see section II.B. of this preamble), cases are classified into LTC–DRGs for payment under the LTCH PPS based on the principal diagnosis, up to eight additional diagnoses, and up to six procedures performed during the stay, as well as age, sex, and discharge status of the patient. The diagnosis and procedure information is reported by the hospital using codes from the ICD–9–CM.

As discussed in section II.B. of this preamble, the CMS DRGs are organized into 25 major diagnostic categories (MDCs), most of which are based on a particular organ system of the body; the remainder involve multiple organ systems (such as MDC 22, Burns). Accordingly, the principal diagnosis determines MDC assignment. Within most MDCs, cases are then divided into surgical DRGs and medical DRGs. Some surgical and medical DRGs are further differentiated based on the presence or absence of CCs. (See section II.B. of this preamble for further discussion of surgical DRGs and medical DRGs.)

Because the assignment of a case to a particular LTC–DRG will help determine the amount that is paid for the case, it is important that the coding is accurate. As used under the IPPS, classifications and terminology used under the LTCH PPS are consistent with the ICD–9–CM and the Uniform Hospital Discharge Data Set (UHDDS), as recommended to the Secretary by the National Committee on Vital and Health Statistics (''Uniform Hospital Discharge Data: Minimum Data Set, National Center for Health Statistics, April 1980'') and as revised in 1984 by the Health Information Policy Council (HIPC) of the U.S. Department of Health and Human Services. We wish to point out again that the ICD–9–CM coding terminology and the definitions of principal and other diagnoses of the UHDDS are consistent with the requirements of the Administrative Simplification Act of 1996 of the HIPAA (45 CFR parts 160 and 162).

The emphasis on the need for proper coding cannot be overstated. Inappropriate coding of cases can adversely affect the uniformity of cases in each LTC–DRG and produce inappropriate weighting factors at recalibration and result in inappropriate payments under the LTCH PPS. LTCHs are to follow the same coding guidelines used by the acute care hospitals to ensure accuracy and consistency in coding practices. There will be only one LTC–DRG assigned per long-term care hospitalization; it will be assigned at the discharge. Therefore, it is mandatory that the coders continue to report the same principal diagnosis on all claims and include all diagnostic codes that coexist at the time of admission, that are subsequently developed, or that affect the treatment received. Similarly, all procedures performed during that stay are to be reported on each claim.

Upon the discharge of the patient from a LTCH, the LTCH must assign appropriate diagnosis and procedure codes from the ICD–9–CM. As of October 16, 2002, a LTCH that was required to comply with the HIPAA Administrative Simplification Standards and that had not obtained an extension in compliance with the Administrative Compliance Act (Pub. L. 107–105) is obligated to comply with the standards at 45 CFR 162.1002 and 45 CFR 162.1102. Completed claim forms are to be submitted to the LTCH's Medicare fiscal intermediary. Medicare fiscal intermediaries enter the clinical and demographic information into their claims processing systems and subject this information to a series of automated screening processes called the Medicare Code Editor (MCE). These screens are designed to identify cases that require further review before assignment into an LTC–DRG can be made.

After screening through the MCE, each LTCH claim will be classified into the appropriate LTC–DRG by the Medicare LTCH GROUPER. The LTCH GROUPER is specialized computer software based on the same GROUPER used under the IPPS. After the LTC–DRG is assigned, the Medicare fiscal intermediary determines the prospective payment by using the Medicare LTCH PPS PRICER program, which accounts for LTCH hospital-specific adjustments. As provided for under the IPPS, we provide an opportunity for the LTCH to review the LTC–DRG assignments made by the fiscal intermediary and to submit additional information within a specified timeframe (§ 412.513(c)).

The GROUPER is used both to classify past cases in order to measure relative hospital resource consumption to establish the LTC–DRG weights and to classify current cases for purposes of determining payment. The records for all Medicare hospital inpatient discharges are maintained in the MedPAR file. The data in this file are used to evaluate possible DRG classification changes and to recalibrate the DRG weights during our annual update (as discussed in section II. of this preamble). The LTC–DRG relative weights are based on data for the population of LTCH discharges, reflecting the fact that LTCH patients represent a different patient mix than patients in short-term acute care hospitals.

3. Development of the FY 2005 LTC–DRG Relative Weights

a. General Overview of Development of the LTC–DRG Relative Weights

As we stated in the August 30, 2002, LTCH PPS final rule (67 FR 55981), one of the primary goals for the implementation of the LTCH PPS is to pay each LTCH an appropriate amount for the efficient delivery of care to Medicare patients. The system must be able to account adequately for each LTCH's case-mix in order to ensure both fair distribution of Medicare payments and access to adequate care for those Medicare patients whose care is more costly. To accomplish these goals, we adjust the LTCH PPS standard Federal prospective payment system rate by the applicable LTC–DRG relative weight in determining payment to LTCHs for each case.

Under the LTCH PPS, relative weights for each LTC–DRG are a primary element used to account for the variations in cost per discharge and resource utilization among the payment groups (§ 412.515). To ensure that Medicare patients classified to each LTC–DRG have access to an appropriate level of services and to encourage efficiency, we calculate a relative weight

for each LTC–DRG that represents the resources needed by an average inpatient LTCH case in that LTC–DRG. For example, cases in an LTC–DRG with a relative weight of 2 will, on average, cost twice as much as cases in an LTC–DRG with a weight of 1.

b. Data

To calculate the LTC–DRG relative weights for FY 2005 in this final rule, we obtained total Medicare allowable charges from FY 2003 Medicare hospital bill data from the March 2004 update of the MedPAR file, and we used Version 22.0 of the CMS GROUPER for IPPS, as discussed in section II.B. of this preamble, to classify cases. Consistent with the methodology under the IPPS, we recalculated the FY 2005 LTC–DRG relative weights based on the best available data for this final rule.

As we discussed in the May 18, 2004 proposed rule (69 FR 28227), we have excluded the data from LTCHs that are all-inclusive rate providers and LTCHs that are reimbursed in accordance with demonstration projects authorized under section 402(a) of Public Law 90–248 (42 U.S.C. 1395b–1) or section 222(a) of Public Law 92–603 (42 U.S.C. 1395b–1). Therefore, in the development of the FY 2005 LTC–DRG relative weights, we have excluded the data of the 22 all-inclusive rate providers and the 3 LTCHs that are paid in accordance with demonstration projects that had claims in the FY 2003 MedPAR file.

In the August 1, 2003, final rule (68 FR 45367), we discussed coding inaccuracies that were found in claims data for a large chain of LTCHs in the FY 2002 MedPAR file used to determine the LTC–DRG relative weights for FY 2004. Specifically, the principal diagnosis was not reported correctly on many of those LTCHs' claims, which resulted in those claims being incorrectly assigned to an LTC–DRG. As we explained in the same final rule, we were able to determine the correct diagnoses and procedure codes for the claims that contained the coding errors, and we used them to group each LTCH case to the appropriate LTC–DRG for determining the LTC–DRG relative weights for FY 2004. In addition, we stated that since the LTCH PPS was implemented for cost reporting periods beginning on or after October 1, 2002 (FY 2003), we believe that this problem will be self-correcting as LTCHs submit more completely coded data in the future.

As we discussed in the May 7, 2004, LTCH PPS final rule (69 FR 25674), an analysis of LTCH claims data from the September 2003 update of the FY 2003 MedPAR file contained coding errors. Specifically, a large hospital chain of LTCHs continued to consistently code diagnoses inaccurately on the claims it submitted, and these coding errors were reflected in the September 2003 update of the FY 2003 MedPAR file. Upon discovering the coding errors, we notified the large chain of LTCHs whose claims contained the coding inaccuracies to request that they resubmit those claims with the correct diagnoses codes by December 31, 2003, so that those corrected claims would be contained in the December 2003 update of the FY 2003 MedPAR file. As we discussed in that same final rule, it appears that those claims were submitted timely with the correct diagnoses codes. Therefore, it was not necessary to correct the FY 2003 MedPAR data for the development of the rates and factors established in the May 7, 2004, LTCH PPS final rule. Accordingly, in the May 18, 2004, IPPS proposed rule, we used LTCH claims data from the December 2003 update of the FY 2003 MedPAR file for the determination of the proposed FY 2005 LTC–DRG relative weights. For this final rule, we used the latest available LTCH claims data from the March 2004 update of the FY 2003 MedPAR file.

c. Hospital-Specific Relative Value Methodology

By nature LTCHs often specialize in certain areas, such as ventilator-dependent patients and rehabilitation and wound care. Some case types (DRGs) may be treated, to a large extent, in hospitals that have, from a perspective of charges, relatively high (or low) charges. This nonarbitrary distribution of cases with relatively high (or low) charges in specific LTC–DRGs has the potential to inappropriately distort the measure of average charges. To account for the fact that cases may not be randomly distributed across LTCHs, we use a hospital-specific relative value method to calculate the LTC–DRG relative weights instead of the methodology used to determine the DRG relative weights under the IPPS described above in section II.C. of this preamble. We believe this method will remove this hospital-specific source of bias in measuring LTCH average charges. Specifically, we reduce the impact of the variation in charges across providers on any particular LTC–DRG relative weight by converting each LTCH's charge for a case to a relative value based on that LTCH's average charge.

Under the hospital-specific relative value method, we standardize charges for each LTCH by converting its charges for each case to hospital-specific relative charge values and then adjusting those values for the LTCH's case-mix. The adjustment for case-mix is needed to rescale the hospital-specific relative charge values (which, by definition, averages 1.0 for each LTCH). The average relative weight for a LTCH is its case-mix, so it is reasonable to scale each LTCH's average relative charge value by its case-mix. In this way, each LTCH's relative charge value is adjusted by its case-mix to an average that reflects the complexity of the cases it treats relative to the complexity of the cases treated by all other LTCHs (the average case-mix of all LTCHs).

In accordance with the methodology established under § 412.523, we standardize charges for each case by first dividing the adjusted charge for the case (adjusted for short-stay outliers under § 412.529 as described in section II.D.4. (step 3) of this preamble) by the average adjusted charge for all cases at the LTCH in which the case was treated. Short-stay outliers under § 412.529 are cases with a length of stay that is less than or equal to five-sixths the average length of stay of the LTC–DRG. The average adjusted charge reflects the average intensity of the health care services delivered by a particular LTCH and the average cost level of that LTCH. The resulting ratio is multiplied by that LTCH's case-mix index to determine the standardized charge for the case.

Multiplying by the LTCH's case-mix index accounts for the fact that the same relative charges are given greater weight in a LTCH with higher average costs than they would at a LTCH with low average costs which is needed to adjust each LTCH's relative charge value to reflect its case-mix relative to the average case-mix for all LTCHs. Because we standardize charges in this manner, we count charges for a Medicare patient at a LTCH with high average charges as less resource intensive than they would be at a LTCH with low average charges. For example, a $10,000 charge for a case in a LTCH with an average adjusted charge of $17,500 reflects a higher level of relative resource use than a $10,000 charge for a case in a LTCH with the same case-mix, but an average adjusted charge of $35,000. We believe that the adjusted charge of an individual case more accurately reflects actual resource use for an individual LTCH because the variation in charges due to systematic differences in the markup of charges among LTCHs is taken into account.

Comment: MedPAC supported the use of the hospital-specific relative value methodology for determining the LTC–DRG relative weights, stating that ''[t]his method eliminates distortions in

weights due to systematic differences among hospitals in the level of costs per case and in charge markups.'' The Commission believed that we should explore the use of this methodology for the DRG relative weights used under the IPPS.

Response: We appreciate MedPAC's support of the use of the hospital-specific relative value methodology for determining the LTC–DRG relative weights. As we discuss above, because by nature LTCHs often specialize in certain types of care, we believe it is important to remove any hospital-specific source of bias in measuring LTCHs' average charges. Therefore, we have continued to use of the hospital-specific relative value methodology for determining the final FY 2005 LTC–DRG relative weights shown in Table 11 of this final rule.

As discussed above, we believe that the LTCHs' charge data are particularly vunerable to having a hospital-specific source of bias when measuring LTCHs' average charges because of the small number of LTCHs (approximately 300 hospitals with approximately 100,00 discharges annually) and the relatively high degree of specialization of many LTCHs. There are over 4,000 short-term acute care hospitals paid under the IPPS, with approximately 11.9 million discharges annually, that generally treat a wide range of conditions, rather than specializing in one or two types of conditions. Therefore, although we agree with the Commission that the hospital-specific relative value methodology eliminates distortions in relative weights due to systematic differences among hospitals' charges, we do not believe that it is necessary to use the hospital-specific relative value methodology under the IPPS since short-term acute care hospitals' charge data is not as susceptible to having a hospital-specific source of bias when measuring average charges.

Furthermore, as we discussed in the August 1, 2000, IPPS final rule (65 FR 47103), in 1995 the MedPAC's predecessor, the Prospective Payment Assessment Commission, made a similar recommendation to adopt the hospital-specific relative value methodology under the IPPS. In the June 2, 1995, proposed rule (60 FR 29246), we agreed with the Commission's judgment that basing the IPPS DRG weights on standardized charges results in weights that are somewhat distorted as measures of the relative costliness of treating a typical case in each DRG, and that the hospital-specific relative value method of setting weights may reduce or eliminate distortions present in the current system. However, in our discussion on DRG refinements under the IPPS in the same rule (60 FR 29209), we reiterated our position published in the final rule on September 1, 1992 (57 FR 39761), that we would not propose to make significant changes to the DRG classification system under the IPPS, unless we are able to either improve our ability to predict coding changes by validating in advance the impact that potential DRG changes may have on coding behavior, or to make methodological changes to prevent building the inflationary effects of the coding changes into future program payments. Without further evaluation, we do not believe it would be appropriate to change the methodology for determining the DRG relative weights under the IPPS at this time. The development of the FY 2005 DRG relative weights used under the IPPS for short-term acute care hospitals is discussed in section II.C. of this preamble.

d. Low-Volume LTC–DRGs

In order to account for LTC–DRGs with low-volume (that is, with fewer than 25 LTCH cases), in accordance with the methodology discussed in the August 30, 2002, LTCH PPS final rule (67 FR 55984) and in the May 18, 2004, IPPS proposed rule (69 FR 28228), we group those low-volume LTC–DRGs into one of five categories (quintiles) based on average charges, for the purposes of determining relative weights. For this final rule, using LTCH cases from the March 2004 update of the FY 2003 MedPAR file, we identified 172 LTC–DRGs that contained between 1 and 24 cases. This list of LTC–DRGs was then divided into one of the 5 low-volume quintiles, each containing a minimum of 34 LTC–DRGs (172/5 = 34 with 2 LTC–DRGs as the remainder). For FY 2005, as we described in the May 18, 2004 IPPS proposed rule, we are making an assignment to a specific low-volume quintile by sorting the low-volume LTC–DRGs in ascending order by average charge. For this final rule, this results in an assignment to a specific low volume quintile of the sorted 172 low-volume LTC–DRGs by ascending order by average charge. Since the number of LTC–DRGs with less than 25 LTCH cases is not evenly divisible by five, the average charge of the low-volume LTC–DRG was used to determine which low-volume quintile received the additional LTC–DRG. After sorting the 172 low-volume LTC–DRGs in ascending order, we grouped the first fifth (34) of low-volume LTC–DRGs with the lowest average charge would be grouped into Quintile 1. The highest average charge cases are grouped into Quintile 5. Since the average charge of the 103rd LTC–DRG in the sorted list is closer to the previous LTC–DRG's average charge (assigned to Quintile 3) than to the average charge of the 104th LTC–DRG in the sorted list (to be assigned to Quintile 4), we placed it into Quintile 3. This process was repeated through the remaining low-volume LTC–DRGs so that 3 low-volume quintiles contain 34 LTC–DRGs and 2 low-volume quintiles contain 35 LTC–DRGs.

In order to determine the relative weights for the LTC–DRGs with low volume for FY 2005, in accordance with the methodology described in the August 30, 2002 LTCH PPS final rule (67 FR 55984) and cited in the May 18, 2004 IPPS proposed rule, we used the five low-volume quintiles described above. The composition of each of the five low-volume quintiles shown below in Table 1 is used in determining the LTC–DRG relative weights for FY 2005. We determine a relative weight and (geometric) average length of stay for each of the five low-volume quintiles using the formula that we apply to the regular LTC–DRGs (25 or more cases), as described below in section II.D.4. of this preamble. We assign the same relative weight and average length of stay to each of the LTC–DRGs that make up that low-volume quintile. We note that, as this system is dynamic, it is possible that the number and specific type of LTC–DRGs with a low volume of LTCH cases will vary in the future. We use the best available claims data in the MedPAR file to identify low-volume LTC–DRGs and to calculate the relative weights based on our methodology.

BILLING CODE 4121–01–P

Table 1.--Composition of Low-Volume Quintiles

LTC-DRG	Description

BILLING CODE 4121–01–C

4. Steps for Determining the FY 2005 LTC–DRG Relative Weights

As we noted previously, the FY 2005 LTC–DRG relative weights are determined in accordance with the methodology described in the August 1, 2003 IPPS final rule (68 FR 45367) and cited in the May 18, 2004 IPPS proposed rule (69 FR 28231). In summary, LTCH cases must be grouped in the appropriate LTC–DRG, while taking into account the low-volume LTC–DRGs as described above, before the FY 2005 LTC–DRG relative weights can be determined. After grouping the cases in the appropriate LTC–DRG, we calculate the relative weights for FY 2005 in this final rule by first removing statistical outliers and cases with a length of stay of 7 days or less. Next, we adjust the number of cases in each LTC–DRG for the effect of short-stay outlier cases under § 412.529. The short-stay adjusted discharges and corresponding charges are used to calculate ''relative adjusted weights'' in each LTC–DRG using the hospital-specific relative value method described above.

Below we discuss in detail the steps for calculating the FY 2005 LTC–DRG relative weights.

Step 1—Remove statistical outliers.

The first step in the calculation of the FY 2005 LTC–DRG relative weights is to remove statistical outlier cases. We define statistical outliers as cases that are outside of 3.0 standard deviations from the mean of the log distribution of both charges per case and the charges per day for each LTC–DRG. These statistical outliers are removed prior to calculating the relative weights. We believe that they may represent aberrations in the data that distort the measure of average resource use. Including those LTCH cases in the calculation of the relative weights could result in an inaccurate relative weight that does not truly reflect relative resource use among the LTC–DRGs.

Step 2—Remove cases with a length of stay of 7 days or less.

The FY 2005 LTC–DRG relative weights reflect the average of resources used on representative cases of a specific type. Generally, cases with a length of stay 7 days or less do not belong in a LTCH because these stays do

not fully receive or benefit from treatment that is typical in a LTCH stay, and full resources are often not used in the earlier stages of admission to a LTCH. If we were to include stays of 7 days or less in the computation of the FY 2005 LTC–DRG relative weights, the value of many relative weights would decrease and, therefore, payments would decrease to a level that may no longer be appropriate.

We do not believe that it would be appropriate to compromise the integrity of the payment determination for those LTCH cases that actually benefit from and receive a full course of treatment at a LTCH, in order to include data from these very short-stays. Thus, in determining the FY 2005 LTC–DRG relative weights, we remove LTCH cases with a length of stay of 7 days or less.

Comment: One commenter believes that it is inappropriate to exclude cases with a length of stay of 7 days or less from the calculation of the proposed LTC–DRG relative weights since it is not uncommon for very resource intensive patients to expire within the first 7 days of the stay. The commenter also suggested that we consider creating a separate LTC–DRG for LTCH patients that expire within the first 7 days of the stay.

Response: While we understand the commenters concerns, as we discussed in the August 30, 2002, final rule (67 FR 55989) which implemented the LTCH PPS, in calculating the LTC–DRG relative weights, we exclude cases with a length of stay of 7 days or less because we believe that, generally, cases with a length of stay of 7 days or less do not belong in a LTCH. In general, LTCHs are defined by statute as hospitals having an average length of stay of greater than 25 days. LTCHs typically furnish extended medical and rehabilitative care for patients who are clinically complex and have multiple or chronic conditions. Generally, LTCH cases with very short lengths of stay (that is, 7 days or less) are discharged from the LTCH before the patient receives a full course of treatment, and therefore do not use the same amount or type of resources as typical LTCH ''inlier'' cases (that is, cases in which Medicare covered days exceed five-sixths of the geometric average length of stay for the LTC–DRG and the patient is discharged prior to receiving a LTCH PPS high cost outlier payment). We believe that the length of stay of an ''inlier'' case is indicative of a LTCH patient receiving a full course of treatment because such cases include cases with stays that received a full LTC–DRG payment, which represents the average resources used for that DRG (that is, the case does not receive an adjusted short-stay outlier payment or a high-cost outlier payment). LTCH discharges with very short lengths of stay (that is, 7 days or less) often occur when it is determined, following admission to a LTCH, that the beneficiary would receive more appropriate care at another setting. Other circumstances that result in cases with very short stays (that is, 7 days or less) would involve patients who were either discharged to their home or who expired within the first 7 days of being admitted to an LTCH. Because LTCH cases with very short lengths of stay (that is, 7 days or less) do not use the same amount or type of resources as typical LTCH inlier cases, our simulations indicate that including these cases would significantly bias payments against LTCH inlier cases to a point where LTCH inlier cases would be underpaid.

As we also discussed in the August 30, 2002, LTCH PPS final rule (65 FR 55989), the LTC–DRG relative weights reflect the average resources used on representative cases of a specific type. Stays of 7 days or less generally do not fully receive or benefit from treatment that is typical in a LTCH stay because the patient is discharged prior to receiving a full course of treatment that a LTCH inlier patient would receive. In addition, full resources are often not used in the earlier stages of an admission to a LTCH because the patient is often medically unstable, and initial efforts are focused on stabilizing the patient before beginning treatment of the patient's additional complications and comorbidities. If we did include stays of 7 days or less in the calculation of the LTC–DRG relative weights, the value of many relative weights would decrease for cases that do, in fact, receive a full course of treatment, and, therefore, LTCH inlier payments could decrease to a level that would not be appropriate (that is, provide sufficient payment). We continue to believe that it is not appropriate to compromise the integrity of the payment amounts for LTCH inlier cases that actually benefit from and receive a full course of treatment at a LTCH in order to include data from cases with stays of 7 days or less. Therefore, we disagree with the commenter that cases with lengths of stay of 7 days or less should be included in the calculation of the LTC–DRG relative weights. Accordingly, in this final rule, in calculating the FY 2005 LTC–DRG relative weights, as we proposed, we have removed cases with a length of stay of 7 days or less.

With regard to the commenter's suggestion that we create a separate LTC–DRG for patients who expire, as we also discussed in the August 30, 2002, LTCH PPS final rule (67 FR 56002), we do not believe that a separate LTC–DRG for patients who expire is necessary. We continue to believe that the short-stay outlier policy at § 412.529 adequately addresses payments for patients who expire August 30, 2002, LTCH PPS final rule (65 FR 56006), because a case with a length of stay up to and including five-sixths of the average length of stay of the LTC–DRG is paid under the short-stay outlier policy regardless of whether or not the patient expires. Under the short-stay outlier policy (§ 412.529), generally a case is paid the least of 120 percent of the estimated cost of the case, 120 percent of the LTC–DRG specific per diem amount, or the full LTC–DRG payment.

We continue to believe that adjusted payments under the short-stay outlier policy for cases that expire generally compensate for any increased costs associated with treating a severely ill patient who dies, including those who expire within 7 days of being admitted to a LTCH. We note that one of the principles underlying prospective payment is that it is a system of payments based on average costs that assumes that some patient stays will consume more resources than the typical stay, while other patients will demand fewer resources. Thus, an efficiently operated hospital should be able to deliver care to its Medicare patients for an overall cost that is at or below the amount paid under the LTCH PPS. We continue to believe the LTCH PPS payment adequately address payments for patients who expire, and therefore, we are not adopting the commenter's suggestion to create a separate LTC–DRG for LTCH patients that expire within the first 7 days of the stay. Accordingly, in establishing the final FY 2005 LTC–DRG relative weights, we continue to exclude cases with a length of stay of 7 days or less and we continue to include the total charges of cases with a length of stay of 8 days or more, including patients who expire, in the LTC–DRG to which the case is assigned based on version 22.0 of the GROUPER.

Step 3—Adjust charges for the effects of short-stay outliers.

The third step in the calculation of the FY 2005 LTC–DRG relative weights is to adjust each LTCH's charges per discharge for short-stay outlier cases (that is, a patient with a length of stay that is less than or equal to five-sixths the average length of stay of the LTC–DRG).

We make this adjustment by counting a short-stay outlier as a fraction of a discharge based on the ratio of the

length of stay of the case to the average length of stay for the LTC–DRG for nonshort-stay outlier cases. This has the effect of proportionately reducing the impact of the lower charges for the short-stay outlier cases in calculating the average charge for the LTC–DRG. This process produces the same result as if the actual charges per discharge of a short-stay outlier case were adjusted to what they would have been had the patient's length of stay been equal to the average length of stay of the LTC–DRG.

As we explained in the May 18, 2004 proposed rule (69 FR 28231), counting short-stay outlier cases as full discharges with no adjustment in determining the LTC–DRG relative weights would lower the LTC–DRG relative weight for affected LTC–DRGs because the relatively lower charges of the short-stay outlier cases would bring down the average charge for all cases within an LTC–DRG. This would result in an ''underpayment'' to nonshort-stay outlier cases and an ''overpayment'' to short-stay outlier cases. Therefore, in this final rule, we adjust for short-stay outlier cases under § 412.529 in this manner because it results in more appropriate payments for all LTCH cases.

Step 4—Calculate the FY 2005 LTC–DRG relative weights on an iterative basis.

The process of calculating the LTC–DRG relative weights using the hospital specific relative value methodology is iterative. First, for each LTCH case, we calculate a hospital-specific relative charge value by dividing the short-stay outlier adjusted charge per discharge (*see* step 3) of the LTCH case (after removing the statistical outliers (*see* step 1)) and LTCH cases with a length of stay of 7 days or less (*see* step 2) by the average charge per discharge for the LTCH in which the case occurred. The resulting ratio is then multiplied by the LTCH's case-mix index to produce an adjusted hospital-specific relative charge value for the case. An initial case-mix index value of 1.0 is used for each LTCH.

For each LTC–DRG, the FY 2005 LTC–DRG relative weight is calculated by dividing the average of the adjusted hospital-specific relative charge values (from above) for the LTC–DRG by the overall average hospital-specific relative charge value across all cases for all LTCHs. Using these recalculated LTC–DRG relative weights, each LTCH's average relative weight for all of its cases (case-mix) is calculated by dividing the sum of all the LTCH's LTC–DRG relative weights by its total number of cases. The LTCHs' hospital-specific relative charge values above are multiplied by these hospital specific case-mix indexes. These hospital-specific case-mix adjusted relative charge values are then used to calculate a new set of LTC–DRG relative weights across all LTCHs. In this final rule, this iterative process is continued until there is convergence between the weights produced at adjacent steps, for example, when the maximum difference is less than 0.0001.

Step 5—Adjust the FY 2005 LTC-DRG relative weights to account for nonmonotonically increasing relative weights.

As explained in section II.B. of this preamble, the FY 2005 CMS DRGs, which the FY 2005 LTC–DRGs are based, contain ''pairs'' that are differentiated based on the presence or absence of CCs. The LTC–DRGs with CCs are defined by certain secondary diagnoses not related to or inherently a part of the disease process identified by the principal diagnosis, but the presence of additional diagnoses does not automatically generate a CC. As we discussed in the May 18, 2004 IPPS proposed rule (69 FR 28232), the value of monotonically increasing relative weights rises as the resource use increases (for example, from uncomplicated to more complicated). The presence of CCs in an LTC-DRG means that cases classified into a ''without CC'' LTC-DRG are expected to have lower resource use (and lower costs). In other words, resource use (and costs) are expected to decrease across ''with CC''/''without CC'' pairs of LTC–DRGs.

For a case to be assigned to a LTC–DRG with CCs, more coded information is called for (that is, at least one relevant secondary diagnosis), than for a case to be assigned to an LTC–DRG ''without CCs'' (which is based on only one principal diagnosis and no relevant secondary diagnoses). Currently, the LTCH claims data include both accurately coded cases without complications and cases that have complications (and cost more), but were not coded completely. Both types of cases are grouped to an LTC–DRG ''without CCs'' because only one principal diagnosis was coded. Since the LTCH PPS was only implemented for cost reporting periods beginning on or after October 1, 2002 (FY 2003) and LTCHs were previously paid under cost-based reimbursement, which is not based on patient diagnoses, coding by LTCHs for these cases may not have been as detailed as possible.

Thus, in developing the FY 2003 LTC–DRG relative weights for the LTCH PPS based on FY 2001 claims data, as we discussed in the August 30, 2002 LTCH PPS final rule (67 FR 55990), we found on occasion that the data suggested that cases classified to the LTC–DRG ''with CCs'' of a ''with CC''/''without CC'' pair had a lower average charge than the corresponding LTC–DRG ''without CCs.'' Similarly, based on FY 2003 claims data, we also found on occasion that the data suggested that cases classified to the LTC–DRG ''with CCs'' of a ''with CC''/without CC'' pair have a lower average charge than the corresponding LTC–DRG ''without CCs'' for FY 2005.

We believe this anomaly may be due to coding that may not have fully reflected all comorbidities that were present. Specifically, LTCHs may have failed to code relevant secondary diagnoses, which resulted in cases that actually had CCs being classified into a ''without CC'' LTC–DRG. It would not be appropriate to pay a lower amount for the ''with CC'' LTC–DRG. Therefore, in this final rule, we grouped both the cases ''with CCs'' and ''without CCs'' together for the purpose of calculating the FY 2005 LTC–DRG relative weights in this final rule. As we stated in the August 30, 2002 LTCH PPS final rule (67 FR 55990), we will continue to employ this methodology to account for nonmonotonically increasing relative weights until we have adequate data to calculate appropriate separate weights for these anomalous LTC–DRG pairs. We expect that, as was the case when we first implemented the IPPS, this problem will be self-correcting, as LTCHs submit more completely coded data in the future.

There are three types of ''with CC'' and ''without CC'' pairs that could be nonmonotonic, that is, where the ''without CC'' LTC–DRG would have a higher average charge than the ''with CC'' LTC–DRG. For this final rule, using the LTCH cases in the March 2004 update of the FY 2003 MedPAR file, we identified two of the three types of nonmonotonic LTC–DRG pairs.

The first category of nonmonotonically increasing relative weights for FY 2005 LTC–DRG pairs ''with and without CCs'' contains 2 pairs of LTC–DRGs in which both the LTC–DRG ''with CCs'' and the LTC–DRG ''without CCs'' had 25 or more LTCH cases and, therefore, did not fall into one of the 5 low-volume quintiles. For those nonmonotonic LTC–DRG pairs, as discussed in the May 18, 2004, proposed rule, we combine the LTCH cases and compute a new relative weight based on the case-weighted average of the combined LTCH cases of the LTC–DRGs. The case-weighted average charge is determined by dividing the total charges for all LTCH

cases by the total number of LTCH cases for the combined LTC–DRG. This new relative weight is then assigned to both of the LTC–DRGs in the pair. In this final rule, for FY 2005, LTC–DRGs 144 and 145 and LTC–DRGs 444 and 445 are in this category.

The second category of nonmonotonically increasing relative weights for LTC–DRG pairs with and without CCs consists of zero pairs of LTC–DRGs that has fewer than 25 cases, and each LTC–DRG is grouped to different low-volume quintiles in which the ''without CC'' LTC–DRG is in a higher-weighted low-volume quintile than the ''with CC'' LTC–DRG. For those pairs, as we discussed in the May 18, 2004, proposed rule (69 FR 28232), we combine the LTCH cases and determine the case-weighted average charge for all LTCH cases. The case-weighted average charge is determined by dividing the total charges for all LTCH cases by the total number of LTCH cases for the combined LTC–DRG. Based on the case-weighted average LTCH charge, we determine which low-volume quintile the ''combined LTC–DRG'' is grouped. Both LTC–DRGs in the pair are then grouped into the same low-volume quintile, and thus have the same relative weight. In this final rule, for FY 2005, there are no LTC–DRGs that fall into this category.

The third category of nonmonotonically increasing relative weights for LTC–DRG pairs with and without CCs consists of 10 pairs of LTC–DRGs where one of the LTC–DRGs has fewer than 25 LTCH cases and is grouped to a low-volume quintile and the other LTC–DRG has 25 or more LTCH cases and has its own LTC–DRG relative weight, and the LTC–DRG ''without CCs'' has the higher relative weight. As discussed in the May 18, 2004 proposed rule (69 FR 28232), we remove the low-volume LTC–DRG from the low-volume quintile and combine it with the other LTC–DRG for the computation of a new relative weight for each of these LTC–DRGs. This new relative weight is assigned to both LTC–DRGs, so they each have the same relative weight. In this final rule, for FY 2005, the following LTC–DRGs are in this category: LTC–DRGs 85 and 86; LTC–DRGs 101 and 102; LTC–DRGs 141 and 142; LTC–DRGs 170 and 171; LTC–DRGs 172 and 173; LTC–DRGs 175 and 175; LTC–DRGs 300 and 301; LTC–DRGs 318 and 319; LTC–DRGs 442 and 443; and LTC–DRGs 521, 522 and 523 (We note, 3 LTC–DRGs make up this non-monotonic ''pair'' of DRGs because the ''without CCs'' DRG is further divided into two DRGs based on the presence or absence of rehabilitation therapy, so that there is one DRG in this non-monotonic ''pair'' with CCs and two DRGs in this non-monotonic ''pair'' without CCs).

Step 6—Determine an FY 2005 LTC–DRG relative weight for LTC–DRGs with no LTCH cases.

As we stated above, we determine the relative weight for each LTC–DRG using charges reported in the March 2004 update of the FY 2003 MedPAR file. Of the 520 LTC–DRGs for FY 2005, we identified 171 LTC–DRGs for which there were no LTCH cases in the database. That is, based on data from the FY 2003 MedPAR file used in this final rule, no patients who would have been classified to those LTC–DRGs were treated in LTCHs during FY 2003 and, therefore, no charge data were reported for those LTC–DRGs. Thus, in the process of determining the LTC–DRG relative weights, we are unable to determine weights for these 171 LTC–DRGs using the methodology described in steps 1 through 5 above. However, because patients with a number of the diagnoses under these LTC–DRGs may be treated at LTCHs beginning in FY 2005, we assign relative weights to each of the 171 ''no volume'' LTC–DRGs based on clinical similarity and relative costliness to one of the remaining 349 (520 − 171 = 349) LTC–DRGs for which we are able to determine relative weights, based on FY 2003 claims data.

As there are currently no LTCH cases in these ''no volume'' LTC–DRGs, as we discussed in the May 18, 2004 proposed rule (69 FR 28233), we determine relative weights for the 171 LTC–DRGs with no LTCH cases in the FY 2003 MedPAR file used in this final rule by grouping them to the appropriate low-volume quintile. This methodology is consistent with our methodology used in determining relative weights to account for the low-volume LTC–DRGs described above.

Our methodology for determining relative weights for the ''no volume'' LTC–DRGs is as follows: We crosswalk the no volume LTC–DRGs by matching them to other similar LTC–DRGs for which there were LTCH cases in the FY 2003 MedPAR file based on clinical similarity and intensity of use of resources as determined by care provided during the period of time surrounding surgery, surgical approach (if applicable), length of time of surgical procedure, post-operative care, and length of stay. We assign the relative weight for the applicable low-volume quintile to the no volume LTC–DRG if the LTC–DRG to which it is crosswalked is grouped to one of the low-volume quintiles. If the LTC–DRG to which the no volume LTC–DRG is crosswalked is not one of the LTC–DRGs to be grouped to one of the low-volume quintiles, we compare the relative weight of the LTC–DRG to which the no volume LTC–DRG is crosswalked to the relative weights of each of the five quintiles and we assign the no volume LTC–DRG the relative weight of the low-volume quintile with the closest weight. For this final rule, a list of the no volume FY 2005 LTC–DRGs and the FY 2005 LTC–DRG to which it is crosswalked in order to determine the appropriate low-volume quintile for the assignment of a relative weight for FY 2005 is shown below in Table 2.

BILLING CODE 4121–01–P

Table 2.--No Volume LTC-DRG Crosswalk and Quintile Assignment for FY 2005

LTC-DRG	Description	Cross-Walked LTC-DRG	Low-Volume Quintile Assigned

BILLING CODE 4121–01–C

To illustrate this methodology for determining the relative weights for the 171 LTC–DRGs with no LTCH cases, we are providing the following examples, which refer to the no volume LTC–DRGs crosswalk information for FY 2005 provided above in Table 2:

Example 1: There were no cases in the FY 2003 MedPAR file used for this final rule for LTC–DRG 163 (Hernia Procedures Age 0–17). Since the procedure is similar in resource use and the length and complexity of the procedures and the length of stay are similar, we determined that LTC–DRG 178 (Uncomplicated Peptic Ulcer Without CC), which is assigned to low-volume quintile 1 for the purpose of determining the FY 2005 relative weights, would display similar clinical and resource use. Therefore, we assign the same relative weight of LTC–DRG 178 of 0.4586 (Quintile 1) for FY 2005 (Table 11 in the Addendum to this final rule) to LTC–DRG 163.

Example 2: There were no LTCH cases in the FY 2003 MedPAR file used in this final rule for LTC–DRG 91 (Simple Pneumonia and Pleurisy Age 0–17). Since the severity of illness in patients with bronchitis and asthma is similar in patients regardless of age, we determined that LTC–DRG 90 (Simple Pneumonia and Pleurisy Age >17 Without CC) would display similar clinical and resource use characteristics and have a similar length of stay to LTC–DRG 91. There were over 25 cases in LTC–DRG 90. Therefore, it would not be assigned to a low-volume quintile for the purpose of determining the LTC–DRG relative weights. However, under our established methodology, LTC–DRG 91, with no LTCH cases, would need to be grouped to a low-volume quintile. We identified that the low-volume quintile with the closest weight to LTC–DRG 90 (0.7494; see Table 11 in the Addendum to this final rule) would be low-volume quintile 2 (0.8508; see Table 11 in the Addendum to this final rule). Therefore, we assign LTC–DRG 91 a relative weight of 0. 8508 for FY 2005.

Furthermore, we are providing LTC–DRG relative weights of 0.0000 for heart, kidney, liver, lung, pancreas, and simultaneous pancreas/kidney transplants (LTC–DRGs 103, 302, 480, 495, 512, and 513, respectively) for FY 2005 because Medicare will only cover these procedures if they are performed at a hospital that has been certified for the specific procedures by Medicare and presently no LTCH has been so certified.

Based on our research, we found that most LTCHs only perform minor surgeries, such as minor small and large bowel procedures, to the extent any surgeries are performed at all. Given the extensive criteria that must be met to become certified as a transplant center for Medicare, we believe it is unlikely that any LTCHs would become certified as a transplant center. In fact, in the nearly 20 years since the implementation of the IPPS, there has never been a LTCH that even expressed an interest in becoming a transplant center.

However, if in the future a LTCH applies for certification as a Medicare-approved transplant center, we believe that the application and approval procedure would allow sufficient time for us to determine appropriate weights for the LTC–DRGs affected. At the present time, we are only including these six transplant LTC–DRGs in the GROUPER program for administrative purposes. Because we use the same GROUPER program for LTCHs as is used under the IPPS, removing these LTC–DRGs would be administratively burdensome.

Again, we note that as this system is dynamic, it is entirely possible that the number of LTC–DRGs with a zero volume of LTCH cases based on the system will vary in the future. We used the best most recent available claims data in the MedPAR file to identify zero volume LTC–DRGs and to determine the relative weights in this final rule.

Table 11 in the Addendum to this final rule lists the LTC–DRGs and their respective relative weights, geometric mean length of stay, and five-sixths of the geometric mean length of stay (to assist in the determination of short-stay outlier payments under § 412.529) for FY 2005.

Comment: A few commenters believe that the budget neutrality requirement found in section 123 of the Public Law 106–113 requires CMS to adjust the LTC–DRG relative weights to ensure that total payments to LTCHs are budget neutral for the proposed changes to the LTC–DRG classifications and relative weights. Alternatively, the commenters suggested that we make an adjustment to the LTCH PPS Federal rate to account for the estimated $55 million reduction in LTCH PPS payments which resulted from the proposed changes in the LTC–DRG classifications and relative weights.

Response: In the May 18, 2004 proposed rule (69 FR 28806), we estimated a $55 million aggregate decrease in LTCH PPS payments as a result of the proposed changes in the LTC–DRG relative weights and proposed version 22.0 GROUPER for FY 2005. We note that we incorrectly estimated the impact of the change in the proposed LTC–DRGs for FY 2005 in the proposed rule because we failed to account for the change in DRG classifications and the change in the geometric average length of stay for each LTC–DRG. As discussed in section VII.B. of Appendix A to this final rule, we are estimating that the impact of the change in LTC–DRGs for FY 2005 (including changes in the DRG classifications, relative weights and geometric average lent of stay) will result in approximately a $14.9 million decrease in LTCH PPS payments. In that same proposed rule, we explained that we found that based on an analysis of the LTCH claims in the FY 2003 MedPAR files, the average LTC–DRG relative weight across all LTC–DRGs has increased due to an increase in the number of cases being assigned to higher weighted LTC–DRGs. As a result, including cases with relatively lower charges into LTC–DRGs that have a relatively higher relative weight in the GROUPER version 21.0 (FY 2004) decreases the average relative weight in the proposed GROUPER version 22.0 (FY 2005).

As we discussed in the August 30, 2002 LTCH PPS final rule (67 FR 55960), which implemented the LTCH PPS, section 123 of Public Law 106–113 requires that the LTCH PPS, among other things, shall include an adequate patient classification system that is based on DRGs and that reflects the differences in patient resource use and costs, and shall maintain budget neutrality. With respect to budget neutrality, we interpreted section 123(a)(1) of Public Law 106–113 to require that total payments under the LTCH PPS during FY 2003 will be projected to equal estimated payments that would have been made for LTCHs' operating and capital-related inpatient hospital costs had the LTCH PPS not have been implemented. Consistent with this requirement, under § 412.523(d)(2) an adjustment is made in determining the standard Federal rate for FY 2003 so that aggregate payments under the LTCH PPS are estimated to equal the amount that would have been paid to LTCHs under the reasonable cost-based (TEFRA) payment system if the LTCH PPS were not implemented. Therefore, in that same final rule (67 FR 56027 through 56037), in order to maintain budget neutrality, we adjusted the LTCH PPS Federal rate for FY 2003 so that aggregate payments under the LTCH PPS are estimated to equal the amount that would have been paid to LTCHs under the reasonable cost-based (TERFA) payment system had the LTCH PPS had not been implemented.

In addition, when we implemented the LTCH PPS in the August 30, 2002 LTCH PPS final rule, we provided subpart O of the regulations at 42 CFR, including § 412.517, for an annual adjustment to the LTC–DRG classifications and weighting factors to reflect changes in treatment patterns, technology, number of discharges, and other factors affecting the relative use of hospital resources. We do not believe that section 123 of the Pub. L. 106–113 requires that the annual update to the LTC–DRG classifications and relative weights maintain budget neutrality. We believe we have satisfied the budget neutrality requirement of section 123 of

the Pub. L. 106–113 by establishing the LTCH PPS Federal rate for FY 2003 under § 412.523(d)(2) so that aggregate payment under the LTCH PPS are projected equal to estimated aggregate payments under the reasonable cost-based payment system if the LTCH PPS were not implemented. Therefore, we disagree with the commenters that an adjustment to the FY 2005 LTC–DRG relative weights or to the LTCH PPS Federal rate is required as a result of the annual update to the LTC–DRGs under § 412.517 for FY 2005. Accordingly, we have updated the LTC–DRG classifications and relative weights for FY 2005 (as shown in Table 11 of Addendum to this final rule) without an adjustment for budget neutrality. We note that this is our policy regardless of whether the annual update to the LTC–DRG classifications and relative weights results in higher or lower estimated aggregate payments. For instance we estimate that the annual update to the LTC–DRG classifications and relative weights from FY 2003 to FY 2004 resulted in an estimated increase in LTCH PPS payments, yet the update to the LTC–DRGs in the August 1, 2003 final rule for FY 2004 were not adjusted to maintain budget neutrality. In either case, at this time we do not make an adjustment to maintain budget neutrality for the effects of changes in the LTC–DRG classifications and relative weights. Accordingly, in developing the FY 2005 LTC–DRGs and relative weights shown in Table 11 of this final rule, we have not applied an adjustment for budget neutrality nor are we adjusting the 2005 LTCH PPS rate year Federal rate established in the May 7, 2004, LTCH PPS final rule (69 FR 25674) to account for the estimated change in LTCH PPS payments which result from the annual update to the LTC–DRG classifications and relative weights for FY 2005.

The commenter raises the issue that it may be appropriate for certain aspects of the LTCH PPS to maintain budget neutrality when they are updated annually as they are in other PPSs, such as the annual update to the DRGs and wage index. Under section 123 of Public Law 106–113 and section 307 of Publicl Law 106–554, the Secretary generally has broad authority in developing the LTCH PPS, including whether and how to make adjustments to LTCH PPS payments. Specifically, section 307(b)(1) of Public Law 106–554 provides that ''the Secretary shall examine and may provide for appropriate adjustments to the long-term hospital payment system, including adjustments to DRG weights, area wage adjustments, geographic classification, outliers, updates, and a disproportionate share adjustment [* * *].'' We will consider whether it is appropriate for use to propose a future revision to the LTCH PPS regulations at subpart O of 42 CFR to maintain budget neutrality in the annual update of some aspects of the LTCH PPS under our broad discretionary authority under the statute to provide ''appropriate adjustments to the long-term hospital payment system.'' Any changes to the LTCH PPS regulations would be made in accordance with Administrative Procedures Act guidelines.

5. Out of Scope Comments Relating to the LTCH PPS Payment Rates

Comment: A few commenters submitted comments that addressed aspects of the existing LTCH PPS, including the standard Federal rate and outlier methodology, which are not relevant to the LTCH policy proposals set forth in the May 18, 2004 IPPS proposed rule.

Response: Because those comments pertain to specific aspects of the existing LTCH PPS rather than to any specific proposed changes to the LTCH PPS presented in the May 18, 2004 IPPS proposed rule, we are unable to respond to those comments at this time. Rather, we believe it is more appropriate to address those issues in the annual LTCH PPS proposed and final rules, and we will consider the issues raised in those comments in the context of future rulemaking for the LTCH PPS.

E. Add-On Payments for New Services and Technologies

1. Background

Sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that the process must apply to a new medical service or technology if, ''based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate.''

The regulations implementing this provision establish three criteria for special treatment. First, § 412.87(b)(2) defines when a specific medical service or technology will be considered new for purposes of new medical service or technology add-on payments. The statutory provision contemplated the special payment treatment for new medical services or technologies until such time as data are available to reflect the cost of the technology in the DRG weights through recalibration. There is a lag of 2 to 3 years from the point a new medical service or technology is first introduced on the market and when data reflecting the use of the medical service or technology are used to calculate the DRG weights. For example, data from discharges occurring during FY 2003 are used to calculate the FY 2005 DRG weights in this final rule. Section 412.87(b)(2) provides that a ''medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD–9–CM code assigned to the new medical service or technology (depending on when a new code is assigned and data on the new medical service or technology become available for DRG recalibration). After CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered 'new' under the criterion for this section.''

In the May 18, 2004, proposed rule (69 FR 28237), we stated that the 2-year to 3-year period of newness for a technology or medical service would ordinarily begin with FDA approval, unless there was some documented delay in bringing the product onto the market after that approval (for instance, component production or drug production had been postponed until FDA approval due to shelf life concerns or manufacturing issues). After the DRGs have been recalibrated to reflect the costs of an otherwise new medical service or technology, the special add-on payment for new medical services or technology ceases (§ 412.87(b)(2)). For example, an approved new technology that received FDA approval in October 2003 and entered the market at that time may be eligible to receive add-on payments as a new technology until FY 2006 (discharges occurring before October 1, 2005), when data reflecting the costs of the technology would be used to recalibrate the DRG weights. Because the FY 2006 DRG weights will be calculated using FY 2004 MedPAR data, the costs of such a new technology would likely be reflected in the FY 2006 DRG weights.

Section 412.87(b)(3) further provides that, to receive special payment treatment, new medical services or technologies must be inadequately paid otherwise under the DRG system. To

assess whether technologies would be inadequately paid under the DRGs, we establish thresholds to evaluate applicants for new technology add-on payments. In the August 1, 2003, final rule (68 FR 45385), we established the threshold at the geometric mean standardized charge for all cases in the DRG plus 75 percent of 1 standard deviation above the geometric mean standardized charge (based on the logarithmic values of the charges and transformed back to charges) for all cases in the DRG to which the new medical service or technology is assigned (or the case-weighted average of all relevant DRGs, if the new medical service or technology occurs in many different DRGs). Table 10 in the Addendum to the August 1, 2003, final rule (68 FR 45648) listed the qualifying threshold by DRG, based on the discharge data that we used to calculate the FY 2004 DRG weights.

However, section 503(b)(1) of Public Law 108–173 amended section 1886(d)(5)(K)(ii)(I) of the Act to provide for ''applying a threshold * * * that is the lesser of 75 percent of the standardized amount (increased to reflect the difference between cost and charges) or 75 percent of one standard deviation for the diagnosis-related group involved.'' The provisions of section 503(b)(1) apply to classification for fiscal years beginning with FY 2005. We updated Table 10 from the October 6, 2003, **Federal Register** correction document, which contains the thresholds that we used to evaluate applications for new service or technology add-on payments for FY 2005, using the section 503(b)(1) measures stated above, and posted these new thresholds on our Web site at: *http://www.cms.hhs.gov/providers/hipps/newtech.asp.* In the May 18, 2004, proposed rule, we included preliminary thresholds for evaluating applicants for new technology add-on payments for FY 2006. Table 10 of this final rule contains the final thresholds that will be used to evaluate applicants for new technology add-on payments for FY 2006. (Refer to section IV.D. of this preamble for a discussion of a revision of the regulations to incorporate the change made by section 503(b)(1) of Public Law 108–173.)

Section 412.87(b)(1) of our existing regulations provides that a new technology is an appropriate candidate for an additional payment when it represents an advance in medical technology that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. For example, a new technology represents a substantial clinical improvement when it reduces mortality, decreases the number of hospitalizations or physician visits or reduces recovery time compared to the technologies previously available. (*See* the September 7, 2001 final rule (66 FR 46902) for a complete discussion of this criterion.)

The new medical service or technology add-on payment policy provides additional payments for cases with high costs involving eligible new medical services or technologies while preserving some of the incentives under the average-based payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. Under § 412.88, Medicare pays a marginal cost factor of 50 percent for the costs of a new medical service or technology in excess of the full DRG payment. If the actual costs of a new medical service or technology case exceed the DRG payment by more than the 50-percent marginal cost factor of the new medical service or technology, Medicare payment is limited to the DRG payment plus 50 percent of the estimated costs of the new technology.

The report language accompanying section 533 of Public Law 106–554 indicated Congressional intent that the Secretary implement the new mechanism on a budget neutral basis (H.R. Conf. Rep. No. 106–1033, 106th Cong., 2nd Sess. at 897 (2000)). Section 1886(d)(4)(C)(iii) of the Act requires that the adjustments to annual DRG classifications and relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. Therefore, in the past, we accounted for projected payments under the new medical service and technology provision during the upcoming fiscal year at the same time we estimated the payment effect of changes to the DRG classifications and recalibration. The impact of additional payments under this provision was then included in the budget neutrality factor, which was applied to the standardized amounts and the hospital-specific amounts.

Section 503(d)(2) of Public Law 108–173 amended section 1886(d)(5)(K)(ii)(III) of the Act to provide that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, add-on payments for new medical services or technologies for FY 2005 and later years will not be budget neutral. We discuss the regulation change necessary to implement this provision in section IV.H. of this final rule.

Applicants for add-on payments for new medical services or technologies for FY 2006 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement, along with a significant sample of data to demonstrate the medical service or technology meets the high-cost threshold, no later than early October 2004. Applicants must submit a complete database no later than mid-December 2004. Complete application information, along with final deadlines for submitting a full application, will be available at our Web site after publication of this FY 2005 final rule at: *http://www.cms.hhs.gov/providers/hipps/default.asp.* To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2006, the Web site will also list the tracking forms completed by each applicant.

2. Other Provisions of Section 503 of Public Law 108–173

Section 503(b)(2) of Public Law 108–173 amended section 1886(d)(5)(K) of the Act by adding a new clause (viii) to provide for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial improvement or advancement. The revised process for evaluating new medical service and technology applications requires the Secretary to—

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries.
- Make public and periodically update a list of the services and technologies for which an application for add-on payments is pending.
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial improvement.
- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new service or technology represents a substantial

clinical improvement to the clinical staff of CMS.

In order to satisfy the requirements of this last provision, we published a notice in the **Federal Register** on February 27, 2004, and held a town meeting at the CMS Headquarters Office in Baltimore, MD, on March 15, 2004. In the announcement notice for the meeting, we stated that the opinions and alternatives provided during the meeting would assist us in our evaluations of applications by allowing public discussions of the substantial clinical improvement criteria for each of the FY 2005 new medical service and technology add-on payment applications before the publication of the FY 2005 IPPS proposed rule.

Approximately 70 participants registered and attended in person, while additional participants listened over an open telephone line. The participants focused on presenting data on the substantial clinical improvement aspect of their products, as well as the need for additional payments to ensure access to Medicare beneficiaries. In addition, we also received many written comments regarding the substantial clinical improvement criterion for the applicants. As indicated in the May 18, 2004, proposed rule, we considered these comments in our evaluation of each new application for FY 2005 in the proposed rule. In the proposed rule, we summarized these comments or, if applicable, indicated that no comments were received, at the end of the discussion of the individual applications.

Section 503(c) of Public Law 108–173 amended section 1886(d)(5)(K) of the Act by adding a new clause (ix) requiring that before establishing any add-on payment for a new medical service or technology, that the Secretary shall seek to identify one or more DRGs associated with the new technology, based on similar clinical or anatomical characteristics and the costs of the technology and assign the new technology into a DRG where the average costs of care most closely approximate the costs of care using the new technology. No add-on payment shall be made with respect to such a new technology.

At the time an application is submitted, the DRGs associated with the new technology are identified. We only determine that a new technology add-on payment is appropriate when the reimbursement under these DRGs is not adequate for this new technology. The criterion for this determination is the cost threshold, which we discuss below. We discuss the assignments of several new technologies within the DRG payment system in section II.B. of this final rule. The comment regarding the DRG assignment of the treatment for AIP is addressed in section II.B.16.i. of this final rule.

Comment: We received several letters from commenters stating that we should address the inequities in the DRG system with respect to several drugs and technologies that appeared to go unnoticed by us, according to the commenters. Specifically, payments for the treatment of acute intermittent porphyria (AIP) were brought to our attention. We received additional comments from physicians and a company concerning new procedure code 00.16 (Pressurized treatment of venous bypass graft (conduit) with pharmaceutical substance). The commenters requested that we evaluate potential reimbursement scenarios for these new procedures.

Response: We discuss the method for applying for consideration for the new technology add-on payment in section II.E.1. of this preamble. The Medicare program pays for thousands of medical services, drugs and technologies and may not necessarily be aware of all new technologies that come to the market. We have implemented the new technology add-on payment provision by providing a process by which applicants can present these technologies to us for add-on payment consideration. Commenters should also consider the application process for obtaining new ICD–9–CM codes to further aid in obtaining specifically identifying procedure codes in an effort to seek new technology add-on payments. We discuss the DRG assignment of procedure code 00.16 in section II.B.16.c. of this final rule. The comment regarding the DRG assignment of the treatment for AIP is addressed in section II.B.16.i. of this final rule.

Comment: Some commenters objected to the application of the newness criterion in the proposed rule. These commenters asserted that CMS's description of the criterion requiring a technology to be new was inconsistent with the statute and the September 7, 2001 final rule. Specifically, the commenters maintained that defining the period of new as during the 2-year to 3-year period after FDA market approval would ''represent a significant shift, retroactively changing the conditions under which companies have been developing innovative technologies and filing new technology applications.'' These commenters further stated that this makes the regulatory process unpredictable, ''potentially having an adverse effect on patient access to breakthrough medical technologies.'' The commenters urged us to ''reaffirm'' our September 7, 2001, policy and reevaluate the applications that CMS proposed to deny on the newness issue.

Response: The intent of section 1886(d)(5)(K) of the Act and regulations under § 412.87(b)(2) is to pay for new medical services and technologies for the first 2 to 3 years that a product comes on the market, during the period when the costs of the new technology are not yet fully reflected in the DRG weights. Generally, we use the FDA approval as the indicator of the time when a technology begins to become available on the market and data reflecting the costs of the technology begin to become available for recalibration of the DRGs. In some specific circumstances, we have recognized a date later than the FDA approval as the appropriate starting point for the 2-year to 3-year period. For example, we have recognized a later date where an applicant could prove a delay in actual availability of a product after FDA approval. The costs of the new medical service or technology, once paid for by Medicare for this 2-year to 3-year period, are accounted for in the MedPAR data that are used to recalibrate the DRG weights on an annual basis. Therefore, it is appropriate to limit the add-on payment window for those technologies that have passed this 2-to 3-year timeframe.

We disagree that our statement of the policy in the proposed rule is inconsistent with policy that was implemented in previous rules. In the first year that new technology applications were considered in the IPPS (that is, during calendar year 2002), we discussed several applications and determined whether they could be considered new on the basis of when FDA approval was granted to the technologies. Again in our August 1, 2003 final rule for FY 2004, we denied applicants on the basis that the technologies had gained FDA approval prior to FY 2001; and thus, were not eligible for new technology add-on payments. In these instances, we employed the actual date of FDA market approval, not the date a separate ICD–9–CM code became available, since data reflecting the costs associated with those technologies had already been included in the DRG weights prior to the adoption of a separate ICD–9–CM code.

Using the ICD–9–CM code alone is not an appropriate test of newness because technologies that are new to the market are automatically placed into the closest ICD–9–CM category when they first come on the market, unless the

manufacturer requests the assignment of a new ICD–9–CM code because existing codes do not adequately reflect or describe the medical service or device. The services and technologies that have been placed into existing ICD–9–CM codes have been paid for using those descriptors. Therefore, while it may be impossible to actually identify when a particular product was used because there is no unique code to identify it amongst other products in the category, the product is nonetheless used and paid for. In addition, hospital charges reflect the services provided to patients receiving the new service or device whether or not a specific code is assigned. Therefore, data containing payments for these new technologies are already in our MedPAR database and when DRG recalibration occurs these costs are accounted for. Furthermore, assignment of new codes can occur for many reasons other than the introduction of new procedures and technologies. For example, new codes can simply reflect more refined and discriminating descriptions of existing procedures and technologies.

If we were strictly to use the ICD–9–CM coding system for the purposes of identifying what technologies are new, there would be an incentive for nearly every product, service and surgical technique to apply for a new, unique ICD–9–CM code. The ICD–9–CM system could not absorb all these potential new codes. It would also be inappropriate to pay more, in the form of new technology add-on payments, for most of the codes, as the technology may have been in use prior to the assignment of the new code for several years, or several decades in some cases. For example, there is currently no procedural distinction between a patient receiving a kidney transplant from a living or cadaver donor. It is conceivable that this kidney transplant could be broken out into several procedures, identifying the source of the kidney (from living/deceased, relative/stranger, etc.), and each would be a ''new'' procedure if we were to adopt the commenters' approach. These procedures have been in use for up to half a century; and therefore, clearly should not qualify as a new medical service or technology simply because a new ICD–9–CM code has been assigned. Another example that further exemplifies the limitations of this ICD–9–CM-based approach is the esophageal permanent tube, which is a stent implanted in a patient who cannot be medically treated and is unable to swallow. If we create a new code, and use it to determine if the esophageal permanent tube should qualify for new technology payment under the commenters' approach, the technology could qualify as new, although the procedure has been used for the last 20 years.

We also note that our existing interpretation does not hamper the ability of patients to receive technologies that do not qualify for new technology add-on payments. The IPPS will continue to pay for existing and new medical services and technologies through the regular payment mechanism established by the DRG payment methodology. Therefore, patient access to these technologies is not adversely affected by this interpretation, and this interpretation is not inconsistent with the framework used to review new technology applications in previous years.

Comment: One commenter stated, ''we believe that the 2-to 3-year clock should not start until a technology receives final approval by the Food and Drug Administration.'' The commenter also submitted an additional comment that stated that the ''date of ICD–9 code assignment should start the add-on payment eligibility time clock, not the date of FDA approval.''

Response: We note that the commenter's comments were somewhat contradictory on the issue of newness. The timeframe that a new technology can be eligible to receive new technology add-on payments begins when data become available. Section 412.87(b)(2) clearly states that ''a medical service or technology may be considered new within the 2 to 3 year after the point at which data begins to become available reflecting the ICD–9–CM code assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration).'' Section 412.87(b)(2) also states ''***[a]fter CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered 'new' under the criterion of this section.'' Therefore, regardless of whether a technology can be individually identified by a separate ICD–9–CM code, if the costs of the technology are included in the charge data, and the DRGs have been recalibrated using that data, then the device can no longer be considered new for the purposes of this provision.

Comment: A commenter suggested that CMS adopt a different strategy for defining the newness criterion. The commenter believes that the decision of whether a technology is new should involve consideration of both the FDA approval date and the date of issuance of an ICD–9–CM code. The commenter explained that if an ICD–9–CM code is issued within 12 months of FDA approval, the 2-to 3-year period of a technology being considered new should begin from the date of issuance of the ICD–9–CM code. If a code is issued more than 12 months after FDA approval, the 2-to 3-year period should begin from the FDA approval date. The commenter noted that adoption of this interpretation would strike a balance between the FDA approval date and the procedure code effective date and is consistent with the preamble of the September 7, 2001 **Federal Register** (66 FR 46914) and the text of the regulation (42 CFR 412.87(b)(2)).

Response: We note that the time period does not necessarily start with the approval date for the medical service or technology and does not necessarily start with the issuance of a distinct code. Instead, it begins with availability of the product on the market, which is when data become available. We have consistently applied this standard, and believe that it is most consistent with the purpose of new technology add-on payments.

Comment: MedPAC recommended that we use a different approach to DRG recalibration. In these instances, MedPAC recommends that we exclude those cases involving a new technology from our DRG recalibration method. Doing so ''would avoid overpaying for the technology by including its costs in the base payment while also providing an add-on payment'' during the overlapping 2-to 3-year period in question. MedPAC further stipulates that this approach ''should be used for all cases where the new technology can be tracked'' with an ICD–9–CM code or where cases can be identified by other characteristics in our MedPAR data. They also stressed the importance of maintaining a conservative approach when CMS evaluates technologies for add-on payments. In addition, they noted that paying indiscriminately for too many technologies ''can be seen as unbundling of the DRG system'' which would threaten the ''incentives for hospitals to be efficient and weigh the benefits of new technologies against their costs.'' Moreover, they noted that section 503(b)(1) of Public Law 108–173 changed the cost criteria by lowering the threshold to qualify for add-on payments. As such, MedPAC believes that the number of technologies that could potentially be eligible to qualify will likely increase expenditures to the program since these payments are no longer budget neutral.

Response: We appreciate MedPAC's recommendations and will consider its suggestion regarding excluding the costs of cases involving new technologies from DRG recalibration calculations in the future. We also believe that we have consistently applied an appropriately high standard of clinical improvement to restrict these types of payments to relatively few technologies that are truly new. We will continue to apply this high standard in our review of applications for new technology add-on payments in the future.

Comment: A commenter noted that if ''CMS believes that it erred in developing the payment period policy published in the September 7, 2001 final rule, then it should propose a policy change applying to all applications for new technology add-on payments.'' The commenter also stated, that ''the implementation of such a policy change should affect only the applications received thereafter, and should not apply to any applications currently under consideration.''

Response: We believe that the commenter, the manufacturer of InFUSE™ Bone Graft, wanted to ensure that if we made a change in the policy, that change would be done through notice and comment rulemaking and that the change would not be applied retroactively to applicants that are currently under consideration. However, we note that we have not made any changes to the policies implemented in the September 7, 2001 final rule.

Comment: Several commenters urged us to be as clear as possible in implementing section 503 of Public Law 108–173. The commenters stated that transparency is necessary, particularly for ''small companies doing a disproportionate amount of the medical device research and development.'' Many commenters urged us to clearly state and adopt an approach to the provision so there is ''a clear path to follow and a reliable set of requirements to meet.'' Several commenters also noted that, despite how we have been applying the definition of new, many of the companies that have applied or could apply for new technology add-on payments do not neatly fall into a standard definition because different manufacturers follow different pathways. These commenters stated, ''many device manufacturers, especially small device entrepreneurs, lack the nationwide marketing, distribution, and reputation of the larger companies in the industry. These small companies are most affected by the so-called 'payment lag' during which new products are under-reimbursed.***'' In addition, commenters stated, despite or because of these problems of distribution, the rates of adoption and utilization of new products should be accounted for before we decide technologies are no longer new. In addition, commenters call for CMS to ''clarify what the bar is for a device to represent a substantial [clinical] improvement.'' Commenters stated that determinations of what represents a substantial clinical improvement have been largely subjective, but that, ''for future generations of add-on applicants, an elaborated definition would be helpful.''

Response: As stated previously, we have used as our uniform standard, the date of FDA approval in combination with market availability to evaluate new technology applications. We also note that in our evaluation of previous new technology applications, we have stated whether or not the applicants have met the substantial clinical improvement criterion as part of the basis for our approval or disapproval of the application. We follow the guidelines, as listed in the September 7, 2001 final rule, to make these determinations as they apply to improving the quality of care for the elderly Medicare population. However, as discussed in response to several of the other comments, we may need to consider revising our policies in the future to make the process more streamlined as more technologies apply for the new technology add-on payments. We will also consider the commenter's views concerning the payment lag for new products as we continue to develop policy in this area. However, at this time we believe that the 2-to 3-years timeframe remains an appropriate standard for determining when the costs of new technologies have been incorporated into the DRG weights.

Comment: Several commenters urged CMS to adopt a uniform standard for reviewing new technology add-on payment applications that is consistent between both the IPPS and the OPPS. Additionally, one commenter believes that CMS is inconsistent in its use of external data for verifying or amending payment rates. The commenter recommended that CMS should acknowledge that different types of data are appropriate for different uses such as revisions to APCs in the outpatient setting and adjustment of DRG relative weights in the inpatient setting. The commenter added that data requirements for determining eligibility for a new technology add-on payment should not be the same as for adjusting DRG relative weights. The commenter also recommended that external data provided for DRG assignments or payments for new technologies may be appropriately proprietary in these cases and the commenter believes CMS should release such data in a summary format agreed to by the companies and should not make the data available for public inspection without the companies' consent. The commenter also suggested that CMS should not require identification of a hospital by its Medicare provider number in cases where there may be a confidentiality agreement between the manufacturer or data vendor and the hospital submitting the data. The commenter recommended that CMS use pseudo-identifiers as an alternative to actual provider numbers. The commenter also proposed that CMS allow the use of external data from recent timeframes without corresponding MedPAR data, particularly for procedures involving new technologies and codes. The commenter explained that external data from private vendors has only a 60–90 day time lag compared to MedPAR, which has a lengthier time lag. The commenter further recommended that when determining the price of a drug or device CMS should accept the disclosure of discounts and rebates at the estimated aggregate level since the company may not know the final price paid by the hospital for a given product. Finally, the commenter recommended that CMS should request that medical technology companies offer the HCPCS codes and ICD–9–CM codes that seem most clinically appropriate to the procedure since this information would be most helpful to CMS and allow companies to target their resources in providing external data. Another commenter expressed that companies will not make the best data available ''unless CMS agrees to hold it confidential.''

Another commenter encouraged CMS to expand its acceptance of external data in order to ease the process of establishing adequate initial inpatient payment for new technology procedures at or as close as possible to the time of FDA approval. The commenter also urged CMS to accept external data as part of the recalibration of the DRG weights. The commenter also recommended that CMS apply reasonable standards that take into account the limited amount of data that may be available for new technologies and the difficulties involved in collecting such data in determining whether external data provides an acceptable basis for making a new DRG assignment or adjustment of the DRG weights.

One commenter, a company that gathers data on hospital services, noted

that its data could be used to project national trends and establish Medicare policies. The commenter also noted that there are instances where its data are more detailed than MedPAR. The commenter believes CMS should work with the industry to develop criteria for making use of external data. The commenter was also concerned about the difficulty of obtaining MedPAR data. The commenter explained that CMS no longer makes available quarterly updates to the MedPAR and that the MedPAR data used to develop the FY 2005 proposed rule were not made available in a timely manner.

Response: We note that we have followed many of these examples when reviewing previous technologies. In the case of Xigris(®), we worked very closely with the applicant to review the applicant's data in order to identify a cohort of cases that would be appropriate candidates to receive the new drug. For FY 2005, we have also worked very closely with the applicants to help them identify what data requirements needed to be met and to help them to determine the best strategies to meet these requirements. We note, however, that applicants should weigh the advantages of submitting additional data in support of an application for new technology add-on payments with the need to preserve the confidentiality of certain proprietary data. We thank the commenters for their other comments and recommendations regarding accepting non-MedPAR data. We intend to take these comments into consideration and review the feasibility of adopting one or more of these approaches at some time in the future. Because we did not make any proposals regarding the use of external data in the May 18, 2004 proposed rule, we are not making any changes at this time. However, we will consider the comments in developing future proposals.

We also note that we offer two annual updates of the MedPAR data used for determining the rates in FY 2005. One update is based on the data used for the proposed rule. This update is usually issued in May. The second update is based on the data used in the final rule and is usually issued in September. Information on purchasing the MedPAR data used in determining the rates for FY 2005 can be found on our Web site at *http://www.cms.hhs.gov/data/order/default.asp.* Finally, we note, that in the interests of providing the most accurate and complete data files and due to time and work constraints, we are no longer able to issue quarterly updates of the MedPAR to the public.

Comment: Commenters in general contended that they ''cannot meet the public's demands to adopt new technologies * * * because their ability to access capital is deteriorating''. Commenters stated that since very few new technologies have qualified for this add-on payment, hospitals continue to underutilize and potentially limit use of clinically important new technologies in the absence of these higher payments. Commenters again urged CMS to increase the payment for new technology add-on payments from 50 percent of the cost of the device to 80 percent of the costs. They stated that to do so would be in line with the Conference Committee Agreement accompanying Public Law 108–173 which states, ''the Secretary should consider increasing the percent of payment associated with the add-on payments up to the marginal rate used for the inpatient outlier.'' (108 Cong., 2d Sess., 212(2003)). Commenters further stated that CMS ''apparently believes that this outlier payment level strikes the appropriate balance between ensuring that providers are not unduly at financial risk for expensive cases * * *'', yet has offered no explanation for why this payment level would not be appropriate for the new technology add-on payment as well.

Response: We note that we have made substantial changes to the application threshold in the last year, reducing the cost threshold to qualify for new technology add-on payments twice. In addition, we have eliminated the budget neutrality provision, thus increasing the total moneys spent to pay for deserving, new technologies. While the conference report to the MMA recommended that the Secretary should consider changing the payment factor, we will not make such a change this year. Rather, we will analyze the impacts of the other MMA changes, especially the reduction in the cost threshold and the elimination of the budget neutrality of the add-on payments, before we consider making changes in the payment percentage. We will continue to consider the conference report's recommendation and will determine whether to proceed with a change in the light of our continuing analysis.

Comment: Commenters urged CMS to adopt an approach to the public meetings required by the MMA in a manner that is similar to the ICD–9 Coordination and Maintenance Committee meetings. Commenters noted that a specific agenda and preliminary opinions are released to the public prior to these meetings and urged CMS to present preliminary opinions on substantial clinical improvement prior to the public meeting on this topic.

Response: We have traditionally not provided our opinion on substantial clinical improvement of applicants for new technology add-on payments until the final rule. We note that if all the criteria are met prior to the publication of the proposed rule, we would prefer to make our preliminary determinations available at that time. However, to date we have not been able to make a sound determination regarding substantial clinical improvement until after the publication of the proposed rule.

Section 503(b)(2) of Public Law 108–173 requires CMS to consider public comments regarding whether an applicant for new technology payments meets the substantial clinical improvement criterion. Comments must be received and considered prior to the publication of the proposed rule for the annual IPPS update. This requirement, which was implemented for the first time through the new technology town hall meeting held in March of this year, and the subsequent comment period is further evidence that we do take the issue of substantial clinical improvement into account prior to the publication of the proposed rule. However, the MMA provision does not require the type of procedure recommended by the commenter, but merely the opportunity for presentation of comments, recommendations, and data to CMS.

We designed the town hall-styled meeting this spring to provide a forum for public comment on the applicants. This format appeared to be received well by most of the attendees. We accepted comments and topics from attendees and presenters at the meeting, as well as accepting comments on substantial clinical improvement of the applicants after the meeting. If presenters would like a more detailed agenda to be published prior to the rule, we welcome them to register to attend the annual meeting and provide the information requested in the **Federal Register** notice announcing the meeting (this includes personal information for registration purposes as well as topics to be presented at the meeting). If we have this information well in advance of the meeting, the agenda will reflect all issues that have been raised regarding the assessment of the substantial clinical improvement criterion for each applicant. We welcome further input on how to better incorporate input prior to the announcement of the next town hall meeting on this topic.

In the May 18, 2004 proposed rule (69 FR 28236), we also evaluated whether new technology add-on payments will

continue in FY 2005 for the two technologies that currently receive such payments. In accordance with section 503(e)(2) of Public Law 108–173, we also reconsidered one application for new technology add-on payments that was denied last year. Finally, we presented our evaluations of 10 new applications for add-on payments in FY 2005.

3. FY 2005 Status of Technology Approved for FY 2004 Add-On Payments

a. Drotrecogin Alfa (Activated)—Xigris®

Xigris®, a biotechnology product that is a recombinant version of naturally occurring Activated Protein C (APC), was approved by the FDA on November 21, 2001. In the August 1, 2002, IPPS final rule (67 FR 50013), we determined that cases involving the administration of Xigris®, (as identified by the presence of code 00.11 (Infusion of drotrecogin alfa (activated)) were eligible for additional payments in FY 2003. (The August 1, 2002, final rule contains a detailed discussion of this technology.)

In the August 1, 2003, final IPPS rule (68 FR 45387), we indicated that, for FY 2004, we would continue to make add-on payments for cases involving the administration of Xigris® as identified by the presence of code 00.11. This was because we determined that Xigris® was still within the 2-year to 3-year period before the costs of this new technology would be reflected in the DRG weights.

Xigris® became available on the market at the time of its FDA licensure on November 21, 2001. Early in FY 2005, Xigris® will be beyond the 2-year to 3-year period during which a technology can be considered new. Therefore, in the May 18, 2004 proposed rule, we proposed that Xigris® would not continue to receive new technology add-on payments in FY 2005. During the period of 2 years and 8 months since it came onto the market, Xigris® has been used frequently in the appropriate DRGs. For FY 2005, we analyzed the number of cases involving this technology in the FY 2003 MedPAR file. We found 4,243 cases that received Xigris®, the majority of which fell appropriately into DRGs 415, 416, 475, and 483, with by far the most cases in DRG 416 (Septicemia Age >17). Accordingly, the costs of Xigris® are now well represented in those DRGs. Therefore, we proposed that FY 2004 would be the final year for Xigris® to receive add-on payments.

Prior to the publication of the May 18, 2004, proposed rule, we received no public comments regarding the continuation of add-on payments for Xigris®. During the 60-day comment period for the proposed rule, we received 3 comments on this application.

Comment: The manufacturer submitted comments that were highly critical of CMS' proposal to discontinue add-on payments for Xigris®. The commenter brought up several points, which it believes, show that CMS is in violation of the statutory provisions. First, the manufacturer expressed opposition to the proposal to terminate the new technology add-on payments. It agreed that it was important to consider when a product comes on the market, but stated, ''[w]hether a technology is 'new' is not salient in determining whether a third year of add-on payments should continue.'' It stated that the costs of the drug had not been adequately accounted for as required by statute and that the period during which it was eligible to receive add-on payments should continue another year, until 3 full years of add-on payments had been made. It stated, that ''the fact that costs of a new technology or service may be included in the Medicare hospital discharge database (MedPAR) starting at the time an item or service is introduced into the marketplace is irrelevant. What matters is the ability to examine 2 years of cost data for cases coded as having used the new technology or service.'' Further, it argued, ''these cost data cannot be identified and collected until the ICD code is assigned and used in the coding of cases.'' It also stated that, since this 3-year maximum period had not yet ended, the costs of the cases could not have adequately been accounted for in our DRG recalibration using only data from FY 2003. It further stated that we should wait to remove them from add-on payment status until data from the FY 2004 MedPAR are available to recalibrate the DRGs. The manufacturer also stated that ''the point of the legislative changes was to improve the old way of doing business * * *. It is unfortunate that CMS proposes to take the path of least resistance because it is the Medicare beneficiaries who will ultimately suffer.''

Another commenter stated that our proposal to deny additional add-on payments in FY 2005 will deny Medicare beneficiaries the access to Xigris®. An additional commenter noted that, particularly because CMS was unable to implement the systems changes necessary to pay the new technology add-on payment for Xigris® until 8 months after the new code and higher payment were allowed, many hospitals were unclear as to the significance of correctly coding the new ICD–9-CM code identifying Xigris®, and therefore, the data for the first year of add-on payments do not adequately reflect the actual use of the drug.

Response: As stated previously, when we determine the newness criterion for new technology add-on applications, we use the date of FDA approval to determine that data including the technology are being incorporated into DRG recalibration, except in those rare cases where evidence can be presented that demonstrates that the product could not be marketed immediately after FDA approval. We have used this method of determining newness since we began reviewing new technology applications. While there was no clearly distinguishable code assigned to Xigris® prior to the implementation of the new ICD–9–CM code 00.11 on October 1, 2002, treatment with Xigris® was identified prior to that time by procedure code 99.19. While this may not suit the applicant in terms of the ability to track specific cases that involved the use of Xigris®, the drug was being used for more than 10 months prior to the assignment of code 00.11 and the costs associated with the drug were, therefore, clearly included in the FY 2003 MedPAR update. Additionally, we note that the manufacturer itself was able to identify patients that would or could use Xigris(r), as discussed in the May 9, 2002 proposed rule. There we stated, ''Lilly also submitted detailed ICD–9–CM diagnosis and procedure codes for a subset of * * * patients with billing data. * * *'' (67 FR 31428). Because the manufacturer was able to identify a subset of patients without billing data at that time, we have met the criteria set forth by the manufacturer itself in being able to identify ''2 years of cost data for cases coded as having used the new technology. * * *'' The data we have captured since including the data used for the FY 2003 proposed rule analysis, have adequately accounted for costs associated with these cases. Including the 2 subsequent years during which Xigris® was eligible to receive new technology add-on payments, this makes a total of 3 years of data that CMS has used to incorporate the costs associated with the drug into the weights of the DRGs into which these cases fall.

In the FY 2004 annual update, we estimated that there would be 3,000 cases involving Xigris® in the relevant DRGs and we note that there are now 4,313 cases involving the drug in the March update of the FY 2003 MedPAR. We have conducted an analysis of the FY 2002 MedPAR to determine the frequency of these cases in the DRGs in

which Xigris® has been used. We have identified 593 cases using procedure code 99.19 in these 5 DRGs, which is significantly lower than the most recent 2 years of data. Additionally, we recognize that this code included other drugs and that not all 593 cases reporting this code in these 5 DRGs necessarily involved Xigris®. However, this low number of cases is consistent with what we would expect, given that the initial ICD–9–CM code did not drive DRG placement or payments. It is also consistent with the reasoning behind our of approval Xigris® for new technology add-on payments, since it was clearly a new technology that provided great potential benefit to Medicare beneficiaries and met the other criteria as defined by the statute. It is also reasonable to expect that, once the new ICD–9–CM code went into effect, with a payment incentive to encourage its rapid adoption and use, the number of cases including this code rose dramatically. While the figure of 593 cases using procedure code 99.19 in the relevant cases in FY 2002 is not very high, we note that in the August 1, 2002 final rule we stated that, based on the sales figures from the company at that time, there was already ''$35 million in sales reported by Lilly through February 2002 (since the drug was approved in November 2001). (At $6,800 per patient, $35 million in sales equates to just over 5,000 cases for the first 4 months since FDA approval.)'' (67 FR 50015). Therefore, we are confident that we have adequate data reflecting the use of Xigris® over the past 3 years. If we were to continue add-on payments beyond FY 2004, the technology would be beyond its 2–3 year maximum as allowed by the statute. We have used these data to recalibrate the DRGs into which these cases most frequently fall, so the costs of the technology have already been accounted for in those DRG weights. Similarly, although we regret that systems changes delayed the processing of add-on payments for Xigris® in FY 2003, hospitals received add-on payments for all cases reporting the ICD–9-CM code for Xigris®. Furthermore, the costs of the new technology are nonetheless represented in the 2003 MedPAR data, whether hospitals used the new ICD–9–CM code for Xigris® (00.11) or the earlier procedure code (99.19). We do not agree with the assertion that Medicare beneficiaries will no longer have access to this important drug once the new technology add-on payments associated with it are terminated. To the contrary, we will continue to pay for the drug through DRG payment, and as noted above, the costs associated with the drug have been included in the weights of the relevant DRGs through the DRG recalibration.

Comment: The manufacturer also noted that section 1886(d)(5)(K)(ii)(IV) of the Act requires, ''that discharges involving such a service or technology that occur after the close of the period [of add-on payments] will be classified within a new or existing diagnosis-related group with a weighting factor * * * that is derived from the cost data collected with respect to discharges occurring during such period.'' The commenter argues that there is no room for interpretation of the statute and that, since the average costs of cases involving the technology are very high, they should be assigned either to a new DRG or remapped to higher-weighted DRGs to reflect the cost of the cases. Another commenter asked that, if CMS refused to continue add-on payments for the entirety of FY 2005, such payments should be ''maintained at least until the agency has analyzed the available data and has classified cases in which Xigris® is administered into an appropriate DRG.''

Response: We do not agree with the implications the commenter draws from the statutory language. We have assigned cases involving the use of Xigris® to clinically coherent DRGs, and the weights of these DRGs have been recalibrated to reflect the costs of these technology. We have also analyzed the costs of these cases and determined that, although the average standardized charge for these cases is higher than the average charges for the DRGs into which the cases involving Xigris® fall, there appears to be no justification to warrant creation of a new DRG or re-assignment of cases involving Xigris® into higher-weighted DRGs. We do not believe that it is necessary to assign cases involving Xigris® to a separate unique DRG, as requested by the manufacturer, in order to satisfy the statutory requirement. Indeed, we note that the commenter's own comment stated, ''Xigris® is administered to only a small proportion of the severe sepsis population and is not representative of the comprehensive incidence of the disease.'' Therefore, by the manufacturer's own statements, we cannot use cases involving the code for Xigris® as the standard by which to assign severe sepsis cases. We discuss the DRG assignment of Xigris® in section II B.16.c. of this final rule.

Comment: One national hospital association agreed with our proposal to discontinue add-on payments for this technology. The commenter noted that the termination of the add-on payments falls outside the timeframe in which a technology is new for add-on payment purposes. The association strongly encouraged CMS to continue monitoring the use of Xigris® and associated conditions of severe sepsis to determine if future revisions to the current DRGs will be necessary. Another commenter urged us to continue to monitor the use and diffusion of all new technologies that qualify or have previously qualified for this provision. Commenters urged CMS to require that all hospitals continue to code for the use of the new technologies, even after the period of add-on payment for the technologies has ended, thus ensuring adequate tracking of diffusion of the new technologies as they continue to be used.

Response: We appreciate the commenter's support for our decision to remove this technology from add-on payment status. We note that we review new technology add-on payment recipients annually to determine whether they continue to meet the criteria to receive add-on payments. In the case of Xigris®, this review led us to find that it no longer meets the newness criterion. While we encourage hospitals to continue to code for the drug, even though there is no longer a payment incentive to do so, we cannot require hospitals to code for the use of the drug.

We are finalizing our proposal to remove Xigris® from new technology status and will no longer pay new technology add-on payments for this technology, starting October 1, 2004. The manufacturer also asked us to consider creating a DRG specifically for severe sepsis. We discuss this request in section II.B.16.c. of the preamble to this final rule.

b. InFUSE™ (Bone Morphogenetic Proteins (BMPs) for Spinal Fusions)

InFUSE™ was approved by FDA for use on July 2, 2002, and became available on the market immediately thereafter. In the August 1, 2003 IPPS final rule (68 FR 45388), we approved InFUSE™ for add-on payments under § 412.88, effective for FY 2004. This approval was on the basis of using InFUSE™ for single-level, lumbar spinal fusion, consistent with the FDA's approval and the data presented to us by the applicant. Therefore, we limited the add-on payment to cases using this technology for anterior lumbar fusions in DRGs 497 (Spinal Fusion Except Cervical With CC) and 498 (Spinal Fusion Except Cervical Without CC). Cases involving InFUSE™ that are eligible for the new technology add-on payment are identified by assignment to DRGs 497 and 498 as a lumbar spinal fusion, with the combination of ICD–9–

CM procedure codes 84.51 (Insertion of interbody spinal fusion device) and 84.52 (Insertion of recombinant bone morphogenetic protein).

Because InFUSE™ was approved by the FDA for use on July 2, 2003, it is still within the 2-year to 3-year period during which a technology can be considered new under the regulations. Therefore, in the May 18, 2004 proposed rule, we proposed to continue add-on payments for FY 2005 for cases receiving InFUSE™ for spinal fusions in DRGs 497 (Spinal Fusion Except Cervical With CC) and 498 (Spinal Fusion Except Cervical Without CC). We also proposed to continue limiting the add-on payment for cases receiving InFUSE™, to those cases identified by the presence of procedure codes 84.51 and 84.52. However, we proposed to eliminate add-on payment for the interbody fusion device that is used in combination with this recombinant human bone morphogenetic protein (rhBMP) product (procedure code 84.52). We note that currently add-on payments for InFUSE™ include costs for the interbody fusion device (the LT Cage, identified by procedure code 84.51), used in the spinal fusion procedure with the InFUSE™ product. Because this device is not a new technology, but in fact has been in use for 9 years for spinal fusions, we believe that it is inappropriate to pay for this device in conjunction with the genuinely new rhBMP technology. Therefore, we proposed no longer to pay for the interbody fusion device as bundled in the current maximum add-on payment amount of $4,450 for cases that qualify for additional payment. The proposal would reduce the add-on payment to account for no longer including the costs of the LT Cage in computing the add-on payment amount. This would reduce the cost of this new technology by $4,990, which results in a total cost of $3,910 for InFUSE™. Therefore, we proposed a maximum add-on amount of $1,955 for cases that qualify for additional payment. Although we proposed to eliminate payment for the LT Cage, we would still require the presence of procedure code 84.51 (in combination with procedure code 84.52) when making new technology add-on payments for InFUSE™. This is due to the fact that the LT Cage is still required by the FDA when InFUSE™ is used for single level spinal fusions.

Prior to the publication of the May 18, 2004 proposed rule, we received public comments in accordance with section 503(b)(2) of Public Law 108–173 regarding the continuation of add-on payments for this technology. Commenters expressed support for the continuation of new technology add-on payments for this technology in FY 2005.

We are finalizing that proposal in this final rule.

We received the following comments in response to the May 18, 2004 proposed rule.

Comment: Several commenters supported our proposal to no longer pay for the LT Cage as a bundled add-on payment with InFUSE™. They noted that it was not appropriate to pay for the LT Cage as part of the InFUSE™ add-on since the technology has been available for several years.

Response: When we initially reviewed the application, the applicant indicated to us that the FDA approval was for a pre-packaged product that included the LT Cage, the InFUSE™ biotechnology product, and an absorbable collagen sponge to carry the rhBMP. While the FDA label required the product to be used with the LT Cage, we were initially under the impression that these devices were provided to hospitals in the same package. It later was brought to our attention that the product was not marketed this way and that in fact the rhBMP product is supplied to hospitals in several different sized ''kits'' that have differing amounts of InFUSE™ in them, and that the LT Cage is purchased separately. As such, it is not only easy to see why the add-on payment should be unbundled, but also easy to do so.

Comment: Some commenters, including the manufacturer, were opposed to our proposal to discontinue bundled payment for InFUSE™ in combination with the LT Cage. They argue that to remove the payment for the LT Cage would result in even further restricting the use of this much needed technology that eliminates a painful second surgery and extensive blood loss for the patients who must otherwise undergo spinal fusions via conventional, autogeneous bone-harvesting methods. Other commenters were very concerned that the lower add-on payment amount would result in hospitals using cages other than the FDA-approved LT Cage with this technology. These commenters stated that to encourage this off-label use by not continuing the higher payments is contrary to our statement in last year's final rule requiring that a product qualify for add-on payments based upon usage consistent with its FDA labeling.

Response: In this clear case where a new technology is being used in conjunction with an old technology, we do not believe it is appropriate to continue to pay an add-on payment for the old device, as this device has already been in use for 9 years and has been accounted for in DRG payments. We are finalizing our proposal to approve InFUSE™ for spinal fusion for an additional year of new technology add-on payments, through the end of FY 2005. We note that in order to receive new technology add-on payment for InFUSE™, we are continuing to require both the procedure code for InFUSE™ (84.52) and the code for the LT Cage (84.51) due to the FDA label that requires the LT Cage to be used in conjunction with the InFUSE™ product. While the procedure code for the LT Cage (84.51) does include other brands and types of cages for spinal fusion, we expect that doctors will maintain the best clinical standard for their patients and will continue to use the LT Cage with the InFUSE™ product. We are therefore finalizing our proposal to unbundle the new technology add-on payments for this device for FY 2005 by removing payment for the LT Cage from the add-on payment for cases involving InFUSE™. We are also finalizing the maximum add-on payment amount of $1955 for cases that are eligible to receive the add-on payment.

Comment: Other commenters were pleased about our proposal to discontinue bundled payments that include the LT Cage for spinal fusions because this bundled payment precluded payment for similar technologies that are used in spinal fusion surgery but that do not require use of the LT Cage. One commenter noted that another BMP product was just awarded FDA approval for spinal fusion involving posterolateral approach. This commenter requested that the other devices of this nature be included in any approval of rhBMPs for new technology add-on payments or an unfair economic advantage would be created.

Response: As we discussed in the September 7, 2001, final rule (66 FR 46915), an approval of a new technology for special payment should extend to all technologies that are substantially similar. Otherwise, our payment policy would bestow an advantage to the first applicant to receive approval for a particular new technology. The new product, called OP–1 Putty, manufactured by Stryker Biotech, utilizes a similar mechanism to promote natural bone growth by using a closely related bone morphogenetic protein called rhBMP–7 (InFUSE™ is rhBMP–2). Because the OP–1 Putty is now available on the market (it received FDA approval for spinal fusions in May of this year) for similar spinal fusion procedures and also eliminates the need

for the autograft bone surgery, we are extending new technology add-on payments to this technology as well, for FY 2005. Because the new product does not require the LT Cage to be used simultaneously, we are requiring that providers use different codes when the different products are used.

Cases using InFUSE™ should be identified by the combination of procedure codes 84.51 and 84.52, as described above and as required in the previous year of new technology add-on payments for this technology. For cases using the OP–1 Putty, the procedure code 84.52 (Insertion of recombinant bone morphogenetic protein) must be coded in combination with procedure codes identifying posterolateral spinal fusions, as is consistent with the FDA approval for this device. Therefore, procedure code 84.52 must be coded with any of the following procedure codes: 81.08 (Lumbar/lumbosac fusion posterior technique), 81.38 (refusion of lumbar posterior approach), 81.05 (Dorsal and dorsolumbar fusion, posterior technique), or 81.35 (Refusion of dorsal and dorsolumbar spine, posterior technique) in order to receive add-on payments under this provision. Both of these devices have FDA approval that is consistent with cases that would be assigned to DRGs 497 or 498. Because Stryker Biotech did not submit a new technology add-on payment application, we were unable to do a complete analysis of the cost of the device. However, we have been able to determine that the costs associated with the OP–1 Implant are similar to those associated with InFUSE™. Therefore, we believe that the same payment amount for new technology add-on payments is appropriate for both devices. Accordingly, cases containing one of the above combinations of procedure codes and that fall into DRGs 497 or 498 will be eligible to receive the add-on payment, with a maximum of $1,955 for FY 2005.

4. Reevaluation of FY 2004 Applications That Were Not Approved

Section 503(e)(2) of Public Law 108–173 requires us to reconsider all applications for new medical service or technology add-on payments that were denied for FY 2004. We received two applications for new technologies to be designated eligible for add-on payments for new technology for FY 2004. We approved InFUSE™ for use in spinal fusions for new technology add-on payments in FY 2004. We denied the application for new technology add-on payments for the GLIADEL ® wafer.

GLIADEL ® Wafer

Gliablastoma Multiforme (GBM) is a very aggressive primary brain tumor. Standard care for patients diagnosed with GBM includes surgical resection followed by radiation and, in some cases, systemic chemotherapy. According to the manufacturer, the GLIADEL® wafer is indicated for use at the time of surgery in order to prolong survival in patients with GBM. Implanted directly into the cavity that is created when a brain tumor is surgically removed, the GLIADEL® wafer delivers chemotherapy directly to the site where the tumor is most likely to recur.

The FDA gave initial approval for the GLIADEL® wafer on September 23, 1996, for use as an adjunct to surgery to prolong survival in patients with recurrent GBM for whom surgical resection is indicated. In 2003, Guilford Pharmaceuticals submitted an application for approval of the GLIADEL® wafer for add-on payments and stated that the technology should still be considered new for FY 2004, despite its approval by the FDA on September 23, 1996. The manufacturer stated that the technology was still new because it had not been possible to specifically identify cases involving use of the GLIADEL® wafer in the MedPAR data prior to the adoption of a new ICD–9–CM code 00.10 (Implantation of a chemotherapeutic agent) on October 1, 2002. However, as discussed in the September 7, 2001 final rule (66 FR 46914), the determination concerning whether a technology meets this criterion depends on the date of its availability for use in the Medicare population rather than the date a specific code may be assigned. A technology can be considered new for 2 or 3 years after data reflecting the costs of the technology begin to become available. Data on the costs of this technology began to become available in September 1996. As a result, the costs of this technology are currently reflected in the DRG weights. As discussed in the final rule for FY 2004 (68 FR 45391), on February 26, 2003, the FDA approved the GLIADEL® wafer for use in newly diagnosed patients with high-grade malignant glioma as an adjunct to surgery and radiation. However, our understanding is that many newly diagnosed patients were already receiving this therapy. To the extent that this is true, the charges associated with this use of the GLIADEL® wafer were also reflected in the DRG relative weights. Therefore, the GLIADEL® wafer did not meet this criterion for FY 2004.

Section 503(e)(2) of Public Law 108–173 required us to reconsider this application, but did not revise the criterion for determining whether a medical service or technology is new. As stated above, the FDA originally approved the GLIADEL® wafer on September 23, 1996. Therefore, this technology is beyond the period in which it can be considered new. Accordingly, in the May 18, 2004, proposed rule, we proposed to deny this application for new technology add-on payments for FY 2005.

Prior to the publication of the May 18, 2004, proposed rule, we received no public comments regarding our reconsideration of this application for add-on payments. During the 60-day comment period for the May 18, 2004, proposed rule, we received the following public comments regarding our reconsideration of the application.

Comment: One commenter stated, ''[a]s a country that prides itself on being a leader in cancer research, it is disheartening that patients must battle to gain access to the benefits that this research has provided.''

Response: We continue to pay for technologies that do not meet the criteria to receive new technology add-on payments through the regular payment mechanism established by the DRG payment methodology. Therefore, patient access to these technologies should not be adversely affected by a determination that a technology does not qualify to receive add-on payments.

Comment: One commenter believes that the GLIADEL® chemotherapy wafer merits a separate DRG, which the applicant contends would be similar to our treatment of the establishment of new DRGs for drug-eluting stents. The commenter acknowledges that DRGs are ''not normally created to recognize the presence or absence of new technology.'' Nevertheless, the commenter argues that CMS' recognition of the ''unique circumstances surrounding the potential breakthrough nature'' of drug-eluting stents should also be applied to GLIADEL® wafer.

Response: Guilford asked us to consider reclassifying this device into another DRG. We discuss issues relating to the DRG assignment of the GLIADEL® wafer in section II.B.16.c. of this final rule. In that discussion, we announce our decision to create a new DRG 543 (Craniotomy with implantation of chemotherapeutic agent or acute complex central nervous system principle diagnosis) to which Gliadel cases will be assigned. The cases assigned to this new DRG have similar resource utilization and comparable charges to cases involving the GLIADEL® wafer. As a result, we

believe this DRG assignment will result in appropriate payments for these cases. In this rule we are finalizing our denial of new technology add-on payments for this technology.

5. FY 2005 Applicants for New Technology Add-On Payments

a. InFUSE™ Bone Graft (Bone Morphogenetic Proteins (BMPs) for Tibia Fractures)

Bone Morphogenetic Proteins (BMPs) have been shown to have the capacity to induce new bone formation and, therefore, to enhance healing. Using recombinant techniques, some BMPs (referred to as rhBMPs) can be produced in large quantities. This has cleared the way for their potential use in a variety of clinical applications such as in delayed unions and nonunions of fractured bones and spinal fusions. One such product, rhBMP–2, is developed for use instead of a bone graft with spinal fusions.

Medtronic Sofamor Danek submitted an application for the InFUSE™ Bone Graft for use in tibia fractures for approval as a new technology eligible for add-on payments in FY 2005. Medtronic submitted a similar application for new technology add-on payments in FY 2004 for InFUSE™ Bone Graft/LT-CAGE™ Lumbar Tapered Fusion Device. As discussed above, we approved this application for FY 2004, and will continue to make new technology payments for FY 2005 for InFUSE™ when used in spinal fusions (refer to section III.E.3.b. of this preamble).

In cases of open tibia fractures, InFUSE™ is applied using an absorbable collagen sponge, which is then applied to the fractured bone in order to promote new bone formation. The manufacturer contends that this use is severely limited due to the greatly increased costs for treating these cases with InFUSE™ at the time of wound debridement and closure. The manufacturer has conducted a clinical trial and FDA approval for the use of InFUSE™ for open tibia fractures was awarded on April 30, 2004. The application for add-on payments for the use of InFUSE™ for open tibia fractures proposes that such payment would encourage the use of InFUSE™ for treatment of these fractures of grade II or higher (up to and including grade III, which often must be amputated due to the severity of injury). The additional payment, according to the applicant, would encourage more hospitals to use the technology at the time of initial wound closure and would result in reduced rates of infection and nonunion currently associated with the treatment of these injuries.

The manufacturer submitted data on 315 cases using InFUSE™ for open tibia fractures in the FY 2002 MedPAR file, as identified by procedure code 79.36 (Reduction, fracture, open, internal fixation, tibia and fibula) and diagnosis codes of either 823.30 (Fracture of tibia alone, shaft, open) or 823.32 (Fracture of fibula and tibia, shaft, open). The applicant also noted that the patients in their clinical trials as well as patients that would be likely candidates to receive InFUSE™ for tibia fractures would include those cases that had malunion of their fractures (diagnosis code 733.81) or nonunion of fractures (diagnosis code 733.82). The applicant also submitted data for a hospital sample that included 63 cases using the same identifying codes. Based on the data submitted by the applicant, InFUSE™ would be used in four different DRGs: 217 (Wound Debridement and Skin Graft Except Hand, for Musculoskeletal and Connective Tissue Disorders), 218 and 219 (Lower Extremity and Humerus Procedures Except Hip, Foot, Femur Age > 17, With and Without CCs, respectively) and 486 (Other O.R. Procedures for Multiple Significant Trauma). The analysis performed by the applicant resulted in a case-weighted cost threshold of $27,111 for these four DRGs. The average case-weighted standardized charge for cases using InFUSE™ in these four DRGs would be $46,468. Therefore, the applicant maintains that InFUSE™ for open tibia fractures meets the cost criterion.

Further discussions with the applicant revealed that the more appropriate DRGs to which this device should be limited are DRGs 218 and 219 (Lower Extremity and Humerus Procedures Except Hip, Foot and Femur Age > 17, With and Without CC). The manufacturer projects that there would be approximately 550 cases (based on the number of open tibia fractures that would have qualified for InFUSE™ in the FY 2002 MedPAR) in FY 2005. Since FDA approval for use of InFUSE™ for open tibia fractures, we have performed an analysis to determine the number of cases that may have already received InFUSE™ for treatment of open tibia fractures. We identified 3,788 cases in DRGs 218 and 219 (Lower Extremity & Humerus Procedures except hip, foot, femur, age >17, with and without CCs) that also had procedure code 79.36 (Reduction, fracture, open, internal fixation, tibia and fibula) and any of the following diagnosis codes: 823.30 (Fracture of tibia alone, shaft, open), 823.32 (Fracture of fibula with tibia, shaft, open), 733.81 (Malunion of fracture), or 733.82 (Nonunion of fracture). We identified 38 cases in DRGs 218 and 219 that contained a code identifying a BMP product (identified by the presence of procedure code 84.52) in the FY 2003 MedPAR.

In the May 18, 2004, proposed rule, we noted that as part of its application, the applicant submitted evidence on the substantial clinical improvement criterion. The applicant cited data from a prospective, controlled study published on December 12, 2002 in *The Journal of Bone and Joint Surgery* (Govender , S., Crismma, C., Genant, H.K., Valentin-Opran, V., ''Recombinant Human Bone Morphogenetic Protein–2 for Treatment of Open Tibia Fractures,'' Vol. 84–A, No. 12. p. 2123). The study, also known as BESTT study group, involved 49 trauma centers in 11 countries. The study enrolled 450 patients who had sustained an open tibia shaft fracture that normally would be treated by intramedullary nail fixation and soft tissue management. The patients were randomly and blindly assigned to one of three groups: The standard of care as stated above, the standard of care plus implantation of an absorbable collagen sponge soaked with .75 mg/ml of rhBmP–2, or the standard of care plus implantation of an absorbable collagen sponge soaked with 1.50 mg/ml of rhBMP–2. The study followed up with 421 (94 percent) of all patients. The applicant stated that the study found that patients who received the standard of care plus an absorbable collagen sponge soaked with 1.50 mg/ml of rhBMP–2 achieved the following results compared to the standard of care without the rhBMP: a 44-percent reduction in the rate of secondary surgery, an average of 39 days reduction in time of clinical healing and lower infection rates. As a result, the applicant maintains that InFUSE™ in tibia fractures represents a substantial clinical improvement over previously available technologies.

In the May 18, 2004, proposed rule, we did not present a full analysis of this application under the substantial clinical improvement criterion because the technology had not yet received FDA approval for this use in time for consideration in the proposed rule. However, we noted that, although the cited study provides some evidence of clinical efficacy, we had some concerns about whether the study conclusively demonstrates substantial clinical improvement over previously available technologies because of its design. (It is important to note, as we stated in the August 1, 2002, **Federal Register** (67 FR

50015), that we do not employ FDA guidelines to determine what drugs, devices, or technologies qualify for new technology add-on payments under Medicare. Our criteria do not depend on the standard of safety and efficacy that the FDA sets for general use, but on a demonstration of substantial clinical improvement in the Medicare population, particularly patients over age 65.) We indicated that we would present our full analysis of the evidence regarding clinical improvement in the final rule.

Since the publication of the proposed rule, the manufacturer has provided additional information regarding substantial clinical improvement. The applicant provided research indicating both the efficacy of the rhBMP product in the elderly, Medicare population as well as satisfactorily answering any remaining questions our physicians had regarding the clinical trials for this use of InFUSE™.

In the proposed rule, we indicated that we determined that this technology still qualifies as new in the context of extending new technology add-on payments for InFUSE™ for single-level spinal fusions (refer to InFUSE™ for spinal fusion in section 3(b) above). We noted that, in the September 7, 2001 final rule (66 FR 46915), we stated that if an existing technology was assigned to different DRGs than those in which the technology was initially used, the new use may be considered for new technology add-on payments if it also meets the substantial clinical improvement and inadequacy of payment criteria. Under the policy suggested in that rule, approval of InFUSE™ for tibia fractures would start a new period of add-on payments for the new use of this technology. However, we stated that we had some reservations about whether this result would be appropriate. We stated that it might be possible, under the policy described in the September 7, 2001 final rule, for a technology to receive new technology add-on payments for many years after it is introduced, provided that use of the technology is continually expanded to treatment of new conditions (in this case, every time the product is used to treat a new bone injury). We invited comment on whether it would be more appropriate merely to extend the existing approval of InFUSE™ for spinal fusions to cases where InFUSE™ is used for open tibia fractures, without extending the time period during which the technology will qualify for add-on payments. We also invited comments on whether use of InFUSE™ for open tibia fractures should qualify for add-on payments under the cost and substantial clinical improvement criteria.

Comment: One commenter wrote ''to bring to Medicare's immediate attention that there is more that one BMP manufacturer with approved indications for long bone fractures * * *''. The commenter went on to note that ''Stryker[Biotech]'s * * * OP–1 Implant for recalcitrant long bone non-unions received FDA clearance in October, 2001.'' The commenter urged Medicare that ''the decision for add-on payment should be for the BMP, not the manufacturer.''

Response: We agree with the commenter that determinations concerning new technology add-on payments should not make distinctions between different manufacturers of the same technology. As we stated in the proposed rule on May 18, 2004: ''an approval of a new technology for special payment should extend to all technologies that are substantially similar. Otherwise, our payment policy would bestow an advantage to the first applicant to receive approval for a particular new technology.'' (69 FR 28242). In this case, we had received no information concerning the existence of the OP–1 Implant for long bone fusion, created by Stryker Biotech, prior to this comment. Since the OP–1 Implant received FDA clearance in October, 2001, it has been necessary to reevaluate whether InFUSE™ for open tibia fractures can still be considered new in the light of this new information. This determination turns on two considerations: whether these products are substantially similar, and whether the indications for the two products lead to the assignment of cases involving the use of the two products to the same DRGs. The crucial consideration in determining whether a technology is new from a payment policy perspective is whether data reflecting the costs of the technology have been incorporated into setting the DRG weights. A technology can be considered new for 2 to 3 years after the point at which charge data begin to become available.

We have been able to determine that the OP–1 Implant created by Stryker Biotech in fact was approved by the FDA under Humanitarian Device Exemption (HDE) on October 17, 2001, for the indication of ''use as an alternative to autograft in recalcitrant long bone nonunions where use of autograft is unfeasible and alternative treatments have failed.'' It came onto the market shortly after approval. The trials where the OP–1 Implant was used demonstrated the safety and efficacy of OP–1 Implant for patients with complicated fractures of the tibia.[3] These cases and the study protocol are similar to those described in the clinical trials involving InFUSE™ for open tibia fractures. In fact, many of the cases that were brought for review during the application process for Infuse™ were patients that had already experienced non-union, were not candidates for autograft (due to already having autograft surgery and there not being enough material left in the hip to acquire more, or poor quality of the bone, etc.), or had fractures in long bones other than the tibia (many cases were femur fractures). Therefore, we believe the technology involving use of rhBMP to treat severe long bone fractures, including open tibial fractures, and recalcitrant long bone fractures has been in use for more than 3 years. In addition, cases involving use of the OP–1 Implant for long bone nonunions and open tibia fractures are assigned to the same DRGs (218 and 219, Lower extremity procedures with and without complication or comorbidity, respectively). Therefore, data reflecting the costs associated with this technology began to become available in the relevant DRGs in 2001, and are now reflected in the DRG weights. We therefore find that the use of rhBMPs for these indications is not a new technology for the purposes of the new technology add-on payment. In addition, if we were to approve InFUSE™ for open tibia fractures for the new technology add-on payment there would be no way to distinguish the claims getting InFUSE™ BMP and those cases receiving the OP–1 Implant BMP, because they are indistinguishable by patient characteristics or ICD–9 code.

Accordingly, we are denying the application for add-on payments for InFUSE™ for open tibia fractures because this device is not a substantial clinical improvement over existing technologies, and therefore is not a new technology for purposes of new technology add-on payments. We acknowledge, however, that products may evolve that are very closely related but that have very different clinical efficacies, and we are committed to continuing to refine and share our methodology for deciding what should or should not be considered a new and innovative technology. In this context, we would note that MedPAC has encouraged us ''to be conservative in [evaluating] * * * technologies for add-

[3] Friedlaender, GE, at al. ''Osteogenic Protein–1 (Bone Morphogenetic Protein–7) in the Treatment of Tibial Nonunions: A Prospective, Randomize Clinical Trial Comparing rhOP–1 with Fresh Bone Autograft.'' Journal of Bone & Joint Surgery. 2001;83A(S1): 151–158.

on payments, ensuring that technologies are substantially different from predecessor technologies, costly, and with clinical benefit.''

Comment: Several commenters stated their concerns regarding a number of issues raised in our discussion in the proposed rule. They do not think that it would be appropriate to deny add-on payments for InFUSE™ for tibia fractures regardless of the existing status of the device for use in other surgeries. They stated that CMS should not indiscriminately impose our policy criteria without considering the clinical opinions of experts involved in these cases and as a result deny patients access to the latest breakthrough medical technologies. Several other commenters wrote to encourage CMS to make add-on payments for the InFUSE™ bone graft for treatment of ''compound fractures of the tibia.'' The manufacturer commented that it would go against CMS precedent not to consider the new indication for InFUSE™ as qualifying for its own determination of substantial clinical improvement since we had made a similar analysis in FY 2004 for GLIADEL® wafer. One commenter also supported the review and approval of new technology add-on payments where the new technology is being used for a different medical procedure than the original use and will group to separate DRGs.

Response: As stated previously, we do not believe that patient access to breakthrough technologies is being denied. Because another device using rhBMPs for these indications has been in use for 3 years and the costs for this technology have been included in the weights for the DRGs where cases involving InFUSE™ for open tibia fractures have been assigned, this technology is not a substantial clinical improvement over exisitng technologies and can no longer be considered ''new.'' We further note that because we determined that the GLIADEL® wafer did not meet the newness criterion, we did not conduct an analysis on the substantial clinical improvement criterion in FY 2004.

b. Norian Skeletal Repair System (SRS)® Bone Void Filler

Brigham and Women's Hospital submitted an application for approval of the Norian Skeletal Repair System (SRS)® Bone Void Filler (Norian SRS® Cement), manufactured by Synthes for new technology add-on payments for FY 2005. Synthes has been assisting the applicant with supplemental information and data to help the applicant with the application process. According to the manufacturer, Norian SRS® Cement is an injectable, fast-setting carbonated apatite cement used to fill defects in areas of compromised cancellous bone during restoration or augmentation of the skeleton. The product provides a bone-void filler that resorbs and is replaced with bone during the healing process.

On December 23, 1998, the FDA approved Norian SRS® for use as an adjunct for fracture stabilization in the treatment of low impact, unstable, metaphyseal distal radius fractures, in cases where early mobilization is indicated. On December 20, 2001, the FDA approved Norian SRS® Cement for use in bony voids or defects that are not intrinsic to the stability of the bony structure. Norian SRS® Cement is intended to be placed or injected into bony voids or gaps in the skeletal system. These defects may be surgically created osseous defects or osseous defects caused by traumatic injury to the bone.

Despite the time that has elapsed since FDA approval, the manufacturer contends that Norian SRS® Cement should still be considered new for several reasons. First, until April 2002, Norian SRS® Cement was hand mixed using a mortar and pestle. Once Norian SRS® Cement was approved by the FDA in December 2001 (for the indication of use in bony voids or defects that are not intrinsic to the stability of the bony structure), the manufacturer issued a new pneumatic mixer. According to the manufacturer, this new pneumatic mixer allows for better preparation, reliability, and ease of use. In addition, a new injection syringe mechanism was developed and made available in May 2002 and replaced the ''Norian Delivery Device''. The manufacturer believes these new procedures for mixing and delivery of the product to the patient should be considered new services as stated in section 1886(d)(5)(k)(ii) of the Act and § 412.87(b)(1) of the regulations. Second, the manufacturer contends that the cement should still be considered new because there is no ICD–9–CM code to uniquely identify Norian SRS® Cement within the DRGs.

In the May 18, 2004, proposed rule, we indicated that, although there have been changes in the way Norian SRS® Cement is mixed and delivered to the patient, we do not believe these changes are significant enough to regard the technology as new. While these changes may enhance the ease with which the technology is used, the product remains substantially the same as when it was initially developed. As we have indicated previously, technology can be considered new only for 2 to 3 years after data reflecting the costs of the technology begin to become available. Data on the costs of this technology began to become available after FDA approval in 1998, and these costs are currently reflected in the DRG weights. As we discussed in the September 7, 2001, final rule (66 FR 46914), the determination concerning whether a technology meets this criterion depends on the date of its availability for use in the Medicare population rather than the date a specific code may be assigned. Therefore, we proposed that Norian SRS® Cement does not meet the newness criterion.

Although we proposed to deny add-on payments because the technology does not meet the newness criterion, we noted that the manufacturer submitted information on the cost criterion and the substantial clinical improvement criterion. The manufacturer submitted 52 Medicare and non-Medicare cases using Norian SRS® Cement. There are currently no ICD–9–CM codes that can distinctly identify Norian SRS® Cement within the MedPAR data; therefore, we cannot track this technology with our own analysis of MedPAR data. Based on the data submitted by the manufacturer, cases using Norian SRS® Cement were found in 12 DRGs, with 71.1 percent of the cases in DRGs 210, 218, 219, and 225. Based on the 52 cases submitted by the applicant, the case-weighted threshold across all DRGs was $22,493. The average case-weighted standardized charge was $29,032. As a result, the applicant and manufacturer maintained that Norian SRS® Cement meets the cost criterion.

According to the manufacturer, Norian SRS® Cement represents a substantial clinical improvement for the following reasons: It enhances short-term and long-term structural support, improves the rate and durability of healing, decreases donor site morbidity, decreases risk of infection at graft site, lowers the risk of operative complications from shorter operative procedures, lowers the rate of post-treatment hospitalizations and physician visits, and finally, reduces pain.

In the May 18, 2004, proposed rule, we did not present a full evaluation of the application for add-on payments for Norian SRS® Cement under these criteria because the technology did not meet the newness criterion. Therefore, we proposed to deny add-on payments for this technology.

In the proposed rule we indicated that prior to publication of the proposed rule, we had received no public comments on this application for add-on payments. During the 60-day

comment period for the proposed rule, we received the following public comments on this application.

Comment: One commenter, the manufacturer, noted that Norian SRS® Cement should still be considered ''new'' since there is sufficient information on the record, including sales data, to prove that Norian SRS® Cement could not have been included in the DRGs until the middle of 2002. The commenter also noted that public comments were indeed submitted prior to the proposed rule supporting a new technology add-on payment for Norian SRS® Cement. Another commenter also explained that Norian SRS® Cement should be considered new since it was not generally distributed to the public for use because of technical difficulties in mixing the product even though the product had been produced and released for quite some time.

Response: As stated previously and as we discussed in the September 7, 2001 final rule (66 FR 46914), the determination concerning whether a technology is new depends on the date of its availability for use in the Medicare population, rather than the date a specific code may be assigned. Data on the costs of this technology began to become available after FDA approval in 1998, and these costs are currently reflected in the DRG weights. Therefore we do not consider Norian SRS® cement to meet the newness criterion. As a result we are denying add-on payments for this technology in FY 2005.

As a final note, the February 27, 2004, **Federal Register** notice specified the method of submitting comments on the town hall meeting. Our statement in the proposed rule that we did not receive comments regarding this application referred to not having received any comments using that method. We are glad to receive the information now. We did, however, consider this comment as part of our discussion to deny add-on payments for this technology in FY 2005.

Comment: One commenter noted that the Norian SRS® Cement is an outstanding product that allows the stabilization of fractures that would normally develop postoperative deformity and problems after surgery. The commenter added that allograft or autogenic bone graft that uses a bone void filler would often deform and cause settling of the joint while the Norian SRS® cement seems to glue all of the small fracture fragments together and can hold together very tenuous reductions extremely well. The commenter also noted that it only began to use the Norian SRS® Cement once the new mixer system became available. Another commenter also noted that the clinical benefits of Norian SRS® cement allow for earlier removal of external fixators and pins without risk of collapse of the fracture site and allow permanent internal fixation to load share with the Norian SRS® cement. This results in earlier range of motion in a safe manner, which ultimately results in earlier return to a functional and productive lifestyle for patients.

Response: We thank the commenters for providing information on the clinical benefits of Norian SRS® cement. However, as stated above, we do not consider Norian SRS® cement to meet the newness criterion and are denying add-on payments for this technology in FY 2005.

Comment: Some commenters supported the creation of procedure code 84.55 (insertion of bone filler) but requested the title of the code be revised to injection of bone void filler cement from insertion of bone filler in order to capture cases of bone void filler cements that require mixing and are applied via injection. One commenter requested we review the data upon implementation of this code to see how these devices affect the DRG weights.

Response: A new code was created for bone void filler which will be implemented on October 1, 2004. The code is as follows: 84.55 Insertion of bone void filler. Various options for this new code were discussed at the April 1–2, 2004, ICD–9–CM Coordination and Maintenance Committee. A summary of this meeting can be found at: *http://www.cms.hhs.gov/paymentsystems/icd9*.

Public comments received at the meeting and later submitted in writing were mixed. The manufacturer and some physicians supported new codes that differentiated between bone void fillers that were pre-mixed and required little or no mixing prior to insertion versus those that required more extensive pre-mixing. The manufacturer suggested a new code for the injection of bone void filler and another new code for insertion of bone void filler. Representatives of hospital and coder organizations were opposed to such a differentiation and recommended the creation of a single new code to capture this technology: 84.55, Insertion of bone void filler. The hospital and coding organizations stated that hospital coders would have difficulty differentiating between the insertion versus the injection of bone void filler. They stated that this would be especially true in cases where it would be necessary to determine the amount of mixing of the product that was necessary. These organizations did not believe that the medical records would provide this type of documentation.

The American Hospital Association will be providing education to hospital coders on the use of this and other new codes. We will review data on claims submitted using this new code to determine if DRG modifications are necessary.

We are finalizing our proposal not to approve this technology for new technology add-on payments.

c. InSync® Defibrillator System (Cardiac Resynchronization Therapy with Defibrillation (CRT–D))

Cardiac Resynchronization Therapy (CRT), also known as bi-ventricular pacing, is a therapy for chronic heart failure. A CRT implantable system provides electrical stimulation to the right atrium, right ventricle, and left ventricle to recoordinate or resynchronize ventricular contractions and improve the oxygenated blood flow to the body (cardiac output).

Medtronic submitted an application for approval of the InSync® Defibrillator System, a cardiac resynchronization therapy with defibrillation system (CRT–D), for new technology add-on payments for FY 2005. This technology combines resynchronization therapy with defibrillation for patients with chronic, moderate-to-severe heart failure who meet the criteria for an implantable cardiac defibrillator. Unlike conventional implantable cardiac defibrillators, which treat only arrhythmias, CRT–D devices have a dual therapeutic nature intended to treat two aspects of a patient's heart disease concurrently: (1) The symptoms of moderate to severe heart failure (that is, the ventricular dysynchrony); and (2) high risk of ventricular arrhythmias, as documented by a electrophysiologic testing or clinical history or both, which would cause sudden cardiac death.

InSync® Defibrillation System received FDA approval on June 26, 2002. However, another manufacturer, Guidant, received FDA approval for its CRT–D device on May 2, 2002. Guidant, and another competitor that has yet to receive FDA approval for its CRT–D device, have requested that their devices be included in any approval of CRT–D for new technology add-on payments. As we discussed in the September 7, 2001 final rule (66 FR 46915), an approval of a new technology for special payment should extend to all technologies that are substantially similar. Otherwise, our payment policy would bestow an advantage to the first applicant to receive approval for a particular new technology.

The applicant contends that, despite the approval of a similar device in May

2002, the InSync® Defibrillator System should still be considered new for several reasons: First, an ICD–9–CM code was only issued in FY 2003, which falls within the 2-year to 3-year range provided in the regulations. Second, the utilization of CRT–Ds is still growing and has not reached full utilization and, therefore, CRT–Ds remain underreported within the FY 2003 MedPAR data that are being used to recalibrate the DRG weights for FY 2005. Finally, the applicant believes reporting of CRT–Ds may be insufficient to accurately recalibrate the DRGs because the new ICD–9–CM codes for CRT–Ds are unlikely to be used consistently and accurately by hospitals in the first year.

We have discussed the relationship between existence of a specific ICD–9–CM code for a technology and our determination of its status as a new technology. As discussed in the September 7, 2001 final rule (66 FR 46914), the determination of whether a technology is new depends on the date of its availability for use in the Medicare population, rather than the date a specific code may be assigned. Because CRT–Ds were available upon the initial FDA approval in May 2002, we consider the technology to be new from this date and not the date a code was assigned.

Using the March 2004 update file to the FY 2003 MedPAR file, we have identified 11,004 cases using CRT–D in the FY 2003 MedPAR database. Of these, 10,750 cases were reported in DRGs 514 and 515 (then Cardiac Defibrillator Implant With and Without Cardiac Catheter, respectively). In DRG 515, we found 3,960 cases with procedure code 00.51 (Implantation of cardiac resynchronization defibrillator, total system (CRT–D)) and 6,790 cases in DRG 514. DRG 514 is no longer valid, effective in FY 2004. In FY 2004, we assigned new cases of defibrillator implants with cardiac catheters from DRG 514 to new DRGs 535 (Cardiac Defibrillator Implant with Cardiac Catheter With Acute Myocardial Infraction (AMI) Heart Failure/Shock) and 536 (Cardiac Defibrillator Implant with Cardiac Catheter Without Acute Myocardial Infarction (AMI) Heart Failure/Shock). Using the 6,790 cases from the FY 2003 MedPAR found in DRG 514, we examined the primary diagnosis codes necessary for assignment to DRG 535 along with procedure code 00.51 and found 3,413 cases of CRT–D for DRG 535. The remaining 3,377 CRT–D cases found in DRG 514 using procedure code 00.51 fall into DRG 536. For FY 2003, the total number of cases of CRT–D found in the FY 2003 MedPAR data for DRGs 514 and 515 were 48,700. Cases reporting CRT–Ds thus represent 22 percent of all cases for these DRGs.

A medical service or technology can no longer be considered new after 2 to 3 years, when data reflecting the costs of the technology begin to become available. Data on the costs of this technology began to become available in May 2002. Our analysis of data from the FY 2003 MedPAR file also shows that the costs of CRT–D are represented by a substantial number of cases within the DRGs. However, as discussed above, the technology still remains within the 2-year to 3-year period during which it can be considered new. Therefore, we indicated in the proposed rule that we were considering whether the CRT–D technology still meets the newness criterion. We stated that we would welcome comments on this issue as we analyzed whether to approve this technology in the final rule.

Comment: Two commenters, the applicant and another manufacturer of CRT–D devices, commented that the utilization of CRT–D is still growing and has not reached full utilization. One of the commenters further noted that industry estimates forecast that CRT–D will ultimately account for over 50 percent of the defibrillator market by 2006 (or double the amount seen in FY 2003). As a result, additional time and utilization is necessary with CRT–D before the DRGs can be recalculated to reflect the full costs of CRT–D in the DRG weights. Some commenters, including the applicant, also explained that the volume of cases in the FY 2003 MedPAR is indicative of the breakthrough nature of the technology and the benefit it confers to heart failure patients. The fact that some hospitals were willing to absorb the costs of the technology and make CRT–D available to their patients should have no effect if the technology remains new and eligible for new technology add-on payments. In light of the above, the applicant believes the technology should be considered new under the timeframe of newness and that the existing MedPAR data are insufficient to update the DRG weights for FY 2005. Another commenter noted that over the last 12 months, the volume of patients receiving the CRT–D in the commenter's hospital has risen by 28 percent. The commenter added that for the coming year the volume of patients receiving the CRT–D is expected to rise an additional 30 percent.

MedPAC questioned if this technology still meets the newness criterion. MedPAC noted that the technology could diffuse further and represent an even greater share of cases. However, MedPAC believes it is clear that costs of the technology are already reflected in the data used to set the DRG weights. MedPAC recommended that one way to deal with this issue would be to exclude cases of the technology when it can be tracked from the calculation of the mean charges from the DRG during recalibration of the relative weights. This would avoid overpaying for the technology by including its costs in the base payment while also providing an add-on payment.

One commenter, the applicant, was concerned that MedPAC's recommendation might lead to the lowering of payment for implantable cardioverter defibrillators (ICDs). The commenter recommended that CMS not take any action that would lower payment for a technology that already experiences inadequate payment.

Response: Although we have a large amount of cases of CRT–D reflected within the DRGs, as stated by the commenter, the potential population that can receive the CRT–D could be much larger as time elapses. While the regulations state that a technology is no longer new when data begin to become available reflecting the new technology in the DRGs, the commenter has argued that the CRT–D is not fully reflected in the DRGs since it has not reached its full market utilization. In the proposed rule, we expressed concerns regarding the extent of the data already reflected in the DRGs, which suggests that CRT–D should no longer be considered ''new''. However, at this point we cannot make a definite determination that the CRT–D is fully reflected within the DRGs; and therefore, we have concluded that CRT–D should be considered to meet the newness criterion.

We have responded to MedPAC's recommendation on excluding a new technology from recalibration of the relevant weight above. We will consider this recommendation as we continue to develop policy in this area.

Comment: Some commenters believed that the date of issuance of an ICD–9–CM code should start the 2- to 3-year period of a technology being new instead of the FDA approval date. The commenters explained that considering a technology new from the FDA approval date is inconsistent with the regulations in 42 CFR § 412.87(b)(2). One commenter further noted that distinct hospital charge data for CRT–D only became available after the issuance of a ICD–9–CM code and CRT–D charge data did not become publicly available until May 2004. As a result the commenter maintains that the CRT–D is still within the 2–3 year period of being considered ''new''. Another commenter

added that even though CRT–D was approved in May of 2002, it is uncertain if hospitals adjusted their charges at that time in order to reflect the higher costs of CRT–D procedures, especially given the lack of a unique ICD–9–CM code. Furthermore, it was not possible to uniquely identify CRT–D in the data until a unique ICD–9–CM code was issued. Therefore, the commenter believes it does not seem appropriate to consider the CRT–D new from the FDA approval date of May 2002. One commenter was concerned that continued inadequate payment for the CRT–D has the potential to limit patient access to this new technology. Therefore, the commenter encouraged CMS to consider the CRT–D to meet the newness criterion.

One commenter, the applicant, added that prior to the MMA, CRT–D did not meet the cost threshold and therefore the applicant did not apply for new technology add-on payments. The commenter noted that had Congress acted earlier an application would have been submitted earlier as well. The applicant believes that finding the CRT–D to meet the newness criterion and approval of add-on payments for CRT–D is consistent with Congress' intent to ensure more new technologies qualify for add-on payments.

Response: As stated previously, we have determined that CRT–D meets the newness criterion. For a further discussion on the newness criterion regarding FDA approval dates and the issuance of ICD–9–CM codes, please see section II.E.2. of the preamble to this final rule.

We note that the applicant submitted information on the cost and substantial clinical improvement criteria. The applicant commissioned Navigant Consulting, Inc. to collect charge data on CRT–D. Navigant found 354 Medicare cases among 30 hospitals. Cases were identified using ICD–9–CM procedure code 00.51. Of these 354 cases, 44.1 percent were reported in DRG 515, 23.7 percent were reported in DRG 535, and 32.2 percent were reported in DRG 536. These DRGs result in a case-weighted threshold of $78,674. The average case-weighted standardized charge for the 354 cases mentioned above was $79,163. Based on these data, the manufacturer contends that InSync® Defibrillator System would meet the cost criterion.

In the September 7, 2001 final rule, we stated that the data submitted must be of a sufficient sample size to demonstrate a significant likelihood that the sample mean approximates the true mean across all cases likely to receive the new technology. Using a standard statistical methodology for determining the needed (random) sample size based on the standard deviations of the DRGs identified by the applicant as likely to include cases receiving a CRT–D, we have determined that a random sample size of 354 cases can be reasonably expected to produce an estimate within $3,500 of the true mean.[4] Of course, the data submitted, which include Medicare data from 30 hospitals, do not represent a random sample of all cases in these DRGs across all hospitals.

The manufacturer also contends that the added capability of the InSync® Defibrillator System device provides significant benefits over and above a conventional defibrillator. The InSync® Defibrillator System device treats both the comorbid conditions of ventricular arrhythmias and moderate to severe heart failure, and takes the place of the existing treatment of drug therapy for heart failure plus a conventional implantable cardiac defibrillator for ventricular arrhythmia. The applicant states this CRT–D is a substantial clinical improvement for patients who remain symptomatic despite drug therapy and who are also at high risk for ventricular arrhythmias. According to the applicant, some of the improved outcomes that result from using a CRT–D device instead of existing treatments include: improved quality of life, improved exercise tolerance, improved homodynamic performance, and reduced hospitalizations and mortality due to chronic heart failure.

We welcomed comments on whether this technology meets the new technology criterion, but especially about whether it meets the newness criterion in the light of the extent to which it is represented cases within the relevant DRGs. We indicated that we would determine whether to approve this technology in the light of any comments that we received and our continuing analysis.

Prior to the publication of the May 18, 2004, proposed rule, we received public comments in accordance with section 503(b)(2) of Public Law 108–173 regarding this application for add-on payments. Commenters noted that CRT–D has had positive clinical outcomes by reversing remodeling of the heart and improving the heart's ability to pump more efficiently. One commenter added that CRT–D has helped decrease hospitalizations and length of stay.

During the 60-day comment period for the May 18, 2004, proposed rule, we received the following public comments on this application.

Comment: The applicant submitted additional data aside from the data discussed in the proposed rule showing that CRT–D meets the cost criterion. The applicant searched the FY 2003 MedPAR for cases with procedure code 00.51 and found 3,947 cases in DRG 515, 3,396 cases in DRG 535 and 3,351 cases in DRG 536. The average standardized charge for these DRGs were $81,950 for DRG 515, $104,092 for DRG 535 and $97,250 for DRG 536. This resulted in a case weighted average standardized charge of $93,776. The case weighted threshold using the threshold amounts from table 10 was $81,161. Based on this analysis, the applicant maintains that CRT–D meets the cost criterion since the case weighted average standardized charge is greater then the case weighted threshold. One commenter believes that the average costs of the CRT–D meet or exceed the cost threshold. The commenter added that CRT–D procedures are more complex and take longer than conventional ICD implantations. One commenter added that the DRGs do not provide adequate reimbursement for cases with a CRT–D.

Response: We also searched the latest update to the FY 2003 MedPAR and found 3960 cases in DRG 515 with an average standardized charge of $82,520, 3,413 cases in DRG 535 with an average standardized charge of $104,755 and 3,377 cases in DRG 536 with an average standardized charge of $98,329. This resulted in a case weighted average standardized charge of $94,546. Using the thresholds from table 10, the case weighted threshold for DRGs 515, 535 and 536 was $81,169. As a result, the average standardized charge is greater than the case weighted threshold and therefore the CRT–D meets the cost criterion for new technology add-on payments.

Comment: The applicant also submitted the following comments on the substantial clinical improvement criterion. The commenter first noted that CRT–D meets the definition of substantial clinical improvement described in 42 CFR 412.87(b)(1) because prior to May 2, 2002 there was no device available that provided cardiac resynchronization therapy in combination with an implantable cardiac defibrillator, and that the introduction of the CRT–D device enabled the treatment of patients with symptomatic heart failure despite maximal medical therapy in addition to providing a potentially life saving

[4] The formula is $n = 4\sigma/B^2$, where σ is the standard deviation of the population, and B is the bound on the error of the estimate (the range within which the sample means can reliably predict the population mean). See Statistics for Management and Economics, Fifth Edition, by Mendenhall, W., Reinmuth, J., Beaver, R., and Duhan, D.

defibrillator in those patients who are at high risk for ventricular arrhythmias. Another commenter agreed with the applicant that the CRT–D represents a substantial clinical improvement because it provides treatment for a new and different patient population (those with heart failure and high risk for ventricular arrhythmias). Two commenters further noted multiple studies that demonstrated objective and subjective clinical improvement in patients with moderate to severe heart failure when treated with CRT or CRT–D as quantified by such measures as New York Heart Association Class, 6 minute walk distance, peak oxygen uptake, left ventricular ejection fraction, and area of regurgitant mitral jet. It was also noted by the applicant that CRT–D was shown in the COMPANION study to significantly reduce all cause of mortality. One of the commenters also noted that CRT–D reduced symptoms and improved quality of life. Another commenter added that the CRT–D provides dual therapy for patients with dual indications, and that it is not simply a combination of two existing devices. One commenter believed that there is some potential benefit from reduced hospital readmissions and cost savings to both the hospital and Medicare program when using the CRT–D.

Response: We agree that CRT–D provides a valuable treatment to Medicare beneficiaries who have refractory, symptomatic congestive heart failure despite optimal medical management and who are also at significant risk for potentially fatal ventricular arrhythmias. We recognize that prior to the advent of CRT–D patients could not have had access to the benefits of both cardiac resynchronization therapy and an implantable defibrillator. For these reasons CMS believes the CRT–D device represents a substantial clinical improvement for the purposes of a new technology add-on payment.

Comment: The applicant commented that the FDA's view of CRT–P and CRT–D devices further supports the distinction between the two technologies. The commenter explained that the FDA did not allow for the pooling of data for the Miracle trial (study of a CRT–P) and MIRACLE ICD trial (study of a CRT–D) as the studies and devices addressed different patient populations and indications. The FDA required that the safety and efficacy of the devices be proven separately as a result of the differences between the devices and because biventricular pacing was a new technology. The commenter explained that the FDA believed that the two types of CRT therapy would affect two different populations (indications for an ICD and CRT–D versus indications for a CRT–P with no arrhythmia). The commenter finally noted that the FDA listed the CRT–D as one of ten ''Advances in Patient Care'' in its Fiscal Year 2002 Office of Device Evaluation Annual Report. In reference to CRT–D the report stated ''[t]he device, the first of its kind, can be used to treat symptoms of advanced heart failure in certain people who already need an ICD.'' The commenter emphasized the FDA's language describing the device as the ''first of its kind.''

Response: We again agree that the CRT–D device represents a substantial clinical improvement because it is capable of treating patients with the two distinct conditions of congestive heart failure and ''at high risk for sudden cardiac death,'' who prior to its availability could not have received the benefits of both cardiac resynchronization therapy and immediate defibrillation in the event of sustained ventricular arrhythmia. We have therefore determined that this device meets the substantial clinical improvement criterion.

Comment: The applicant submitted three different scenarios on the potential add-on payment amount for the new technology. The device consists of a defibrillator, right atrial and right ventricular leads, left ventricular lead, lead delivery system and a balloon catheter. The first scenario would pay for the device and all the leads associated with implanting the device. The second approach, which was supported by the applicant, excluded the costs of the right atrial and right ventricular leads because these items are used in ICDs whose costs are already reflected in DRGs 515, 535 and 536. The last scenario excluded all costs associated with the ICD since the DRGs have already captured all costs of an ICD in the CRT–D.

Response: After reviewing all the criteria, we have determined that CRT–D is eligible for add-on payments in FY 2005. Cases involving CRT–D that are eligible for new technology add-on payments are identified by either one of the following two ICD–9–CM procedure codes: 00.51 (Implantation of Cardiac Resynchronization Defibrillator, Total System (CRT–D)) or 00.54 (Implantation or Replacement of Pulse Generator Device Only (CRT–D)). We agree with the commenter that option number two is the best approach to determine the costs of the CRT–D for the purpose of new technology add-on payments. Using this approach, the total costs for the device are $32,525. Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the costs of the technology or 50 percent of the costs in excess of the DRG payment for the case. As a result, the maximum add-on payment for a case involving the CRT–D is $16,262.50.

Comment: One commenter recommended that CRT–D add-on payments should expire in May of FY 2005. The commenter explained that the newness criterion should be extended to the full 2–3 year period from the FDA approval date.

Response: Predictability is an important aspect of the prospective payment system methodology. Accordingly, we believe that it is appropriate to apply a consistent payment methodology for new technologies throughout the fiscal year. Furthermore, we note that the CRT–D will still be within the 2 to 3 year period in which it can be considered new for most of FY 2005. As a result, we will make add-on payments for cases involving CRT–D for the entire FY 2005.

d. GliaSite® Radiation Therapy System (RTS)

The Pinnacle Health Group submitted an application for approval of GliaSite® Radiation Therapy System (RTS) for new technology add-on payments. GliaSite® RTS was approved by the FDA for use on April 25, 2001. The system involves several components, including a drug called Iotrex and a GliaSite® catheter. Iotrex is an organically bound liquid form of Iodine ^{125} used in intracavitary brachytherapy with GliaSite® RTS. Iotrex is a single nonencapsulated (liquid) radioactive source. The liquid is a solution of sodium ^{3}-(^{125})iodo-4-hydroxybenzenesulfonate and is used to deliver brachytherapy for treatment of brain cancer.

The delivery system for Iotrex is the GliaSite® RTS catheter. Iotrex is administered via injection through a self-sealing port into the primary lumen of the barium-impregnated catheter that leads to the balloon reservoir. After a malignant brain tumor has been resected, the balloon catheter (GliaSite®) is implanted temporarily inside the cavity. The patient is released from the hospital. After a period of 3 days to 3 weeks, the patient is readmitted. During the second admission, the appropriate dose (200 to 600 millicuries) of radiation is then administered. Iotrex is infused into the GliaSite® catheter and intracavitary radiation is delivered to the target area. The gamma radiation emitted by Iotrex is delivered directly to

the margins of the tumor bed. After 3 to 7 days, the Iotrex is removed.

GliaSite® RTS was approved by the FDA for use on April 25, 2001. Technology is no longer considered new 2 to 3 years after data reflecting the costs of the technology begin to become available. Because data regarding this technology began to become available in 2001, we determined that GliaSite® RTS does not meet the criterion that a medical service or technology be considered new. Therefore, in the May 18, 2004 proposed rule, we proposed to deny approval of GliaSite® RTS for new technology add-on payments.

Although we proposed not to approve this application because GliaSite® RTS does not meet the newness criterion, we noted that the applicant submitted information on the cost criterion and substantial clinical improvement criterion. The applicant stated that the number of cases in DRG 7 for FY 2004 was projected to be 14,782, and estimated that 10 percent (or about 1,478) of those patients would be candidates for GliaSite® RTS. The applicant estimated that the standardized charge for all cases using the technology in DRG 7 was $49,406. Based on this calculation, the manufacturer stated in its application that this figure is greater than the cost threshold of $32,115 for DRG 7. Therefore, according to the manufacturer, it appears that GliaSite® RTS would meet the cost criterion.

The applicant also claims this way of delivering brachytherapy to the brain is significantly more patient friendly. The use of a single intracavitary applicator positioned inside the resection cavity during the initial surgery in place of an interstitial-seed implant removes the need for additional invasive procedures and the need for multiple puncture sites (up to 20). In addition, the manufacturer claims that the approach used in the GliaSite® RTS system improves dose-delivery and provides a more practical means of delivering the brachytherapy.

However, as discussed above, because GliaSite® RTS did not meet the newness criterion, we proposed to deny add-on payments for this technology in FY 2005.

Prior to the publication of the May 18, 2004 proposed rule, we received no public comments on this application for add-on payments. During the 60-day comment period for the proposed rule, we received the following public comments on this application.

Comment: Many commenters objected to the proposed denial of new technology status for Iotrex (the chemotherapy agent in the GliaSite® RTS). They stated that it represents a substantial improvement over conventional brachytherapy treatment for brain tumors by reducing the number of radioactive seeds implanted into the patient's brain (via up to 20 catheters). Commenters also stated that this therapy reduces the problems associated with conventional therapy by providing a more ''conformal therapy with no target tissue underdosing, less target tissue overdosing and no healthy tissue 'hot spots.' ''

Commenters also noted that this therapy is more widely available at over 140 centers starting in 2003 (whereas brachytherapy treatment is only offered at 5 centers nationwide). While more widely spread, commenters nonetheless stated that prior to 2003, when the treatment was accepted at the 140 centers noted above, ''significantly fewer hospitals offered this therapy'' due to a combination of licensing and safety requirements that must be met in order for providers to purchase and use this radioisotope. Commenters stated that meeting these requirements of the Nuclear Regulatory Commission or applicable State authorities governing the distribution and use of Iotrex was time-consuming, taking on average 6 to 8 months or more per hospital, and caused a significant delay in the adoption and use of this therapy, despite the FDA approval date. Commenters also stated that by denying GliaSite® RTS new technology status, CMS is not permitting appropriate payment for the device and is ''likely restricting access to this therapy.''

Response: The regulations clearly state that a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD–9–CM code assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration). Notably, the regulations continue, ''[a]fter CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered 'new' under the criterion of this section.'' This device received FDA approval in April of 2001. Information provided by the applicant demonstrates that despite the delays caused by licensing and safety requirements, the device was available on the market no later than fall of 2001 and data began to become available at that time. The applicant's own comments indicate that since that time, a relatively large number of hospitals have adopted this therapy, with 69 hospitals having the required license halfway through FY 2002, and 118 hospitals with the required license at the end of FY 2003. Therefore, the costs of the device have already been reflected in three cycles of DRG recalibrations using costs contained in the second half of FY 2001, and captured in the entirety of FYs 2002 and 2003 MedPAR data. Since the product has been on the market since 2001, and since many hospitals that treat this disease are currently using the device, and have since early in FY 2002, this device is now beyond the 2 to 3 year period in which it can still be considered new.

Comment: One commenter noted that the DRG for craniotomy (DRGs 1 and 2) does not adequately cover the cost of the catheter and isotope. The commenter stated that ''some centers are readmitting the patients for reoperation to place the catheter'' and ''some are treating patients as outpatient to avoid losing money on the DRG.''

Response: Since Medicare has paid for the device for the hospitals that have correctly coded the use of the product in the correct DRGs as well as in other DRGs and in other areas of our system (as disclosed by this commenter), the costs have nonetheless been accounted for in our data and the treatment cannot be considered new.

We therefore finalize the decision to deny new technology add-on status for the GliaSite® RTS (Iotrex) for FY 2005.

e. Natrecor®—Human B-Type Natriuretic Peptide (hBNP)

Scios, Inc. submitted an application for approval of Natrecor® for new technology add-on payments. Natrecor is a member of a new class of drugs, Human B-type Natriuretic Peptide (hBNP), and it is manufactured from E. coli with recombinant DNA technology. It binds to the particulate guanylate cyclase receptor of vascular smooth muscle endothelial cells, leading to increased intracellular concentrations of guanosine 3′5′-cyclic monophosphate, and therefore to enhanced smooth muscle cell relaxation, ultimately causing dilation of arteries and veins. The applicant states that Natrecor® is more potent and relieves symptoms of heart failure more rapidly, while also causing less hemodynamic instability than intravenous nitroglycerin, the most commonly used vasodilator for heart failure.

Natrecor® was approved by the FDA for the treatment of acute congestive heart failure on August 10, 2001. It is indicated for the intravenous treatment of patients with acutely decompensated congestive heart failure (dyspnea).

Congestive heart failure is the result of impaired pumping capacity of the heart. It causes a variety of clinical consequences, including water retention, sodium retention, pulmonary congestion, and diminished perfusion of blood to all parts of the body.

The applicant concedes that the FY 2003 MedPAR file includes hospital charge information for patients receiving Natrecor®. The manufacturer contends that Natrecor® should still be considered new for several reasons. The first reason is that these data will not provide an accurate representation of hospital utilization of this product nor an adequate reimbursement rate for hospitals treating acute congestive heart failure patients with Natrecor® in FY 2005. The FY 2003 MedPAR file represents the first full year in which the ICD–9–CM procedure code 00.13 (Injection or infusion of nesiritide) was in effect. Therefore, the manufacturer anticipates a slow increase in the accuracy of coding and billing in FY 2003. In addition, the manufacturer stated that market penetration for this product was 3 percent for FY 2003, but is expected to be significantly higher for FY 2005.

However, technology is no longer considered new 2 to 3 years after data reflecting its costs begin to become available. Because data reflecting the costs of Natrecor® began to become available in 2001, these costs are currently reflected in the DRG weights. In addition, as discussed in the September 7, 2001 final rule (66 FR 46914), the determination of whether a technology is new depends on the date of its availability for use in the Medicare population rather than the date a specific code was assigned. Because Natrecor® was available upon FDA approval, it does not meet the criterion that a medical service or technology be considered new.

Although we proposed not to approve this application because Natrecor® does not meet the newness criterion, in the proposed rule, we noted that the applicant submitted information on the cost criterion and substantial clinical improvement criterion. Scios commissioned Premier, Inc. to search its database of 196 hospitals for cases in FY 2003 that used Natrecor®. Premier identified 9,811 cases across many DRGs using National Drug Codes from pharmacy databases. The majority of cases (approximately 42 percent) were found in DRG 127 (Heart Failure and Shock), while the remaining cases were found in other DRGs that individually had a maximum of 8 percent of the 9,811 cases identified by Premier. The case-weighted threshold across all DRGs for Natrecor®, using data provided by Premier, was $26,509. (DRGs with less than 25 discharges were not included in this analysis.) The average charge for cases with Natrecor® was $70,137. The average case-weighted standardized charge across all DRGs was $43,422. Because the average standardized charge is greater than the case-weighted threshold, the applicant stated that Natrecor® meets the cost criterion.

The manufacturer stated that Natrecor® represents a substantial clinical improvement over existing treatments for decompensated congestive heart failure because it provides novel clinical effects, leads to fewer complications, and improves overall clinical outcomes. Specifically, Natrecor® reduces left ventricular preload, afterload, and pulmonary capillary wedge pressure without inducing tachyphylaxis, and it causes a balanced vasodilation of veins, arteries, and coronary arteries that increases cardiac output. It has also been shown to significantly reduce dyspnea, and it blocks the rennin-aldosterone-angiotensin system, thereby reducing sodium retention and enhancing diuresis and natriuresis. In addition, Natrecor® is not pro-arrhythmic; it does not increase cardiac work by causing tachycardia, and it does not cause electrolyte imbalances.

However, as discussed above, Natrecor® does not meet the newness criterion. Therefore, in the May 18, 2004 proposed rule, we proposed to deny add-on payments for this technology in FY 2005.

Prior to the publication of the proposed rule, we received no public comments on this application for add-on payments. During the 60-day comment period for the proposed rule, we received the following public comments on this application.

Comment: Some commenters, including the applicant, disagreed with CMS' position that Natrecor® is ineligible for an add-on payment since it is not ''new''. A commenter explained that in the proposed rule CMS stated that the 2-to-3 year period for collection of cost data begins when the drug or biological receives FDA approval and not when an ICD–9–CM code is issued. The commenter felt this contradicts the statutory language in section 1886 (d)(5)(K)(ii)(II) and the regulatory text in 42 CFR 412.87(b)(2). The commenter stated that that based on the statutory and regulatory text, a technology should be considered new from the date a code is issued. As a result, since Natrecor® did not receive a unique code until October 1, 2002, it should still fall within the 2–3 year period to be considered new.

The commenter further noted that heart failure patients who receive Natrecor® are more costly than patients who do not receive Natrecor®. Based on data the applicant submitted, the commenter explained that the average charge for a patient receiving Natrecor® is 47.5 percent higher than the case weighted average charge threshold of $32,485. The commenter also added that based on data from the Premier database, even though 48 percent of all cases of Natrecor® map to DRG 127, Natrecor® has had a very small impact on DRG 127 since it represents only 1.8 percent of all charges in DRG 127 which is a result of the fact that only 8.4 percent of all patients assigned to DRG 127 received Natrecor®. As a result, the commenter disagreed with CMS' contention that charges for Natrecor® are adequately reflected in the relevant DRGs. The commenter concluded that limited Medicare reimbursement coupled with the high cost of a breakthrough biologic therapy have led to restrictions on the use of Natrecor®. Also, the number of patients that could receive Natrecor® in DRG 127 is much higher then the current figure of 8.4 percent.

Another commenter believed that CMS should provide its full evaluation of the cost and clinical data submitted by this applicant (and all other applicants) in order to provide for better insight into the agency's decision-making process. The commenter was concerned that during the comment period an application could satisfy the criterion upon which CMS had proposed to deny the application in the proposed rule, while in the final rule CMS could deny the application on a different criterion that had not been discussed in the proposed rule. As a result, the commenter recommended a full analysis of all the criteria in the proposed rule.

Response: As stated above, a technology is no longer considered new 2 to 3 years after data reflecting its costs begin to become available. Because data reflecting the costs of Natrecor® began to become available in 2001, these costs are currently reflected in the DRG weights. For a further discussion on the newness criterion regarding FDA approval dates and the issuance of ICD–9–CM codes, please see the preamble above.

We conduct sufficient analysis on each application in order to provide sufficient opportunity to comment. We do not believe that it is necessary to provide a full analysis of all the criteria in cases where, for example, we believe

that sufficient evidence is available to propose denying the application on the basis of the newness criterion. However, even in these cases we provide an account of any information submitted by the applicant in order to provide opportunity for comment.

Comment: One commenter believes that CMS should be more proactive when it comes to DRG reclassifications of new technologies. The commenter cited Natrecor® as an example of a new technology with over 10,000 cases in which the current reimbursement is inadequate. The commenter noted that after CMS denied the application for add-on payments, no consideration was given to the reclassification of the new technology. The commenter encouraged CMS to make strides to ensure that patient access to important, life threatening therapies is not threatened by inappropriate PPS payments.

Response: When reviewing new technology applications, we consider if the applicant has met all the criteria for new technology add-on payments. The applicant or anyone from the public is free to make a separate request for consideration of a new DRG assignment as we discuss in section II. B. of this final rule.

Because Natrecor® does not meet the newness criterion, we are finalizing our proposal not to approve add-on payments for this technology in FY 2005.

f. Kinetra® Implantable Neurostimulator for Deep Brain Stimulation

Medtronic, Inc. submitted an application for approval of the Kinetra® implantable neurostimulator device for new technology add-on payments. The Kinetra® device was approved by the FDA on December 16, 2003. The Kinetra® implantable neurostimulator is designed to deliver electrical stimulation to the subthalamic nucleus (STN) or internal globus pallidus (GPi) in order to ameliorate symptoms caused by abnormal neurotransmitter levels that lead to abnormal cell-to-cell electrical impulses in Parkinson's Disease and essential tremor. Before the development of Kinetra®, treating bilateral symptoms of patients with these disorders required the implantation of two neurostimulators (in the form of a product called Soletra™, also manufactured by Medtronic): one for the right side of the brain (to control symptoms on the left side of the body), the other for the left side of the brain (to control symptoms on the right side of the body). Additional procedures are required to create pockets in the chest cavity to place the two generators required to run the individual leads. The Kinetra® neurostimulator generator, implanted in the pectoral area, is designed to eliminate the need for two devices by accommodating two leads that are placed in both the left and right sides of the brain to deliver the necessary impulses. The manufacturer argues that the development of a single neurostimulator that treats bilateral symptoms provides a less invasive treatment option for patients, and simpler implantation, follow up, and programming procedures for physicians.

In December 2003, the device was approved by the FDA. Therefore, it qualifies under the newness criterion because FDA approval was within the statutory timeframe of 2–3 years and its costs are therefore not yet reflected in the DRG weights. Because there are no data available to evaluate costs associated with Kinetra®, we conducted the cost analysis using Soletra™, the predecessor technology used to treat this condition, as a proxy for Kinetra®. The pre-existing technology provides the closest means to track cases that have actually used similar technology and serves to identify the need and use of the new device. The manufacturer informed us that the cost of the Kinetra® device is twice the price of a single Soletra™ device. Since most patients would receive two Soletra™ devices if the Kinetra® device is not implanted, data regarding the cost of Soletra™ give a good measure of the actual costs that will be incurred. Medtronic submitted data for 104 cases that involved the Soletra™ device (26 cases in DRG 1 (Craniotomy Age > 17 With CC), and 78 cases in DRG 2 (Craniotomy Age > 17 Without CC)). These cases were identified from the FY 2002 MedPAR file using procedure codes 02.93 (Implantation, intracranial neurostimulator) and 86.09 (Other incision of skin and subcutaneous tissue). In the analysis presented by the applicant, the mean standardized charges for cases involving Soletra™ in DRGs 1 and 2 were $69,018 and $44,779, respectively. The mean standardized charge for these Soletra™ cases according to Medtronic's data was $50,839.

For the proposed rule, we used the same procedure codes to identify 187 cases involving the Soletra™ device in DRGs 1 and 2 in the FY 2003 MedPAR file. Similar to the Medtronic data, 53 of the cases were found in DRG 1, and 134 cases were found in DRG 2. The average standardized charges for these cases in DRGs 1 and 2 were $51,163 and $44,874, respectively. Therefore, the case-weighted average standardized charge for cases that included implantation of the Soletra™ device was $46,656. The new cost thresholds established under the revised criteria in Public Law 108–173 for DRGs 1 and 2 are $43,245 and $30,129, respectively. Accordingly, the case-weighted threshold to qualify for new technology add-on payment using the data we identified would be $33,846. Under this analysis, Kinetra® would qualify for the cost threshold.

We note that an ICD–9–CM code was approved for dual array pulse generator devices, effective October 1, 2004, for IPPS tracking purposes. The new ICD–9–CM code that will be assigned to this device is 86.95 (Insertion or replacement of dual array neurostimulator pulse generator), which includes dual array and dual channel generators for intracranial, spinal, and peripheral neurostimulators. The code will not identify cases with this specific device and will only be used to distinguish single versus dual channel-pulse generator devices.

The manufacturer claims that Kinetra® provides a range of substantial improvements beyond previously available technology. These include a reduced rate of device-related complications and hospitalizations or physician visits and less surgical trauma because only one generator implantation procedure is required. Kinetra® has a reed switch disabling function that physicians can use to prevent inadvertent shutoff of the device, as occurs when accidentally tripped by electromagnetic inference (caused by common products such as metal detectors and garage door openers). Kinetra® also provides significant patient control, allowing patients to monitor whether the device is on or off, to monitor battery life, and to fine-tune the stimulation therapy within clinician-programmed parameters. While Kinetra® provides the ability for patients to better control their symptoms and reduce the complications associated with the existing technology, it does not eliminate the necessity for two surgeries. Because the patients who receive the device are often frail, the implantation generally occurs in two phases: the brain leads are implanted in one surgery, and the generator is implanted in another surgery, typically on another day. However, implanting Kinetra® does reduce the number of potential surgeries compared to its predecessor (which requires two surgeries to implant the two single-lead arrays to the brain and an additional surgery for implantation of the second generator). Therefore, the Kinetra® device reduces the number of surgeries from 3 to 2.

In the May 18, 2004, proposed rule, we indicated that, despite the improvement Kinetra® represents over its immediate predecessor, Soletra™, we had concerns about whether the device is significantly different in terms of how it achieves its desired clinical result. The stimulation mechanism by which it treats patient symptoms remains substantially the same as the predecessor device. The enhancements cited by the manufacturer are primarily to features such as control, power, monitoring, and reliability. Nevertheless, these improvements, along with the reduced number of surgeries required, may be sufficient to warrant a determination that the device represents a substantial clinical improvement. We welcomed further public comment on the issue of whether the device is sufficiently different from the previously used technology to qualify as a substantially improved treatment for the same patient symptoms.

In the proposed rule, we also invited comments concerning the cost of the device. If the new device, at twice the cost of the existing technology, merely replaces the costs of two of the previous devices, then the charges for Kinetra® are not substantially different from current charges resulting from the use of either device alone. Because the costs for the predecessor device meet the statutory cost criterion, the successor technology would meet the criterion as well, at least under the manufacturer's assumption that a single Kinetra® costs twice as much as each of the two Soletras™ required to perform the same function. However, since there should be less surgery involved, more patient control, less risk of complications, and fewer office visits as a result of using Kinetra®, we stated in the proposed rule that we would expect the costs for patients who receive the new device to drop. We stated that, for those reasons, it may not be appropriate to base the cost analysis for Kinetra® on the manufacturer's assumption that total costs for Soletra™ and Kinetra® are substantially the same.

In addition, in the proposed rule, we invited public comment concerning the approval of the device for add-on payment, given the uncertainty over the frequency with which the patients receiving the device have the generator implanted in a second hospital stay, and the frequency with which this implantation occurs in an outpatient setting. Any hospital performing the implantation in two separate patient stays, whether they are both inpatient or whether one is inpatient and the second is outpatient, would be paid double for the single device. Therefore, we had some concern about the appropriateness of approving add-on payments for a device that may already receive payment at a nonbundled rate for a high percentage of patients who receive the device. We also investigated whether a second hospital stay is needed for implantation of Kinetra®.

Despite these issues, we indicated that we would continue to consider whether it was appropriate to approve add-on status for Kinetra® for FY 2005. If approved for add-on payments, the device would be reimbursed up to half of the costs for the device. Since the manufacturer has stated that the cost for Kinetra® would be $16,570, the maximum add-on payment for the device would be $8,285. We stated that we would make a final determination in the light of public comments that we received on the proposed rule and our continuing analysis.

Prior to publication of the proposed rule, we received no public comments on this application. During the 60-day comment period for the proposed rule, we received the following public comments on this application.

Comment: The applicant responded to our request for comments by providing further detail on the cost of the device, how it derived the higher cost for the device and recommendations on how we might proceed if we were to approve the device for add-on payments. It noted that the device has substantially higher manufacturing costs than the predecessor device, Soletra™, which has a smaller battery and much lower production cost. The applicant also stated that the device meets the substantial clinical improvement criterion due to the much improved user outcomes for patients that receive Kinetra® as opposed to those that receive the Soletra™. In addition to the factors listed above, it noted that not only does the device reduce invasiveness and risk of surgical complications to implant the device, but the shorter operating time needed to implant one device reduces the duration of anesthesia in one episode that these patients need for surgical placement. The time to reach the desired and improved therapeutic outcome is greatly reduced. The need for follow up care is substantially reduced and the intervals between battery replacement operations with the new device are significantly increased (anywhere from 15 months to 2 years longer, based on various comments received).

The applicant also provided data that satisfactorily answered our remaining questions with regard to the reasons for staged implantation of the device in some patients. It noted that many patients simply cannot physically tolerate the long day of surgery, and particularly the general anesthesia required to implant the generator if the procedure is all done in one day or one hospital stay. In addition, due to the nature of the brain surgery involved to place the leads, care must be given to ensure that no hemorrhages are present before proceeding with implanting the rest of the device. Other physicians noted that patient medications must also be taken into account when planning the implantation of the device. One commenter, a physician using the device in his practice, also noted the improved mobility and function of patients receiving this device and the reduced interference in daily and leisure activities for patients receiving this device over the Soletra™ generators. Other physicians noted that patients actually spend less time in the hospital under the staged method for implanting the device and tolerate the procedures much better. Some nurses noted that there are additional educational requirements associated with the Kinetra® device due to the unique patient control, but this training and the additional time to set up the initial programming of the device result in reduced follow-up visits and re-programming, and allow the patients to monitor their symptoms in the stress-free environment of the home instead of the doctor's office.

Response: We believe that sufficient evidence has been provided by the applicant to demonstrate that this device satisfies the significant clinical improvement criterion and should receive new technology add-on payment for FY 2005. We have found that, based on the new evidence provided, Kinetra® does represent a substantial clinical improvement over the previous Soletra™ device. Specifically, the increased patient control, reduced surgery, fewer complications, and elimination of environmental interference significantly improve patient outcomes. Since we stated in the proposed rule that the device meets the newness criterion, and that the device meets the cost threshold in the DRGs to which it is assigned, this determination of substantial clinical improvement warrants the approval of Kinetra® for new technology add-on payments for FY 2005.

Comment: The applicant also recommended that, if approved for add-on payment, CMS should require both the procedure code that identifies the neurostimulator device for deep brain stimulation (02.93) in addition to the code that identifies the placement of the

generator in the chest cavity (86.95). In addition, it commented that any concern over double-payment if implantation occurs in a staged manner (that is, in separate inpatient admissions or in different settings that Medicare pays for) would be ameliorated if we require that both these two ICD–9–CM codes be required in a case that is mapped to either DRG 1 or 2 (Craniotomy with and without CC).

Response: We agree that this is the best approach to resolving both the reimbursement issue as well as concerns over the possibility of paying for the device twice if performed in different settings (that is, a staged implantation). We are approving new technology add-on payments for the Kinetra® device for FY 2005 in this final rule. Cases receiving Kinetra® for Parkinson's disease or essential tremor on or after October 1, 2004 will be eligible to receive an add-on payment of up to $8,285, or half the cost of the device, which is approximately $16,570. These cases will be identified by the presence of procedure codes 02.93 (Implantation or replacement of intracranial neurostimulator leads) and 86.95 (Insertion or replacement of dual array neurostimulator pulse generator). If a claim has only the procedure code identifying the implantation of the intracranial leads, or if the claim identifies only insertion of the generator, no add-on payment will be made.

Comment: Commenters expressed disappointment that we did not approve this device in our proposed rule. However, they remarked upon the complex issues that were raised by our concerns. Specifically, commenters urged that CMS adopt and maintain a uniform standard between the inpatient PPS and the outpatient PPS, urging CMS to make consistent decisions for devices that may be used appropriately in both settings. The commenters specifically referenced different sets of language defining substantial improvements from the OPPS rules, urging the IPPS to follow the guidance of the policies set forth in the OPPS.

Response: The commenters' specific reference to the language in the November 1, 2002 outpatient prospective payment system final rule (67 FR 66781 through 66783) that refers to determinations of substantial clinical improvement where factors such as ''increased battery life'' and ''miniaturization, might so improve convenience, durability and ease of operation'' was taken out of context. The November 1, 2002 final OPPS rule states, ''[n]evertheless, there may be some improvements in the medical technology itself that are so significant that we may wish to recognize them for separate payment * * * even though they do not directly result in substantial clinical improvements.'' To date, the OPPS has only applied these explicit substantial clinical improvement criteria to pass-through device category applications. We have not yet determined whether to apply this particular standard within IPPS. However, we are approving the Kinetra® device for new technology add-on payments for FY 2005, without reference to these considerations. We will continue to consider whether to employ specific factors such as those identified for the OPPS in the IPPS.

Comment: Several commenters noted the importance of the programmability of the device, especially for patients who live at a distance from their physician and would not be able to visit frequently to adjust the level of stimulation as would be necessary with the Soletra™ device. One commenter (a physician) noted that ''the problem [with the Soletra™ device] has been so severe in some patients that [he has] had to loan them a regular physician programmer so that they could do the adjustments at home.'' He noted further that the Soletra™ programmer is not meant for patient use and encouraged CMS to approve add-on payment for Kinetra® so he can use it in his practice.

Response: We do not know the protocol for doctor-patient programming of the Soletra™ device, however, we are approving add-on payment for Kinetra® for FY 2005.

Comment: We received one comment that cited that ''the use of Kinetra® in the VA system is preferred by an almost 3 to 1 ratio versus the previous technology'' whereas the usage in Medicare was only approximately 1 to 4.

Response: We do not know where the commenter received the data in this comment, as we were not given this data by the applicant. However, we are approving Kinetra® for add-on payment for FY 2005.

g. Intramedullary Skeletal Kinetic Distractor (ISKD)

Orthofix, Inc. submitted an application for approval of the Intramedullary Skeletal Kinetic Distractor (ISKD) Internal Limb Lengthener for new technology add-on payments for FY 2005. The device received FDA marketing approval on May 2, 2001. The ISKD System is a ''closed'' lengthening system. There are no fixation pins exiting the skin, thus eliminating this portal for entry of infectious organisms. The device is implanted in the intramedullary canal. This provides mechanical stability and support to the bone segments during the distraction, regeneration and consolidation phases, thus reducing the opportunity for misalignment.

In the May 18, 2004, proposed rule, we indicated that we had reviewed the application and technology, and we had determined that the device is not new and cannot be approved for new technology add-on payments because it came on the market on May 2, 2001. The costs of the device are thus reflected in the FY 2001 MedPAR file, as acknowledged by the manufacturer's data. As a result, the costs of the device are already reflected in the DRG weights.

The manufacturer submitted charge data for cases found in the FY 2001 MedPAR file, as well as data from several hospitals that have used the device. The manufacturer identified cases using ICD–9–CM codes 78.35 (Limb lengthening procedure, femur) and 78.37 (Limb lengthening, tibia/fibula). These procedure codes occur in four DRGs: DRGs 210 and 211 (Hip and Femur Procedures Except Major Joint Procedures Age > 17, With and Without CC, respectively) and DRGs 218 and 219 (Lower Extremity and Humerus Procedures Except Hip, Foot and Femur Age > 17, With and Without CC). The average charges for cases involving these procedure codes identified by the applicant were not standardized. The average charges provided for DRGs 210, 211, 218, and 219 were $26,692, $18,187, $32,959 and $20,228, respectively. The manufacturer then added the cost of the device, which the manufacturer states is $6,750. The manufacturer projects that, in FY 2005, there will be 9 cases in DRG 210, 4 cases in DRG 211, 28 cases in DRG 218, and 19 cases in DRG 219, which results in a case-weighted threshold of $22,347. Thus, according to the manufacturer's data, because the case-weighted average standardized charges of $27,003 for the technology are greater than the cost threshold of $22,347 for these projected 60 cases, the ISKD would qualify for new technology add-on payments.

The manufacturer also stated that the ISKD met the substantial clinical improvement criterion because, in addition to the improvements mentioned above (reduces infection rates and provides mechanical stability), lengthening with the ISKD occurs gradually and with no soft tissue impingement, reducing two factors commonly associated with pain during distraction. In addition, the manufacturer pointed out that with the ISKD, the lengthening procedure is

discreet because there are no external pins. There is no cumbersome external frame that may hinder the patient's activities of daily living, or draw further attention to the discrepant limb. In addition, the patient may have partial weight bearing during the lengthening process and resume some activities of normal living.

However, because the device is already captured in our DRG weights, in the May 18, 2004 proposed rule, we proposed to deny the application for the ISKD device for new technology add-on payments for FY 2005.

Prior to publication of the proposed rule, we received no public comments on this application. During the 60-day comment period for the proposed rule, we received the following public comments on this application.

Comment: The applicant noted that it was very disappointed with CMS' proposal to deny add-on payments for this device. It stated that, although the device may be paid for in the DRG system, so few cases have received the device that the costs related to the device are not accurately reflected in the data used to recalibrate the DRG weights. It argues that the low volume of cases that have received the device has been a direct result of underpayment for the device and that CMS is denying this treatment to beneficiaries by not paying more for this device. The applicant also stated that if we had asked for market data in the application, it would have provided that information to us sooner, and would have had the opportunity to present its argument that the device did, in fact, have a delay between FDA approval and coming to the market. It stated that the ''delay between FDA approval and commercial availability was due to a halt in production while certain changes on the ISKD were validated.'' It also noted that the company ''conducted a comprehensive review of its sales database'' and has determined that the first commercial sales of the device were made in February 2002, and as such, the costs of the device were not included in the FY 2001 MedPAR.

Response: This device has been on the market for more than the 2- to 3-year period for which new technology add-on payments are allowed. Even though there may have been a delay in commercial availability of the device, the company stated that sales were made in February of 2002. We note that we are not using strictly the FY 2001 MedPAR as our basis for determining newness in FY 2005, but are denying add-on payments to those products that were on the market prior to midway into FY 2002. Products that were in use prior to April of 2002 have data for more than half of FY 2002 so that the costs of the new technology were included in the DRG recalibration in subsequent years. We have been making payments for the ISKD device since it came on the market and data reflecting the cost of the device are therefore already reflected in the DRG weights. Therefore, we cannot find that the device is new and we are finalizing our proposal to deny this applicant new technology add-on payments.

h. Acticon™ Neosphincter

American Medical Systems submitted an application for approval of the Acticon™ Neosphincter for new technology add-on payments for FY 2005. The Acticon™ Neosphincter is a small, fluid-filled prosthesis that is completely implanted within the body. The Acticon™ Neosphincter prosthesis has been developed to treat severe fecal incontinence (the accidental loss of solid or liquid stool at least weekly). It is designed to mimic the natural process of bowel control and bowel movements. The prosthesis consists of three components: an occlusive cuff implanted around the anal canal, a pressure-regulating balloon implanted in the prevesical space, and a control pump with septum implanted in the scrotum. All components are connected with color-coded, kink-resistant tubing.

The FDA approved the Acticon Neosphincter for use on December 18, 2001. A technology can be considered new only 2 to 3 years after data reflecting the costs of the technology begin to become available. Data on the costs of this technology began to become available after the December 2001 FDA approval. As a result, the costs of this technology are currently reflected in the DRG weights. Therefore, in the proposed rule, we indicated that we had determined that Acticon™ Neosphincter does not meet this criterion.

Although we proposed not to approve this application because Acticon™ Neosphincter does not meet the newness criterion, we noted that the applicant submitted information on the cost criterion and substantial clinical improvement criterion. The applicant submitted 23 cases (that are indistinguishable as to whether they are Medicare or non-Medicare) using ICD–9–CM procedure codes 49.75 (Implantation or revision of artificial anal sphincter) and 49.76 (Removal of artificial anal sphincter) in order to identify cases where the Acticon™ Neosphincter was used. Of these cases, 9 were in DRG 157 (Anal and Stomal Procedures With CC), and 14 were in DRG 158 (Anal and Stomal Procedures Without CC). The average standardized charge per case was $16,758. The case-weighted threshold for DRGs 157 and 158 (39.1 percent of cases in DRG 157 and 60.1 percent of cases in DRG 158) for this technology is $14,426. Therefore, according to the applicant, the Acticon™ Neosphincter meets the cost criterion.

The applicant states in its application that the Acticon™ Neosphincter represents a substantial clinical improvement for the following reasons: (1) There is no other existing device in the United States that can be used to treat severe fecal incontinence; and (2) self-treatment for severe fecal incontinence has proven to be largely unsuccessful and surgical options have historically been more limited, including sphincteroplasty or muscle transposition.

However, because Acticon™ Neosphincter does not meet the newness criterion, we proposed to deny add-on payments for this new technology. The applicant also requested a DRG reclassification for this technology. In section II.B.4 of the preamble of this final rule, we are finalizing our proposal to remove codes 49.75 and 49.76 from DRGs 157 and 158, and reassign them to DRGs 146 (Rectal Resection With CC) and 147 (Rectal Resection Without CC) in MDC 6 (Diseases and Disorders of the Digestive System) only. All other MDC and DRG assignments for codes 49.75 and 49.76 remain the same.

Prior to the publication of the May 18, 2004 proposed rule, we received public comments in accordance with section 50(b)(2) of Pub. L. 108–173 regarding this application for add-on payments.

One commenter noted that the implant of the Acticon™ Neosphincter avoids the life-altering and disfiguring consequences of a permanent stoma. Another commenter noted that the implant of the Acticon™ Neosphincter avoids the need for a colostomy, which limits a patient's ability to travel and work due to the fact they could have a fecal accident at any time. However, because we concluded that the Acticon™ Neosphincter is no longer new, we proposed that it is not eligible for add-on payments.

During the 60-day comment period for the May 18, 2004 proposed rule, we received the following public comments on this application.

Comment: One commenter, the applicant, commented that the Acticon™ Neosphincter should still be considered new under the newness criterion since the device received FDA approval on December 18, 2001 and

ICD–9–CM codes (49.75 and 49.76) became effective October 1, 2002. The commenter believes that only after the ICD–9–CM codes became available did data begin to reflect the costs of the technology in the DRGs. Based on the issuance of the codes, there is only 1½ years of data and this is the first year CMS is using data with the new ICD–9–CM codes that reflect the Acticon™ Neosphincter within the DRGs. As a result, the commenter maintains that the Acticon™ Neosphincter is still ''new'' under 42 CFR 412.87(b)(2).

The commenter also noted that the standardized charges per case of $16,758 are actually the standardized costs per case. The correct average charge per case based on the data submitted is $41,396.

Response: As stated above, a technology can be considered new only 2 to 3 years after data reflecting the costs of the technology begin to become available. Data on the costs of this technology began to become available after the December 2001 FDA approval and the costs of this technology are currently reflected in the DRG weights. As a result, the Acticon™ Neosphincter does not meet the newness criterion. For a further discussion regarding the effect of FDA approval dates and the issuance of ICD–9–CM codes upon our evaluation of the newness criterion, please see the preamble above.

Also, in reference to the cost data, we appreciate the commenter pointing out this error and agree that the average case weighted standardized charge is $41,396. Because the average case weighted standardized charge is greater then the average case weighted threshold of $14,426, the commenter maintains that the Acticon™ Neosphincter meets the cost criterion. However, because the Acticon™ Neosphincter does not meet the newness criterion, we are denying add-on payments for this technology in FY 2005.

We are finalizing our proposal not to approve this technology for add-on payments for FY 2005.

i. TandemHeart™ Percutaneous Left Ventricular Assist System

Brigham and Women's Hospital submitted an application for approval of the TandemHeart™ Percutaneous Ventricular Assist System (PVTA) manufactured by Cardiac Assists, Inc., for new technology add-on payments for FY 2005. Cardiac Assists, Inc. has been assisting the applicant with supplemental information and data to support the application process. According to the manufacturer, the device contains a controller, arterial and venous cannulae, and the TandemHeart™ Percutaneous Ventricular Assist Device (pVAD) that works parallel with the left ventricle to provide left ventricular circulatory support. The device is intended for extracorporeal circulatory support using an extracorporeal bypass circuit. The duration of use approved by the FDA is for periods of up to 6 hours.

On November 11, 2000, FDA approved the AB–180 XC Blood Pump (also known as the TandemHeart™ pVAD) as a single use, disposable centrifugal blood pump designed to circulate blood through an extracorporeal circuit. On May 23, 2003, FDA approved the CardiacAssist Transseptal Cannula Set for transseptal catherization of the left atrium via the femoral vein for the purpose of providing a means for temporary (6 hours or less) left ventricular bypass when connected to a suitable extracorporeal blood pump unit that returns blood to the patient via the femoral artery or other appropriate site. The manufacturer stated that, although the TandemHeart™ pVAD was approved in November 2000, this device should still be considered new because the device was not marketed and sold to hospitals until the CardiacAssist Transseptal Cannula Set was approved by FDA in May 2003. We have received confirmation from hospitals that the TandemHeart™ pVAD was indeed not marketed until FDA approved the CardiacAssist Transseptal Cannula Set. Also, only half of a year's worth of data containing the TandemHeart™ pVAD is reflected within the FY 2003 MedPAR file. The manufacturer stated that approximately 60 TandemHeart™ pVADs have been used since the FDA approved the Cardiac Arrest Transseptal Cannula Set in May 2003. Therefore, the costs of the TandemHeart™ pVAD are not adequately reflected within the DRGs. As a result, we consider the TandemHeart™ pVAD to be new under our criterion.

As stated above, according to the manufacturer, approximately 60 TandemHeart™ pVADs have been used since the FDA approved the Cardiac Assist Transseptal Cannula Set in May 2003 (not all of these have been used in Medicare beneficiaries). However, only two actual cases were submitted by the applicant with an ICD–9–CM code of 37.65 (Implant of an external pulsatile heart assist system) used to identify the device. As stated in the September 7, 2001, final rule (66 FR 46916), data submitted by the applicant must be of a sufficient sample size to demonstrate a significant likelihood that the true mean across all cases likely to receive the technology will exceed the threshold established by CMS. We indicated in the proposed rule that, because we lack a significant sample of data reflecting the costs of this technology, we could not accurately determine the average charge per case for the TandemHeart™ pVAD. Neither could we determine whether this technology meets our cost criterion. We indicated that if we received sufficient data to complete our analysis in time for inclusion in the final rule, we would assess whether this technology meets the cost criterion.

In response to this request, the manufacturer and applicant submitted supplementary data on the TandemHeart™ pVAD. We received a total of 11 actual cases that used the Tandem Heart. Although these cases are approximately 18 percent of all TandemHeart™ pVAD cases, we cannot consider this a significant sample of cases to determine if the Tandem Heart meets the cost criterion. Of the 11 cases submitted, the variance in charges from the lowest charge per case to highest charge per case was close to 1 million dollars. Such a large variance in charges per case will require us to consider many more cases in excess of the 11 cases submitted and the 60 total cases that have used the device since its inception before we can determine if the TandemHeart™ pVAD meets the cost criterion. Also, because this is a small pool of cases, one unrepresentative case could skew the results of the data. As a result, because there are insufficient data for us to determine whether the TandemHeart™ pVAD meets the cost criterion, we are denying add-on payments for this technology in FY 2005.

Although we are not approving this application because we did not have sufficient data to determine whether TandemHeart™ pVAD meets the cost criterion, in the proposed rule we noted that the applicant submitted information on the substantial clinical improvement criterion. The applicant stated in its application that the TandemHeart™ pVAD represents a substantial clinical improvement because, at present, the only alternative to intra-aortic balloon pump support is the surgical implantation of a ventricular assist device. The TandemHeart™ pVAD is the only therapeutic intervention that is capable of achieving effective circulatory support to stabilize cardiogenic shock patients that could be placed via a percutaneous approach. In the proposed rule, we indicated that we would present a full analysis of this technology under the significant improvement

criterion if we received sufficient data in time for this final rule to evaluate whether the technology met the cost criterion. For this final rule, as we have determined above, the TandemHeart™ pVAD does not meet the cost criterion and therefore we are not presenting our full analysis of this technology under the substantial improvement criterion. However, we note, although the TandemHeart™ pVAD appears to be a promising new technology for providing circulatory support in profound, refractory left ventricular failure, our review of the submitted literature did not find that adequate clinical experience or clinical evidence exists to demonstrate substantial clinical improvement to the degree we feel is necessary to warrant a new technology special add-on payment. As a result of this and the fact that there are insufficient data to determine whether the TandemHeart™ pVAD meets the cost criterion, we are denying add-on payments in FY 2005 for this technology.

Nevertheless, we encourage the manufacturers of the TandemHeart™ pVAD device to continue their efforts to compile objective clinical data that demonstrate its clinical efficacy, particularly with regard to improved clinical outcomes in patients with this very serious, life threatening condition. Because the device only became available for use in May 2003, it could remain eligible for consideration for new technology add-on payments in FY 2006.

The applicant also requested an ICD–9–CM code for this technology. We discuss this request in section II.B.3. of the preamble of this final rule.

j. Aquadex ™ System 100 Fluid Removal System (System 100)

CHF Solutions, Inc. submitted an application for the approval of the System 100 for new technology add-on payments for FY 2005. The System 100 is designed to remove excess fluid (primarily excess water) from patients suffering from severe fluid overload through the process of ultrafiltration. Fluid retention, sometimes to an extreme degree, is a common symptom of patients with chronic congestive heart failure. This technology removes excess fluid without causing hemodynamic instability. It also avoids the inherent nephrotoxicity and tachyphylaxis associated with aggressive diuretic therapy, the mainstay of current therapy for fluid overload in congestive heart failure.

The System 100 consists of: (1) A S–100 console; (2) a UF 500 blood circuit; (3) an extended length catheter (ELC); and (4) a catheter extension tubing. The System 100 is designed to monitor the extracorporeal blood circuit and to alert the user to abnormal conditions. Vascular access is established via the peripheral venous system, and up to 4 liters of excess fluid can be removed in an 8-hour period.

On June 3, 2002, FDA approved the System 100 for use with peripheral venous access. On November 20, 2003, FDA approved the System 100 for expanded use with central venous access and catheter extension use for infusion or withdrawal circuit line with other commercially applicable venous catheters. According to the applicant, although the System 100 was first approved by FDA in June 2002, the System 100 was not used by hospitals until August 2002 because it took a substantial amount of time to market and sell the device to hospitals. As a result, the applicant believes that the System 100 should still be considered new. The applicant has presented data and evidence demonstrating that the System 100 was not marketed until August 2002. Therefore, we also believe August 1, 2002 is the relevant date for determining the availability of the System 100.

The applicant estimates that 308 patients (approximately 120 cases per year) have used the System 100 since its inception and the potential population for use of the device is 60,000 cases per year. These 308 cases represent a small percentage of the potential number of cases that can utilize the System 100. Therefore, the System 100 is not adequately reflected within the DRG weights (as discussed in the September 7, 2001 final rule (66 FR 46914)). In addition, the System 100 is within the 2 to 3 year period contemplated under § 412.87(b)(2) of the regulations. Therefore, the System 100 could be considered new. However, the ultrafiltration process that the System 100 employs can also be considered to be a type of hemodialysis, which is an old and well-established technology. In the proposed rule, we indicated that we have concerns about whether new technology add-on payments should be extended to a well-established technology, even when a new clinical application is developed for that technology. As discussed above, in the September 7, 2001 final rule (66 FR 46915), we noted that if an existing technology is used for treating patients not expected to be assigned to the same DRG as the patients already receiving the technology, it may be considered for approval if it also meets the other cost and clinical improvement criteria. In this case, the device does treat a different patient population of congestive heart failure than the patient population for renal dialysis. Under the policy described in the September 7, 2001, final rule, this technology may be considered new for the purposes of determining whether it qualifies for add-on payments. However, in the proposed rule, we indicated that we have some concerns about whether this is an appropriate result, and about whether technologies that have been in use for many years, in some cases decades, should be able to qualify for add-on payments for new technologies. Therefore, we invited comments on whether this technology should be considered new, and on the general issue of whether existing technologies should be approved for add-on payments when new applications are developed for these technologies and whether special standards regarding, for example, clinical improvement, should be applied in such cases.

Comment: One commenter, the applicant, explained that the System 100 should still be considered new for numerous additional reasons. The commenter explained that System 100 has received numerous patents issued from the United States Patent Office for many aspects of the technology thus demonstrating its uniqueness and newness. The commenter also added that the technology should be considered new since the FDA recognized the features of the technology, such as proprietary design of the filter assembly and its unique low flow capability, as a different technology because the device can be used in a different patient population. The commenter further explained that no other technology operates in this low flow range using automatic pressure control algorithms and peripheral vascular access while delivering ease of use and patient safety.

Some commenters recommended that CMS maintain the criteria and definition established in the September 7, 2001, **Federal Register** (66 FR 46915) that if an existing technology is used for treating patients not expected to be assigned to the same DRG as the patients already receiving the technology, it may be considered for approval if it also meets the other cost and clinical improvement criterion. As a result, the commenters maintain that according to the September 7, 2001, final rule the System 100 meets these criteria and should be approved for new technology add-on payments.

Response: We appreciate the commenter's comments on the newness criterion. As noted above, we do not employ FDA guidelines to determine

what drugs, devices or technologies qualify for new technology add-on payments. We also do not consider patents issued by the United States Patent Office as an indicator of a new technology. For a more detailed discussion of the criteria for newness and substantial clinical improvement please see the September 7, 2001, **Federal Register** (66 FR 46914).

We will continue to review the policy stated in our September 7, 2001, rule. We invite further public comment on this issue in the interim.

The applicant submitted five sets of data to demonstrate that the System 100 meets the cost criterion. Of these five, three sets of data were flawed in the analysis of the cost criterion. Therefore, as in the proposed rule, we discuss only the data that are most accurate and relevant. It is important to note at the outset of the cost analysis that the console is reusable and is, therefore, a capital cost. Only the circuits and catheters are components that represent operating expenses. Section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services or technologies under the payment system established under that subsection, which establishes the system for paying for the operating costs of inpatient hospital services. The system of payment for capital costs is established under section 1886(g) of the Act, which makes no mention of any add-on payments for a new medical service or technology. Therefore, it is not appropriate to include capital costs in the add-on payments for a new medical service or technology and these costs should also not be considered in evaluating whether a technology meets the cost criterion. The applicant has applied for add-on payments for only the circuits and catheter, which represent the operating expenses of the device. However, in the proposed rule we stated our belief that the catheters cannot be considered new technology in any sense. As a result, we considered only the UF 500 disposable blood circuit as relevant to the evaluation of the cost criterion.

The applicant commissioned Covance to search the FY 2002 MedPAR file. The applicant used a combination of diagnosis codes to determine which cases could potentially use the System 100. Covance found 27,589 cases with the following combination of ICD–9–CM diagnosis codes: 428.0 through 428.9 (Heart Failure), 402.91 (Unspecified with Heart Failure), or 402.11 (Hypertensive Heart Disease with Heart Failure), in combination with 276.6 (Fluid Overload) and 782.3 (Edema). The 27,589 cases were found among 281 DRGs with 49.4 percent of cases mapped across DRGs 88, 89, 127, 277 and 316. The applicant eliminated those DRGs with less than 150 cases, which resulted in a total of 22,024 cases that could potentially use the System 100. The case-weighted average standardized charge across all DRGs was $14,534. The case-weighted threshold across all DRGs was $17,789. Although the case-weighted threshold is greater than the case-weighted standardized charge, it is necessary to include the standardized charge for the circuits used in each case. In order to establish the charge per circuit, the manufacturer submitted data regarding 51 actual cases that used the System 100. Based on these 51 cases, the standardized charge per circuit was $2,209. The manufacturer also stated that an average of two circuits are used per case. Therefore, adding $4,418 for the charge of the two circuits to the case-weighted average standardized charge of $14,534 results in a total case-weighted standardized charge of $18,952. This is greater than the case-weighed threshold of $17,789. In the May 18, 2004 proposed rule, we welcomed comments from the public on the charge information submitted by the applicant for the circuits.

Comment: One commenter noted that we stated, ''[c]atheters cannot be considered new technology in any sense.'' The commenter stated that this language on catheters is unduly broad and it is possible that the introduction of a new catheter could represent a substantial clinical improvement. The commenter also noted that a catheter could be considered new under CMS policy specified in the September 7, 2001, **Federal Register** (66 FR 46915) that discusses if the new use of an existing technology is for treating patients not expected to be assigned to the same DRG, it may be considered for approval of new technology add-on payments.

Response: We thank the commenter for pointing this out and we agree that in a certain circumstance a catheter could be considered a new technology under our current policy. We also note that we are continuing to review our policy regarding whether a new use of an existing technology may be considered for approval of new technology add-on payments.

For the proposed rule, using the FY 2003 MedPAR file, we used the same combination of diagnosis codes to identify 28,660 cases across all DRGs. As in the applicant's analysis, we eliminated those DRGs with less than 150 cases, which resulted in 22,395 cases. The case-weighted average standardized charge for these cases is $15,447. The case-weighted threshold to qualify for new technology add-on payments using the data we identified would then be $18,029. Again, as in the applicant's analysis, it was necessary to include in the charge of $4,418 for the circuits. This results in a total case-weighted average standardized charge of $19,865, which is also greater than the case-weighted threshold of $18,029. Based on these two analyses, the System 100 meets the cost criterion.

The applicant contends that the System 100 represents a substantial clinical improvement for the following reasons: It removes excess fluid without the use of diuretics; it does not lead to electrolyte imbalance, hemodynamic instability or worsening renal function; it can restore diuretic responsiveness; it does not adversely affect the renin-angiotensin system; it reduces hospital length of stay for the treatment of congestive heart failure, and it requires only peripheral venous access. In the proposed rule we stated our belief that there was some basis for concluding that the System 100 represents a substantial clinical improvement over current standard treatment of fluid overload in congestive heart failure. However, in the May 18, 2004 proposed rule, we also invited comment on whether the data submitted are indeed adequate to demonstrate significant clinical improvement.

Prior to the publication of the May 18, 2004, proposed rule, we received public comments in accordance with section 503(b)(2) of Public Law 108–173 regarding this application for add-on payments. Several commenters noted that the System 100 provides physicians a new treatment option for patients with fluid overload who are unresponsive to diuretics and has been documented in clinical studies and other published articles to effectively treat fluid overload. Another commenter noted that patients who have been treated with the System 100 seem to have improved health versus those who have lingered on diuretic therapy or have been treated by hemodialysis. The commenter also noted that the System 100 reduces hospital stays. Other commenters noted that the System 100 is safer for those patients in terms of reduced electrolyte imbalance and renal dysfunction and is a major step forward in the treatment of decompensated heart failure.

We considered these comments in our evaluation in the proposed rule of whether the System 100 meets this substantial clinical improvement criterion. During the 60-day comment period for the proposed rule, we

received the following comments on this application.

Comment: One commenter, the applicant, illustrated that there remains a growing unmet clinical need for effective treatment of the congestive heart failure population. The need for new technologies to treat fluid overload is demonstrated through data from the ADHERE registry which states that the percentage of heart failure patients discharged but still symptomatic of fluid retention is 39 percent. The registry had other notable facts and concluded that chronic diuretic therapy is due to fluid overload seen in patients with and without renal insufficiency and is an independent predictor of poor clinical outcomes and higher resource utilization. The commenter concluded that the emerging knowledge of congestive heart failure patients suffering from fluid overload demonstrates the need for efficient and effective fluid removal such as the System 100.

Some commenters also commented that the System 100 meets the established criteria for new technology since it is clearly and distinctly new and different from any currently available technology and provides clinical services to patients who previously were ineligible for this kind of therapy, and treats a different patient population—heart failure versus renal failure. Furthermore, these commenters also noted that patients with fluid overload are treated in a different DRG than patients who have renal failure.

The applicant also noted that there are some clinical trials that have demonstrated the clinical safety and effectiveness as well as cost effectiveness of the System 100 in treating patients with fluid overload.

Response: We thank the commenters for their comments on this criterion. After careful review of all available information, we have determined that although we recognize the potential benefit of this new technology for Medicare beneficiaries (as stated by the commenter), we do not believe there is sufficient objective clinical evidence to determine that the System 100 meets the substantial clinical improvement criterion (such as a large prospective, randomized clinical trial), given the prevalence of congestive heart failure in the Medicare population. For example, a large prospective, randomized clinical trial that demonstrates improved outcomes, especially in morbidity and mortality, when compared to standard therapy for this sub-population of Medicare patients with congestive heart failure was not submitted. As a result, we are denying add-on payments for this technology for FY 2005.

III. Changes to the Hospital Wage Index

A. Background

Section 1886(d)(3)(E) of the Act requires that, as part of the methodology for determining prospective payments to hospitals, the Secretary must adjust the standardized amounts ''for area differences in hospital wage levels by a factor (established by the Secretary) reflecting the relative hospital wage level in the geographic area of the hospital compared to the national average hospital wage level.'' In accordance with the broad discretion conferred under the Act, we currently define hospital labor market areas based on the definitions of statistical areas established by the Office of Management and Budget (OMB). A detailed discussion of the FY 2005 hospital wage index based on the statistical areas, including OMB's revised definitions of Metropolitan Areas, appears under section III.B of this preamble.

Beginning October 1, 1993, section 1886(d)(3)(E) of the Act requires that we update the wage index annually. Furthermore, this section provides that the Secretary base the update on a survey of wages and wage-related costs of short-term, acute care hospitals. The survey should measure, to the extent feasible, the earnings and paid hours of employment by occupational category, and must exclude the wages and wage-related costs incurred in furnishing skilled nursing services. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. The adjustment for FY 2005 is discussed in section II.B. of the Addendum to this final rule.

As discussed below in section III.G. of this preamble, we also take into account the geographic reclassification of hospitals in accordance with sections 1886(d)(8)(B) and 1886(d)(10) of the Act when calculating the wage index. Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amounts so as to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. The budget neutrality adjustment for FY 2005 is discussed in section II.B. of the Addendum to this final rule.

Section 1886(d)(3)(E) of the Act also provides for the collection of data every 3 years on the occupational mix of employees for short-term, acute care hospital participating in the Medicare program, in order to construct an occupational mix adjustment to the wage index. A discussion of the initial collection of these data and the occupational mix adjustment that we are applying beginning October 1, 2004 (the FY 2005 wage index) appears under section III.C. of this preamble.

B. Revised OMB Definitions for Geographical Statistical Areas

1. Current Labor Market Areas Based on MSAs

The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. In accordance with the broad discretion under section 1886(d)(3)(E) of the Act, we currently define hospital labor market areas based on the definitions of Metropolitan Statistical Areas (MSAs), Primary MSAs (PMSAs), and New England County Metropolitan Areas (NECMAs) issued by OMB. OMB also designates Consolidated MSAs (CMSAs). A CMSA is a metropolitan area with a population of one million or more, comprising two or more PMSAs (identified by their separate economic and social character). For purposes of the hospital wage index, we use the PMSAs rather than CMSAs because they allow a more precise breakdown of labor costs. If a metropolitan area is not designated as part of a PMSA, we use the applicable MSA.

These different designations use counties as the building blocks upon which they are based. Therefore, hospitals are assigned to either an MSA, PMSA, or NECMA based on whether the county in which the hospital is located is part of that area. For purposes of the IPPS wage index, we combine all of the counties in a State outside a designated MSA, PMSA, or NECMA together to calculate a statewide rural wage index.

2. Core-Based Statistical Areas

OMB reviews its Metropolitan Area (MA) definitions preceding each decennial census. In the fall of 1998, OMB chartered the Metropolitan Area Standards Review Committee to examine the MA standards and develop recommendations for possible changes to those standards. Three notices related to the review of the standards were published on the following dates in the **Federal Register**, providing an opportunity for public comment on the recommendations of the Committee: December 21, 1998 (63 FR 70526);

October 20, 1999 (64 FR 56628), and August 22, 2000 (65 FR 51060).

In the December 27, 2000, **Federal Register** (65 FR 82228 through 82238), OMB announced its new standards. According to that notice, OMB defines a Core-Based Statistical Area (CBSA), beginning in 2003, as ''a geographic entity associated with at least one core of 10,000 or more population, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties. The standards designate and define two categories of CBSAs: Metropolitan Statistical Areas and Micropolitan Statistical Areas.'' (65 FR 82235)

According to OMB, MSAs are based on urbanized areas of 50,000 or more population, and Micropolitan Statistical Areas (referred to in this discussion as Micropolitan Areas) are based on urban clusters of at least 10,000 population but less than 50,000 population. Counties that do not fall within CBSAs are deemed ''Outside CBSAs.'' In the past, OMB defined MSAs around areas with a minimum core population of 50,000, and smaller areas were ''Outside MSAs.''

The general concept of the CBSAs is that of an area containing a recognized population nucleus and adjacent communities that have a high degree of integration with that nucleus. The purpose of the standards is to provide nationally consistent definitions for collecting, tabulating, and publishing Federal statistics for a set of geographic areas. CBSAs include adjacent counties that have a minimum of 25 percent commuting to the central counties of the area. This is an increase over the minimum commuting threshold for outlying counties applied in the previous MSA definition of 15 percent.

On June 6, 2003, OMB announced the new CBSAs, comprised of MSAs and the new Micropolitan Areas based on Census 2000 data. (A copy of the announcement may be obtained at the following Internet address: *http://www.whitehouse.gov/omb/bulletins/fy04/b04–03.html*.) The new definitions recognize 49 new MSAs and 565 new Micropolitan Areas, and extensively revise the composition of many of the existing MSAs. There are 1,090 counties in MSAs under these new definitions (previously, there were 848 counties in MSAs). Of these 1,090 counties, 737 are in the same MSA as they were prior to the changes, 65 are in a different MSA, and 288 were not previously designated to any MSA. There are 674 counties in Micropolitan Areas. Of these, 41 were previously in an MSA, while 633 were not previously designated to an MSA. There are five counties that previously were designated to an MSA but are no longer designated to either an MSA or a new Micropolitan Area: Carter County, KY; St. James Parish, LA; Kane County, UT; Culpepper County, VA; and King George County, VA.

3. Revised Labor Market Areas

In its June 6, 2003 announcement, OMB cautioned that these new definitions ''should not be used to develop and implement Federal, State, and local nonstatistical programs and policies without full consideration of the effects of using these definitions for such purposes. These areas should not serve as a general-purpose geographic framework for nonstatistical activities, and they may or may not be suitable for use in program funding formulas.''

We have previously examined alternatives to the use of MSAs for the purpose of establishing labor market areas for the Medicare wage index. In the May 27, 1994, proposed rule (59 FR 27724), we presented our latest research concerning possible future refinements to the labor market areas. Specifically, we discussed and solicited comment on the proposal by the Prospective Payment Assessment Commission (ProPAC, a predecessor organization to the Medicare Payment Advisory Commission (MedPAC)) for hospital-specific labor market areas based on each hospital's nearest neighbors, and our research and analysis on alternative labor market areas. Even though we found that none of the alternative labor market areas that we studied provided a distinct improvement over the use of MSAs, we presented an option using the MSA-based wage index but generally giving a hospital's own wages a higher weight than under the current system. We also described for comment a State labor market option, under which hospitals would be allowed to design labor market areas within their own State boundaries.

We described the comments we received in the June 2, 1995, proposed rule (60 FR 29219). There was no consensus among the commenters on the choice for new labor market areas. Many individual hospitals that commented expressed dissatisfaction with all of the proposals. However, several State hospital associations commented that the options merited further study. Therefore, we contacted the association representatives that participated in our November 1993 meeting on labor market issues in which we solicited ideas for additional types of labor market research to conduct. None of the individuals we contacted suggested any ideas for further research.

Consequently, we have continued to use MSAs to define labor market areas for purposes of the wage index. While we recognize MSAs are not designed specifically to define labor market areas, we believe they do represent a useful proxy for this purpose, and our analysis and discussion here are focused on issues related to adopting the new CBSAs to define labor market areas.

Comment: Many commenters recommended various revisions to the proposed labor market definitions. Many of these comments focused on specific situations, especially situations in which previously large MSAs were divided into smaller MSAs under the new definitions, and the converse situation in which MSAs expanded under the new definitions. One commenter, proposed an extensive reoconfiguration of CMS' labor market areas. Specifically, the commenter recommended that, instead of expanding certain MSAs, we create a system of overlapping markets, beginning with a core labor market, consisting of the original MSA and center city, and creating overlapping subdivisions, or ''tiers,'' out of the areas outside the core. Furthermore, the commenter cites a U.S. Government Accountability Office (GAO) report that called for CMS to refine its MSA-based wage index areas so that they might better represent actual hospital labor markets, which could potentially entail reducing the size of some large urban markets because of the large disparities between the wage levels in central cities, large towns, and outlying counties.

The proposal begins with all counties associated with the urban area, either under the old or new MSAs, which are then subdivided based upon PMSAs or Metropolitan Divisions. These areas would be ranked according to wage level, assigning the highest wage area as the ''core.'' Then overlapping labor markets would be formed as each subsequent ranked area is packaged with the center city, creating tiers of labor markets. A wage index would be developed for each tier, retaining a high wage value reflective of the center city, and successively lower wage levels for the surrounding areas. As the labor markets incorporate one another and build upon the central area, the system acknowledges the interaction between the given areas but fairly accounts for the wage level differences encompassed therein.

The commenter asserts that this system will adequately recognize the higher labor costs in the core area and moderate the funding differential between the central area and the

outlying communities, who are undoubtedly linked to the core area. It would also afford more reclassification opportunities for hospitals within the greater metropolitan area and prevent the 'orphanization' of hospitals whose provider neighbors are reclassified into higher wage areas while they retain their geographic wage index.

Other commenters objected to the division of certain MSAs, and advocated restoring the larger MSAs that existed under the previous definitions. These commenters contended that the smaller MSAs do not adequately capture the regional nature of markets for hospital labor.

Other commenters, especially those that would benefit from specific changes, supported the changes previously cited. Hospitals in a high wage area supported the proposal to split their area off from the lower wage areas around the fringe of the large MSA to which they had belonged under the old definitions. Hospitals that are included in a higher wage MSA under the new definitions also expressed strong support for the expansion of this MSA, and specifically requested that we make no changes in the proposal.

Response: We appreciate the detailed and substantive recommendations provided by these commenters. These recommendations merit further study and consideration. However, we do not believe that it would be prudent to proceed with any of these recommendations at this time, for several reasons. First, these recommendations are not entirely consistent, since some emphasize expanding existing MSAs or preserving large MSAs that existed under the old definitions, and others emphasize creating smaller units or at least distinguishing segments within larger MSAs. In addition, the range of comments on specific situations indicates the importance of taking into consideration all of the effects that these proposed revisions might have. Specifically, hospitals that stand to benefit from the new definitions might experience lesser gains from the proposed revisions. Finally, we believe that the 1-year transition that we have proposed will alleviate the concerns of many hospitals, by limiting the reductions that they might otherwise experience from the introduction of the new labor market areas. We will continue to study these issues.

Comment: Several commenters have suggested that the implementation of the new MSAs be delayed at least another year so that alternative solutions may be reviewed.

Response: The new MSA designations were released June 6, 2003. We stated in our August 1, 2003 final rule that CMS was unable to implement the new MSAs immediately but intended to evaluate the impact of the changes for the FY 2005 proposed rule. In essence, we have already delayed the implementation of the new Census information.

Comment: One commenter mentioned the need to closely monitor the population changes in the large Micropolitan areas, as crossing the threshold to 50,000 would create a new MSA. The commenter cited the case of Eagle Pass, TX, which, according to July 1, 2003 population estimates, now exceeds the 50,000 threshold. The commenter states that failure to recognize such areas will unnecessarily cripple growing areas.

Response: In the past, CMS has updated its MSA database annually before the publication of the proposed rule based on OMB's listing of MSAs. While an area may have an estimated population exceeding the threshold, we can only update once OMB recognizes this change. At this time, OMB still recognizes Eagle Pass, TX as a Micropolitan Area.

Comment: Many commenters believe that the large MSA should not be divided into the Metropolitan Divisions as outlined by the new OMB definitions.

Response: In previous years we have utilized PMSAs, a division of the larger CMSA. We believe the usage of Metropolitan Divisions represent the closest approximation to PMSAs, the building block of our current Labor Market Definitions. Therefore, we do not believe that we should abandon the use of these new definitions since they most accurately retain our current structuring of labor market areas. However, given the scope and drastic implications of these new boundaries and to buffer the subsequent negative impact on numerous hospitals, we have decided to provide, during FY 2005, a blend of wage indexes to those hospitals that would experience a drop in their wage indexes because of the adoption of the new labor market areas. Any hospital experiencing a decrease in their wage index relative to its FY 2005 wage index because of the labor market area changes will receive 50 percent of the wage index using the new labor market definitions and 50 percent of the wage index that the provider would have received under the old MSA standards. This blend will apply to any provider experiencing a decrease due to the new definitions, including providers who are reclassifying under MCGRB requirements, section 1886(d)(8)(B) of the Act or section 508 of Public Law 108–173. We describe the determination of this blend in detail below. It is important to note that this blend will not protect hospitals from the effects of a drop in wage index due to any reason other than the usage of the new MSAs. For example, the blend will not apply to changes due to the use of new wage data in calculating the FY 2005 wage index. In other words, the two wage indexes (one wage index reflecting the labor market definitions employed in FY 2004, the other wage index reflecting the new CBSA definitions) used in determining the blended wage index both reflect the new FY 2005 wage data. Both these wage indexes also reflect the 10 percent occupational mix adjustment that we discuss in section III.G of this final rule.

a. New England MSAs

As stated above, we currently use NECMAs to define labor market areas in New England, because these are county-based designations rather than the 1990 MSA definitions for New England, which used minor civil divisions such as cities and towns. Under the previous MSA definitions, NECMAs provided more consistency in labor market definitions for New England compared with the rest of the country, where MSAs are county-based. Under the new CBSAs, OMB has defined the MSAs and Micropolitan Areas in New England on the basis of counties. OMB also established New England City and Town Areas, which are similar to the previous New England MSAs. Therefore, to maintain consistency in the definition of labor market areas between New England and the rest of the country, in the May 18, 2004 proposed rule (69 FR 28250), we proposed to use the New England MSAs under the new CBSA definition.

Comment: Some commenters have expressed concern regarding the adoption of a county-based system for the New England MSAs. They believe that abandoning the city- and town-based areas will inaccurately reflect the labor market areas in New England.

Response: In order to create consistency among all labor market areas and facilitate the maintenance of these areas, we will use the county-based areas for all MSAs in the nation. Census has now defined the New England area around counties, creating a city- and town-based system as an alternative. We believe that adopting county-based labor market areas for the entire country provides consistency and stability in program payment, and minimizes programmatic complexity. In addition, we have consistently employed a county-based system for

New England for precisely that reason: to maintain consistency with the labor market definitions used throughout the country. Because we have never used cities and towns, employing a county-based system in New England maintains that consistent practice.

b. Metropolitan Divisions

A Metropolitan Division is a county or group of counties within a CBSA that contains a core population of at least 2.5 million, representing an employment center, plus adjacent counties associated with the main county or counties through commuting ties. A county qualifies as a main county if 65 percent or more of its employed residents work within the county and the ratio of the number of jobs located in the county to the number of employed residents is at least .75. A county qualifies as a secondary county if 50 percent or more, but less than 65 percent, of its employed residents work within the county and the ratio of the number of jobs located in the county to the number of employed residents is at least .75. After all the main and secondary counties are identified and grouped, each additional county that already has qualified for inclusion in the MSA falls within the Metropolitan Division associated with the main/secondary county or counties with which the county at issue has the highest employment interchange measure. Counties in a Metropolitan Division must be contiguous. (65 FR 82236)

As noted above, in the past, OMB designated CMSAs as Metropolitan Areas with a population of one million or more and comprising two or more PMSAs. We currently use the PMSAs rather than CMSAs to define labor market areas because they comprise a smaller geographic area with potentially varying labor costs due to different local economies. Similarly, in the May 18, 2004 proposed rule, we proposed to use the Metropolitan Divisions where applicable under the CBSA definitions.

Under the CBSA definitions, there are 11 MSAs containing Metropolitan Divisions: Boston; Chicago; Dallas; Detroit; Los Angeles; Miami; New York; Philadelphia; San Francisco; Seattle; and Washington, DC. Although these MSAs were also CMSAs under the prior definitions, in some cases their areas have been significantly altered. Under the prior definitions, Boston was a single NECMA. It is now comprised of 4 Divisions. Los Angeles went from 4 PMSAs to 2 Divisions because 2 MSAs became separate MSAs. The New York CMSA went from 15 PMSAs down to only 4 Divisions. Five PMSAs in Connecticut now become separate MSAs, and the number of PMSAs in New Jersey goes from 5 to 2, with the consolidation of 2 New Jersey PMSAs (Bergen-Passaic and Jersey City) into the New York-Wayne-White Plains, NY-NJ Division. In San Francisco, only 2 Divisions remain where there were once 6 PMSAs, some of which are now separate MSAs.

Previously, Cincinnati, Cleveland, Denver, Houston, Milwaukee, Portland, Sacramento, and San Juan were all designated as CMSAs, but are not any longer. As noted previously, the population threshold to be designated a CMSA was one million. In most of these cases, counties formerly in a PMSA have become a separate, independent MSA, leaving only the MSA for the core area under the new CBSA definitions.

Comment: Many commenters have expressed their concern regarding the division of large MSAs of 2.5 million population or greater. They are concerned that this dividing of previously larger areas will result in dramatic disparities in wage indexes in what once was a congruous area. Additionally, many hospitals are concerned they did not have the opportunity to reclassify given the dramatic effect of this division of previously consolidated areas.

Response: As indicated above, Metropolitan Divisions represent the closest approximation to PMSAs, the building block of our current labor market definitions. Therefore, we do not believe that we should abandon the use of these new definitions since they most accurately retain our current structuring of labor market areas. However, given the scope and drastic implications of these new boundaries and to buffer the subsequent negative impact on numerous hospitals, we have decided to provide, during FY 2005, a blend of wage indexes to those hospitals that would experience a drop in their wage indexes because of the adoption of the new labor market areas. Any hospital experiencing a decrease in their wage index relative to its FY 2005 wage index because of the labor market area changes will receive 50 percent of the wage index using the new labor market definitions and 50 percent of the wage index that the provider would have received under the old MSA standards. This blend will apply to any provider experiencing a decrease due to the new definitions, including providers who are reclassifying under MCGRB requirements, section 1886(d)(8)(B) of the Act or section 508 of Public Law 108–173. We describe the determination of this blend in detail below. It is important to note that this blend will not protect hospitals from the effects of a drop in wage index due to any reason other than the usage of the new MSAs. For example, the blend will not apply to changes due to the use of new wage data in calculating the FY 2005 wage index. In other words, the two wage indexes (one wage index reflecting the labor market definitions employed in FY 2004, the other wage index reflecting the new CBSA definitions) used in determining the blended wage index both reflect the new FY 2005 wage data.

c. Micropolitan Areas

One of the major issues with respect to the new definitions is whether to use Micropolitan Areas to define labor market areas for the purpose of the IPPS wage index. Because the new Micropolitan Areas are essentially a third area definition made up mostly of currently rural areas, but also some or all of current MSAs, how these areas are treated will have significant impacts on the calculation and application of the wage index. Treating Micropolitan Areas as separate and distinct labor market areas would affect both the wage indexes of the hospitals in the Micropolitan Areas and the hospitals in the labor market areas where those hospitals are currently located (both positively and negatively).

Because we currently use MSAs to define urban labor market areas and we group all the hospitals in counties within each State that are not assigned to an MSA together into a statewide rural labor market area, we have used the terms ''urban'' and ''rural'' wage indexes in the past for ease of reference. However, the introduction of Micropolitan Areas complicates this terminology because these areas include so many hospitals that are currently included in the statewide rural labor market areas. In order to facilitate the discussion below, we use the term ''rural'' hospitals to describe hospitals in counties that are not assigned to either an MSA or a Micropolitan Area. This should not be taken to indicate that hospitals in Micropolitan Areas are no longer ''rural'' hospitals. In fact, we proposed that hospitals in Micropolitan Areas are included in the statewide rural labor market areas, for the reasons outlined below. The reader is referred to section IV.B. of the preamble of this final rule for a more specific discussion of the implications of these changes for defining urban and rural areas under § 412.62(f).

Chart 1 below, which was included in the proposed rule, demonstrates the distributions of hospitals by their current and new designations. Approximately 50 percent of hospitals currently designated rural are now in

either Micropolitan Areas (691 hospitals) or MSAs (197 hospitals). The vast majority of hospitals currently in MSAs remain in an MSA (2,478, although in some cases the MSAs have been reconfigured), while 2 are now in rural areas and 65 are now in Micropolitan Areas.

Chart 1.--Distribution of Hospitals by Current and New Designation

2005 Statistical Area	Currently Rural (2004)	Currently MSA (2004)
Rural	861	2
Micropolitan	691	65
MSA	197	2,478
TOTALS	1,749	2,545

In order to evaluate the impact of these changes, we grouped hospitals based on the county where they are located according to the new MSA and Micropolitan areas using the definitions on the Census Bureau's Web site: *http://www.census.gov/population/www/estimates/metrodef.html.* We then compared the FY 2004 wage indexes (using data from hospitals' FY 2001 cost reports) calculated based on the current MSAs, without any effects of hospital geographic reclassifications. Consistent with current policy, we applied the rural floor in the case where the statewide rural wage index is greater than the wage index for a particular urban area. We excluded Indian Health Service hospitals from the analysis due to the special characteristics of the prospective payment system for these hospitals. Hospitals in Maryland were excluded from the analysis because they remain excluded from the IPPS under the waiver at section 1814(b)(3) of the Act. Our analysis also did not reflect any changes to the Puerto Rico-specific wage index, which is applicable only to the Puerto Rico standardized amounts (the analysis does include the national wage index values for Puerto Rico hospitals).

Chart 2 below, which was included in the proposed rule, shows the impact on hospitals' wage indexes of recalculating new wage indexes based on the new MSAs, and treating the new Micropolitan Areas as separate labor market areas. Specifically, the table shows the impact of treating the new MSA and Micropolitan Areas as labor market areas and calculating a wage index for each one. The most dramatic impact of this change would be on hospitals that are currently classified as rural. Only 10 currently rural hospitals would experience no changes in their wage indexes after applying the new MSA definitions. Five of these hospitals are in Delaware and Connecticut (three and two hospitals respectively), where the only counties in the State currently considered rural are now part of Micropolitan Areas.

Approximately 62 percent (1,092 out of 1,749) of currently rural hospitals experience decreases in their wage indexes under this change. Among hospitals that remain rural after separately recognizing Micropolitan Areas (those hospitals in counties ''outside CBSAs''), rural hospitals in six States (Arizona, Florida, Idaho, Indiana, Minnesota, and Missouri) experience a positive impact after applying the new MSA definitions. These hospitals benefit because the net effect on their wage index of other hospitals moving into Micropolitan Areas is positive. The majority of the currently rural hospitals (762 out of 1,092) that experience decreases in their wage indexes are hospitals that would remain rural under the new definitions. Moreover, among the 646 rural hospitals whose wage indexes would increase under the new definitions, 547 would now be in an MSA or Micropolitan Area.

Furthermore, in many cases, the magnitude of the changes is quite large. Nearly one-half of all rural hospitals would experience payment changes of at least 5.0 percent, either negatively or positively, if we were to adopt labor market areas based in part on the new Micropolitan Areas.

In contrast, there are 938 currently urban hospitals (37 percent) with wage indexes that are unaffected by the new MSA definitions. These hospitals are in MSAs or PMSAs that are either unchanged (for example, the Austin, Buffalo, Milwaukee, Oakland, Phoenix, San Diego, and Tampa-St. Petersburg MSAs are all unchanged) or include new counties without any hospitals in those counties that are now part of the existing MSA (for example, counties were added to the Atlanta, Denver, Little Rock, Omaha, Portland, Richmond, Toledo, Virginia Beach-Norfolk MSAs but hospitals were not added).

The most significant negative impact (more than a 20-percent decrease) among hospitals currently in an MSA is on those located in counties that become Micropolitan areas or rural areas. Among hospitals with the largest positive impacts (more than a 20-percent increase), the changes appear to be largely due to changes in the counties that are now included (under the CBSAs) in the MSA labor market area.

Chart 2.--Impact on Wage Indexes of New MSA, Micropolitan Areas, and Rural Labor Market Areas

Percent Change in Area Wage Index	Number of Currently Rural Hospitals	Number of Currently MSA Hospitals	Total Number of Hospitals
Decrease Greater Than 10.0	99	36	135
Decrease Between 5.0 and 10.0	420	77	497
Decrease Between 2.0 and 5.0	238	95	333
Decrease Between 0 and 02.0	335	585	920
No Change	10	938	948
Increase Between 0 and 2.0	168	495	663
Increase Between 2.0 and 5.0	138	145	283
Increase Between 5.0 and 10.0	203	139	342
Increase Greater Than 10.0	138	35	173
Total	1,749	2,545	4,294

One of the reasons Micropolitan Areas have such a dramatic impact on the wage index is, because Micropolitan Areas encompass smaller populations than MSAs, they tend to include fewer hospitals per Micropolitan Area. Currently, there are only 25 MSAs with one hospital in the MSA. However, under the new definitions, there are 373 Micropolitan Areas with one hospital, and 49 MSAs with only one hospital.

This large number of labor market areas with only one hospital and the increased potential for dramatic shifts in the wage indexes from 1 year to the next is a problem for several reasons. First, it creates instability in the wage index from year to year for a large number of hospitals. Second, it reduces the averaging effect of the wage index, lessening some of the efficiency incentive inherent in a system based on the average hourly wages for a large number of hospitals. In labor market areas with a single hospital, high wage costs are passed directly into the wage index with no counterbalancing averaging with lower wages paid at nearby competing hospitals. Third, it creates an arguably inequitable system when so many hospitals have wage indexes based solely on their own wages, while other hospitals' wage indexes are based on an average hourly wage across many hospitals.

For these reasons, in the May 18, 2004, proposed rule, we proposed not to adopt Micropolitan Areas as independent labor market areas. Although we considered alternative approaches that would aggregate Micropolitan Areas in order to reduce the number of one-hospital labor market areas, these approaches created geographically disconnected labor market areas, an undesirable outcome. Therefore, we proposed to maintain our current policy of defining labor market areas based on the new MSAs (and Divisions, where they exist) using OMB's new criteria and the 2000 Census data.

Chart 3, which was included in the proposed rule, displays the impacts of using this approach on hospital wage indexes. The most apparent difference comparing this chart to Chart 2 is the reduction in the numbers of currently rural hospitals impacted by more than 2.0 percent. Recognizing Micropolitan Areas as independent labor market areas results in negative impacts of more than 2.0 percent for 757 currently rural hospitals, while the comparative number, when recognizing only MSAs, is 256. Conversely, the number of currently rural hospitals positively impacted by more than 2.0 percent declines from 479 to 154.

The greatest negative impacts among hospitals currently designated rural are in Idaho, where the statewide rural wage index falls 6.7 percent as a result of 6 formerly rural hospitals now being included in either new or redefined MSAs. The wage index for rural Utah hospitals declines by 5.7 percent, for similar reasons. Conversely, formerly rural hospitals that are not part of an MSA generally experience positive impacts.

Among hospitals that are currently in MSAs, the number of hospitals with decreases in their wage indexes of at least 10 percent increases from 36 to 45. These are primarily hospitals that are now located in Micropolitan Areas that are included in the statewide labor market area. There are 46 counties with 72 hospitals that are currently in an MSA that would be treated as rural.

Chart 3.--Impact on Wage Indexes of New MSA and Rural Labor Market Areas

Percent Change in Area Wage Index	Number of Currently Rural Hospitals	Number of Currently MSA Hospitals	Total Number of Hospitals
Decrease Greater Than 10.0	0	45	45
Decrease Between 5.0 and 10.0	122	60	182
Decrease Between 2.0 and 5.0	134	73	207
Decrease Between 0 and 2.0	588	615	1,203
No Change	160	1,015	1,175
Increase Between 0 and 2.0	591	574	1,165
Increase Between 2.0 and 5.0	32	103	135
Increase Between 5.0 and 10.0	64	25	89
Increase Greater Than 10.0	58	35	93
Total	1,749	2,545	4,294

Comment: Many commenters addressed the usage of Micropolitan Areas. Some commenters believe that we should adopt a policy recognizing each of the individual Micropolitan Areas. These commenters pointed out that some hospitals would benefit from the adoption of Micropolitan Areas as in the case of higher wage hospitals in currently rural areas that would receive a wage index more closely reflecting their own wage level. However, other commenters endorsed our proposal to treat Micropolitan Areas as part of the statewide rural areas. Many hospitals and several national hospital associations supported our decision not to employ Micropolitan Areas for the reasons that we presented. MedPAC also expressed support for the proposal to include Micropolitan Areas in the statewide rural areas.

Response: We continue to believe that the reasons we presented in the proposed rule for including Micropolitan Areas in the statewide rural areas are compelling. We are therefore finalizing our proposal to treat the Micropolitan Areas as ''rural.''

d. Transition Period

We have in the past provided for transition periods when adopting changes that have significant payment implications, particularly large negative impacts. When we recently removed the wage costs of teaching physicians and residents from the wage index data of teaching hospitals, we spread out the impact over 3 years by blending the hospitals' average hourly wages with and without the data. Similarly, the regulations at § 412.102 provide for a 3-year transition to the DSH adjustment payments to a hospital redesignated from urban to rural.

Given the significant payment impacts upon some hospitals because of these changes, we considered options to transition from the current MSAs to the new MSAs. As noted above, the most dramatic negative impacts are among hospitals currently located in an MSA but would become rural under the new definitions. Some negative impacts also occur among urban hospitals that remain in MSAs that have been reconfigured. However, these impacts are generally smaller than those among currently urban hospitals that would become rural. To help alleviate the decreased payments for currently urban hospitals that would become rural, in the May 18, 2004 proposed rule, we proposed to allow them to maintain their assignment to the MSA where they are currently located for the 3-year period FY 2005, FY 2006, and FY 2007. Specifically, we will assign these hospitals, as we did in the proposed rule, the prereclassified wage index of the urban area to which they currently belong. (For purposes of wage index computation, the wage data of these hospitals will remain assigned to the statewide rural area in which they are located.) We are finalizing this policy in the final rule. We are using the wage data from these hospitals as part of setting the rural wage index. The higher wage indexes these hospitals are receiving is being taken into consideration in determining whether they qualify for the out-commuting adjustment and the amount of any adjustment. Beginning in FY 2008, these hospitals would receive their statewide rural wage index, although they will be eligible to apply for reclassification by the MGCRB, both during this transition period as well as subsequent years.

We also considered the option of allowing a transition to the new MSAs for all hospitals, such as a blend of wage indexes based on the old and new MSAs for some specified period of time. We noted that, although this would help some hospitals that are negatively impacted by the changes to the MSAs, it would dampen the payment increases for those hospitals that are positively impacted by the changes. Therefore, although we notified the public that a blended rate was a viable option, we did not propose this in the proposed rule. We also noted that OMB in the past has

announced MSA changes on an annual basis due to population changes, and we have not transitioned these changes.

Comment: Many commenters urged CMS to adopt broader protections for hospitals against changes in the wage index due to the adoption of the new labor market areas. Many of these commenters advocated extending hold harmless protection to other categories of providers beyond those that we provided for in the proposed rule. Commenters offered various recommendations about how to provide such protection. Most commenters advocated transition mechanisms such as hold harmless or blending only for those hospitals that would experience a wage index decrease from the effects of the labor market area changes. MedPAC recommended providing a transition to all hospitals that experience large decreases in their wage indexes due to these changes and phasing in the changes for these hospitals over three years. MedPAC also recommended that the threshold for large decreases be set so that the cost of this provision over the transition period would equal the cost of our proposal to implement the new market definitions with a hold harmless for urban hospitals that become rural under the new definitions.

Response: We recognize that many hospitals will experience decreases in wage index as a result of the labor market area changes. At the same time, significant numbers of hospitals will benefit from these changes. In addition, as of September 1, 2004, hospitals will be able to seek reclassification for FY 2006 using the new labor market areas, if they believe another area's wage index is more appropriate and if they meet the requirements for reclassification by the MGCRB. Therefore, we have decided to provide a 1-year transition blend for hospitals that, due solely to the changes in the labor market definitions, experience a decrease in their FY 2005 wage index compared to the wage index they would have received using the labor market areas included in calculating their FY 2004 wage index. Each hospital experiencing a decrease in its wage index due to the labor market changes will receive 50 percent of its wage index based upon the new CBSA configurations and 50 percent based upon FY 2004 MSA boundaries (in both cases using the FY 2001 wage data). This blend will not apply to any hospital that experiences a drop for any reason other than the new MSA definitions, nor will it apply to hospitals that benefit from a higher wage index due to the labor market definition changes.

Specifically, we will determine for each hospital a new wage index employing the FY 2001 wage index data and the old labor market definitions, and a wage index employing FY 2001 wage index data and the new labor market definitions. Any hospital experiencing a decrease in its wage index under the new labor market definitions will receive a blended wage index consisting of 50 percent of each of these wage indexes (that is, 50 percent of the wage index using the FY 2001 wage index data and the old labor market definitions, and 50 percent of the wage index using FY 2004 wage index data and the new labor market definitions). Both the comparison and the blending will employ post reclassification wage indexes; that is, wage indexes computed after applying the established rules for assigning the wage data for reclassifying hospitals to one or more wage areas.

As part of this transition, as we proposed in the proposed rule, we will also allow currently urban hospitals that become rural under the new definitions to maintain their assignment to the MSA where they are currently located for the 3-year period FY 2005, FY 2006, and FY 2007. Specifically, we will assign these hospitals, as we did in the proposed rule, the prereclassified wage index of the urban area to which they currently belong. (For purposes of wage index computation, the wage data of these hospitals will remain assigned to the statewide rural area in which they are located.) Beginning in FY 2008, these formerly urban hospitals will receive their statewide rural wage index, although they would be eligible to apply for reclassification by the MGCRB, both during this transition period as well as subsequent years. The hospitals receiving this transition will not be considered urban hospitals but rather they will maintain their status as rural hospitals. Thus, the hospital would not be eligible, for example, for a large urban add-on under capital PPS. Thus, it is the wage index, but not the urban or rural status, of these hospitals that is being affected by this transition.

Comment: One commenter asked us to clarify whether the special provisions of § 412.102 of the regulations apply to these hospitals, that is, hospitals that were classified as urban under the previous labor market definitions, but are rural under the new labor market definitions. The commenter pointed out that this section of the regulations provides special protections for hospitals against abrupt reductions in DSH payments resulting from transitions from urban to rural status.

Response: We agree with the commenter that the provisions of § 412.102 apply in this case. Specifically, as described in § 412.102, in the first year after a hospital loses urban status, the hospital will receive an additional payment that equals two thirds of the difference between the urban disproportionate share payments applicable to the hospital before its redesignation from urban to rural and the rural disproportionate share payments applicable to the hospital subsequent to its redesignation from urban to rural. In the second year after a hospital loses urban status, the hospital will receive an additional payment that equals one third of the difference between the urban disproportionate share payments applicable to the hospital before its redesignation from urban to rural and the rural disproportionate share payments applicable to the hospital subsequent to its redesignation from urban to rural.

We decided not to provide for a longer transition, as recommended by MedPAC and other commenters, because we have already, in effect, provided one year at a higher wage index level for these hospitals by retaining the previous labor market definitions for one year after the new labor market definitions became available. However, we are still allowing a longer, 3-year hold-harmless transition for the group of hospitals that were previously urban, and are now rural under the new definitions. We are continuing to provide for a longer transition for these hospitals because, as a group they have experienced a steeper and more abrupt reduction in their wage index due to the labor market revisions.

We will apply this blended transition in a budget neutral manner. Specifically, we will make an adjustment to the rates to ensure that total payments, including the effects of the transition provisions, will equal what payments would have been if we had fully implemented the new labor market areas. We believe that doing so is most consistent with the requirement of section 1886(d)(3)(E) of the Act that any ''adjustments or updates [to the adjustment for different area wage levels] * * * shall be made in a manner that assures that aggregate payments * * * are not greater or less than those that would have been made in the year without such adjustment.'' In addition, as a policy matter, it would not be feasible for us to allow for a transition only for hospitals that experience a decrease as a result of the new labor market definitions, were we not to implement such a transition in a budget

neutral manner. Because we have adopted a policy of allowing for a transition only when it would benefit the hospital, we believe it is appropriate to ensure that such a transition does not increase Medicare payments beyond the payments that would be made had we simply adopted the new labor market definitions without any transition provisions. We note that, consistent with past practice, we are not adopting the new labor market definitions themselves in a budget neutral manner. We do not believe that the revision to the labor market areas in and of itself constitutes an ''adjustment or update'' to the adjustment for area wage differences, as provided under section 1886(d)(3)(E) of the Act.

C. Occupational Mix Adjustment to FY 2005 Index

As stated earlier, section 1886(d)(3)(E) of the Act provides for the collection of data every 3 years on the occupational mix of employees for each short-term, acute care hospital participating in the Medicare program, in order to construct an occupational mix adjustment to the wage index, for application beginning October 1, 2004 (the FY 2005 wage index). The purpose of the occupational mix adjustment is to control for the effect of hospitals' employment choices on the wage index. For example, hospitals may choose to employ different combinations of registered nurses, licensed practical nurses, nursing aides, and medical assistants for the purpose of providing nursing care to their patients. The varying labor costs associated with these choices reflect hospital management decisions rather than geographic differences in the costs of labor.

1. Development of Data for the Occupational Mix Adjustment

In the September 19, 2003, **Federal Register** (68 FR 54905), we published a final notice of intent to collect occupational mix data from hospitals using the Medicare Wage Index Occupational Mix Survey, Form CMS–10079. (The survey and instructions may be accessed at the Web site: *http://cms.hhs.gov/providers/hipps/ippswage.asp*.) The survey requires hospitals to report the number of total paid hours for directly hired and contract employees in occupations that provide the following services: nursing, physical therapy, occupational therapy, respiratory therapy, medical and clinical laboratory, dietary, and pharmacy. These services each include several standard occupational classifications (SOCs), as defined by the Bureau of Labor Statistics (BLS) on its Occupational Employment Statistics (OES) survey (*http://www.bls.gov/oes/2001/oes_tec.htm*), that may be used by hospitals in different mixes to provide specific aspects of patient care. CMS decided to use BLS's SOCs to categorize employees for the occupational mix survey in an effort to ease hospitals' reporting burden; most hospitals have had experience with collecting and reporting their employment data according to the SOC definitions. The survey includes a total of 19 SOCs that provide services for the above 7 categories and an ''all other occupations'' category. The hours collected on the survey would be used to determine the proportion of a general service category total that is attributable to each of the category's SOCs, that is, the category's occupational mix.

In order to accurately reflect a hospital's employment, we initially planned to require all hospitals to provide occupational mix data collected from a 1-year period. Several hospitals and their representatives advised us that a 1-year reporting period was feasible because salary and wage data are maintained quarterly for revenue and tax reporting purposes. However, several hospitals expressed concern that their payroll and other personnel accounting systems are typically not set up to collect data on hours for contract employees. The hospitals and their representatives advised us that the approximately 2-month timeframe (see dates below) for collecting and submitting the occupational mix data to the fiscal intermediaries would not allow hospitals enough time to develop a year's worth of hours data for contract workers. Therefore, given the short timeframe for collecting the occupational mix data, and to reduce hospitals' reporting burden associated with the initial collection of the data, we decided to allow hospitals the option of providing their hours data for the 19 SOCs either prospectively for a 4-week period beginning on or between December 28, 2003, and January 11, 2004, and ending no later than February 7, 2004, or retrospectively for a 12-month period, that is, calendar year 2003. Although we recognize that using data from only a 4-week period increases our risk of obtaining results that reflect seasonal rather than normal employment trends, we believe that the 4-week prospective reporting period should enable hospitals to plan and provide more accurate data according to our survey instructions and definitions. (See the discussion below on the verification and validity of our occupational mix survey results.)

An advance copy of the occupational mix survey was provided to hospitals in mid-December 2003 so that hospitals could begin gathering their data and documentation necessary to complete the survey. The official survey was published as a CMS One-Time Notification (Pub. 100–20, R47OTN) on January 23, 2004. We instructed our fiscal intermediaries to distribute and collect completed occupational mix surveys from any hospital that is subject to IPPS, or any hospital that would be subject to IPPS if not granted a waiver. If a hospital was not an IPPS provider during FY 2001 or, otherwise, did not submit a FY 2001 cost report, the hospital was not required to submit occupational mix data. Consistent with the wage data, CAHs were excluded from the occupational mix survey. In addition, the FY 2005 wage index does not include occupational mix data for hospitals that submitted FY 2001 wage data, but terminated participation in the Medicare program as IPPS providers before calendar year 2003. For such terminated hospitals, there would be no occupational mix data to collect for our survey period.

Hospitals had to submit their completed occupational mix surveys to their fiscal intermediaries by February 16, 2004. Our initial collection of these data was completed by March 1, 2004, the deadline for fiscal intermediaries to submit hospitals' survey data to CMS. We released a public use file containing the data on March 8, 2004 (through the Internet on our Web site at: *http://cms/hhs.gov/providers/hipps/ippswage.asp*). In a memorandum also dated March 8, 2004, we instructed all fiscal intermediaries to inform the IPPS hospitals they service of the availability of the occupational mix data file and the process and timeframe for requesting corrections and revisions. If a hospital wished to request a change to its data as shown in that file, the hospital had to submit the changes to its fiscal intermediary by March 22, 2004. In addition, as this was hospitals' first experience with the occupational mix survey, we provided hospitals another opportunity, if they missed the February 16 filing deadline, to submit their completed surveys. The deadline for this one-time, final opportunity to submit occupational mix data to fiscal intermediaries for the FY 2005 wage index was also March 22, 2004. The final deadline for fiscal intermediaries to submit hospitals' data to CMS was April 16, 2004. (From April 16 until the final rule is published, the process, criteria, and timetable for correcting occupational mix data was the same as

for Worksheet S–3 wage data, under Section H.) Occupational mix survey data received by us through March 15, 2004, were used in computing the proposed wage index in the May 18, 2004, proposed rule. Data received from intermediaries after March 15 through April 16, 2004, are included in this final rule.

The final response rate for the occupational mix survey was 93.8 percent. We received occupational mix data from 3,768 hospitals. We expected to receive completed survey data from 4,018 hospitals that submitted cost report wage data for FY 2001 and were still IPPS hospitals during calendar year 2003 or on January 1, 2004. In the proposed rule, we said that for any hospital that was expected to provide occupational mix data but did not, we would consider using proxy occupational mix data to adjust the hospital's wage data in the final wage index. One option would be to assume that the hospital only has employees in the highest level SOC for each of the general service categories included on the occupational mix survey. Another option would be to assume that such hospitals have the national SOC mix for each general service category. We invited public comment to this proposal. We noted that the wage index in the proposed rule did not include proxy data for hospitals that did not complete and submit the occupational mix survey.

Comment: Some commenters supported the intent of the occupational mix adjustment to the wage index. The commenter believed that an occupational mix adjusted wage index more accurately reflects hospitals' labor costs. Other commenters questioned whether there is a need for the occupational mix adjustment with the implementation of the provisions of Public Law 108–173 that has also increased payments to hospitals in rural areas. One commenter, an association representing hospitals in a large metropolitan area, stated that its members are concerned that any redistribution of monies from urban teaching hospitals to rural hospitals will result in further underpayment by Medicare to hospitals that utilize the most sophisticated and costly equipment, technology, and staff needed to treat the sickest patients. Further, the commenter believed that an occupational mix classification system is inherently flawed due to the diverse manner in which hospital services are rendered throughout the United States.

Several commenters expressed concern that the occupational mix adjustment is contrary to CMS' quality initiatives that place emphasis on improvement in quality outcomes and standards of care, which may require hospitals to employ more highly skilled caregivers. In addition, some commenters believed that the occupational mix adjustment opposes the direction that State governments are undertaking in mandating registered nurse staffing ratios; the resulting adjustment may be negative for hospitals in these states. Two commenters opposed the occupational mix adjustment because the commenters believed that the adjustment is unnecessary, increases the information burden for hospitals, and adds to the data that CMS must regularly audit. A few commenters recommended that we request Congress to rescind the BIPA provision that requires the occupational mix adjustment because our proposed adjustment does not have the anticipated impact.

Response: We appreciate these and other comments and concerns we received regarding the proposed initial implementation of the occupational mix adjusted wage index. We acknowledge that a wage index adjusted for occupational mix could have a redistributive effect on Medicare payments to hospitals, and, combined with the provisions of Public Law 108–173, some hospitals may be significantly negatively impacted. However, we also agree with the theory that an occupational mix adjusted wage index should more accurately reflect relative labor costs among hospitals by removing the differences that result from hiring higher skilled or lower skilled workers. For hospitals that employ a higher skill mix because they treat more complicated cases, the DRG assignment of cases should reflect the extra cost. Therefore, we do not agree with the recommendation that we should approach Congress to rescind the law that requires the occupational mix adjustment.

While the law requires us to implement the adjustment with the FY 2005 wage index, we also intend to minimize the negative impact that this initial implementation of the occupational mix adjustment may have on some hospitals' wage index values. The final FY 2005 wage index adjustment is only partially adjusted for occupational mix. A complete discussion of the blended wage index appears in section III.G. of the preamble to this final rule. We welcome input from MedPAC, hospitals, and associations in assessing the impact of the occupational mix adjustment on hospitals' wage index values and monitoring how current hospital staffing trends affect the expected outcome of the adjustment.

Comment: Several commenters addressed the issue of how we should handle the occupational mix adjustment for hospitals that did not complete the survey. The majority of commenters recommended that we use the unadjusted wage data or the national SOC mix so that other hospitals in the MSA are not adversely impacted by negative proxy data. One commenter requested us to adopt the first option, that, for any hospital that did not respond to the survey, CMS should assume that the hospital employs all of its workers in the highest level SOC for each category. The commenter believed that hospitals were provided enough time to ensure that their data collected for the occupational mix adjustment were accurate. One commenter suggested that we could achieve a 100 percent response rate to the survey if we make the survey mandatory. Another commenter recommended that we set the same consequences for failure to complete the occupational mix survey as those for not submitting a cost report and notify hospitals of these consequences in the survey instructions.

Response: We agree that other hospitals should not be harmed by a hospital's failure to respond to the occupational mix survey. If we were to apply the first option, the worst-case scenario, the wage index values for most of the areas that have hospitals that did not complete the survey would decrease significantly compared to leaving such hospitals' wage data unadjusted for occupational mix. Therefore, for the final FY 2005 wage index, we decided to use the unadjusted wage data for hospitals that did not submit occupational mix survey data. For calculation purposes, this equates to applying the national SOC mix to the wage data for such hospitals, because hospitals having the same mix as the nation would have an occupational mix adjustment factor equaling 1.0000. We note that we will revisit this matter with subsequent collections of the occupational mix data. We will explore the possibilities of making it mandatory for all IPPS hospitals to complete the survey, as well as establishing penalties for hospitals that fail to submit occupational mix data.

Comment: Some commenters opposed our decision to allow hospitals to provide occupational mix data prospectively for a 4-week period. The commenters believed that the 4-week reporting period occurred during hospitals' peak season and is not representative of hospitals' annual staffing (about 30 percent of hospitals

used this option). The commenter suggested that the next survey should be for a full year only.

Response: We believe that in the first year of the occupational mix adjustment, it was reasonable to use a 4-week period. A 4-week period represents a sampling of the occupational mix that occurs in a hospital during the year. We do not have available data to determine if the 4-week reporting period is a peak season for hospitals, as the commenter contends, or even whether a hospital's employment mix significantly changes during peak seasons. However based on the similarity of our results and the results found by the Bureau of Labor Statistics, we believe use of the 4-week period did not significantly affect the data we received for the adjustment. Nevertheless, in order to further assure the accuracy of the adjustment, in future years, we will require data collected from a full year.

Comment: Several commenters reported that the short timeframe for hospitals to complete, review, and correct the survey data and lack of clarity by hospitals in determining the proper category to place certain employees (for example, a registered nurse who also conducts administrative duties) led to errors and inconsistencies in reporting that may have contributed to the unexpected outcomes. One commenter noted errors in the date fields of the survey, stating that about 8 percent of hospitals appear to have incorrect dates in the date fields and large variances in hours reported between Worksheet S–3 and the occupational mix survey. The commenter recommended that CMS clarify its definitions and notify hospitals of the next survey's design at least 60 days or, ideally, 6 months prior to the period the data collection will begin. This would allow hospitals more time to prepare their payroll and other systems to collect more accurate data. Some commenters suggested that, due to possible errors and inconsistencies in the initial data collection, CMS should gather new data next year, rather than waiting 3 years for the next collection of occupational mix data.

Response: We did not believe that the survey definitions would be problematic for hospitals because of hospitals' experience with the BLS OES survey. In fact, several hospitals and associations strongly recommended that we use the BLS definitions for the occupational mix survey. In future years, if hospitals wish to receive further clarification of the definitions of the occupational categories then we welcome their assistance. We also plan in future years to provide the next survey to hospitals prior to the period that the data collection begins. The suggested 60-day preparation period appears reasonable, and we will consider such a schedule for future occupational mix data collections. With regard to administering another survey next year, we are reluctant to do so because of the additional reporting burden for hospitals. Further, we would have to issue the survey immediately for implementation with the FY 2006 index. However, we have not ruled out the possibility of revising the survey and administering another survey before 2007. According to section 1886(d)(3)(E) of the Act, the Secretary has the authority to administer the occupational mix survey more than once during a 3-year period.

Comment: Two commenters suggested changes to the categories that are included in the occupational mix survey. One commenter recommended that CMS exclude the dietary categories and medical assistants. The commenter noted significant variations among hospitals in these categories that may have been due to lack of clarity regarding the category definitions. The commenter further cautioned that, although only a small portion of hospital workers are in these occupational categories, misreporting in these categories could significantly distort the occupational mix data because the categories have low hourly rates. MedPAC recommended that CMS assess whether including subcategories of RNs would result in a more accurate occupational mix adjustment. MedPAC believed that including all RNs in a single category may obscure significant wage differences among the subcategories of RNs, for example, the wages of surgical RNs and floor RNs may differ. To offset additional reporting burden for hospitals, MedPAC suggested that CMS could eliminate some of the general service categories that account for fewer hours, since most of the total occupational mix adjustment is correlated with the nursing general service category.

Response: We believe that it is appropriate to include the dietary and medical assistant occupations in the FY 2005 adjustment. Although these occupations represent a small portion of a hospital's total workforce, hospitals employ these occupations in different mixes, just as for the other survey categories. In the absence of data showing that there is minimum variation among hospitals in their employment of these occupations, we are not convinced, as the commenter suggests, that the variations reflected in the survey results are due to a lack of clarity regarding the category definitions. With regards to MedPAC's recommendation to expand the RN category, we would need to investigate this matter further to assess its impact on the occupational mix adjustment, hospital's reporting burden, and intermediary's review workload. We welcome any data or studies related to both of these issues.

Comment: Several commenters noted that the occupational mix adjusted wage index in the proposed rule was based on data from the March 8, 2004 public use file. However, 263 surveys were added to the database in the May 13, 2004 public use file. The commenters urged CMS to recalculate its final analysis of the occupational mix adjustment using the data for all hospitals that submitted the survey data.

Response: As we stated in the proposed rule (69 FR 28253), and above, the occupational mix adjustment in the proposed rule was based on data we received by March 15, 2004. We further stated in the proposed rule, and above, that data received after March 15 and through April 16 would be included in the final wage index. The FY 2005 wage index in this final rule includes the most complete and updated set of occupational mix survey data that we received timely from hospitals, that is, by April 16, 2004.

Comment: Two commenters recommended that CMS collect data on hospitals' service mix to include as part of the occupational mix adjustment. The commenters believe that hospitals that provide more services requiring highly skilled workers, such as oncology services, should not be penalized in the wage index for providing those services. One of the commenters also suggested that the adjustment should account for productivity, because hospitals should not be penalized if they hire highly skilled workers who work effectively with minimum support staff.

Response: We are concerned that collecting data on service mix and productivity would substantially increase the reporting burden for hospitals and the complexity of the occupational mix adjustment. We are also uncertain as to what impact these additional factors would actually have on the occupational mix adjustment. If hospitals hire more highly skilled workers because they treat more complex cases, Medicare's DRG assignment already reflects the higher costs of providing these services. We note that the wage index under section 1886(d)(3)(E) is intended to account for geographic differences in labor costs—not skill mix. We welcome the

commenters to provide more details of the data and methodology that would be required to include these factors in the occupational mix adjustment, as well as any analysis of the impact of these factors on the occupational mix adjustment.

Comment: Several commenters expressed concern about CMS' use of unaudited occupational mix data and suggested that a review process is needed. Some commenters believed that CMS should not implement the occupational mix adjustment because the survey data were not verified by the fiscal intermediaries. One commenter added that CMS should provide the fiscal intermediaries ample time and resources to complete more thorough reviews of future occupational mix data.

Response: We plan to audit the occupational mix survey data in future years. However, given the short timeframe for collecting the occupational mix data and implementing the adjustment with the FY 2005 wage index, there was no time for fiscal intermediaries to conduct such reviews. Further, as this was the first time we collected data on hours for the 19 occupational categories, we had no baseline data to develop edit thresholds to incorporate in an intermediary review program. Thus, it would have been difficult to develop an audit program for use by fiscal intermediaries. We notified hospitals that they were responsible for submitting to us accurate data for Medicare payment purposes. Because hospitals will be affected by their own submission of data, we believe that hospitals had ample incentive to ensure that the data they submitted were correct and, therefore, self-audited their own data. Finally, we note that our policy of applying the occupational mix adjustment to only 10 percent of the wage index takes into account that this is the first year for submitting, analyzing, and applying the occupational mix data.

Although the occupational mix data were not as extensively reviewed as may occur in future years, we are required by law to implement an occupational mix adjustment with the FY 2005 wage index. The next collection of occupational mix data will include an intermediary review period and an opportunity for hospitals to respond to any adjustments made by the intermediaries during the review.

As this was the first administration of the occupational mix survey, we did not provide fiscal intermediaries an extensive program for reviewing the hours of data collected. However, hospitals were required to be able to provide any documentation that could be used by the fiscal intermediaries to verify the survey data. In addition, after reviewing the compiled survey data, we contacted fiscal intermediaries to request corrections from a few hospitals that provided data for reporting periods that were out of range with our specified 12-month or 4-week data collection periods. As the wage index is a relative measure of labor costs across geographic areas, it is important that the data collected from hospitals reflect a common period. We also tested the validity of our occupational mix survey data by comparing our results to those of the 2001 BLS OES survey. As shown in Charts 4 and 5 below, the results of our survey are rather consistent with the findings of the BLS OES survey, especially for the nursing and physical therapy categories.

In addition, to compute the occupational mix adjustment, we collected data on the average hourly rates for the 19 SOCs so that we could derive a weighted average hourly rate for each labor market area. (More details about the occupational mix calculation are included in section III.C.2. of this preamble.) To decrease hospital's reporting burden for this initial collection of the occupational mix data, and to facilitate the timely collection of the data, we did not require hospitals to report data on their total wages or average hourly rates associated with the 19 SOCs. Instead, we used national average hourly rates from the BLS OES *2001 National Industry-Specific Occupational Employment and Wage Estimates, SIC—Hospitals* (accessible at Web site: *http://www.bls.gov/oes/2001/oesi3_806.htm*), as reflected in Chart 4 below.

BILLING CODE 4120–01–P

Chart 4.-- BLS National Occupational Employment and Wage Estimates for Hospitals

General Service Categories	Number of Hospital Employees	Percent of Service Category	Percent of Total Employees	National Average Hourly Wage
Nursing Services and Medical Assistant Services				
Registered Nurses	1,307,960	68.8%	25.88%	$23.62
Licensed Practical Nurses	194,900	10.2%	3.86%	$14.65

2. Calculation of the Occupational Mix Adjustment Factor and the Occupational Mix Adjusted Wage Index

The method used to calculate the occupational mix adjusted wage index follows:

Step 1—For each hospital, the percentage of the general service category attributable to an SOC is determined by dividing the SOC hours by the general service category's total hours. Repeat this calculation for each of the 19 SOCs.

Step 2—For each hospital, the weighted average hourly rate for an SOC is determined by multiplying the percentage of the general service category (from Step 1) by the national average hourly rate for that SOC from the 2001 BLS OES survey (see Chart 4 above). Repeat this calculation for each of the 19 SOCs.

Step 3—For each hospital, the hospital's adjusted average hourly rate for a general service category is computed by summing the weighted hourly rate for each SOC within the general category. Repeat this calculation for each of the 7 general service categories.

Step 4—For each hospital, the occupational mix adjustment factor for a general service category is calculated by dividing the national adjusted average hourly rate for the category by the hospital's adjusted average hourly rate for the category. (The national adjusted average hourly rate is computed in the same manner as Steps 1 through 3, using instead, the total SOC and general service category hours for all hospitals in the occupational mix survey database.) Repeat this calculation for each of the 7 general service categories. If the hospital's adjusted rate is less than the national adjusted rate (indicating the hospital employs a less costly mix of employees within the category), the occupational mix adjustment factor will be greater than 1.0000. If the hospital's adjusted rate is greater than the national adjusted rate, the occupational mix adjustment factor will be less than 1.0000.

Step 5—For each hospital, the occupational mix adjusted salaries and wage-related costs for a general service category is calculated by multiplying the hospital's total salaries and wage-related costs (from Step 5 of the unadjusted wage index calculation in section F) by the percentage of the hospital's total workers attributable to the general service category (this is corrected from the proposed rule, in which we applied, instead, the national percentages to all hospitals) and by the general service category's occupational mix adjustment factor (from Step 4 above). Repeat this calculation for each of the 7 general service categories. The remaining portion of the hospital's total salaries and wage-related costs that is attributable to all other employees of the hospital is not adjusted for occupational mix.

Step 6—For each hospital, the total occupational mix adjusted salaries and wage-related costs for a hospital are calculated by summing the occupational mix adjusted salaries and wage-related costs for the 7 general service categories (from Step 5) and the unadjusted portion of the hospital's salaries and wage-related costs for all other employees. To compute a hospital's occupational mix adjusted average hourly wage, divide the hospital's total occupational mix adjusted salaries and wage-related costs by the hospital's total hours (from Step 4 of the unadjusted wage index calculation in Section F).

Step 7—To compute the occupational mix adjusted average hourly wage for an urban or rural area, sum the total occupational mix adjusted salaries and

wage-related costs for all hospitals in the area, then sum the total hours for all hospitals in the area. Next, divide the area's occupational mix adjusted salaries and wage-related costs by the area's hours.

Step 8—To compute the national occupational mix adjusted average hourly wage, sum the total occupational mix adjusted salaries and wage-related costs for all hospitals in the nation, then sum the total hours for all hospitals in the nation. Next, divide the national occupational mix adjusted salaries and wage-related costs by the national hours. The national occupational mix adjusted average hourly wage is 26.4114.

Step 9—To compute the occupational mix adjusted wage index, divide each area's occupational mix adjusted average hourly wage (Step 7) by the national occupational mix adjusted average hourly wage (Step 8).

Step 10—To compute the Puerto Rico specific occupational mix adjusted wage index, follow the Steps 1 through 9 above. The Puerto Rico occupational mix adjusted average hourly wage is 12.2577.

BILLING CODE 4120–01–C

In implementing an occupational mix adjusted wage index based on the above calculation, the final wage index values for 16 rural areas (36.0 percent) and 210 urban areas (4.4 percent) would decrease as a result of the adjustment. Six (6) rural areas (12.8 percent) and 111 urban areas (28.8 percent) would experience a decrease of 1 percent or greater in their wage index values. The largest negative impact for a rural area would be 2.1 percent and for an urban area, 4.0 percent. Meanwhile, 31 rural areas (66.0 percent) and 176 urban areas (45.6 percent) would experience an increase in their wage index values. Although these results show that rural hospitals would gain the most from an occupational mix adjustment to the wage index, their gains may not be as great as might have been expected. Further, it might not have been anticipated that over one-third of rural hospitals would actually fare worse under the adjustment. Overall, a fully implemented occupational mix adjusted wage index would have a redistributive effect on Medicare payments to hospitals.

Comment: Several commenters raised concerns about the data CMS utilized to compute the occupational mix adjustment. One commenter noted that CMS computed the occupational mix adjustment using various sources of data from various time periods: (1) Average hourly wage data from the BLS 2001 OES survey; and (2) hours data collected on the Medicare occupational mix survey from calendar year 2003 or 4 weeks in 2004. The commenter added that CMS applied the adjustment to wage costs collected on the Medicare cost report during FY 2001. The commenter believed that the data used in computing the occupational mix adjusted wage index should derive from the same time period because significant labor changes can occur in 2 to 3 years in the health care industry.

Some commenters also expressed concern about CMS' reliance on BLS data for average hourly rate information that led to CMS collecting hours data for occupations that are excluded from the wage index (certified registered nurse anesthestists (CRNAs), nurse practitioners (NPs) and clinical nurse specialists (CNSs)). The commenters recognized that CMS attempted to simplify the reporting and effort required by utilizing the BLS information. However, they recommended that future surveys collect salaries and hours from hospitals and on the same basis as Worksheet S–

3 of the cost report. The commenters believed that this would facilitate the intermediary's and CMS' review of the survey data.

Response: It is our intent to collect both salaries and hours data directly from hospitals for the computation of the occupational mix adjustment. We agree that, ideally, both the data used to compute the occupational mix adjustment and the wage data to which the adjustment is applied should derive from approximately the same time period and include the same occupational categories. However, we do not believe it was unreasonable in this instance, and in this short timeframe to use data from different time periods. We believe the consistency of our outcomes with the BLS OES data reflects this. In addition, if hospitals were concerned about collecting data from different time periods, we believe this is an issue that should have been commented upon when the actual occupational mix survey was published in 2003. We also believe that the BLS OES data are the best available for representing hospital hourly wage data. For future data collections, we will revise the occupational mix survey to allow hospitals to provide both salaries and hours data for each of the employment categories that are included on the survey. We will also assess whether future occupational mix surveys should be based on the calendar year or if the data should be collected on a fiscal year basis as part of the Medicare cost report. One logistical problem is that cost report data are collected yearly, but occupational mix survey data are collected only every 3 years.

Comment: Several comments addressed the methodology we used to calculate the occupational mix adjustment to the wage index. Most commented that the methodology appears theoretically sound, although the results appear counterintuitive. The commenters noted that one third of rural hospitals would experience a decline in their occupational mix adjusted wage index, while several large academic medical centers would experience an increase in their wage indexes. However, the commenters believed that the unexpected results are due more to errors in the data rather than our methodology for computing the occupational mix adjustment.

Four commenters cited problems with our computation of the occupational mix adjustment. The first commenter suggested that CMS should compute and apply the adjustment to the MSA average hourly wage rather than to each hospital's average hourly wage to reduce the effect that an individual hospital's data could have on an area wage index. The second commenter suggested that CMS should calculate an occupational mix adjustment for each of the 19 SOCs rather than the 7 general service category groupings. The third commenter noted that CMS applied the occupational mix adjustment for each general service category to a percentage of total salaries that was computed based on hours represented by each general service category. This commenter believed that, instead, the adjustment should have been applied to a percentage of total salaries that was based on wage costs represented by each of the general service categories. The fourth commenter cited that, in Step 5 of the occupational mix adjustment calculation in the proposed rule, CMS applied national weights to adjust all hospitals' total salaries for occupational mix, rather than applying hospital-specific weights. This commenter suggested that, in applying the national weights to all hospitals' total wages, some area wage index values could be negatively impacted.

Response: We appreciate the input that we received from MedPAC, the Bureau of Labor Statistics, and the hospital community during our research and development of the occupational mix adjustment. We believe that our calculation of the occupational mix adjustment in this final rule is appropriate based on the purpose of the adjustment and the data we had available to calculate the adjustment.

We disagree with the comment that the occupational mix adjustment should be applied at the MSA level instead of the hospital level. By adjusting hospitals' data for occupational mix, we are treating the occupational mix adjustment consistent with the way we treat the wage index; that is, in calculating the wage index, we first compute adjusted salaries and hours for each hospital, then we sum the adjusted salaries and hours for all hospitals in an area to derive an area average hourly wage.

We also disagree with the suggestion that CMS should calculate an occupational mix adjustment for each of the 19 SOCs rather than the aggregated 7 general service category groupings. The adjustment is intended to control for hospitals' employment choices within certain service groupings, where, to an extent, the employees' skills are interchangeable. Therefore, we believe it is appropriate to apply the adjustment to the general service category grouping.

With regards to the suggestion that the adjustment should have been applied to a percentage of total salaries that was based on salary costs represented by each of the general service categories, the initial implementation of the occupational mix adjustment did not provide for the collection of data on salaries. Therefore, we could not use the salaries for a general service category to derive the proportion of a hospital's total salaries to be adjusted for occupational mix. Based on our experience with wage and hours data, we believe that the proportions we derived from hours data would closely approximate the proportions that we would have derived if salaries data were available and used. Further, this use of hours data is consistent with a methodology we allow hospitals to use for allocating their wage-related costs on Worksheet S–3. Some hospitals base these allocations on proportions of total hours rather than salaries.

Finally, we acknowledge the error the commenter cited regarding Step 5. As shown above, we applied hospital-specific weights to adjust hospitals' total salaries in computing the occupational mix adjustment in this final rule.

Comment: Several hospitals stated that they had difficulty determining the impact of the occupational mix adjustment on their area wage index values. The commenters acknowledged that CMS provided public use files in March and May of the survey data and a public use file in June indicating hospitals' occupational mix adjustment factors. The commenters requested that CMS provide more detailed information about the findings of the occupational mix adjustment. One commenter suggested that CMS provide a table in the Addendum of the rule that shows what the area wage index values would have been without the occupational mix adjustment.

Response: In our continuing efforts to meet the information needs of the public, we will provide two additional public use files for the final occupational mix adjusted wage index: a file including each hospital's unadjusted and adjusted average hourly wage and a file including each area's unadjusted and adjusted average hourly wage and wage index value. These additional files will be posted on the Internet, at *http://cms.hhs.gov/providers/hipps/ippswage.asp.* We will also post these files with future applications of the occupational mix adjustment.

D. Worksheet S–3 Wage Data for the FY 2005 Wage Index Update

The FY 2005 wage index values (effective for hospital discharges occurring on or after October 1, 2004 and before October 1, 2005) in section

VI. of the Addendum to this final rule are based on the data collected from the Medicare cost reports submitted by hospitals for cost reporting periods beginning in FY 2001 (the FY 2004 wage index was based on FY 2000 wage data).

The FY 2005 wage index includes the following categories of data associated with costs paid under the IPPS (as well as outpatient costs):

- Salaries and hours from short-term, acute care hospitals (including paid lunch hours and hours associated with military leave and jury duty).
- Home office costs and hours.
- Certain contract labor costs and hours (which includes direct patient care, certain top management, pharmacy, laboratory, and nonteaching physician Part A services).
- Wage-related costs (The September 1, 1994, **Federal Register** included a list of core wage-related costs that are included in the wage index, and discussed criteria for including other wage-related costs (59 FR 45356)).

Consistent with the wage index methodology for FY 2004, the wage index for FY 2005 also excludes the direct and overhead salaries and hours for services not subject to IPPS payment, such as SNF services, home health services, costs related to GME (teaching physicians and residents) and certified registered nurse anesthetists (CRNAs), and other subprovider components that are not paid under the IPPS. The FY 2005 wage index also excludes the salaries, hours, and wage-related costs of hospital-based rural health clinics (RHCs), and Federally qualified health centers (FQHCs) because Medicare pays for these costs outside of the IPPS (68 FR 45395). In addition, salaries, hours and wage-related costs of CAHs are excluded from the wage index, for the reasons explained in the FY 2004 IPPS final rule (68 FR 45397).

Data collected for the IPPS wage index are also currently used to calculate wage indexes applicable to other providers, such as SNFs, home health agencies, and hospices. In addition, they are used for prospective payments to rehabilitation, psychiatric, and long-term care hospitals, and for hospital outpatient services.

Comment: One commenter noted that the data CMS uses to compute the wage index is 4 years old and urged CMS to use more recent data. The commenter suggested that, due to the time lapse, the wage index does not sufficiently capture trends of health care professional shortages in certain labor markets and the corresponding salary increases associated with the rise in demand for certain health care professionals.

Response: We discussed this matter in a previous notice (65 FR 47070). Due to the time period allowed for: (1) Hospitals to complete and submit their cost reports to their intermediaries, (2) fiscal intermediaries to perform a separate, detailed review of all wage data and submit hospitals' reviewed wage data to CMS, and (3) CMS to compile a complete set of all hospitals' wage data from a common Federal fiscal year period, we do not have available more recent, complete, and reliable data to calculate the wage index. Therefore, hospitals' wage data are always 3 to 4 years old, depending on the end date of the hospital's cost reporting period, before we can use the data in calculating the wage index.

Comment: One commenter noted that, in the August 1, 2002, **Federal Register** rule (67 FR 50022), CMS stated that it would begin to collect contract labor wage costs and hours for management services and the following overhead services: administrative and general, housekeeping, and dietary. The commenter requested CMS to also add a line 25.01 to Worksheet S–3, Part II to collect wage costs and hours for contract laundry services and include the costs in the wage index calculation. Based on the commenter's analysis of the May public use file, 1,468 hospitals had no data on line 25 (direct costs for laundry services) and 1,599 hospitals had less than $100,000 in wage costs on this line. The commenter believed that the data indicates that many hospitals contract their laundry services, and including the costs for contract laundry services would provide equity in the wage index.

Response: In the August 1, 2002, rule, we stated that, while we agree that it may be appropriate to include indirect patient care contract labor costs in the wage index, in light of concerns about hospitals' ability to accurately document and report the costs, we believe that the best approach is to assess and include these costs incrementally. We will begin collecting data on contract management, administrative and general, housekeeping, and dietary services with cost reporting periods beginning on or after October 1, 2003 (that is, the FY 2004 cost reports). Hospitals will submit their FY 2004 cost reports to their intermediaries during calendar year 2005 through early 2006. Intermediaries will complete their wage index desk reviews and submit hospitals' FY 2004 audited wage data to us by early 2007. We will use data from the FY 2004 cost reports to compute the FY 2008 wage index. Before including these additional costs in the wage index, we will analyze the impact of the costs on area wage index values and provide a detailed analysis for public comment. Our decision on whether to include these contract costs, and other contract costs in the future, such as, contract laundry services, will depend on the outcome of our analyses and public comment.

Comment: One commenter requested CMS to designate provider-based clinics (PBCs) as an IPPS-excluded area in order to remove the costs from the wage index. The commenter stated that PBCs are like physician private offices, which are excluded from the wage index. PBCs bill the technical component under certain outpatient ambulatory payment classifications (APCs) and the professional component under the physician fee schedule. The commenter noted that PBC costs are not paid under IPPS.

Response: We appreciate the commenter's suggestion. However, as this matter was not addressed in the FY 2005 proposed rule, or any previous rulemaking, we are not prepared to provide a decision about PBC costs in this final rule. We intend to explore a comprehensive assessment of the costs in a future rule.

E. Verification of Worksheet S–3 Wage Data

The wage data for the FY 2005 wage index were obtained from Worksheet S–3, Parts II and III of the FY 2001 Medicare cost reports. Instructions for completing the Worksheet S–3, Parts II and III are in the Provider Reimbursement Manual, Part I, sections 3605.2 and 3605.3. The data file used to construct the wage index includes FY 2001 data as of June 25, 2004. As in past years, we performed an intensive review of the wage data, mostly through the use of edits designed to identify aberrant data.

We asked our fiscal intermediaries to revise or verify data elements that resulted in specific edit failures. The unresolved data elements that were included in the calculation of the proposed FY 2005 wage index have been resolved and are reflected in the calculation of the final FY 2005 index. For the final FY 2005 wage index in this final rule, we removed the data for 237 hospitals from our database: 147 hospitals became critical access hospitals by the time we published from the FY 2005 wage index), and 76 hospitals were low Medicare utilization hospitals or failed edits that could not be corrected because the hospitals terminated the program or changed ownership. In addition, we removed the wage data for 14 hospitals with incomplete or inaccurate data resulting in zero or negative, or otherwise

aberrant, average hourly wages. As a result, the final FY 2005 wage index is calculated based on FY 2001 wage data from 3,955 hospitals.

In constructing the FY 2005 wage index, we include the wage data for facilities that were IPPS hospitals in FY 2001, even for those facilities that have terminated their participation in the program as hospitals, as long as those data do not fail any of our edits for reasonableness. We believe that including the wage data for these hospitals is, in general, appropriate to reflect the economic conditions in the various labor market areas during the relevant past period. However, we exclude the wage data for CAHs (as discussed in 68 FR 45397). The wage index in this final rule excludes hospitals that are designated as CAHs by February 24, 2004, the date of the latest available Medicare CAH listing at the time we released the proposed wage index public use file on February 27, 2004.

F. Computation of the Unadjusted Wage Index

The method used to compute the FY 2005 wage index without an occupational mix adjustment follows:

Step 1—As noted above, we based the FY 2005 wage index on wage data reported on the FY 2001 Medicare cost reports. We gathered data from each of the non-Federal, short-term, acute care hospitals for which data were reported on the Worksheet S–3, Parts II and III of the Medicare cost report for the hospital's cost reporting period beginning on or after October 1, 2000, and before October 1, 2001. In addition, we included data from some hospitals that had cost reporting periods beginning before October 2000 and reported a cost reporting period covering all of FY 2001. These data were included because no other data from these hospitals would be available for the cost reporting period described above, and because particular labor market areas might be affected due to the omission of these hospitals. However, we generally describe these wage data as FY 2001 data. We note that, if a hospital had more than one cost reporting period beginning during FY 2001 (for example, a hospital had two short cost reporting periods beginning on or after October 1, 2000, and before October 1, 2001), we included wage data from only one of the cost reporting periods, the longer, in the wage index calculation. If there was more than one cost reporting period and the periods were equal in length, we included the wage data from the later period in the wage index calculation.

Step 2—Salaries—The method used to compute a hospital's average hourly wage excludes certain costs that are not paid under the IPPS. In calculating a hospital's average salaries plus wage-related costs, we subtracted from Line 1 (total salaries) the GME and CRNA costs reported on lines 2, 4.01, 6, and 6.01, the Part B salaries reported on Lines 3, 5 and 5.01, home office salaries reported on Line 7, and excluded salaries reported on Lines 8 and 8.01 (that is, direct salaries attributable to SNF services, home health services, and other subprovider components not subject to the IPPS). We also subtracted from Line 1 the salaries for which no hours were reported. To determine total salaries plus wage-related costs, we added to the net hospital salaries the costs of contract labor for direct patient care, certain top management, pharmacy, laboratory, and nonteaching physician Part A services (Lines 9 and 10), home office salaries and wage-related costs reported by the hospital on Lines 11 and 12, and nonexcluded area wage-related costs (Lines 13, 14, and 18).

We note that contract labor and home office salaries for which no corresponding hours are reported were not included. In addition, wage-related costs for nonteaching physician Part A employees (Line 18) are excluded if no corresponding salaries are reported for those employees on Line 4.

Step 3—Hours—With the exception of wage-related costs, for which there are no associated hours, we computed total hours using the same methods as described for salaries in Step 2.

Step 4—For each hospital reporting both total overhead salaries and total overhead hours greater than zero, we then allocated overhead costs to areas of the hospital excluded from the wage index calculation. First, we determined the ratio of excluded area hours (sum of Lines 8 and 8.01 of Worksheet S–3, Part II) to revised total hours (Line 1 minus the sum of Part II, Lines 2, 3, 4.01, 5, 5.01, 6, 6.01, 7, and Part III, Line 13 of Worksheet S–3). We then computed the amounts of overhead salaries and hours to be allocated to excluded areas by multiplying the above ratio by the total overhead salaries and hours reported on Line 13 of Worksheet S–3, Part III. Next, we computed the amounts of overhead wage-related costs to be allocated to excluded areas using three steps: (1) We determined the ratio of overhead hours (Part III, Line 13) to revised hours (Line 1 minus the sum of Lines 2, 3, 4.01, 5, 5.01, 6, 6.01, and 7); (2) we computed overhead wage-related costs by multiplying the overhead hours ratio by wage-related costs reported on Part II, Lines 13, 14, and 18; and (3) we multiplied the computed overhead wage-related costs by the above excluded area hours ratio. Finally, we subtracted the computed overhead salaries, wage-related costs, and hours associated with excluded areas from the total salaries (plus wage-related costs) and hours derived in Steps 2 and 3.

Step 5—For each hospital, we adjusted the total salaries plus wage-related costs to a common period to determine total adjusted salaries plus wage-related costs. To make the wage adjustment, we estimated the percentage change in the employment cost index (ECI) for compensation for each 30-day increment from October 14, 2000 through April 15, 2002 for private industry hospital workers from the Bureau of Labor Statistics' *Compensation and Working Conditions.* We use the ECI because it reflects the price increase associated with total compensation (salaries plus fringes) rather than just the increase in salaries. In addition, the ECI includes managers as well as other hospital workers. This methodology to compute the monthly update factors uses actual quarterly ECI data and assures that the update factors match the actual quarterly and annual percent changes. The factors used to adjust the hospital's data were based on the midpoint of the cost reporting period, as indicated below.

MIDPOINT OF COST REPORTING PERIOD

After	Before	Adjustment Factor
10/14/2000	11/15/2000	1.07771
11/14/2000	12/15/2000	1.07273
12/14/2000	1/15/2001	1.06767
01/14/2001	02/15/2001	1.06245
02/14/2001	03/15/2001	1.05706
03/14/2001	04/15/2001	1.05168
04/14/2001	05/15/2001	1.04645
05/14/2001	06/15/2001	1.04139
06/14/2001	07/15/2001	1.03638
07/14/2001	08/15/2001	1.03134
08/14/2001	09/15/2001	1.02627
09/14/2001	10/15/2001	1.02133
10/14/2001	11/15/2001	1.01665
11/14/2001	12/15/2001	1.01224
12/14/2001	01/15/2002	1.00803
01/14/2002	02/15/2002	1.00395
02/14/2002	03/15/2002	1.00000
03/14/2002	04/15/2002	0.99610

For example, the midpoint of a cost reporting period beginning January 1, 2001, and ending December 31, 2001, is June 30, 2001. An adjustment factor of 1.03638 would be applied to the wages of a hospital with such a cost reporting period. In addition, for the data for any cost reporting period that began in FY 2001 and covered a period of less than 360 days or more than 370 days, we annualized the data to reflect a 1-year cost report. Dividing the data by the number of days in the cost report and then multiplying the results by 365 accomplish annualization.

Step 6—Each hospital was assigned to its appropriate urban or rural labor market area before any reclassifications under section 1886(d)(8)(B) or section 1886(d)(10) of the Act. Within each urban or rural labor market area, we added the total adjusted salaries plus wage-related costs obtained in Step 5 for all hospitals in that area to determine the total adjusted salaries plus wage-related costs for the labor market area.

Step 7—We divided the total adjusted salaries plus wage-related costs obtained under both methods in Step 6 by the sum of the corresponding total hours (from Step 4) for all hospitals in each labor market area to determine an average hourly wage for the area.

Step 8—We added the total adjusted salaries plus wage-related costs obtained in Step 5 for all hospitals in the nation and then divided the sum by the national sum of total hours from Step 4 to arrive at a national average hourly wage. Using the data as described above, the national average hourly wage is $26.3570.

Step 9—For each urban or rural labor market area, we calculated the hospital wage index value by dividing the area average hourly wage obtained in Step 7 by the national average hourly wage computed in Step 8.

Step 10—Following the process set forth above, we developed a separate Puerto Rico-specific wage index for purposes of adjusting the Puerto Rico standardized amounts. (The national Puerto Rico standardized amount is adjusted by a wage index calculated for all Puerto Rico labor market areas based on the national average hourly wage as described above.) We added the total adjusted salaries plus wage-related costs (as calculated in Step 5) for all hospitals in Puerto Rico and divided the sum by the total hours for Puerto Rico (as calculated in Step 4) to arrive at an overall average hourly wage of $12.2568 for Puerto Rico. For each labor market area in Puerto Rico, we calculated the Puerto Rico-specific wage index value by dividing the area average hourly wage (as calculated in Step 7) by the overall Puerto Rico average hourly wage.

Step 11—Section 4410 of Public Law 105–33 provides that, for discharges on

or after October 1, 1997, the area wage index applicable to any hospital that is located in an urban area of a State may not be less than the area wage index applicable to hospitals located in rural areas in that State. Furthermore, this wage index floor is to be implemented in such a manner as to ensure that aggregate IPPS payments are not greater or less than those that would have been made in the year if this section did not apply. For FY 2005, this change affects 208 hospitals in 57 urban areas. The areas affected by this provision are identified by a footnote in Table 4A in the Addendum of this final rule.

G. Computation of the FY 2005 Blended Wage Index

As we proposed in the May 18, 2004, proposed rule, for the final FY 2005 wage index, we are using a blend of the occupational mix adjusted wage index and the unadjusted wage index, in order to minimize the redistributive impact of the occupational mix adjustment (as discussed in section III.C.2. of this preamble) for the first year of its implementation. Specifically, we are basing the FY 2005 wage index on a blend of 10 percent of an average hourly wage, adjusted for occupational mix, and 90 percent of an average hourly wage, unadjusted for occupational mix. Using this blend, the national average hourly wage is $26.3624 and the Puerto Rico specific average hourly wage is $12.2569. We chose this blend for FY 2005 in recognition that this was the first time, for the administration of the occupational mix survey, hospitals had a short timeframe for collecting their occupational mix survey data and documentation, we could not collect optimum data (that is, wages and hours data from a 1-year period for all hospitals) within the mandatory timeframe for implementing the adjustment, and we had no baseline data to use in developing a desk review program that could ensure the accuracy of the occupational mix survey data.

In addition, we are moving cautiously with implementing the occupational mix adjustment in recognition of changing trends in the hiring of nurses, the largest group in our survey. Since the enactment of section 304(c) of Public Law 106–554, the law requiring the occupational mix adjustment to the wage index, some States have implemented laws that establish floors on the minimum level of registered nurse staffing that hospitals must maintain in order to continue to be licensed and certified by the State. In addition, some rural areas that are facing a shortage of physicians may be hiring more registered nurses as extenders or substitutes for physicians. Such trends may explain why the occupational mix impacts in section III.C.2. of this preamble are not as expected for rural areas in particular.

Further, we are using this blend because, although we want to minimize the immediate impact of the occupational mix adjustment on hospitals' wage index values, we do not want to nullify the value and intent of the occupational mix adjustment. We believe that the blended wage index we are proposing satisfies both of these goals. With only 10 percent of the wage index adjusted for occupational mix, the wage index values for 14 rural areas (21.3 percent) and 205 urban areas (53.1 percent) would decrease as a result of the adjustment. However, the decreases would be minimum; the largest negative impact for a rural area would be only 0.21 percent and for an urban area, 0.40 percent. Conversely, 31 rural areas (66 percent) and 172 urban areas (44.6 percent) would benefit from this adjustment, with 1 urban area increasing 2.2 percent and all other areas gaining 0.7 percent or less. Overall, a wage index that has only 10 percent of the salaries adjusted for occupational mix would have a minimal redistributive effect on Medicare payments to hospitals. (*See* Appendix A to this final rule for further analyses of the impact of the occupational mix adjustment on the FY 2005 wage index.)

The wage index values in Tables 4A, 4B, 4C, 4F, 4G, and 4H and the average hourly wages in Tables 2, 3A, and 3B in the Addendum to this final rule include the occupational mix adjustment. We note that, although we are using a blended wage index for FY 2005, at this time we are not applying an incremental phase-in of the occupational mix adjustment beyond FY 2005. The application of the occupational mix adjustment beyond FY 2005 will be determined and discussed in subsequent IPPS updates.

Comment: Commenters generally agreed with CMS' decision to only partially implement the occupational mix adjustment with the FY 2005 wage index. A majority of commenters supported the proposed blended wage index in which the occupational mix adjusted portion is 10 percent. A few commenters suggested other applications of the adjustment as follows:

- Lower the percent adjusted for occupational mix to 5 percent or less. In addition, CMS should not raise the percent until the occupational mix survey process is improved.
- Apply an occupational mix adjustment to only 1 percent of the wage index.
- Apply a higher percentage of the occupational mix adjustment if the results for the hospital are positive and a lower percentage if the results are negative.
- Fully apply the adjustment to hospitals that are positively impacted and use a blend of 10 percent for hospitals that are negatively impacted.
- Phase in the adjustment, for example, over a period of 10 years (apply 10 percent per year). After the adjustment is fully implemented, cap the adjustment at 2 percent. That is, an occupational mix adjusted wage index value should be no greater or less than 2 percent of what the wage index value would have been in the absence of the occupational mix adjustment.
- Hold hospitals harmless on the use of occupational mix adjustment for 3 years.

One commenter stated that CMS should impose a temporary moratorium on the use of the occupational mix data until more accurate and reliable data can be gathered and studied.

Response: Due to the general support we received for our proposal to base the FY 2005 wage index on a blend of 10 percent of an average hourly wage adjusted for occupational mix and 90 percent of an average hourly wage unadjusted for occupational mix, we are proceeding as proposed. As we stated above, we will determine and discuss the application of future adjustments in subsequent IPPS updates.

H. Revisions to the Wage Index Based on Hospital Redesignation

1. General

Under section 1886(d)(10) of the Act, the Medicare Geographic Classification Review Board (MGCRB) considers applications by hospitals for geographic reclassification for purposes of payment under the IPPS. Hospitals must apply to the MGCRB to reclassify by September 1 of the year preceding the year during which reclassification is sought. Generally, hospitals must be proximate to the labor market area to which they are seeking reclassification and must demonstrate characteristics similar to hospitals located in that area. The MGCRB issues its decisions by the end of February for reclassification to become effective for the following fiscal year (beginning October 1). The regulations applicable to reclassifications by the MGCRB are located in §§ 412.230 through 412.280.

Section 1886(d)(10)(D)(v) of the Act provides that, beginning with FY 2001,

a MGCRB decision on a hospital reclassification for purposes of the wage index is effective for 3 fiscal years, unless the hospital elects to terminate the reclassification. Section 1886(d)(10)(D)(vi) of the Act provides that the MGCRB must use the 3 most recent years' average hourly wage data in evaluating a hospital's reclassification application for FY 2003 and any succeeding fiscal year.

Section 304(b) of Public Law 106–554 provides that the Secretary must establish a mechanism under which a statewide entity may apply to have all of the geographic areas in the State treated as a single geographic area for purposes of computing and applying a single wage index, for reclassifications beginning in FY 2003. The implementing regulations for this provision are located at § 412.235.

Section 1886(d)(8)(B) of the Act requires the Secretary to treat a hospital located in a rural county adjacent to one or more urban areas as being located in the MSA to which the greatest number of workers in the county commute if: the rural county would otherwise be considered part of an urban area under the standards for designating MSAs if the commuting rates used in determining outlying counties were determined on the basis of the aggregate number of resident workers who commute to (and, if applicable under the standards, from) the central county or counties of *all* contiguous MSAs. In light of the new CBSA definitions and the Census 2000 data, we undertook to identify those counties meeting these criteria. The eligible counties are identified below, as well as a discussion of counties that no longer meet the criteria under this provision.

2. Effects of Reclassification

Section 1886(d)(8)(C) of the Act provides that the application of the wage index to redesignated hospitals is dependent on the hypothetical impact that the wage data from these hospitals would have on the wage index value for the area to which they have been redesignated. These requirements for determining the wage index values for redesignated hospitals is applicable both to the hospitals located in rural counties deemed urban under section 1886(d)(8)(B) of the Act and hospitals that were reclassified as a result of the MGCRB decisions under section 1886(d)(10) of the Act. Therefore, as provided in section 1886(d)(8)(C) of the Act,[5] the wage index values were determined by considering the following:

- If including the wage data for the redesignated hospitals would reduce the wage index value for the area to which the hospitals are redesignated by 1 percentage point or less, the area wage index value determined exclusive of the wage data for the redesignated hospitals applies to the redesignated hospitals.
- If including the wage data for the redesignated hospitals reduces the wage index value for the area to which the hospitals are redesignated by more than 1 percentage point, the area wage index determined inclusive of the wage data for the redesignated hospitals (the combined wage index value) applies to the redesignated hospitals.
- If including the wage data for the redesignated hospitals increases the wage index value for the urban area to which the hospitals are redesignated, both the area and the redesignated hospitals receive the combined wage index value. Otherwise, the hospitals located in the urban area receive a wage index excluding the wage data of hospitals redesignated into the area.
- The wage data for a reclassified urban hospital is included in both the wage index calculation of the area to which the hospital is reclassified (subject to the rules described above) and the wage index calculation of the urban area where the hospital is physically located.
- Rural areas whose wage index values would be reduced by excluding the wage data for hospitals that have been redesignated to another area continue to have their wage index values calculated as if no redesignation had occurred (otherwise, redesignated rural hospitals are excluded from the calculation of the rural wage index).
- The wage index value for a redesignated rural hospital cannot be reduced below the wage index value for the rural areas of the State in which the hospital is located.

3. FY 2005 Issues

Recent policies and decisions that will affect hospitals' geographic classifications for FY 2005 are discussed below. First, we describe decisions by the MGCRB on applications received in accordance with the ongoing reclassification process described in the regulations at §§ 412.230 through 412.280. Second, we describe the implications for reclassification decisions by the MGCRB to be effective during FY 2005 of our adoption of new MSA definitions for the FY 2005 wage index. Third, we discuss the new counties identified under the standards at section 1886(d)(8)(B) of the Act, based on the new CBSA and the Census 2000 data. Fourth, we discuss the interactions of these changes with reclassifications approved under the one-time appeal process for hospital wage index reclassifications at section 508 of Public Law 108–173. Fifth, we discuss our implementation of section 505 of Public Law 108–173. Under this provision, the Secretary must establish a new process, similar to the current wage index reclassification process, to make adjustments to the hospital wage index, based on commuting patterns of hospital employees.

a. FY 2005 MGCRB Reclassifications

In the August 1, 2003 IPPS final rule, we indicated that hospitals submitting applications for reclassification by the MGCRB for FY 2005 should base those applications on the current (for Medicare payment purposes) MSAs (68 FR 45401). At the time this final rule was constructed, the MGCRB had completed its review of FY 2005 reclassification requests. There were 339 hospitals approved for wage index reclassifications by the MGCRB for FY 2005. Because MGCRB wage index reclassifications are effective for 3 years, hospitals reclassified during FY 2003 or FY 2004 are eligible to continue to be reclassified based on prior reclassifications to current MSAs during FY 2005. There were 55 hospitals reclassified for wage index in FY 2003 and 102 hospitals reclassified for wage index in FY 2004.

In the past, hospitals have been able to apply to be reclassified for purposes of either the wage index or the standardized amount. Existing regulations at § 412.230(a)(5)(ii) state that, after 2002, a hospital may not be reclassified for purposes of the standardized amount if the area to which the hospital seeks reclassification does not have a higher standardized amount than the standardized amount the hospital currently receives. Standardized amount reclassifications are only effective for 1 year, so hospitals must reapply every year. At the time the FY 2005 reclassification applications were due, hospitals applied on the basis that the law still provided for a higher

[5] Although section 1886(d)(8)(C)(iv)(I) of the Act also provides that the wage index for an urban area may not decrease as a result of redesignated hospitals if the urban area wage index is below the wage index for rural areas in the State in which the urban area is located, this was effectively made moot by section 4410 of Pub. L. 105–33, which provides that the area wage index applicable to any hospital that is located in an urban area of a State may not be less than the area wage index applicable to hospitals located in rural areas in that State.

Also, section 1886(d)(8)(C)(iv)(II) of the Act provides that an urban area's wage index may not decrease as a result of redesignated hospitals if the urban area is located in a State that is composed of a single urban area.

standardized amount for hospitals in large urban areas. However, section 401 of Public Law 108–173 established that all hospitals will be paid on the basis of the large urban standardized amount beginning with FY 2004. Consequently, all hospitals will be paid on the basis of the same standardized amount, which effectively makes standardized amount reclassifications moot, at least for purposes of the standardized amount. As a result, the MGCRB denied all applications for standardized amount reclassifications for FY 2005. In light of the fact that all hospitals are now paid on the basis of the same standardized amount, in the proposed rule, we explained our proposed method for eliminating standardized amount reclassifications. Although there could still be some benefit in terms of payments for some hospitals under the DSH adjustment for operating IPPS, section 402 of Public Law 108–173 equalized DSH payments for rural and urban hospitals, with the exception that the rural DSH adjustment is capped at 12 percent (except that rural referral centers have no cap) (a detailed discussion appears in section IV.H. of this preamble).

No commenters objected to our proposal to eliminate standardized amount reclassifications.

b. Implementation of New MSAs

As discussed above, we are implementing the new CBSAs for FY 2005. Under these new CBSAs definitions, many existing MSAs are reconfigured. Therefore, because hospitals applied for reclassification during FY 2005 on the basis of the MSAs currently used to define labor market areas for FY 2004, the definition of the MSA to which they have been reclassified, or the area where they are located, may have changed under our implementation. Hospitals that were reclassified for FY 2005 were asked to verify that the reclassified wage index for the labor market area into which they had been reclassified (in Table 4C in the Addendum to the May 18, 2004 proposed rule) exceeded the wage index of the labor market area where they are located (in Table 4A or 4B in the Addendum of the May 18, 2004 proposed rule) after our proposed implementation of the new MSAs. Hospitals could have withdrawn their FY 2005 reclassifications within 45 days of the publication of the proposed rule.

In some cases, the new CBSA definitions result in previously existing MSAs being divided into two or more separate MSAs. Given that the areas to which the hospitals reclassified no longer exist in FY 2005, we needed to propose rules we could use to determine such hospitals' reclassification areas. We proposed assigning the hospital to the nearest county in the current MSA, and the hospital's FY 2005 reclassification is to the new MSA (under the CBSA definitions) that includes that county to which it has been assigned.

For example, the Ann Arbor, MI MSA currently includes the counties of Lenawee, MI; Livingston, MI; and Washtenaw, MI. Under the new CBSA definitions, the Ann Arbor, MI MSA is comprised solely of the county of Washtenaw, MI. Lenawee, MI now comprises the Adrian, MI Micropolitan Area, and Livingston, MI is now in the Warren-Farmington Hills-Troy, MI Metropolitan Division of Detroit. Therefore, a hospital that was reclassified by the MGCRB into Ann Arbor for either FY 2003, FY 2004, or FY 2005 would be assigned to either the Ann Arbor, MI MSA or the Warren-Farmington Hills-Troy, MI Metropolitan Division, depending on whether the hospital was closer to Washtenaw or Livingston (A reclassified hospital located closest to Lenawee County would be assigned to an MSA based on whether it is closer to Washtenaw or Livingston, which are still in MSAs. We would not consider Lenawee because it is now considered part of the statewide rural area.)

Reclassified hospitals that have been assigned to a new MSA are identified in Table 9A in the Addendum of this final rule by the identification of the county used to designate them. We determined that the hospital is in closest proximity to the county listed based on mapping data available to us at the time of the preparation of this final rule. Hospitals that disagreed with our determination of the closest proximate county on which to assign them to a new MSA were given the opportunity to submit a comment indicating the basis for their disagreement.

Comment: Many hospitals approved for reclassification under the traditional reclassification process objected to our proposal to assign hospitals to the nearest county in the MSA to which it was reclassified. Several hospitals recommended allowing hospitals to amend their FY 2005 reclassification applications or implementing the policy adopted in 1994. Others recommended that CMS consider retracting the proposal, in its entirety and, in doing so, allow hospitals to be reclassified to the area approved by the MGCRB for the full 3 years. In the September 1, 1993 final rule (58 FR 46292), the adopted methodology for effectuating FY 1994 MGCRB decisions resulted in the assignment of hospitals to the revised labor market area that included ''most or all of the counties that comprised the labor market area to which the hospital was reclassified by the MGCRB based on the current labor market area definitions.'' Others recommended that CMS consider retracting the proposal in its entirety and in doing so allow hospitals to be reclassified to the area approved by the MGCRB for the full 3 years.

Finally, two sets of hospitals commented on special circumstances that would arise under the rule as proposed. One group of hospitals from Rhode Island commented that the nearest county proposal does not take into consideration instances where a hospital or group of hospitals reclassified to an area defined under the old MSA definitions is assigned to the nearest county which, under the new definitions, is in its own home MSA. In another situation, a group of hospitals in the Midwest described a situation where, under the new definitions, the MSA the hospitals reclassified to splits and the hospitals are assigned to the MSA that contains the nearest county from the old MSA. In some cases, a hospital may also satisfy the normal distance requirement for reclassification into one or more of the new MSAs that were once part of the old MSA. In these cases, the commenter believed that a hospital should be permitted to reclassify to any MSA that was once part of the old MSA for which it meets the normal proximity requirement.

Response: We acknowledge that the new MSA designations have considerable effect on hospital geographic reclassifications under both section 1886(d)(8)(B) and 1886(d)(10) of the Act. Because the MGCRB reclassifications approved for FY 2005 and prior years are based on the old MSA designations, it was necessary to reconcile (as we did with the FY 1994 reclassification decisions) the processes of implementing the new MSA designations with the MGCRB decisions for FY 2003, FY 2004, and FY 2005. As was the case with the implementation of new MSA definitions in FY 1994, we have sought to implement the MGCRB decisions in the manner that is most consistent with implementing the new labor market areas. As we stated in the May 25, 1993 proposed rule (58 FR 30234), ''* * * we believe that in reconciling the two processes, we must balance our obligation to implement the reclassifications prescribed by the MGCRB's decisions with our duty to implement the new labor market areas in as uniform a manner as possible. Thus, we believe that when a hospital

has been reclassified based on the old MSA definitions, payment to the hospital should be based on the new MSA definition most compatible with the reclassification decision.'' On the basis of our evaluations, we decided not to employ the FY 1994 reclassification assignment rule. This is because doing so would have led in many cases to anomalous results in the context of the current MSA changes. For example, we needed to take in account instances where MSAs split, creating smaller MSAs on the boundaries of what was the old MSA. If we were to apply the FY 1994 rule to the new MSA designations, many hospitals would have been reclassified into MSAs farther away than a new bordering MSA. We believe this would have been inconsistent with the proximity rules that govern reclassifications.

However, the commenters on the two situations described above persuade us that two refinements to the basic rule are appropriate.

• We will assign the hospital or group of hospitals previously reclassified in accordance with sections 1886(d)(8)(B) and 1886(d)(10) of the Act to an MSA that is splitting, to the MSA outside the hospital's own MSA that contains the nearest county from the old MSA. For example, under the new MSA designations, the Boston-Worcester-Lancaster-Lowell-Brockton, MA–NH NECMA was split into several new MSAs. The reclassification of Rhode Island hospitals to the old Boston NECMA resulted, under our proposal, in an assignment to the Providence-New Bedford-River Falls, RI–MA MSA, their home MSA. This is because the nearest proximate county of the old Boston NECMA, Bristol County, is now part of the Providence-New Bedford-River Falls, RI–MA MSA. Under this revision, the Rhode Island hospitals approved for reclassification for FY 2005 will be assigned to the Boston-Cambridge-Quincy, MA–NH MSA, the nearest outside MSA that contains a county from the old Boston-Worcester-Lancaster-Lowell-Brockton, MA–NH NECMA.

• In cases where a hospital (or group of hospitals) was reclassified under section 1886(d)(8)(B) or section 1886(d)(10) of the Act to an MSA that has been split, the hospital may be reclassified to any MSA containing counties from the old MSA reclassification provided that the hospital demonstrates that it meets the applicable proximity requirements in 42 CFR 412.230(b) and (c) (for individual hospitals), § 412.232(a)(1) (for a rural group), and § 412.234(a)(2) and (a)(3) (for an urban group) or in relation to the MSA.

We have changed the reclassification assignments for hospitals that brought this situation to our attention. Hospitals in this situation that wish to be reassigned to the nearest alternate county, for which they meet the applicable proximity criteria, may notify us in writing within 30 days of the date of publication of this final rule. The notification should contain:

• The hospital's name and street address.

• The hospital's provider number.

• The name, title, and telephone number of a contact person.

• The area (name and MSA number) identified in the FY 2005 reclassification application and the name and MSA number of the ''assigned'' area.

• Documentation certifying that they meet the requisite proximity requirement for assignment to the nearest alternate county.

We also note that the 1-year transition blend that we have adopted for FY 2005 will have the effect of giving hospitals that would experience a decrease in wage index due to the new MSA designations, 50 percent of the wage index determined using the old area definitions for MSAs to which the hospital reclassified, and 50 percent of the wage index determined using the new area definition for the MSA to which the hospital is assigned in this final rule. This provision will mitigate any negative effects of the new labor market areas on reclassifying hospitals and all other hospitals.

Comment: One commenter suggested that CMS provide that a hospital will not lose SCH status, or other special designations that are dependent upon being located in a rural area, by being redesignated into an MSA. The commenter further elaborated that the loss of SCH status can have profound implications for a hospital, including loss of special payment under the hospital inpatient and outpatient payment systems and loss of favorable treatment for purposes of geographic reclassification. The commenter recommended that CMS provide that hospitals with SCH status that are redesignated into an urban area will maintain SCH status. The commenter also recommended that, likewise, CMS provide that these hospitals will continue to be eligible for hold-harmless payments under the outpatient PPS, even though these hospitals will no longer be physically located in an urban area.

Response: The regulations at § 412.103(a)(3) provide for a hospital located in an urban area to be reclassified as a rural hospital if it would qualify as an SCH if it were located in a rural area, or if it meets any of the other conditions specified. Because any reclassification under this provision is effective as of the filing date of the application, existing SCHs that have been redesignated to urban areas and otherwise meet all of the requirements for SCH status could retain their SCH designation by filing an application for reclassification as rural with their CMS Regional Office before October 1, 2004.

In order to retain its SCH status when the area in which it is located is redesignated from rural to urban, a hospital must apply for reclassification as rural under the regulations at § 412.103(a). Section 412.103(a) specifies that a prospective payment hospital that is located in an urban area may be reclassified as a rural hospital if it submits a complete application and meets any of the specified conditions, including § 412.103(a)(3), which states, ''The hospital would qualify as a rural referral center as set forth in § 412.96, or as a sole community hospital as set forth in § 412.92, if the hospital were located in a rural area.'' A hospital seeking reclassification under this section must submit a complete application in writing to its CMS Regional Office. Because any reclassification under this provision is effective as of the filing date of the application, existing SCHs that have been redesignated to urban areas effective October 1, 2004, and otherwise meet all of the requirements for SCH status, could retain their SCH designation, without a break in status, by filing an application for reclassification as rural with their CMS Regional Office before October 1, 2004.

We note that a hospital located in an urban area and more than 35 miles from other like hospitals would qualify as an SCH under § 412.92(a). In order to retain its SCH status by qualifying as an urban SCH under this provision, a hospital must submit an application to its fiscal intermediary, in accordance with the classification procedure at § 412.92(b). According to that procedure, the fiscal intermediary would review the request and send the request, with its recommendation, to the CMS Regional Office responsible for the hospital. The CMS Regional Office would review the request and the fiscal intermediary's recommendation and notify the fiscal intermediary of its approval or disapproval. SCH status is effective 30 days after the date of CMS' written notification to the fiscal intermediary. Therefore, written notification dated by

September 1, 2004, would be effective by October 1, 2004.

We note that comments regarding the hospital outpatient PPS will need to be addressed as part of the outpatient prospective payment system rule that is under development.

Comment: One commenter requested CMS to clarify that rural RRCs will not lose that status when they become urban.

Response: Section 4202(b) of Public Law 105–33 states, in part, ''Any hospital classified as a rural referral center by the Secretary * * * for fiscal year 1991 shall be classified as such a rural referral center for fiscal year 1998 and each subsequent year.'' In the August 29, 1997 final rule with comment period, we reinstated RRC status for all hospitals that lost the status due to triennial review or MGCRB reclassification, but not to hospitals that lost RRC status because they were now urban for all purposes because of the OMB designation of their geographic area as urban (62 FR 45999).

However, subsequently, in the August 1, 2000 final rule, we indicated we were revisiting that decision (65 FR 47089). Specifically, we stated we would permit hospitals that previously qualified as an RRC and that lost their status due to OMB redesignation of the county in which they are located from rural to urban to be reinstated as an RRC. This policy extends to RRCs located in counties that become urban as a result of the new MSAs implemented in this final rule.

Comment: One commenter suggested that CMS utilize its broad discretion under the Act to designate urban hospitals as RRCs for purposes of geographic reclassification if such hospitals reflect the same characteristics of those facilities currently designated urban RRCs. The commenter stated that, otherwise, CMS will fail in its desire to treat all RRCs equally and will continue to significantly disadvantage other urban hospitals that play the same critical role in treating Medicare rural beneficiary populations. The commenter suggested designating any hospital meeting the criterion of § 412.103(a)(3) as it relates to RRCs as an urban RRC for geographic reclassification purposes.

Response: While CMS has broad discretion regarding establishing criteria for geographic reclassification purposes under section 1886(d)(10) of the Act, we are limited in designating a hospital as an RRC. Section 1886(d)(5)(C)(I) of the Act limits the Secretary to giving RRC status to a hospital that is classified as a rural hospital (with certain exceptions for previously designated RRCs, as noted above). In other words, CMS is, in fact, limited from granting first-time RRC status to a hospital that is not classified as a rural hospital.

Comment: Another commenter stated that some hospitals, due to geography and market size, are located in an urban area but serve a high number of rural patients. The commenter further stated that CMS noted RRCs play a significant role in treating Medicare beneficiaries from rural areas, whether or not a particular hospital is physically located in a rural or urban area. The commenter asked that CMS review the RRC criteria and revise it so that urban hospitals can qualify for RRC status and be on the same level as their urban RRC counterparts.

Response: There is already a regulatory provision for these urban hospitals that are like RRCs to obtain that status by first being reclassified as rural. Section 412.103(a)(3) provides for hospitals that would otherwise qualify as an RRC if they were rural to be reclassified as rural.

c. Redesignations Under Section 1886(d)(8)(B) of the Act

Beginning October 1, 1988, section 1886(d)(8)(B) of the Act required us to treat a hospital located in a rural county adjacent to one or more urban areas as being located in the MSA to which the greatest number of workers in the county commute, if the rural county would otherwise be considered part of an urban area under the standards published in the **Federal Register** on January 3, 1980 (45 FR 956) for designating MSAs (and for designating NECMAs), and if the commuting rates used in determining outlying counties (or, for New England, similar recognized areas) were determined on the basis of the aggregate number of resident workers who commute to (and, if applicable under the standards, from) the central county or counties of all contiguous MSAs (or NECMAs). Hospitals that met the criteria using the January 3, 1980 version of these OMB standards were deemed urban for purposes of the standardized amounts and for purposes of assigning the wage data index.

Section 402 of Public Law 106–113 provides that, with respect to FYs 2001 and 2002, a hospital may elect to have the 1990 standards applied to it for purposes of section 1886(d)(8)(B) of the Act and that, beginning with FY 2003, hospitals will be required to use the standards published in the **Federal Register** by the Director of OMB based on the most recent decennial census. We implemented section 402 in the August 1, 2001, **Federal Register** (66 FR 39868). However, at that time, updated standards based on the Census 2000 data were not available.

For FY 2005, we are using OMB's 2000 CBSA standards and the Census 2000 data to identify counties qualifying under section 1886(d)(8)(B) of the Act for FY 2005. The number of qualifying counties, shown in the following chart, increases from 28 to 98. As we proposed, we are providing that, effective for discharges on or after October 1, 2004, hospitals located in the rural counties listed in the first column of the following table will be redesignated for purposes of assigning the wage index to the urban area listed in the second column.

BILLING CODE 4120–01–C

As in the past, hospitals redesignated under section 1886(d)(8)(B) of the Act are also eligible to be reclassified to a different area by the MGCRB. Affected hospitals were requested to compare the reclassified wage index for the labor market area in Table 4C in the Addendum of the proposed rule into which they have been reclassified by the MGCRB to the wage index for the area to which they are redesignated under section 1886(d)(8)(B) of the Act. Hospitals were given the opportunity to withdraw from an MGCRB reclassification within 45 days of the publication of the proposed rule.

When we apply the OMB 2000 CBSA standards, 16 rural counties no longer meet the qualifying criteria to be redesignated, either because they are now included in a metropolitan area (with the exception of Barry, MI and Cass, MI, most of the counties are now in the metropolitan area in which they were grouped in accordance with section 402) or they fail to meet the 25-percent cumulative out-migration threshold when we apply the new OMB standards. Counties that are now identified as metropolitan are: Chilton, AL; Macoupin, IL; Piatt, IL; Brown, IN; Carroll, IN; Jefferson, KS; Barry, MI; Cass, MI; Ionia, MI; Greene, NC; Preble, OH.

Counties that failed to meet the 25-percent threshold are: Marshall, AL; Putnam, FL; Wilson, NC; Van Wert, OH; and Lawrence, PA.

Comment: Several commenters expressed concern with our proposed adoption of the OMB area designations and the impact on county designations governed by section 1886(d)(8)(B). Specifically, these commenters objected to the proposed adoption because use of the 2000 Census data to develop the revised designations resulted in five counties no longer meeting the qualifying criteria for section 1886(d)(8)(B) county designation. The commenters argue that because they were not given adequate notice that these counties were in danger of losing their section 1886(d)(8)(B) county designation, the abrupt decrease will have a significant impact on operations. The commenters are requesting that CMS extend the three-year hold harmless transition to hospitals located in those counties losing their section 1886(d)(8)(B) county designation.

Response: In the proposed rule, to help alleviate dramatic negative impacts in payment for hospitals designated as urban under the old MSA standards, but slated to be classified as rural, we proposed to implement a 3-year hold harmless transition period that would allow these hospitals to maintain their assignment to the MSA where they are currently located for FY 2005, FY 2006, and FY 2007. Specifically, we will assign these hospitals, as we did in the proposed rule, the prereclassified wage index of the urban area to which they currently belong. (For purposes of wage index computation, the wage data of these hospitals will remain assigned to the statewide rural area in which they are located.) We are finalizing this policy in the final rule. We did not propose that the transition period apply to hospitals located in those counties losing their designation under section 1886(d)(8)(B). Consistent with our longstanding policy that counties redesignated under section 1886(d)(8)(B) of the Act, are considered urban for purposes of the standardized amount, we are extending the 3-year transition to the hospitals located in counties formerly designated as urban under 1886(d)(8)(B), because the hospitals are, in fact, losing their designated urban status. We are using the wage data from these hospitals as part of setting the rural wage index. The higher wage indexes these hospitals are receiving are being taken into consideration in determining whether they qualify for the out-commuting adjustment and the amount of any adjustment. During this 3-year transition period, these hospitals are eligible to apply for reclassification by the MGCRB. In FY 2008, these hospitals will receive their statewide rural wage index. Thus, the hospital would not be eligible, for example, for a large urban add-on under capital PPS. Thus, it is the wage index, but not the urban or rural status of the hospitals, that is being affected by this transition.

Comment: Commenters indicated that CMS utilized an older 2000 Census Crosswalk that has since been updated in December of 2003. Commenters wanted to know whether or not CMS intends to use this updated crosswalk for the final regulation.

Response: Our initial investigation and analysis of the impact of the new metropolitan areas began in the early fall of 2003. In the process of this analysis, the update of the crosswalk was overlooked and was not incorporated into the proposed rule. We have updated the crosswalk for this final regulation and, therefore, the updates are incorporated in the calculations and the subsequent output in the tables.

Comment: Commenters noted that CMS improperly classified Merrimack, NH and Litchfield, CT. These counties are ''deemed urban'' and, therefore, must be included in an urban area.

Response: We recognize this oversight. Based on the strongest commuting ties, we have incorporated Merrimack, NH into the Manchester-Nashua, MA MSA (31700), and Litchfield, CT has been placed into the Hartford-West Hartford-East Hartford, CT MSA (25540).

Comment: Commenters expressed opposition to and support of the decision to not adopt micropolitan areas. They indicated that the financial and reimbursement impact of using these areas is unknown at this time, and it appears that further consideration of the effects of these changes by CMS is necessary. Some commenters argued that those micropolitan areas that were previously included in a metropolitan are now unjustly dubbed ''rural.''

Response: We have provided hospitals in urban counties now designated as micropolitan and therefore rural as ''hold harmless,'' assigning them the urban wage index for the MSA from which they came. We will continue to review the role of micropolitan areas in the development of labor market areas for the purposes of the wage index.

d. Reclassifications Under Section 508 of Public Law 108–173

Under section 508 of Public Law 108–173, a qualifying hospital may appeal the wage index classification otherwise applicable to the hospital and apply for reclassification to another area of the State in which the hospital is located (or, at the discretion of the Secretary, to an area within a contiguous State). Hospitals were required to submit their applications by February 15, 2004. We implemented this process through notices published in the **Federal Register** on January 6, 2004 (69 FR 661) and February 13, 2004 (69 FR 7340). Such reclassifications are applicable to discharges occurring during the 3-year period beginning April 1, 2004 and ending March 31, 2007. Under section 508(b), reclassifications under this process do not affect the wage index computation for any area or for any other hospital and cannot be effected in a budget neutral manner.

The applications submitted under this process were reviewed and decided upon by the MGCRB. The MGCRB issued notifications of its decisions on April 16, 2004. Reclassifications under this one-time appeal process interact with: FY 2005 MGCRB reclassification decisions under the ongoing reclassification process described in the regulations at §§ 412.230 through 412.280; the implementation of the new MSA definitions; and the new redesignations under section 1886(d)(8)(B) of the Act.

In the notices implementing this process, we indicated that, with limited exceptions, hospitals eligible for reclassification under section 508 of Public Law 108–173 are not otherwise reclassified, effective for discharges on or after October 1, 2004. Therefore, aside from the exceptions specified in the notices, hospitals reclassified under this one-time appeal process were not otherwise reclassified by the MGCRB for FY 2005. For the hospitals exempted from the ''not otherwise classified'' requirement and that received a section 508 reclassification under the one-time appeal process, the section 508 takes precedence over any other MGCRB reclassification. We show the reclassifications effective under the one-time appeal process in Table 9B, in the Addendum to this final rule.

Comment: One hospital commented that the proposed adoption of the new MSA designations will result in the hospital being located in a county that has been incorporated, under the new designations, into the MSA to which they were approved for reclassification. Because they will now be located in the area to which they were granted reclassification, the hospital argued that its FY 2005 reclassification is, in effect, moot.

Response: We acknowledge that there are situations where hospitals that have been reclassified by the MGCRB are located in counties that have been incorporated, under the new designations, into the area to which the hospitals were approved for reclassification. As a result, hospitals in this situation are already located in the area to which they requested to be reclassified. In this case, under the new designations, these hospitals will be paid by virtue of this change based on the payment rates applicable to the requested area and their wage data will be reflected in the wage index for that area. Although we have acknowledged above that hospitals reclassified to MSAs that split need not be reclassified back into their home area, that rule would not apply in the situation raised by the commenter. In the commenter's case, the area to which it reclassified has now been expanded to absorb the hospital's home county. Thus, we need not identify an area that can serve as a substitute for the reclassification area. Rather, there is no need for the hospital to reclassify when it now is originally classified into its desired area.

Comment: Several hospitals approved for reclassification under section 508 objected to our proposal regarding the treatment of hospitals that were reclassified under section 508 to areas that have since divided because of implementation of the new labor market definitions. As we discuss in further detail in section III.H.3.b. above, in some cases, the new CBSA definitions result in previously existing MSAs being divided into two or more separate MSAs. Given that the areas to which the hospitals reclassified no longer exist in FY 2005, we proposed assigning the hospital to the nearest county in the current MSA, and the hospital's FY 2005 reclassification is to the new MSA (under the CBSA definitions) that includes that county to which it has been assigned. The hospitals argue that consistent with section 508, when a previous labor market area has split into several different areas, they should be permitted to select the area to which to reclassify.

Response: We appreciate the commenters' suggestions and their interest in this matter. Based on those comments, and on a careful review of the provisions of section 508, we have decided to change our proposed policy in the limited case of hospitals that reclassified in accordance with section 508 to areas that, because of the new labor market definitions, have now been divided into several areas. Because section 508(a)(1) of Public Law 108–173 allows a hospital to appeal its wage area classification to the Board and ''select another area within the state (or, at the discretion of the Secretary, to a contiguous State) to which to be reclassified,'' we believe, in these limited circumstances, a hospital should be permitted to select the area into which it should be reclassified. Specifically, a hospital reclassified under the section 508 process to an MSA that, under the new labor market definitions, divided into several areas, will be given the opportunity to select which of those areas it wishes to reclassify to. We believe this is in keeping with the statutory intent of section 508. To effect the selection, we will automatically assign these hospitals to the divisor MSA with the highest wage index. Hospitals reclassified under the one-time appeals process that have been assigned to a new MSA are identified in Table 9B, column 7, in the Addendum of this final rule. If these hospitals disagree with our selection, they must submit to us, in writing, a request to select a different divisor area. Requests must be received by us within 30 days of publication of this final rule. Requests should be sent to the following address: Centers for Medicare and Medicaid Services, Center for Medicare Management, Hospital and Ambulatory

Policy Group, Division of Acute Care, Mailstop C4–08–06, 7500 Security Boulevard, Baltimore, Maryland 21244–1850. Attn: Section 508 Appeals.

In the proposed rule, we also stated that hospitals reclassified under the section 508 one-time appeal process that are also in counties identified under the redesignation process in accordance with section 1886(d)(8)(B) of the Act were asked to compare the wage index applicable to the area to which they were reclassified under section 508 with the wage index applicable to the area to which they were redesignated under section 1886(d)(8)(B) of the Act, if those areas are different. Again, affected hospitals were allowed to withdraw their one-time appeal process reclassifications within 45 days of the publication of the proposed rule.

Comment: A hospital association expressed concern that, due to our proposal to implement the new CBSAs, hospitals granted a reclassification under section 508 of Public Law 108–173 or the traditional MCGRB reclassification process may realize little or no benefit from the reclassification. The association stated that the requirement that a hospital base its decision to withdraw an existing reclassification is ''unnecessary'' and ''unfair'' because it requires the hospital to ''give up'' the reclassification when there exists the possibility that changes effected in the final rule could result in the reclassification being beneficial. The association believed that, for hospitals reclassified under section 508 or the traditional MGCRB process, we should automatically apply the higher wage index for each hospital, with no action required by the hospital. Many other commenters recommended that CMS allow reclassifying hospitals 30 days after publication of the final rule to withdraw their reclassification requests.

Response: In the August 1, 2001 final rule, we included a detailed discussion of the withdrawal, termination, and cancellation procedures for reclassified hospitals (66 FR 39887). In that rule, we stated that a hospital may cancel a previous withdrawal or termination of a 3-year wage index reclassification by submitting written notice of intent to the MGCRB no later than the deadline for submitting reclassification applications effective at the start of the following fiscal year. This provision allows the hospital to reinstate the original reclassification for the wage index. As we stated in the August 1, 2001 final rule, we provided this option so that ''a hospital that later discovers that the withdrawal of its approved wage index reclassification was disadvantageous would have the ability to reinstate its MGCRB approval for the wage index for the remaining years in the 3-year term.'' Even in light of the existing provision, we are persuaded by the comments received in response to the proposed rule, in this limited circumstance, to allow hospitals a 30-day period where they can make final, informed determinations regarding whether to maintain or withdraw their existing reclassification on the basis of the information published in the final rule. This 30-day period is also applicable to those hospitals that adhered to the established process and notified the MGCRB of their decision to withdraw or terminate their section 1886(d)(10) or section 508 reclassification. Hospitals will have 30 days after the publication date of this rule to submit, in writing, to the MGCRB a request to withdraw their reclassification request or to rescind their previous withdrawal or termination request.

e. Wage Index Adjustment Based on Commuting Patterns of Hospital Employees (Section 505 of Pub. L. 108–173)

Section 505 of Public Law 108–173 established new section 1886(d)(13) of the Act. The new section 1886(d)(13) requires that the Secretary establish a process to make adjustments to the hospital wage index based on commuting patterns of hospital employees. The process provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county but work in a different county with a higher wage index. Such adjustments to the wage index are effective for 3 years beginning with discharges occurring on or after October 1, 2004. Adjustments under this provision are not subject to the inpatient PPS budget neutrality requirements at section 1886(d)(3)(E) or section 1886(d)(8)(D) of the Act.

The Secretary is required to establish criteria to identify ''qualifying counties,'' and hospitals located in such qualifying counties are to receive an adjustment to their wage index. Section 1886(d)(13)(B)(i) of the Act directs the Secretary to establish a threshold percentage difference between the county's wage index and the weighted average of the wage indexes of the surrounding higher wage index area(s) to which hospital employees commute that must be met in order for the county to qualify. Section 1886(d)(13)(B)(ii) of the Act specifies that the Secretary is also to establish the minimum out-migration threshold in order to qualify, which may not be less than 10 percent. Section 1886(d)(13)(iii) of the Act requires that the average hourly wage for all hospitals in the county must be equal to or exceed the average hourly wage for all hospitals in the labor market area. Section 1886(d)(13)(E) of the Act indicates this process may be based on the process used by the MGCRB. This section also gives the Secretary the authority to require hospitals to submit data necessary to implement this provision, or to use other data sources as available.

Hospitals located in counties that qualify for the payment adjustment are to receive an increase in the wage index that is equal to a weighted average of the differences between the wage indexes of the MSA(s) with higher wage indexes and the wage index of the resident county, weighted by the overall percentage of hospital workers residing in the qualifying county who are employed in any MSA with a higher wage index. We have employed the prereclassified wage indexes in making these calculations. We also are not taking into account any of the transition payments that are being used to account for the change in labor market definitions announced by CMS. We believe it is reasonable to interpret the term ''wage index'' in section 1886(d)(13)(D) to mean the prereclassified, preadjusted wage index. In response to comment, we discuss below our reasons for using the prereclassified wage indexes in both identifying higher wage index areas and in calculating the out-migration adjustment. We believe that it is also reasonable to interpret ''wage index'' under section 1886(d)(13) as applying solely to the wage index that exists using the most recent CMS definitions for labor market areas. Section 505 is a new provision, first being implemented for FY 2005, and we do not believe it is necessary to incorporate transitional wage index payments, when there is no transition necessary. Hospitals were fully able to assess the implications of the new labor market areas on implementation of section 505 through review of the proposed rule. Thus, the higher wage index areas will be identified, and the out-migration adjustment will be calculated without taking into account the effect on wage index caused by either of our transitional rules. We include a detailed discussion of these transitional rules in section III.B.3. of this preamble. The wage index increase is effective for 3 years, unless a hospital requests to waive the application of the payment adjustment. Hospitals that receive this payment adjustment are not eligible for

reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

(1) Data

To implement this provision, we analyzed commuting data compiled by the U.S. Census Bureau. The data derive from a special tabulation of Census 2000 journey-to-work data, compiled from responses to the long-form (sample) census survey questions on where people worked. When the Census conducts its decennial survey, each household receives either a short form or a long form. On average, about 1 in every 6 households receive the long form. The results from the long form are used to formulate descriptive population estimates. Thus, the data set is based on the Census 2000 sample and represents estimates of the actual figures that would be obtained from a complete count.

The data provide information about commuting patterns of workers at the county level for residents of the 50 States and the District of Columbia. Each record within the data set represents a combination of a particular resident county, a workplace county, and a particular industry category. Thus, the record shows the county-of-residence by county-of-work commuter flows. The resident county represents the county where the worker resides, while the workplace county represents the county where the worker works. The industry category associated with workers is based on the 108 Industrial Structure codes developed by the Bureau of Economic Analysis. These Industrial Structure codes break down economic activities by defining industries (such as ''fabricated metal product manufacturing,'' ''legal services,'' and ''gasoline stations''). We limited the data set to those employees working in the category designated ''hospitals'' (BEA code 622000).

Using these data, we are able to identify the total number of hospital workers who live in each county and the number of workers within that county who commute to hospitals in other counties. For example, the data can be used to determine that, from a sample of 100 hospital employees who live in County A, 50 commute to work at hospitals within County A, 20 commute to work at hospitals within County B, and 30 commute to work at hospitals within County C.

There are some intrinsic limitations to the data. The file shows the weighted worker estimate for flows using a threshold or minimum size of 50 unweighted worker (from all industry codes) records. This means that only county-to-county flows that are comprised of at least 50 unweighted worker records are shown in this file. The Census Bureau omitted all other county-to-county flows from the file for confidentiality reasons. While this could eliminate the workflows of some hospital residents, we believe the eliminations would not have a major impact on the policy.

When Census calculated this special tabulation, the estimates of workers numbering from 1 through 7 have been rounded to 4. Values of 8 or greater have been rounded to the nearest multiple of 5, unless the estimate already ended in 5 or 0, in which case it was not changed. In addition, in this special tabulation, workers are defined as people 16 years and older who were employed and at work during the Census long form reference week. This is the week prior to when the questionnaire was filled out, which was the last week of March 2000 for most people.

In addition, because these data derive from the decennial census, the data file will not change until the census is taken again in 2010. This does not mean that the list of qualifying counties will not change from year to year. The out-migration percentage for each county is a function both of the commuting data and changes in the wage index values. Because the wage indexes associated with each work and resident county change each year, a county's out-migration percentages can still vary each year because a higher wage index area in one year, might not be a higher wage index area in the next year. For example, if 100 hospital employees living in County A (wage index 1.00 in FY 2004) commute to County B (wage index 1.10 in FY 2004), then County B would be a higher wage index area for 2004. If in FY 2005, County A's wage index increases to 1.02 and County B's wage index decreases to 1.01, those 100 workers commuting from County A to County B will not be commuting to a higher wage index area for 2005. Consequentially, County A's out-migration percentage would decrease from 100 percent in 2004 to 0 percent in 2005. These normal changes in wage index values could also result in a county not deemed a qualifying county for FY 2005, becoming a qualifying county in FY 2006 or later.

We believe these data provide a useable data source to implement this provision. However, in the May 18, 2004 proposed rule, we solicited comments on the availability and value of alternative data sources. Although the statute authorizes the Secretary to require all hospitals to submit data on the commuting patterns of their employees, such a requirement would be a major undertaking for the hospital industry and CMS. It was not possible to pursue this approach in time to implement the provision by FY 2005. However, in addition to soliciting comments on the merits of relying on the Census data, we welcomed comments on the feasibility of surveying hospitals on the residence and commuting patterns of all their hospital employees for purposes of developing future year adjustments.

Comment: One commenter questioned whether it would be possible in future years to update commuting data using data from U.S. Census Bureau's American Community Survey (ACS) rather than using data from the 2000 census.

Response: The ACS is part of the U.S. Census Bureau's effort to streamline and improve the census, and is intended to replace the long form and provide some demographic information every year instead of once every 10 years. Starting in July 2004, 1 in every 480 households throughout America will receive and be asked to participate in the survey each month. Since this is a new initiative, we are unable to determine whether the data that will be collected is appropriate for use in calculating the out-migration adjustment. However, as the U.S. Census Bureau moves forward with this initiative, we will continue to monitor the initiative's progress and evaluate the feasibility of using data from the ACS to calculate the out-migration adjustment.

Comment: Several comments stated that the commuting data does not reflect the ''new potential for increased commuting,'' in a specific instance where a county used to be part of an MSA, but no longer is due to the new MSA definitions. The commenters stated that the reduced reimbursement resulting from the new MSA definitions will create the potential for increased commuting in future years, even though the county qualified for an out-migration adjustment. The commenters recommended we ''adjust the commuting index to a more appropriate value based on opportunity and not based solely on historical data.''

Response: The commenters did not provide suggestions on how we would consistently measure the ''opportunity'' for increased commuting. Therefore, we are unable to address the commenters' concerns at this time. As we stated in the proposed rule, we will use the decennial census in order to determine commuting rates. We note that as part of its new definitions of statistical areas, OMB takes into account the level of commuting. Thus, the new areas should reflect any increased commuting that

has already occurred from one county to another.

Comment: One commenter stated that it is unclear as to how we will measure commuting patterns and determine the applicability of the wage index adjustment. The commenter requested that we describe the proposed data resources and methodology that will be used for applying the wage index adjustment.

Response: We note that in the May 18, 2004 proposed rule and in this final rule, we discussed the data set used for measuring out-migration patterns and the process for determining the out-migration adjustments. (*See* sections III.H.3.e.(1) and 3.e.(3) of this preamble, respectively.)

Comment: A commenter asked if the data used by CMS to compute the out-migration adjustment will be made available via a public use file.

Response: We plan to make the data used for determining the qualifying counties and the out-migration adjustment available after the publication of this final rule on the CMS Web site at *http://www.cms.gov*.

Comment: One commenter requested that CMS allow hospitals to submit their own commuting data to apply for the out-migration adjustment.

Response: Because the adjustment is based on the number of hospital workers in a county who commute to other higher wage index areas, we believe it would be extremely problematic for individual hospitals to track and submit the data necessary for the out-migration adjustment. The hospital could not simply survey their own employees to obtain this necessary data, but would have to survey all hospital workers who live in the county where the hospital is located and commute to hospitals in other higher wage index areas.

In addition, we did not receive any specific comments on the availability of an alternative data source or on the feasibility of surveying hospitals on the residence and commuting patterns of their employees for purposes of developing future year adjustments. We also received comments supportive of our general implementation process and its administrative simplicity. The commenters noted the merits of using this data set and not placing an additional burden on hospitals through a survey of employees. Therefore, we will use our proposed data set for purposes of computing the qualifying counties and the out-migration adjustment. However, we will continue to explore the possibility that hospitals could submit their own data in future refinements of our policy.

(2) Qualifying Counties

As noted previously, section 1886(d)(13)(B)(iii) of the Act requires that, to qualify for this commuting wage index adjustment, the average hourly wage for all hospitals in the county must be equal to or exceed the average hourly wage for all hospitals in the labor market area in which the county is located. To determine which counties meet this requirement, we calculated the average of hospitals' 3-year average hourly wages for all hospitals in a given county. We compared this county average 3-year average hourly wage to the 3-year average hourly wage for the labor market area where the county is located. We chose to use the 3-year average hourly wage because we believe it provides a more accurate and stable estimate for the wages paid by a given hospital over a period of time. This statutory requirement limits the number of eligible counties, as counties with an average 3-year average hourly wage less than the 3-year average hourly wage of the MSA where the county is located were not considered to meet this requirement.

Some resident counties do not have average hourly wages because either there is no hospital located in the county, or the only hospital in the county is new and has not yet submitted wage data. We did not consider these counties to have met the average hourly wage criteria and thus hospitals in these counties are not yet eligible to receive an increase in wage index. This is consistent with our regulations at § 412.230(e)(2)(iii), which require a new hospital to accumulate at least 1 year of wage data, before it is eligible to apply for reclassification.

As noted previously, section 1886(d)(13)(B)(ii) of the Act specifies that the Secretary is to establish the minimum out-migration threshold in order to qualify, which may not be less than 10 percent. To determine the out-migration percentage for each county, we identified higher wage index areas, by comparing 2005 prereclassified wage index of a resident county with the 2005 prereclassified wage index of the MSA or rural statewide area where the work county is located. We use the prereclassified wage index so that hospitals in the county are not disadvantaged by reclassification of other hospitals into the county.

Comment: One commenter recommended that the wage index amounts utilized in the calculation for the higher wage county be based on the wage index utilized for Medicare payment including those increases in wage index due to a group reclassification appeal. The commenter stated that not utilizing this higher wage index amount would put the hospitals addressed by the commuting adjustment provision at a serious disadvantage.

Response: We considered using the post-reclassified wage index as the basis for computing the higher wage index counties. In situations like the group reclassification where all hospitals in a given county are receiving the same wage index, it could be possible to use the post-reclassified wage index for determining higher wage index counties and for calculating the out-migration adjustment. However, it is not as straightforward for counties where not all hospitals are receiving the same wage index due to individual hospital reclassifications. For example, in one county there may be two hospitals that receive different wage indexes because one hospital has been reclassified. Given the differing wage indexes in this situation, it is unclear which wage index would be most appropriate to use as the basis for comparison for this county or if some form of a blended wage index should be calculated. This issue is further complicated by the use of a blended wage index this year to mitigate the effects of the new MSA definitions. Due to these complicating factors, and the fact that the prereclassified wage index most accurately reflects the wages being paid to hospital employees in a given geographic area, we believe that the most equitable method is to use the prereclassified wage index when calculating the qualifying counties and the out-migration adjustment. However, we will continue to examine the possibility of employing post-reclassification wage indexes as we refine our policy for future adjustments.

Comment: One commenter asked how the out-migration adjustment will be made in subsequent years, specifically if CMS increases the wage index of qualifying counties by the out-migration adjustment when calculating higher wage index counties in subsequent years. The commenter identified a potential ripple effect if the data we use in year two incorporates the new higher wage index value (resulting from the additional out-migration adjustment) when identifying the county-to-county flows where hospital employees were commuting to a higher wage index area.

Response: We appreciate the opportunity to clarify this important point. We recognize that if we used the new wage index (wage index plus commuting adjustment) when computing the higher wage index counties, the effect of the out-migration adjustment could ripple out each year to

more counties. Consequently, in future years, we plan to identify the higher wage index counties and compute the adjustment using the prereclassified wage index without the additional out-migration adjustment. We believe that this will more appropriately reflect the intent of the statute without creating unanticipated effects.

Once we limited the dataset to those county-to-county flows where hospital employees were commuting to a higher wage index area, we calculated the out-migration percentage for resident counties. To calculate the out-migration percentage, we calculated the total number of hospital employees in a resident county who were commuting to a higher wage area as a percentage of the total number of hospital employees residing in the resident county. For example, there are 100 hospital employees who live in County A (wage index 1.0). Of those 100 employees, 50 commute to County B (wage index 1.10), 20 commute to County C (wage index 1.05), and 30 work within County A. Because 70 out of 100 people commute to higher wage areas, County A's out-migration percentage is equal to 70 percent.

To implement section 1886(d)(13)(B)(ii) of the Act, in the May 18, 2004 proposed rule (69 FR 28267), we proposed that the out-migration threshold to qualify for this adjustment would be the statutory minimum of 10 percent. We believe that this threshold provides an opportunity for a reasonable number of hospitals that would not have recourse to the normal reclassification process to receive an appropriate adjustment to their wage index. We welcomed public comment on this proposed threshold.

Comment: Many commenters supported our decision to set the out-migration threshold at the statutory minimum of 10 percent.

Response: We note that we did not receive any comments recommending that we increase the threshold and we do not plan to change the threshold in this final rule. Therefore, we are finalizing the out-migration threshold at the statutory minimum of 10 percent.

As noted previously, section 1886(d)(13)(B)(i) of the Act directs the Secretary to establish a threshold percentage difference between the county's wage index and the weighted average wage indexes of the higher wage index areas to which hospital employees commute. However, unlike the threshold for the level of out-migration, the statute does not designate a minimum level for this threshold. Because of the nature of the adjustment provided under this provision, in the May 18, 2004 proposed rule (69 FR 28268), we proposed to establish that the minimum difference in the wage indexes between the resident county and the work county can be any percentage greater than zero. We proposed this threshold because the wage index increment for hospitals in qualifying counties under the statutory formula is a function of the differences between that county's wage index and the wage indexes of the areas into which resident hospital workers of that county are commuting. In those cases where that difference is very small, the adjustment to the wage index will also be very small. (*See* the discussion of the statutory formula in section III.H.3.e.(3) of this preamble.) Therefore, we believe that a threshold of anything greater than zero is justifiable and consistent with the purposes of this provision.

Comment: Many commenters supported our decision not to set a minimum difference between the wage index that applies to the county and the higher wage index areas.

Response: We do not plan to change the minimum difference requirement in this final rule; and therefore, establish the minimum difference in the wage indexes between the resident county and the work county to be any percentage greater than zero.

Our analysis for the proposed rule indicated that 224 counties qualify under the proposed criteria. There were 411 hospitals located in these qualifying counties. For the final rule, we have identified 230 counties that qualify under the proposed criteria. There were 415 hospitals located in these qualifying counties. Hospitals located in qualifying counties are identified in Table 4J in the Addendum to this final rule. Of the 415 hospitals, 181 are reclassified under section 1886(d)(8) of the Act, redesignated under section 1886(d)(10) of the Act or received a section 508 reclassification and are signified in Table 4J in the Addendum to this final rule with asterisks. Given the statutory limitation on hospitals receiving the out-migration adjustment and reclassification under section 1886(d)(8) of the Act, redesignation under section 1886(d)(10) of the Act, or reclassification under section 508, we assume that hospitals represented by asterisks that have already been reclassified or redesignated, wish to retain their reclassification or redesignation and not receive the out-migration adjustment. Only one of the redesignated hospitals informed us that they would like to waive the application of their redesignation for the purposes of receiving the out-migration adjustment. As described in section III.H.3.e.(4) of this preamble, hospitals have an additional 30 days from the date of publication of this final rule to notify CMS if they would like to waive their reclassification or redesignation in order to receive the out-migration adjustment.

(3) The Adjustment

Hospitals located in the qualifying counties identified in Table 4J in the Addendum to this final rule that have not already reclassified through section 1886(d)(10) of the Act, redesignated through section 1886(d)(8) of the Act, received a section 508 reclassification, or requested to waive the application of the out-migration adjustment will receive the wage index adjustment listed in the table. This adjustment increase is equal to the percentage of the hospital employees residing in the qualifying county who are employed in any higher wage area, multiplied by the sum of: the products, for each higher wage index area, of the difference between the wage index for such higher wage index area and the wage index of the qualifying county, and the percentage of hospital employees residing in the qualifying county who are employed in any higher wage index area who are employed in such higher wage index area. This increase in wage index is depicted using the following equation:

$$\text{Adjustment} = A * \Sigma[(B–C) * (D/E)]$$

A is the percentage of hospital employees residing in a qualifying county who are employed in any higher wage index area. B represents the wage index of the higher wage index area. C represents the wage index of the qualifying resident county. D represents the number of hospital employees residing in the qualifying county involved who are employed in such higher wage index area. E represents the total number of hospital employees residing in qualifying county who are employed in any higher wage index area.

For example, County A is identified as a qualifying county. As illustrated before, if 100 hospital employees live in County A (wage index = 1.00), 50 commute to County B (wage index = 1.10), 20 commute to County C (wage index = 1.05); and 30 commute within County A, the out-migration percentage is equal to 70 percent.

The adjustment for hospitals in County A would be:

$$= .70 * (((1.10 - 1.00)*(50/70)) + ((1.05 - 1.00)*(20/70)))$$
$$= .70 * ((.10 * .714) + (.05 * .285))$$
$$= .70 * (0.0714 + 0.01428)$$
$$= .70 * (0.0856)$$

= 0.05998

So, hospitals in County A could receive a new wage index of 1.05998, instead of 1.000 for the following 3 years.

The adjustments calculated for qualifying hospitals are listed in Table 4J in the Addendum to this final rule. These adjustments are effective for each county for a period of 3 fiscal years beginning with discharges occurring on or after October 1, 2004. The commuting adjustments for each county will remain static for the 3-year period, after which the county's status as a qualifying county and the adjustment will be recalculated.

Comment: Several commenters questioned the temporary nature of the out-migration adjustment. They suggested that CMS modify the rule to extend the out-migration adjustment beyond the 3-year period in order to reflect ongoing wage competition.

Response: Section 1886(d)(13)(F) of the Act specifies that the wage index increase shall be applied for a period of 3 fiscal years. Therefore, we do not have the discretion to extend the time period. However, we will evaluate and designate qualifying counties each year. Therefore, it is possible that after a qualifying county's 3-year period ends, the county again will become a qualifying county and receive a new out-migration adjustment for another 3-year time period.

Comment: Several commenters noted that the commuting adjustment is based the commuting flows of hospital employees alone, while clinicians can work in many nonhospital environments. Thus, the commenter stated that the data used for the commuting adjustment does not address the economic reality facing certain areas because it does not incorporate data from clinicians working in nonhospital environments.

Response: Section 1886(d)(13) of the Act specifies that the adjustment be based on the out-migration patterns of hospital employees. Thus, we do not have flexibility to incorporate data based on the commuting patterns of clinicians working in nonhospital environments in the out-migration adjustment.

Comment: One commenter requested that the out-migration adjustment be given to all counties within an MSA, to avoid competitive disadvantages within an MSA.

Response: Section 1886(d)(13) of the Act specifies that the adjustment is applied to qualifying counties, not to MSAs. In keeping with this provision, we are adopting the provision that was in the proposed rule that we will apply the out-migration adjustment at a county level and not to all counties within an MSA.

Comment: Several commenters stated that the out-migration adjustment only captures the success of other hospitals recruiting labor from areas, but fails to recognize the cost of recruiting and retaining hospital employees. One commenter noted that the formula does not take into account the in-migration of hospital employees who live in other MSAs and recommends that CMS address this issue to include a more comprehensive measure of the interchange between adjacent MSAs.

Response: Section 1886(d)(13) of the Act specifies that the adjustment be made based on the out-migration of hospital employees. Therefore, we do not have the discretion to make additional adjustments based on the in-migration of hospital employees.

Comment: One commenter stated that the out-migration adjustment demonstrates that ''CMS is aware that many hospital's wage index would be significantly affected by the OMB's revised definitions of geographic statistical areas.'' The commenter also stated that the provision does not go far enough to stabilize the severe impact of changes in the MSAs.

Response: Section 505 of Public Law 108–173 established a provision to recognize the out-migration of hospital employees. This statutory provision is separate and distinct from OMB's release of updated MSA definitions. We believe the commenter is incorrect in linking the two provisions, because the out-migration adjustment was not explicitly established to mitigate the effects of the new MSA definitions. We also note that the blended wage index described in section III.G. of the preamble of this final rule is specifically intended to help mitigate the impacts of the adoption of the new MSA definitions.

(4) Automatic Adjustments

Section 1886(d)(13)(A) of the Act allows the Secretary to establish the process for receiving this increase in wage index through application or otherwise. Listed in Table 4J in the Addendum to this final rule are the counties and corresponding hospitals that qualify for an increase in wage index through our implementation of the section. This list includes the universe of hospitals that could receive the adjustment, including those who are redesignated under section 1886(d)(8) of the Act or reclassified under section 1886(d)(10) of the Act. Hospitals located in qualifying counties that have not already been reclassified or redesignated to another geographic area for purposes of the wage index amount (including reclassifications under section 508 of Pub. L. 108–173) will automatically receive the increase in wage index. This commuting wage index adjustment will be effective for the county for a period of 3 fiscal years, FY 2005 through FY 2007. As discussed previously, yearly changes in the wage indexes associated with areas could result in changes in the out-migration percentage for a given county. Irrespective of these changes, a county will not lose its status as a qualifying county due to wage index changes during the 3-year period, and counties will receive the same wage index increase for those 3 years. However, a county that qualifies in FY 2005 may no longer qualify in FY 2008, or it may qualify but receive a different adjustment level.

In the May 18, 2004 proposed rule, we invited public comment on the automatic application of such a wage index adjustment, and whether an application process should be developed under which individual hospitals would have to apply in order to receive the adjustment. We noted that, given the short timeframe before implementation of this provision on October 1, 2004, we believe that there is no practical alternative to providing for an automatic adjustment for FY 2005. However, one possibility was to employ an automatic adjustment process this year, and to replace the automatic process with an application process for future years. We invited comments on whether to establish the automatic process permanently, or to devise an application process for future years. We also invited public comment on whether any application process should be the responsibility of the MGCRB or some other entity.

Comment: One commenter expressed support for the automatic nature of the out-migration adjustment.

Response: We appreciate the commenter's support. In addition, we did not receive specific comments on whether we should devise an application process for the out-migration adjustment in future years. However, we believe that numerous comments in support of our general implementation process and its administrative simplicity suggest that hospitals also appreciate the merits of an automatic application of the out-migration adjustment. Thus, we are adopting our proposal of applying the adjustment on an automatic basis to all hospitals in qualifying counties except those that have already been reclassified under section 1886(d)(10) of the Act, or

under section 508 of Public Law 108–173 redesignated under section 1886(d)(8)of the Act, or requested waiver of the application of the out-migration adjustment.

Hospitals receiving this wage index increase under section 1886(d)(13)(F) of the Act are not eligible for reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act, including reclassifications under section 508 of Public Law 108–173. As previously noted, the wage index increase is effective for 3 years, unless a hospital elects to waive the application of the wage index adjustment. Hospitals that wished to waive the application of this wage index adjustment were asked to notify CMS within 45 days of the publication of the proposed rule. However, consistent with § 412.273, hospitals that have been reclassified by the MGCRB were permitted to withdraw their applications within 45 days of the publication of the proposed rule in the **Federal Register**. Hospitals that have been reclassified by the MGCRB (including reclassifications under section 508 of Public Law 108–173) were permitted to terminate an existing 3-year reclassification within 45 days of the publication of the proposed rule in order to receive the wage index adjustment under this provision. Hospitals that are eligible for this adjustment and that have not been reclassified through section 1886(d)(10) of the Act or under section 508 of Public Law 108–173, redesignated through section 1886(d)(8) of the Act, or requested waiver of the application of the out-migration adjustment will automatically receive the wage index adjustment listed in Table 4J in the Addendum to this final rule. In our proposed rule, we stated that the request for withdrawal of an application for reclassification or termination of an existing 3-year reclassification had to be received by the MGCRB within 45 days of publication of the proposed rule. We asked hospitals to carefully review the wage index adjustment that they would receive under this provision (as listed in Table 2 in the Addendum to the proposed rule) in comparison with the wage index that they would receive under MGCRB reclassification (Table 9 in the Addendum to the proposed rule).

Comment: Many commenters questioned the timing of hospitals reclassification decisions for FY 2005 because of the changes to the wage index reclassification in this year's proposed rule (including the new MSA definitions, section 1886(d)(8)(B) redesignations, and the out-migration adjustment). The commenters noted that since the 45-day timeframe for hospitals to waive their reclassification request ends before publication of the final rule, hospitals are unable to appropriately evaluate the impacts of their reclassification decisions before to the deadline for withdrawing an approved reclassification. Commenters suggested that CMS allow hospitals 30 days after publication of the final rule to withdraw a reclassification request in order to receive the out-migration adjustment instead. Commenters also requested that CMS clarify that hospitals eligible for the out-migration adjustment, but were already reclassified for FY 2005, were not required to submit a formal waiver request to retain their existing reclassification.

In addition, several commenters questioned how the out-migration adjustment affects counties that are redesignated under section 1886(d)(8)(B) of the Act (Lugar counties). Specifically, one commenter requested clarification on how hospitals that are eligible for redesignation under section 1886(d)(8)(B) of the Act and the out-migration adjustment are to notify CMS as to which provision they wish to take advantage of because hospitals are automatically redesignated under section 1886(d)(8)(B) of the Act, and do not have a reclassification request to withdraw. The commenter also requested that hospitals be given the opportunity to determine whether they want to accept the section 1886(d)(8(B) of the Act redesignation or the out-migration adjustment when the final rule is published.

Response: Section 1886(d)(13)(G) of the Act specifies that the out-migration adjustment is not eligible for a hospital that has received redesignation under section 1886(d)(8) of the Act or reclassification under section 1886(d)(10) of the Act during that period (unless they waive their reclassification/redesignation). In the vast majority of cases, we believe that it is most advantageous for hospitals that have been granted redesignation under section 1886(d)(8) of the Act, reclassification under section 1886(d)(10) of the Act or section 508 of Public Law 108–173 to retain the redesignation or reclassification instead of the out-migration adjustment. However, there may be a circumstance in which it is in the hospital's best interest to terminate its redesignation or reclassification because the out-migration adjustment results in a higher wage index. Given the number of changes in the proposed rule and the apparent confusion regarding the automatic application of the out-migration adjustment, we are allowing hospitals a 30-day period from the date of this final rule during which they can decide if they would rather take advantage of their redesignation or reclassification or the out-migration adjustment. Therefore, hospitals will have 30 days from the date of publication of this final rule to submit to CMS a request to withdraw their reclassification requests under section 1886(d)(10) of the Act, section 508 of Public Law 108–173, or their redesignated status under section 1886(d)(8) of the Act and receive the out-migration adjustment instead. Hospitals must submit their request to the following address: Centers for Medicare & Medicaid Services, Center for Medicare Management, Attention: Wage Index Adjustment Waivers, Division of Acute Care, C4–08–06, 7500 Security Boulevard, Baltimore, MD 21244–1850.

As previously noted, we will assume that hospitals that have been redesignated under section 1886(d)(8) of the Act, reclassified under section 1886(d)(10) of the Act or under section 508 of Public Law 108–173 would prefer to keep their redesignation/reclassification unless they explicitly notify CMS that they would like to receive the out-migration adjustment instead. Additionally, we are clarifying that hospitals that wish to retain their redesignation/reclassification (instead of getting the out-migration adjustment) for FY 2005 did not and do not have to submit a formal request to CMS, and will automatically retain their reclassification/redesignation status for FY 2005.

The hospitals listed in Table 4J include all the hospitals that could possibly take advantage of the out-migration adjustment. Hospitals marked with an asterisk represent those hospitals that could have received the out-migration adjustment, but are assumed to be taking advantage of their reclassification or redesignation status (and consequently not the out-migration adjustment) for FY 2005. These hospitals do not have to do anything if they would like to remain reclassified/redesignated and not receive the out-migration adjustment.

Comment: Several commenters requested that we clarify if hospitals will have the same option to withdraw their reclassification or redesignation if they would rather receive the out-migration adjustment in subsequent years.

Response: In subsequent fiscal years, we will use the same process we proposed for FY 2005 to allow hospitals to withdraw their reclassification or redesignation requests and receive the

out-migration adjustment as long as their county remains a qualifying county. That is, hospitals will be able to terminate their reclassification or redesignation and take advantage of the out-migration adjustment if they notify CMS within 45 days of the notice of proposed rulemaking. We note that in upcoming years, we do not expect to allow any withdrawals after that date, as we have done in this final rule (allowing 30 days after publication of the final rule to withdraw a reclassification or redesignation). We note that by the time the proposed rule is published in 2005, hospitals will be familiar with the new labor market areas and the policies for adopting such areas will have been finalized.

Comment: Several commenters requested clarification on the ability of hospitals to apply for reclassification in future year if they receive the out-migration adjustment in FY 2005. Specifically, the commenter asked whether a hospital that qualifies for the out-migration adjustment effective for October 1, 2004, through September 30, 2005, will be able to request geographic reclassification effective for October 1, 2005, under the normal reclassification process. Similarly, another commenter asked if a hospital would be able to receive the out-migration adjustment at the time their MGCRB reclassification expires.

Response: It is our intent that hospitals should be able to evaluate the merits of reclassification and the out-migration adjustment on an annual basis. Given the statutory prohibition on hospitals being redesignated or reclassified (under section 1886(d)(8) or section 1886(d)(10) of the Act) and receiving the commuting adjustment, hospitals cannot receive both the out-migration adjustment and reclassification in the same year. We agree with the commenter that a hospital should not have to forgo the out-migration adjustment in FY 2005 in order to be able to apply for reclassification in FY 2006. Hospitals that qualify for the out-migration adjustment in a given year can take advantage of that adjustment in that year, and can still apply to be reclassified in the subsequent year. Hospitals that apply for reclassification for FY 2005 will be viewed as implicitly waiving the out-migration adjustment for that fiscal year, assuming they receive the reclassification requested. Conversely, if a hospital's reclassification request is not approved in a given year and the hospital remains eligible for the out-migration adjustment, the hospital will automatically receive the out-migration adjustment.

4. FY 2005 Reclassifications

The wage index values for FY 2005 (except those for hospitals receiving wage index adjustments under section 505 of Pub. L. 108–173) are shown in Tables 4A, 4B, 4C, and 4F in the Addendum to this final rule. Hospitals that are redesignated will be required to use the wage index values shown in Table 4C. Areas in Table 4C may have more than one wage index value because the wage index value for a redesignated urban or rural hospital cannot be reduced below the wage index value for the rural areas of the State in which the hospital is located. Therefore, those areas with more than one wage index shown have hospitals from more than one State reclassified into them, and the rural wage index for a State in which at least one hospital is physically located is higher than the wage index for the area to which the hospital is reclassified.

Tables 3A and 3B in the Addendum to this final rule list the 3-year average hourly wage for each labor market area before the redesignation of hospitals, based on FYs 1999, 2000, and 2001 cost reporting periods. Table 3A lists these data for urban areas and Table 3B lists these data for rural areas. In addition, Table 2 in the Addendum to this final rule includes the adjusted average hourly wage for each hospital from the FY 1999 and FY 2000 cost reporting periods, as well as the FY 2001 period used to calculate the FY 2005 wage index. The 3-year averages are calculated by dividing the sum of the dollars (adjusted to a common reporting period using the method described previously) across all 3 years, by the sum of the hours. If a hospital is missing data for any of the previous years, its average hourly wage for the 3-year period is calculated based on the data available during that period.

We are including in the Addendum of this final rule Table 9A, which shows hospitals that have been reclassified under either section 1886(d)(8) or section 1886(d)(10)(D) of the Act. This table includes 400 hospitals reclassified for FY 2005 by the MGCRB (for wage index purposes), as well as hospitals that were reclassified for the wage index in either FY 2003 (53 hospitals) or FY 2004 (102 hospitals) and are, therefore, in either the second or third year of their 3-year reclassification. This table also includes hospitals located in urban areas that have been redesignated rural in accordance with section 1886(d)(8)(E) of the Act (17). In addition, it includes rural hospitals redesignated to urban areas under section 1886(d)(8)(B) of the Act for purposes of the wage index (98).

Under § 412.273, hospitals that have been reclassified by the MGCRB are permitted to withdraw their applications within 45 days of the publication of a proposed rule. The request for withdrawal of an application for reclassification or termination of an existing 3-year reclassification that would be effective in FY 2004 must be received by the MGCRB within 45 days of the publication of the proposed rule. If a hospital elects to withdraw its wage index application after the MGCRB has issued its decision but prior to the above date, it may later cancel its withdrawal in a subsequent year and request the MGCRB to reinstate its wage index reclassification for the remaining fiscal year(s) of the 3-year period (§ 412.273 (b) (2) (i)). The request to cancel a prior withdrawal must be made in writing to the MGCRB no later than the deadline for submitting reclassification applications for the following fiscal year (§ 412.273 (d)). For further information about withdrawing, terminating, or canceling a previous withdrawal or termination of a 3-year reclassification for wage index purposes, we refer the reader to § 412.273, as well as the August 1, 2002, IPPS final rule (67 FR 50065) and the August 1, 2001 IPPS final rule (66 FR 39887).

Changes to the wage index that result from withdrawals of requests for reclassification, wage index corrections, appeals, and the Administrator's review process have been incorporated into the wage index values published in this final rule. These changes may affect not only the wage index value for specific geographic areas, but also the wage index value redesignated hospitals receive; that is, whether they receive the wage index that includes the data for both the hospitals already in the area and the redesignated hospitals. Further, the wage index value for the area from which the hospitals are redesignated may be affected.

Applications for FY 2006 reclassifications are due to the MGCRB by September 1, 2004. We note that this is also the deadline for canceling a previous wage index reclassification withdrawal or termination under § 412.273(d). Applications and other information about MCGRB reclassifications may be obtained, beginning in mid-July 2004, via the CMS Internet Web site at: *http://cms.hhs.gov/providers/prrb/mgcinfo.asp,* or by calling the MCGRB at (410) 786–1174. The mailing address of the MGCRB is: 2520 Lord Baltimore Drive, Suite L, Baltimore, MD 21244–2670.

I. Requests for Wage Index Data Corrections

1. Worksheet S–3 Wage Data

In the August 1, 2003, final rule (68 FR 27194), we revised the process and timetable for application for development of the wage index, beginning with the FY 2005 wage index. The preliminary and unaudited Worksheet S–3 wage data file was made available on October 8, 2003 through the Internet on CMS's Web site at: *http://cms.hhs.gov/providers/hipps/ippswage.asp.* In a memorandum dated October 10, 2003, we instructed all Medicare fiscal intermediaries to inform the IPPS hospitals they service of the availability of the wage data file and the process and timeframe for requesting revisions (including the specific deadlines listed below). We also instructed the fiscal intermediaries to advise hospitals that these data are also made available directly through their representative hospital organizations.

If a hospital wished to request a change to its data as shown in that wage data file, the hospital was to submit corrections along with complete, detailed supporting documentation to its intermediary by November 24, 2003. Hospitals were notified of this deadline and of all other possible deadlines and requirements, including the requirement to review and verify their data as posted on the preliminary wage data file on the Internet, through the October 10, 2003 memorandum referenced above.

The fiscal intermediaries notified the hospitals in early February of any changes to the wage data as a result of the desk reviews and the resolution of the hospitals' early November change requests. The fiscal intermediaries also submitted the revised data to CMS in early February. CMS published the proposed wage index public use file that included hospitals' revised wage data on February 27, 2004. In a memorandum also dated March 1, 2004, we instructed fiscal intermediaries to notify all hospitals regarding the availability of the proposed wage index public use file and the criteria and process for requesting corrections and revisions to the wage data. Hospitals had until March 12, 2004, to submit requests to the fiscal intermediaries for reconsideration of adjustments made by the fiscal intermediaries as a result of the desk review, and to correct errors due to CMS's or the intermediary's mishandling of the wage data. Hospitals were also required to submit sufficient documentation to support their requests.

After reviewing requested changes submitted by hospitals, fiscal intermediaries transmitted any additional revisions resulting from the hospitals' reconsideration requests by April 16, 2004. The deadline for hospitals to request CMS intervention in cases where the hospital disagreed with the fiscal intermediary's policy interpretations was April 23, 2004.

Hospitals were also instructed to examine Table 2 in the Addendum to the proposed rule. Table 2 of the proposed rule contained each hospital's adjusted average hourly wage used to construct the wage index values for the past 3 years, including the FY 2001 data used to construct the FY 2005 wage index. We noted that the hospital average hourly wages shown in Table 2 of the proposed rule only reflected changes made to a hospital's data and transmitted to CMS by March 15, 2004.

The final wage data public use file was released in May 2004 to hospital associations and the public on the Internet at *http:/www.cms.hhs.gov/providers/hipps/ippswage.asp.* The May 2004 public use file was made available solely for the limited purpose of identifying any potential errors made by CMS or the fiscal intermediary in the entry of the final wage data that result from the correction process described above (revisions submitted to CMS by the fiscal intermediaries by April 16, 2004). If, after reviewing the May 2004 final file, a hospital believed that its wage data were incorrect due to a fiscal intermediary or CMS error in the entry or tabulation of the final wage data, it was provided the opportunity to send a letter to both its fiscal intermediary and CMS that outlined why the hospital believed an error exists and provide all supporting information, including relevant dates (for example, when it first became aware of the error). These requests had to be received by CMS and the fiscal intermediaries no later than June 11, 2004. The intermediary reviewed requests upon receipt and contacted CMS immediately to discuss its findings.

After the release of the May 2004 wage index file, changes to the hospital wage data were only made in those very limited situations involving an error by the intermediary or CMS that the hospital could not have known about before its review of the final wage data file. Specifically, neither the intermediary nor CMS accepted the following types of requests:

- Requests for wage data corrections that were submitted too late to be included in the data transmitted to CMS by fiscal intermediaries on or before April 16, 2004.
- Requests for correction of errors that were not, but could have been, identified during the hospital's review of the March 1, 2004, wage data file (or the March 8 occupational mix data; see section III.H.2. of this preamble).
- Requests to revisit factual determinations or policy interpretations made by the intermediary or CMS during the wage index data correction process.

2. Occupational Mix Data

The process and criteria for requesting corrections to the occupational mix survey data are described in section III.C.1 of this preamble. As stated in that section, from April 16, 2004 forward, the process for correcting the final occupational mix survey data is the same, and on the same schedule, as described above for correcting the final Worksheet S–3 wage data.

3. All FY 2005 Wage Index Data

Verified corrections to the wage index received timely (that is, by June 11, 2004) have been incorporated into the final wage index in this final rule, and are effective October 1, 2004.

We created the processes described above to resolve all substantive wage index data index correction disputes before we finalize the wage and occupational mix data for the FY 2005 payment rates. Accordingly, hospitals that did not meet the procedural deadlines set forth above will not be afforded a later opportunity to submit wage data corrections or to dispute the intermediary's decision with respect to requested changes. Specifically, our policy is that hospitals that do not meet the procedural deadlines set forth above will not be permitted to challenge later, before the Provider Reimbursement Review Board, the failure of CMS to make a requested data revision (*See W. A. Foote Memorial Hospital* v. *Shalala,* No. 99–CV–75202–DT (E.D. Mich. 2001), also *Palisades General Hospital* v. *Thompson,* No. 99–1230 (D.D.C. 2003)).

Again, we believe the wage index data correction process described above provides hospitals with sufficient opportunity to bring errors in their wage data to the fiscal intermediaries' attention. Moreover, because hospitals had access to the final wage index data by early May 2004, they had the opportunity to detect any data entry or tabulation errors made by the fiscal intermediary or CMS before the development and publication of the final FY 2005 wage index in this final rule, and the implementation of the FY 2005 wage index on October 1, 2004. If hospitals availed themselves of this opportunity, the wage index implemented on October 1 should be

accurate. Nevertheless, in the event that errors are identified after publication of the final rule, we retain the right to make midyear changes to the wage index under very limited circumstances.

Specifically, in accordance with § 412.63(x)(2) of our existing regulations, we make midyear corrections to the wage index for an area only if a hospital can show: (1) That the intermediary or CMS made an error in tabulating its data; and (2) that the requesting hospital could not have known about the error or did not have an opportunity to correct the error, before the beginning of FY 2005 (that is, by the June 11, 2004 deadline). This provision is not available to a hospital seeking to revise another hospital's data that may be affecting the requesting hospital's wage index. As described earlier, since a hospital had to show that it could not have known about the error, or that it did not have the opportunity to correct the error, before the publication of the FY 2005 wage index. As indicated earlier, since a hospital had the opportunity to verify its data, and the fiscal intermediary notified the hospital of any changes, we do not expect that midyear corrections will be necessary. However, if the correction of a data error changes the wage index value for an area, the revised wage index value will be effective prospectively from the date the correction is approved.

Comment: One national hospital association commended CMS for the revised wage index development process and timeframe that CMS implemented with the FY 2005 wage index. The commenter believed that releasing the wage data file before intermediaries begin their desk reviews of the wage data makes the process more efficient than in prior years and recommended that CMS follow a similar process for 2006. The commenter suggested that notifying hospitals of the schedule as soon as possible and extending the hospital review timeframe would enhance the process.

Another commented that nearly 13 percent of hospitals made changes to their wage data after the release of the February public use file. The commenter believed that this percentage of changes is too high and creates budgeting challenges for hospitals, as well as, contributes to difficulties in determining reclassification decisions.

Response: We will continue to explore ways to improve the process for developing the wage index. With the new process in place, the rate of revisions between the proposed (February) and final (May) public use files has decreased dramatically, from approximately 30 percent in prior years to less than 15 percent for the FY 2005 wage index. However, we agree with the commenter that the volume of changes after the proposed rule is still too high. We encourage hospitals to work with their intermediaries as early as possible to ensure that their wage data are correct early in the process. For the FY 2006 wage index, we will apply the same process that we used for the FY 2005 wage index.

Comment: One commenter requested that CMS provide more specific guidance to fiscal intermediaries for handling the June appeals, that is, hospitals' requests to correct errors in the May public use files, just as CMS provides for the earlier stages of the correction process.

Response: We plan to provide more specific instructions regarding the intermediaries' handling of the June appeals in forthcoming instructions for the wage index development process, beginning with the FY 2006 wage index.

Comment: One commenter suggested that CMS should put a process in place that allows other hospitals negatively impacted by another hospitals' incorrect data to make a request to obtain a correction. The commenter is concerned that sometimes the hospital with the incorrect data has no incentive to request a correction, for example, the hospital has closed or changed enrollment status to a CAH other non-IPPS hospital.

Response: The opportunity that the commenter requested is already available. If a hospital believes that another hospital's wage data may be erroneous in the public use files, the hospital may notify CMS that there is a potential problem with the other hospital's data. CMS and the other hospital's intermediary will review the data and attempt to contact the other hospital to determine the appropriate action. Any correction to a hospital's wage data can only be based on data that derives directly from the hospital.

J. Revision of the Labor-Related Share of the Wage Index

Section 1886(d)(3)(E) of the Act directs the Secretary to adjust the proportion of the national prospective payment system base payment rates that are attributable to wages and wage-related costs by a factor that reflects the relative differences in labor costs among geographic areas. It also directs the Secretary to estimate from time to time the proportion of hospital costs that are labor-related: ''The Secretary shall adjust the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. * * *'' The portion of hospital costs attributable to wages and wage-related costs is referred to as the labor-related share. The labor-related share of the prospective payment rate is adjusted by an index of relative labor costs, which is referred to as the wage index. In the past, we have defined the labor-related share for prospective payment acute care hospitals as the national average proportion of operating costs that are related to, influenced by, or vary with the local labor market. The labor-related share for the acute care hospital inpatient prospective payment system has been calculated as the sum of the weights for wages and salaries, fringe benefits, nonmedical professional fees, contract labor, postage, and labor-intensive services.

In its June 2001 Report to Congress, MedPAC recommended that the Secretary ''should reevaluate current assumptions about the proportion of providers'' costs that reflect resources purchased in local and national markets.'' (Report to the Congress: Medicare in Rural America, Recommendation 4D, page 80.) MedPAC recommended that the labor-related share include the weights for wages and salaries, fringe benefits, contract labor, and other labor-related costs for locally purchased inputs only. MedPAC noted that this would likely result in a lower labor share, which would decrease the amount of the national base payment amount adjusted by the wage index. As a result, hospitals located in low-wage markets (those with a wages index less than 1.0) would receive higher payments, while those located in high-wage labor markets would receive lower payments.

In our proposed and final regulations updating the IPPS for FY 2003 (67 FR 31404, May 9, 2002 and 67 FR 49982, August 1, 2002), we discussed the methodology that we have used to determine the labor-related share. We noted that, at that time, the results of employing that methodology suggested that an increase in the labor-related share (from 71.066 percent to 72.495 percent) was warranted. However, we decided not to propose such an increase in the labor-related share until we conducted further research to determine whether a different methodology for determining the labor-related share should be adopted. The labor-related share has thus remained 71.066 percent.

Section 403 of Public Law 108–173 amended sections 1886(d)(3)(E) of the Act to provide that the Secretary must employ 62 percent as the labor-related share unless this ''would result in lower

payments than would otherwise be made.'' However, this provision of Public Law 108–173 did not the change the legal requirement that the Secretary estimate ''from time to time'' the proportion of hospitals'' costs that are ''attributable to wages and wage-related costs.'' In fact, section 404 of Public Law 108–173 requires the Secretary to develop a frequency for revising the weights used in the hospital market basket, including the labor share, to reflect the most current data more frequently than once every 5 years. This reflects Congressional intent that hospitals will receive payment based on a 62-percent labor share, or the labor share estimated from time to time by the Secretary, whichever results in higher payments.

Section 404 further requires us to include in the final IPPS rule for FY 2006 an explanation of the reasons for, and options considered, in determining the frequency for revising the weights used in the hospital market basket, including the labor share. In the meantime, we are also continuing our research into the assumptions employed in calculating the labor-related share. Our research involves analyzing the compensation share separately for urban and rural hospitals, using regression analysis to determine the proportion of costs influenced by the area wage index, and exploring alternative methodologies to determine whether all or only a portion of professional fees and nonlabor intensive services should be considered labor-related. We will present our analysis and conclusions regarding the frequency and methodology for updating the labor share in the proposed and final rules for FY 2006.

In section IV.F. of this preamble, we discuss our incorporation of the requirements of section 403 of Public Law 108–173 in a new § 412.64(h) of the regulations.

As discussed above, the Secretary had determined, prior to the enactment of Public Law 108–173, that the labor-related share would be 71.066 percent. As a result, application of a 62-percent labor share would result in lower payments for any hospital with a wage index greater than 1.0. Therefore, we are modifying our payment system software for FY 2005 to apply wage indexes greater than 1.0 to 71.066 percent of the standardized amount, and to apply wage indexes less than or equal to 1.0 to 62 percent of the standardized amount.

We did not receive any specific comments on the proposed implementation of section 403 of Public Law 108–173. Therefore, we are adopting as final the proposed policy change without modification.

IV. Other Decisions and Changes to the IPPS for Operating Costs and GME Costs

A. Postacute Care Transfer Payment Policy (§ 412.4)

1. Background

Existing regulations at § 412.4(a) define discharges under the IPPS as situations in which a patient is formally released from an acute care hospital or dies in the hospital. Section 412.4(b) defines transfers from one acute care hospital to another, and § 412.4(c) defines transfers to certain postacute care providers. Our policy provides that, in transfer situations, full payment is made to the final discharging hospital and each transferring hospital is paid a per diem rate for each day of the stay, not to exceed the full DRG payment that would have been made if the patient had been discharged without being transferred.

The per diem rate paid to a transferring hospital is calculated by dividing the full DRG payment by the geometric mean length of stay for the DRG. Based on an analysis that showed that the first day of hospitalization is the most expensive (60 FR 45804), our policy provides for payment that is double the per diem amount for the first day (§ 412.4(f)(1)). Transfer cases are also eligible for outlier payments. The outlier threshold for transfer cases is equal to the fixed-loss outlier threshold for nontransfer cases, divided by the geometric mean length of stay for the DRG, multiplied by the length of stay for the case, plus one day.

Medicare adopted its IPPS transfer policy because, if the program were to pay the full DRG payment regardless of whether a patient is transferred or discharged, there would be a strong incentive for hospitals to transfer patients to another IPPS hospital early in the patients' stay in order to minimize costs while still receiving the full DRG payment. The transfer policy adjusts the payments to approximate the reduced costs of transfer cases.

Previously, when a patient chose to depart from a hospital against the medical opinion of treating physicians, the case was treated as a left against medical advice (LAMA) discharge and coded as discharge status ''07-Left Against Medical Advice (LAMA)'' on the inpatient billing claim form. Because, by definition, LAMA discharges were assumed not to involve the active participation of the hospital administration, our policy had been to treat LAMA cases as discharges. This policy applied even if the patient was admitted to another hospital on the date of the LAMA discharge. Consequently, until FY 2004, we made a full DRG payment for any discharge coded as a LAMA case.

Last year, in response to an Office of Inspector General (OIG) report issued in March 2002 (A–06–99–00045), we became concerned that some hospitals were incorrectly coding transfers as LAMA cases. Therefore, in the August 1, 2003 final IPPS rule (68 FR 45405), we expanded our definition of a transfer under § 412.4(b) to include all patients who are admitted to another IPPS hospital on the same day that the patient is discharged from an IPPS hospital, unless the first (transferring) hospital can demonstrate that the patient's treatment was completed at the time of discharge from that hospital. In other words, unless the same-day readmission is to treat a condition that is unrelated to the condition treated during the original admission (for example, the beneficiary is in a car accident later that day), any situation where the beneficiary is admitted to another IPPS hospital on the same date that he or she is discharged from an IPPS hospital would be considered a transfer, even if the patient left against medical advice from the first hospital.

This policy prohibits payment of two claims for the same patient on the same day. Therefore, if a hospital believes a claim has been wrongly denied, the original discharging hospital must resubmit the claim with documentation that the discharge was appropriate and unrelated to the subsequent same-day admission.

Comment: One commenter requested that we clarify our policy regarding LAMAs. The commenter noted that in the FY 2004 proposed rule, we ''considered and appropriately rejected * * * a knowledge standard'' when we amended the transfer policy to include LAMAs. Under the standard that was rejected, a hospital would have been required to code LAMAs as transfers based on knowledge of a same-day admission to another hospital. However, the commenter notes that in the May 18, 2004 proposed rule, we stated that hospitals ''are now allowed to report a patient as left against medical advice only if they have no knowledge that the patient has been admitted to another hospital on the same day.'' The commenter notes that this could be interpreted as reflecting a change in policy, returning to the knowledge standard that we rejected in the August 1, 2003 final rule.

Response: We did not intend to change our policy in the preamble of the

May 18, 2004 proposed rule. A discharging hospital is not required to identify cases in which a patient is admitted to another hospital on the same day. Our claims processing software has been revised to identify cases in which a patient is admitted to a hospital after being discharged from another hospital on the same day.

Comment: Some commenters noted that the edits to the CWF will cause claims to be rejected and that providers will have to recode the claims and resubmit them. Others expressed concerns that hospitals appropriately discharge their patients to home ''only to have other providers outside of the hospital admit patients to other entities and healthcare settings,'' imposing on hospitals an unfair burden that is caused by patient choice and is not of their own doing. As a result, claims are frequently denied for these providers as a result of the lack of a method to ensure consistent inpatient processing of claims. The commenter cites ''unplanned situations (for example, LAMA, readmissions post-discharge to home, patients seeking additional care at other facilities)'' that result in ''unnecessary payment delays and rework of claims'' by the facilities that originally treated the patients. The commenter further argues, ''these unnecessary process issues result in additional overhead costs that will never be recovered by the already reduced transfer per diem payments that the original treating facility ultimately receives.''

Response: As we discussed above, we adopted this policy in the August 1, 2003 final rule (68 FR 45404 through 45406) in response to an OIG report indicating that transfers were frequently miscoded as LAMAs. Since we have implemented the systems edits to identify these cases, the number of cases identified by these edits has provided further evidence that this policy is appropriate.

2. Changes to DRGs Subject to the Postacute Care Transfer Policy (§ 412.4(c) and (d))

Under section 1886(d)(5)(J) of the Act, a ''qualified discharge'' from one of 10 DRGs selected by the Secretary to a postacute care provider is treated as a transfer case beginning with discharges on or after October 1, 1998. This section required the Secretary to define and pay as transfers all cases assigned to one of 10 DRGs selected by the Secretary, if the individuals are discharged to one of the following postacute care settings:

- A hospital or hospital unit that is not a subsection 1886(d) hospital. (Section 1886(d)(1)(B) of the Act identifies the hospitals and hospital units that are excluded from the term ''subsection (d) hospital'' as psychiatric hospitals and units, rehabilitation hospitals and units, children's hospitals, long-term care hospitals, and cancer hospitals.)
- A SNF (as defined at section 1819(a) of the Act).
- Home health services provided by a home health agency, if the services relate to the condition or diagnosis for which the individual received inpatient hospital services, and if the home health services are provided within an appropriate period (as determined by the Secretary).

In the July 31, 1998 IPPS final rule (63 FR 40975 through 40976), we specified the appropriate time period during which we would consider a discharge to postacute home health services to constitute a transfer as within 3 days after the date of discharge. In addition, in the July 31, 1998 final rule, we did not include in the definition of postacute care transfer cases patients transferred to a swing-bed for skilled nursing care (63 FR 40977).

Section 1886(d)(5)(J) of the Act directed the Secretary to select 10 DRGs based upon a high volume of discharges to postacute care and a disproportionate use of postacute care services. As discussed in the July 31, 1998 final rule, these 10 DRGs were selected in 1998 based on the MedPAR data from FY 1996. Using that information, we identified and selected the first 20 DRGs that had the largest proportion of discharges to postacute care (and at least 14,000 such transfer cases). In order to select 10 DRGs from the 20 DRGs on our list, we considered the volume and percentage of discharges to postacute care that occurred before the mean length of stay and whether the discharges occurring early in the stay were more likely to receive postacute care. We identified 10 DRGs to be subject to the postacute care transfer rule starting in FY 1999.

Section 1886(d)(5)(J)(iv) of the Act authorizes the Secretary to expand the postacute care transfer policy beyond 10 DRGs for FY 2001 or subsequent fiscal years. In the FY 2004 IPPS final rule (68 FR 45412), we expanded the postacute care transfer policy to include additional DRGs. We established the following criteria that a DRG must meet, for both of the 2 most recent years for which data are available, in order to be added to the postacute care transfer policy:

- At least 14,000 postacute care transfer cases;
- At least 10 percent of its postacute care transfers occurring before the geometric mean length of stay;
- A geometric mean length of stay of at least 3 days; and
- If a DRG is not already included in the policy, a decline in its geometric mean length of stay during the most recent 5 year period of at least 7 percent.

We identified 21 new DRGs that met these criteria. We also determined that one DRG from the original group of 10 DRGs (DRG 263) no longer met the volume criterion of 14,000 transfer cases. Therefore, we removed DRGs 263 and 264 (DRG 264 is paired with DRG 263) from the policy and expanded the postacute care transfer policy to include payments for transfer cases in the new 21 DRGs, effective October 1, 2003. As a result, a total of 29 DRGs were subject to the postacute care transfer policy in FY 2004.

In the FY 2004 IPPS final rule, we indicated that we would review and update this list periodically to assess whether additional DRGs should be added or existing DRGs should be removed (68 FR 45413). We have analyzed the available data from the FY 2003 MedPAR file. For the 2 most recent years of available data (FY 2002 and FY 2003), we have found that no additional DRGs qualify under the four criteria set forth in the IPPS final rule for FY 2004. We have also analyzed the DRGs included under the policy for FY 2004 to determine if they still meet the criteria to remain under the policy. In addition, we have analyzed the special circumstances arising from a change to one of the DRGs included under the policy in FY 2004.

As discussed in the May 18, 2004 IPPS proposed rule (69 FR 28212) and in section II.B.9. of this final rule, we proposed to eliminate DRG 483. Under our proposal, the cases that would have been placed into DRG 483 would be split into two proposed new DRGs, 541 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth and Neck Diagnoses With Major O.R. Procedure) and 542 (Tracheostomy with Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth and Neck Diagnoses Without Major O.R. Procedure). This would be done by subdividing the cases in the existing DRG 483 based on the presence of a major O.R. procedure, in addition to the tracheostomy code that is currently required to be assigned to this DRG. Therefore, if the patient's case involves a major O.R. procedure (a procedure whose code is included on the list that is assigned to DRG 468 (Extensive O.R. Procedure Unrelated to Principal

Diagnosis), except for tracheostomy codes 31.21 and 31.29), the case would be assigned to the proposed new DRG 541. We indicated that if the patient does not have an additional major O.R. procedure (that is, there is only a tracheostomy code assigned to the case), the case would be assigned to proposed new DRG 542. In section II.B.9. of this preamble, we are finalizing our proposal to eliminate DRG 483 and create new DRGs 541 and 542.

As discussed in the May 18, 2004 proposed rule, neither of the new DRGs 541 and 542 would have enough cases to meet the first criterion for inclusion in the postacute care transfer policy. DRG 483 had 44,788 total cases with 15,520 transfer cases in FY 2002, and 44,618 total cases with 20,034 transfer cases in FY 2003. These cases will now split between new DRG 541 (20,812 total cases) and new DRG 542 (23,387 total cases). As a result, neither of these new DRGs would meet the existing threshold of 14,000 transfer cases (6,779 projected transfer cases for new DRG 541, and 8,570 projected transfer cases for new DRG 542). Nevertheless, we indicated that we believe the cases that will now be incorporated into these two new DRGs remain appropriate candidates for application of the postacute care transfer policy. The new DRGs 541 and 542 will contain the same cases that were included in existing DRG 483, which qualified for inclusion in the postacute care transfer policy. Furthermore, many of the cases in the new DRGs 541 and 542 will continue to require postacute care.

For the proposed rule, when we analyzed the cases that we projected would fall into the two new DRGs in the FY 2005 GROUPER Version 22.0, we found that a high proportion of cases in both the new DRGs were projected to be transfer cases: 33 percent of all cases in DRG 541, and 37 percent in DRG 542. In addition, based on the data from cases in DRG 483 in the FY 2003 MedPAR file, a high proportion of the transfer cases in these proposed new DRGs were projected to fall into the short-stay transfer category: 41 percent of transfer cases in new DRG 541 and 42 percent of transfer cases in new DRG 542 were projected to occur before the geometric mean length of stay for these new DRGs. By contrast, among all DRGs, approximately 15 percent of transfer cases are short-stay transfer cases. The percentage of transfer cases that were short-stay cases that would be in both new DRGs 541 and 542 would be more than 2 standard deviations above the mean percentage of short-stay cases across all DRGs. (Two standard deviations above the mean across all DRGs is 37 percent for FY 2005.) Therefore, we proposed that the subdivision of DRG 483 should not change the original application of the postacute care transfer policy to the cases once included in that DRG. We did not believe that it was appropriate for these cases to fall outside the scope of this policy solely because of a revision to the DRG structure that was driven by policy reasons unrelated to the postacute care transfer provision. We proposed that the high proportion of transfer cases among all cases that would be assigned to these new DRGs, along with the unusually high proportion of short-stay cases among those transfer cases, provided solid reasons for considering whether alternate criteria might better address the special circumstances that can arise from changes in DRGs unrelated to the postacute care transfer policy.

Therefore, in the May 18, 2004 proposed rule, we proposed alternate criteria to be applied in cases where DRGs do not satisfy the existing criteria, for discharges occurring on or after October 1, 2004 (69 FR 28273–28374). The proposed new criteria were designed to address situations such as those posed by the split of DRG 483, where there remain substantial grounds for inclusion of cases within the postacute care transfer policy, although one or more of the original criteria may no longer apply. Therefore, we proposed to examine DRGs for inclusion within the policy against two sets of criteria, first, the original four criteria, and then, the proposed alternate set of criteria. Under our proposal, DRGs that did not satisfy the first set of criteria would still be included if they satisfied the second set. Specifically, a DRG would still be subject to the postacute care transfer policy under the alternative set of criteria if, for the 2 most recent years for which data are available, there were at least 5,000 total transfers to postacute care among the cases included in the DRG, and if, among the cases included in the DRG, the percentage of transfer cases that were short-stay transfer cases was at least 2 standard deviations above the geometric mean length of stay across all DRGs (which is 37 percent for FY 2005). We indicated that we would also continue to require a geometric mean length of stay of at least 3 days among the cases included in the DRG. Finally, we proposed to require that, if a DRG was not already included in the policy, it either experienced a decline in its geometric mean length of stay during the most recent 5-year period of at least 7 percent or contained only cases that would have been included in a DRG to which the policy applied in the prior year.

Under the proposed alternate criteria, DRGs 430, 541, and 542 would have qualified for inclusion in the postacute care transfer policy. DRG 430 met the proposed threshold of 5,000 transfer cases in both of the 2 most recent years, with 11,973 transfer cases and 46 percent short-stay transfer cases in FY 2002, and 12,202 transfer cases and 38 percent short-stay transfers in FY 2003. In addition, DRG 430 experienced a 7-percent decline in length of stay from FY 2000 to FY 2004. DRG 430 also had a 5.8 day average length of stay during those years. As discussed in the proposed rule, the cases to be included in new DRGs 541 and 542 contain a sufficient number of transfers to meet the first alternate criterion, and among the cases to be included in these DRGs, the percentages of transfer cases occurring before the geometric mean length of stay new DRGs exceed 2 standard deviations above the geometric mean length of stay for all DRGs. The average lengths of stay for the cases to be included in new DRGs 541 and 542 are 37.7 days and 28.9 days, respectively.

We proposed to revise the regulations governing the postacute transfer policy to include the alternative criteria described above (§ 412.4(d)). We also proposed that DRG 430 and new DRGs 541 and 542 would be included in the postacute care transfer policy.

In the May 18, 2004 proposed rule, we also called attention to the data concerning DRG 263, which was subject to the postacute care transfer policy until FY 2004. We removed DRG 263 from the postacute care transfer policy for FY 2004 because it did not have the minimum number of cases (14,000) transferred to postacute care (13,588 transfer cases in FY 2002, with more than 50 percent of transfer cases being short-stay transfers). The FY 2003 MedPAR data show that there were 15,602 transfer cases in the DRG in FY 2003, of which 46 percent were short-stay transfers. Because we removed the DRG from the postacute care transfer policy in FY 2004, it must meet all criteria to be included under the policy in subsequent fiscal years. Because the geometric mean length of stay for DRG 263 shows only a 6-percent decrease since 1999, DRG 263 does not qualify to be added to the policy for FY 2005 under the existing criteria that were included in last year's rule. DRG 263 would have qualified under the volume threshold and percent of short-stay transfer cases under the proposed new alternate criteria contained in the proposed rule. However, it still did not

meet the proposed required decline in length of stay to qualify to be added to the policy in FY 2005.

Comment: Several commenters objected to the proposed alternate criteria for DRGs to be included in the postacute care transfer policy. Some commenters believed that the proposed criteria were inappropriate because they appeared contrived to ensure that cases in the former DRG 483, which had a very high DRG weight and resulted in significant Medicare payments, would not be paid at the higher rate associated with those cases. One commenter stated that if CMS' creation of the two new DRGs for tracheostomies with and without surgical procedures does not create less variation in length of stay and cost per case, there is no need to split DRG 483 and no need to expand the transfer policy criteria. The commenters argued that if the split of DRG 483 into more specific DRGs will better account for variations in the original DRG, then the historical logic behind the transfer policy in these cases is no longer valid. Some commenters also believed that the alternate criteria did not meet the objective of the provision, which is to ensure that the postacute care transfer policy only subjects high volume DRGs to this payment method.

Response: We disagree with some of the points raised by these commenters. In the proposed rule (69 FR 28273) we clearly indicated that the alternate criteria to be included in the postacute care transfer policy still required relatively high volumes of postacute care transfer cases, as well as very high proportions of short stay transfer cases. We specifically chose a very high threshold for the percent of these postacute care transfer cases that are short-stay cases in order to avoid including inappropriate DRGs within the postacute care transfer policy. In many areas of Medicare program policy we employ a threshold of one standard deviation or less in order to qualify for inclusion to or exclusion from certain provisions. In this instance, we deliberately chose a much higher threshold in order to ensure that only those DRGs with the highest rate of short-stay postacute care transfers would be included in the policy.

However, in the light of these and other comments, we are not adopting the proposed alternate criteria in this final rule. We note that the postacute care transfer policy was not considered at the time the decision was made to split DRG 483. We do not intend to change our rationale for reorganizing DRGs into more coherent groups or to compromise the clinical cohesiveness of the DRG system in order ensure cases are included in or excluded from the postacute care transfer policy or other CMS policies. We have discussed the reasons for splitting DRG 483 in section II.B.9. of the proposed rule and in this final rule. However, we do note that, while these cases will continue to be included in the postacute care transfer policy and subject to per diem payments, we anticipate that fewer cases will actually receive these reduced payments as the new DRGs better reflect the resources required to treat these patients. As a result, hospitals will have less incentive to discharge these patients to postacute care.

Comment: Some commenters suggested that in place of the proposed alternate criteria, we should adopt a policy of keeping cases within the scope of the postacute care transfer policy permanently once they initially qualify for inclusion in the policy. These commenters noted that removing DRGs from the postacute care transfer policy makes the payment system less stable and results in inconsistent incentives over time. They also argued that ''a drop in the number of transfers to postacute settings is to be expected after the transfer policy is applied to a DRG, but the frequency of transfers may well rise again if the DRG is removed from the policy.'' Other commenters expressed concern about our changing of the policy criteria in 2 consecutive years. These commenters argued that such frequent changes in policy give the appearance that the policy has been contrived to achieve certain desired results and make the regulatory process unpredictable and unfair. They further imply that these ''band-aid fixes'' to the 20-year old Medicare system do not bode well for the confidence of outside organizations in regards to the program.

Response: We did consider grandfathering cases already included in the policy because this approach is, on the surface, the simplest method of ensuring these cases continue to be paid appropriately. However, we determined that in order to adopt this approach, we would also need to determine an appropriate timeframe for the grandfathering period. We did not believe that we could adequately predict or project what timeframe would be appropriate, not only in the case of the splitting of DRG 483 into DRGs 541 and 542, but also for future situations where this kind of split may occur. Therefore, we tried to develop appropriate, alternative criteria based on actual case data that could be monitored and applied from year to year.

However, due to the large number of comments received and the strong arguments they have raised in favor of a more straightforward approach, we have decided not to adopt the alternate criteria proposed in the May 18, 2004 proposed rule. Instead, in this final rule we are adopting the policy of simply grandfathering, for a period of 2 years, any cases that were previously included within a DRG that has split, when the split DRG qualified for inclusion in the postacute care transfer policy for both of the previous 2 years. Under this policy, the cases that were previously assigned to DRG 483, and that will now fall into DRGs 541 and 542, will continue to be subject to the postacute care transfer policy for the next 2 years. We will monitor the frequency with which these cases are transferred to postacute settings and the percentage of these cases that are short-stay transfer cases. Because we are not adopting the proposed alternate criteria for DRG inclusion the postacute care transfer policy at this time, DRG 430 (Psychoses) does not meet the criteria for inclusion and will not be subject to the postacute care transfer policy for FY 2005.

We appreciate the recommendation to address situations such as the splitting of DRGs by simply including all cases within the postacute care transfer policy permanently once they have initially qualified. While we are not adopting this policy at this time, we will actively consider it for adoption at a later date. Meanwhile, we believe that grandfathering the cases formerly included in DRG 483 for 2 years is an appropriate interim measure that ensures a consistent payment approach to these cases while affording us sufficient time to undertake a thorough review of this issue. In the meantime, we welcome comments on how to treat the cases formerly included in a split DRG after the grandfathering period. We note that, if we were to adopt the policy recommended by the commenter, cases in DRGs 263 and 264 would again become subject to the policy. As noted above, these DRGs are already very close to meeting the criteria required to be re-included in the policy. However, we will monitor cases until next year or until such time that another change to this policy is warranted.

The table below displays the 30 DRGs that we are including in the postacute care transfer policy, effective for discharges occurring on or after October 1, 2004. This table includes the effects of dropping DRG 483, which we are deleting from the DRG list, and adding the two new DRGs 541 and 542 that will now incorporate the cases formerly assigned to DRG 483. As discussed above, these cases are being grandfathered into the policy for 2

years. The other DRGs meet the criteria specified above during both of the 2 most recent years for which data were available prior to the publication of this final rule (FYs 2002 and 2003), as well as their paired-DRG if one of the DRGs meeting the criteria includes a CC/no-CC split.

BILLING CODE 4120–01–C

Section 1886(d)(5)(J)(i) of the Act recognizes that, in some cases, a substantial portion of the costs of care is incurred in the early days of the inpatient stay. Similar to the policy for transfers between two acute care hospitals, the transferring hospital in a postacute care transfer receives twice the per diem rate for the first day of treatment and the per diem rate for each following day of the stay before the transfer, up to the full DRG payment. However, three of the DRGs subject to the postacute care transfer policy exhibit a disproportionate share of costs very early in the hospital stay in postacute care transfer situations. For these DRGs, hospitals receive 50 percent of the full DRG payment plus the single per diem (rather than double the per diem) for the first day of the stay and

50 percent of the per diem for the remaining days of the stay, up to the full DRG payment.

In previous years, we determined that DRGs 209 and 211 met this cost threshold and qualified to receive this special payment methodology. Because DRG 210 is paired with DRG 211, we include payment for cases in that DRG for the same reason we include paired DRGs in the postacute care transfer policy (to eliminate any incentive to code incorrectly in order to receive higher payment for those cases). The FY 2003 MedPAR data show that DRGs 209 and 211 continue to have charges on the first day of the stay that are higher than 50 percent of the average charges in the DRGs. Therefore, we proposed to continue the special payment methodology for DRGs 209, 210, and 211 for FY 2005 (69 FR 28274).

We received no comments on this proposal. Therefore, we will continue the special payment methodology for these DRGs in FY 2005.

Comment: One commenter requested that we require physicians and postacute care facilities to notify the original treating hospital that a patient has been treated within 3 days at another facility. The commenter indicated that this step would reduce the burden on hospitals in relation to the postacute transfer policy.

Response: While we appreciate the commenter's concern to reduce the burdens on hospitals, we are reluctant to impose this burden on other entities, especially since these other entities are not affected by the payment decisions that are involved.

B. Payments for Inpatient Care in Providers That Change Classification Status During a Patient Stay (§§ 412.2(b)(3) and 412.521(e)

Situations may occur in hospital inpatient care settings where a Medicare provider changes its Medicare payment classification status during a patient's stay, for example, an acute care hospital is reclassified as a LTCH. (We refer to the patients in these situations as ''crossover patients.'') Different Medicare payment systems apply to care furnished to Medicare beneficiaries during inpatient stays, depending on the classification status of the provider. For example, payments to an acute care hospital for inpatient services are made under the IPPS on a per discharge basis, using a DRG classification system. Payments to LTCHs that are classified under section 1886(d)(1)(B)(iv)(I) of the Act are made under the LTCH PPS on a per discharge basis using a LTC-DRG classification system. The main difference between a LTCH that is classified under section 1886(d)(1)(B)(iv)(I) of the Act and an acute care hospital is the average length of stay at the hospital. Specifically, section 1886(d)(1)(B)(iv)(I) of the Act defines a LTCH as ''a hospital which as an average inpatient length of stay (as determined by the Secretary) of greater than 25 days.''

Questions have arisen as to how Medicare should pay for an inpatient stay in a hospital when the hospital changes its classification status during the course of the beneficiary's single hospital stay. Specifically, how should Medicare pay for a patient's stay when the first part of that stay is in the acute care hospital (before the hospital was reclassified as a LTCH and the second part of that stay is in the same hospital after it is reclassified as a LTCH. Although the situation may occur in other settings, this payment issue is most prevalent for services furnished to crossover patients in a newly established LTCH. The fact is that all new LTCHs that seek LTCH classification under section 1886(d)1)(B)(iv)(I) of the Act begin as other provider types, generally as acute care hospitals, and then these providers under the regulations at § 412.23(e)(3) are required to meet the average length of stay criterion by showing that for the period of at least 5 months of a preceding 6-month period, the hospital's average Medicare inpatient length of stay is greater than 25 days. Once the entity meets the criteria under § 412.23(e)(3), they are reclassified as LTCHs and are then paid under the LTCH PPS. It is for those patients who were admitted to the acute care hospital before the acute care hospital was reclassified as a LTCH and are discharged after the hospital is classified as a LTCH that we proposed to codify a revised crossover policy in the May 18, 2004 IPPS proposed rule.

To address payment for inpatient care for such crossover patients, we had issued instructions for hospital billing purposes (paper-based manual, Hospital Manual, HCFA Pub. 10, section 404, which has been replaced by the Medicare Claims Processing Manual, Pub. 100–4, Chapter 3, section 100.4.1) that were in effect prior to the implementation of the PPS for LTCHs (that is, prior to October 1, 2002). The manual instructed hospitals as follows: ''The hospital must submit a discharge bill with the old provider number and an admission notice with the new provider number. The date of discharge and the date of admission are the same date, which is the first day of the new fiscal period. All subsequent billings are submitted under the new provider number.''

It is important to note that at the time this manual provision was written, IPPS-excluded hospitals were reimbursed under the reasonable cost-based (TEFRA) payment system, not other prospective payment systems. Thus, under the manual instructions, if a patient was in an acute care hospital and the hospital reclassified to a LTCH during the patient's stay, Medicare would then make payment for what was, in reality, only one episode of care as if it were two episodes. Specifically, the days of the stay while the facility was certified as an acute care hospital generated a full DRG payment under the IPPS; and the services provided from the time the facility was reclassified as a LTCH were paid under the TEFRA payment system. The patients were treated as if they were ''admitted'' to the ''new'' facility until the patient was actually discharged. We had proposed to revisit the issue of Medicare payment for crossover patients now that there has been a fundamental change in the Medicare payment system for LTCHs. That is, LTCHs are now being paid under a LTCH PPS which was effective for LTCHs for cost reporting periods beginning on or after October 1, 2002.

Under the LTCH PPS for crossover patients, under the existing Manual instructions, Medicare makes a full DRG payment under the IPPS to the acute care hospital for the ''first portion'' of the patient stay, and when the acute care hospital is reclassified as a LTCH, Medicare makes a second PPS payment under the LTCH PPS for the ''second portion'' of the stay. We believe that this results in excessive Medicare payments and results in the inappropriate use of the Medicare Trust Fund. We believe the result described above is contrary to a basic premise of a PPS, which is that a single PPS payment is adequate and appropriate reimbursement for the entire bundle of services that a hospital provides during the course of a patient's stay. We believe the care provided prior to and after the reclassification of a LTCH is really one bundle of services associated with a single hospitalization. The ''discharge'' from the acute care hospital and ''admission'' to the LTCH has only been a ''paper discharge'' that was triggered solely by a change in the classification status of the hospital treating the patient. In the instant case, the beneficiary by mere coincidence, was an inpatient of the acute care hospital when it reclassified-the acute care hospital did not materially change the medical care it provided to the beneficiary during his/her single hospitalization because its classification

as an acute care hospital ended on one day and changed to LTCH classification on the next day. Under the existing manual instructions, the hospital is receiving not one payment, but two PPS payments, for a bundle of services that should have been adequately and properly reimbursed by a single PPS payment.

As explained in the May 18, 2004 proposed rule (69 FR 28275), presently, if the DRG assigned to the ''discharge'' from the acute care hospital for a crossover patient falls within one of the DRGs covered by the postacute care transfer policy at § 412.4(c) of the regulations, the provider will receive a payment under the postacute care transfer policy as if the patient, who in fact has not moved, was transferred to a postacute care provider. Payment under the postacute care transfer policy is triggered when a discharge bill with the old provider number and an admission notice with the new provider number is submitted and processed by the Medicare standard bill processing systems as a transfer. Because the patient is, in reality, at the ''same'' facility (an acute care hospital that has been reclassified as a LTCH) and is in one episode of care, we do not believe the application of the existing transfer policy is the appropriate methodology for dealing with the crossover patient situation described above. Under the postacute care transfer policy, the affect on payment is limited to a specific scenario; the payment to the transferring hospital is only affected if the patient is discharged prior to the day before the geometric mean length of stay for the DRG. When the patient is discharged by the day before the geometric mean length of stay, the ''discharging'' acute care hospital will receive the equivalent of the full IPPS DRG payment and the LTCH hospital will also receive a full LTCH PPS payment. Therefore, although the transfer policy addresses discharges from an acute care hospital that occur prior to the geometric mean length of stay for each DRG, it does not address crossover patients where the hospital is reclassified after the patient has a length of stay of at least the geometric mean length of stay.

As we have stated previously in this discussion, we believe that it is inappropriate to continue to allow the current payment policy for crossover patients. An acute care hospital before reclassification as a LTCH may admit and treat patients with multicomorbidities that result in longer hospital stays than are characteristic of the patient census at a LTCH. Invariably, at the time the acute care hospital becomes a LTCH, there will be patients who were admitted to the acute care hospital and who remain in the facility when it is reclassified as a LTCH and are ultimately discharged from the LTCH. An acute care hospital's change in classification status to a LTCH should have no impact on the course of treatment that is already underway for the patient in what would now be a LTCH. Thus, since we believe the proposed patient is receiving one consistent course of treatment throughout this stay, in the May 18, 2004 proposed rule, we proposed to revise the present policy and allow for only one Medicare payment for the patient's entire stay. In proposing this change in policy, we proposed to provide for one Medicare payment where previously there would have been two payments made for one stay; instead payment would be based on the PPS of the facility that is actually discharging the patient.

Under the proposed approach, we would include those days of care and costs incurred by the hospital for the crossover patient before the facility met the LTCH classification criteria, in determining payments to the LTCH for that patient under the LTCH PPS. Under this policy, for example, if an acute care hospital admits a patient on December 28 and the hospital reclassifies to a LTCH on January 1 when its cost reporting period begins, and the patient is physically discharged from the LTCH on February 5, one payment would be made for this entire stay (December 28–February 5), and payment would be based on the LTCH-DRGs under the LTCH PPS. We are counting the patient's entire hospitalization (that is, all days and costs of the patient stay in the facility that occurred prior to and after reclassification) in determining the applicable payment under the LTCH PPS. This provision would also count all the days of the patient stay, that is prior to and after reclassification, as LTCH days for purposes of determining whether the facility continues to meet the average length of stay requirement for LTCHs. We believe this is consistent with the discretionary authority granted to the Secretary at section 1886(d)(1)(B)(iv)(I) of the Act for determining lengths of stay for LTCHs. Specifically, section 1886(d)(1)(B)(iv)(I) of the Act provides that a LTCH is a hospital that has an average length of stay (as determined by the Secretary) of greater than 25 days. Thus, the Secretary determines how a LTCH's average length of stay is to be determined. (We are also using the broad discretionary authority provided in section 1871 of the Act to not count the days of the patient's stay in the acute care hospital prior to reclassification as acute care days.)

In addition, we are using the broad authority in section 1871 of the Act to not pay for the days of the patient's stay in the acute care hospital as acute care days. Section 1871 authorizes the Secretary to promulgate regulations that are necessary to carry on the administration of the Medicare program. In addition, as stated in the proposed rule, we believe counting all days for the patient's stay and applying them in determining the PPS at the hospital that actually discharges the patients even though part of the stay was in a prior cost reporting period is consistent with the policy as recently revised at § 412.23(e)(3) of the regulations, which provides that if a LTCH patient is admitted in one cost reporting period and discharged in a second cost reporting period, all of the days of the patient's stay even those from prior fiscal years are counted in the cost reporting period in which the patient is discharged. In this example of the crossover patient, including the days in December may result in a full LTC-DRG payment rather than a lower payment possible under the short-stay outlier policy (§ 412.529) based solely on the length of the stay of the patient at the LTCH once it was reclassified. (Under the short-stay policy, we would adjust (lower) the Federal prospective payment if the payment is for a length of stay that is up to and including five-sixths of the geometric average length of stay for the LTC-DRG assigned to the case.)

While this final rule specifically addresses the situation of a crossover patient that is in an acute hospital that reclassifies as a LTCH during the course of the patient's stay, we believe the policy may be equally applicable to other crossover situations. For example, an acute care hospital may meet the requirements to be paid as a rehabilitation hospital (under IRF PPS) and there could be rehabilitation patients who were admitted to the acute care hospital who were not discharged from the hospital until after the facility was designated as an IRF. However, at this time, we are not making a change to the existing payment policy in situations other than the LTCH crossover patient. We have only addressed the LTCH crossover patient since, based on the statutory and regulatory qualifying criteria, every LTCH must first be certified as a hospital before it can meet the LTCH criteria. Therefore, it is inevitable that there will be crossover patients in the newly classified LTCH. However, the same is not true for other hospital

certifications. For example, a rehabilitation hospital can be certified as an IRF, without first being certified and paid as an acute care hospital for inpatient services. However, we intend to revisit the existing crossover patient policy as it affects other crossover situations in the future and would welcome receiving the industry's views on how Medicare payment policy should address those situations.

Accordingly, we are finalizing our proposed revisions to § 412.2(b) of the regulations to add a new paragraph (3) which would be applicable to acute care hospitals, and to add a new paragraph (e) to § 412.521 which would be applicable to LTCHs. The additions will specify that Medicare would make only one payment for a crossover patient to the LTCH that is discharging the patient based on the entire stay, both prior to the change to LTCH status and after the change. In order to implement the final policy, we will create systems adjustments that will enable the single claim generated by the discharging provider to include patient days under the initial provider number. We note that our final provisions to define and pay for crossover patient stays as one episode of care based on the PPS of the discharging provider are consistent with existing regulations. (Existing regulations have established that payment under the per discharge PPS constitutes ''payment-in-full'' for acute care hospitals and for LTCHs.

Comment: The commenters agreed that hospitals should not be receiving two payments for crossover patients, and stated that our proposed change in policy to pay for only one stay appears reasonable. Moreover, they suggested that we consider applying this policy to all conversions, including acute care to rehabilitation, rehabilitation to LTCH, and LTCH to rehabilitation so that payment rules could be consistent with those presented in this final rule.

Response: We appreciate the commenters' support of our policy change to allow only one payment in crossover situations. As we stated above, we believe this policy could be equally applicable in other crossover situations, and will be revisiting the crossover policy as it affects other similar situations in the future.

Therefore, we are proposing to finalize our proposal without modification.

C. Geographic Reclassifications—Definitions of Urban and Rural Areas (§ 412.63(b), § 412.64(b), and 412.102)

1. Revised MSAs

As we discussed in section III.B. and III.G. of the May 18, 2004 proposed rule and of this final rule, we proposed how we would implement OMB's revised standards for defining MSAs and our plan to use the New England MSAs established by OMB. These proposals relate to our policies in established regulations under § 412.63(b) governing geographic classification of hospitals for purposes of the wage index and the standardized amounts in determining the Federal rates for inpatient operating costs. In this section, we define the geographic areas for purposes of reclassification of hospitals. Therefore, consistent with our proposed changes to reflect the new definitions of CBSAs based on the Census 2000 data, effective for discharges occurring on or after October 1, 2004, in the May 18, 2004 proposed rule (69 FR 28277), we proposed to revise § 412.63(b) and add a new § 412.64(b) to reflect the existing geographic classification definitions.

We note that commenters did not express objections to this specific proposal. However, commenters expressed concern regarding various aspects of our proposal to adopt the new definition of CBSAs. We address these comments throughout this final rule.

2. Transition Period for DSH Payments to Redesignated Hospitals

Section 412.102 of the regulations provides for a 3-year transition to the standardized amount and DSH adjustment payments to a hospital redesignation from urban to rural.

Comment: One commenter asked CMS to clarify whether the transition period that allows urban hospitals reclassified as rural to maintain their assignment to the MSA where they are currently located for 3 years applies to both the wage index and the DSH payment adjustment.

Response: As described in § 412.102, in the first year after a hospital loses urban status, the hospital will receive an additional payment that equals two-thirds of the difference between the urban DSH payments applicable to the hospital before its designation from urban to rural and the rural DSH payments applicable to the hospital subsequent to its redesignation from urban to rural. In the second year after a hospital loses urban status, the hospital will receive an additional payment that equals one-third of the difference between the urban DSH payment applicable to the hospital before its redesignation from urban to rural and the rural DSH payments applicable to the hospital subsequent to its redesignation from urban to rural.

D. Equalization of Urban and Rural Standardized Amounts (§ 412.63(c) and § 412.64)

Sections 1886(d)(2)(D) and (d)(3) of the Act previously required the Secretary to compute two average standardized amounts for discharges occurring in a fiscal year: one for hospitals located in large urban areas and one for hospitals located in other areas. In addition, under sections 1886(d)(9)(B)(iii) and (d)(9)(C)(i) of the Act, the average standardized amount per discharge was determined for hospitals located in large urban and other areas in Puerto Rico. In accordance with section 1886(b)(3)(B)(i) of the Act, prior to April 1, 2003, the large urban average standardized amount was 1.6 percent higher than the other area average standardized amount. The two standardized amounts are currently equal, as discussed in the following paragraphs.

Section 402(b) of Public Law 108–7 required that, effective for discharges occurring on or after April 1, 2003, and before October 1, 2003, the Federal rate for all IPPS hospitals would be based on the large urban standardized amount. Subsequently, Public Law 108–89 extended section 402(b) of Public Law 108–7 to discharges occurring on or after October 1, 2003, and before April 1, 2004. Finally, section 401(a) of Public Law 108–173 required that, beginning with FY 2004 and thereafter, an equal standardized amount is to be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage update. This provision in effect makes permanent the equalization of the standardized amounts at the level of the previous standardized amount for large urban hospitals. Section 401(c) also equalizes the Puerto Rico-specific urban and other area rates.

Accordingly, in the May 18, 2004 proposed rule (69 FR 28277) and in this final rule, we are providing for a single national standardized amount and a single Puerto Rico standardized amount for FY 2005 and thereafter, as discussed in detail in the Addendum to this final rule. We are revising existing § 412.63 that includes the provisions related to computation of the standardized amount to make it applicable to fiscal years through FY 2004 and establishing a new § 412.64 that will include the provisions applicable to the single national standardized amount applicable for FY 2005 and subsequent

years. Similarly, we are revising existing § 412.210 for Puerto Rico to make it applicable to fiscal years through FY 2004 and adding a new § 412.211 for FY 2005 and subsequent years for the Puerto Rico standardized amount. We are also making conforming changes to various other sections of the regulations to reflect the single standardized amount for the States and for Puerto Rico.

The comments received in response to this specific proposal concurred with the proposal on the basis that it is consistent with the implementation of recent legislative changes.

E. Reporting of Hospital Quality Data for Annual Hospital Payment Update (§ 412.64(d))

1. Background

Section 501(b) of Public Law 108–173 amended section 1886(b)(3)(B) of the Act to add a new subclause (vii) to revise the mechanism used to update the standardized amount for payment for inpatient hospital operating costs. Specifically, the amendment provides that the update percentage increase (also known as the market basket update) for each of FYs 2005 through 2007 will be reduced by 0.4 percentage points for any ''subsection (d) hospital'' that does not submit data on a set of 10 quality indicators established by the Secretary as of November 1, 2003. (The statutory reference to a ''subsection (d) hospital'' restricts the application of this provision to hospitals paid under the IPPS. Therefore, the provision does not apply to hospitals and hospital units excluded from the IPPS, nor to payments to hospitals under other systems such as the outpatient hospital PPS.) The statute also provides that any reduction will apply only to the fiscal year involved, and will not be taken into account in computing the applicable percentage increase for a subsequent fiscal year. This measure establishes an incentive for IPPS hospitals to submit data on the quality measures established by the Secretary.

In the May 18, 2004 proposed rule (69 FR 28277), we proposed to implement the provisions of section 501(b) as described at the CMS Web site: *http://www.cms.hhs.gov/quality/hospital.*

At a press conference on December 12, 2002, the Secretary of HHS announced a series of steps that HHS and its collaborators are taking for public reporting of hospital quality information. These collaborators include the American Hospital Association, the Federation of American Hospitals, the Association of American Medical Colleges, the Joint Commission on Accreditation of Healthcare Organizations (JCAHO), the National Quality Forum, the American Medical Association, the Consumer-Purchaser Disclosure Project, the American Association of Retired Persons, the American Federation of Labor-Congress of Industrial Organizations and the Agency for Healthcare Research and Quality, as well as CMS, QIOs, and others.

CMS began the public reporting initiative in July 2003 with a professional Web site that provides data intended for health care professionals. The professional Web site will be followed by a consumer Web site. The information on the consumer Web site will include the data from the professional Web site but in an easy-to-use format for consumers. It is intended to be an important tool for individuals to use in making decisions about their health care coverage. This information will assist beneficiaries by providing comparison information for consumers who need to select a hospital. It will also serve as a way of encouraging hospitals to adopt quality improvement strategies.

The 10 measures that were employed in this voluntary initiative as of November 1, 2003, are:

- Heart Attack (Acute Myocardial Infarction)

Was aspirin given to the patient upon arrival to the hospital?

Was aspirin prescribed when the patient was discharged?

Was a beta-blocker given to the patient upon arrival to the hospital?

Was a beta-blocker prescribed when the patient was discharged?

Was an ACE inhibitor given for the patient with heart failure?

- Heart Failure

Did the patient get an assessment of his or her heart function?

Was an ACE inhibitor given to the patient?

- Pneumonia

Was an antibiotic given to the patient in a timely way?

Had a patient received a pneumococcal vaccination?

Was the patient's oxygen level assessed?

These measures have been endorsed by the National Quality Forum (NQF) and are a subset of the same measures currently collected for the JCAHO by its accredited hospitals. Many hospitals are currently participating in the Department's National Voluntary Hospital Reporting Initiative (NVHRI) and are already submitting data to the QIO Clinical Warehouse. The Secretary adopted collection of data on these 10 quality measures in order to: (1) Provide useful and valid information about hospital quality to the public; (2) provide hospitals a sense of predictability about public reporting expectations; (3) begin to standardize data and data collection mechanisms; and (4) foster hospital quality improvement.

2. Requirements for Hospital Reporting of Quality Data

For the hospital reporting initiative for the Medicare annual payment update provided for under section 501(b) of Public Law 108–173, we will be collecting data on the 10 clinical measures for all patients. We refer to this program as the Reporting Hospital Quality Data for the Annual Payment Update (RHQDAPU) program to distinguish it from the continuing NVHRI.

The procedures for participating in the RHQDAPU can be found on the QualityNet Exchange at the Web site: *http://www.qnetexchange.org* in the ''Reporting Hospital Quality Data for Annual Payment Update Reference Checklist.'' This checklist also contains all of the forms to be completed by hospitals participating in the program. In order to participate in the RHQDAPU, hospitals must follow the following steps:

- The hospital must identify a QualityNet Exchange administrator who follows the registration process and submits the information through the QIO. This must be done, regardless of whether the hospital uses a vendor for transmission of data.
- All participants must first register with the QualityNet Exchange, regardless of the method used for data submission. If a hospital is currently participating in the voluntary reporting initiative, re-registration on the QualityNet Exchange is unnecessary. However, registration includes completion of the RHQDAPU Notice of Participation form. All hospitals must send the RHQDAPU form to their QIOs no later than August 1, 2004, for the FY 2005 update.
- The hospital must collect data for all 10 measures and submit the data to the QIO Clinical Warehouse either using the CMS Abstraction & Reporting Tool (CART), the JCAHO Oryx Core Measures Performance Measurement System (PMS), or another third-party vendor who has met the measurement specification requirements for data transmission to the QualityNet Exchange. The QIO Clinical Warehouse will submit the data to CMS on behalf of the hospitals. The submission will be done through QualityNet Exchange, which is a secure site that voluntarily

meets or exceeds all current Health Insurance Portability and Accountability Act (HIPAA) requirements, while maintaining QIO confidentiality as required by law. The information in the Clinical Warehouse is considered QIO data, and therefore, is subject to the stringent confidentiality regulations in 42 CFR Part 480.

Hospitals must begin the submission of data under the provisions of section 1886(b)(3)(B)(vii)(II) of the Act, as added by section 501(b) of Public Law 108–173, by July 1, 2004. Because section 501(b) of Public Law 108–173 grants a 30-day grace period for submission of data with respect to FY 2005, in the May 18, 2004 proposed rule, we proposed to allow hospitals until August 1, 2004, for completed submissions to be successfully accepted into the QIO Clinical Warehouse. Hospitals would be required to submit data for the first calendar quarter of 2004 discharges in order to meet the requirements for the FY 2005 payment update. Hospitals participating in the NVHRI that submitted the required 10 measures for the fourth calendar quarter of 2003 by the CMS-established deadline of May 15, 2004, and that met the registration requirements for the market basket update, would be given until August 15, 2004, to submit data for the first calendar quarter of 2004. There will be no chart-audit validation criteria in place for the FY 2005 payment update beyond the CART edits, currently in force, applied to data entering the QIO Clinical Warehouse. In addition, we proposed that we would estimate the minimum number of discharges anticipated to be submitted by a hospital using Medicare administrative data. We proposed to use this anticipated minimum number to establish our expectations of the number of cases for each hospital. Hospitals that do not treat a condition or have very few discharges would not be penalized and would receive the full annual payment update if they submit all the data they do possess. New hospitals should begin collecting and reporting data immediately and complete the registration requirements for the market basket update. The same standards that are applied to established hospitals would be applied to new hospitals when determining the expected number of discharges for the calendar quarters covered for each fiscal year.

In the May 18, 2004 proposed rule, we stated that the annual payment updates would be based on the successful submission of data to CMS via the QIO Clinical Warehouse by the established deadlines. Hospitals may withdraw from RHQDAPU at any time up to August 1, 2004. Hospitals withdrawing from the program would not receive the full market basket update. Instead, they would receive a 0.4 percentage points reduction in the update. By law, a hospital's actions each fiscal year will not affect its update in a subsequent fiscal year. Therefore, a hospital must meet the requirements for RHQDAPU each fiscal year the program is in effect, and failure to receive the full update in one fiscal year will not affect its update in a succeeding fiscal year.

Comment: All of the commenters who addressed our proposed plans to implement section 501(b) of Public Law 108–173 supported hospitals providing quality performance data. Most of the commenters also mentioned that it was important for CMS and the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) to align their respective quality measures and procedures to make collection and submission of this data as easy as possible.

Response: We are working with the JCAHO to accomplish this alignment on the current quality measures. We are also setting up a process to align any and all future measures that may be required by either organization. In addition, we have taken the necessary steps to ensure that this alignment is reflected in our chart audit validation process. We are committed to making the submission of the quality measures as seamless as possible for submitting either the core measures defined by JCAHO or the quality measures contained in the CMS Abstraction and Reporting Tool (CART).

Comment: Many of the comments expressed concerns about the proposed chart audit validation procedures.

Response: We believe that all of the data to be collected by CMS in its Clinical Warehouse must be timely, complete, and accurate. To accomplish this, we proposed reabstraction of data submitted to the Warehouse using the Clinical Data Abstraction Contractors (CDAC). The CDAC will request paper charts from each hospital that has submitted data to the warehouse and reabstract the quality measures using the CMS CART. Based upon the percent agreement rate at the element level (that is, the variables abstracted from the chart and used to construct each measure), hospitals achieving an 80-percent agreement with the CDAC abstraction will be considered as providing valid data. We will randomly sample charts for each hospital each quarter and aggregate across all charts to calculate the percent agreement. Several comments were concerned about our process for requesting copies of the charts. Under the proposed rules, hospitals are allowed 30 days to provide the charts. A followup request is sent, if necessary, 15 days following the initial request. Charts not received by the 31st day are considered missing and a zero-percent agreement is assigned to that missing chart.

Comment: One commenter asked that we notify the hospital through our QNet Exhange Web site to alert the hospitals that a request for charts has been sent.

Response: We agree that this alert would be helpful and have included this in future enhancements to our processes.

Comment: Several commenters asked that we allow hospitals to submit additional information should the initial results be unfavorable.

Response: At this time, we believe allowing hospitals to submit additional information would create an untenable workload for our contractors. We have approximately 4,000 hospitals submitting data in response to section 501(b) of Public Law 108–173. In addition, we are collecting data from other hospitals that are participating in the NVHRI. We estimate that we will be receiving data from as many as 4,500 hospitals. We also believe it is important to keep the turnaround time for processing the validation records as short as possible. It is important both for our reporting requirements and for the hospitals to receive the validation results as soon as possible. To allow extensions for providing data on a piecemeal basis would extend the process beyond reasonable time limits. The CDAC process for requesting charts has been in place for over 6 years. We have been collecting both quality data and administrative data from all hospitals in the country during that time. We believe our process is functioning well, and we take steps to ensure that the chart requests are properly addressed and sent in a timely manner. We believe that hospitals understand the importance of these requests and will provide the charts in a timely manner.

Comment: Many of the commenters expressed concern about reconciling differences between the hospital abstracted and CDAC abstracted data. Several commenters asked that we allow hospitals to supplement the submitted medical charts during an appeal process.

Response: We have devised an appeal process that allows a hospital to review the validation results with their local QIO. If, after this review, the QIO agrees with the hospital's interpretation, the appeal is forwarded to the CDAC for review and correction, if necessary. We

do not believe we can allow hospitals to supplement the submitted medical charts during this appeal process. The original request asks for the complete chart, and we expect to receive all the information and documentation necessary to support the abstraction of the quality measures. Additional documentation puts the CDAC abstractors at a disadvantage and extends the time to complete the validation process. We understand that human error is possible and this is why we have set the required percent agreement at less than 100 percent.

Comment: Other commenters recommended that the adjudication of any differences noted between the hospital abstraction and the CDAC abstraction should be subject to third party review and verification.

Response: We believe that adopting this recommendation would create a lengthy and complicated process. We also believe that abstraction of the clinical data to calculate the quality measures is a straight-forward process. The information requested by each question in the abstraction tool is either there, as stated, or it is not. These data are not qualitative in their derivation and not subject to human opinion. Also, our stated policy for ensuring that the data in the warehouse meet our requirements for consistency and accuracy is that the CDAC abstraction using the CART tool constitutes the correct data, or gold standard. We have devoted a great deal of resources to ensuring that the CDAC abstraction process is consistent and accurate through our training and internal quality assurance. We consistently achieve inter rater reliability rates approaching 100 percent in the CDAC.

Comment: All of the commenters who addressed the sampling process asked that we reduce the percent agreement from our current 80 percent to at least 60 percent initially and gradually raise the rate to 80 percent.

Response: We do not believe that this is necessary or desirable for two reasons. First, we believe that the 80 percent level is a minimum level of agreement that we can accept at any time. This means that four out of five comparisons are the same. A 60 percent agreement would mean that only three out of five comparisons are the same. We do not believe this level of agreement is acceptable to meet our goal of ensuring submission of timely, complete, and accurate data.

Second, for the FY 2005 annual payment update, we do not have a chart audit validation requirement. We realize that hospitals need time to understand the chart audit validation process and learn how to provide accurate and reliable data. We also need time to implement and test our procedures to ensure that we meet our goals of timely and accurate submission of data and provide a fair opportunity to hospitals to become familiar with the process. In support of the NVHRI program, we have started the validation process on data submitted to the warehouse beginning with calendar year 2003. We are providing feedback to the participating NVHRI hospitals that have deposited data in the warehouse and have instructed the QIOs to assist hospitals in correcting any issues or problems that are identified. The first data submission requirement for section 501(b) is the first calendar quarter of 2004. We will conduct chart audit validation on these data and provide feedback to all of the hospitals. The results of this first quarter will not affect annual payment update determinations for FY 2005 or subsequent fiscal years. We believe that this test period will provide hospitals the necessary lead time to improve their data abstraction processes and provide them with the opportunity to achieve the necessary 80 percent level of agreement prior to institution of the validation requirement for the annual payment update for FY 2006. By allowing the hospitals a penalty free period to meet the 80 percent level we maintain consistent expectations regarding the submission of accurate data and reduce any confusion that a constantly changing goal might introduce.

Comment: One commenter suggested we modify our assessment of percent agreement to differentiate between transcription errors and errors of omission. This commenter contended that the goal of the validation process is to determine if the standard of care has been met.

Response: We disagree. The goal of the chart audit validation process is to ensure that the hospital is submitting accurate data. In order to calculate quality measures, which are used to determine the standard of care, we need to have complete and accurate data. Errors of omission and transcription errors both contribute to errors in calculation of quality measures. Therefore, we believe it is important to include both errors in calculating the percent agreement. We agree that it is important to differentiate between these errors in order to provide feedback to the hospitals. The process we have in place to provide this feedback gives each hospital the detail abstraction results from the CDAC so that staff may determine the types of errors and take appropriate action.

In support of our goal of obtaining complete, timely and accurate data, the chart audit validation process will be applied to all data submitted to the clinical data warehouse. Several commenters argued that the validation in support of section 501(b) should only apply to the 10 quality measures required to be submitted. While such a restriction would not be in support of our policy on the integrity of the data in the clinical warehouse, we understand that receiving the full annual payment update is only subject to submission of the 10 required measures. To varying degrees, all of the data contained in the clinical warehouse are used to inform different parties on the quality of care delivered to patients. Therefore, we plan to apply the validation results in a two-step process. For purposes of the annual payment update, the validation will be restricted to the 10 measures. For purposes related to publishing data, we will apply the validation results to all of the measures submitted. This second validation will not affect the annual payment update.

Comment: Several commenters made suggestions on the quarterly sample size used to assess the percent agreement. One commenter recommended that we allow hospitals to submit additional records if the hospitals fail the initial validation. A second commenter suggested that we request a larger number of records and allow the hospital to select a subset to forward to the CDAC.

Response: In order to maintain the integrity of the chart audit validation process, the selection of records must be random and independent of the hospital's control to ensure that the records being reviewed are representative of the data submitted by the hospital. We do not believe we can compromise the validity of the audit procedure by giving up control of the cases selected.

Comment: Several commenters suggested that we consider optional standards for small volume hospitals. They contended that small differences in data validation can produce large percent differences that may adversely affect validation rates.

Response: Our plans call for calculating the percent agreement based upon the individual variables abstracted from each chart aggregated across all of the charts abstracted. That is, we will pool the variables to create a denominator and then calculate the percent agreement. This approach creates a percent agreement that is independent of the number of cases a hospital may treat. The problem for small volume hospitals is that they may

not generate enough cases to meet our minimum sample sizes. Our chart audit validation rules would have us then request all of the charts generated by these small volume hospitals and we would, in essence, be evaluating the ''universe'' of data for these hospitals. In such a case, we would be calculating the actual percent agreement for that hospital, rather than estimating this percent as in a hospital where we have sampled the cases. It is our intent to monitor the demands our processes will have on small volume hospitals and to consider modifications so as to not over burden these hospitals. However, we do believe that Medicare beneficiaries are entitled to the same high level of quality care in all hospitals providing services and that all hospitals should be subject to a similar level of assurance by CMS.

Comment: Several commenters requested that we engage in a series of training programs and briefings to educate the hospitals about the validation process and, in particular, provide information on the variables used in calculating the percent agreement.

Response: We agree that this is an important aspect of this process and we have instructed the QIOs to assist hospitals to understand the results of the chart audit validation as well as begin to educate the hospitals on the process itself. We have published on our QNet Exchange Web site all of the documentation that supports the chart audit validation process, including the list of variables included in our calculations. However, we will continue to explore better ways to educate hospitals, through our QIOs, on all of our processes.

Comment: Several commenters urged us to allow reasonable variation in abstracted data, especially for the variables containing continuous data such as the timing data. One commenter stated that our allowed variances seemed to be arbitrary.

Response: We note that we have published the variation allowed for each of these continuous data variables. Our decisions on how much variation to allow in calculating these timing measures are the result of input from our clinical experts. Each variable was carefully considered in this context. For example, the variation allowed for the pneumonia and surgical infection timing is based on the fact that the measures derived from those values are measured in hours. In contrast, the acute myocardial infarction indicators are measured in minutes so the timing variables need to be more accurate. We will conduct research on this issue as we collect data to test and refine our theoretical expectations against the empirical data.

Comment: One commenter urged us to streamline and automate our registration and attestation processes so that potential administrative problems do not prevent eligible hospitals from receiving their annual payment update.

Response: We agree that this is an important issue. It is our policy to guard against just such a situation. We will be upgrading our systems, with input from the hospital community, to minimize this potential problem.

Comment: One commenter raised concerns about the accessibility of the clinical warehouse data through our QNet Exchange server. The commenter suggested that other users, such as corporate quality assurance staff employed by a hospital system and not necessarily the specific hospital, as well as staff from JCAHO accredited ORYX vendors should be able to see a hospital's data to assist that hospital in its data collection and reporting and quality assurance activities.

Response: Under current policy, only staff from a specific hospital are allowed to access that hospital's data through a system of user registration and password protections. This is a result of the laws and regulations that govern the data our QIOs maintain in the Clinical Warehouse. Specifically, regulations prohibit QIOs from releasing data that identifies individual hospitals without first notifying the hospitals and allowing a 30-day response period. In principle, we agree with the suggestion that other users, such as corporate quality assurance staff employed by a hospital system and not necessarily the specific hospital, as well as staff from JCAHO accredited ORYX vendors should be able to see a hospital's data (not patient-identified data) to assist that hospital in its data collection and reporting and quality assurance activities. We believe we can resolve the legal issues satisfactorily and we anticipate implementation of mechanisms to allow this type of access in the Fall of 2004.

Comment: Several commenters expressed a concern that the designation of the 10 quality indicators in section 501(b) fixes, by law, measures that in fact are subject to change depending upon medical science and the evolving field of quality measurement. While realizing that CMS cannot change the required data by regulation, the commenters nonetheless believed that some accommodation should be considered for allowing these measures to be modified or changed as the knowledge in the field of quality measurement changes.

Response: We agree that the field of quality measurement is a changing landscape and that, sometimes, accommodations need to be made. However, we would point out that section 501(b) contains a sunset clause for these 10 measures. Submission of the data on the 10 quality measures is only required for FYs 2005, 2006, and 2007 in order for a hospital to receive the full annual payment update. Otherwise, we are required to enforce the law as written.

Comment: Several commenters made note of our attempts to estimate the minimum number of cases that CMS expects from each hospital. They were particularly concerned that this number will not be an accurate representation of the number of cases a hospital may treat.

Response: The estimate of the minimum number of cases that we are providing is based upon the average number of Medicare discharges per quarter found in the administrative data for each hospital over the last 2 years. In contrast, section 501(b) requires that the submitted data include all payers and not just the Medicare beneficiaries. We recognize that this distinction is a shortcoming in our calculation of the minimum number of cases. However, we do not have any data from which to estimate how many non-Medicare patients a hospital treats. Our intent is to monitor the submissions from the hospitals and to update our estimates as we gain experience, taking into account sampling where appropriate.

Comment: One commenter believed it was important that its organization participate in the formulation of quality measures, given the importance attached to these measures.

Response: All of the measures CMS currently collects, as well as those measures collected by the JCAHO, are endorsed by the National Quality Forum (NQF). This organization uses a consensus process to develop quality measures for all health care settings. Its deliberations include all aspects of a quality measure, including current standards of practice, documentation requirements, and the scientific research supporting the measure. Membership is open to all interested parties. These organizations can contact the NQF and participate through this mechanism. The 10 measures are required by statute and have been endorsed by the NQF.

Comment: One commenter was concerned about new hospitals that are not able to meet the registration and reporting requirements simply because they were not in existence during the first quarter of calendar year 2004, but will be operating throughout FY 2005.

Response: We agree that new hospitals should not be disadvantaged by their inability to report data prior to opening. Therefore, we will hold these hospitals harmless with respect to the update. The instructions we have given the QIOs are to have these new hospitals register with QNet Exchange as soon as possible; complete the pledge to participate in the annual payment update; complete the form that tells CMS the hospital has zero discharges for the first quarter of calendar year 2004, and begin submitting the required data as it becomes available in the future.

Comment: Several commenters were concerned about our intent to publish the quality measure data that we receive through section 501(b). These commenters focused on the validation of the published data and on the use of composite hospital level scores, as opposed to individual measures.

Response: We have stated that we intend to use validation results as part of the criteria for publishing the hospital data. This is still our intent. However, we recognize that situations may change and we may have to modify this decision. It is our practice, in this situation, to notify the community should this decision change. As to the use of a composite score at the hospital level, we have not made our final decisions about the format for publishing these data, but we are considering the use of composite scores.

3. Submission of Hospital Data for FYs 2006 and 2007

For FYs 2006 and 2007, we will require hospitals to submit data quarterly, starting August 15, 2004. Eligibility for the full annual payment update will be based on the most recent four quarters of data. These data would be submitted on the same schedule for data transmission currently in force for CART data. That is, data must be submitted to the QIO Clinical warehouse no later than 15 calendar days after the fourth month following the end of the calendar quarter. This schedule is available at *http://www.qnetexchange.org*. We will establish validation requirements for submitted data for FYs 2006 and 2007. Submissions would, at a minimum, need to be accurate, timely, and complete. That is—

- The hospital-submitted data must meet minimum levels of reliability through chart audit re-abstractions over all topics. At the data element level, there must be an 80 percent agreement between the original abstraction and the re-abstraction using the CART tool.
- The submitted data must be on schedule, pass all warehouse edits, and be successfully accepted into the warehouse.
- Completeness of submitted data will be assessed to ensure the number of submitted cases corresponds to the number of bills submitted by the hospital to CMS.

We are planning to publish the most recent 12 months of discharge data(4 quarters) for all data accepted into the warehouse and passing all validation requirements. For FY 2005, we will publish as much data as we have available. Hospitals will have the opportunity to review the information prior to posting on the CMS Web site. However, there will be no opportunity to withhold the publication of the information. The preview will only be to correct obvious errors. Comments regarding the requirements for the submission of quality data for FY 2006 and FY 2007 are presented above in conjunction with the comments regarding the general requirements for hospital reporting of quality data.

4. Regulation Change

In the May 18, 2004 proposed rule (69 FR 28279), we proposed to establish a new § 412.64(d)(2) to provide that, for FYs 2005, 2006, and 2007, the applicable percentage change is reduced by 0.4 percentage points in the case of any subsection (d) hospital that does not submit data to CMS on the 10 quality indicators established by the Secretary as of November 1, 2003. Any reduction will apply only to the fiscal year involved, and will not be taken into account in computing the applicable percentage increase for a subsequent fiscal year.

Comment: MedPAC reiterated its support of the concept of tying payment to quality performance. MedPAC did question the need to financially reward or penalize hospitals just for submitting data. It also noted that the statute requires hospitals to report on the quality measures that were a part of the NVHRI as of November 2003. MedPAC recommended that the Secretary should have the authority to update the measures on a regular basis, adding or retiring measures as clinical guidelines change or when providers reach high levels of performance in certain areas.

Response: While payment for performance may be an ultimate goal, the current law is specific in tying the annual payment update data to reporting only. We point out that hospitals, as a condition of participation and payment, are required to submit charts of Medicare patients for review upon the request of the program. The failure to do so may result in a denial of payment for that discharge. We appreciate MedPAC's recommendation that the Secretary should have the authority to update the measures that are reported. As MedPAC's comment implies, adoption of this recommendation would require a statutory change.

Comment: One commenter asked whether the Medicare intermediaries would receive specific instructions about how to implement this differential update for hospitals that do and do not submit quality data.

Response: As we indicated in the proposed rule, we will be modifying our payment software to apply the correct updates to hospitals, depending on whether they submit the requisite data on the 10 quality indicators. The software will automatically provide payment based on the fully updated rate to hospitals that have submitted data on the requisite quality measures.

In this final rule, we are adopting, as final, the new § 412.64(d)(2) as proposed. This new section of the regulations provides that, for FYs 2005, 2006, and 2007, the applicable percentage change is reduced by 0.4 percentage points in the case of any subsection (d) hospital that does not submit data to CMS on the 10 quality indicators established by the Secretary as of November 1, 2003. Any reduction will apply only to the fiscal year involved, and will not be taken into account in computing the applicable percentage increase for a subsequent fiscal year.

We show the different standardized amounts that apply to hospitals that submit the requisite quality data, and to hospitals that do not, in the Addendum to this final rule.

F. Revision of the Labor-Related Share for the Hospital Wage Index (§ 412.64(h))

As discussed in section III. of the preamble of this final rule, section 1886(d)(3)(E) of the Act directs the Secretary to adjust the proportion of the national prospective payment system base payment rates that are attributable to wages and wage-related costs by a factor that reflects the relative differences in labor costs among geographic areas. It also directs the Secretary to estimate from time to time the proportion of hospital costs that are labor-related. The portion of hospital costs attributable to wages and wage-related costs is referred to as the labor-related share. The labor-related share of the prospective payment rate is adjusted by an index of relative labor costs, which is referred to as the wage index. In the past, we have defined the labor-related share for prospective payment

acute care hospitals as the national average proportion of operating costs that are related to, influenced by, or vary with the local labor market. The labor-related share for the acute care hospital inpatient prospective payment system has been calculated as the sum of the weights for wages and salaries, fringe benefits, nonmedical professional fees, contract labor, postage, and labor-intensive services. For FY 2004, the labor share of the hospital wage index was established at 71.066 percent.

Section 403 of Public Law 108–173 amended section 1886(d)(3)(E) of the Act to provide that the Secretary must use 62 percent as the labor-related share unless application of this percentage ''would result in lower payments than would otherwise be made.'' However, this provision of Public Law 108–173 did not change the legal requirement that the Secretary estimate ''from time to time'' the proportion of hospitals'' costs that are ''attributable to wages and wage-related costs.'' In fact, section 404 of Public Law 108–173 requires the Secretary to develop a frequency for revising the weights used in the hospital market basket, including the labor share, to reflect the most current data more frequently than once every 5 years. Section 404 further requires us to include in the final IPPS rule for FY 2006 an explanation of the reasons for, and options considered, in determining such frequency.

Under section III. of this final rule (and in the May 18, 2004 proposed rule), we discuss our implementation of section 1886(d)(3)(E) of the Act, as amended by section 403, as it applies to the development of the FY 2005 wage index. In this section IV.F. of the preamble, we are incorporating the provisions of section 403 of Public Law 108–173 under a new § 412.64(h). Specifically, we are specifying that CMS will adjust the proportion of the Federal rate for inpatient operating costs that are attributable to wages and labor-related costs for area differences in hospital wage levels by a factor (established by CMS based on survey data) reflecting the relative level of hospital wages and wage-related costs in the geographic area (that is, urban or rural area as determined by the regulations) of the hospital compared to the national average level of hospital wages and wage-related costs. The wage index will continue to be updated annually. In addition, we are specifying that CMS will determine the proportion of the Federal rate that is attributable to wages and labor-related costs from time to time, employing a methodology that is described in the annual regulation updating the system of payment for inpatient hospital operating costs. However, CMS will employ 62 percent as the proportion of the rate that is adjusted for the relative level of hospital wages and wage-related costs, unless employing that percentage would result in lower payments for the hospital than employing the proportion determined under the methodology described in the preceding sentence.

We did not receive any public comments on our proposed implementation of section 403 of Public Law 108–173. Therefore, we are adopting as final, the proposed addition of the section 403 provisions in § 412.64(h) of the regulations.

G. Wage Index Adjustment for Commuting Patterns of Hospital Employees (§ 412.64(i))

As discussed in section III.H.3.e. of this final rule (and in the May 18, 2004 proposed rule), section 505 of Public Law 108–173 established new section 1886(d)(13) of the Act. We refer readers to section III.H.3.e for a discussion of this adjustment.

We are incorporating the provisions of section 505 of Public Law 108–173 in the regulations by adding a new § 412.64(i).

To identify ''qualifying counties,'' we use commuting data compiled by the U.S. Census Bureau based on a special tabulation of Census 2000 journey-to-work data. This information is gathered from responses to the Census long-form (sample) questions on where people worked. The resulting county-of-residence by county-of-work commuter flow file uses 108 Industrial Structure codes, developed by the Bureau of Economic Analysis. We limited the data set to those employees working in the category designated ''hospitals.'' (BEA code 622000).

In order to be considered a qualifying county, the hospitals in such county must meet the criteria listed § 412.64(i). First, the difference between the county's wage index and the weighted wage index of the surrounding higher wage index areas to which hospital workers commute must be greater than zero. Thus, any increase in the wage index resulting from this provision that is greater than zero percent would be recognized for meeting this criterion. Second, the county must meet the minimum out-migration threshold of 10 percent (the minimum out-migration percentage permitted by statute). Third, the average hourly wage of the hospitals located in the county must equal or exceed the wage index of the labor market area in which the county is located.

As stated in section III.H.3.e. of this preamble, for this third criterion, we will use the average of hospitals' 3-year average hourly wage for all hospitals in a given county. We compared this county average hourly wage to the 3-year average hourly wage for the labor market area where the county is located. We are using the 3-year average hourly wage because we believe it gives a better estimate for the wages paid by a given hospital over a period of time.

In addition, as stated in section III.H.3.e of this preamble that we will apply the out-migration adjustment in an automatic manner. All hospitals located in qualifying counties will automatically receive the increase in wage index, unless the hospital has already been reclassified to another geographic area, including reclassifications under section 508 of Public Law 108–173. If a hospital has been redesignated under section 1886(d)(8)(B) of the Act, reclassified under section 1886(d)(10) of the Act, or reclassified under section 508 of Public Law108–173, we assume that the hospital wishes to remain reclassified/redesignated and does not want to receive the out-migration adjustment. This wage index increase will be effective for a period of 3 fiscal years, FY 2005 through FY 2007.

Hospitals receiving this wage index increase under section 1886(d)(13)(F) of the Act are not eligible for reclassification under section 1886(d)(8)(B) or section 1886(d)(10) of the Act, or under section 508 of Public Law 108–173. Therefore, in the proposed rule, consistent with § 412.273, we stated that hospitals that were reclassified by the MGCRB were permitted to terminate their reclassifications or redesignations within 45 days of the publication of the proposed rule in the **Federal Register** (that is, by July 2, 2004).

In this final rule, we have allowed for a one time rule for FY 2005 that would allow hospitals a 30-day period after publication of this final rule when they can decide if they would rather take advantage of their redesignation/reclassification or the out-migration adjustment. Hospitals will have 30 days after the publication of this rule in the **Federal Register** to either— (1) submit to us a request to terminate their reclassifications under section 1886(d)(10) of the Act (or under section 508 of Public Law 108–173) or redesignated status under section 1886(d)(8)(B) of the Act and receive the out-migration adjustment instead; or (2) reactivate a hospital's reclassification/redesignation if a hospital withdrew its reclassification/redesignation within 45

days of publication of the May 18, 2004 proposed rule. (Only one hospital requested waiver of its redesignation.) If we do not receive a request for termination or reactivation within this 30-day period, we will assume that hospitals that have been redesignated under section 1886(d)(8)(B) of the Act or reclassified under section 1886(d)(10) of the Act or under section 508 of Public Law 108–173 would prefer to keep their redesignation/reclassification. In addition, if within 30 days of publication of this final rule, we do not receive a request from the one hospital that withdrew its redesignation to reactivate such redesignation, we will assume that the hospital wishes to receive the out-migration adjustment. Finally, we wish to clarify that (except for the one hospital that has already withdrawn its redesignation) hospitals that wish to retain their redesignation/reclassification (instead of receiving the out-migration adjustment) for FY 2005 did not and do not have to submit a formal request to CMS, and will automatically retain their reclassification/redesignation status for FY 2005.

H. Additional Payments for New Medical Services and Technology: Policy Changes (§§ 412.87 and 412.88)

As discussed in section II.D. of the preamble of this final rule (and in the preamble of the May 18, 2004 proposed rule), sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies under the IPPS, effective for discharges beginning on or after October 1, 2001. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that the process must apply to a new medical service or technology if, ''based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate.'' Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered ''new'' if it meets criteria established by the Secretary after notice and opportunity for public comment.

Sections 1886(d)(5)(K)(ii) through (d)(5)(K)(vi) of the Act further provide—

- For an additional payment for new medical services and technology in an amount beyond the DRG prospective payment system payment rate that adequately reflects the estimated average costs of the service or technology.
- That the requirement for an additional payment for a new service or technology may be satisfied by means of a new technology group (described in section 1886(d)(5)(L) of the Act), an add-on payment, a payment adjustment, or any other similar mechanism for increasing the amount otherwise payable with respect to a discharge.
- For the collection of data relating to the cost of a new medical service or technology for not less than 2 years and no more than 3 years after an appropriate inpatient hospital services code is issued. The statute further provides that discharges involving new services or technology that occur after the collection of these data will be classified within a new or existing DRG group with a weighting factor derived from cost data collected for discharges occurring during such period.

Section 412.87(b)(1) of our existing regulations provides that a new technology will be an appropriate candidate for an additional payment when it represents an advance in medical technology that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries (see the September 7, 2001 final rule (66 FR 46902)). Section 412.87(b)(3) provides that, to receive special payment treatment, new technologies meeting this clinical definition must be demonstrated to be inadequately paid otherwise under the DRG system.

In the August 1, 2003 final IPPS rule, we revised the threshold amount for determining if payment for a new technology or medical service is inadequate, effective for FY 2005 and subsequent fiscal years (68 FR 45392). We lowered the previously established threshold of 1 standard deviation to 75 percent of 1 standard deviation (based on the logarithmic values of the charges) beyond the geometric mean standardized charges for all cases in the DRG to which the new technology is assigned (or the case-weighted average of all relevant DRGs, if the new technology occurs in many different DRGs), transformed back to charges.

Section 503(b) of Public Law 108–173 amended section 1886(d)(5)(K)(ii)(I) of the Act to specify that in determining whether payments for a new technology or medical service are inadequate, the Secretary is to determine and apply a threshold amount that is the ''lesser of 75 percent of the standardized amount (increased to reflect the difference between cost and charges) or 75 percent of 1 standard deviation for the DRG involved.'' As a result of enactment of section 503(b), as we proposed in the May 18, 2004 proposed rule, we are revising our regulations at § 412.87(b)(3) to incorporate the revised threshold amount.

The report language accompanying section 533 of Public Law 106–554 indicated Congressional intent that the Secretary implement the new mechanism on a budget neutral basis (H.R. Conf. Rep. No. 106–1033, 106th Cong., 2nd Sess., at 897 (2000)). Section 1886(d)(4)(C)(iii) of the Act requires that the adjustments to annual DRG classifications and relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. Therefore, in the past, we accounted for projected payments under the new medical service and technology provision during the upcoming fiscal year at the same time we estimated the payment effect of changes to the DRG classifications and recalibration. The impact of additional payments under this provision was then included in the budget neutrality factor, which was applied to the standardized amounts and the hospital-specific amounts.

To balance appropriately the Congressional intent to increase Medicare payments for eligible new technologies with concern that the total size of those payments not result in significantly reduced payments for other cases, we set a target limit for estimated add-on payments for new technology under the provisions of sections 1886(d)(5)(K) and (L) of the Act at 1.0 percent of estimated total operating prospective payments. In accordance with § 412.88(c) of the regulations, if the target limit was exceeded, we would reduce the level of payments for approved technologies across the board, to ensure estimated payments did not exceed the limit.

Section 503(d)(1) of Public Law 108–173 amended section 1886(d)(5)(K)(ii)(III) of the Act to remove the budget neutrality provision for add-on payments for a new medical service or technology. Section 503(d)(2) specifies that ''There shall be no reduction or other adjustment to payments under section 1886 of the Social Security Act because an additional payment is provided'' for new technology. Accordingly, as a result of the enactment of section 503(d) of Public Law 108–173, we will no longer include the impact of additional payments for new medical services and technologies in the budget neutrality factor. In addition, as we proposed in the May 18, 2004 proposed rule, we are deleting § 412.88(c) of the regulations. All the comments that we received on add-on payments for new technologies are addressed in section II.E. of the preamble to this final rule.

I. Rural Referral Centers (§ 412.96)

Under the authority of section 1886(d)(5)(C)(i) of the Act, the regulations at § 412.96 set forth the criteria that a hospital must meet in order to qualify under the IPPS as a rural referral center. For discharges occurring before October 1, 1994, rural referral centers received the benefit of payment based on the other urban standardized amount rather than the rural standardized amount. Although the other urban and rural standardized amounts are the same for discharges occurring on or after October 1, 1994, rural referral centers continue to receive special treatment under both the DSH payment adjustment and the criteria for geographic reclassification.

Section 402 of Public Law 108–173 raised the DSH adjustment for other rural hospitals with less than 500 beds and rural referral centers. Other rural hospitals with less than 500 beds are subject to a 12-percent cap on DSH payments. Rural referral centers are not subject to the 12.0 percent cap on DSH payments that is applicable to other rural hospitals (with the exception of rural hospitals with 500 or more beds). Rural referral centers are not subject to the proximity criteria when applying for geographic reclassification, and they do not have to meet the requirement that a hospital's average hourly wage must exceed 106 percent of the average hourly wage of the labor market area where the hospital is located.

Section 4202(b) of Public Law 105–33 states, in part, ''[a]ny hospital classified as a rural referral center by the Secretary * * * for fiscal year 1991 shall be classified as such a rural referral center for fiscal year 1998 and each subsequent year.'' In the August 29, 1997 final rule with comment period (62 FR 45999), we also reinstated rural referral center status for all hospitals that lost the status due to triennial review or MGCRB reclassification, but not to hospitals that lost rural referral center status because they were now urban for all purposes because of the OMB designation of their geographic area as urban. However, subsequently, in the August 1, 2000 final rule (65 FR 47089), we indicated that we were revisiting that decision. Specifically, we stated that we would permit hospitals that previously qualified as a rural referral center and lost their status due to OMB redesignation of the county in which they are located from rural to urban to be reinstated as a rural referral center. Otherwise, a hospital seeking rural referral center status must satisfy the applicable criteria.

One of the criteria under which a hospital may qualify as a rural referral center is to have 275 or more beds available for use (§ 412.96(b)(1)(ii)). A rural hospital that does not meet the bed size requirement can qualify as a rural referral center if the hospital meets two mandatory prerequisites (a minimum case-mix index and a minimum number of discharges) and at least one of three optional criteria (relating to specialty composition of medical staff, source of inpatients, or referral volume) (§ 412.96(c)(1) through (c)(5)). (See also the September 30, 1988 **Federal Register** (53 FR 38513)). With respect to the two mandatory prerequisites, a hospital may be classified as a rural referral center if—

- The hospital's case-mix index is at least equal to the lower of the median case-mix index for urban hospitals in its census region, excluding hospitals with approved teaching programs, or the median case-mix index for all urban hospitals nationally; and
- The hospital's number of discharges is at least 5,000 per year, or, if fewer, the median number of discharges for urban hospitals in the census region in which the hospital is located. (The number of discharges criterion for an osteopathic hospital is at least 3,000 discharges per year, as specified in section 1886(d)(5)(C)(i) of the Act.)

1. Case-Mix Index

Section 412.96(c)(1) provides that CMS will establish updated national and regional case-mix index values in each year's annual notice of prospective payment rates for purposes of determining rural referral center status. The methodology we use to determine the proposed national and regional case-mix index values is set forth in regulations at § 412.96(c)(1)(ii). The proposed national median case-mix index value for FY 2005 includes all urban hospitals nationwide, and the proposed regional values for FY 2005 are the median values of urban hospitals within each census region, excluding those hospitals with approved teaching programs (that is, those hospitals receiving indirect medical education payments as provided in § 412.105). These proposed values are based on discharges occurring during FY 2003 (October 1, 2002 through September 30, 2003) and include bills posted to CMS' records through March 2004.

In the May 18, 2004 proposed rule (69 FR 28281), we proposed that, in addition to meeting other criteria, if they are to qualify for initial rural referral center status for cost reporting periods beginning on or after October 1, 2004, rural hospitals with fewer than 275 beds must have a case-mix index value for FY 2003 that is at least—

- 1.3550; or
- The median case-mix index value (not transfer-adjusted) for urban hospitals (excluding hospitals with approved teaching programs as identified in § 412.105) calculated by CMS for the census region in which the hospital is located. (See the table set forth in the May 18, 2004 proposed rule at 69 FR 28282.)

Based on the latest data available (FY 2003 bills received through March 2004), in addition to meeting other criteria, hospitals with fewer than 275 beds, if they are to qualify for initial rural referral center status for cost reporting periods beginning on or after October 1, 2004, must have a case-mix index value for FY 2004 that is at least—

- 1.2496; or
- The median case-mix index value (not transfer-adjusted) for urban hospitals (excluding hospitals with approved teaching programs as identified in § 412.105) calculated by CMS for the census region in which the hospital is located.

The final median case-mix index values by region are set forth in the following table:

Region	Case-Mix Index Value
1. New England (CT, ME, MA, NH, RI, VT)	1.2157
2. Middle Atlantic (PA, NJ, NY)	1.2118
3. South Atlantic (DE, DC, FL, GA, MD, NC, SC, VA, WV)	1.2365
4. East North Central (IL, IN, MI, OH, WI)	1.1957
5. East South Central (AL, KY, MS, TN)	1.0901
6. West North Central (IA, KS, MN, MO, NE, ND, SD)	1.0855
7. West South Central (AR, LA, OK, TX)	1.1371
8. Mountain (AZ, CO, ID, MT, NV, NM, UT, WY)	1.1696
9. Pacific (AK, CA, HI, OR, WA)	1.2698

Hospitals seeking to qualify as rural referral centers or those wishing to know how their case-mix index value compares to the criteria should obtain hospital-specific case-mix index values (not transfer-adjusted) from their fiscal intermediaries. Data are available on the Provider Statistical and Reimbursement (PS&R) System. In keeping with our policy on discharges, these case-mix index values are computed based on all Medicare patient discharges subject to DRG-based payment.

2. Discharges

Section 412.96(c)(2)(i) provides that CMS will set forth the national and regional numbers of discharges in each year's annual notice of prospective payment rates for purposes of determining rural referral center status. As specified in section 1886(d)(5)(C)(ii) of the Act, the national standard is set at 5,000 discharges. In the May 18, 2004 proposed rule, we proposed to update the regional standards based on discharges for urban hospitals' cost reporting periods that began during FY 2001 (that is, October 1, 2000 through September 30, 2001), which is the latest available cost report data we had at that time. In last year's final rule we inadvertently indicated that we relied upon data regarding discharges occurring during FY 2002. However, we have now determined that our values for FY 2004 were based upon data regarding discharges occurring during FY 2000.

Therefore, in the May 18, 2004 proposed rule (69 FR 28282), we proposed that, in addition to meeting other criteria, a hospital, if it is to qualify for initial rural referral center status for cost reporting periods beginning on or after October 1, 2004, must have as the number of discharges for its cost reporting period that began during FY 2001 a figure that is at least—

- 5,000 (3,000 for an osteopathic hospital); or
- The median number of discharges for urban hospitals in the census region in which the hospital is located. (See the table set forth in the May 18, 2004 proposed rule at 69 FR 28282.)

Based on the latest discharge data available at this time, that is, for cost reporting periods that began during FY 2002, the final median number of discharges for urban hospitals by census region area are as follows:

Region	Number of Discharges
1. New England (CT, ME, MA, NH, RI, VT)	7,557
2. Middle Atlantic (PA, NJ, NY)	9,466
3. South Atlantic (DE, DC, FL, GA, MD, NC, SC, VA, WV)	9,602
4. East North Central (IL, IN, MI, OH, WI)	8,323
5. East South Central (AL, KY, MS, TN)	6,986
6. West North Central (IA, KS, MN, MO, NE, ND, SD)	6,576
7. West South Central (AR, LA, OK, TX)	6,307
8. Mountain (AZ, CO, ID, MT, NV, NM, UT, WY)	9,367
9. Pacific (AK, CA, HI, OR, WA)	6,954

We note that the median number of discharges for hospitals in each census region is greater than the national standard of 5,000 discharges. Therefore, 5,000 discharges is the minimum criterion for all hospitals.

We reiterate that if an osteopathic hospital is to qualify for rural referral center status for cost reporting periods beginning on or after October 1, 2004, the hospital would be required to have at least 3,000 discharges for its cost reporting period that began during FY 2002.

We note that in section IV.N.3 of this preamble, we discuss public comments that we received on the effects on RRCs of the new geographical area designations for wage index purposes.

J. Additional Payments to Hospitals With High Percentage of End-Stage Renal Disease (ESRD) Discharges (§ 412.104)

Under existing regulations at § 412.104(a), CMS provides for additional Medicare payments to a hospital for inpatient dialysis provided to Medicare beneficiaries with end-stage renal disease (ESRD) if the hospital's ESRD Medicare beneficiary discharges are 10 percent or more of its total Medicare discharges. This provision states that discharges classified into DRG 302 (Kidney Transplant), DRG 316 (Renal Failure), or DRG 317 (Admit for Renal Dialysis) are excluded for purposes of determining a hospital's eligibility for this special payment. We have been informed that, under this provision, hospitals may be counting all discharges of ESRD Medicare beneficiaries towards determining the 10 percent factor rather than counting only those discharges where the ESRD beneficiary received inpatient dialysis.

When we established this regulation in the August 31, 1984 final rule (49 FR 34747), we stated that this special payment was intended to ameliorate those circumstances in which the concentration of ESRD beneficiaries receiving inpatient dialysis may be such that the hospital would not be able to absorb the entire expense with revenue from other less costly cases. We further stated that we believed those few hospitals most extremely impacted by the ESRD beneficiary population should be afforded some protection against the chance of encountering inpatient dialysis expenses that could not be offset by revenue from cases in which the DRG payment was greater than the hospital's cost. Because this special payment is intended to limit the adverse impact on hospitals delivering inpatient dialysis services to ESRD beneficiaries, we firmly believe that only those discharges of beneficiaries who receive dialysis services during an inpatient stay should be counted in determining a hospital's eligibility for the additional payment. After a careful review of § 412.104(a), we acknowledge that hospitals may require additional guidance in appropriately determining their eligibility for this special payment. Therefore, in the May 18, 2004 proposed rule (69 FR 28282), we proposed to revise § 412.104(a) to make it clear that, in determining a hospital's eligibility for the additional Medicare payment, only discharges involving ESRD Medicare beneficiaries who have received a dialysis treatment during an inpatient hospital stay are to be counted. We indicated that this proposed change would be applied prospectively, effective for cost reporting periods beginning on or after October 1, 2004.

Comment: One commenter requested clarification as to whether the proposed change to § 412.104, which provides for an additional payment to hospitals with a high percentage of ESRD discharges, applies to LTCHs.

Response: The additional payment to hospitals with a high percentage of ESRD discharges provided at § 412.104 is applicable only to short-term, acute care hospitals paid under the IPPS. It does not apply to LTCHs paid under the LTCH PPS.

Comment: Some commenters opposed the proposed revisions to the regulation because they believe this regulation was intended to compensate hospitals for higher costs of treating all ESRD patients, not just those receiving inpatient dialysis treatment.

Response: Section 412.104 specifically provides for an additional payment to a hospital for inpatient dialysis provided to ESRD beneficiaries. This payment is based on the estimated weekly cost of dialysis and the average length of stay of ESRD beneficiaries for the hospital. Therefore, we believe it is entirely consistent with the regulations to provide this additional payment only when dialysis is actually provided during the inpatient stay.

Comment: Several commenters expressed concern that a revision of the regulation would place an undue financial burden on hospitals that treat a significant number of ESRD beneficiaries, and that hospitals may discontinue these services in the future.

Response: Our data indicate that approximately 41 hospitals are currently receiving approximately $15 million dollars through this add-on payment. While we cannot precisely quantify the impact of this revision, we believe that the impact will be modes because ESRD patients admitted to the hospital will typically require dialysis during their hospital stay.

Comment: Some commenters believed that, because hospitals and fiscal intermediaries are currently counting all ESRD beneficiaries, the proposed change would lead to confusion. The commenter also indicated that, in the cost report, there is no way to indicate only discharges of ESRD beneficiary who are receiving dialysis.

Response: We do not believe that this policy will create confusion. The cost report instructions will be amended to reflect the policy in the final rule. As we stated earlier, we believe this revision to the regultaion will have little effect on additional hospitals with respect to the add-on payment.

Comment: Several commenters expressed concern that the proposed revision would distort the existing formula to compute the add-on payment and would under compensate those hospitals that now treat a large number of African-American patients who seem to be those affected largely by ESRD.

Response: The formula is now based on several factors; the most significant is the cost of inpatient dialysis. We are not revising the formula. Therefore, we do not agree that the revision would distort the formula. Further, we do not believe this revision would adversely affect any specific group of beneficiaries.

Comment: Several commenters expressed concern that CMS did not comply with the Regulatory Flexibility Act (RFA), in proposing this revision.

Response: As we indicated in the proposed rule (69 FR 28807), our impact analysis identified those hospitals currently receiving compensation through the add-on payment, as well as the amount paid to each hospital. Currently, there are approximately 41 hospitals receiving approximately $15 million. As we stated in the proposed rule, we are unable to quantify the impact more precisely.

Comment: One commenter objected to the exclusion of DRGs 316 and 317 from the add-on payment. The commenter believed the exclusion places an unfair burden on hospitals.

Response: We do not believe that the exclusion of these DRGs is inappropriate, because their weights already include a payment amount for inpatient dialysis.

Comment: One commenter recommended that the add-on payment for inpatients receiving dialysis be updated. Specifically, the commenter recommended that the average weekly cost of dialysis be increased from the current $335.

Response: Under § 412.104(b)(3), the average cost of dialysis includes only those costs that are determined to be directly related to the dialysis services. These costs include salary, employee health and welfare, drugs, supplies, and laboratory services. We will review these costs and consider the commenter's recommendation to update the average weekly cost of dialysis as part of our next annual IPPS rulemaking.

Comment: One comment referenced correspondence that CMS had written with instructions to include all ESRD beneficiaries when considering the add-on payment.

Response: The correspondence cited reflected our policy at the time the correspondence was issued. However, we have further evaluated that policy and, as we stated in the proposed rule, believe that a revision is necessary to ensure that the add-on payment is made in accordance with the intent of the law.

K. Indirect Medical Education (IME) Adjustment (§ 412.105)

1. IME Adjustment Factor Formula Multipliers (Section 502(a) of Public Law 108–173 and § 412.105(d)(3)(vii) and § 412.105(d)(3)(viii) Through (d)(3)(xii) of the Regulations)

Section 1886(d)(5)(B) of the Act provides that prospective payment hospitals that have residents in an approved graduate medical education (GME) program receive an additional payment to reflect the higher indirect costs of teaching hospitals relative to nonteaching hospitals. The regulations regarding the calculation of this additional payment, known as the indirect medical education (IME) adjustment, are located at § 412.105. The IME adjustment is based in part on the applicable IME adjustment factor. The IME adjustment factor is calculated using a hospital's ratio of residents to beds, which is represented as r, and a formula multiplier, which is represented as *c*, in the following equation: $c \times [\{ 1 + r\}^{.405} - 1]$. The formula is traditionally described in terms of a certain percentage increase in payment for every 10-percent increase in the resident-to-bed ratio.

Section 502(a) of Public Law 108–173 modified the formula multiplier c to be used in the calculation of the IME adjustment. Prior to enactment of Public Law 108–173, the formula multiplier was fixed at 1.35 for discharges occurring during FY 2003 and thereafter. Section 502(a) modifies the formula multiplier beginning midway through FY 2004 and provides for a new schedule of formula multipliers for FYs 2005 and thereafter as follows:

- For discharges occurring on or after April 1, 2004, and before October 1, 2004, the formula multiplier is 1.47.
- For discharges occurring during FY 2005, the formula multiplier is 1.42.
- For discharges occurring during FY 2006, the formula multiplier is 1.37.
- For discharges occurring during FY 2007, the formula multiplier is 1.32.
- For discharges occurring during FY 2008 and fiscal years thereafter, the formula multiplier is 1.35.

In the May 18, 2004 proposed rule (69 FR 28283), we proposed to revise § 412.105(d)(3)(vii) and add § 412.105(d)(3)(viii) through (d)(3)(xii) to incorporate these changes in the formula multipliers.

Comment: One commenter opposed decreases in the IME adjustment factor. The commenter asserted that hospitals are already being taxed beyond their ability to shoulder the costs of graduate medical education and that further decreases in payment for such costs will threaten important educational programs.

Response: The proposed regulatory changes to the IME adjustment factor are mandated by section 502(a) of Public Law 108–173. We do not have the discretion to change the IME adjustment factor that is mandated by statute. However, the changes to the IME factor provided by section 502(a) of Public Law 108–173 generally constitute increases, not decreases as indicated by the commenter. As stated above, prior to enactment of Public Law 108–173, the formula multiplier was fixed at 1.35 for discharges occurring during FY 2003 and thereafter. Section 502(a) modified the formula multiplier beginning midway through FY 2004 and provided for a new schedule of formula multipliers for FYs 2005 and thereafter, as previously noted.

We are adopting, as final without modification, the proposed revision of § 412.105(d)(3)(vii) and the proposed addition of § 412.105(d)(3)(viii) through (d)(3)(xii) to incorporate changes in the formula multipliers.

2. IME Adjustment Formula Multiplier for Redistributed FTE Resident Slots (Section 422(b)(1)(C) of Public Law 108–173)

Under new section 1886(h)(7)(B) of the Act, added by section 422(a) of Public Law 108–173, a hospital may receive an increase in its FTE resident cap as a result of the agency's redistribution of unused resident positions. (This provision is discussed in detail in section IV.J.2. of the preamble of this final rule.) Section 422(b)(1)(C) of Public Law 108–173 amended section 1886(d)(5)(B) of the Act to add a new subclause (ix) to provide that, for discharges occurring on or after July 1, 2005, for a hospital whose FTE resident cap is increased as a result of a redistribution of unused resident positions, the IME adjustment factor is to be calculated using a formula multiplier of 0.66 with respect to any additional residents counted by the hospital as a result of that increase in the hospital's FTE resident cap. Thus, in the May 18, 2004 proposed rule (69 FR 28283), we proposed that a hospital that counts additional residents as a result of an increase in its FTE resident cap under section 1886(h)(7)(B) of the Act would receive IME payments based on the sum of two different IME adjustment factors: (1) An IME adjustment factor that is calculated using the schedule of formula multipliers described in section IV.G.1. of this preamble established by section 502(a) of Public Law 108–173, and which also uses the hospital's number of FTE residents, not including residents attributable to an FTE cap increase under section 1886(h)(7)(B) of the Act, in the numerator of the resident-to-bed ratio; and (2) an IME adjustment factor that is calculated using the formula multiplier of 0.66, and the additional number of FTE residents that is attributable to the increase in the hospital's FTE resident cap under section 1886(h)(7)(B) of the Act in the numerator of the resident-to-bed ratio. (The number of available beds used in the denominator would be the same for both IME adjustments.)

We note that section 422(b) of Public Law 108–173, which addresses the application of the IME adjustment to the residents counted as a result of an increase in a hospital's FTE resident cap under section 422(a), makes no reference to section 1886(d)(5)(B)(vi) of the Act. That is, the statute does not provide for an exclusion from application of the cap on the resident-to-bed ratio at section 1886(d)(5)(B)(vi)(I) of the Act or from application of the rolling average count at section 1886(d)(5)(B)(vi)(II) of the Act for residents added as a result of FTE cap increases under section 1886(h)(7)(B). There is no specific pronouncement in section 422 exempting residents counted as a result of the FTE resident cap increases under section 422(a) from the cap on the resident-to-bed ratio and the rolling average, and we see no apparent reason to treat those residents differently for purposes of these two provisions. Therefore, in the May 18, 2004 proposed rule, we proposed to require that if a

hospital increases its IME FTE count of residents as a result of section 1886(h)(7)(B) of the Act, those FTE residents are immediately subject to the cap on the resident-to-bed ratio and the rolling average calculation. We explained further that, given potentially significant shifts of FTE positions among hospitals as a result of the new section 1886(h)(7) of the Act, the inclusion of FTE residents added as a result of section 1886(h)(7)(B) of the Act in the cap on the resident-to-bed ratio and in the rolling average introduces a measure of stability and predictability, and mitigates radical shifts in IME payments from period to period. Thus, a hospital's increase in IME payment may be delayed for one year to the extent that the resident-to-bed ratio for the current cost reporting period is capped by the resident-to-bed ratio for the previous cost reporting period. Further, the additional FTE residents would be phased in over a 3-year period in the hospital's FTE count because they are immediately included in the rolling average calculation.

The following illustrates how we proposed to calculate the IME payment for a hospital that receives an increase to its FTE resident cap as a result of section 1886(h)(7)(B) of the Act. For example, Hospital A has a fiscal year end (FYE) of September 30, and a 1996 IME FTE cap of 20 FTEs. During its FYEs September 30, 2003, September 30, 2004, and September 30, 2005, Hospital A trains 25 FTE residents. Effective July 1, 2005, under section 1886(h)(7)(B) of the Act, Hospital A receives an increase to its IME 1996 cap of 5 FTEs, for a total adjusted IME cap of 25 FTEs. Hospital A has maintained an available bed count of 200 beds in FYE September 30, 2004 and throughout FYE September 30, 2005. For the FYE September 30, 2005 cost report, the IME adjustment factor is calculated as follows:

Step 1. For discharges occurring on October 1, 2004, through September 30, 2005 for residents NOT counted pursuant to section 1886(d)(5)(B)(ix) of the Act:

- Rolling average count of FTE residents: 20+20+20/3 = 20.
- Current year resident-to-bed ratio: 20/200 = .10
- Cap on resident-to-bed ratio (from prior year): 20/200 = .10
- Compare, and use the lower of, prior year resident-to-bed ratio and current year resident-to-bed ratio: .10 = .10.
- Compute IME adjustment factor: $1.42 \times [\{1 + .10\}^{.405} - 1] = 0.0559$.

Step 2. For discharges occurring on July 1, 2005 through September 30, 2005 for residents counted pursuant to section 1886(d)(5)(B)(ix) of the Act:

- Rolling average count of FTE residents: 25+20+20/3 = 21.7.
- Resident-to-bed ratio for 7/1/05–9/30/05: 21.7/200 = .11
- Cap on resident-to-bed ratio (from prior year): 20/200 = .10
- Compare, and use the lower of, prior year resident-to-bed ratio and resident-to-bed ratio for 7/1/05–9/30/05: .10 < .11. Capped by prior year ratio of .10.
- Compute IME adjustment factor: $0.66 \times [\{1 + 0\}^{.405} - 1] = 0.0$.

In this example, the addition of 5 FTE residents under section 1886(h)(7)(B) caused Hospital A's resident-to-bed ratio for discharges occurring on July 1, 2005, through September 30, 2005, to exceed the resident-to-bed ratio of .10 from the prior year. Since the multiplier of 0.66 is to be used for determining IME payment ''insofar as an additional payment amount * * * is attributable to resident positions redistributed to a hospital * * *'' under section 1886(d)(5)(B)(v) of the Act, as amended by section 422(b)(1)(C) of Public Law 108–173, Hospital A does not receive any IME payment attributable to the 5 FTE residents added as a result of section 1886(h)(7)(B) of the Act for discharges occurring on July 1, 2005, through September 30, 2005. As shown under the fifth bullet point in Step 2 of the example above, a resident-to-bed ratio of zero is used to compute the IME adjustment for FTE residents attributable to increases in the FTE resident cap under section 1886(h)(7)(B) of the Act for discharges occurring on or after July 1, 2005 and on or before September 30, 2005. The ratio of .10 would not be used to compute the IME adjustment for FTE residents attributable to an increase in the FTE resident cap under section 1886(h)(7)(B) because the ratio of .10 is attributable to the 20 FTE residents from the prior year, and is not related to residents added under section 1886(h)(7)(B) of the Act. (We noted that a hospital's resident-to-bed ratio in the current year might decrease despite residents added as a result of section 1886(h)(7)(B) of the Act, due to an increase in the number of available beds in the denominator of the current year resident-to-bed ratio. In such a case, because the current year ratio would be less than the prior year ratio, the hospital's resident-to-bed ratio would not be capped by the prior year resident-to-bed ratio, and, therefore, the hospital could receive an IME payment in the current year (that is, there would not be a 1-year delay) relating to residents added under section 1886(h)(7)(B) of the Act).

However, an increase in the resident-to-bed ratio in the current period may establish a higher cap for the following period, and, all other things being equal, a hospital could then receive IME payment for FTE residents added as a result of section 1886(h)(7)(B) of the Act after a 1-year lag. In the example above, Hospital A would receive an IME payment for residents added as a result of section 1886(h)(7)(B) of the Act in its cost reporting period ending September 30, 2006, as follows:

Step 1. For residents NOT counted pursuant to section 1886(d)(5)(B)(ix) of the Act:

- Rolling average count of FTE residents: 20 + 20 + 20/3 = 20.
- Current year resident-to-bed ratio: 20/200 = .10
- Cap on resident-to-bed ratio (from prior year): 20/200 = .10
- Compare, and use the lower of, prior year resident-to-bed ratio and current year resident-to-bed ratio: .10 = .10.
- Compute IME adjustment factor: $1.37 \times [\{1 + .10\}^{.405} - 1] = 0.0559$.

Step 2. For 5 FTE residents counted pursuant to with section 1886(d)(5)(B)(ix) of the Act:

- Rolling average count of FTE residents: 25 + 25 + 20/3 = 23.3.
- Resident-to-bed ratio for FYE 9/30/06: 23.3/200 = .12
- Cap on resident-to-bed ratio (from prior year): 25/200 = .13
- Compare, and use the lower of, prior year resident-to-bed ratio and current year resident-to-bed ratio: .13 > .12. Current year ratio of .12 is the lower of the two.
- Take the difference between the rolling average count of FTE residents counted as a result of section 1886(h)(7)(B) of the Act, and the rolling average count of FTE residents *not* counted as a result of section 1886(h)(7)(B) of the Act, (rolling average count under step 2 minus rolling average count under step 1): 23.3 − 20 = 3.3.
- Compute current year resident-to-bed ratio attributable to residents added under section 1886(h)(7)(B): 3.3/200 = 0.02.
- Compute IME adjustment factor: $0.66 \times [\{1 + .02\}^{.405} - 1] = 0.0053$.

Step 3. Compute IME payment for FYE September 30, 2006: [Total DRG payments for discharges occurring on October 1, 2005 through September 30, 2006] × [0.0592] (that is, 0.0539 + 0.0053).

In the May 18, 2004 proposed rule, we proposed to revise § 412.105 to incorporate these changes under proposed new paragraph (d)(4), proposed new paragraph (e)(2),

proposed new paragraph (f)(1)(iv)(B), and proposed added new last sentence of paragraph (f)(1)(v).

Comment: One commenter stated that the calculation of the IME payment relating to additional residents counted as a result of an increase in the hospital's FTE cap received under section 1886(h)(7)(B) of the Act is extremely cumbersome and will require difficult and extensive changes to the Medicare cost report, particularly if the additional residents are to be subject to the rolling average and the resident-to-bed ratio. The commenter suggested that instead of revising Worksheet E, Part A to include this calculation, CMS should consider including this calculation on a separate worksheet, with the results added to Worksheet E, Part A.

Response: First, we note that we are required by section 1886(d)(5)(B)(ix) to apply a different IME formula multiplier to calculate the IME payment relating to these residents. Therefore, some level of additional complexity is not avoidable. Additionally, we have stated in previous responses concerning the IME calculation relating to residents counted under section 1886(h)(7)(B) of the Act, under our final policy, we are not requiring that these residents be subject to the rolling average and resident-to-bed ratio calculations. Thus, we believe our final policy substantially reduces the complexity of the proposed calculations that concerned the commenter. Even so, we do realize that the presence of an additional calculation on Worksheet E, Part A for IME (and also on Worksheet E–3, Part IV for direct GME) further complicates an already difficult calculation. We will attempt to revise the worksheets in the simplest and least disruptive manner.

Comment: Several commenters noted that there is a mathematical error on page 28284 of the May 18, 2004 **Federal Register**. The second column on page 28284, in ''Step 1'', shows an IME computation of: $1.37 \times [\{ 1 - .10\}^{.405} - 1] = 0.0559$. The result of this computation should be .053917, not the .0559 as indicated.

Response: We agree with the commenters that the computed result for ''Step 1'' of the example is 0.053917, not 0.0559.

Comment: One commenter noted that there appears to be an error on page 28284 of the May 18, 2004 **Federal Register**. On page 28284, third column, in ''Step 3'', shows an IME adjustment factor computation of: 0.0539 + 0.0053 = .0592. The commenter believes the adjustment factor should be calculated as 0.0559 + 0.0053 = .0612 since 0.0559 is the factor calculated in ''Step 1'' for residents not counted as a result of cap redistribution.

Response: As noted previously, ''Step 1'' of the IME adjustment factor calculation (shown in the second column of page 28284) contains an error. The result of ''Step 1'' should read 0.0539, not the 0.0559 as indicated. With this change, ''Step 3'' shows the correct IME adjustment factor calculation (0.0539 + 0.0053 = .0592).

3. Counting Beds and Patient Days for Purposes of Calculating the IME Adjustment (§ 412.105(b)) and DSH Adjustment ((§ 412.106(a)(1)(i))

As stated in section IV.K.1 of the preamble, § 412.105 of our existing regulations specifies that the calculation of the IME adjustment is based on the IME adjustment factor, which is calculated using hospitals' ratios of residents to beds. The determination of the number of beds is based on available bed days. This determination of the number of available beds is also applicable for other purposes, including the level of the disproportionate share hospital (DSH) adjustment payments under § 412.106(a)(1)(i).

In the FY 2004 IPPS proposed rule (68 FR 27201 through 27208, May 19, 2003), we proposed changes to our policy on determining the number of beds and patient days as it pertains to both the IME and DSH adjustments. In the FY 2004 IPPS final rule (68 FR 45415 through 45422), we indicated that, due to the nature and number of public comments we received on the proposed policies regarding unoccupied beds, observation beds for patients ultimately admitted as inpatients, dual-eligible patient days, and Medicare+Choice (M+C) days, we would address the comments in a separate document. In the May 18, 2004 proposed rule, we stated that we planned to respond to comments in this final rule. Under section IV.L.3. of this preamble, we are responding to public comments received on the proposals in the May 19, 2003 and the May 18, 2004 proposed rules as they relate to both the IME and DSH payment adjustments and finalizing our policies in these four areas.

4. Technical Changes

- In § 412.105(a)(1), introductory text, we include a cross-reference to ''paragraph (f) and (h)'' of § 412.105. Paragraph (h) no longer exists in this section. Therefore, in the May 18, 2004 proposed rule (69 FR 28284), we proposed to remove the cross-reference to paragraph (h).
- In § 412.105(f)(1)(i)(A), we reference national organizations listed in § 415.200(a). The cross-reference to § 415.200(a) is incorrect. In the May 18, 2004 proposed rule (69 FR 28284), we proposed to correct the cross-reference to read ''§ 415.152.''

We did not receive any comments on these two proposals for technical changes and, therefore, are adopting them as final.

- In section IV.O. of the preamble of this final rule (and in the May 18, 2004 proposed rule), we discuss our redesignation of existing § 413.86 governing payments for direct costs of GME to nine separate sections. Many of the paragraphs in the existing § 413.86 are cited in § 412.105 governing the IME adjustment. We proposed to make changes to the cross-reference in § 412.105 to conform them to these redesignated separate sections.

We did not receive any comments on this proposal; and therefore, are adopting this proposal as final.

L. Payment to Disproportionate Share Hospitals (DSHs) (Section 402 of Pub. L. 108–173 and § 412.106 of Existing Regulations)

1. Background

Section 1886(d)(5)(F) of the Act provides for additional payments to subsection (d) hospitals that serve a disproportionate share of low-income patients. The Act specifies two methods for a hospital to qualify for the Medicare disproportionate share hospital (DSH) adjustment. Under the first method, hospitals that are located in an urban area and have 100 or more beds may receive a DSH payment adjustment if the hospital can demonstrate that, during its cost reporting period, more than 30 percent of its net inpatient care revenues are derived from State and local government payments for care furnished to indigent patients. These hospitals are commonly known as ''Pickle hospitals.'' The second method, which is also the most commonly used method for a hospital to qualify, is based on a complex statutory formula under which payment adjustments are based on the level of the hospital's DSH patient percentage, which is the sum of two fractions: the ''Medicare fraction and the Medicaid fraction.'' The Medicare fraction is computed by dividing the number of patient days that are furnished to patients who were entitled to both Medicare Part A and Supplemental Security Income (SSI) benefits by the total number of patient days furnished to patients entitled to benefits under Medicare Part A. The Medicaid fraction is computed by dividing the number of patient days furnished to patients who, for those

days, were eligible for Medicaid but were not entitled to benefits under Medicare Part A by the number of total hospital patient days in the same period.

$$\text{DSH Patient Percentage} = \frac{\text{Medicare, SSI Days}}{\text{Total Medicare Days}} + \frac{\text{Medicaid, Non - Medicare Days}}{\text{Total Patient Days}}$$

2. Enhanced DSH Adjustment for Rural Hospitals and Urban Hospitals With Fewer Than 100 Beds

Hospitals whose DSH patient percentage exceeds 15 percent are eligible for a DSH payment adjustment (prior to April 1, 2001, the qualifying DSH patient percentage varied, in part, by the number of beds (66 FR 39882)). The DSH payment adjustment may vary based on the DSH patient percentage and the type of hospital. The statute provides for different payment adjustments for urban hospitals with 100 or more beds and rural hospitals with 500 or more beds, hospitals that qualify as RRCs or SCHs, and other hospitals.

Effective April 1, 2004, section 402 of Public Law 108–173 amended section 1886(d)(5)(F) of the Act to revise the formulae used to calculate DSH payment adjustments for certain hospitals that qualify for the adjustments under the second method. Specifically, under the new section 1886(d)(5)(F)(xiv), added by section 402, for hospitals that are not large urban or large rural hospitals, DSH payments are calculated using the same DSH adjustment formula used for large urban hospitals. However, the DSH payment adjustment for most of these categories of hospitals, except for hospitals classified as RRCs, including RRCs that are also SCHs, is capped at 12 percent. In addition, the formula for large urban hospitals with 100 beds or more, and large rural hospitals with 500 beds or more, has not been revised by section 402. Finally, Pickle hospitals are not affected by this change; they will continue to receive a DSH adjustment under the alternative formula.

Effective for discharges occurring on or after April 1, 2004, the following DSH payment adjustment formulae apply for the following specified categories of hospitals:

- For urban hospitals with fewer than 100 beds and whose disproportionate patient percentage is equal to or greater than 15 percent and less than or equal to 20.2 percent:

(Disproportionate patient percentage − 15 percent) (65 percent) + 2.5 percent.

≥15% <20.2% 2.5% + [.65 × (DSH pct. − 15%)]

- For urban hospitals with fewer than 100 beds and whose disproportionate patient percentage is greater than 20.2:

(Disproportionate patient percentage − 20.2 percent) (82.5 percent) + 5.88 percent.

≥20.2% 5.88% + [.825 × (DSH pct. − 20.2%)]

For urban hospitals with fewer than 100 beds, the maximum DSH payment adjustment is 12 percent.

- For rural hospitals that are SCHs and are not RRCs and whose disproportionate patient percentage is equal to or greater than 15 percent and less than or equal to 20.2 percent:

(Disproportionate patient percentage − 15 percent) (65 percent) + 2.5 percent).

≥15% <20.2% (2.5% + [.65 × (DSH pt.% − 15%])

- For rural hospitals that are SCHs and are not RRCs and whose disproportionate patient percentage is greater than 20.2 percent:

(Disproportionate patient percentage − 20.2 percent) (82.5 percent) + 5.88 percent.

≥20.2% 5.88% + [.825 × (DSH pct. − 20.2%)]

For rural hospitals that are SCHs and are not RRCs, the maximum DSH payment adjustment is 12 percent.

- For RRCs whose disproportionate patient percentage is greater than or equal to 15 percent and less than or equal to 20.2 percent:

(Disproportionate patient percentage − 15 percent) (65 percent) + 2.5 percent.

≥15% <20.2% 2.5% + [.65 × (DSH pct. − 15%)]

- For RRCs whose disproportionate patient percentage is greater than 20.2 percent:

(Disproportionate patient percentage—20.2 percent) (82.5 percent) + 5.88 percent.

≥20.2% 5.88% + [.825 × (DSH pct. − 20.2%)]

For rural referral centers there is no maximum DSH payment adjustment.

- For rural hospitals that are both RRCs and SCHs and whose disproportionate patient percentage is greater than or equal to 15 percent and less than or equal to 20.2 percent:

(Disproportionate patient percentage − 15 percent) (65 percent) + 2.5 percent.

≥15% <20.2% 2.5% + [.65 × (DSH pct. − 15%)]

- For rural hospitals that are both RRCs and SCHs whose disproportionate patient percentage is greater than 20.2 percent:

(Disproportionate patient percentage − 20.2 percent) (82.5 percent) + 5.88 percent.

≥20.2% 5.88% + [.825 × (DSH pct. − 20.2%)]

For rural hospitals that are both RRCs and SCHs there is no maximum DSH payment adjustment.

- For rural hospitals with fewer than 500 beds and whose disproportionate patient percentage is equal to or greater than 15 percent and less than or equal to 20.2 percent:

(Disproportionate patient percentage − 15 percent) (65 percent) + 2.5 percent.

≥15% <20.2% 2.5% + [.65 × (DSH pct. − 15%)]

- For rural hospitals with fewer than 500 beds and whose disproportionate patient percentage is greater than 20.2 percent:

(Disproportionate patient percentage − 20.2 percent) (82.5 percent) + 5.88 percent.

≥20.2% 5.88% + [.825 × (DSH pct. − 20.2%)]

For rural hospitals with fewer than 500 beds, the maximum DSH payment adjustment is 12 percent.

These revised formulae, which became effective for discharges occurring on or after April 1, 2004, were implemented through a CMS One-Time Notification (CR 3158), issued on March 26, 2004. The notice describes the changes required by section 402 of Public Law 108–173. In the May 18, 2004 proposed rule (69 FR 28284 through 28286) we described the changes to the DSH adjustment calculations required under section 402 of Public Law 108–173 as well as the required modifications to its regulations to implement section 402 of Public Law 108–173.

The following DSH formulae were not affected by the changes made by section

402 of Public Law 108–173 and remain in effect:

• For urban hospitals with 100 beds or more and whose disproportionate patient percentage is equal to or greater than 15 percent and less than or equal to 20.2 percent:

(Disproportionate patient percentage − 15 percent) (65 percent) + 2.5 percent.

≥15% ≤20.2% 2.5% + [.65 × (DSH pct. − 15%)]

• For urban hospitals with 100 beds or more and whose disproportionate patient percentage is greater than 20.2 percent:

(Disproportionate patient percentage − 20.2 percent) (82.5 percent) + 5.88 percent.

≥20.2% 5.88% + [.825 × (DSH pct. − 20.2%)]

For urban hospitals with 100 beds or more there is no maximum DSH payment adjustment.

• For rural hospitals with 500 beds or more and whose disproportionate patient percentage is equal to or greater than 15 percent and less than or equal to 20.2 percent:

(Disproportionate patient percentage − 15 percent) (65 percent) + 2.5 percent.

≥15% <20.2% 2.5% + [.65 × (DSH pct. − 15%)]

• For rural hospitals with 500 beds or more and whose disproportionate patient percentage is greater than 20.2 percent:

[(Disproportionate patient percentage − 20.2 percent) (82.5 percent)] + 5.88 percent.

≥20.2% 5.88% + [.825 × (DSH pct. − 20.2%)]

For rural hospitals with 500 beds or more there is no maximum DSH payment adjustment.

Comment: We received several comments in regard to section 402 of Public Law 108–173. One commenter requested that CMS clarify how the DSH percentage will be computed to implement these provisions for a provider whose year-end period overlaps with the April 1, 2004 date. Another commenter stated that when the DSH policy was developed, consideration was given to the financial condition of the hospitals providing a high level of care to low-income patients, and as a result of that consideration, a cap was placed on the size of DSH payments to rural hospitals. Additionally, the commenters believe that without any publicly articulated policy basis, Congress has called for raising this cap and increasing DSH payments, but only increasing them for rural hospitals, even though these hospitals are not treating more low-income patients and have not seen their financial condition deteriorate. The commenter believes that urban hospitals are in far worse and declining financial condition, and are to receive comparable benefit.

Response: As we stated in the May 18, 2004 proposed rule (69 FR 28285) hospitals whose DSH patient percentage exceeds 15 percent are eligible for a DSH payment adjustment (prior to April 1, 2001, the qualifying DSH patient percentage varied, in part, by the number of beds (66 FR 39882)). The DSH payment adjustment may vary based on the DSH patient percentage and the type of hospital. The revised formula increases the DSH add-on payment that a hospital receives because the cap has been increased. For example, effective for discharges occurring on or after April 1, 2004, a hospital that is not a large urban hospital that qualifies for a DSH adjustment will receive its DSH payments using the current DSH adjustment formula for large urban hospitals, subject to a limit. The DSH adjustment for these hospitals, except RRCs will be capped at 12 percent instead of the 5.25 percent used prior to discharges occurring before April 1, 2004. We have determined that the revised formulae used to calculate the DSH payment adjustments for certain hospitals will result in making a change in the Medicare cost report. We will make two separate computations of the DSH percentage on the Medicare cost report for discharges occurring before April 1, 2004 and one after April 1, 2004.

In response to the comment regarding rural hospitals receiving a higher cap and DSH payment, as we stated previously, the statute allows a hospital that is not a large urban hospital that qualifies for a DSH adjustment to receive its DSH payments using the current DSH adjustment formula for large urban hospitals, subject to a limit. Like large urban hospitals with 100 beds or more and rural hospitals with 500 beds or more, the revised formula removes the cap for RRCs and SCHs that are also RRCs.

Therefore, in this final rule, we are adopting as final the policy expressed in the May 18, 2004 proposed rule to revise the formulae used to calculate the DSH payment adjustment for certain hospitals that qualify for the adjustments, and amending our regulations at § 412.106 accordingly. This policy is effective for discharges occurring on or after April 1, 2004.

3. Counting Beds and Patient Days for the IME and DSH Adjustments

In the May 19, 2003 IPPS proposed rule for FY 2004 (68 FR 27201), we proposed changes to our policy on counting beds and patient days for the purposes of the DSH and IME adjustments. We proposed changes to the way unoccupied beds are counted. We also proposed to clarify how observation beds and swing-beds are counted, as well as our policy regarding nonacute care (that is, a level of care that would not generally be payable under the IPPS) beds and days. In regard to patient days, we proposed changes to the way observation days, dual-eligible days and M+C days are counted. We recognize that section 101 of Public Law 108–173 changed the title of Medicare+Choice to Medicare Advantage. However, throughout this preamble and our regulations, we are continuing to use the title, Medicare+Choice (M+C). We will make a global change of this reference in a separate regulatory document.

As discussed earlier under section IV.N.1. of this preamble, the IME adjustment provided for under section 1886(d)(5)(B) of the Act applies to prospective payment hospitals that have residents in an approved GME program. These hospitals receive an additional payment to reflect the higher indirect costs of teaching hospitals relative to nonteaching hospitals and the level of the payment varies based in part on the applicable IME adjustment factor. The IME adjustment factor is calculated using a hospital's ratio of residents to beds. As in the May 19, 2003 proposed rule (68 FR 45415), we are combining in this final rule our discussion of changes to the policies for counting beds and patient days in relation to the regulations at §§ 412.105(b) and 412.106(a)(1)(ii) because the underlying concepts are similar, and we believe they generally should be interpreted in a consistent manner for both purposes.

Due to the number and nature of the public comments received on the proposals regarding the counting of available beds and patient days in the May 19, 2003 proposed rule, we did not respond to the public comments on some of the proposals in the final rule for FY 2004 (August 1, 2003 final rule (68 FR 45415)). We indicated in that final rule that we would address public comments regarding unoccupied beds, observation beds, dual-eligible days, and M+C days in a separate document. In the May 18, 2004 proposed rule, we indicated that we planned to address the comments in this IPPS final rule for FY 2005.

a. Provisions of the FY 2004 Proposed Rule, Responses to Public Comments, and Provisions of the FY 2005 Final Rule

In the May 19, 2003, FY 2004 IPPS proposed rule (68 FR 27205), we discussed proposed changes to our policies for counting beds and patient days in relation to the IME and DSH adjustments. Specifically, we proposed to amend § 412.105(b) and § 412.106(a)(1)(ii) as they pertain to the counting of beds and patients days for determination of the IME adjustment and DSH payment adjustment. We proposed to amend § 412.105(b) to indicate that the bed days in a unit that is unoccupied by patients receiving a level of care that would be generally payable under the IPPS (IPPS level of care) for the 3 preceding months are to be excluded from the available bed day count for the current month. In addition, we proposed that the beds in a unit that was occupied by a patient(s) receiving an IPPS level of care during the 3 preceding months should be counted unless they could not be made available for patient occupancy within 24 hours, or they are used to provide outpatient observation services or swing-bed skilled nursing care (68 FR 27204). Regarding nonacute care beds and days, we proposed to revise § 412.105(b) to clarify that beds in units or wards established or used to provide a level of care that is not consistent with what would be payable under the IPPS cannot be counted. We also proposed to revise the DSH regulations at § 412.106(a)(1)(ii) to clarify that the number of patient days includes only those days attributable to patients that receive care in units or wards that furnish a level of care that would generally be payable under the IPPS (68 FR 27205).

In the May 19, 2003 proposed rule, we proposed to revise our regulations to specify our policy that observation and skilled nursing swing-bed days are to be excluded from the counts of both available beds and patient days, unless a patient treated in an observation bed is ultimately admitted, in which case the bed and patient days would be included in those counts.

The final categories of patient days addressed in the proposed rule of May 19, 2003 were the dual-eligible patient days and the Medicare+Choice (M+C) days. We proposed in the rule that the days of patients who are dually-eligible, (that is, Medicare beneficiaries who are also eligible for Medicaid) and have exhausted their Medicare Part A coverage will not be included in the Medicare fraction. Instead, we proposed that these days should be included in the Medicaid fraction of the DSH calculation. In regard to M+C days, we proposed that once a beneficiary elects Medicare Part C, those patient days attributable to the beneficiary should not be included in the Medicare fraction of the DSH patient percentage. The patient days should be included in the count of total patient days in the denominator of the Medicaid fraction, and if the M+C beneficiary is also eligible for Medicaid, the patient's days would be included in the numerator of the Medicaid fraction as well.

In the August 1, 2003 final rule (68 FR 45346), we finalized some of these proposals. For the proposals we did not finalize, we indicated that we would address the comments in a separate document. The proposals for nonacute care beds and days, observation and swing-bed days, LDP beds and days, and days for 1115 demonstration projects were finalized in the August 1, 2003 final rule. However, due to the large number of comments we received on our proposals for unoccupied beds, observation beds for patients ultimately admitted as inpatients, dual-eligible patient days, and M+C days, we decided to address the comments on these proposed policies in a separate final document. In this IPPS final rule, we are addressing those comments, as well as some additional comments that we received in response to the May 18, 2004 proposed rule, and finalizing the policies.

As we did in the IPPS proposed rule of May 19, 2003 and the August 1, 2003 IPPS final rule, we are combining our discussion of policies for counting beds and patient days in relation to the calculations at §§ 412.105(b) and 412.106(a)(1) which relate to the IME and DSH payment adjustments, because the underlying concepts are similar, and we believe they should generally be interpreted in a consistent manner for both purposes. Specifically, we clarified that beds and patient days that are counted for these purposes should be limited to beds or patient days in hospital units or wards that would be directly included in determining the allowable costs of inpatient hospital care payable under the IPPS on the Medicare cost reports. As a preliminary matter, beds, and patient days associated with these beds, that are located in units or wards that are excluded from the IPPS (for example, psychiatric or rehabilitation units, or outpatient areas), and thus from the determination of allowable costs of inpatient hospital care under the IPPS on the Medicare cost report, are not to be counted for purposes of §§ 412.105(b) and 412.106(a)(1)(ii).

The remainder of this discussion pertains to beds and patient days in units or wards that are not excluded from the IPPS and for which costs are included in determining the allowable costs of inpatient hospital care under the IPPS on the Medicare cost report.

As we noted in our FY 2004 proposed and final rules, our policies on counting beds are applied consistently for both IME and DSH although the incentives for hospitals can be different for IME and DSH. For purposes of IME, teaching hospitals have an incentive to minimize their number of available beds in order to increase the resident-to-bed ratio and maximize the IME adjustment. On the other hand, for DSH purposes, urban hospitals with under 100 beds and rural hospitals with under 500 beds may have an incentive to increase their bed count in order to qualify for the higher DSH payments for urban hospitals with over 100 beds or rural hospitals with over 500 beds (although we recognize that, as a result of section 402 of Public Law 108–173, the DSH payment adjustment no longer varies based upon the hospital's number of beds effective for discharges on or after April 1, 2004). However, under section 402 of Public Law 108–173, urban hospitals under 100 beds and rural hospitals under 500 beds are subject to a 12 percent cap on the DSH payment adjustment.

While some of the topics discussed below pertain only to counting available beds (unoccupied beds) and some only to counting patient days (dual-eligible days and Medicare+Choice days), other topics are applicable to both bed-counting and day-counting policies (observation beds and days and swing-beds and days). Therefore, for ease of discussion, we have combined all topics pertaining to counting available beds and patient days together in the following discussion.

We received numerous comments on our May 19, 2003 and May 18, 2004 proposals and our responses and final policies are included in this preamble.

1. Unoccupied Beds

The existing regulations for counting hospital beds for IME and DSH are at § 412.105(b). The bed count is based on total available bed days during the hospital's cost reporting period, divided by the number of days in the cost reporting period. The regulations specify certain types of beds to be excluded from this count (for example, beds or bassinets in the healthy newborn nursery, custodial care beds, and beds in excluded distinct part hospital units).

Further instructions for counting beds are detailed in section 2405.3, Part I, of the Medicare Provider Reimbursement Manual (PRM). That section states that a bed must be permanently maintained for lodging inpatients and it must be available for use and housed in patient rooms or wards. Thus, beds in a completely or partially closed wing of the facility are considered available only if the hospital can put the beds into use when they are needed.

Currently, if a bed can be staffed for inpatient care either by nurses on staff or from a nurse registry within 24 to 48 hours, the unoccupied bed is determined available.[6] In most cases, it is a straightforward matter to determine whether unoccupied beds can be staffed within this timeframe because they are located in a unit that is otherwise staffed and occupied (an unoccupied bed is available for patient care but it is not occupied by a patient on a particular day). The determination is not as simple in situations where a room in an otherwise occupied unit has been altered for other purposes, such as for a staff lounge or for storage.

Beds in unoccupied rooms or wards are to be excluded from the bed count if the associated costs are excluded from depreciable plant assets because the area is not available for patient use.[7] However, issues continue to arise with regard to how to treat entire units or even entire floors that are unoccupied over a period of time. For example, in a Provider Reimbursement Review Board (PRRB) decision, the hospital acknowledged that an entire floor was temporarily unoccupied for approximately 2 years. Rooms on the floor were used for office space, storage, and outpatient services. The PRRB held that current rules allowed these beds to be counted. Specifically, the PRRB found the beds could reasonably be made ready for inpatient use within 24 to 48 hours, the rooms were counted on the hospital's cost report as depreciable plant assets available for patient care, and the hospital could adequately provide patient care in the beds using staff nurses or nurses from a nurse registry. Upon review, the Administrator also ultimately upheld this decision based on existing policies and instructions.

We do not believe that an accurate bed count should include beds that are essentially hypothetical in nature; for example, when the beds are on a floor that is not used for inpatient care throughout the entire cost reporting period (and, indeed, may have been used for other purposes). Followed to the extreme, a hospital could count every bed in its facility, even if it had no intention of ever using a bed for inpatient care, as long as it would be theoretically possible to place an inpatient in the bed. We do not believe such a result would accurately reflect a hospital's capacity to provide inpatient services. Although teaching hospitals have an incentive to minimize the bed count for IME payment purposes, some DSH hospitals have had an incentive to maximize the bed count for the same reason. Our current policy is intended to reflect a hospital's available bed count as accurately as possible, achieving a balance between capturing short-term shifts in occupancy and long-term changes in capacity. Therefore, we believe further clarification and refinement of our policies relating to counting available beds is necessary.

In the FY 2003 IPPS proposed rule published on May 9, 2002 (67 FR 31462), we proposed that, if a hospital's reported bed count results in an occupancy rate (average daily census of patients divided by the number of beds) below 35 percent, the applicable bed count, for purposes of establishing the number of available beds for that hospital, would exclude beds that would result in an average annual occupancy rate below 35 percent. However, at the time the FY 2003 IPPS final rule was published on August 1, 2002 (67 FR 50060), we decided not to proceed with the proposed changes as final and to reconsider the issue as part of a future comprehensive analysis of our bed and patient day counting policies.

In the May 19, 2003 proposed rule, we proposed to determine whether beds in a unit or ward are available based upon whether the unit or ward was used to provide patient care of a level generally payable under the IPPS (''IPPS level of care'') at any time during the 3 preceding months, rather than propose to establish a minimum standard occupancy rate. If any of the beds in the unit or ward were used to provide an IPPS level of care at any time during the preceding 3 months, all of the beds in the unit or ward are considered available and are to be counted for purposes of determining available bed days during the current month. (However, individual bed days may be excluded from that count if the bed is used to provide other services such as observation bed or swing-bed service, as discussed below.) If no patient care of a type generally payable under the IPPS was provided in that unit or ward during the 3 preceding months, the beds in the unit or ward are to be excluded from the determination of available bed days during the current month (proposed §§ 412.105(b)(2) and 412.106(a)(1)(ii)(C)).

Comment: Many commenters objected to our proposals to amend our policy for counting unoccupied beds. Some commenters believed we should not apply an occupancy test, regardless of how long a hospital's beds sit idle. Other commenters believed the proposed 3-month test to show that a unit is unoccupied was unreasonable, and suggested that our policy should recognize small-scale, short-term renovations that take individual rooms out of service for less than 3 months.

A few commenters recommended the threshold for excluding an unoccupied unit should be reduced from 3 months to 1 month. Several commenters requested tangible evidence to support a 3-month threshold for excluding unoccupied beds.

Response: We believe that our proposal to amend our policy for counting unoccupied beds would provide a clear standard for both hospitals and fiscal intermediaries to use to determine whether otherwise unoccupied beds are to be counted. We note that if the required time period for excluding the unoccupied beds were set too low, hospitals could potentially manipulate their available bed count by not admitting any patients to a unit or ward during low occupancy periods, thereby distorting the measure of hospital beds. We believe that, 3 months (one quarter of a hospital's fiscal year), represents a reasonable standard for determining whether beds in a unit or ward are not being used to provide patient care and should be excluded from the hospital's available bed count.

Comment: One commenter stated that we should include the beds in the determination of the available bed count if they are located in an area that is included in the determination of allowable costs on the Medicare cost report. One commenter suggested that a policy that does not recognize such beds for DSH payment purposes because they do not meet an occupancy standard contradicts the recognized allowable nature of the costs associated with those beds. This commenter also requested that we apply the same 24-hour availability standard, regardless of the reason a bed is unoccupied. The commenter expressed the opinion that, whether a bed is associated with an altered patient room or merely a bed in a unit housing unoccupied beds, if the bed can be staffed and readied to house

[6] This policy was first articulated in correspondence to the Blue Cross and Blue Shield Association (BCBSA) on November 2, 1988, and published in BCBSA's Administrative Bulletin No.1841, 88.01, on November 18, 1988.
