FOR FURTHER INFORMATION CONTACT: Ruth Johnson, Amy Sloan or Patrick Opay (301)713–2289.

SUPPLEMENTARY INFORMATION: The subject amendments are requested under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216), the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226).

Permit No. 782–1702 issued to the NMML authorizes the permit holder to capture harbor seals (*Phoca vitulina*), California sea lions (*Zalophus californianus*), and northern elephant seals (*Mirounga angustirostris*) and to conduct the following activities: tag and brand for long-term identification of individuals and to obtain information on reproductive success, survival and longevity; blood sample for disease screening; blubber biopsy for contaminant analysis; tissue sample for genetic and fatty acid analyses; and attach electronic instruments to document movements, activity and foraging patterns. The Permit also authorizes up to five (5) accidental mortalities of California sea lions each year.

The permit holder has requested an amendment to the permit to increase the number of accidental mortalities of California sea lions from five to seven for the year spanning July 1, 2004 to June 30, 2005. The Permit expires June 30, 2008. During the 2004 summer field season California sea lions captured on a floating trap in the East Mooring Basin at Astoria, Oregon, were left unattended in the trap. When researchers returned to the capture site, five of the seven captured animals were dead or dying. The two remaining live animals were released. Apparently fighting among the animals caught in the trap resulted in the five deaths. The researchers maintain that this was unusual behavior, but to prevent this type of accident from occurring in the future the following mitigation measures will be included in the permit amendment,

if issued: "On all future captures at least one person must remain in an attending vessel near the trap until all animals can be handled and released into the wild. Should there be future events of uncontrollable highly aggressive fighting among animals in the trap, the animals must be released immediately to preclude mortality of individual animals."

Permit 1409 issued to Karen G. Holloway-Adkins authorizes take of 100 green sea turtles (*Chelonia mydas*) and 10 loggerhead sea turtles (*Caretta caretta*) annually for scientific research. Turtles are captured, handled, measured, weighed, flipper and PIT tagged, and lavaged. The purpose of the research is to characterize turtle aggregations using the nearshore reefs in central Brevard County, FL as developmental habitat, and to provide information on turtle size class, foraging habitats, and movements.

The permit holder has requested a modification to the permit to allow sonic tags to be attached to 15 green sea turtles, a subset of the turtles already authorized to be taken, to determine distribution and seasonal movements of turtles in nearshore reefs in Brevard County.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of the marine mammal application to the Marine Mammal Commission and its Committee of Scientific Advisors.
