SUPPLEMENTARY INFORMATION:

Species Covered in This Notice

The following listed species (evolutionarily significant unit) is covered in this notice:

Chinook salmon (*O. tshawytscha*): threatened naturally produced and artificially propagated Puget Sound (PS).

Authority

Scientific research permits are issued in accordance with Section 10(a)(1)(A) of the ESA (16 U.S.C. 1531 *et seq.*) and regulations governing listed fish and wildlife permits (50 CFR Parts 222–226). NMFS issues permits based on findings that such permits: (1) Are applied for in good faith; (2) if granted and exercised, would not operate to the disadvantage of the listed species that are the subject of the permit; and (3) are consistent with the purposes and policy of section 2 of the ESA. The authority to take listed species is subject to conditions set forth in the permits.

Anyone requesting a hearing on an application listed in this notice should set out the specific reasons why a hearing on that application would be appropriate (see **ADDRESSES**). The holding of such a hearing is at the discretion of the Assistant Administrator for Fisheries, NOAA.

Application Received

Permit 1499

The Battelle Marine Sciences Laboratory (BMSL) is requesting a 1-year research permit to annually capture, handle, and release adult and juvenile PS chinook salmon. The research would take place in Puget Sound, Washington. The purpose of the research is to develop a more comprehensive understanding of salmon behavior and movement near large overwater structures. The BMSL intends to determine juvenile fish movement, residence time, activity pattern, and migration routes along unshaded shoreline and adjacent to and under ferry structures. The research would benefit the fish by determining fish behavior near ferry terminals and providing information to be used in reducing the impact the structures have on listed fish. The BMSL proposes to capture the fish using enclosure nets. Most of the captured fish would be anesthetized, identified, counted, checked for tags and marks, allowed to

recover, and released. A portion of the juvenile salmonids would be measured, implanted with acoustic tags, released, and tracked remotely. The BMSL does not intend to kill any of the fish being captured, but a small percentage may die as an unintended result of the activities.

This notice is provided pursuant to section 10(c) of the ESA. NMFS will evaluate the application, associated documents, and comments submitted to determine whether the application meets the requirements of section 10(a) of the ESA and Federal regulations. The final permit decisions will not be made until after the end of the 30-day comment period. NMFS will publish notice of its final action in the **Federal Register**.
