Title: Hazardous Waste Generator Standards (Renewal).

Abstract: Under the Resource Conservation and Recovery Act (RCRA), as amended, Congress directed the U.S. Environmental Protection Agency to implement a comprehensive program for the safe management of hazardous waste. The core of the national waste management program is the regulation of hazardous waste from generation to transport to treatment and eventual

disposal, or from "cradle to grave." Section 3001(d) of RCRA requires EPA to develop standards for small quantity generators. Section 3002 of RCRA among other things states that EPA shall establish requirements for hazardous waste generators regarding recordkeeping practices. Section 3002 also requires EPA to establish standards on appropriate use of containers by generators.

Finally, Section 3017 of RCRA specifies requirements for individuals exporting hazardous waste from the United States, including a notification of the intent to export, and an annual report summarizing the types, quantities, frequency, and ultimate destination of all exported hazardous waste.

This ICR addresses the following categories of informational requirements in part 262: Pre-transport requirements for both large (LQG) and small (SQG) quantity generators; air emission standards requirements for LQGs (referenced in 40 CFR part 265, subparts I and J); recordkeeping and reporting requirements for LQGs and SQGs; and export requirements for LQGs and SQGs (*i.e.*, notification of intent to export and annual reporting).

This collection of information is necessary to help generators and EPA: (1) Identify and understand the waste streams being generated and the hazards associated with them; (2) determine whether employees have acquired the necessary expertise to perform their jobs; and (3) determine whether LQGs have developed adequate procedures to respond to unplanned sudden or non-sudden releases of hazardous waste or hazardous constituents to air, soil, or surface water. This information is also needed to help EPA determine whether tank systems are operated in a manner that is fully protective of human health and the environment and to ensure that releases to the environment are managed quickly and efficiently.

Additionally, this information contributes to EPA's goal of preventing contamination of the environment from hazardous waste accumulation practices, including contamination from equipment leaks and process vents. Export information is needed to ensure that: (1) Foreign governments consent to U.S. exported wastes; (2) exported waste is actually managed at facilities listed in the original notifications; and (3) documents are available for compliance audits and enforcement actions. In general, these requirements contribute to EPA's goal of preventing contamination of the environment.

An agency may not conduct or sponsor, and a person is not required to

respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in 40 CFR are listed in 40 CFR part 9 and are identified on the form and/or instrument, if applicable.

Burden Statement: The average public reporting and recordkeeping burden for LQGs under this collection of information is estimated to be 13.18 hours (averaged across all LQG respondents). The average public reporting and recordkeeping burden for SQGs under this collection of information is estimated to be 1.22 hours (averaged across all SQG respondents). Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Hazardous Waste generators; Hazardous Waste transporters who co-mingle waste with different Department of Transportation descriptions; and Importers/Exporters of hazardous waste.

Estimated Number of Respondents: 124,382.

Frequency of Response: Occasionally and biennially.

Estimated Total Annual Hour Burden: 455,387.

Estimated Total Annual Cost: \$28,532,136, includes \$22,770 in annualized capital costs, \$33,524 in O&M costs, and \$28,475,842 in Respondent Labor costs.

Changes in the Estimates: There is a decrease of 29,749 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This decrease is a result due primarily to a decrease in the universe of facilities affected by the hazardous waste generator rules.

Dated: October 27, 2004.

Acting Director, Collection Strategies
