

vessels) for incorporation into the new regulations regarding the inspection of towing vessels? If so, which regulations or standards should be incorporated into these new regulations?

(2) Title 46, United States Code, specifies the items covered with regard to inspected vessels including lifesaving, firefighting, hull, propulsion equipment, machinery and vessel equipment. However, the legislation that added towing vessels to the list of inspected vessels, authorized that the Coast Guard may prescribe different standards for towing vessels than for other types of inspected vessels. What, if any, different standards should be considered with regard to inspected towing vessel requirements from other inspected vessels?

(3) Towing vessels vary widely in terms of size, horsepower, areas of operation, and type of operation. Under what circumstances, if any, should a towing vessel be exempt from the requirements as an inspected vessel?

(4) Should existing towing vessels be given time to implement requirements, be "grandfathered" altogether from them, or should this practice vary from requirement to requirement?

(5) Should existing towing vessels be treated differently from towing vessels yet to be built?

(6) The same act that requires inspection of towing vessels authorizes the Coast Guard to develop a safety management system appropriate for the towing vessels. If such a system is developed, should its use be required for all inspected towing vessels?

(7) Examples of existing safety management systems include the international safety management (ISM) code and the American Waterways Operators Responsible Carrier Program. If a safety management system is used, what elements should be included in such a system?
