Background and Purpose

In order to facilitate safe navigation
and to prevent disasters, collisions, and
wrecks of vessels, the Coast Guard may
establish, maintain, and operate aids to
navigation required to serve the needs of
the Armed Forces or of the commerce of
the United States (14 U.S.C. 81). It is
through its Waterways Analysis and
Management System (WAMS) process,
that the Coast Guard manages aids to
navigation in navigable waters of the
U.S. WAMS studies, therefore, are
intended to ensure that existing aids to
navigation systems support safe marine
navigation and the effective and
efficient flow of waterborne commerce.
A key aspect of a WAMS study is the
consideration of the needs and input of
waterway users (such as commercial
interests, pilots, port authorities,
military commands and other Federal
agencies, State and local agencies,
recreational boating organizations, and
other interested groups) and non-user
sources (such as waterfront facilities,
homeowners or community
associations, and political groups). Such
valued input to these important studies
is highly encouraged and should reflect
