

Inclined separation panel testing would take place aboard four different fishing vessels totaling 92, 1-hour trawls conducted over 23 days at sea. Fishing activities would take place within 30-minute squares 123, 124, 138, 139, 140, 146, and 147, outside of year-round closure areas. All legal catch would be landed and sold, consistent with the current daily and trip possession and landing limits. Undersized fish would not be retained at any time. The participating vessels would be required to report all landings in their Vessel Trip Reports.

The main species expected to be caught under this EFP are: 770 lb (350 kg) of Atlantic cod; 618 lb (281 kg) of monkfish; 270 lb (123 kg) of American plaice; 44 lb (20 kg) of haddock; 44 lb (20 kg) of winter flounder; 44 lb (20 kg) of witch flounder; 44 lb (20 kg) of yellowtail flounder; 44 lb (20 kg) of summer flounder; 2,640 lb (1,198 kg) of skate; 440 lb (200 kg) of crab; 440 lb (200 kg) of lobster; and 110 lb (50 kg) of sculpin. The applicant could request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions could be granted without further notice if they are deemed essential to facilitate completion of the proposed research and would result in only a minimal change in the scope or impact of the initially approved EFP request. The EFP could be made effective following publication of the EFP application in the **Federal Register**, with a 15-day public comment period.

Data collected and maintained is used to assess the medical and dental deployability of Service members for the purposes of pre- and post-deployment and any changes during and after deployment.

Data collected and maintained in the EMR system is used to perform disease management and the prevention of exacerbations and complications using evidence-based practice guidelines and patient empowerment strategies. Data collected and maintained in the EMR system is used in proactive health intervention activities for the active duty and non-active duty beneficiary population. Data collected and maintained is used to capture data on hearing loss and occupational exposures, to perform noise exposure surveillance and injury referrals to assess auditory readiness.
