Department of the Army; Corps of Engineers

Availability of Draft Integrated Feasibility Report & Environmental Impact Statement for the Flood Damage Reduction Project, Bloomsburg, PA

AGENCY: Department of the Army, U.S. Army Corps of Engineers, DOD.

ACTION: Notice of availability.

SUMMARY: In accordance with the requirements of the National Environmental Policy Act (NEPA), the U.S. Army Corps of Engineers (USACE), Baltimore District has prepared a Draft Integrated Feasibility Report & Environmental Impact Statement (EIS) for the flood damage reduction project for the Town of Bloomsburg, in Columbia County, PA. The integrated report investigates the potential environmental effects of an array of alternative plans based on reducing flood damages in Bloomsburg. The preferred alternative includes 16,555 linear feet of levee/floodwall systems with fourteen drainage structures, and nine closure structures, six of which incorporate limited road raisings. We are making the integrated report and EIS available to the public for a 45-day review and comment period.

DATES: Comments need to be received on or before June 27, 2005, to ensure consideration in final plan development. A public meeting on the flood damage reduction measures presented in the integrated report and EIS will be held on Thursday, June 16, 2005 beginning at 7 p.m.

ADDRESSES: Send written comments concerning this proposed project to U.S. Army Corps of Engineers, Baltimore District, Attn: Mr. Jeff Trulick, CENAB-PL-P, P.O. Box 1715, Baltimore, MD 21203-1715. Submit electronic comments to jeff.trulick@usace.army.mil. The public meeting will be held at the Bloomsburg Fire Department Banquet Hall at 911 South Market Street, in Bloomsburg, PA.

FOR FURTHER INFORMATION CONTACT: Mr. Jeff Trulick, Study Manager, (410) 962-6715 or (800) 295-1610.

SUPPLEMENTARY INFORMATION: The Town of Bloomsburg, PA is located in Columbia County within the Middle Susquehanna River sub-basin. The Susquehanna River forms the Town's southern boundary, and Fishing Creek forms the northern and western boundary.

The primary water resources problem along the Susquehanna River at Bloomsburg is recurrent flooding. Recurrent flooding that occurs in the Bloomsburg study area is a result of the morphology of the Susquehanna River and the regional topography. When the Susquehanna River and a local tributary, Fishing Creek, simultaneously rise above flood stage, overbank flooding can cover up to 33 percent of the landmass within the Town of Bloomsburg's boundaries.

Flood damages are attributable to overbank flooding from the Susquehanna River and to flooding along Fishing Creek. Past flood events have resulted in extensive damages to structures and their contents and have threatened public safety. The Bloomsburg study area includes approximately 525 residential structures and 75 businesses.

The recommended flood damage reduction plan is the National Economic Development (NED) Plan with a Tropical Storm Agnes (440-year) level of protection from Susquehanna river flooding, and 100-year level of protection from Fishing Creek flooding. The recommended plan consists of 16,555 linear feet of levee/floodwall systems with fourteen drainage structures, and nine closure structures, six of which incorporate limited road raisings. The alignment of the line of protection was refined based on physical, environmental, and economic criteria.

The project consists of a system of earthen levees, mechanically stabilized earth (MSE) floodwalls, concrete floodwalls, railroad and road closure structures and roadway relocations to provide ramps over the line of protection. Earthen levees are proposed for the majority of the line of protection, though MSE walls will be required along portions of Fishing Creek in both Bloomsburg and Fernville and a concrete floodwall (H-Pile wall) will be required along portions of Fishing Creek in Bloomsburg. Limited riprap will be used to protect the steep banks of Fishing Creek from bank crest to below the stream invert along the lower project reaches along Fishing Creek.
