Title: Certification in Lieu of Chloroform Minimum Monitoring Requirements for Direct and Indirect Discharging Mills in the Bleached Papergrade Kraft and Soda Subcategory of the Pulp, Paper and Paperboard Point Source Category (Renewal).

Abstract: The Environmental Protection Agency (EPA) imposed minimum monitoring requirements on bleached papergrade kraft and soda (subpart B) mills under 40 CFR part 430 as part of the final Cluster Rules promulgated on April 15, 1998. The provisions required direct and indirect discharging subpart B mills to monitor their effluent for certain pollutants, including chloroform, at specified frequencies. Subsequently, EPA has promulgated an amendment to the Cluster Rules that allows direct and indirect discharging subpart B mills to demonstrate compliance with applicable chloroform limitations and standards under 40 CFR part 430 in lieu of monitoring at a fiber line required by 40 CFR 430.02 by certifying (1) that the fiber line is not using elemental chlorine or hypochlorite as bleaching agents and (2) that it also maintains certain process and operating conditions identified during the initial compliance demonstration period of not less than two years, where the facility must monitor for chloroform at the minimum

frequency required by 40 CFR 430.02, at a minimum, to demonstrate compliance with applicable chloroform limitations. These mills must submit a report summarizing the results of the initial compliance demonstration period and subsequently submit periodic certification reports confirming that the participating fiber line continues to operate within the range of process and operating conditions documented during the initial compliance demonstration period.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in 40 CFR are listed in 40 CFR part 9 and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average six hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Operations that chemically pulp wood using kraft or soda methods to produce bleached papergrade pulp, paperboard, coarse paper, tissue paper, fine paper, and/or paperboard.

Estimated Number of Respondents: 80.

Frequency of Response: not less than annually for direct dischargers and less than twice annually for indirect dischargers.

Estimated Total Annual Hour Burden: 480.

Estimated Total Reduction in Annual Cost: \$31,000, includes \$0 annualized capital or O&M costs.

Changes in the Estimates: There is no change in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens.

Dated: May 18, 2005.

Title: Protection of Stratospheric Ozone: Request for Applications for

Critical Use Exemption from the Phaseout of Methyl Bromide (Renewal).

Abstract: With this Information Collection Request (ICR), EPA's Office of Air and Radiation (OAR) and Office of Pollution Prevention and Toxic Substances (OPPTS), are continuing the existing request for critical use exemption applications for methyl bromide, under the Clean Air Act (CAA) and in accordance with U.S. obligations under the Montreal Protocol on Substances that Deplete the Ozone Layer (Protocol). This information is collected so that the U.S. government can submit a technically valid and robust methyl bromide critical use exemption Nomination to the Ozone Secretariat of the United Nations Environment Programme on an annual basis. Since 2002, this information has primarily been collected through agricultural consortia, and also through individuals who have submitted applications to EPA. If an applicant indicates that the application contains Confidential Business Information (CBI), that information will be treated as such by EPA. Responses to the collection of information are required for users to obtain a critical use exemption benefit. EPA may consider a different format for the application in conjunction with this Information Collection Request Renewal, in order to reduce Agency burden during the compilation of the annual Nomination.

EPA received one comment on the Notice published on February 11, 2005 (70 FR 7254) requesting the Agency to not exempt any methyl bromide for critical uses and opposing use of methyl bromide. The CAA allows the Agency to create an exemption for critical uses to the extent consistent with the Protocol. The Protocol authorizes exemptions to the extent decided by the Parties.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in 40 CFR are listed in 40 CFR part 9 and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 50 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying
