Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Written comments should be received within 60 days of this notice.

*Background and Brief Description:* Differences in incidence of invasive cervical cancer exist among some minority populations. Among women older than 29 years cervical cancer incidence for Hispanic women was approximately twice that for non-Hispanic women. Papanicolaou (Pap) tests can prevent cervical cancer. Nevertheless, recent studies suggest that Hispanic women in the United States and Puerto Rico under-use cervical cancer screening tests. Additionally, survey data have shown that Hispanic women in the international border region of the United States under-utilize these Pap tests compared to non-Hispanic women in the same region. The need exists to increase Pap test screening among Hispanic women living in the United States.

The purpose of this project is to refine a multi-component behavioral intervention delivered by lay health workers to increase cervical cancer screening among U.S. and foreign-born Mexican women. The proposed study will use personal interviews and workshops. There will be no cost to respondents other than their time.

*Estimate of Annualized Burden Hours:*

**Proposed Data Collections Submitted for Public Comment and Recommendations**

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under

review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 371-5983 or send an e-mail to [omb@cdc.gov](mailto:omb@cdc.gov). Send written comments to CDC Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503 or by fax to (202) 395-6974. Written comments should be received within 30 days of this notice.

**Proposed Project**

State Medicaid Survey—New—National Center for Chronic Disease Prevention and Control (NCCDPHP), Centers for Disease Control and Prevention (CDC).

**Background and Brief Description**

The proposed 2004 State Medicaid Survey will assess State Medicaid Programs to determine the extent of coverage for tobacco-dependence treatment. Tobacco use is the leading preventable cause of death in the United States. One of the 2010 National Health Objectives is to increase insurance coverage of evidence-based treatment for nicotine dependence (*i.e.*, Food and Drug Administration [FDA]-approved pharmacotherapies and total coverage of behavioral therapies in Medicaid programs) from 36 states to all 50 states and the District of Columbia. To increase both the use of treatment by smokers attempting to quit and the number of smokers who quit successfully, the Guide to Community Preventive Services recommends reducing the out-of-pocket cost of effective tobacco-dependence treatments (*i.e.*, individual, group and telephone counseling and FDA-approved pharmacotherapies). The 2000 Public Health Service (PHS) Clinical Practice Guideline supports expanded insurance coverage for tobacco-dependence treatment.

In 2000, approximately 32 million low-income persons in the United States

received their health insurance coverage through federally funded State Medicaid programs; approximately 11.5 million (36%) of these persons smoked. The amount and type of coverage for tobacco-dependence treatment offered by Medicaid has been reported for 1998 and annually from 2000–2003. In 2002 and 2003, surveys were funded by the Robert Wood Johnson Foundation (RWJF). RWJF will no longer be tracking this coverage; therefore, CDC proposes to fund the survey. CDC proposed to fund the survey from 2004–2010. The survey will allow CDC to continue to measure progress of State Medicaid Programs toward the 2010 National Health Objective and document changes in the provision of coverage toward reaching the Healthy People 2010 goal.

The objectives of the project are as follows:

- Conduct a study of all 50 states and the District of Columbia Medicaid Programs to determine coverage for tobacco dependence treatment (counseling and FDA-approved pharmacotherapies) and assess compliance with the PHS recommendations.
- Analyze and publish the data.

Medicaid recipients have approximately 50% greater smoking prevalence than the overall U.S. adult population, and they are disproportionately affected by tobacco-related disease and disability. Substantial action to improve coverage will be needed if the United States is to

achieve the 2010 National Health Objective of 12% smoking prevalence among adults.

This project will provide an opportunity to assess the extent of coverage for tobacco-dependence treatment under Medicaid. In 2002, 36 states provided coverage for some FDA approved medications; however, only 10 states provided some form of coverage for counseling and only 2 states provided comprehensive coverage, counseling and medication. Fifteen states provided no coverage. This project will be conducted with a mailed request to State Medicaid directors to identify a knowledgeable person within their system to respond to the survey. The survey will be mailed to the identified individuals.

Respondents will be asked to submit a written copy of their Medicaid coverage policies. If responses are not received, individuals will receive a telephone follow-up. Respondents are mailed the survey that they completed the previous year and asked to make revisions if changes have occurred. If this is being done by the person who completed the survey the previous year, the response burden is reduced. If the questions are not answered or not answered clearly, follow-up is required which takes additional time. All 50 states plus the District of Columbia have reported in the past. There is no cost to respondents except the time to complete the survey. The estimated total burden hours are 26.45.

ESTIMATE OF ANNUALIZED BURDEN TABLE

Respondents	No. of respondents	No. of responses per respondent	Average burden per response (in hrs)
State Medicaid Directors .....	51	1	2/60
State Medicaid Programs with Minimal Response .....	35	1	15/60
State Medicaid Programs with Maximum Response .....	16	1	1

Dated: May 31, 2005.
