* as defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

Australia - SM-2 Block IIIA Standard Missiles

The Government of Australia has requested a possible sale of up to 175 SM-2 Block IIIA Standard missiles, up to 30 Telemetry missiles, up to 2 SM-2 Block IIIA Inert Operational missiles, canisters, containers, spare and repair parts, supply support, personnel training and training equipment, publications and technical data, U.S. Government and contractor technical assistance and other related elements of logistics support. The estimated cost is \$315 million.

Australia is an important ally in the Western Pacific. The strategic location of this political and economic power significantly contributes to ensuring peace and economic stability in the region. It is vital to the U.S. national interest to assist the Royal Australian Navy (RAN) in modernizing its surface combatant fleet so as to maintain a strong and ready self-defense capability and contribute to an acceptable military balance in the area. This procurement also aids in maintaining the U.S. Navy (USN) production base and will improve interoperability between RAN and USN forces. This proposed sale is consistent with those objectives, and facilitates burden sharing with our allies.

The proposed sale will provide Australia continued anti-aircraft defense capabilities for its Navy. The RAN intends to use the SM-2 missiles on its destroyer class surface ships for self-defense against air and cruise missile threats. Australia, which already has SM-1 Standard missiles in its inventory, will have no difficulty absorbing these SM-2 Standard missiles.

The proposed sale of this equipment and support will not affect the basic military balance in the region.

The principle contractors will be: Raytheon Systems Company of Tucson, Arizona and General Dynamics, Scottsdale, Arizona. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will not require the assignment of any additional U.S. Government or contractor representatives to Australia.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 05-22

**Notice of Proposed Issuance of Letter of Offer
Pursuant to Section 36(b)(1)
of the Arms Export Control Act**

**Annex
Item No. vii**

(vii) Sensitivity of Technology:

1. The SM-2 Block IIIA Standard missile is a U.S. Navy surface-launched guided missile and is classified Confidential. It is operationally deployed on cruisers, destroyers, and frigates for use against air and surface threats (aircraft, missiles, and ships). The guidance system employs a continuous-wave or interrupted continuous wave radar link for homing to the target. Steering and roll commands from the adaptive auto pilot system provide flight stability via four aft-mounted control surfaces. Propulsion is provided by a solid propellant, dual thrust rocket motor, which is an integral part of the missile airframe. The target-detecting device uses dual radar systems to optimize warhead lethality against a spectrum of target sizes and speeds. The telemeter unit transmits missile performance data to ground stations to be analyzed for accuracy of missile/target scenario. Certain operation frequencies and performance characteristics are classified Secret.

2. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures or equivalent systems which might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.
