

habitats, historical resources, and archaeological sites of the refuges. To enable the implementation of management activities outlined under Alternative C, the refuge volunteer program would more than double from current levels and refuge staff would be expanded to eleven.

Pelican Island National Wildlife Refuge was established in 1903 by President Roosevelt "as a preserve and breeding ground for native birds" through an unnumbered Executive Order. Located across the Intracoastal Waterway from Sebastian, Florida, in Indian River County in southeastern Florida, the refuge manages over 5,400 acres of estuarine, transitional, and upland habitats supporting 14 federally listed species and 45 state listed species, as well as a wide variety of mammals, birds, reptiles and amphibians, fishes, invertebrates, and plants. Although the refuge exists in an increasingly developed landscape, it supports key fish spawning sites, a globally important juvenile sea turtle habitat, and important bird rookeries. Given its location in a transitional zone between subtropical and temperate climates, refuge supports highly diverse resident and migratory species. Over 600 wildlife species have been confirmed on the refuge with hundreds more expected to occur with more extensive surveys. Over 130 species of birds, over 200 species of fish, and 250 species of plants have been confirmed on the refuge.
