

assessment of the expected impacts of the use of herbicides, in addition to other vegetation treatment methods (fire, mechanical, manual, and biological) on up to approximately 5,030,000 acres of public lands per year. Together, these documents will:

- Consider reasonably foreseeable activities, particularly hazardous fuels reduction treatments, emergency stabilization and rehabilitation efforts, noxious weed, and invasive terrestrial plant species management.
- Address human health and ecological risk for proposed use of chemical herbicides on public lands.
- Provide a cumulative impact analysis of the use of chemical herbicides in conjunction with other treatment methods.

The EIS is neither a land-use plan nor a land-use plan amendment. The EIS and ER will provide a comprehensive programmatic NEPA document and environmental report to allow effective tiering and incorporation by reference of baseline cumulative impact assessment to be used for other new, revised or existing land use and activity level plans that involve vegetation modification or maintenance. This EIS does not affect the status of the herbicide court injunction in Oregon.

The analysis area includes only surface estate public lands administered by 11 BLM state offices: Alaska, Arizona, California, Colorado, Idaho, Montana (Dakotas), New Mexico (Oklahoma/Texas/Nebraska), Nevada, Oregon (Washington), Utah and Wyoming.

Assistant Director, Renewable Resources and Planning.

Diversion-related impacts include the effects of increased diversions from the Bay Delta and associated changes in Reclamation's operation of Central Valley Project (CVP) facilities and DWR's operation of State Water Project (SWP) facilities. Project diversions therefore may directly or indirectly affect the Sacramento River, its tributaries, San Joaquin River, its tributaries, and Delta resources including water supply, fish and aquatic habitat, riparian vegetation and habitat, water quality, recreation, visual and cultural resources. The Draft EIS/EIR also evaluates potential growth-inducing impacts for the CVP and SWP water service areas. An evaluation of cumulative hydrologic and water service area impacts associated with reasonably foreseeable actions is also included.
