OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 532

RIN 3206-AK94

Prevailing Rate Systems; North American Industry Classification System Based Federal Wage System Wage Surveys

AGENCY: Office of Personnel Management.

ACTION: Proposed rule with request for comments.

SUMMARY: The Office of Personnel Management is issuing a proposed rule that would replace the Standard Industrial Classification codes currently used in Federal Wage System (FWS) regulations with the more recent North American Industry Classification System (NAICS) codes, published by the Office of Management and Budget. The purpose of this change is to update the FWS wage survey industry regulations by adopting the new NAICS system.

DATES: We must receive comments on or before December 16, 2005.

ADDRESSES: Send or deliver comments to Donald J. Winstead, Deputy Associate Director for Pay and Performance Policy, Strategic Human Resources Policy Division, Office of Personnel Management, Room 7H31, 1900 E Street, NW., Washington, DC 20415-8200; e-mail pay-performance-policy@opm.gov; or FAX: (202) 606-4264.

FOR FURTHER INFORMATION CONTACT: Madeline Gonzalez, (202) 606-2838; e-mail pay-performance-policy@opm.gov; or FAX: (202) 606-4264.

SUPPLEMENTARY INFORMATION: The goal of the Federal Wage System (FWS) is to pay blue-collar Federal employees according to local prevailing rates. To determine local prevailing rates, the Department of Defense, the lead agency for all regular FWS wage surveys, collects wage data for a prescribed list of industries in each FWS wage area annually. The Office of Personnel

Management (OPM) is responsible for prescribing the required industries to be surveyed and the conditions under which required industrial coverage may be augmented for particular surveys. Under the current regulations, the industries surveyed are defined under the Standard Industrial Classification (SIC) system. The Office of Management and Budget developed the North American Industry Classification System (NAICS) to replace the SIC system. NAICS was developed jointly by the United States, Canada, and Mexico to provide comparability in statistics about business activity across North America.

NAICS groups establishments into industries based on the activities in which they are primarily engaged. It is a comprehensive system covering the entire field of economic activities. NAICS groups the economy into 20 broad sectors and uses a 6-digit coding system to identify particular industries. The first two digits of the code designate the sector, the third digit designates the subsector, the fourth digit designates the industry group, the fifth digit designates the NAICS industry, and the sixth digit designates the national industry.

Because NAICS is now the official industry classification system used in the United States, the Federal Prevailing Rate Advisory Committee (FPRAC), the national labor-management committee responsible for advising OPM on matters concerning the pay of FWS employees, established a Wage Survey Methodology Work Group (Work Group) to study the desirability and feasibility of replacing the SIC codes currently used in FWS regulations with NAICS codes and the effect this change would have on industry coverage for FWS wage surveys. The following sections of title 5, Code of Federal Regulations, list the industries included in the FWS wage surveys by SIC codes:

Section 532.213 Industries included in regular appropriated fund wage surveys.

Section 532.221 Industries included in regular nonappropriated fund surveys.

Section 532.267 Special wage schedules for aircraft, electronic, and optical instrument overhaul and repair positions in the Puerto Rico wage area.

Section 532.279 Special wage schedules for printing positions.

Section 532.285 Special wage schedules for supervisors of negotiated rate Bureau of Reclamation employees.

Section 532.313 Private sector industries.

The Work Group recommended to FPRAC that OPM replace all SIC codes in the FWS regulations with the most closely corresponding NAICS codes. In effect, this would update the FWS wage survey industry regulations by adopting the NAICS system, while making as few changes as possible in the types of industrial establishments that are already included in FWS wage surveys under the SIC system. FPRAC agreed with the Work Group's recommendation, and OPM concurs with FPRAC's recommendation.

Regulatory Flexibility Act

I certify that these regulations would not have a significant economic impact on a substantial number of small entities because they would affect only Federal agencies and employees.

E.O. 12866, Regulatory Review

The Office of Management and Budget has reviewed this proposed rule in accordance with Executive Order 12866.

Airworthiness Directives; McCauley Propeller Systems Models 3A32C406/82NDB-X and D3A32C409/82NDB-X Propellers

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for McCauley Propeller Systems models 3A32C406/82NDB-X and D3A32C409/82NDB-X propellers, installed on Teledyne Continental Motors (TCM) IO-520, TSIO-520, or IO-550 reciprocating engines. These propellers are herein referred to as C406 and C409 propellers, respectively. This proposed AD would require adding an operational revolutions per minute (rpm) restriction on the C406 and C409 propellers, and installing an rpm restriction placard in the cockpit. This proposed AD would also add a 10,000-hour total time-in-service (TIS) life limit for these propellers. This proposed AD would also remove from service any propeller that has 10,000 hours or more total TIS, or that has an unknown total TIS. Also, this proposed AD would require initial and repetitive propeller blade inspections for damage, and repair if necessary. This proposed AD results from testing by the manufacturer that identified stress conditions that affect the fatigue life and damage tolerance of C406 and C409 propellers, when installed on TCM IO-520, TSIO-520, or IO-550 reciprocating engines. We are proposing this AD to prevent blade or

hub failure that could result in separation of a propeller blade and loss of control of the airplane.

DATES: We must receive any comments on this proposed AD by January 17, 2006.

Discussion

McCauley Propeller Systems recently conducted tests to measure vibratory stress on C406 and C409 propellers. The tests identified a high stress condition that reduces the fatigue life and damage tolerance of C406 and C409 propellers when installed on TCM IO-520, TSIO-520, or IO-550 reciprocating engines. This condition, if not corrected, could result in blade or hub failure that could result in separation of a propeller blade and loss of control of the airplane.

Relevant Service Information

We reviewed and approved the technical contents of McCauley Propeller Systems Alert Service Bulletin (ASB) No. ASB248, dated January 17, 2005, that does the following:

- Adds an rpm restriction that states continuous propeller operation between 2,350 rpm and 2,450 rpm at 24 inches Hg and higher manifold pressure is prohibited.

- Installs an rpm restriction placard in the cockpit.

- Adds a 10,000-hour total TIS life limit for C406 and C409 propellers.

- Removes from service any propeller that has 10,000 hours or more total TIS, or that has an unknown total TIS.

- Requires initial and repetitive propeller blade inspections for damage, and repair if necessary.

FAA's Determination and Requirements of the Proposed AD

We evaluated all pertinent information and identified an unsafe condition that is likely to exist or
