

compliance issue that can be resolved using the current regulatory structure.

2. *Ensure the Secure Use and Management of Radioactive Materials:* The requested regulatory amendments would have no impact on the security provisions necessary for the secure use and management of radioactive materials. The petition for rulemaking deals with the taking of protective actions for nursery schools and day care centers by offsite authorities, which is currently required by NRC and FEMA regulations and guidance.

3. *Ensure Openness in Our Regulatory Process:* The requested rulemaking would not enhance openness or public confidence in our regulatory process because the petitioners' requests raise potential issues of compliance with the existing requirements and guidance. The NRC staff does not believe that the contentions identify deficiencies in regulatory requirements. Appendix 4 in NUREG-0654, discusses "special facility populations." Daycare centers and nursery schools fall under the definition of "special facility populations" and as such, state and local governments are currently required to ensure that these populations are included in the offsite emergency response plans. It should be noted, however, that 3000 members of the public co-signed the original petition for rulemaking. Additionally, 410 members of the public signed letters supporting the petition. This amount of public support reinforces the importance of NRC and FEMA's continued commitment to providing protection for the public in the event of an emergency which has always included daycare centers and nursery schools.

4. *Ensure that NRC Actions Are Effective, Efficient, Realistic and Timely:* The proposed revisions would decrease efficiency and effectiveness because current NRC and FEMA regulations and guidance already adequately address the petition requests.

Amending the regulations would require licensees and state and local governments to generate additional and more prescriptive information in their emergency plans, and the NRC and FEMA staffs would need to evaluate the additional information. The additional NRC staff and licensee effort would not improve efficiency or effectiveness. In addition, the NRC resources expended to promulgate the rule and supporting regulatory guidance would be significant with little return value.

5. *Ensure Excellence in Agency Management:* The requested rule would have no effect on the excellence in NRC management, but would increase

licensee and state and local government burden by requiring the generation of additional, unnecessary, and burdensome information with little expected benefit because current NRC and FEMA regulations and guidance already adequately address the petition requests. This rulemaking would add significant burden on a national scale in order to address a potential local compliance issue.

Reason For Denial

The Commission is denying the petition for rulemaking (PRM-50-79) submitted by Mr. Lawrence T. Christian, *et al.* Current NRC requirements and NRC and FEMA guidance, provide reasonable assurance of adequate protection of all members of the public, including children attending daycare centers and nursery schools, in the event of a nuclear power plant incident. Many of the specific requests of the petitioner are either already covered by regulations and/or guidance documents or are inappropriate for inclusion in NRC regulations due to their very prescriptive nature. The Commission does believe, however, that information obtained during the review of the petition does raise questions about local implementation of relevant requirements and guidelines. Accordingly, the NRC staff met with FEMA officials to assure an understanding of this issue for consideration by FEMA as reflected in separate letters to the petitioner and TMI-Alert Chairman, Eric Epstein dated respectively, March 23, 2005 and March 24, 2005.² Copies of those letters are available through the NRC's ADAMS document system and can be located using accession numbers ML050590344 and ML050590357, respectively. The NRC staff will continue to work with FEMA to ensure emergency planning exercises are appropriately focused and provide adequate assurance regarding compliance with NRC and FEMA regulations and guidance.

For these reasons, the Commission denies PRM-50-79.

Dated at Rockville, Maryland, this 13th day of December, 2005.

² FEMA did evaluate a May 3, 2005 Emergency Planning exercise at TMI. NRC understands that during this exercise FEMA reviewed aspects of emergency planning involving nurseries and daycare centers. No deficiencies were identified by FEMA during the exercise. FEMA's final report on the exercise was issued on August 4, 2005.
