

transportation. DOT requires a security threat assessment including fingerprinting and an intelligence and immigration check for the drivers of trucks hauling certain radioactive sources. The Energy Policy Act of 2005 amends section 149 of the Atomic Energy Act to require fingerprinting, for criminal history check purposes, for individuals or entities that are: (1) Licensed or certified to engage in an activity subject to regulation by the Commission; (2) have filed an application for a license or certificate to engage in an activity subject to regulation by the Commission; or (3) have notified the Commission in writing of an intent to file an application for licensing, certification, permitting, or approval of a product or activity subject to regulation by the Commission. The key employees of these entities would be required to be fingerprinted if they have, among other things: (1) Unescorted access to radioactive material or other property subject to regulation by the Commission that the NRC determines to be of such significance to the public health and safety or the common defense and security as to warrant fingerprinting and background checks; or (2) access to Safeguards Information.

Commenters are invited to provide input on inconsistencies in the requirements, any perceived overlaps in the requirements, and any additional measures needed to address perceived gaps in the background check requirements. If commenters provide input for improvements of the programs, they should explain the basis for the recommended measure.

Topic 10

Alternative technologies.

Discussion: EPA and NRC have conducted and/or sponsored research in the area of alternative technologies. Some of the projects are ongoing. As required by the Energy Policy Act of 2005, NRC has recently entered into an arrangement with the National Academy of Sciences to conduct an analysis of alternative technologies. The effort will not be concluded until 2007. Alternative technologies may be available that could perform some or all of the functions performed by devices or processes that employ radiation sources. Use of these alternative technologies could result in the reduction in the number of radiation sources or in the replacement of radiation sources with sources that would pose a lower risk to the public health and safety in the event of an accident or attack involving the radiation source. Commenters are

invited to provide information on potential impacts of the use of alternative technologies and information on potential alternative technologies for consideration by the Task Force. Commenters are also invited to suggest regulatory approaches and possible incentives that could encourage the use of alternative technologies.
