SUPPLEMENTARY INFORMATION:

I. Introduction

The Nuclear Regulatory Commission (NRC) proposes to issue a license amendment for License Condition 35 (alternate concentration limit (ACL) for ground water compliance monitoring), to Materials License SUA-648, for the Umetco Minerals Corporation (Umetco), East Gas Hills, Wyoming uranium mill site. The purpose of this amendment is to increase the Lead-210 (Pb-210) ACL from 46.7 pCi/L to 189 pCi/L in the Southwestern Flow Regime (SWFR). NRC has prepared an Environmental Assessment (EA) in support of this amendment in accordance with the requirements of 10 CFR part 51. Based on the EA, the NRC has concluded that a Finding of No Significant Impact (FONSI) is appropriate. The amendment will be issued following the publication of this Notice.

II. EA Summary

The staff has prepared the EA in support of the proposed license amendment. Much of the information relied upon in preparation of the EA was obtained from the licensee's ACL application and from two previous EAs for Umetco site activities related to their revised soil decommissioning plan and a recent application for several ACLs. Since this action relates to ground water, the primary focus of the evaluation of potential environmental impacts relates to ground water. In

particular, current and future ground water use, and predicted concentrations of Pb-210 at the designated point of exposure were considered in the analysis. Staff has concluded that there would be no effect to the following resources: Visual resources, vegetation and soils, ambient air quality, and transportation. Staff has also determined that the proposed action is not the type of activity that has the potential to cause effects on cultural or historic resources.

III. Finding of No Significant Impact

On the basis of the EA, NRC has concluded that there are no significant environmental impacts from the proposed amendment and has determined not to prepare an environmental impact statement.
