Title: Higher Education Act (HEA) Title II Reporting Forms on Teacher Quality and Preparation.

Frequency: Annually.

Affected Public: State, Local, or Tribal Gov't, SEAs or LEAs; Not-for-profit institutions.

Reporting and Recordkeeping Hour Burden:

Responses: 1,309.

Burden Hours: 121,632.

Abstract: The Higher Education Act of 1998 calls for annual reports from states and institutions of higher education (IHE) on the quality of teacher education and related matters (Pub. L. 105-244, Section 207:20 U.S.C. 1027). The purpose of the reports is to provide greater accountability in the preparation of America's teaching forces and to provide information and incentives for its improvement. Most IHEs that have teacher preparation programs must report annually to their states on the performance of their program completers on teacher certification tests. States, in turn, must report test performance information, institution by institution, to the Secretary of Education, along with institution rankings. They must also report on their requirements for licensing teachers,

state standards, alternative routes to certifications, waivers, and related items.

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: Under this program we provide Federal financial assistance to eligible entities to assist them in designing and implementing character education programs that are able to be integrated into classroom instruction and to be consistent with state academic content standards and are able to be carried out in conjunction with other educational reform efforts. These character education programs must take into consideration the view of parents, students, students with disabilities (including those with mental or physical disabilities) and other members of the community, including members of private and nonprofit organizations.

Priorities: This competition includes one absolute priority and one invitational priority. These priorities are as follows.

Absolute Priority: In accordance with 34 CFR 75.105(b)(2)(iv), this priority is from Title V, Part D, Subpart 3, Section 5431 of the ESEA (20 U.S.C. 7247). For FY 2006 and any subsequent year in which we make awards based on the list of unfunded applications from this competition, this priority is an absolute priority. To be considered for funding, each applicant must address the absolute priority. Under 34 CFR

75.105(c)(3) we consider only applications that meet this priority.

This priority is: the design and implementation of character education programs that:

(A) Are able to be integrated into classroom instruction and to be consistent with State academic content standards; and

(B) Are able to be carried out in conjunction with other educational reform efforts.

Within this absolute priority, we are particularly interested in applications that address the following invitational priority.

Invitational Priority: For FY 2006 and any subsequent year in which we make awards based on the list of unfunded applications from this competition, this priority is an invitational priority. Under 34 CFR 75.105(c)(1) we do not give an application that meets this invitational priority a competitive or absolute preference over other applications.

The Secretary is particularly interested in projects proposing an evaluation plan that is based on rigorous scientifically based research methods to assess the effectiveness of a particular intervention. The Secretary intends that grantees responding to this priority will work with the Department to determine whether the project produces meaningful effects on student achievement or teacher performance.

Evaluation methods using an experimental design are best for determining project effectiveness. Thus, when feasible, the project should use an experimental design under which participants—e.g., students, teachers, classrooms, or schools—are randomly assigned to participate in the project activities being evaluated or to a control group that does not participate in the project activities being evaluated. If random assignment is not feasible, the project may use a quasi-experimental design with carefully matched comparison conditions. This alternative design attempts to approximate a randomly assigned control group by matching participants—e.g., students, teachers, classrooms, or schools—with non-participants having similar pre-program characteristics.

In cases where random assignment is not possible and participation in the intervention is determined by a specified cutting point on a quantified continuum of scores, regression discontinuity designs may be employed.

For projects that are focused on special populations in which sufficient numbers of participants are not available to support random assignment or matched comparison group designs,

single-subject designs such as multiple baseline or treatment-reversal or interrupted time series that are capable of demonstrating causal relationships can be employed.

Proposed evaluation strategies that use neither experimental designs with random assignment nor quasi-experimental designs using a matched comparison group nor regression discontinuity designs will not be considered responsive to the priority when sufficient numbers of participants are available to support these designs. Evaluation strategies that involve too small a number of participants to support group designs must be capable of demonstrating the causal effects of an intervention or program on those participants.

The proposed evaluation plan should describe how the project evaluator will collect—before the project intervention commences and after it ends—valid and reliable data that measure the impact of participation in the program or in the comparison group.

In determining the quality of the proposed evaluation method, we will consider the extent to which the applicant presents a feasible, credible plan that includes details such as the following:

(1) The type of design to be used (that is, random assignment or matched comparison). If matched comparison, include in the plan a discussion of why random assignment is not feasible.

(2) Outcomes to be measured.

(3) A discussion of how the applicant plans to assign students, teachers, classrooms, or schools to the project and control group or match them for comparison with other students, teachers, classrooms, or schools.

(4) A proposed evaluator, preferably independent, with the necessary background and technical expertise to carry out the proposed evaluation. An independent evaluator does not have any authority over the project and is not involved in its implementation.

Definitions

As used in this notice—*Scientifically based research* (section 9101(37) NCLB):

(A) Means research that involves the application of rigorous, systematic, and objective procedures to obtain reliable and valid knowledge relevant to education activities and programs; and

(B) Includes research that—

(i) Employs systematic, empirical methods that draw on observation or experiment;

(ii) Involves rigorous data analyses that are adequate to test the stated hypotheses and justify the general conclusion drawn;

(iii) Relies on measurements or observational methods or observational methods that provide reliable and valid data across evaluators and observers, across multiple measurements and observations, and across studies by the same or different investigators;

(iv) Is evaluated using experimental or quasi-experimental designs in which individuals, entities, programs, or activities are assigned to different conditions and with appropriate controls to evaluate the effects of the condition of interest, with a preference for random-assignment experiments, or other designs to the extent that those designs contain within-condition or across-condition controls;

(v) Ensures that experimental studies are presented in sufficient detail and clarity to allow for replication or, at a minimum, offer the opportunity to build systematically on their findings; and

(vi) Has been accepted by a peer-reviewed journal or approved by a panel of independent experts through a comparably rigorous, objective, and scientific review.

Random assignment or experimental design means random assignment of students, teachers, classrooms, or schools to participate in a project being evaluated (treatment group) or not participate in the project (control group). The effect of the project is the difference in outcomes between the treatment and control groups.

Quasi experimental designs include several designs that attempt to approximate a random assignment design.

Carefully matched comparison groups design means a quasi-experimental design in which project participants are matched with non-participants based on key characteristics that are thought to be related to the outcome.

Regression discontinuity design means a quasi-experimental design that closely approximates an experimental design. In a regression discontinuity design, participants are assigned to a treatment or control group based on a numerical rating or score of a variable unrelated to the treatment such as the rating of an application for funding. Eligible students, teachers, classrooms, or schools above a certain score (“cut score”) are assigned to the treatment group and those below the score of applicants’ proposal for funding, the (“cut score”) are assigned to the treatment group and those below the score are assigned to the control group. In the case of the scores of applicants’ proposals for funding, the “cut score” is established at the point where the program funds available are exhausted.

Single subject design means a design that relies on the comparison of treatment effects on a single subject or group of single subjects. There is little confidence that findings based on this design would be the same for other members of the population.

Treatment reversal design means a single subject design in which a pre-treatment or baseline outcome measurement is compared with a post-treatment measure. Treatment would then be stopped for a period of time, a second baseline measure of the outcome would be taken, followed by a second application of the treatment or a different treatment. For example, this design might be used to evaluate a behavior modification program for disabled students with behavior disorders.

Multiple baseline design means a single subject design to address concerns about the effects of normal development, timing of the treatment, and amount of the treatment with treatment-reversal designs by using a varying time schedule for introduction of the treatment and/or treatments of different lengths or intensity.

Interrupted time series design means a quasi-experimental design in which the outcome of interest is measured multiple times before and after the treatment for program participants only.

Program Authority: 20 U.S.C. 7247.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for this competition are in the application package.

2. *Review and Selection Process:*

Additional factors we consider in selecting an application for an award are in 20 U.S.C. 7247. In making selections for funding, we also will ensure, to the extent practicable, that the projects for which we provide funding are equitably distributed among the geographic regions of the United States, and among urban, suburban, and rural areas.

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representatives and U.S. Senators and send you a Grant Award Notification (GAN). We may also notify you informally.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Reporting:* At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multi-year award, you must submit an annual performance report that provides the most current performance and financial expenditure information as specified by the Secretary in 34 CFR 75.118. The Secretary will also use this information to respond to reporting requirements concerning this program established in section 5431(h) of the ESEA (20 U.S.C. 7247).

4. *Performance Measure:* We have established one performance indicator for the Partnerships in Character Education Program. The indicator is: Partnerships in Character Education Program grantees will demonstrate predicted student effects through valid, rigorous evaluations. Consequently, applicants for a grant under this

program are advised to give careful consideration to this measure in conceptualizing the design, implementation, and evaluation of their proposed project. If funded, applicants will be asked to collect and report data in their annual performance reports on evaluation outcomes. The Secretary will also use this information to respond to the reporting requirements concerning this program established in section 5431(h) of the ESEA (20 U.S.C. 7247). We will track this indicator through the use of the following measure. This measure is: the proportion of projects funded under this competition demonstrating predicted student effects through valid, rigorous evaluations will increase.
