Authority

Issuance of permits and permit

 Endangered Species Act of 1973 (16
 U.S.C. 1531-1543) (ESA), is based on a
 finding that such permits/modifications:

 consistent with the purposes and
 policies set forth in section 2 of the
 ESA. Authority to take listed species is
 subject to conditions set forth in the
 permits. Permits and modifications are
 issued in accordance with and are
 subject to the ESA and NOAA Fisheries
 regulations governing listed fish and
 wildlife permits (50 CFR parts 222-
 226). Those individuals requesting a
 hearing on an application listed in this
 notice should set out the specific
 reasons why a hearing on that
 application would be appropriate (see
ADDRESSES). The holding of such a
 hearing is at the discretion of the

Assistant Administrator for Fisheries, NOAA. All statements and opinions contained in the permit action summaries are those of the applicant and do not necessarily reflect the views of NMFS.

FOR FURTHER INFORMATION CONTACT:

Carrie Hubard or Patrick Opay, (301)713-2289.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222-226).

The applicant proposes to test two types of large mesh gillnets to ascertain which type of net will reduce sea turtle interactions while maintaining targeted catch rates for southern flounder (*Paralichthys lethostigma*). Both nets would be constructed of 0.52 mm diameter monofilament with 6-inch (15.2 cm) mesh webbing and would be 1,200 yards (1,097 m) long. The control net would be 25 meshes deep while the low profile net would be twelve meshes deep. Control nets would have additional floatation every six feet (1.8 m) and tie downs every 30 feet (9.1 m);

the experimental net would have neither. NCDMF plans to conduct 150 paired net deployments (one of each type of net). To follow fishing protocols, nets would be set at dusk and retrieved in the early morning. Captured sea turtles would be examined for any possible injuries and held for approximately two hours to ensure they are healthy before being transported away from the fishing area and released. Turtles would be identified to species, measured, photographed, and flipper and PIT tagged. Any comatose or debilitated turtles would be transported to a rehabilitation center. During the life of the permit, the applicant requests authorization to capture 23 Kemp's ridley (*Lepidochelys kempii*), 23 loggerhead (*Caretta caretta*), 22 green (*Chelonia mydas*), 2 hawksbill (*Eretmochelys imbricata*), and 2 leatherback (*Dermodochelys coriacea*) sea turtles. Of the captured turtles, 11 Kemp's, 11 loggerhead, 11 green, 1 hawksbill, and 1 leatherback may be mortalities. Research would be conducted in Pamlico Sound, North Carolina and the permit would expire in December 2007.

Dated: March 10, 2006.

Chief, Permits, Conservation and Education Division, Office of Protected Resources, National Marine Fisheries Service.
